Silver, METALLURGY OF. Silver occurs most abundantly in the following ores: Native silver, Argentite, Pyrargyrite, Proustite, and Cerargyrite. Besides these there are several other ores with sulphur, arsenic, bromine, etc.; and it is also found in small amount in the ores of other metals, notably in tetrahedrite. Pure silver is white, soft, very malleable, very ductile, the best known conductor of heat and electricity. Its mpt. is 954° C.; it boils below the mpt. of platinum (1,775° C.), and has been distilled; its vapor is greenish. Thin leaf is blue by transmitted light. It crystallizes usually in octahedrons. When melted, it absorbs 22 times its volume of oxygen, which it gives out suddenly when setting, producing a spitting. It does not oxidize in dry or damp air, but is easily blackened by vapors containing sulphur, forming silver sulphide. It alloys easily with melted lead, copper, zinc, and many other metals; it dissolves in cold mercury, more easily in hot.

Three principal methods are used in treating the ores. The most usual is to smelt the silver ore together with lead ore, the lead obtained carrying all the silver. This may be accomplished in any of the ways used for treating lead ores (see LEAD, METALLURGY OF). This silver-bearing lead can be desilverized by several processes. Another method is to convert the silver into chloride, then dissolve this in a salt solution, from which it is afterward precipitated. Another is to amalgamate the silver by grinding the ore up with mercury, and distilling the mercury from the amalgam.

Amalgamation processes are very old, and are conducted as follows: the barrel amalgamation makes use of tight, revolving barrels. If the ore is not native silver or the chloride, it is first roasted with common salt, which converts the silver into chloride. The charge of a barrel, in Freiberg, was 1,500 lbs. of roasted ore, 300 lbs. of water, 120 lbs. of lumps of iron. The barrel was turned 12 times a minute for 2 hours, then stopped, and 300 to 500 lbs. of mercury put in, and ro-

Amalgamating Barrels, seen from above.

tated again 20 times a minute for 18 hours. The barrel was then filled two-thirds full of water and turned two hours longer. The amalgam thus obtained was squeezed through canvas bags, and the pasty, rich amalgam put into retorts in which the mercury was distilled off, leaving nearly pure silver. The cost of treating an ore by this method is $10 to $20 per ton, making it profitable to treat only ores over 25 to 50 ounces of silver per ton.

The same process can be conducted more economically in iron pans, in which the finely-divided ore is ground with hot water and mercury. This is called the Washoe process, and can be operated for $5 to $7 per ton. The same principle is again employed in the more primitive Patio process, in which the preliminary grinding of the ore is done in an ARRASTRA (q.v.), and the amalgamation is done by spreading the fine ore on a cemented or paved courtyard, making a mud of it, sprinkling it over with salt, and then treading it by driving mules through. After the salt is worked in, mercury and some sulphate of iron and copper are added, and trodden in. The whole working of a heap takes 15 to 45 days. The mass is then washed in tanks, the amalgam separated, squeezed through canvas bags, and distilled. This process was largely used in Mexico and Spanish-American countries from 1600 nearly to the present.

The wet processes of silver extraction depend on the fact that silver chloride, while not soluble in water, is soluble in solutions of common salt, sodium hyposulphite, copper hyposulphite, etc. If the ore is a chloride, bromide, or iodide ore, it can be treated directly. If not, it is first roasted carefully with common salt, an operation called chloridizing roasting, whereby silver chloride is formed. The ore containing the silver as chloride is then placed in tanks having false or perforated bottoms, and is washed with a strong brine (Augustin's process), or sodium hyposulphite (Patera), or calcium thiosulphate (Kiss), or hyposulphite of sodium and copper (Russell). All these solutions dissolve notable quantities of silver chloride, and are mostly precipitated by putting into them strips of copper, which throws down pure silver. Russel's process can be applied to most silver ores without preliminary chloridizing roasting, and he prefers to precipitate the silver as sulphide by adding sodium sulphide. The precipitated silver sulphide is filtered out, dried, and gently roasted in air to silver. These wet processes are in extensive use, and can treat very poor ores.

The concentration of silver in lead furnishes work-lead, which must be desilverized. The oldest method of accom-

plishing this is cupellation. The lead is placed upon a hearth of baked bone-ashes or marl, and heated to redness with access of air. The lead and any other base metals present oxidize, and the oxides thus formed, being liquid, are absorbed by the porous bed, until finally only pure, unoxidizable silver

German Cupelling Furnace.

remains. The furnaces for this operation frequently had a removable roof, as in figure. As at present conducted, this final cupellation is always preceded by a refining process, in which the lead is oxidized but is not absorbed by the hearth; a little notch in the side of the furnace allowing the melted oxides continually to flow from the furnace.

Another means of desilverizing lead is Parkes' process of stirring into it, at a red-heat, metallic zinc, and then letting the bath stand. The zinc, rising to the surface, brings all the silver with it as a rich alloy, while the remaining lead contains only a little zinc, and needs only to be heated a few hours in a softening furnace to be very pure. The zinc alloy is skimmed off, and heated in closed retorts provided with a condenser to catch the zinc vapors driven off. Sometimes the zinc vapors are not condensed, but allowed to burn directly to zinc oxide, which is caught in bags and used for paint. The silver in the retort is nearly pure. The use of a little aluminium in working Parkes' process is very advantageous, as it prevents oxidation of the zinc in the pot and produces richer scums. The scums are treated in Germany quite satisfactorily by electrolysis, producing a very pure electrolytic zinc and leaving rich silver residues.

In treating argentiferous copper ores, the silver accumulates in the copper-iron sulphide or matte, and is extracted by Ziervogels' process of roasting this very carefully, converting the silver almost entirely into sulphate, soluble in water, and washing it out. The silver solution is then precipitated, as by copper.

It is one of the most widely distributed of the metals, and has been known to man since remote antiquity. At different times, different regions have taken the lead in production. The mines of Saxony, Bohemia, and the Harz Mts. have been worked for centuries, and those of Mexico have long been celebrated for their richness. In S. America, Peru, Bolivia and Chili have been the largest producers In the U. S., prior to 1860, the amount produced was small; but during the next thirty years, the yield rapidly increased, amounting in 1892 to 63,500,000 oz., or two-fifths of the world's total production in that year. Since 1892 the amount annually produced has materially fallen.

The world's production of silver was, in 1895, 169,180,249 oz. Of this the U. S. produced 55,726,945, Mexico 46,962,738, Bolivia 21,999,966, Australasia 12,507,335, Germany 5,818,106, and the rest scattering. The U. S. coining value of silver is $1.29 per oz. U. S. coins are 900 parts silver and 100 copper, a dollar weighing 412.5 grs. (see DOLLAR). Sterling silver is 925 silver and 75 copper. Dec. 1897 the value of gold was $20.67, and of silver 57 cts. per oz. troy. Oct. 1, 1896, the U. S. had 437,202,141 silver dollars, of which 56,513,178 were in circulation; $75,354,781 subsidiary silver coins, of which $60,228,298 were in circulation. In 1895 there was used in the industrial arts in the U. S. 9,419,552 oz. of silver. See ASSAY and COINAGE.

Silver, THOMAS, 1813–1888. American inventor of a marine governor for engines 1854, adopted in several European navies.

Silver Ammonium. $(NH_3Ag)_2$. Deep blue liquid with metallic luster, made by the action of sodium ammonium on silver chloride.

Silver-bell Tree. Small trees of the genus *Mohrodendron* (*Halesia*), natural family *Styracaceæ*, with showy white flowers, natives of the s.e. U. S.; called Snowdrop Tree.

Silverberry. *Elæagnus argentea.* Shrub of the natural family *Elæagnaceæ*, with silvery leaves and fruit, native of the n.w. U. S.

Silver Bromate. $AgBrO_3$. Tetragonal crystals, unaffected by sunlight; made by precipitating silver sulphate with potassium bromate, and crystallizing from hot water.

Silver Bromide. AgBr. Bright yellow precipitate, obtained by treating silver nitrate with a soluble bromide. It occurs native in small quantities, and is used in photography.

Silver Carbonate. Ag_2CO_3. Prepared from ammonium silver nitrate, it forms transparent, lemon-yellow needles, or rhombohedra, which polarize light. It blackens in light, and loses carbon dioxide at 200° C.

Silver Chlorate. $AgClO_3$. White, opaque, tetragonal columns; mpt. 230° C., sp. gr. 4.43; soluble in water; made by passing chlorine into water containing silver oxide in suspension.

Silver Chloride. AgCl. Occurring in nature as HORN-SILVER (q.v.); white, curdy precipitate, obtained by adding a soluble chloride or hydrochloric acid to silver nitrate; soluble in ammonia water. Dry silver chloride absorbs 10 per cent of ammonia, forming ammonio-silver chloride, $2AgCl.3NH_3$, a white compound. It is decomposed by light, and is used in photography.

Silver Cyanate. AgCNO. White, anhydrous powder, sp. gr. 4.004. It blackens on heating, fuses, and takes fire. It is made by precipitating silver nitrate with potassium cyanate.

Silver Cyanide. AgCN. White, curdy precipitate, obtained by adding a soluble cyanide to silver nitrate; soluble in ammonium hydroxide and in potassium cyanide solution. The solution in potassium cyanide is used for silver plating various metals with the aid of the electric current. It is not affected by sunlight.

Silver Fluoride. AgF. Extremely hygroscopic, yellowish-brown substance; sp. gr. 5.85; made by treating the oxide or carbonate with hydrofluoric acid and evaporating.

Silver Glance. Common name for ARGENTITE (q.v.).

Silver Grain. Wood which when split radially exhibits the sides of numerous medullary rays as shining specks or small patches.

Silver Grays. Conservative Whigs, who withdrew from the N. Y. Convention of 1848. Many of them had gray hair.

Silver Hydrozoate. AgN_3. Prisms, melting at 250° C. and exploding with terrific violence; insoluble in water, decomposed by light, soluble in ammonia; similar in its properties to silver chloride.

Silver Iodate. $AgIO_3$. White, crystalline substance, unaffected by light; made by the action of iodine in alcoholic solution on silver oxide.

Silver Iodide. AgI. Natural and artificial varieties form hexagonal crystals, isomorphous with greenockite (CdS). The color varies from lemon-yellow to olive-green. Sp. gr. 5.0 to 5.6; made by heating iodine and silver; acted upon by light; used in photography.

Silver Nitrate (LUNAR CAUSTIC). $AgNO_3$. Rhombic crystals, made by dissolving silver in nitric acid and evaporating the solution. Not changed in the light unless it comes into contact with organic substances, when it blackens. It disintegrates flesh, and is used by physicians to remove warts and other superfluous growths; also used as an ingredient in indelible ink.

Silver Nitrite. $AgNO_2$. Crystallizing in needles, made by adding potassium nitrite to a concentrated silver nitrate solution; soluble with difficulty in water; used in organic syntheses.

Silver Oxide. Ag_2O. Dark brown, amorphous powder, made by adding a soluble hydroxide to a silver nitrate solution. It dissolves in ammonium hydroxide, forming black crystals of the composition $Ag_2O.2NH_3$, fulminating silver. Silver also forms a suboxide, Ag_4O, and a peroxide, AgO or Ag_4O_3, similar to the copper compounds.

Silver Perchlorate. $AgClO_4$. White powder, mpt. 486° C.; made by treating silver oxide with perchloric acid.

Silver Phosphate. Ag_3PO_4. Yellow, insoluble compound, obtained by treating silver nitrate with a soluble phosphate.

Silver Plating. Solution of silver nitrate in water is carefully precipitated with potassium cyanide and the silver cyanide is filtered out and washed with water. It is then dissolved in a water solution of potassium cyanide, and this constitutes the plating solution. The articles to be plated are carefully cleaned and hung in the solution, being connected to the negative pole of a battery or dynamo; a plate of silver

is also hung in the same solution and attached to the positive pole. This maintains the strength of the solution. Potassium cyanide should be added from time to time, as the solution should always have a decided odor of it. The solution should be protected from dust.

Silver Standard Countries. Bolivia, Central America, China, Colombia, Ecuador, India, Mexico, and Russia.

Silver Stick. In the British Court, the title of the lieutenant and the standard-bearer of the corps of gentlemen-at-arms; also the field officer of any of the guard regiments.

Silver Subchloride. Ag_4Cl_2?. Black or brown powder, melting to a yellow mass of silver and silver chloride; made by treating silver with a solution of cupric or mercuric chloride.

Silver Sulphate. Ag_2SO_4. Small rhombic prisms; soluble with difficulty in water; obtained by dissolving silver in sulphuric acid.

Silver Sulphide. Ag_2S. Regular or rhombic crystals, or amorphous powder; sp. gr. 7.1 to 7.36; made by heating silver in sulphur vapor, or by passing hydrogen sulphide into a silver salt solution. It occurs in nature as ARGENTITE and ACANTHITE (q.v.).

Silver Sulphite. Ag_2SO_3. White, curdy precipitate, obtained on adding sulphurous acid to silver nitrate. It blackens when exposed to light.

Silver-Thaw. Fine rain or Scotch mist, deposited on cold objects and frozen by reason of their coldness. The ice thus formed is always clear and transparent, and gives a silvery sheen to the objects. The weight of the ice frequently breaks limbs of trees, telegraph wires, etc.

Silver-Tree. *Leucodendron argenteum.* Small tree of the natural family *Proteaceæ*, with lanceolate silvery leaves, native of S. Africa.

Silverweed. *Potentilla anserina.* Low trailing herb of the natural family *Rosaceæ*, with yellow flowers and leaves silvery-white on the lower surface, widely diffused in the n. temperate zone.

Silvestre, THEOPHILE LOUIS, 1823–1876. French critic and historian of art. *Delacroix*, 1864; *Th. Rousseau*, 1868.

Silvia, ST., ab. 400. Of s. France; sister of Rufinus, Consul 392; supposed author of *Peregrinatio ad loca sancta*, pub. 1887.

Simarubaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 33 genera and ab. 110 species, mostly trees, natives of tropical and warm countries.

Simeon. Second son of the patriarch Jacob, and ancestor of one of the twelve tribes of Israel.

Simeon, CHARLES, 1759–1836. English Evangelical leader. *Horæ Homileticæ*, 17 vols., 1815–28; *Works*, 21 vols., 1832–33.

Simeon Stylites, ab.391–459. Syrian fanatic, who spent 30 years on a pillar 60 ft. high; revered as a saint and imitated by many.

Simia. Genus ANTHROPOMORPHA (q.v.) or Man-like Apes, including the Mias or ORANG-UTAN (q.v.) of Sumatra and Borneo.

Simiadæ (QUADRUMANA, PITHECI, or SIMOIDEA). Apes and Monkeys; sub-order of Primates, characterized by having the posterior limbs furnished with an opposable hallux, shorter

Death's Head Monkey (*Chrysothrix sciurea*).

than the other digits, rendering the feet fitted for grasping in climbing trees, rather than for walking. The canines are prominent, and there is a diastema behind the lower and in front of the upper, to allow of their overlapping. The body is hairy and the tail often long and prehensile. The orbits of the eyes are shut off from the temporal fossa, and look forward. The facial angle in the adult rarely exceeds 30° (in *Chrysothrix* it is nearly 60°). The face is more human in appearance in the young. The pinna of the ear is rounded and human-like. They live in companies in tropical forests, with the strongest male for a leader, and feed chiefly on fruits and seeds, but also on insects, eggs and birds. The female bears one or at most two young, which it tends with great care and affection. The sections included are *Arctopithecini*, *Platyrhina*, and *Catarhina*.

Similar Figures. In Geometry, those of the same form. Similar polygons have equal angles and proportional sides. Similar solids of revolution are generated by the revolution of similar figures.

Simile. Figure of speech comparing two objects by like or as; resembling metaphor, but weaker.

Simla. Town of Hindustan, on the slope of the Himalayas, 170 m. n. of Delhi; socially important as a summer resort;

General View of Simla.

government headquarters in the hot months since 1864; settled 1819. It exports opium, fruits and shawl-wool. Altitude 7,048 ft., mean temperature 55° F. Permanent pop. ab.16,000.

Simler, JOSIAS, 1530–1576. Prof. Zurich 1552. *De Republica Helvetiorum.*

Simmons, EDWARD EMERSON, b.1852. S.A.A. 1888. American painter.

Simmons, FRANKLIN, b.1842. American sculptor.

Simmons, JAMES FOWLER, 1795–1864. U. S. Senator from R.I. 1841–47 and 1857–62.

Simmons, JOSEPH EDWARD, LL.D., b.1841. Pres. New York Stock Exchange 1884–86; pres. Board of Education 1886–89.

Simms, WILLIAM GILMORE, 1806–1870. American novelist. *Guy Rivers*, 1834; *The Yemassee*, 1835; *Hist. S. Carolina*, 1840; *Beauchampe*, 1842; *Life of Marion*, 1844.

Simnel, LAMBERT, ab.1475–ab.1535. Yorkist claimant to the throne of England, personating Edward, Earl of Warwick; defeated at Stoke, June 16, 1487; afterward employed in the household of Henry VII.

Simon. 1. See PETER. 2. Another apostle, Zelotes, or "the Canaanite," formerly of the party called Zealots.

Simon, ÉTIENNE, 1747–1809. Belgian explorer, in Brazil 1795–1804; author of books of travel and history.

Simon, SIR JOHN, LL.D., D.C.L., b.1816. London physician and official, author of reports on sanitation. *Pathology*, 1850.

Simon, JULES, 1814–1896. Lecturer on Philosophy at the Sorbonne 1839–51; Deputy 1848 and 1863; opposed to the empire; Minister of Instruction 1871–73; ed. *Siècle* 1874; Senator 1875, Prime Minister 1876–77; author or editor of many philosophical and political works. *Natural Religion*, 1856, tr. 1857.

Simon, PEDRO ANTONIO, ab.1560–ab.1630. Flemish Franciscan, missionary in New Granada from ab.1590; historical writer.

Simon, RICHARD, 1638–1712. French theologian and con-

troversialist, Oratorian 1662–78. His *Critical Hist. O. T.*, 1678. tr. 1682, and *Hist. Text N. T.*, tr. 1689, anticipated the modern science of biblical criticism; his *Commentateurs du N. T.*, 1693, attacked the Fathers and provoked a reply from Bossuet. *Texte et Versions du N. T.*, 1695; *Lettres*, 1700–5; *Bibliothèque Critique*, 1708. His works aroused the wrath of Protestants as well as Catholics.

Simond, ALFRED, 1740–1801. Brazilian botanist, in Guiana (to which his books chiefly relate) 1776–88. *Flora Brasilia*, 1800.

Simonds, WILLIAM, 1822–1859. American writer for boys. *Aimwell Stories*, 1853–60.

Simonians. Gnostic sect, taking their name from SIMON MAGUS (q.v.).

Simonides, OF AMORGOS, 7th cent. B.C. Greek satirical poet.

Simonides, OF CEOS, 556–468 B.C. Greek lyric poet, winner of 56 prizes; long at Athens, where he wrote on martial and patriotic themes; at Syracuse from 478. Fragments only remain.

Simonin, LOUIS LAURENT, b.1830. French geologist and writer on America.

Simon Magus. Samaritan sorcerer, imperfectly converted, and rebuked by St. Peter (Acts viii.) for seeking to buy the gifts of the Spirit. Hence simony, traffic in Ch. patronage; a practice always condemned, but common in most ages.

Simonoseki. See SHIMONOSEKI.

Simony. See SIMON MAGUS.

Simoom. Intensely hot wind in n. Arabia, so oppressive that death frequently results from exposure to it, but not believed to have any other poisonous qualities. The intense heat appears to be peculiar to the central portion of the storm, about which there is a rapid gyratory movement on the part of the remainder of the air. It occurs in spring and summer, and seldom lasts longer than a few minutes; twenty minutes, at the outside. Very similar winds occur in the deserts of Sahara and of Sinde.

Simple Harmonic Motion. That to and fro, resulting from the projection in a vertical plane of a point moving uniformly in a horizontal circle of reference. Instances occur in physics, especially in optics and acoustics. An example is furnished by a particle vibrating under the action of a force which is proportional to the displacement of the particle from its mean position. The condition of the moving point defined with reference to its position and direction of motion is its phase. Phase is also defined as the fraction of a period that has elapsed since the point last passed through its mean position in the positive direction. If the point of maximum elongation be not the position of the body when time begins to be reckoned, the interval, positive or negative, till the body reaches this position is called the epoch. See AMPLITUDE and PERIOD.

Simplicea (ASCIDIÆ SIMPLICES). See ASCIDIANS.

Simplicidentata. See RODENTIA.

Simplicius. Pope 468–483. He condemned the Monophysites.

Simplicius, 6th cent. Neoplationist at Athens, commentator on Aristotle.

Simplon. Pass from Canton Valais into Italy, 6,218 ft. high. A road, built for Napoleon 1800–6, cost $3,600,000. This

Simplon.

road, extending from Glys to Domodossola, a distance of ab. 38 m., is 6,592 ft. above the sea, and from 25 to 30 ft. wide. It passes through several extensive tunnels, over 611 bridges, and has 20 stations for travelers. It was greatly injured by storms in 1834, '39, '49, making the Sardinian side nearly impassable.

Simpson, EDWARD, U.S.N., 1824–1888. Lieut. 1855; active on the Atlantic and the Gulf 1863–65; Captain 1870, Commodore 1878, Rear-admiral 1884. *Ordnance*, 1862.

Simpson, SIR GEORGE, 1796–1860. Scottish traveler, Gov. of Rupert's Land 1822–41; knighted 1855. *Journey Round the World*, 1847.—His cousin, THOMAS, 1808–1840, led an important expedition to the Mackenzie River and along the Arctic coast 1836–40.

Simpson, JAMES HERVEY, U.S.A., 1813–1883. Explorer of a route from Utah to the Pacific 1859–61; military engineer.

Simpson, SIR JAMES YOUNG, M.D., D.C.L., 1811–1870. Prof. of Midwifery Univ. Edinburgh 1840; discoverer of the anæsthetic uses of chloroform, which he introduced 1847; Baronet 1866. *Obstetric Memoirs*, 1856; *Archæological Essays*, 1872.—His nephew, assistant, and editor, ALEXANDER RUSSELL, b. 1835, succeeded to his chair. *Obstetrics and Gynæcology*, 1880.

Simpson, JOHN PALGRAVE, 1805-1887. English playwright; biographer of Von Weber.

Simpson, MATTHEW, D.D., LL.D., 1811–1884. Pres. Indiana Asbury (now De Pauw) Univ. 1839–48; M. E. bp. 1842; eminent orator, much admired by Pres. Lincoln. He rendered notable service to the Union 1861–65. *Hundred Years of Methodism*, 1876; *Cyclopædia of Methodism*, 1878; *Lectures on Preaching*, 1879.

Simpson, THOMAS, F.R.S., 1710–1761. Prof. of Mathematics at Woolwich 1743. *Fluxions*, 1737–50; *Laws of Chance*, 1740; *Algebra*, 1745; *Geometry*, 1747; *Trigonometry*, 1748; *Select Exercises*, 1752.

Simpson River. In British Columbia, flowing into the Pacific Ocean.

Simrock, KARL, 1802–1876. German poet, prof. Bonn from 1850; tr. *Nibelungenlied*, 1827; *Reineke Fuchs*, 1845; *Edda*, 1851; *Beowulf*, 1859, and other old poems, besides Shakespeare's *Sonnets*, 1867, and some of the plays.

Sims, GEORGE ROBERT, b.1847. English playwright and novelist. *Romany Rye*, 1882.

Sims, JAMES MARION, M.D., LL.D., 1813–1883. Surgeon, in New York from 1853; founder of the Women's Hospital 1855–58; in Europe 1861–68; organizer and head of an ambulance corps in the Franco-Prussian war 1870; pre-eminent as a gynæcologist.

Sims, WINFIELD SCOTT, b.1844. Inventor of an electric motor 1872, and of torpedo boats, used in U. S. navy.

Simson, ROBERT, 1687–1768. Prof. Glasgow 1711–61. *Sectiones Conicæ*, 1735; his *Elements of Euclid*, 1756–62, supplied a basis to most modern text-books. *Opera*, 1776.

Simulation. Counterfeiting a disease. Sometimes it is a manifestation of a nervous disorder; at others it is a means to accomplish an ulterior purpose, *e.g.*, the transference to a hospital of a prisoner condemned to hard labor.

Simultaneous Equations. Those which are satisfied by the same values of the unknown quantities. In the relations of loci, the simultaneity of their equations is the condition of intersection of the loci, and values which make the equations simultaneous determine the intersection.

Simultaneous Values. Those at or for the same time.

Sin. Transgression of duty or of law considered as offense against God.

Sin, WILDERNESS OF. Region through which the Israelites wandered after coming out of Egypt.

Sinai. Mountain-mass in desert peninsula at head of Red

Plain Er-Rahah—Mount Sinai

Sea, over 8,000 ft. high; scene of the giving of the Law, through Moses, to Israel. The peninsula, the scene of the Israelite

wanderings, is ab. 140 m. long n. to s. In different localities of it are ancient inscriptions. Politically it now belongs to Egypt. See HOREB.

Sinaitic Inscriptions. Uncial manuscripts of the Greek Bible, discovered by Constantine Tischendorf in 1844 in the convent of St. Catharine on the range of Mt. Sinai, in a scrap basket. The manuscript is now in St. Petersburg. See CODEX.

Sincerity. That form of truthfulness which consists in a habitual freedom from duplicity.

Sinclair, SIR JOHN, 1754–1835. Scottish M.P. 1780–1811; Baronet 1786; prolific writer. *Hist. Revenue of British Empire*, 1784–89; *Statistical Account of Scotland*, 21 vols., 1791–99.—His daughter, CATHERINE, 1800–1864, wrote many novels and books, religious, juvenile, or descriptive. *Modern Flirtations*, 1841; *Beatrice*, 1852.

Sindbad. See SEVEN WISE MASTERS.

Sinde, SCINDE, or SINDH. Province of w. India, conquered by Mohammedans ab.712, by Akbar of Delhi 1592, by Persia 1739, and by the English 1843. Area 54,435 sq. m., pop. near 3,000,000. Capital, KARACHI (q.v.).

Sindia, or SCINDIA. Mahratta rulers of Gwalior, n. central India, from 1744; hostile to the British 1779–1844. Their power began 1743 in Malwa.

Sine. Trigonometric function: ratio of the ordinate of any point in the terminal line of the angle (the initial line being the axis of x) to the distance of that point from the vertex of the angle.

Sin-Eating. It was formerly the custom in parts of rural England and Wales to hire poor people at funerals to take upon them the sins of the deceased. A loaf and a bowl of beer was given, which the sin-eater ate and drank. The usage may have originally been limited to the clergy, but was afterward continued and practiced as a profession by others.

Sines, LAW OF. See LAWS OF REFRACTION.

Singanfoo. Former capital of China; on the Wei, a branch of the Hoang Ho; notable for its commerce and remains of antiquity. Pop. ab.200,000.

Singapore. 1. Island s. of Malay Peninsula, held by Gt. Britain since 1819. Area 206 sq. m.; pop., 1891, 182,650.

Singapore.

2. Its capital, and that of the Straits Settlements since 1853; of modern growth and great commercial importance. Pop., 1891, 160,000.

Singeing Cake. English term for the HOST (q.v.) in the Latin Church.

Singer, ISAAC MERRITT, 1811–1875. American improver and patentee of sewing-machines.

Singerly, WILLIAM MISKEY, b.1832. Publisher of Phila. *Record* since 1877.

Singhalese. See CEYLON.

Singing. Art of uttering music composed for the human voice. What constitutes good singing depends largely on the state of music and the conceptions which prevail among different peoples and at different periods touching the purpose of the art. Among savages it is, like dancing, more often a religious function than an entertainment, and the idea of beauty is not considered. After the invention of opera, with its artificial forms, sensuous beauty of tone and perfection of phrasing and execution were chiefly admired and sought. With the development of the dramatic element in opera, the need of truthfulness of expression was more felt, and greater importance was attached to significant enunciation of the words. Vocal composition and singing became more declamatory, and less attention was bestowed upon mere beauty and flexibility of voice. Singing is also much influenced by the peculiarities of languages, and this has helped to give rise to a variety of schools and methods; but the professed aim of all is to produce tones which shall be true in pitch and consistent in quality, to make the voice full, powerful, flexible, and capable of enduring a strain, and to secure distinctness of enunciation and truthfulness of declamation.

Singing Flames. If a small gas flame be produced at the end of a tube terminating in a fine point, and be slowly passed up into a wide glass tube, some particular position will be found at which the flame alters its character and begins to sound a note the pitch of which is a little higher than that of the tube when sounded by itself. Should the flame not begin to sound immediately when the most favorable position has been reached, it can often be made to respond by singing to it a note corresponding very nearly in pitch to that which the flame will produce when in action. A flame of hydrogen has been found to be more prompt in its action than one of coal gas. An instrument termed the pyrophone has been devised by arranging a set of such tubes of various pitches. The air in the tube is made to vibrate by the heat of the flame. See PYROPHONE, and HARMONICA, CHEMICAL.

Singing Flame, or Chemical Harmonica.

Single-Acting Engine. Form in which the motor fluid acts on one side of the piston only, the other side being in connection with the atmosphere to receive its pressure, or with the condenser. Such are the CORNISH ENGINE (q.v.) and most of the CALORIC and GAS ENGINES (q.v.).

Single Altitude. Method of determining time. The altitude of the sun or a star is measured with the sextant; then, in the spherical triangle having its vertices at the zenith, the pole, and the star, three parts will be known; therefore the angle at the pole (the hour angle) can be computed.

Single Riveting. Connection of two plates by a single row of rivets. The strength of such a joint is usually ab. 60 per cent of the strength of the plate itself. By adding another row of rivets the strength may be raised to ab. 75 per cent of that of the plate.

Single-Stick. Straight stick with a basket-handle to protect the hand, used in practicing the broad-sword exercise. There are seven cuts, as many corresponding guards, and three thrusts.

Single Tax. The method of obtaining public revenue by taxing land only and not the improvements upon it; proposed in 1887 by Henry George.

Single Touch. One of the three principal methods of magnetization. It consists of moving the pole of a powerful magnet from one end to the other of the bar to be magnetized, the motion always taking place in the same direction. The magnetism developed by this method is usually feeble, and the method is employed only for small magnets. It has also the disadvantage of often developing consequent poles.

Sing Sing. Village of Westchester co., N. Y., on the Hudson, 31 m. n. of New York; site of a state prison.

Singular Points. Those points of a curve having peculiar properties: points of inflexion, multiple points, cusps, nodes, abrupt and conjugate points, etc.

Sinim. Biblical name for the Seres, or ancient Chinese.

Sinistral (LEFT-HANDED). Gastropod shell whose mouth faces the spectator on the left when the shell is viewed with the spire pointing upward.

Sinistrorse. Twining vines which wind around a sup-

port from right to left, and thus in an opposite direction to the apparent motion of the sun; *e.g.*, the Hop.

Sinker-Bar. In well-drilling machinery, heavy rod of iron, ab. 18 ft. long, occupying a position in the string of tools just above the jar.

Sink Hole. Cavities formed in limestone regions by rain or running water; known in England as Swallow-hole.

Sinking Fund. Financiering plan by which a certain amount of money is laid aside annually, the principal and interest of which are expected to pay off a funded debt by the end of a given period.

Sinope. Ancient capital of Pontus, Asia Minor, on the Black Sea; taken by Romans 72 B.C., and by Turks 1461.

Sinope.

Near it a Turkish fleet was destroyed by Russians, Nov. 30, 1853, with loss of 4,000 lives. Pop. ab.7,500.

Sinter. Cellular siliceous or calcareous deposit formed on evaporation of water at the outlet of some mineral springs.

Sinuate. Wavy margins of certain leaves and other organs.

Sinupalliata. Group of siphoniate Lamellibranchs, including forms having the pallial impression more or less deeply bowed forward at the posterior end. This bay represents the attachment of the muscles that retract the long siphon. Here belong the VENERIDÆ, MACTRIDÆ, MYIDÆ, PHOLADIDÆ, and TEREDIDÆ (q.v.).

Sinus. In Anatomy, a pocket or dilatation in bone or other structure, as the frontal sinus, a cavity in the frontal bone between the eyebrows, communicating with the air through the nose; the sinuses of the dura mater are blood channels for venous blood.—In Surgery, an abnormal canal usually produced by ulceration and through which the products of inflammation may be discharged.

Sinus. Indentation at the base of a leaf or other flat organ.

Sioux (DAKOTAS). Confederacy of Indian tribes possibly related to the Six Nations of New York. The territory originally occupied included Wisconsin, Minnesota, and Iowa. They were

Ghost Dance of the Sioux Indians.

driven West because of a massacre of Minnesota pioneers in 1862. In 1876, under Sitting Bull, they fought U. S. troops, their chief escaping to Canada. They number ab.50,000. The tribes included are: Santees, Yanktons, Tetons, Sissetons, Brules, Minikanyes, and Unkpapas. Besides these, there are tribal offshoots, such as the Assiniboines of L. Winnipeg, the Crows of Montana, Hidatsa, Mandans, and the Winnebagoes of e. Wisconsin. The Sioux proper are great warriors, cruel, and cunning. They love to gamble, paint and ornament themselves. They are nomads, and practice dances in which they endure self-inflicted tortures.

Sioux City. Capital of Woodbury co., Iowa, on the Missouri; founded 1849; of recent growth. It is a railroad center of importance, and has large packing houses and varied manufactures. Pop., 1890, 37,806.

Sioux Falls. Capital of Minnehaha co., S. Dak.; on the Big Sioux; chartered 1877 and 1883; noted for its quarries. Pop., 1890, 10,177.

Sioux War. 1876; occasioned by the refusal of the Sioux to keep a treaty with the U. S., by which they were to relinquish a certain amount of territory and retire from it by Jan. 1, 1876. They continued to roam about Wyoming and Montana, burning, robbing, and killing, whereupon the government sent a force under command of Gens. Terry and Crook to subdue them. Gen. Custer and his whole force of nearly 300 men were destroyed in a battle, but the Sioux were finally defeated and driven across the border into Canada.

Siphon. Instrument by which a mass of liquid may be removed from a vessel to a lower level without moving the vessel. In its simplest form it consists of a U tube, the shorter leg of which is immersed in the liquid, while the longer opens into the air at a level lower than that of the liquid. The flow takes place by reason of the difference of pressure at the two levels of the tube, due to the weight of the columns and to the

Siphon.

pressure of the air.—In Engineering, a bent pipe for carrying water over an elevation less than 30 ft. in height. A long siphon will not continue permanently in flow unless a pump be occasionally operated at the summit to remove the air that collects there.

Siphon. In Botany, certain elongated cells in the thallus of some red *Algæ*, grouped in the order *Siphoneæ*.

Siphonaceæ. Order of filamentous *Algæ* of the sub-class *Chlorophyceæ*. The filaments are aseptate.

Siphon Condensers. See CONDENSERS.

Siphoniata. Division of Lamellibranchs, in which the posterior parts of the mantle edges are fused to form long tubular siphons. Here are included the Cockles (*Cardiidæ*), *Cyprinidæ*, *Veneridæ*, *Mactridæ*, *Myidæ*, and the Boring Mussels (*Pholadidæ*). These families may be put under the two groups, *Integripalliata* and *Sinupalliata*.

Siphonochlamyda (SIPHONOSTOMATA). Division of Prosobranchs, including forms with the aperture of the shell notched or prolonged into a canal, for the exit of the siphon. The groups included are: *Rachiglossa*, *Toxiglossa*, and *Tænioglossa* (in part, *i.e.*, siphonostomatous *Orthoneura*, as *Cypræa*, Strombus, Triton).

Siphonodentalium. See SCAPHOPODA.

Siphonophora. Free-swimming polymorphic colonies of *Hydrozoa*. They have a common contractile stem, medusoid buds, nutritive polyps, and usually also nectocalices, hydrophyllia, dactylozoöids, etc. They are divided into the *Physophoridæ*, *Physalidæ*, *Calycophoridæ*, and *Discoideæ*.

Siphonopoda. See CEPHALOPODA.

Siphonostomata, or PARASITICA. Group of parasitic Copepods or fish-lice, whose mouth-parts are adapted for sucking; the structure is more or less degraded, and the segmentation is lost or obscure. Sometimes the body is reduced to nothing but a branched reproductive organ. The males are rare, usually small, sometimes parasitic on the female. *Actheres* is an example. See SIPHONOCHLAMYDA.

Siphonostomatous. Having the lip of the aperture of the shell of Univalves prolonged into a canal.

Siphon Recorder. Instrument invented by Lord Kelvin, designed to receive the signals transmitted through a submarine cable. The signals are zigzag lines, drawn with ink discharged from a light glass siphon, which is moved by a light coil of fine copper wire suspended by a silk fiber between the poles of a powerful electromagnet. The paper in front of

the siphon tube is movable by clockwork, and the ink reservoir is electrified.

Siphons. Tubes formed by extensions of the mantle in Mollusks, through which water is inhaled and exhaled for respiratory, nutritive, or locomotor purposes.

Siphuncle. Tube which unites the chambers of such Cephalopods as the Pearly Nautilus.

Sipunculacea. See GEPHYREA.

Sipunculoidea, or SIPUNCULIDÆ. See ACHÆTA.

Sir. Title of baronets, knights, and formerly of clergymen.

Siraj-ud-Daula. See SURAJAH DOWLA.

Sirbonian Bog. According to Strabo, deep lake on the coast of Egypt, e. from Pelusium, impregnated with asphalt. Diodorus says it was overgrown with reeds. At present its site is covered with sand. One of the chief routes from Egypt to Asia passed along a narrow ridge between sea and lake, which was dangerous in case of a n. wind.

Siredon. See AXOLOTL.

Siren. Acoustical apparatus for measuring pitch, devised by Seebeck and De Latour, and improved by Helmholtz. The simplest form of the latter consists of a cylindrical brass box, the top of which is pierced with a ring of small holes bored obliquely; just above this and nearly in contact is a movable circular disk, pierced with the same number of holes similarly arranged, except that the obliquity is in the opposite direction. This disk is capable of revolving upon a vertical axis. Through the bottom of the box is an opening through which air or steam may be forced; this air, passing through the oblique holes in the top, strikes against the sides of those in the disk and causes the latter to revolve rapidly. As the rotation of one plate upon the other causes the holes to be alternately opened and closed, the air escapes in successive puffs, the frequency of which depends upon the rate of rotation and upon the number of holes, and a note is emitted whose pitch is equal to the product of the number of revolutions per second into the number of holes in the disk. The latter is a constant of the instrument, and a speed indicator will enable one to determine the former. Thus by bringing the siren into tune with any musical note, the pitch of that note will be known.

Siren. See PERENNIBRANCHIATA.

Sirenia (CETACEA-HERBIVORA). Order of adeciduate, placental Mammals, formerly included in the order *Cetaceu.* They are aquatic and herbivorous, with sparse hair on the body, no hind limbs, but body terminating in a horizonal fin. The neck is distinct, and the mammæ are on the breast. The

Dugong (*Halicore dugong*).

incisors are two sets, a milk dentition being present. They feed on sea-weed and are between Whales and Seals, with affinities to the Ungulates. The Sea-Cow, Manatee, and Dugong are examples. They live near the mouths of large rivers, and do not grow to any extraordinary size. Unlike the Whales, the nostrils are on the snout, on which hair is present as a mustache.

Sirens. Sea-nymphs whose songs charmed and destroyed all listeners; two, sometimes three. Ulysses escaped by stuffing his companions' ears with wax, and tying himself to the mast till out of hearing. Orpheus outdid them in song, whereupon they cast themselves into the sea and became rocks.

Siricius. Pope 384–398; enforcer of clerical celibacy; active against Manichees and Priscillianists.

Sirius, or DOG-STAR. Brightest fixed star in the heavens; right ascension 6h. 40 m., declination —16° 33′, parallax 0″.380, according to Gill and Elkin. This would make the distance such that light would require 8.6 years to reach us from the star. The mass is 5.8 that of the sun, the light 42 times the sun's.

Sirocco. Hot and very dry wind in Arabia and the Sahara, usually raising oppressive clouds of dust; also a hot dry n.w. or w. wind in Natal, S. Africa, descending from the high interior country with clear weather, and stronger than the average wind. By its dryness it differs from the scirocco of Italy.

Sisal Hemp. Fiber of several species of AGAVE (q.v.). It is grown in the West Indies, and especially at Sisal, Yucatan; it is used in making cordage, and is considered superior to true hemp.

Sisenna, LUCIUS CORNELIUS, ab.120–67 B.C. Roman historian of his own time, praised by Cicero. Fragments survive.

Sisera. Canaanitish general, oppressor of the Israelites; treacherously slain by Jael.

Sismondi, JEAN CHARLES LÉONARD DE, 1773–1842. Swiss-French author of Italian ancestry, resident chiefly at Geneva. *De la Richesse Commerciale*, 1803; *Hist. Italian Republics*, 16 vols., 1807–18, abridged 1832; *Littérature du Midi de l'Europe*, 4 vols., 1813, tr. 1823; *Economie Politique*, 1819; *Hist. des Français*, 31 vols., 1821–44; *Sciences sociales*, 1836.

Sisserskite. Rare mineral alloy of iridium and osmium.

Sisterhoods. Female associations for pious and charitable work; first formed in R.C. Ch. by St. Vincent de Paul 1629–33 (see CHARITY, SISTERS OF), in Ch. of England by Dr. Pusey 1845, and in the U. S. by Dr. Muhlenberg 1852.

Sisters of Mercy. Organized in Ireland 1827, and in the U. S. 1843. They have over 200 houses, and are engaged in teaching and nursing.

Sistine Choir. That which sings at the services and functions in which the Pope takes part. It is a collegiate body, and consists of 32 choral chaplains, and is traced in part to 4th century, and more distinctly to 14th. Since 1870 its regular service of the choir has been dispensed with, though it is heard at long intervals, as at the anniversary of the Pope's consecration. It has played an important part in the history of Palestrina, Dufay, Josquin des Prés, Arcadelt, Morales, Nanini, and Allegri.

Sisyphus. King of Corinth; condemned in the lower world to roll uphill a huge stone, which always rolled back.

Sitaris. See HETEROMERA.

Sitka. Capital of Alaska; on Baranoff Is., on s.e. coast. Pop., 1890, 1,188.

Sitting Bull, 1837–1890. Sioux chief, leader of various raids and massacres. In 1876 his followers overpowered and

Sitting Bull.

slew Gen. Custer and his troops, and escaped to Canada. He surrendered 1880, but, continuing to make trouble, was attacked in his camp Dec. 15, 1890, and slain in the fight.

Situation Rent. Value of the advantage which any industrial establishment possesses over any or all other similar producers, on account of its proximity to markets for purchase or sale of goods or for labor.

Siva. One of the Hindu trinity, with Brahma and Vishnu;

represented as destroyer and renewer; celebrated in the Puranas, but not in the Vedic hymns.

Sivatherium. Fossil four-horned antelope from the Miocene of India, of elephantine size and some elephantine characters.

Six Articles, or "BLOODY STATUTE" (q.v.). Enacted in England June 28, 1539, to enforce auricular confession, clerical celibacy, transubstantiation, and other R. C. doctrines and practices. Under it 28 persons were executed. See ARTICLES OF RELIGION.

Six Nations. Confederacy of Indian tribes, Mohawks, Senecas, Cayugas, Oneidas, Onondagas (the Five Nations) and Tuscaroras. In 1722 an important council was held at Albany between their chiefs and the Governors of N. Y., Pa., and Va., resulting in a treaty by which a large part of the fur trade was diverted from the French to the English.

Six-Principle Baptists. Non-Calvinistic body, formed in R. I. 1652; once strong, now numbering less than 1,000.

Sixteen Soldiers. See FOX AND GEESE and JUROKU MUSASHI.

Sixth. See INTERVALS.

Sixtus. I. 6th bp. of Rome, ab.120 or 130.—II. Bp. 257-258; martyr.—III. Pope 432-441.—IV. FRANCESCO DELLA ROVERE, 1414-1484; general of the Franciscans; Pope 1471. He

Seal of Sixtus IV.

adorned Rome, made five nephews cardinals, plotted to murder the Medici, and involved Italy in war.—V. FELICE PERETTI, 1521-1590; Cardinal 1570, Pope 1585; energetic ruler. He hated Protestants, disliked Spain, and approved the murder of Henry III. of France.

Sixty-Six. Variety of Bézique, played by 2, 3, or 4 persons, with twenty-four cards, from 9 upward, the 10 ranking next to ace. In two-handed game six cards are dealt to each, three at a time, the thirteenth card being turned up on the table for trump. Two cards are a trick, and following suit is not required. 9 of trumps may be exchanged by a player for the turned up card, after taking a trick. A card is taken from the pack by each player after a trick is taken. The cards in the tricks count as follows: ace 11, ten 10, king 4, queen 3, knave 2, nine 0. Marriage of king and queen of the same suit, declared after winning a trick, counts 20; marriage in trump suit counts 40. After all the cards have been drawn the players must follow suit, and take the tricks if possible. When 66 is declared the play stops. The game is 7 points, as follows: making 66, the opponent having made 33 or more, counts 1; making 66, before opponent makes 33, counts 2; making 66, before opponent makes anything, counts 3. In the three-handed game the dealer takes no cards, but counts the same as the winner of the hand; if he already has 6, he must win on another's deal.

Sizar. Poor student at Oxford, Cambridge, and Dublin.

Size. See GLUE and GELATINE.

Sjöberg, ERIK ("VITALIS"), 1794-1828. Swedish poet and satirist.

Skagen, CAPE, or THE SKAW. Most northerly point of Jutland, on which is a stone lighthouse, 148 ft. high; near by is a small town of pilots and fishermen.

Skager Rack. Extension of North Sea between Denmark and Norway, connecting with Cattegat, which leads to the Baltic. Length ab.140 m., width ab.70 m.

Skalds. Old Norse poets, of whose works many fragments exist.

Skating. Traveling over ice on a sort of shoe with a runner, now of steel; not only a sport, but in some countries a necessary accomplishment. Indulged in out of doors at first, it came to be popular also in rinks, where the ice was at first a product of winter weather, and later artificial. Then followed roller-skating, where the ice was dispensed with, and, instead of a steel blade, boxwood rollers were attached to the shoe part of the skate, and the surface over which the skater moved was a polished floor. 100 yds., with standing start, has been made on ice in 9 sec.—$\frac{3}{5}$ of a sec. faster than a runner can make it; with a flying start it has been covered in 7 sec. A quarter-mile, with flying start, has been skated in $31\frac{1}{4}$ sec.,

Skating.

and a half, with wind, in 1 m. $5\frac{3}{5}$ sec., a mile, with wind, in 2 m. $12\frac{3}{5}$ sec.

Skeat, WALTER WILLIAM, b. 1835. English philologist, editor of *Piers Plowman*, Chaucer, and other early texts. *Etymological Dictionary*, 1882.

Skeleton. In general, the hard parts of animals; exoskeleton, an external covering, as with Mollusks and Crustaceans;

Human Skeleton.

endoskeleton, an internal supporting framework, as in Man. Many animals have both, as with the Tortoise. The skeleton

of Invertebrates is mostly of calcium carbonate, silica, or horny matter; the skeleton of Vertebrates consists of bony and cartilaginous matter, the former largely calcium phosphate. Vertebrates have a dorsal axis or vertebral column, to which the vertebra are attached, with the spinal cord; in many Reptiles, all Birds and Mammals, a breastbone, to which the ribs are attached; a skull, containing the brain; the shoulder- and hip-girdles, to which the limbs are attached. In Man there are 278 bones at birth, which at the age of 25 are reduced to 224 by the uniting of some by bony matter. They are connected by cartilaginous tissues. The various divisions are described under their several titles.

Skelligs. Three rocky islands on s.w. coast of Ireland, lying 10 m. s.w. of Valentia Island. The Great Skellig rises abruptly to 714 ft. altitude, and has two lighthouses, 372 ft. high, and the ruins of a monastery for centuries the resort of pilgrims.

Skelton, JOHN, ab.1460–1529. English satirical poet, who attacked Wolsey and the clergy. *Works*, 1843.

Skene, ALEXANDER JOHNSTON CHALMERS, M.D., b.1837 in Scot. Prof. of Gynæcology in N. Y. *Diseases of Women*, 1888.

Skene, PHILIP, 1725–1810. British officer, in America 1756–79; taken with Gen. Burgoyne. His large estate on Lake Champlain was confiscated.

Skene, WILLIAM FORBES, D.C.L., 1809–1892. Antiquarian; historiographer of Scotland 1881; editor of sundry chronicles and other old books. *The Highlanders*, 1837; *Celtic Scotland*, 1876–80.

Skennotoka. See CAMPANULARIÆ.

Skepticism, or SCEPTICISM. Doctrine asserting the uncertainty of all human knowledge and belief. Its basis is the illusory nature of perception and the contradictions of the understanding, the two being presumably the only sources of conviction.

Sketch, MILITARY. Map of a portion of the country upon which topographical features, such as roads, woods, valleys, hills, passes, streams, etc., are delineated with sufficient accuracy to enable a commander of troops to maneuver them for marching or battle purposes. Such sketches are usually made by a reconnoissance under fire and therefore require on the part of the officer charged with this duty the characteristics of coolness and bravery, rapidity of execution, and the rare quality called coup-d'œil-militaire.

Skew Arch. One whose faces are not at right angles to its axis, so that the joints are spiral lines and the sides of the

Skew Arch.

stones are warped instead of plane. It is more difficult of construction and more costly than common arches.

Skewback. Joint of the abutment against which the arch abuts, or large stone common to both abutment and arch.

Skew-bevel Wheels. Gear wheels in which the axes of the two shafts are not parallel and do not intersect, and in which the pitch-surfaces of the wheels are hyperboloids (see GEAR WHEELS). The actual wheels are usually designed on frusta or tangent cones to the hyperboloids. They occur when a vertical shaft in a mill drives horizontal shafts on several floors, both to be continuous when the former rises somewhere near the middle of the building. They have the property of working in pairs, one on each side of the projected intersection of the two shafts, if it be desired to distribute the effort on more teeth than convenient on one wheel. When the pitch-surfaces are cylinders tangent to the circle of the gorge of the hyperboloids, the gears become HELICAL (q.v.).

Skew Determinants. Those whose conjugate elements are equal in magnitude, but differ in sign.

Skilling. Old copper coin of Denmark.

Skimmers. *Rhynchops nigra*, the Black Skimmer, has considerable white, the tail, tips of secondaries, hind neck; and in summer, when these marine birds come north, also the forehead, sides of head, and lower parts. They fly with the elongated compressed lower mandible immersed beneath the surface, to scoop up fish. See RAZOR-BILL.

Skimpings. In Cornwall, poor or worthless portion of ore that rises to the top in the operation of jigging, and is skimmed or scraped off.

Skin. Integument covering the body, serving as the organ of touch. It is composed of two principal layers, the dermis or true skin, and the epidermis or outer layer. In the skin are to be found ramifications of the nerves for the sense of touch, blood vessels, lymphatics and sweat glands. The action of tannin upon the dermis constitutes the process known as tanning, producing LEATHER (q.v.).

Skin Diseases. Those whose manifestations are located in the skin. They may be purely local or but a symptom of a derangement of the internal economy. A number of forms are included in cutaneous affections, the modern classifications recognizing about one hundred varieties.

Skin-Moths. Beetles of the family *Dermestidæ*, which attack skins and are frequently found in museums. The most destructive, *Anthrenus museorum*, is only ab. $\frac{1}{10}$th of an in. long Museum specimens should be killed with benzene, camphor or turpentine.

Skinner, JOHN, 1721–1807. Minister at Langside, Scotland, 1742–1806; imprisoned 1753; author of *Tullochgorum* and other songs. *Ecclesiastical Hist. Scotland*, 1788; *Poems*, 1809.—His son, JOHN, 1744–1816, became a bishop 1782, primus of Scotland 1788, and was one of Dr. Samuel Seabury's consecrators 1784.

Skinner, JOHN STUART, 1788–1851. Founder and editor of *American Farmer*, 1819–29; *Turf Register*, 1829–39; *Farmer's Library*, 1845–48; and *Plow, Loom, and Anvil*, 1848–51; ed. sundry agricultural books.

Skin Sensations. Changes of consciousness aroused by stimulation of the skin. They include tactile sensations and sensations of temperature. See TOUCH and TEMPERATURE SENSE.

Skip, or SKEP. Bucket or car in which coal or ore is raised to the surface from the underground workings of a mine. It usually runs between guides, but sometimes on rails.

Skittles. See BOWLS.

Skobeleff, MICHAEL, 1841–1882. Russian general, who conquered Khiva and Khokand 1873–74, and gained repeated victories over the Turks in Bulgaria 1877–78.

Skotograph, or SKIOGRAPH. Shadow picture taken on a sensitized plate, in a plate-holder, by ROENTGEN RAYS (q.v.). The subject is placed between the plate-holder and the Crookes' tube and the plate is developed as in the ordinary photographic process.

Skrælingar. Eskimo; so named in Norse.

Skuas (SEA-HENS). Web-footed, marine birds of the Arctic and Antarctic Oceans; like large brown gulls. They have a cere on the bill like a Puffin. They feed on other birds.

Skull. With man this is divided into the cranium, forming the brain-cavity, to which it gives protection, and consisting of 8 bones; and the face, which consists of 14 bones. Many sutures between the bones at birth are closed by bony union in the adult. The capacity of the human skull is from 60 to 110 cu. in., average 85 in. See CRANIOMETRY.

Side View of Human Skull:
a, frontal bone; *b*, parietal bone; *c*, occipital bone; *d*, temporal bone (squamous portion); *e*, sphenoid bone; *f*, malar bone; *g*, nasal bone; *h*, superior maxillary or upper jaw bone; *i*, inferior maxillary or lower jaw bone.
BD, height of cranium; GO, length of cranium; BN, basinasal length; BA, basialveolar length. (These measurements are supposed to be made in a straight line from point to point.)

Skullcap. Herbs of the genus *Scutellaria*, natural family *Labiatæ*, principally natives of the n. temperate zone.

Skunk. *Mephitis mephitica* is the common skunk. It is dark colored, with a white patch on the forehead, extending backward to the bushy tail as two stripes on the back. On each side of the anus is the opening of the perianal glands, which secrete a pungent liquid, that is forcibly ejected when the creature raises its tail, and is very irritating if it strikes in the eye. Skunks do not exhibit fear of man, and are easily tamed. They are insectivorous, but like to rob hen-roosts. It is claimed that

Common Skunk (*Mephitis mephitica*).

they suffer naturally from hydrophobia, and that from them the dog gets this disease originally.

Skunk-Bush. *Ptelea augustifolia.* Shrub of the natural family *Rutaceæ*, native of s.w. U. S. The foliage has a mephitic odor.

Skunk-Cabbage. *Spathyema fœtida.* Large-leaved herb of the natural family *Araceæ*, with a strong mephitic odor; blooming in early spring; known as Skunk-weed.

Skupshtina. Servian National Assembly.

Sky. Apparent arch of the heavens, which is blue on a clear day; this is due to the downward reflection of light from the infinitely small solid particles suspended in the atmosphere; the blue and violet rays of light are most refracted and most reflected repeatedly by these solid particles; if the particles are coarse, the light reflected is white, as with clouds. The light, not thus reflected, is transmitted yellower or redder, or is absorbed. See ATMOSPHERE, CLOUDS, DUST-FREE, and METEOROLOGY.

Skye. One of the Hebrides, off w. coast of Scotland; part of Inverness. Area 535 sq. m.; pop., 1891, 15,800, and dwindling.

Skye Terrier. Long silky-haired house-dog, 40 in. long, 10 in. high, in color gray to dark blue, it is supposed to have originated in a cross of a Skye dog with a Maltese terrier, which is doubtful.

Skyros, or SCYROS. Ancient island of Greece, to the e. of the middle of Eubœa; one of the Sporades. Its silver mines and marble quarries are no longer worked. Here Achilles concealed himself before the Trojan war. It abounds in vineyards and is well timbered. Area 79 sq. m., pop. ab. 3,200.

Slack Coal. Small or refuse coal broken from the larger pieces in handling during the operations of mining or preparing for market.

Slade, FELIX, 1789–1868. Founder of chairs of Art in Oxford, Cambridge, and Univ. London.

Slade, WILLIAM, 1786–1859. M.C. 1831–43; Gov. of Vt. 1844–46; sec. National Board of Education 1846–56. *Laws of Vt.*, 1825; *Reports of Vt. Supreme Court*, 1844.

Slag Brick. Castings made of melted slag, and used for pavements of sidewalks, and even for roadways. They have not come into general use.

Slags. Vitreous product of metals or minerals, after fusion in blast-furnaces. Silica, alumina, chloride of calcium and alum are made from slag, and it is used for roofing, like rough glass, and in thin slabs like Dutch tiles. See CINDER, BALLAST, SCORIA, and SLAG BRICK.

Slander. Oral defamation. To be actionable it must impute a criminal offense involving moral turpitude, or a contagious disease which would exclude from society, or which tends to prejudice the victim in his trade or calling, or must cause special damage.

Slang. Words and phrases not recognized by correct usage; sometimes the "jargon of thieves and vagabonds;" often merely colloquial and jocose; frequently silly and vulgar, sometimes forcible and imaginative, "poetry in the egg." Its unbridled use and the unsparing condemnation of it are alike objectionable.

Slate. Cleavable rock in which the tendency to split is regarded as resulting from long-continued pressure exerted at right angles to the cleavage planes. Slates vary in mineral and in chemical composition. The most common is known as clay slate or argillite. Roofing slate of excellent quality is quarried in Wales and Canada. In the U. S. the principal slate regions are in Pa. and Vt. Its tensile strength is ab.3,000 and its compressive strength 12,000 lbs. per sq. in. During 1896 the value of all the slate produced in the U. S. was $2,728,437, of which Pa. produced two-thirds and Vt. one-fourth.

Slater, SAMUEL, 1768–1835. English machinist, founder of the first successful cotton-spinning mill in U. S., at Pawtucket, R. I., 1790, and later of others in Mass.—His nephew, JOHN FOX, 1815–1884, gave a fund of $1,000,000 in 1882 for the education of freedmen.

Slatin, RUDOLPH, b.1856. Austrian officer, in Africa under Gordon 1878; Pasha 1879, and Gov. of w. Darfur 1880–Dec. 1883, when he was overcome by the Mahdists; held as a slave till Feb. 1895. The story of his battles, captivity, and escape is told in his *Fire and Sword in the Sudan*, tr. 1896.

Slaughter House, or ABATTOIR. Establishment for the slaughtering and preparation of cattle, calves, sheep and lambs for food, so arranged that there shall be no contamination of the atmosphere by injurious or unpleasant emanations. The first was built in Paris in 1807; in 1818 five public abattoirs were built there; also one in Edinburgh 1851 and in London 1855. Since then they have been established in many cities; in the U. S. they are usually owned by private persons. The most elaborate are constructed of brick and iron, and are furnished with machinery and appliances for rapid and humane slaughtering, saving the blood and drying it, chill rooms for cooling the slaughtered animal, and cold storage for the dressed beef. The liver, heart, tongue, tail, fat, hide, hoofs and horns are all prepared for sale. In some places oleomargarine is prepared from the fat and the trimmings are canned for soup. The refuse matter is carefully removed without nuisance. One abattoir in New York has a capacity for slaughtering 5,000 cattle per day and cold storage for 6,500.

Slave Coast, or BENIN COAST. In W. Africa, extending from the Volta R. to the Benin R.; oppressively hot and unhealthy. The slave-trade, which flourished here in former times, has been suppressed. It is under the German, French and British influence. See LAGOS, SENEGAMBIA, and TOGO.

Slavery, IN ECONOMIC HISTORY. Institution in which labor is not a participant in distribution of the products of industry, but itself part of the contribution of the capitalist slave-owner. This arose in the early world's history, as a result of capture in war, and was common to the ancient Oriental nations and Jews, Greeks and Romans. Christianity ameliorated the condition of slaves. The barbarian invaders of the Roman empire brought Slavonian captives with them, hence the word slave. In Britain, Celts were enslaved by the Anglo-Saxons, who also exported the Irish as slaves. With the Norman Conquest, slavery was replaced by serfdom, an ameliorated form of slavery, which prevailed in Europe, and has been gradually abolished. Mohammedans continued to deal in slaves, including Christians, until 1812. Negro slavery existed from ancient times. They were brought from Africa to America by the Portuguese and other colonizers, and were first largely used in Hayti ab.1500. The English brought 300,000 slaves from Africa to their colonies 1680–1700, and 610,000 to Jamaica 1700–86. Up to 1772 negro slaves were also held in England; at that date it was decided by the courts that a slave became free on English soil, but could be reclaimed in his master's country. Slave trade was prohibited by England 1808. Emancipation of slaves took place in Hayti 1791; in the British colonies 1838; in the French colonies and the South American republics 1848; in the Dutch colonies 1863; in Brazil 1888. See SLAVERY IN THE U. S.

Slave Gang in Zanzibar.

Slavery in the U. S. Slavery was a recognized fact in the U. S. from colonial times. In 1776 ab. 300,000 slaves had been imported into the colonies since their settlement. By 1790 this number had increased to 700,000; by 1850 it was over 3,000,000, and in 1861 nearly 4,000,000. The founders of the Republic were mostly opposed to the institution and efforts were made to abolish it. But Ga. and S. C. insisted on its preservation as a condition of their entering the Union, and it remained, although the Constitution refused to recognize it by name, Madison saying that the U. S. "did not choose to admit the right of property in man." The slave question entered into nearly every chapter of the subsequent history of the U. S. until the Civil War. The admission of States, the enactment of laws, even the decisions of courts, were determined by its presence. It was the defense of slavery which at last led to the secession of the Southern States and the outbreak of war. Antagonism to slavery from the humane and moral point of view had increased with great rapidity in the North, the pioneers among the anti-slavery movement being Benj. Lundy, E. P. Lovejoy, Wm. Lloyd Garrison, Wendell Phillips, Chas. Sumner, and others. The sentiment of the North was strongly against slavery at the outbreak of the rebellion, although there was by no means unanimity of opinion as to the wisest way to get rid of it. It had been abolished in all the Northern States in the early days of the Union, begin-

ning with Vt. 1777, and ending with N. J. 1804. The emancipation of the slaves preceded the close of the war. Congress in 1862 passed an act abolishing slavery in the Territories, and in Sept. Pres. Lincoln issued the proclamation of emancipation. In 1864 the constitutional amendment was passed abolishing and forever prohibiting slavery throughout the U. S. Slavery was introduced into Va. 1619, and excluded from N.W. Territory 1787. Importation of slaves was prohibited 1808. The Mo. Compromise was enacted 1821, repealed 1854. The Fugitive Slave Bill was passed 1850, repealed June 13, 1864. The Dred Scott decision was made 1857. Abolition of slavery in District of Columbia April 16, 1862; Lincoln's first emancipation proclamation Sept. 22, 1862; second, Jan. 1, 1863. The abolition of slavery was officially proclaimed Dec. 18, 1865.

Slavonia. Province of Austria-Hungary, now forming with CROATIA (q.v.) the province of Croatia-Slavonia. It occupies the whole of the angle between the Drave and Save Rivers and, on the Save, forms the n. boundary of Servia.

Slavonic (or SLAVIC) **Languages.** Russian and Ruthenian (or Little Russian); Bulgarian, Servian, and Kroatian; Polish, Bohemian, and Moravian, with other dialects. The Old Bulgarian, into which Cyril translated the Bible ab.1000, was adopted as the sacred language of the Greek Church. Besides Russian, now growing in importance, the Servian is important for its ballads, to which J. Grimm called attention in an appreciative review.

Slavs, or SLAVONIANS. Branch of the Aryan family, first known about the Carpathian Mts. To this stock belong the Russians, Bulgarians, Illyrians, Lechs (including Poles, Siberians, and Pomeranians), Bohemians, and Polabians, or Slavic tribes of n. Germany.

Sleep. State of rest of the intellectual and voluntary activities of the body manifested by the cessation of the automatic activity of the brain. The physical basis is not definitely determined. It is possibly an example of the vital cycle of function, where rest follows activity, as seen in the more rapid sequences of the heart. See DREAMING.

Sleeper. Piece of timber laid upon the earth and supporting other timbers or railroad track; in England, CROSS-TIE (q.v.) of a railroad track.

Sleeping Table. Stationary ore-dressing apparatus, similar to the BUDDLE (q.v.) in principle, but worked by hand.

Sleep of Plants. Many flowers close in the night, and the leaves also fold up. Some flowers are open a portion of the day, as with the Crocus, in the morning; some are open in the night only, as the Night-blooming Cereus, a species of Cactus. The closing of plants protects the sensitive parts from cooling and wetting.

Sleidan, or **Philippsohn,** JOHANNES, 1506–1556. German historian of Charles V. and the Reformation. This work, *De Statu Religionis*, 1553–56, tr. 1560, was widely read, as was his book on ancient Babylon, Persia, Greece, and Rome, 1556, tr. 1627 as *Key of History*.

Sleigh. Vehicle on runners, used in all countries where snow lies on the ground for any considerable part of the year. There are many forms, the low variety being used for heavy loads. They are also used in some warm countries. Pictures of sleighs are found on Egyptian sculptured work.

Slemmer, ADAM J., U.S.A., 1828–1868. Brig.-gen. U. S. Vols. 1862; disabled at Stone River.

Sleswick. See SCHLESWIG.

Slickensides. Smooth polished or striated surface, frequently seen in regions where the rocks have been much disturbed by geological causes; produced by the rubbing of one rock mass upon another under great pressure.

Slide, or SLIP. In Mining, nearly identical with Fault.

Slide Joint. Mechanical device to limit the effects of the concussion when the drill strikes the rock. See JAR.

Slidell, JOHN, 1793–1871. M.C. from La. 1843–45, U.S. Senator 1853–61; Commissioner C.S.A. to France with James M. Mason 1861; arrested on a British vessel Nov. 8, 1861, by CAPT. C. WILKES (q.v.), but soon released on demand of England.

Slide Rule. Instrument for making rough multiplications and divisions, the principle being that of logarithms.

Slide Valve. Most usual form of valve for distributing steam to the two ends of the engine cylinder, and allowing its escape at and through the proper interval. Devised by James Watt. In the surface upon which the valve slides are three (or more) openings, called ports. The two extreme ones communicate respectively with the two ends of the cylinder beyond the travel of the piston; the central one communicates with the open air or with the condenser to which exhausted steam is delivered. The simple valve without lap (see LAP) just covers the outer edges of the outer ports; on its under side is a cavity whose length equals the distance between the inner edges of the steam ports, and whose breadth is the length of the ports. It will be seen that any motion of the valve to admit steam to one end, when the piston is at that end, and the valve in its central position, is accompanied by an opening of the passage from the other end into the cavity which is always in connection with the exhaust port. This kind is called a D valve, and has been moving to open the port in the opposite direction to that of the last motion of the piston; in pumps it is often desirable to have the valve open by a motion in the same direction as the previous piston stroke, and the valve is called a B valve from its resemblance in section to a letter ɑ on its side, there being two cavities. In the ALLEN VALVE (q.v.) steam comes also over a passage in the shell over the cavity into the port, as well as at the end. To shorten the passages for steam, the valve is often separated into two parts coupled by a rod, so that the steam ports are short for conduction of heat, but the exhaust passage is long. To enable an early cut-off to be attained without impeding or disarranging exhaust, one valve slides on back of another, the upper cutting off admission to ports made in the lower valve, which carries the exhaust cavity, and releases and compresses exhaust steam at proper and fixed points. The slide valve may be driven by an eccentric or crank directly, or through a rock-shaft, or through a link-motion, or by cams. See ADJUSTABLE CUT-OFF, BALANCED VALVES, GRIDIRON VALVE, and LINK-MOTION.

Positions of a Slide Valve.

Sliding Friction. That arising when one surface slides upon another. This is greatest at the moment when motion begins.

Slimes. In ore dressing, particles of ore and rock that get reduced to a condition of great fineness and are easily carried along in a slowly moving current of water.

Slime Table. Ore-dressing apparatus devised for separating and saving the more valuable portions in the slimes, as they are carried in water over the surface of the table.

Sline, or SLYNE. The CLEAT (q.v.).

Sling. Small piece of leather, pierced and held by cords, whereby stones were hurled; weapon much used in ancient times, as by David against Goliath (I. Sam. xvii.), and till firearms came into use.

Slip. See SLIDE.

Slipper Flower. Shrubs of the genus *Calceolaria*, natural family *Scrophulariaceæ*, natives of the Andes of S. America; much cultivated for ornament.

Slit. Narrow opening in one end of the collimating telescope, which in a spectroscope or spectrometer serves to render parallel the rays falling on the prism or grating.

Sloan, SAMUEL, b. 1817 in Ireland. Pres. Hudson River R. R. 1855–62; pres. Delaware, Lackawanna, and Western R. R. since 1867.

Sloane, SIR HANS, F.R.S., 1660–1753. Irish naturalist; Baronet 1716; royal physician 1727. His library and collections formed the beginning of the British Museum. *Natural History of Jamaica*, 1707–25.

Sloane, WILLIAM MILLIGAN, b.1850. Prof. of History at Princeton since 1883. *Life of Napoleon*, 1896.

Sloat, JOHN DRAKE, U.S.N., 1780–1867. Captain 1837, Commodore 1862, Rear-admiral 1866. He occupied San Francisco and parts of Cal. 1846.

Slocum, HENRY WARNER, U.S.A., 1827–1894. Brig.-gen. U. S. Vols. 1861, Major-gen. 1862, serving in Va., Tenn., and Ga.; prominent at Gettysburg; M.C. from N. Y. 1869–73 and 1885–87.

Sloe. See BLACKTHORN.

Slope OF A PLANE CURVE. Trigonometrical tangent of the inclination at a given point: its differential expression when the locus is referred to rectangular co-ordinates is $\frac{dy}{dx}$.

Slope. See INCLINE.

Slope. Angle between an inclined surface and a horizontal plane. A slope of 2 to 1 is such that its horizontal projection is double that of the vertical rise. The slope necessary for the flow of water in a channel is very slight, and is usually expressed by the ratio of the vertical fall to the horizontal distance.

Slope Level. Small level to which is attached a gradu-

ated arc; used for finding the slope of the surface of ground, this being expressed by the number of degrees in the angle it makes with the horizontal. See CLINOMETER.

Slope Wall. Thin wall used to protect the slopes of embankments from the action of rain, or the sides of the bed of a canal from that of waves.

Sloop. Vessel with a single mast, resembling a cutter and sometimes identified with it. See CUTTER.

Sloths. Long-legged gray edentates of S. America, with 2 or 3 toes furnished with long, hooked claws, for walking suspended beneath branches. They rarely descend to earth; the tail is aborted. They sleep, hanging to a limb. They feed on

Two-toed Sloth (*Cholœpus didactylus*).

leaves; their voice is a grunt. Their alimentary canal is simple, not divided into large and small sections. One young is born at a time. In *Cholœpus didactylus*, only digits 2 and 3 are present. It can turn its head easily: its stomach has 4 divisions, somewhat as in herbivora. See BRADYPODIDÆ.

Slotter. Machine-tool in which the cutting tool reciprocates vertically, while the work is held upon the table which receives the feed-motions. It is a vertical shaper (see SHAPER), and the work-table has lateral, longitudinal, and circular feed-motions. It gets its name from its special adaptation to cutting slots or key-ways in work chucked to the table. The tool slide in smaller machines is driven by a Whitworth quick-return motion (see QUICK-RETURN). Larger ones are often driven by toothed gearing, driving a rack on the slide.

Slovaks. Slavic people in n.w. Hungary, inhabiting the valleys of the Waag, Gran, Taracz and Topla, numbering ab.

Slovak Maiden.

2,000,000. They are also met with about Budapest and in the e. of Moravia. Efforts have been made to create a pure Slovak literature, but they have met considerable opposition from the Hungarians and Bohemians. Their language is a dialect of Czech, and has a recent literature, in the 19th century.

Slovenians. Slavic people in Styria, Carniola, Carinthia, and w. Hungary, numbering ab.1,300,000. Their language is probably the oldest of the Slavonic tongues, but its literature is chiefly of recent development, near the end of the 18th century.

Slow Match. See MATCH.

Slows. MILKSICKNESS (q.v.) in cattle.

Sloyd. Method of manual training originated in Finland, prevalent in Sweden, and largely adopted elsewhere; certain artisan work is taught as a matter of discipline.

Sludge. Pulverized rock that accumulates in the bottom of a hole in the operation of drilling.—Also the black compound of sulphuric acid and hydrocarbons, which separates in the refining of petroleum. About half the acid is recovered by dilution with water and evaporation, the residual tarry matter settling out.

Slugs. See STYLOMMATOPHORA.

Sluice. Culvert or trough for carrying water, or for conveying water away from a water wheel.—In Placer Mining, long, narrow, and shallow trough, or series of troughs, with rough flat bottoms, sometimes paved with stone, through which a current of water carries the auriferous sands and gravels, and in which the gold is saved with the help of quicksilver. In the hydraulic mines of Cal. sluices hundreds or thousands of ft. in length have been built.

Slums. In Mining, (1) slimes; (2) soft clayey coal-beds.

Sluys. Town of E. Flanders, 6 m. n.e. of Bruges. Near it Edward III. of England gained a signal naval victory over the French, June 24, 1340; 230 French ships were taken, and 25,000 men slain. It was taken by the Spaniards 1587, and by Prince Maurice 1604. Pop. ab.2,800.

Smalkaldic League. Treaty of defensive alliance between the Protestant princes of Germany; formed at Smalkald in Hesse, and concluded at Frankfort, Dec. 31, 1530.

Small Arms. The portable firearms used by troops; namely, muskets, carbines, pistols and revolvers.

Small Debts. In Scotland, debts under £12, recoverable in the Sheriff's Court.

Smalley, GEORGE WASHBURN, b.1833 in Mass. London correspondent of N. Y. *Tribune* 1867–95; New York correspondent of London *Times* 1895. *Studies of Men*, 1895.

Smalley, JOHN, D.D., 1734–1820. Pastor at New Britain, Conn., 1758–1813; prominent preacher and theologian. *Inability*, 1769.

Small Fruits. Fruits which grow upon bushes, as strawberries, currants, blackberries and gooseberries. Grapes, cherries, and mulberries are improperly classed with small fruits. With the exception of the strawberry, the term corresponds to the English Bush fruits.

Smallpox. Acute, infectious, eruptive fever. One of the most virulent of contagious diseases which, before the introduction of vaccination, decimated the race. The contagium, which has not been isolated, exists in the secretions, excretions and exhalations from the lungs and skin, but is most marked in the dust-like powder of the dried scales from the eruption. Vaccination is the great prophylactic. Complete isolation and thorough disinfection is necessary in the proper treatment of every case. See VACCINATION.

Smallwood, CHARLES, 1812–1873. Prof. of Meteorology in McGill Coll. from 1858, and later also of Astronomy; contributor to Smithsonian *Reports*.

Smallwood, WILLIAM, 1732–1792. Col. of Md. troops 1776; active at Brooklyn and White Plains; Brig.-gen. Oct. 1776; distinguished at Germantown and Camden, S. C.; Major.-gen. 1780; Gov. of Md. 1785–88.

Smalt. Dark-blue glass made by fusing quartz, potassium carbonate, and a compound of cobalt. When finely powdered, it is used as a pigment.

Smaltite. $CoAs_2$. Mineral compound of cobalt and arsenic, in which the cobalt is usually replaced to a greater or less extent by nickel and iron. It is one of the raw materials used in the manufacture of smalt and other preparations of cobalt. There are extensive works in Saxony, utilizing the ores found there.

Smaragdite. Light green variety of the mineral amphibole, found associated with saussurite in the rock known as euphotide.

Smart, BENJAMIN HUMPHREY, ab.1785–ab.1872. English grammarian and lexicographer. *Metaphysics*, 1831–39; *Dictionary*, 1836.

Smart, CHRISTOPHER, 1722–1770. English poet, tr. of Horace, 1756, and the Psalms, 1765. His best piece, *Song to David*, 1763, was produced in a madhouse.

Smart, HENRY, 1813–1879. English composer. His cantata, *The Bride of Dunkerron*, written for the Birmingham Festival, 1864, is popular, because melodious and easy for choristers.

Smartweed. *Polygonum hydropiper.* Acrid herb of the natural family *Polygonaceæ*, native of Europe, introduced as a weed into America; also called Water-pepper. Various species of the genus *Polygonum*, and this especially, are occasionally bad weeds in cultivated ground. They succumb easily to careful and thorough culture.

Smeaton, JOHN, 1724–1792. English civil engineer; builder of the Eddystone lighthouse 1756–59, the greatest work of its

John Smeaton.

kind till the erection of a new lighthouse near by 1879; and of the Forth and Clyde canal; first to use the diving-bell. His professional reports were published in 3 vols. 1779.

Smectite. Clay-like mineral of greenish color, allied in composition to fuller's earth.

Smectymnuus. Name affixed to *An Answer*, 1641, to Bp. Hall's defense of Episcopacy, 1640; formed from the initials of the authors, S. Marshall, E. Carbamy, T. Young (Milton's tutor), M. Newcomen, and W. Spurstow.

Smedes, SUSAN (DABNEY), b.1840. American author of *Memorials of a Southern Planter*, 1887.

Smedley, FRANCIS EDWARD, 1818–1864. English novelist. *Frank Fairleigh*, 1850; *Lewis Arundel*, 1852; *Harry Coverdale's Courtship*, 1854.

Smell, SENSATIONS OF. Those aroused by stimulation of the olfactory cells of the upper third of the nose, the excitement being carried to the brain by the olfactory nerve; they are sharply differentiated from all the special senses except taste and the tactile sense; confused with taste in the case of flavors, and with tactile sense in that of such stimuli as ammonia fumes. The variety of odors is very great, and no analysis and classification can be made. The physical condition of smell is that the odorous substance exist in an extremely fine state of subdivision, and be driven against the olfactory mucous membrane of the nose. This latter mechanical process is ordinarily carried out by breathing or sniffing.

Smelling Salts. Restoratives used by persons suffering from faintness. See SAL VOLATILE.

Smelting. Process of melting or fusing ores for the purpose of extracting the metal. See COPPER, IRON, and FURNACES.

Smelts. Isospondylous fishes of the genus *Osmerus*. These are small fishes, with toothed mouth, sometimes erroneously called Frost-fish. They are closely related to the salmon, and are anadromous in habit, spawning in the headwaters of rivers late in fall.

Smendes. See HER-HOR.

Smerdis. Brother and victim of Cambyses; personated by an impostor, who gained the Persian throne 521 B.C.

Smeru, or SEMERU. Highest mountain of Java, on the e. end of the island, an active volcano. Altitude 12,030 ft.

Smetana, FRIEDRICH, 1824–1884. Bohemian pianist and composer; one of the founders of the Bohemian school. He wrote eight operas on national subjects, besides symphonic poems and chamber music. An enthusiastic interest in Czechish music, especially his own, has been lately aroused by performances of his opera *Married for Money*.

Smet, PETER JOHN DE, 1801–1872. Belgian Jesuit, missionary among the western Indians from 1838. *Rocky Mountains*, 1843–47.

Smift. Form of slow match, used by miners in firing blasts.

Smilax. 1. Genus of climbing woody plants of the Lily family, of wide geographical distribution. 2. *Myrsiphyllum asparagoides*, herbaceous vine of the same family, much cultivated for ornament.

Smiles, SAMUEL, LL.D., b.1812. Scottish author. *Self-Help*, 1859; *Lives of Engineers*, 4 vols., 1861–65; *Huguenots*, 1867–73; *Character*, 1871; *Thrift*, 1875; *Duty*, 1880; and several biographies.

Smillie, JAMES, 1807–1885. N.A. 1851. American landscape engraver. His principal plates are after Cole's *Voyage of Life*, Bierstadt's *Rocky Mountains*, and Kensett's *Mt. Washington*.—His sons, JAMES DAVID, b.1833, N.A. 1876, and GEORGE HENRY, b.1840, N.A. 1882, are noted painters.

Smirke, ROBERT, 1752–1845. English painter and illustrator, R.A. 1791.—His son, SIR ROBERT, 1780–1867, architect, R.A. 1811, knighted 1831, built Covent Garden Theater 1809, and most of the British Museum (1823–27), which was completed by his brother, SYDNEY, 1799–1877, R.A. 1860.

Smith, ADAM, LL.D., 1723–1790. Father of modern political economy; Prof. of Logic Univ. Glasgow 1751, and of Moral

Adam Smith.

Philosophy 1752–63. *Theory of Moral Sentiments*, 1759. His *Wealth of Nations*, 1776, was the fruit of long study, and is still of high importance. *Works*, 5 vols., 1811–12.

Smith, ALBERT, 1816–1860. English novelist. *Mr. Ledbury*, 1844; *Pottleton Legacy*, 1849.

Smith, ALEXANDER, 1830–1867. Scottish poet, essayist, and novelist. *Life Drama*, 1851; *Edwin of Deira*, 1861; *Dreamthorp*, 1863; *A Summer in Skye*, 1865; *Alfred Hagart's Household*, 1866; *Miss Oona McQuarrie*, 1866.

Smith, ANDREW JACKSON, U.S.A., b.1815. Brig.-gen. U. S. Vols. 1862–66; active at Vicksburg, on Red River, in Mo., and at Nashville.

Smith, ARCHIBALD CARY, b.1837. American naval architect.

Smith, ASA DODGE, D.D., LL.D., 1804–1877. Pres. Dartmouth Coll. from 1863.

Smith, BUCKINGHAM, 1810–1871. American antiquarian. His researches chiefly related to the early history of Mexico and Florida.

Smith, CALEB BLOOD, 1808–1864. M.C. from Ind. 1843–49; Sec. Interior 1861–62.

Smith, CHARLES EMORY, b.1842. Ed. Albany *Journal* 1870, and Phila. *Press* since 1880; U. S. Minister to Russia 1890–92.

Smith, CHARLES FERGUSON, U.S.A., 1807–1862. Brig.-gen. U. S. Vols. 1861; distinguished at Fort Donelson, Tenn.; Major-gen. 1862.

Smith, CHARLES HENRY ("BILL ARP"), b.1826. Humorist of Georgia.

Smith, CHARLES SHALER, 1836–1886. Civil engineer, builder of four bridges over the Mississippi and many elsewhere.

Smith, DAVID M., 1809–1881. American inventor.

Smith, DONALDSON, M.D., b. 1864. American traveler. *Through Unknown African Countries*, 1897.

Smith, EDMUND KIRBY, 1824–1893. Brig.-gen. and Major-gen. C.S.A. 1861, Lieut.-gen. 1862, General 1864; active in Ky., Tenn., and on Red River; chancellor Univ. Nashville 1870–75; prof. at Sewanee, Tenn., from 1875.

Smith, ELI, 1801–1857. American missionary in Syria 1827; Palestinian explorer, with Dr. E. Robinson, 1838 and 1852. *Researches in Armenia*, 1833.

Smith, ELIZABETH OAKES. See SMITH, SEBA.

Smith, ERMINNIE ADELLE (PLATT), 1836–1886. Ethnologist, working for the Smithsonian Institution.

Smith, EUGENE ALLEN, b. 1841. Asst. State Geologist of Mo. 1868–71; State Geologist of Ala. since 1873; prof. Univ. Ala. from 1871. *Reports*, 1874 and later.

Smith, FRANCIS HENNEY, LL.D., 1812–1890. Prof. Va. Military Institute 1839–89; author of mathematical text-books.

Smith, FRANCIS HOPKINSON, b.1838. American artist and author. *Well-Worn Roads*, 1886; *Tile Club*, 1887; *Colonel Carter of Cartersville*, 1891; *Tom Grogan*, 1896.

Smith, FRANCIS OSMOND, 1806–1876. M.C. from Me. 1833–39; promoter of the Morse telegraph. *Laws of Maine*, 1834.

Smith, SIR FRANCIS PETTIT, 1808–1874. English inventor of screw-steamers 1834; knighted 1871.

Smith, GEORGE, 1840–1876. English Assyriologist; in British Museum 1867; sent to Nineveh 1872–73, where he made important discoveries and collections. *Assyria*, 1875; *Hist. Babylonia*, 1877.

Smith, GEORGE WILLIAMSON, D.D., b.1836. Pres. Trinity Coll., Hartford, Conn., since 1883.

Smith, GERRIT, 1797–1874. Reformer, active against slavery; M.C. from N. Y. 1853–55. *Speeches*, 1855–61; *Theologies*, 1866.

Smith, GOLDWIN, LL.D., D.C.L., b.1823. Prof. Oxford 1858–66, Cornell 1868–71; at Toronto since 1871; prolific writer, chiefly on history; biographer of Cowper, 1880, Jane Austen, 1890, and others. *Hist. U. S.*, 1893.

Smith, GREEN CLAY, 1830–1895. Brig.-gen. U. S. Vols. 1862–63; M.C. from Ky. 1863–66; Gov. of Montana 1866–69; Prohibition candidate for Pres. 1876.

Smith, GUSTAVUS WOODSON, 1822–1896. Major-gen. C.S.A. 1861–65.

Smith, HANNAH ("HESBA STRETTON"). English novelist and writer of juvenile tales. *Paul's Courtship*, 1867; *Bede's Charity*, 1882.

Smith, HENRY BOYNTON, D.D., LL.D., 1815–1877. Prof. Union Theol. Sem., N. Y., 1850–74; ed. *American Theol. Review* 1862–71. *Apologetics*, 1882; *Systematic Theology*, 1884.

Smith, SIR HENRY GEORGE WAKELYN, 1788–1860. English general, active in India 1839–46; knighted 1844, Baronet 1846; in S. Africa 1834–35 and 1847–53.

Smith, HENRY HOLLINGSWORTH, M.D., b.1815. Prof. Univ. Pa. 1855–71. *Surgery*, 1852, '57, '63.—His cousin, FRANCIS GURNEY, M.D., 1818–1878, was prof. Univ. Pa. 1863–77, and ed. sundry medical books.

Smith, HENRY JOHN STEPHEN, 1826–1883. Prof. of Geometry at Oxford 1861. He wrote largely on the Theory of Numbers, received the Steiner Prize in Berlin 1868, and the Grand Prize of the French Academy 1883.

Smith, HOKE, b.1855. Ed. Atlanta *Journal* 1887; Sec. Interior 1893–96.

Smith, HORACE, 1779–1849. London stockbroker, author of many forgotten novels, and with his brother JAMES, 1775–1839, of *Rejected Addresses*, 1812, the most famous book of English parodies.

Smith, HORACE, 1809–1893. American inventor.

Smith, ISRAEL, 1759–1810. M.C. 1791–97; U. S. Senator 1803–7; Gov. of Vt. 1807–8.

Smith, JAMES, ab.1720–1806. Delegate to Congress from Pa. 1776–78; signer of the Declaration of Independence.

Smith, JAMES, b.1851. U. S. Senator from N. J. 1893.

Smith, JAMES EDWARD, 1759–1828. Pres. Linnæan Society in London. *Flora Britannica*, 1800–4; *Physiological and Systematical Botany*, 1807; *English Flora*, 1824–36.

Smith, JAMES MILTON, b.1823. Confederate M.C. 1862–65; Gov. of Ga. 1872–74.

Smith, JAMES YOUNGS, 1809–1876. Gov. of R. I. 1863–65.

Smith, JEREMIAH, 1759–1842. M.C. 1791–97; Chief-justice of N. H. 1802–9 and 1813–16; Gov. 1809–10.

Smith, JEROME VAN CROWNINSHIELD, M.D., 1800–1879. Ed. Boston *Medical Journal* 1828–56; prof. New York Medical Coll. 1859.

Smith, JOHN, 1579–1631. English adventurer, prominent in the early history of Va. 1606–9. He made voyages to New

John Smith.

England 1614–15. *True Religion*, 1608; *New England*, 1616; *Hist. Va.*, 1624; *Travels*, 1630. The story of his deliverance by Pocahontas is probably fabulous.

Smith, JOHN, 1616–1652. Cambridge Platonist, esteemed by Matthew Arnold the ablest of that eminent band. *Select Discourses*, 1660.

Smith, JOHN COTTON, LL.D., 1765–1845. M.C. 1801–7; Judge of Conn. Supreme Court 1809; Gov. 1813–18.

Smith, JOHN EUGENE, b.1816. Brig.-gen. U. S. Vols. 1862–65, serving in Tenn. and under Sherman; Col. U.S.A. 1866–81.

Smith, JOHN GREGORY, LL.D., 1818–1891. Gov. of Vt. 1863–65.

Smith, JOHN LAWRENCE, M.D., 1818–1883. Prof. Univ. Va. 1852–54, and at Louisville 1854–66; investigator of meteorites. *Mineralogy and Chemistry*, 1873.

Smith, JOHN PYE, F.R.S., 1774–1851. Teacher in theol. sem. at Homerton, England, 1800–50. *Scripture and Geology*, 1839.

Smith, JOHN WILLIAM, 1809–1845. Irish lawyer and writer. *Mercantile Law*, 1834; *Leading Cases*, 1837–40.

Smith, JONATHAN BAYARD, 1742–1812. Delegate to Congress 1777–78; judge of Pa. courts 1778.

Smith, JOSEPH, U.S.N., 1790–1877. Captain 1837, Rear-admiral 1862.

Smith, JOSEPH, 1805–1844. Mormon prophet; b. in Sharon, Vt., removed to Palmyra, N. Y., 1815. In 1827 he received, as he said, from an angel, a book written in strange characters on golden plates. This *Book of Mormon* he tr. by the aid of

magical spectacles, and pub. 1830. He and his followers removed 1831 to Kirtland, Ohio, 1838 to Mo., and 1840 to Ill., where he founded NAUVOO (q.v.). Here in 1843 he claimed to have received a revelation authorizing polygamy. A paper was started to oppose his teachings: its plant was destroyed by his disciples. He and his brother Hyrum were arrested and lodged in the county jail, where they were both shot by a mob. —His son, JOSEPH, b.1832, became the head of a reorganized ch. 1860.

Smith, JOSEPH MATHER, M.D., 1789–1866. Prof. New York Coll. of Physicians from 1826. *Epidemics*, 1824; *Hygiene*, 1850.

Smith, JOSHUA TOULMIN, 1816–1869. English antiquarian, in America 1837–42. *Northmen in New England*, 1839; *The Parish*, 1854; *Hist. English Guilds*, 1870.

Smith, JUDSON, D.D., b.1837. Prof. Oberlin 1866–84; ed. *Bibliotheca Sacra* 1882–84; foreign sec. A.B.C.F.M. since 1884. *Ch. History*, 1881.

Smith, JUNIUS, LL.D., 1780–1853. Lawyer and merchant of Conn.; founder British and American Steam Navigation Co. 1836.

Smith, MATTHEW HALE, 1816–1879. American writer for (1836) and against (1842–47) Universalism.

Smith, MELANCTON, U.S.N., 1810–1893. Commander 1855, Captain 1862; distinguished on the Gulf of Mexico and on the Mississippi; Commodore 1866, Rear-admiral 1870.—His grandfather, MELANCTON, 1724–1798, was in Congress 1785–88, and prominent in N. Y. affairs.

Smith, MERIWETHER, 1730–1790. Delegate to Congress 1778–82; supposed author Va. Bill of Rights.

Smith, MORGAN LEWIS, 1822–1874. Brig.-gen. U. S. Vols. 1862–65.—His brother, GILES ALEXANDER, 1829–1876, was Brig.-gen. 1863–65, and Major-gen. 1865–66. Both served in Tenn. and Ga.

Smith, NATHAN, M.D., 1762–1828. Prof. Dartmouth from 1798; eminent as a surgeon. *Medical Memoirs*, 1831.—His son, NATHAN RYNO, M.D., 1797–1877, was prof. Univ. Md. 1827–28 and 1840–70. *Anatomy of the Arteries*, 1832–35; *Fractures*, 1867.—His son, ALAN PENNEMAN, M.D., b.1840, prof. Univ. Md. since 1868, is a noted lithotomist.

Smith, NATHANIEL, 1762–1822. M.C. 1795–99; Justice Conn. Supreme Court 1806–19; leader in Hartford Convention 1814.—His brother, NATHAN, 1769–1835, was U. S. Senator from 1832. —Their nephew, TRUMAN, 1791–1884, was M.C. from Conn. 1839–49, and U. S. Senator 1849–54. *Anæsthesia*, 1859—A relative, PERRY, 1783–1852, was U. S. Senator 1837–43.

Smith, PERSIFOR FRAZER, 1798–1858. Brig.-gen. U.S.A. 1856; distinguished in the war with Mexico.—His cousin and namesake, 1808–1882, pub. *Reports of Pa. Supreme Court*, 32 vols., 1865–82.

Smith, PRESTON, 1823–1863. Brig.-gen. C.S.A. 1862.

Smith, RICHARD, b.1823 in Ireland. Ed. Cincinnati *Gazette* from ab.1857.

Smith, RICHARD PENN, 1799–1854. Grandson of Dr. Wm.; dramatist; biographer of Van Buren and Crockett, 1836.

Smith, RICHARD SOMERS, 1813–1877. Pres. Girard Coll., Phila., 1863–68; pres. U. S. Naval Academy from 1870. *Topographical Drawing*, 1854; *Linear Perspective*, 1857.

Smith, RICHMOND MAYO, b.1854. Prof. Columbia since 1883. *Economics*, 1888; *Emigration*, 1890.

Smith, ROBERT, 1689–1768. Prof. Cambridge 1716; master Trinity Coll. 1742; founder of prizes there. *Optics*, 1738; *Harmonics*, 1748.

Smith, ROBERT BARNWELL. Original name of RHETT, R. B. (q.v.).

Smith, ROBERT PAYNE, D.D., b.1818. Prof. Oxford 1865; Dean of Canterbury 1871; O. T. reviser; commentator. *Isaiah*, 1862; *Prophecy*, 1865.

Smith, ROSWELL, 1829–1892. Founder, in connection with J. G. Holland and C. Scribner, of *Scribner's Mag.* 1870–81, which became the *Century Mag.* 1881, and of *St. Nicholas*, 1873; pres. Century Co.

Smith, SAMUEL, 1752–1839. Revolutionary officer 1776–79; defender of Fort Mifflin 1777, and of Baltimore 1814; M.C. from Md. 1793–1803 and 1815–22; U. S. Senator 1803–15 and 1822–33; Mayor of Baltimore 1835–38.—His brother, ROBERT, 1757–1842, was Sec. of the Navy 1802–5, Atty.-gen. 1805, and Sec. of State 1809–11.

Smith, SAMUEL EMERSON, 1788–1860. Judge of Me. courts 1821–30 and 1835–37; Gov. 1831–34.

Smith, SAMUEL FRANCIS, D.D., 1808–1895. American Baptist, author of "My country 'tis of thee," 1832, and many hymns.

Smith, SAMUEL STANHOPE, D.D., LL.D., 1750–1819. Prof. Princeton 1779, pres. 1795–1812. *Evidences*, 1809; *Moral and Political Philosophy*, 1812.

Smith, SEBA, 1792–1868. American humorist. *Letters of Major Jack Downing*, 1833.—His wife, ELIZABETH OAKES (PRINCE), 1806–1893, wrote much in prose and verse.

Smith, SOLOMON FRANKLIN, 1801–1869. American comedian. —His son, MARCUS, 1829–1874, played with Wallack and Edwin Booth.

Smith, SOPHIA, 1796–1870. Founder of SMITH COLLEGE (q.v.).

Smith, STEPHEN, M.D., b.1823. Prof. Bellevue 1861, and Univ. N. Y. 1874; founder Health Association 1872; N. Y. Commissioner of Lunacy 1882–88. *Operative Surgery*, 1879.

Smith, SYDNEY, 1771–1845. English Divine, first ed. *Edinburgh Review*, 1802–3, and long a contributor; canon of St. Paul's 1831; famous chiefly for wit. His *Letters of Peter Plymley*, 1807–8, opened the way for Catholic emancipation. *Moral Philosophy*, 1850.

Smith, WALTER CHALMERS, b.1824. Scottish divine and poet. *Olrig Grange*, 1872; *Raban*, 1880; *Kildrostan*, 1884; *A Heretic*, 1890.

Smith, WILLIAM, 1697–1769. Councilor in N. Y. 1763–67; judge from 1763.—His son, WILLIAM, 1728–1793, became Chief-justice of N. Y. 1763, Councilor 1767, and was Chief-justice of Canada from 1786. *Laws of N. Y.*, 1762; *Hist. of N. Y.*, 1793. —His son, WILLIAM, 1769–1847, pub. *Hist. of Canada*, 1815.

Smith, WILLIAM, D.D., 1727–1803. Teacher at Phila. 1752, and in Md. 1780; elected Bp. of Md. 1783, but not consecrated; provost of Phila. Coll. 1789; framer of the "Proposed Book" (liturgical) 1786.—His half-brother, THOMAS, 1745–1809, was in Congress 1780–82, and Judge Pa. Supreme Court from 1794.—His cousin, WILLIAM, 1754–1821, taught in New York and Conn., and prepared the Office of Institution in the Prayer Book, 1804–8.

Smith, WILLIAM, 1730–1814. Delegate to Congress from Md. 1777–78; M.C. 1789–91.

Smith, WILLIAM, 1762–1840. M.C. from S. C. 1797–99; judge 1799–1816; U. S. Senator 1817–23 and 1826–29.

Smith, WILLIAM, 1769–1839. English surveyor, who in 1790 pub. a *Tabular View of the Strata*, in which he proposed a classification of the secondary formations in w. England. In 1815 he completed a geological map of England, in which he succeeded in throwing the whole complicated series of British strata into natural order. He is hence called the Father of English Geology.

Smith, WILLIAM ("EXTRA BILLY"), 1796–1887. M.C. 1841–43 and 1853–61; Gov. of Va. 1846–49 and 1863–65; Brig.-gen. C.S.A. 1862–63.

Smith, WILLIAM, U.S.N., 1803–1873. Commander 1854, Commodore 1862, serving in Va. and Fla.

Smith, SIR WILLIAM, D.C.L., 1813–1893. Prof. New Coll., London; knighted 1892. He edited important dictionaries of *Greek and Roman Antiquities*, 1840–42; *Biography and Mythology*, 1843–49, and *Geography*, 1853–57; of the *Bible*, 1860–63; of *Christian Antiquities*, 1875–80, and of *Christian Biography, Literature, Sects, and Doctrines to 800*, with Dr. Wace, 1877–87; of *Latin*, 1855–70; besides sundry students' manuals of history, and *The Quarterly Review* from 1867.

Smith, WILLIAM ANDREW, D.D., 1802–1870. Pres. Randolph-Macon Coll., Va., 1846–66; author of a defense of slavery 1857.

Smith, WILLIAM FARRAR ("BALDY"), U.S.A., b.1824. Brig.-gen. U. S. Vols. 1861, Major-gen. 1864–65, serving in Va., Md., and Tenn.; pres. New York Police Commission 1875–81.

Smith, WILLIAM HENRY, D.C.L., 1824–1891. Head of a great firm of news agents and booksellers; M.P. from 1868; Sec. Treasury 1874–77; Lord of Admiralty 1877–80; Sec. for War 1885; First Lord of the Treasury and leader of the Commons from 1887.

Smith, WILLIAM HENRY, 1833–1896. American journalist; manager Associated Press 1883–93. *St. Clair Papers*, 1882.

Smith, WILLIAM LOUGHTON, 1758–1812. M.C. from S. C. 1789–97; Minister to Portugal 1797–1800, and to Spain 1800–1; Federalist writer.

Smith, WILLIAM NATHAN HARRELL, 1812–1889. M.C. 1859–61; in Confederate Congress 1861–65; Chief-justice of N. C. from 1878.

Smith, WILLIAM ROBERTSON, D.D., LL.D., 1846–1894. Prof. Free Ch. Coll., Aberdeen, 1870–81, and Cambridge from 1883; ed. *Encyclopedia Britannica* 1881–88; biblical critic of highest rank. *O. T. in Jewish Ch.*, 1881; *Prophets of Israel*, 1882; *Religion of the Semites*, 1889.

Smith, WILLIAM RUSSELL, 1813–1896. M.C. 1851–57; in Confederate Congress 1861–65; pres. Univ. Ala. *Ala. Reports*, 1862.

Smith, SIR WILLIAM SIDNEY, R.N., 1764–1840. Defender of Acre when besieged by Bonaparte 1799; destroyer of a Turkish fleet at Abydos 1807; Admiral 1805, '10, '21; knighted 1815.

Smith, WILLIAM SOOY, b.1830. Civil engineer; Brig.-gen. U. S. Vols. 1862–64; builder of many bridges in the West.

Smith College. At Northampton, Mass., for women; founded 1871, opened 1875. It has a teaching staff of 40, ab. 850 students, and a library fund of $300,000. To the usual classical, literary, and scientific courses it adds schools of music and art.

Smithfield. In London; cattle-market till 1855; now a hay-market and garden; scene of many beheadings and burnings till 1612, especially of the Protestant martyrs under Mary.

Smithson, JAMES, F.R.S., ab.1754–1829. English scientist, devoted to chemistry and mineralogy; founder of the Smithsonian Institution by a bequest which realized $541,379.63 to the U. S. government.

James Smithson.

Smithsonian Institution. At Washington; established 1846, "for the increase and diffusion of knowledge among men," by use of the bequest of JAMES SMITHSON (q.v.). Separate funds for special objects have since been added by other benefactors. Its affairs are managed by a board of regents, consisting of the President of the U. S., the Chief-justice, 3 Senators, 3 members of the House, and 6 citizens. The executive office is called Secretary. This post has been filled by Joseph Henry, 1846–77, Spencer F. Baird, 1877–87, S. P. Langley since 1888. Its library of 300,000 titles is deposited in the National Library. It issues various serial publications: *Contributions to Knowledge*, 28 vols.; *Miscellaneous Collections*, 36 vols.; *Reports; Bulletins of National Museum*, 1–50; *Proceedings*, 17 vols.; *Reports of Bureau of Ethnology*, 12 vols. The U. S. Weather Bureau and Fish Commission grew out of enterprises which it set on foot. The Astrophysical Observatory and the National Zoölogical Park have been added by the present secretary to the numerous undertakings previously initiated and directed.

Smithsonite. $ZnCO_3$. Zinc carbonate; mineral frequently found associated with other zinc-bearing minerals, and, when abundant, of value as an ore of zinc.

Smith Sound. Between Greenland and Grinnell Land, in Arctic N. America, connecting Baffin Bay with the Polar Sea.

Smith-Stanley, E. G. See DERBY.

Smock, JOHN CONOVER, b.1842. Asst. in N. J. Geological Survey 1864–68 and 1871–85; prof. Rutgers Coll. 1871–85; in N. Y. State Museum 1885; State Geologist, N. J., 1890.

Smock-Frock. Coarse linen outer garment, worn by English laborers to protect the other clothes.

Smoke Arch. Partition thrown across the fire-box of a locomotive boiler to secure more complete combustion by union of the fuel gases with air before they enter the tubes to be extinguished by the low temperature there (see COMBUSTION). It makes the back part of the fire-box into a combustion chamber, and diminishes the discharge of solid fuel from the stack. It is either an arch of fire-brick sprung from the two sides of the water-legs, or a water-table of boiler plate in communication with the water in the legs at sides, front, and rear, so that it is added heating surface, the gases passing through the table by a hole; or else slabs of fire-brick rest on curved water tubes, to force the flame toward the door and the incoming air before they pass together into the open space and into the tubes. Its name comes from its use as a smoke preventer with long flame fuels. See BOILER, FIRE-BOX and LOCOMOTIVE.

Smoke-Box. See BOILER and LOCOMOTIVE.

Smokeless Powders. These have been made from nitrostarch, nitrocellulose, nitroglycerin, nitrobenzol, picric acid or mixtures of them, with additions of potassium, ammonium, or barium nitrate. The addition of mineral or non-volatile matter increases the smoke. They effect high velocities to projectiles with smaller charges than prevail with other powders.

Smoke-Prevention. Plans for furnishing sufficient warmed air in furnaces or combustion chambers to secure the union of all the carbon in the fuel with oxygen, and its combustion to CO_2 gas. If there is not oxygen enough, or heat or time enough for this, the carbon is precipitated in fine black particles, which are not combustible at the temperature in which they find themselves; they pass out with the invisible gases from the stack, coloring them black, and constituting smoke. There is no such thing as smoke consumption. See COMBUSTION.

Smoking. The custom of smoking tobacco originated among the natives of America, whence, shortly after the discovery, it spread rapidly over the world. Among the northern tribes the pipe was employed; southward, the cigarette and cigar. The practice was largely ceremonial, and probably sprang from the use of smoke to make the breath visible in the medicine man's rite of blowing upon the sick. Opium is now smoked in China, dried hemp leaves in Mohammedan countries, and tobacco by practically every people on earth. See PIPES and TOBACCO.

Smoky Quartz. See CAIRNGORM STONE.

Smolensk. Old town of Russia, on the Dnieper, 244 m. w. by s. from Moscow; thrice fiercely, but vainly, assaulted by Napoleon, Aug. 16–17, 1812, with fearful slaughter on both sides; fired by the Russians, who silently retreated on the night of the 17th. Pop., 1891, 38,034.

Before Smolensk, August 20, 1812.

Smollett, TOBIAS GEORGE, M.D., 1721–1771. Scottish novelist, resembling Fielding in vigor and coarseness; translator of *Don Quixote*, 1755, *Gil Blas*, 1761, and much of *Voltaire*, 1761–67. *Roderick Random*, 1748; *Peregrine Pickle*, 1751; *Ferdinand, Count Fathom*, 1753; *Sir Lancelot Greaves*, 1760–62; *Humphrey Clinker*, 1771. Of his *History of England*, 1758–64,

the portion covering 1689–1760 is appended to Hume's. His other works include *Travels*, 1766; a satire, *Adventures of an Atom*, 1769; two plays, and a few fine poems.

Smooth. A surface is so called when no resistance to motion is developed when it is moved in contact with another surface. The coefficient of friction between any two surfaces one of which is smooth is always zero.

Smooth Bore. Muzzle-loading gun whose bore is not rifled. Its caliber is always a trifle greater than that of the projectile to facilitate loading. It is rapidly becoming obsolete. Smooth bore projectiles are of necessity spherical in shape, and are made of lead for small arms and of cast iron for cannon.

Smut on Maize.

Smuggling. Illegal importation of dutiable articles without paying the import tax upon them; statutory offense in most countries.

Smut. Fungi of the group *Coniomycetes*, parasitic on other plants, and in many cases exceedingly destructive.

Smut. Earthy, dirty coal, such as is frequently seen near the outcrop of a seam.

Smybert, or **Smibert,** JOHN, ab. 1684–1751. Scottish painter, in Boston from 1729. His portraits are of historical and artistic importance.

Smyrna. Only one of the ancient cities of Asia Minor which has survived to the present. It claimed to be the birthplace of Homer, and lay at the entrance of a great fertile plain, with Sardis behind it; rebuilt on a new site, at the head

Smyrna from the Bay.

of the Gulf of S., ab.327 B.C. Polycarp was martyred here ab.169. It was taken by Tamerlane 1402, by Turks 1424. It is the chief seat of Levant trade. An earthquake, May 12, 1875, destroyed 2,000 lives. Pop. ab. 220,000, half Greeks.

Smyth, ALEXANDER, 1765–1830. U. S. Inspector-gen. 1812; M.C. from Va. 1817–25 and 1827–30. *Regulations for Infantry*, 1812.

Smyth, ANDREW WOODS, M.D., b.1833 in Ireland. Surgeon in New Orleans, eminent for difficult operations.

Smyth, CHARLES PIAZZI, LL.D., b.1819. Astronomer-royal for Scotland 1845–88; noted for his theories about the great pyramid, pub. 1864–68. *Teneriffe*, 1858.—His father, WILLIAM HENRY, R.N., 1788–1865, was made rear-admiral 1853 and admiralty's hydrographer 1857. *The Mediterranean*, 1854.

Smyth, JOHN, ab.1552–1612. English separatist, at Amsterdam from 1606; founder of the General Baptists.

Smyth (SAMUEL PHILLIPS), NEWMAN, D.D., b.1843. Pastor at New Haven since 1882. *Old Faiths in New Light*, 1879–87; *Orthodox Theology of To-day*, 1881; *Personal Creeds*, 1890; *Ethics*, 1892.—His brother, EGBERT COFFIN, D.D., b.1829, became prof. at Andover 1863, pres. 1878, and ed. *Andover Review* 1884.—Their father, WILLIAM, 1797–1868, was prof. at Bowdoin from 1825. *Algebra*, 1833–52; *Calculus*, 1856.

Snails. See STYLOMMATOPHORA and BASOMMATOPHORA.

Snake-Bird. See DARTERS and WRY NECK.

Snake Bites. See BITES and SNAKE POISON.

Snake-Head. See BALMONY.

Snake Indians. See SHOSHONES.

Snake-Nut. *Ophiocaryon paradoxum.* Tree of the natural family *Sabiaceæ*, native of Guiana. The large embryo is coiled in the seed, so as to resemble a snake.

Snake Plains. Region in Idaho, Oregon and Washington, through which the Snake River flows; covered with basaltic lava. Area ab. 250,000 sq. m. Lost rivers flow beneath the lava.

Snake Poison. See SOLENOGLYPHA.

Snake River. Fork of the Columbia. It heads in Yellowstone National Park, pursues a tortuous and very rapid course w. across Idaho, with several fine falls, among them Shoshone and American Falls. At the w. boundary of Idaho it turns n. and then w. into Washington, to its junction with the Columbia. Length ab.1,000 m., drainage area 103,835 sq. m.

Snake River. That part of the Mackenzie in Canada which connects Lake Athabasca with Great Slave Lake.

Snakeroot. Plants supposed to be cures for snake bites; among them *Ophiorhiza mungas*, a shrub of the natural family *Rubiaceæ*, native of India; *Chiococca augustifolia*, of the same family, from Brazil, and *Casearia ulmifolia*, of the natural family *Samydaceæ*, also from Brazil.

Snakeroot, BLACK. In e. U. S., herbs of the genus *Sanicula*, natural family *Umbelliferæ*.

Snakeroot, BUTTON. *Eryngium maritimum.* E. American herb of the Carrot family, called also Rattlesnake Master; also species of *Liatris* of the Composite family.

Snakeroot, SENECA. *Polygala senega.* Herb of the natural family *Polygalaceæ*, native of e. N. America.

Snakeroot, VIRGINIA. *Aristolochia serpentaria.* Woodland herb of the natural family *Aristolochiaceæ*, native of e. N. America.

Snakeroot, WHITE. *Eupatorium ageratoides.* White-flowered perennial herb of the Composite family, native of e. N. America.

Snakes. See OPHIDIA and COLUBRIFORMIA.

Snakestone. Placed upon a snake bite, it is supposed by the superstitious that it will absorb the poison. When it is applied to the bite of a rabid dog it is called a Madstone. It usually is of a porous nature and may have strong absorbing power, and this, coupled with the unlimited faith of the person in the stone, may act as a powerful auxiliary to a cure.

Snake-Wood. *Strychnos colubrina.* Small tree of the natural family *Loganiaceæ*, native of the E. Indies, supposed to be a cure for snake-bites.

Snapdragon. *Linaria vulgaris.* Showy-flowered species of the genus *Antirrhinum*, natural family *Scrophulariaceæ*, natives of Europe; cultivated for ornament, and sparingly escaped into waste places in N. America; called also Butter and Eggs and Toad Flax. It is a very troublesome weed in some localities in meadow and pasture land. It seeds abundantly, and also spreads from underground stems: for these reasons is difficult of eradiction. It is not touched by animals under ordinary circumstances, though sheep may be starved to eat it.

Snapdragon (*Linaria vulgaris*).

Snapdragons. Accompaniment of All-Hallows Eve festivities, consisting of small slips of paper with verses written on them, wrapped in lead or tinfoil, placed in a dish and covered with water, over which alcohol is ignited. The players each snatch one through the flames, and the verses are supposed to tell their fortunes.

Snapping Turtles. See CHELYDRIDÆ.

Sneezeweed. *Helenium autumnale.* Showy, yellow-flowered, resinous herb of the natural family *Compositæ*, native of N. America.

Sneezewort. *Achillæa ptarmica.* White-flowered herb of the Composite family, native of Europe, introduced as a weed into N. America.

Sneezing. The mechanism of sneezing consists in a deep and long-drawn inspiration filling the lungs, a closing of the top of the windpipe (glottis) and the opening of the pharynx into the mouth, followed by a sudden, forcible expiration and the sudden opening of the glottis, causing the expired air to pass entirely through the nose.

Snell, or **Snellius,** WILLIBRORD, 1591–1626. Prof. Leyden 1613; precocious mathematician, who discovered the properties of the polar triangle in Spherical Trigonometry. *Cyclometria,* 1621.

Snellaert, FERDINAND AUGUSTIN, b.1809. Belgian essayist and critic.

Snelling, JOSIAH, U.S.A., 1782–1829. Captain 1809, Colonel 1819; active in war of 1812; builder of Fort S., near St. Paul, Minn., 1824.

Snethen, NICHOLAS, 1769–1845. Introducer of camp-meetings in N. Y. and Md.; leader in forming M. P. Ch. *Lay Representation,* 1835.

Snider, JACOB, d.1866. Phila. merchant, inventor of a breech-loading rifle, adopted in England 1866.

Snipe. Limicoline, twilight birds, with soft, mottled plumage; long, soft, flexible bill, and (in true Snipes) eyes placed far back, over the ears. *Scolopacidæ,* the Snipe family, of ab. 90 species, includes also Sandpipers, Curlews, etc. The sexes are unlike, and seasonal variations of plumage occur. In *Rostratula,* a genus represented only in South America, Africa, and s.e. Asia, the female is largest, and does the courting: the male incubates the eggs, the reverse of what obtains in other genera.

Common Snipe (*Gallinago cœlestis*).

Snoilsky, KARL JOHAN GUSTAV, COUNT, b.1841. Swedish lyric poet and diplomatist. His earliest poems, *Smaädikter,* 1861, are characterized by great warmth, especially in its descriptions of Italian life and scenery.

Snore Hole. For admission of water in snore piece, at lower end of a set of mining pumps.

Snoring. Noisy breathing during sleep caused by the vibration of the soft palate during inspiration; this is only possible when the mouth is open.

Snorre, STURLASON, 1178–1241. Icelandic historian and poet, author of the *Heimskringla,* a chronicle of Norwegian kings to 1177, and (of part, at least) of the *Younger Edda.*

Snow. Precipitation of the vapor of the atmosphere when the temperature is below freezing. It falls in flakes, each of which is a distinct crystal or a combination of crystals. Over 1,000 different forms of crystals have been observed. See HAIL and ICE FLOWERS.

Snowball-Tree. Cultivated form of the Cranberry-tree, *Viburnum opulus,* a shrub of the natural family *Caprifoliaceæ;* known also as Guelder-rose.

Snowberry. *Symphoricarpus racemosus.* White-berried shrub of the natural family *Caprifoliaceæ;* native of n. N. America, much planted for ornament.

Snowberry, CREEPING. *Chiogenes hispidula.* Low, white-berried plant of the Heath family, native of deep woods in n. N. America.

Snow Cocks (SNOW PHEASANTS). Gallinaceous birds dwelling among the heights (6,000 to 18,000 ft. elevation) of the Asiatic mts., breeding near the snow line. They are large and shy, weighing 3 to 6½ lbs., and have a length of 19 to 29 in. They post sentinels while feeding. See PHEASANTS.

Snowden, JAMES ROSS, 1810–1878. Director U. S. Mint 1853–61; author of several numismatic works.—His nephew, ARCHIBALD LOUDON, b.1837, was supt. of the Mint 1879–85.

Snowdon. Mt. of N. Wales, with five summits. Greatest altitude 3,560 ft.

Snowdrop Tree. See SILVER-BELL TREE.

Snow Limit. Altitude on mountain sides at which snow is found to remain perpetual; lower in summer than in winter. This in Greenland is 2,350 ft., Norway 5,100, Alps 8,800, Caucasus 11,000, Rocky Mts. 12,500, Himalaya 19,500, Bolivian Andes 16,000 and Patagonia 6,000.

Snow Plow. Of the various forms in use, a revolving one is shown in the cut, the helical blades of the plow throwing the snow by centrifugal action to one side of the track.

Snow Plow.

The earlier forms of snow plows required oftentimes the combined power of 15 locomotives to push them through the drifts, when the snow had become thoroughly compacted.

Snow Shed. Built over a railroad cut to prevent the accumulation of snow. For this item of snow protection the Canadian Pacific Railway has expended ab. $4,000,000.

Snow Shoe. Light frame of wood supporting a web of rawhide which is fastened to the foot, so as to prevent the foot from sinking into the snow. The Canadian snow shoe is from 3 to 5 ft. long and 1 to 2 ft. wide. In Norway, the ski is used for the same purpose and is from 8 to 10 ft. long but only 4 in. wide.

Snuff. Powder used as an errhine. Tobacco is the usual basis, but small quantities of other articles are added, to vary its flavor, pungency, and scent. Its use has greatly fallen off in late years.

Snuff Bottles. The use of snuff was common among the Indians of the Amazon, who were described at the time of the discovery as using short tubes with which they blew the substance into each other's noses. A similar custom is said to survive among the Uitotos. In Morocco and many parts of Africa snuff is carried in bamboo boxes made of a joint of the reed. In China, small bottles of glass, porcelain, and jade are employed. These objects are often elaborately carved and decorated, and are much sought by collectors, both in Europe and the East.

Snyders, FRANS, 1579–1657. Flemish animal painter; a vigorous designer and fine colorist, associated with Rubens.

Soane, SIR JOHN, 1753–1837. English architect, prof. R. A. 1806. *Buildings,* 1828.

Soap. In its widest sense, metallic salt of a fat acid; commonly a sodium (hard) or potassium (soft) salt of a fat acid or a mixture of fat acids, usually consisting of stearic, palmitic, and oleic acids; made by boiling fats with caustic soda or potash.

Soap Bark. *Quillaia saponaria.* Tree of the natural family *Rosaceæ,* native of Chili. Its bark is used for washing as a substitute for soap, as is that of *Pithecolobium bigeminum* of n. S. America, under the same name. It is added to fruit syrups, used with soda-water, to form foam. See SAPONIN.

Soapberry. *Sapindus saponaria.* Small tree of the natural family *Sapindaceæ,* native of tropical America. Its fruit, the size of a gooseberry, is used as a substitute for soap.

Soap-Bubbles. See BUBBLES.

Soap-Bulb. *Chlorogalum pommeridianum.* Bulbous herb of the Lily family, native of n.w. N. America. Its bulbs are used by Indians as a substitute for soap.

Soapstone. 1. Massive variety of TALC (q.v.). 2. In many mining districts, any soft unctuous rock.

Soapwort. See BOUNCING BET.

Sobbing. A series of convulsive inspirations following each other slowly, with the glottis closing early in the act, permitting but little air to enter the lungs.

Sobieski, JOHN III., 1624–1696. King of Poland from 1674; became Commander-in-chief 1667; he routed the Turks at Choczim Nov. 11, 1673, and in 1683, with an army of 50,000, attacked the Turks, who were besieging Vienna with a force of 100,000, routed and pursued them into Hungary. He was less fortunate as ruler than as general.

Sobraon. Village of n. India, on the Sutlej; scene of a British victory over the Sikhs Feb. 10, 1846.

Social Capital. Things made by man, by which the society in question obtains its livelihood; consisting of stores of

commodities for the sustenance of workers, and raw materials, machinery, and all other aids to production.

Social Contract. Supposed agreement, expressed or implied, regulating the relation of citizens with one another, and forming the foundation of civil society.

Social Democracy. Movement in Germany, begun by Lassalle 1862, and developed under the influence of Marx and his followers. It became a political influence 1871, and was subjected to a government proscription 1878–90, but has shown little sign of diminution.

Social Duties. Those which we owe to our fellow human beings, as justice and benevolence.

Socialia. See ASCIDIANS and TERMITES.

Socialism. Proposed reorganization of society, in which the element of competition should be less prevalent, the action of the State more extensive, and, as a consequence, greater equality of conditions exist among the members of the community.

Socialists of the Chair. Certain teachers in German universities and their disciples in other countries, who teach the inadequacy of individual competition and the desirability of a greater extent of State intervention in industry.

Social Psychology. See PSYCHOLOGY.

Social Sanction, IN ETHICS. Pleasures that come from the approval and good-will of our fellowmen, or unpleasantness arising from their disapprobation and dislike.

Social Science. See SOCIOLOGY.

Social War. 1. Between Rome and her Italian allies, 90–88 B.C. 2. Between Athens and her allies 358–355 B.C.

Social Wealth. Sum total of the wealth of the individuals composing a social group.

Social Workshops. Institutions proposed by Louis Blanc, in which, by the use of capital loaned by the State, co-operative production should be carried on, forming the basis for a socialistic organization. They were travestied in the National Workshops of the Revolution of 1848.

Societies. Organized association of persons for the accomplishment of some particular object; such as the advancement of science, literature and art, or for mutual aid in distress.

Societies, COLLEGE SECRET. The first Greek letter secret society in U. S. was the Phi Beta Kappa, founded 1776. Chapters of this exist at many colleges; it is now an honorary society, without secrecy, which meets at commencement time. Following this were a number of secret societies, whose object was training in composition and oratory. The present system originated with the Kappa Alpha society, founded at Union Coll. 1825. This was followed by the Sigma Phi and Delta Phi at the same college in 1827. Since then a great number of such societies have been established. Their aims are the promotion of social intercourse and fraternal association, combined with literary culture. They usually have chapters at a number of colleges. Many have chapter houses, where the members lodge and hold their meetings. There is frequently a council or convention of delegates from the chapters, which establish rules of government. Books of songs, catalogues of members and periodicals are issued by many of the fraternities. Graduate chapter houses have also been established. The badge is usually a pin or key, bearing the respective Greek letters.

Society Islanders. Typical Polynesian Malays of beautiful physique, who invaded these Pacific islands and conquered a darker race, who had narrower skulls. Now nominally Christian, they were celebrated for their beautiful tattooing of both sexes, which was so extensive as to give the naked body the appearance of being clothed. They eat animal food only on special occasions, and do their cooking by means of heated stones. See TAHITIANS.

Society Islands. Mountainous group in the Pacific, in lat. 16°–18° S., long. 148°–155° N. Chief exports are cocoanut

Society Islands.

fiber and mother-of-pearl. They comprise two groups, the Windward and Leeward; the former under French protection from 1842, annexed in 1880, and the latter in 1885. They are of volcanic origin, surrounded by coral reefs, and watered by numerous streams. Climate is mild and healthy. Total area 636 sq. m., pop. ab. 16,000. See TAHITIANS.

Society of Friends. See FRIENDS.

Society of Jesus. See JESUITS.

Socin, ALBERT, b. 1844. Swiss Orientalist, prof. Leipzig. *Arabic Grammar*, tr. 1885.

Socinus, LÆLIUS (LELIO SOZZINI), 1525–1562. Italian reformer and refugee. His papers passed to his nephew, FAUSTUS, 1539–1604, who spread his doctrines, anticipating modern rationalism and Unitarianism, through Poland, and endured much persecution. His followers, the Socinians, prospered for a time, but were condemned as traitors by the Diet of Warsaw, 1658, and driven into exile.

Sociology. Science which treats of man in his social relations; including Politics, Economics, and Ethics, as distinctive subjects, and those principles which underlie these and all other relations of men to one another.

Socotra. Island in Indian Ocean, 220 m. s. of Arabia, and 140 e. of Cape Guardafui; held by Gt. Britain 1835–39 and since 1886. Area 1,380 sq. m., pop. ab. 10,000, of mixed blood, chiefly Arab and negro.

Socrates, 469–399 B.C. Athenian philosopher, famous from his personal characteristics no less than the nature of his doctrines; founder of the psychological method; teacher of Plato, and critic of the Sophists; accused of corrupting Athenian youth and condemned to drink hemlock. He applied scientific dialectics to practical questions, originated "the Socratic method" for gaining truth by means of question and answer,

Socrates—Marble Bust in Villa Albani at Rome.

but confined himself to ethical topics, abstaining from physical inquiries. He wrote nothing, and is known to us chiefly through Plato's dialogues and Xenophon's *Memorabilia*. His influence is comparable to that of Jesus; all schools of Greek thought claimed the sanction of his name, and professed to be the true interpreters of his teachings, as all systems of Christian theology and ethics have sought to expound, if not to monopolize, the ideas of Christ.

Socrates, 5th cent. Church historian, resident of Constantinople. His work extends 305–439, continuing that of Eusebius.

Sod. Dense mass of roots and underground stems formed by many of the grasses. Its formation depends mainly upon the habit of the plant, but is aided by soil and climate. Those grasses which form the closest sod are most valuable as lawn grasses, and in general are more valuable for pasture than for curing as hay. Turf is synonymous with sod.

Soda. See SODIUM CARBONATE.

Soda Ash. Commercial sodium carbonate.

Sodalite. $3Na_2Al_2Si_2O_8+2NaCl$. Sodium aluminium silicate combined with a small quantity of chloride; important constituent of some crystalline rocks.

Sodamide. $NaNH_2$. Greenish or red crystalline mass, formed by passing dry ammonia gas over heated sodium. It decomposes readily with water.

Soda Niter. Natural SODIUM NITRATE (q.v.).

Soda Water. Water charged with carbon dioxide under pressure; so named because acid sodium carbonate is sometimes used for making the carbon dioxide.

Sodium, or NATRIUM. Na. At. wt. 23.05, sp. gr. .979, sp. ht. .293, mpt. 95.6° C., valence I.; discovered by Davy 1807; widely distributed in nature, occurring as the chloride in sea water, as rock-salt and Chili saltpeter; very light, soft, silvery white metal, which rapidly oxidizes in the air. It decomposes water, liberating hydrogen. It is kept under benzine or petroleum to prevent the action of the air; even then it gradually becomes coated with a layer of the oxide and hydroxide, which increases with time. The metals sodium, potassium, and lithium may be kept bright by being rubbed with a rag under a mixture of 3 parts petroleum and 1 part amyl alcohol, until it is silvery white, then removed to petroleum containing 5 per cent amyl alcohol, washed with petroleum, and placed in petroleum containing 0.5 to 1 per cent of amyl alcohol. Treated thus, the metal retains its silvery luster for a long time, but finally becomes covered with a coating of the amylate, which may be easily removed by rubbing.

Sodium, METALLURGY OF. It was formerly obtained by subjecting a mixture of sodium carbonate and charcoal to a white heat, or of caustic soda and iron filings to a red heat, and condensing in a flat, book-shaped condenser the vapors of

Manufacturing Sodium by the Iron Process.

sodium driven off. This is now entirely superseded by the Castner process of electrolytically decomposing fused caustic soda, which melts at 312° C. and is electrolyzed at 316°; at 318° to 320° the current separates out very little metal, and at 325° the electrolysis yields no sodium. Each pot requires 7 horsepower of current to run it, at a tension of 5 volts, and produces 1 lb. of sodium per hour. The same current that performs the electrolysis develops sufficient heat in transit to keep the bath at the proper temperature. A plant at Oldbury, England, produces 1¾ tons of sodium per day; a 500 horsepower plant started 1897 at Niagara Falls, ¾ of a ton. The present market price is 50 cts. per lb. Its uses are in making aniline dyes, antipyrine, sodium cyanide (a substitute for potassium cyanide), sodium peroxide (a valuable bleach for silk and wool, and a useful laboratory reagent), and in quickening the amalgamating action of mercury on gold ores.

Sodium Alcoholate. C_2H_5ONa. White crystalline compound, formed by the action of metallic sodium upon absolute alcohol; easily decomposed by water, forming alcohol and caustic soda; used largely in synthesis of organic compounds.

Sodium Alum. $Na_2SO_4.Al_2(SO_4)_3+24H_2O$. Similar in its properties to potassium and ammonium alums, and more difficult to prepare, since it is more soluble than these; not manufactured on a large scale. See ALUMS.

Sodium Aluminium Fluoride. See CRYOLITE.

Sodium Amalgam. Made by dropping sodium upon heated mercury. A number of different amalgams may be obtained by varying the proportions of the constituents. A crystallized compound of the formula Hg_6Na is known, and is used for obtaining hydrogen in alkaline solutions.

Sodium Ammonium Hydrogen Phosphate. $HNaNH_4PO_4$. Microcosmic salt; white crystalline salt, found in guano and decomposing urine; used in the laboratory for blowpipe work, its value depending on the fact that at high temperatures it combines with many metallic oxides, forming colored compounds.

Sodium Biborate. See BORAX.

Sodium Bicarbonate. $NaHCO_3$. Primary or acid sodium carbonate; white solid, made by passing carbon dioxide into a solution of sodium carbonate in water; used in medicine, in baking powders, and for effervescing beverages.

Sodium Borate. See BORAX.

Sodium Bromate. $NaBrO_3$. Small, lustrous, regular crystals; mpt. 384° C., sp. gr. 3.33; soluble in water; made by treating caustic soda with bromine.

Sodium Bromide. NaBr. White solid; made by treating caustic soda with bromine, evaporating to dryness, and igniting the residue with carbon. It melts at 708° C., is soluble with difficulty in alcohol, and is very similar to POTASSIUM BROMIDE (q.v.).

Sodium Carbonate. $Na_2CO_3+10H_2O$. Soda. Anhydrous sodium carbonate has sp. gr. 2.47, is soluble in 6 parts of water at 10° C., 2 parts if boiling water, has an alkaline taste and reaction, melts at a red heat and crystallizes with 62.69 per cent water. In the Le Blanc process it is made from sodium chloride, common salt, by treating with sulphuric acid; the sulphate thus formed is heated with coal and calcium carbonate, and lixiviated with water, leaving calcium sulphide undissolved and sodium carbonate in solution; this is evaporated, and the residue heated, when it loses all its water, forming the soda ash of commerce. Another process in use is the Solvay or Ammonia process. Sodium chloride in solution is treated with ammonium bicarbonate, when sodium bicarbonate is formed; this, being more insoluble than the ammonium chloride formed at the same time, crystallizes out. On heating it is converted into sodium carbonate. It is also made from cryolite. It is manufactured in enormous quantities for use in making glass, soap, for household and a variety of other purposes. It was formerly obtained from the ashes of plants.

Sodium Chlorate. $NaClO_3$. Colorless tetrahedral crystals of the regular system; mpt. 302° C., sp. gr. 2.29; soluble in water; strong oxidizing substance, used in the manufacture of aniline-black; made by passing chlorine into a solution of caustic soda. It is now made by electrolyzing a solution of salt.

Sodium Chloride. NaCl. Salt, occurring widely distributed in the earth (see ROCK SALT), springs, lakes, and sea water, which contains ab. 2.7–3.2 per cent of salt. In some localities it is mined, in others water is used to dissolve it; the solution is then evaporated. In hot countries, the sun's heat is utilized for evaporating ocean water. It crystallizes in colorless cubes, melts at 776° C., and is used as the starting point in the preparation of other sodium compounds, for freezing mixtures, packing meats, soap-making, and for culinary purposes. See SALT.

Sodium Chromate. $Na_2CrO_4+10H_2O$. Made by fusing chromic oxide and sodium nitrate, and evaporating the solution at low temperatures; deliquescent, yellow prisms; of alkaline reaction and a bitter, metallic taste.

Sodium Dichromate. $Na_2Cr_2O_7+2H_2O$. Yellowish-red solid, very similar to potassium dichromate, and now frequently used in place of it, the sodium compound being cheaper.

Sodium Dioxide. Na_2O_2. Peroxide. Pure white mass, made by heating sodium nitrate or igniting sodium in oxygen. It does not decompose on heating. See SODIUM.

Sodium Diuranate. $Na_2U_2O_7$. Uranium Yellow. Made by heating pitchblend, containing 40 to 50 per cent of uranium oxide (U_3O_8) and lime in a reverberatory furnace; used for painting on glass and porcelain, and as a pigment for coloring glass.

Sodium Fluoride. NaF. Colorless, at times opalescent cubes. Decrepitating on heating; sp. gr. 2.76, mpt. 902° C.; slowly and slightly soluble in water; made by neutralizing sodium carbonate with hydrofluoric acid.

Sodium Hydrazoate. NaN_3. Well crystallized, easily soluble substance, very similar in appearance and properties to sodium chloride; made by treating sodium amide with nitrous oxide.

Sodium Hydride. Na_2H. Very similar to POTASSIUM HYDRIDE (q.v.), and made in the same way.

Sodium Hydrogen Sulphate. $NaHSO_4$. Acid sodium sulphate; triclinic prisms, obtained by treating sodium sulphate with sulphuric acid; decomposed by alcohol into the free acid and normal salt.

Sodium Hydroxide. NaOH. Caustic soda, sodic hydrate; very similar to the potassium compound, used more extensively because cheaper; made by treating sodium carbonate in solution with calcium hydroxide; used in the laboratory and for making soap.

Sodium Hypobromite. Similar to SODIUM HYPOCHLORITE (q.v.).

Sodium Hypochlorite. NaOCl. Known only as mixed with sodium chloride in the liquid obtained by passing chlorine into cold, dilute caustic soda.

Sodium Hyposulphite. $NaHSO_2$. Colorless crystals, made by treating a solution of acid sodium sulphite with zinc, or by passing a galvanic current through the same solution; used by dyers and calico-printers for the reduction of indigo. This is not the substance used in photography. See also SODIUM THIOSULPHATE.

Sodium Iodate. $NaIO_3$. Crystals containing varying proportions of water, which they lose at 150° C.; present in Chili saltpeter; made by treating iodine trichloride with sodium carbonate.

Sodium Iodide. NaI. Anhydrous cubes; mpt. 628–633° C., sp. gr. 3.45; very soluble in water; prepared in the same way as POTASSIUM BROMIDE (q.v.).

Sodium Metaborate. $NaBO_2+4H_2O$. White, crystallized solid, obtained by adding the proper quantity of sodium hydroxide to a solution of borax and evaporating to crystallization.

Sodium Monoxide. Na_2O. Gray mass, conchoidal fracture, made by heating caustic soda with sodium.

Sodium Nitrate. $NaNO_3$. Chili saltpeter occurs in large deposits in the rainless districts of Chili, at an altitude of 3,000 ft., s. Peru and Bolivia; containing 27 to 65 per cent of the pure substance, the impurities being common salt, gypsum and sodium sulphate. Deposits have been reported from Nevada and New Mexico. It is used largely in the manufacture of nitric acid, artificial manures, and for certain kinds of powders which are not required to fire quickly.

Sodium Nitrite. Similar to POTASSIUM NITRITE (q.v.).

Sodium Perchlorate. $NaClO_4+H_2O$. Hygroscopic leaflets or rhombohedra, losing water at 45° C.; made by treating the chlorate with nitric acid.

Sodium Periodates. Sundry compounds, the simplest having the formula $NaIO_4+3H_2O$; made by passing chlorine into a warm solution of sodium iodate and treating the product with nitric acid.

Sodium Peroxide. See SODIUM DIOXIDE.

Sodium Phosphates. Primary Sodium Phosphate. NaH_2PO_4. Transparent rhombic crystals; made by adding phosphoric acid to common phosphate of soda (see below). —Secondary Sodium Phosphate. $Na_2HPO_4+12H_2O$. Best known of these compounds; generally called common phosphate of soda; made by treating phosphoric acid with sodium carbonate until alkaline; also from bone-ash; used in medicine as a mild purgative. The commercial compound usually contains sodium sulphate.—Tertiary Sodium Phosphate (Orthophosphate). $Na_3PO_4+12H_2O$. Made by treating secondary phosphate with caustic soda and evaporating. It absorbs carbon dioxide, and has an alkaline reaction.—Sodium Metaphosphate. $NaPO_3$. Formed by igniting the primary phosphate.—Sodium Pyrophosphate. $Na_4P_2O_7+10H_2O$. Colorless glassy substance, made by igniting the secondary phosphate.

Sodium Platinic Chloride. $Na_2PtCl_6+6H_2O$. Red, triclinic prisms or tables, obtained by evaporating a solution of platinic chloride with sodium chloride; soluble in water and alcohol.

Sodium Silicate. Na_2SiO_3. Water glass; made by fusing sand (quartz) with sodium carbonate; soluble in water, the solution being used to give objects a transparent glassy coating; used in the manufacture of artificial stone, silicated soaps, fresco-painting, and in dunging calico.

Sodium Stannate. Na_2SnO_3. Made by fusing tin-stone with caustic soda, or by heating tin with sodium nitrate and caustic soda; made in large quantities for use in calico-printing, as preparing salts or mordant.

Sodium Sulphantimonate. See SCHLIPPE'S SALT.

Sodium Sulphate. $Na_2SO_4+10H_2O$. Glauber's salt. It occurs in small quantities in nature and in a number of natural waters, and is made in large quantities in the manufacture of soda, by the action of sulphuric acid on sodium chloride, and in that of nitric acid from Chili saltpeter. It is efflorescent, and is used as a purgative in medicine, for the production of artificial cold in the laboratory, in the manufacture of sodium carbonate, and of glass. The anhydrous salt is called Salt-cake.

Sodium Sulphide. Na_2S. Solid substance, in color varying with the method of preparation; soluble in water; the solution readily passing to the thiosulphate; made by passing hydrogen sulphide over heated caustic soda in lumps. Sodium also forms a di-, tri-, tetra-, and pentasulphide; see the corresponding potassium compounds.

Sodium Sulphite. $Na_2SO_3+7H_2O$. Transparent crystals, obtained by passing sulphur dioxide into a solution of sodium carbonate and evaporating.

Sodium Thiosulphate. $Na_2S_2O_3+5H_2O$. Better known as sodium hyposulphite or "Hypo"; made by treating caustic soda with sulphur and then passing sulphur dioxide into the solution; used as an antichlor in the manufacture of paper, and extensively in photography to dissolve the excess of the silver compounds on the exposed plate.

Sodom. Ancient town of e. Palestine, destroyed with others for their wickedness (Gen. xix.), and covered by the Dead Sea. See CITIES OF THE PLAIN.

Sodom, APPLES OF. See APPLES OF SODOM.

Sodoma, IL (GIOVANNI ANTONIO BAZZI), ab. 1477–1549. Greatest Sienese painter of his day. In some pictures he rivals the greatest men of his time. Among his few works

St. Sebastian, by Il Sodoma.

extant are fine frescoes in the upper story of the Farnesina Villa at Rome. The *St. Sebastian* of the Uffizi in Florence is his best known work.

Soetbeer, ADOLF, 1814–1892. Prof. Göttingen 1872; writer on finance. *Gold and Silver*, 1879.

Sofala. Portion of s.e. coast of Africa from the Zambesi to Delagoa Bay. It has disused mine workings near Zimbabwe. It has belonged to Portugal since 1505.

Soffit. Interior cylindrical surface of a stone arch.

Sofia, or SOPHIA. Capital of Bulgaria; on a branch of the Isku, near the Balkan Mts.: anciently Serdica; seat of a council 343; held by Turks 1382–1878; of recent development and importance. Pop. ab.48,000.

Softas. Mohammedan students of theology; very numerous, and often active in politics.

Softs, or SOFTSHELLS. Democratic faction in N. Y. 1852–60, disinclined to co-operate with Southern pro-slavery Democrats.

Soft-shelled Crabs. Commercial name given to swimming crabs after the shell is cast and before the new shell has hardened. *Cancer pagurus* is the edible crab.

Sogdiana. Province of ancient Persian empire ab.540–332 B.C.; e. of the Caspian Sea; conquered by Alexander and joined to Bactria.

Sohn, KARL FERDINAND, 1805–1867. German painter, prof. Dusseldorf 1838.

Sohrab. Only son of Rustum, king of Persia, whom, unrecognized, his father slew in single combat; celebrated by Matthew Arnold.

Soignies. Old town of Hainault, Belgium, 22 m. s. of Brussels; scene of a French victory July 10, 1794. Pop. ab. 9,000.

Soiling. Practice of cutting green fodder and bringing it to cattle in the stable, instead of allowing them to graze it or pasture. It is of advantage only where land is very valuable, and is scarcely ever employed except with milch cows.

Soils. The ground or earth, produced by decomposition of rocks and made fertile by natural admixture of decomposed vegetable or animal matter, or by use of artificial fertilizers.

Soissons. Town of France, 65 m. n.e. of Paris; scene of councils 743, 852. 861–862, 866, 1092, 1121 (which condemned Abelard), and 1201; repeatedly taken in war, as by the Armagnacs 1414, by Charles V. 1544, thrice 1814, and by the Germans Oct. 16, 1870. Pop., 1891, 11,352.

Sojourner Truth, ab. 1775–1883. Illiterate negress of N. Y., who lectured in the interest of reforms 1851–ab.1863.

Sokoto. African kingdom, e. of the Niger. Area ab.200,000 sq. m., pop. ab.12,000,000.

Solanaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising ab. 75 genera and ab. 1,800 species, widely distributed throughout the warmer portions of the globe; called the Nightshade family.

Solan-Goose. See GANNET.

Solanine. $C_{52}H_{93}NO_{18}$(?). Colorless needles, almost insoluble in water, prepared from potato sprouts and from the berries of the deadly nightshade. It is very poisonous, paralyzing the lower extremities, as is shown in cattle which have been poisoned by eating the green shoots of potatoes.

Solano. Warm land wind, in certain valleys in the interior of Spain, belonging to the type of Föhn winds.

Solar Climate. Hypothetical climate that would prevail if the solar heat were the only consideration.

Solar Constant. The approximately constant quantity of radiant heat received by the outer layer of atmosphere of the earth from the sun: its value has been variously determined by Pouillet, 1.76; Violle, 2.5; Crova, 1.90 to 2.32; Langley, 2.84 and 3.0 calorics per minute per square centimeter. The amount of heat received by a square meter of surface on which the sun's rays fall perpendicularly is 25 calorics per min.: this equals the amount required to raise 25 kilograms of water 1° centigrade per min., or 6,886 ft. lbs. of energy per sq. ft. per min.

Solar Engine. Form of motor, devised by John Ericsson 1883, to utilize the heat of the sun for power. The rays fall upon a large reflecting cone or parabola of flat angle, and are converged upon a cylindrical surface, which in the caloric design is the hot end of such a hot-air engine. Behind the reflector

Ericsson's Solar Engine.

are the cooling cylinder and the crank mechanism (see CALORIC ENGINE). It has been calculated that the heat radiated from the sun during a day of nine hours upon a surface of 100 sq. ft. would give a power of 270,000 ft. lbs., or from 8 to 9 horse power for latitudes between the equator and the 45th parallel.

Solar Eyepiece. See HELIOSCOPE.

Solario, ANDREA DA, 1458–1530. Milanese painter of the school of Leonardo da Vinci.

Solar Parallax. See PARALLAX, SOLAR.

Solar Radiation. Influence that emanates from the sun in straight lines, and whose effect at the earth is to produce the phenomena of light, heat, chemical or molecular or actinic change, and electric or magnetic or electro-magnetic effects. It is of the nature of a vibration, rotation, or other periodic motion or change of motion of the molecules of the ether, and it is the effect of such motion in the molecules of ordinary matter that is observed and described as the RADIATION (q.v.) of solar light, heat, etc. In meteorology, the name applies specifically to the heat effect. See SOLAR CONSTANT.

Solar System. See PLANETS and SUN.

Solar Transit. Engineer's transit, to which is attached the necessary devices whereby the true meridian can be determined by an observation of the sun. The principle of the solar attachment is the same as that of the equatorial telescope.

Solar Transit.

Solder. Made of equal parts of lead and tin, two of tin to one of lead, or two of lead to one of tin; they fuse at 185° C., 170° C., and 225° C. It is used in general for soldering purposes.

Soldier. One who engages for a definite period in the military service of his country. He faithfully promises implicit obedience to the orders of his commanding officers, to the rules and articles of war, and is entitled to the protection and care of his government, and to pay, subsistence and clothing while so serving. The recognition of the soldier's service empowers him to take life, destroy property, etc., under the legal orders of his commander without subjecting himself to the civil penalties connected with such acts: neither is he to be held morally responsible for the justice or injustice of the war in which his government may employ him.

Soldier Beetles. Different species of carnivorous beetles, useful in destroying other insects; *e.g.*, the sugar-cane borer and the cotton worm.

Soldo. Former copper coin of some Italian States; equal or inferior to the sou or halfpenny.

Solecism. Grammatical error; so named from Soli in Cilicia, s.e. Asia Minor, where imperfect if not semi-barbarous Greek was spoken.

Solemn League and Covenant. See NATIONAL COVENANT.

Solenoconchæ. See SCAPHOPODA.

Solenoglypha. Sub-order of *Ophidia*, including venomous snakes, having a triangular head, a short tail, a pair of hollow, poison fangs on the maxillaries, with reserve teeth in the rear. The fangs bend back, but can be erected, when the mouth is open, at will. The poison glands are modified salivary glands, and lie back of the eye. The poison can be thrown from the fang several feet. The blood of the victim bitten loses the power to coagulate. On being bitten a person should wind a ligature tightly on the heart side of the wound, which should be excised, sucked, cauterized, and a one per cent solution of permanganate of potassium injected. The drinking of spirits to keep up the heart vigor is the usual remedy. Bile is also a neutralizer of snake poison. Blood or serum from animals rendered immune by repeated inoculation of small, gradually increasing doses of snake poison, on being injected into a person, will render him immune, and has been known to cure when practiced even several hours after a bite. In India 20,000 people die from snake-bites annually, especially from the cobra. Compare PROTEROGLYPHA. See also ADDERS, ANCISTRODON, BOTHROPHERA, RATTLESNAKES, and VIPERS.

Solenoid. Series of circular conductors, arranged with their axes parallel and so joined that a current may pass similarly through them all. Such a system, if freely suspended, will behave in every way like a magnet, setting itself parallel to the lines of force in a magnetic field.

Solera. The foundation, or old stock wine, to which later wines are added. See SHERRY.

Soley, JAMES RUSSELL, b.1850. Prof. U. S. Naval Academy 1876. *Hist. Naval Academy*, 1876; *Blockade*, 1883.

Solfaing. See SOLMIZATION.

Solfatara. Escape of steam from the ground, accompanied by sulphurous and other vapors; also, aperture or craterlet from which it issues.

Solfeggio. See SOLMIZATION.

Solferino. Variety of FUCHSINE (q.v.).

Solferino. Village of Lombardy, 19 m. n.w. of Mantau; site of a decisive battle, lasting 15 hours, June 24, 1859, between the allied armies of France and Sardinia under Louis Napoleon and Victor Emmanuel, and ab. 170,000 Austrians under Gen. Hess, who were defeated with loss of 19,300 men and 630 officers; allies lost 17,300 killed and wounded, 986 officers and 8 generals. This victory freed most of n. Italy.

Solicitor. Formerly, legal practitioner in a court of equity; now, in British Supreme Court of judicature. He ranks below a barrister or counsel; his examination and admission to the bar, as well as his duties, liabilities, and rights respecting his clients, are largely regulated by statutes.

Solid. Geometric object of three dimensions, length, breadth, and thickness; generated by consecutive position of a surface moving under some fixed law; of revolution, when the surface rotates on some axis; laminate, when the surface remains parallel in all consecutive positions.—In Physics, a body which possesses in any degree elasticity of shape. A

Geometrical Solids.

rigid solid is one which offers infinite resistance to strain; or the ratio of strain to stress is always 0. Hardened steel perhaps approaches as nearly as anything to this ideal state, though even in steel the rigidity is not perfect. A soft solid is one in which the ratio of strain to stress is very large; *i.e.*, a very small force applied will cause a large deformation. Jelly is a good example.

Solidungula. See EQUIDÆ.

Solidus. 1. Roman gold coin after 295, succeeding the aureus; wt. $\frac{1}{72}$ lb.; used for a time by the Franks. 2. Mediæval silver coin, wt. $\frac{1}{20}$ lb.

Solifidians. Extreme Protestants, charged with so refining Justification by Faith alone as to divorce Faith from Works.

Solifugæ. Hairy, spider-like Arachnids, with the body divided, much as in Insects, into head, thorax, and abdomen. The cheliceræ and pedipalps are much as in Scorpions. Respiration by tracheæ is as in Insects. They are principally found in warm desert regions of the Old World. *Solpugidæ* is the family included.

Soliman. See SOLYMAN.

Solingen. Town of Prussia, 13 m. e. of Düsseldorf; noted since ab.1200 for its iron and steel wares. Pop., 1890, 36,540.

Solinus, CAIUS JULIUS. 3d cent. Latin historian, formerly popular. *Polyhistor*, tr. 1587.

Solipeds. Animals walking on a single toe, *e.g.*, the Horse.

Solis, JUAN DIAZ DE, ab.1470–1516. Spanish seaman; killed while exploring the La Plata.

Solis y Rivadeneyra, ANTONIO DE, 1610–1686. Spanish dramatist, historian of the conquest of Mexico, 1684.

Solitaire. Game for one person, of which many varieties exist; played with marbles or pins upon a board, with cards, and with dominoes. The prototypes of these modern card games are found in the Chinese and Corean solitaire games with dominoes, the object of which was once divinatory. One of the most popular Corean domino games is called "personally counting divination," to distinguish it from the divinatory games participated in by several players.

Solitaria. See ASCIDIANS.

Sollar. Small platform or resting place at the foot of a ladder in a mine shaft.

Solmization. Method of learning the intervals of musical scales by associating each interval with a syllable. Its invention is credited to Guido d'Arezzo, who applied the first syllables of the lines of a Latin hymn to the tone to which it was sung. Thus arose the familiar syllables, Ut, re, mi, fa, sol, la. In Italy Do took the place of Ut.

Solms Laubach, HERMANN GRAFZU, b. 1842. German botanist. *Tentamen Bryogeographiæ Algarviæ regni Lusitani provinciæ*, 1868.

Solo. Tune, air or strain to be played by a single instrument or sung by a single voice.

Solomon, ab.1033–975 B.C. Son of David and Bathsheba; King of Israel from ab. 1015; famed for wisdom; reputed author of three O.T. books. The burdens of his reign led, on his death, to the revolt of the northern tribes, and the division of the nation into the two kingdoms of Israel and Judah.—Builder of the Temple at Jerusalem, ab. 1000 B.C.; burned by Nebuchadnezzar 588 B.C.; rebuilt by Zerubbabel 538 B.C.;

The Temple of Solomon.

reconstructed with great splendor by Herod ab.20 B.C.; finally destroyed by Titus 70.

Solomon, SONG OF. See SONG OF SOLOMON.

Solomon, WISDOM OF. See WISDOM.

Solomon ben Gabirol, d. ab.1041. Spanish Jew, author of poems and philosophic writings.

Solomon ben Isaac. See RASHI.

Solomon Islands. Ab.500 to 1,000 m. e. of New Guinea; held by Germany and Gt. Britain. Area 17,065 sq. m., pop. ab.175,000. The people are sturdy, well-formed Melanesians, with some admixture of Polynesian blood; in height they average 5 ft.: their skulls are mesocephalic. They are dark-skinned, with curly hair, polygamous, fond of dancing, cunning and deceitful; they practice a simple agriculture, make graceful pottery and weapons, and use shell money; their canoes are the finest in the Pacific. They are fond of human flesh. Christianity has made but slight progress among them. Their dead are exposed on platforms.

Solomon's Seal. Plants of the genus *Polygonatum*, herbs of the natural family *Liliaceæ*, natives of the n. temperate zone, the root-stock bearing seal-shaped leaf-scars.

Solomon's Seal, FALSE. Plants of the genus *Vagnera* (*Smilacina*), herbs of the natural family *Liliaceæ*, natives of the n. hemisphere.

Solon, ab.638–ab.559 B.C. Athenian legislator; commander of the expedition which drove the Megarians out of Salamis; archon 594 with unlimited power. He repealed the laws of Draco, except such as concerned bloodshed, enlarged the functions of the popular assembly, instituted a senate of 400, took measures for relief of debtors, and rectified the calendar. He lived to see his constitution overthrown by Pisiscratus. Some fragments of his poems remain.

Solor. Island of Malay Archipelago off the e. extremity of Flores; s. point in lat. 8° 47′ S., long. 123° 8′ E. Length e. to w. 30 m., breadth 15 m. Pop. ab.30,000.

Soloviev, SERGEI MIKHAILOVICH, 1820–1879. Rector Univ. Moscow 1871–77. His *History of Russia* fills 29 vols. and extends to 1774.

Solpugidæ. See SOLIFUGÆ.

Solstices. Points in the sun's apparent orbit where his greatest and least altitude are reached; also time when the

Summer and Winter Solstice.

altitude is greatest and least. The former is the summer, the atter the winter solstice, June 20–21, and Dec. 20–21.

Soluble Blue. See NICHOLSON'S BLUE and COTTON BLUE.

Soluble Oil. Thick solution in water of the sodium salt or soap of ricinoleic acid, prepared by the action of caustic soda solution upon castor oil. Also ALIZARINE ASSISTANT (q.v.).

Solution. 1. Result of mixing two substances, one usually a liquid or a gas, which have a mutual action such as to destroy the cohesion of one of the substances and produce a homogeneous fluid mixture. 2. In Botany, separation of organs which are normally more or less united or approximate. 3. In Mathematics, the solution of a problem gives a law of general relation based upon the given conditions and meeting the requirements of the problem. That of an equation gives: (1) a value for an unknown quantity in known terms; (2) an explicit function of a variable from an implicit function. The term is also used, unfortunately, as synonymous with "root of an equation."

Solutions, CHEMICAL. Regarded as fluid, unstable, definite chemical compounds in a state of dissociation.

Solvay Process. See SODIUM CARBONATE.

Solway Firth. Inlet of Irish Sea, between Scotland and Cumberland; length 35 m., breadth 2 to 22 m.; noted for the rapidity of its tides.

Solway Moss. In n. Cumberland; scene of a rout of Scottish raiders, Nov. 25, 1542, and of a destructive flood, Nov. 13, 1771.

Solyma, or HIEROSOLYMA. See JERUSALEM.

Solyman (or SULEIMAN) **I.,** 1496–1566. Sultan of the Ottoman empire at its height; able ruler and lawgiver; conqueror of Rhodes 1522, Hungary 1526, and much of Persia and n. Africa 1534. He besieged Vienna 1529 and Malta 1565, unsuccessfully and with heavy losses.—II., 1642–1691. Sultan 1687.

Soma. Plant growing in n. India, and its juice. In Vedic times its sap was held to infuse immortal life and energy into those who quaffed it, and was offered in sacrifices. Hence, third principal deity of the Vedic pantheon, identified with the moon and the moon plant; god of sacrifice; creator, with the aid of Agni, of the heaven and earth, the sun and stars.

Somalis. Mixed race along e. African coast, from equator to Gulf of Aden; allied to the Abyssinians; wild, independent,

Somali Types.

and unfriendly to foreigners; Mohammedans. The region is of indefinite extent, and partly under British (n. part) and Italian protectorates.

Somatic. Pertaining to the body; in Botany, cells which effect the propagation of an organism.

Somatocyst. Cavity in the cœnosarc of certain Siphonophores, at the base of the upper nectocalyx.

Somatology. Study or science of human and other organisms on the material side; also that of inorganic bodies.

Somatropism. In Plant Physiology, directive influence of the soil on the growth of organs.

Sombrero. Felt hat with a wide brim, common in N. and S. America, originally Spanish.

Somerby, HORATIO GATES, 1805–1872. Genealogist of Mass., in England from 1845

Somers, SIR GEORGE, 1554–1611. Colonizer of the Bermudas 1611.

Somers, JOHN, LORD, F.R.S., 1652–1716. Whig leader, M.P. 1689; Baron 1697; Lord Chancellor 1697–1700; impeached 1701; Pres. of Council 1708–10. The *Somers Tracts*, State papers from his library, were pub. in 16 vols. 1748–52, and in 13 vols. 1809–15.

Somers, RICHARD, U.S.N., 1778–1804. Lieut. 1799, commander 1804; distinguished for gallantry on the Barbary coast; killed in an effort to blow up the Tripolitan fleet.

Somers (or SOMMERS) **Islands.** See BERMUDAS.

Somerset, EDWARD SEYMOUR, DUKE OF, 1500–1552. Brother of Jane Seymour; Duke and Protector 1547–49. He executed his brother, Sir Thomas Seymour, 1549; plotted against Warwick, and was beheaded.

Somerset, FITZROY. See RAGLAN.

Somerset, ROBERT CARR. See OVERBURY, SIR THOMAS.

Somerville. City of Middlesex co., Mass., on the Mystic, n. of Boston; part of Charlestown till 1842; chartered 1872. Pop., 1890, 40,152.

Somerville, MRS. MARY (FAIRFAX), 1780–1872. Scottish writer on science. *Mechanism of the Heavens*, 1830; *Connection of the Physical Sciences*, 1835; *Physical Geography*, 1848.

Somerville, WILLIAM, 1677–1742. English poet. *The Chase*, 1735.

Somite. Segment or joint of the body of a segmented animal.

Somme. River of n. France, rising e. of St. Quentin, and flowing 150 m. w. and n.w. to the English Channel.

Somnambulism. Peculiar abnormality of sleep, characterized by the performance of apparently purposive acts, yet with imperfect reaction to sense stimuli and with lack of memory on waking for what has taken place during the state. A common form of it is sleep-walking. The similar condition artificially induced by suggestion or HYPNOTISM (q.v.) is called artificial or induced somnambulism.

Sonata. Literally, sounded piece; antithesis of cantata, a sung piece; originally music wholly instrumental. A sonata is a cyclical composition for a single instrument, with or without accompaniment, consisting of three or four parts, called movements, which are contrasted in tempo and mood, the first of which exemplifies the sonata form. The sequence of movements is generally fast, slow, fast, fast. The first movement written in this form has a triple division. It may or may not have a slow introduction. In the first division the thematic material of the movement is brought forward; in the second, called free fantasia, this material is subjected to the fanciful play of the composer; in the third the first is recapitulated in a related key and provided with a coda. The slow movement may be in the same form or a theme with variations; the third is playful in character, and is usually a Minuet or Scherzo. The fourth may be in the sonata form or a Rondo. Symphonies, concertos for solo instruments and orchestra, and the various kinds of chamber music, such as Trios, Quartets, etc., are sonatas. As an art-form the sonata was perfected by Haydn, Mozart, and Beethoven, who greatly extended it.

Sonderbund. In Switzerland, the union of the Catholic cantons, which led to the war of 1845.

Songkoi, or SONGKA. Largest river of e. Indo-China, rising in the mountains of Yunnan and emptying into the Gulf of Tonquin. Length 750 m.

Song of Birds. The notes of birds are produced in the syrinx, a portion of the windpipe, by certain muscles, in some birds as many as eight pairs. The tongue has little to do with it. It varies from a single note upward, and the males usually excel. In Man and other Mammals the sounds are made in the LARYNX (q.v.).

Song of Solomon, or CANTICLES. 22d O. T. book; an idyl, representing the attachment of an Israelitish maiden to her rural lover, though wooed by Solomon; traditionally regarded as an allegory of Christ and the Church; never referred to in N. T.

Songs. 1. Brief poems, adapted to be sung; an important section of almost every literature. 2. Musical forms adapted to these.

Sonnet. Poem of 14 ten-syllable lines, variously rhymed; produced in Italy from 13th century; introduced in France, England, and Germany, ab. 1530–50. Shakespeare is its greatest master; Milton and Wordsworth afford eminent examples.

Sonntag, WILLIAM LOUIS, b.1822. American landscape painter. N.A. 1861.

Sonometer. Instrument for studying the transverse vibrations of strings. It consists of a long box of thin light wood having lateral apertures. Near either end of the box is a bridge or upright piece of wood over which pass strings, or

Sonometer.

often metal wires. The wires are fixed at one end, while the other passes over a pulley and is attached to a weight, or passes round a tuning peg and is stretched by a tuning-key. When the instrument has but one string, it is sometimes called a Monochord.

Sonorescence. That property of hard rubber in virtue of which when a beam of light, intermittent or variable in its intensity or composition, is made to fall upon it, the rubber emits a sound which reproduces in its pitch or quality the peculiarities of the incident light.

Sontag, Henriette Gertrude Walpengis, 1804–1854. Soprano singer, in both Italian and German opera. Her husband was Count Rossi, Sec. of Legation in Berlin, Sardinian envoy at the Hague, and Ambassador at St. Petersburg.

Soot. Deposit of carbonaceous matter in a chimney or flue. It contains sulphate of ammonia, and hence is valuable as a manure for cereals and grasses. See Lampblack and Smoke Prevention.

Sophia. See Sofia.

Sophia, Electress of Hanover, 1630–1714. Youngest child of Elizabeth, queen of Bohemia, and granddaughter of James VI. of Scotland and I. of England; duchess of Brunswick 1658; mother of George I.

Sophia, St. Church at Constantinople; built 532–566 by Justinian at a cost of ab. $5,000,000; chiefly of brick, but lined within with costly marbles; converted into a mosque 1453; finest specimen of the Byzantine style. The dome rises 180 ft., and has a diameter of 107 ft. and a depth of 46 ft. The church is 245 ft. by 225 ft. inside the walls. See Architecture.

Sophism. Fallacy consciously committed in an argument intended to deceive.

Sophists. Body of ethical and rhetorical teachers at Athens, from ab.450 B.C., whose failure to distinguish interest from duty subjected them to the criticism and opposition of Socrates; ridiculed by Aristophanes; defended by Grote in his *Hist. of Greece* in the 67th and 68th chapters. The most eminent were Protagoras and Gorgias.

Sophocles, 495–406 B.C. Second of the three great Attic tragedians. Seven tragedies, *Antigone, Electra, Trachiniæ, Œdipus Tyrannus, Ajax, Philoctetes* and *Œdipus at Colonus*, survive out of 120. He won the first prize over Æschylus and others 468, and was the chief figure in dramatic composition until Euripides came to the front 441. Critics regard him as approaching nearest to the ideal of tragic writing. He partakes of the lofty spirit of Æschylus, and adds more of the human side, as did Euripides, while his characters by their self-restraint and nobility of soul show a higher level of conception.

Sophocles.

Sophocles, Evangelinus Apostolides, LL.D., 1807–1883. Greek teacher, in America from 1829; prof. Harvard from 1849; author of several Greek text-books. *Lexicon of Roman and Byzantine Periods*, 1870.

Sophron, 5th cent. B.C. Greek writer of Syracuse, noted as the inventor of Mimes, a variety of Dorian comedy.

Soprano. In most of the music of to-day, highest part written for women's voices; also the voice itself. In choirs of boys and men the voice belongs to boys; in the 17th and 18th centuries it was frequently produced by sexual mutilation, the quality of the immature boy's voice being retained and coupled with the lung-power of the developed man. In the Sistine Choir boys' voices were used until the intricacy of the music compelled the employment of men. Resort was then had to mature soprano falsettists, most of whom came from Spain, and artificial sopranos, products of accident.

Soracte. Mountain 26 m. n. of Rome, site of a temple of Apollo, and since 746 of a monastery.

Sorata. Peak of the Andes, in Bolivia. Altitude 21,470 ft.

Sorbian Language. Language of the Sorbs or Lusatian Wends. It belongs to the western branch of the Slavic family. It is also called Lusatian-Servian. See Slavic Languages.

Sorbonne. Theological faculty of old Univ. of Paris; founded 1252–56; long of high authority; opposed to the Ultramontanists and Jesuits; suppressed 1790; partially revived 1808 and later. The name is now applied to the Academie of Paris which occupies the buildings, rebuilt since 1884.

Sorby, Henry Clifton, b.1826. English author of many papers on the microscopical structure of rocks and on new methods of studying the optical character of minerals.

Sorcery. See Magic, Witchcraft, etc.

Sordello, 13th cent. Italian troubadour; subject of Browning's poem, 1840.

Soredia. Minute portions of the thallus of Lichens, consisting of one or more alga-cells to which are attached some of the thread-like cells or hyphæ. They break away from the lichen and become propagative bodies.

Sorel, Agnes, 1409–1450. Mistress of Charles VII. of France. Her influence is thought to have been beneficial.

Sorel's Cements. Invented by a French chemist: depending on the principle that an insoluble, solid oxychloride is formed when a concentrated solution of a metallic chloride and the oxide of the same metal are mixed. A solution of magnesium chloride and magnesia mixed to form a pasty mass solidifies to a white mass resembling marble.

Sorema. Mass of loosely coherent pistils placed imbricately on the torus of a flower, as in Magnolia.

Soret's Formula. Used in connection with the Hypsometer (q.v.).

Sorgh, Hendrik Waertensz, ab.1621–1670. Dutch genre painter.

Sorghum. *S. vulgare*, or *Andropogon sorghum*. Tall Asiatic grass. A variety, *Sorghum saccharatum*, in all portions of the U. S. where it will mature, has been proven to be a profitable molasses-producing plant. In more northern localities it makes an excellent forage plant. Culture of sorghum is like that of Indian corn, except that, the seed being slow to start, the seed bed must be better prepared and the ground somewhat warmer before it is planted. In 1890 upward of 24,000,000 gals. of molasses were produced. In 1893 ab. 1,000,000 lbs. of sugar were made from it.

Sorghum Sugar. See Sugar.

Soricidæ (Shrew-Mice). Family of *Insectivora*, distinguished by having feet adapted for running rather than for digging, with external ears and well developed eyes. The tail is scaly, the appearance mouse-like. They are very widely distributed. Some are the smallest of Mammals. The Muskrat or Desman of the Pyrenees stands between the Shrews and Moles: it has a flexible elongated snout, webbed feet, and a musk gland at the root of the rudder-like tail. An allied form exists in Japan, but is burrowing rather than aquatic.

Sorin, Edward, b.1814 in France. R.C. missionary in Indiana 1841; founder Univ. Notre Dame, Ind., chartered 1844, and of many other schools; Superior-gen. of order of Holy Cross 1868.

Soris, or Snefru. First king of 4th Egyptian dynasty.

Sorophora. Order of *Mycetozoa*, in which the plasmodium is formed by simple contact, without fusion, of amœboid cells. The fruit consists of spores produced by the encystment of separate amœbulæ, and each spore hatches as a simple amœbula, which, with its fellows, forms a new plasmodium.

Sorosis. In Botany, fleshy collective fruits, as the pineapple.

Sorosis. Club of women in New York, founded 1868. Similar organizations exist elsewhere.

Sorrel. Certain herbs of the genus *Rumex*, natural family *Polygonaceæ*, with acid foliage and small, green flowers, widely distributed. The common *R. acetosella* or Field Sorrel is a native of Europe naturalized in America as a weed, and known as Sour-grass. It takes possession of poor worn-out gravelly soil, and is said to indicate a lack of lime therein. Like the ox-eye daisy, it is not troublesome on lands that are kept fertile and well cultivated. These herbs contain potassium binoxalate.

Common Sorrel (*Rumex acetosella*).

Sorrel, MOUNTAIN. *Oxyria digyna.* Herb of the natural family *Polygonaceæ*, native of mountainous regions in the colder parts of the n. hemisphere.

Sorrel, WOOD. *Oxalis acetosella.* Low, pink-flowered herb of the natural family *Oxalidaceæ*, native of the cooler portions of the n. hemisphere.

Sorrel-Tree. *Oxydendrum arboreum.* Small tree of the natural family *Ericaceæ*, native of the s.e. U. S. The foliage is sour, whence the name, Sour-wood.

Sorrento. Ancient Greek and Roman town, on s. side of Bay of Naples; famous for beauty of situation and salubrity of its climate; visited by many tourists; birthplace of Tasso. In

Villa at Sorrento.

the time of Augustus it was noted for its fine buildings, the remains of which are few. Its wine was also held in high repute. Pop. ab.6,100.

Sortes Virgilianæ. See SORTILEGE.

Sortilege. Divination with lots; probably practiced originally with arrows, as indicated by many survivals. Throughout e. Asia it is one of the universal methods of fortune telling. A square or cylindrical box, originally a bamboo quiver, containing numbered lots, is found in most Chinese temples, and in both Buddhist and Shinto temples in Japan. The lots consist of strips of bamboo, in China having an arrow-like tip, painted red, the name of which is homophonous with arrow. The worshipers pay a small fee, and, after sacrificing, shake one or more of the lots from the box before the shrine. The number on the lot or lots is then referred to a book, in which, under a corresponding number, the answer is found. The lots of the Greek and Roman temples were little tablets. Another method consisted in opening a book at random, and taking the first line on which the eye fell as an indication: Virgil was a favorite work for this purpose; hence the Sortes Virgilianæ. Mohammedans use the Koran and Hafiz, and Christians have used the Bible and Psalter. Divination with a book is also common in China.

Sorus. Group of sporanges or spore-cases, as the fruit dot of a fern and of some *Algæ*.

Sosigenes, 1st cent. B.C. Egyptian astronomer, employed by Cæsar in reforming the calendar.

Soter. Bp. of Rome 168–176.

Soteriology. Department of theology dealing with redemption through Christ.

Sothern, EDWARD ASKEW, 1830–1881. English actor, known in America from 1852; famous from 1858 as Lord Dundreary in Taylor's *Our American Cousin.*

Sothic Period. Ab. 1,500 years, required for the beginning of the Egyptian year of 365 days to correspond in succession with all of the seasons.

Sothic Year. Egyptian year of 365 days 6 hrs., the beginning of which corresponded with the heliacle rising of the dog star, called by them Sothis.

Soto, BERNARDO, b.1853. Pres. of Costa Rica 1885–90.

Soto, HERNANDO DE. See DE SOTO.

Soto, MARCO AURELIO, b.1846. Pres. of Honduras 1877–83.

Sotomayor, CRISTOBAL DE, d.1511. Lieutenant of Ponce de Leon in the conquest of Porto Rico.

Souari Nut. See BUTTERNUT.

Soubeyran, JEAN MARIE GEORGES DE, BARON, 1829–1897. French statesman.

Soubise, CHARLES DE ROHAN, PRINCE DE. 1715–1787. Marshal of France; defeated by Frederick II. at Rossbach Nov. 5, 1757.—His relative, BENJAMIN, ab.1589–1642, was a Huguenot leader.

Soublette, CARLOS. 1790–1870. Venezuelan soldier, associated with Bolivar in the war of liberation; Sec. of War 1830–34 and 1839–42; Pres. 1836–39 and 1843–47; in exile 1848–58.

Soudan, or SUDAN. Part of Africa s. of the Sahara and Lower Egypt and n. of the Congo basin, not including Abyssinia. The area is indefinite, but not far from 2,000,000 sq. m. It is drained by the Niger, the tributaries to Lake Tchad and the Nile. The climate is tropical, with a wet and a dry season. Central and w. Soudan are inhabited by native tribes, under their own governments. The e. part was under the control of Egypt till 1884–85, when the Mahdist revolt led to the fall of Khartoum and death of Gordon.

Soudanese. People of Central Africa, comprising more or less pure negro tribes in the s. portion, mixed tribes in the central, and foreign elements n., along the Sahara. Berbers have invaded (prehistorically) the w. and central region, other

A Soudanese Marriage Dance.

Hamites the e., and later, the Semitic, Mohammedan influence, has entered the e. and center. The Fulah are the most important Hamitic negroes. They are intelligent, and zealous Mohammedans. The Mandingoes are true negro Mohammedans. See TUAREGS, DAHOMEY, ASHANTI, and FAN.

Soul. In popular language, the spiritual and immortal part of man. The words thus translated were of varying and

unfixed signification, sometimes meaning in Hebrew merely life, and in Greek opposed either to reasoning mind or to spirit, thus indicating, though not uniformly, the lower impulses and passions. This vagueness, for which Aristotle is in part responsible, remains. See PSYCHOLOGY.

Soule, JOSHUA, D.D., 1781–1867. M.E. bp. from 1824; leader in M.E. Ch. South from 1844, residing at Nashville.

Soulé, PIERRE, 1802–1870. French journalist, at New Orleans from 1827; U. S. Senator 1847–53; U. S. Minister to Spain 1853–55; imprisoned 1862; noted for eloquence.

Soule, RICHARD, 1812–1877. Associate ed. Worcester's *Dictionary*, 1859. *Synonyms*, 1871.

Soulié, MELCHIOR FRÉDÉRIC, 1800–1847. French dramatist and novelist.

Soulouque, FAUSTIN ÉLIC, 1785–1867. Haytian slave, freed 1793; insurrectionist; General 1844; Pres. 1847; Emperor, as Faustin I., 1849–59; defeated by Geffrard 1859, and exiled. He unsuccessfully invaded Dominica 1849 and 1855.

Soult, NICOLAS JEAN DE DIEU, 1769–1851. French general 1794, Marshal 1804, Duke of Dalmatia 1807; prominent at Austerlitz and Jena, 1805–6, and in Spain as Commander-in-chief 1809–12; in exile 1815–19; Peer 1827; Marshal-gen. 1847.

Sound. 1. Physically, wave motion propagated through an elastic medium by the longitudinal vibrations of its particles. 2. Physiological sensation in the ear by such wave motion. Sounds may differ in intensity, pitch, and quality.

Sound. Strait or passage connecting two portions of the sea; especially that between the Baltic and the Cattegat.

Sounder. Small electromagnet, in front of the poles of which is a soft iron armature attached to a lever controlled by a spring; employed very generally on telegraph lines for receiving the signals by sound. When the current is made to

Sounder.

pass, the armature is drawn toward the poles; when the current is interrupted the spring draws the armature back. The clicks which accompany these motions are slightly different in sound and the dots and dashes of the Morse alphabet can be readily distinguished.

Sounding Apparatus. Tackle employed by mariners for ascertaining the depth of water and character of the ground. The lead and line are still in universal use. The lead has a cavity which is partly filled with tallow to which the ground adheres. The common hand lead weighs from 7–11 lbs. See BATHOMETER, DEEP-SEA SOUNDING, and SOUNDING LINE.

Sounding Line. Used on shipboard to measure depth of water. The greatest depth so far sounded is 4,655 fathoms e. of Japan. With a ship in motion, there is now used fine steel wire, suspending a brass tube, with an inner glass tube, open at the lower end only, and coated internally with a paint soluble in water, which shows the hydrostatic pressure.

Soup. Decoction of flesh for food, seasoned more or less strongly; strong broth.

Soupé, MARIE JOSEPH, 1738–1794. French physician, writer on cholera, which he studied in Peru 1784; guillotined.

Sour-Grass. See SORREL.

Sour-Gum. See PEPPERIDGE.

Sour-Sop. See CUSTARD APPLE.

Sour-Wood. See SORREL-TREE.

South, SIR JAMES, 1785–1867. English astronomer, knighted 1830.

South, ROBERT, D.D., 1633–1716. Prebendary of Westminster 1663, chaplain to Charles II. 1678; famous as a preacher. His works have frequently been reprinted.

South African Republic. See TRANSVAAL.

South America. S. grand division of the w. continent; connected with N. America by Isthmus of Panama. In shape it is rudely triangular, with a long narrow angle pointing s. Along the w. coast, from Panama to Cape Horn, runs a high, continuous, and rugged mountain system, the Andes. Between it and the Pacific there is but a narrow ribbon of land. E. of it the level of the country drops immediately to nearly sea level and there succeeds a great plain, treeless in the n. in Venezuela, where it is known as llanos, heavily forested in the basin of the Amazon, near the equator (selvas), and again treeless further s. in the Argentine Republic (pampas). In the e. part of Brazil the land rises into a second system of mountains, broader than the Andes, but of much less height and length. The area is 6,861,400 sq. m. The mean elevation is 2,078 ft. The coast is simple, with few harbors or islands. The temperature varies with latitude, being very high in the Amazon valley, while in the extreme s. it is severely cold. The rainfall is excessive near the equator, diminishing n. and s., becoming very light in the s. parts of the Argentine Republic. The principal rivers are the Amazon, the greatest on the globe, and the Rio de la Plata. The population is estimated at 28,380,000. These consist almost entirely of the aborigines and the descendants of the Spanish and Portuguese. The principal countries are Brazil, Guiana, Colombia, Venezuela, Argentine Republic, Paraguay, Uruguay, Chili, Peru, Ecuador, and Bolivia; except Guiana, these are republics.

South American Indians. See INDIANS, PAMPAS INDIANS, PATAGONIANS, PERUVIANS, TUPI-GUARANI, CARIBS, and FUEGIANS. Among these tribes civilization increases northward, and also with altitude. Of the Amazon tribes, some are cannibals, and some are dangerous enemies of travelers. A few of the coast tribes have been slightly improved by the efforts of R. C. missionaries. They live by hunting, fishing, and the cultivation of cassava. The majority of the tribes use arrows poisoned by curari. Some practice the couvade, some apply torture of a severe kind to girls and boys on attaining their majority, which occurs about the time of puberty. Dissipation abounds.

Southampton. Seaport of Hampshire, Eng., at the junction of the Itchin and Test; settled ab.500; birthplace of Dr. Watts. It has an important commerce. The remains of its

The Walls of Southampton.

town walls, with a fine arcade on the w. shore, with 4 out of 7 gates, Norman house, etc., show its ancient importance. The Town Quay is 6,072 ft. long. Pop., 1891, 65,325.

Southampton, HENRY WRIOTHESLEY, EARL OF, 1573–1624. Sentenced to death 1600 as partaker in Essex's insurrection; interested in the colonization of Va.; imprisoned 1621 for efforts against tyranny; officer in the Dutch war with Spain 1623; patron of Shakespeare, whose early poems, 1593–94, were dedicated to him.

Southard, SAMUEL LEWIS, LL.D., 1787–1842. Justice N.J. Supreme Court 1815; U.S. Senator 1821–23 and 1833–42; Sec. Navy 1823–29; Atty.-gen. of N. J. 1829, Gov. 1832; pres. Senate 1841. *Reports N. J. Supreme Court*, 1819–20. — His father, HENRY, 1749–1842, was M.C. from N. J. 1801–11 and 1815–21.

South Australia. British colony occupying the middle part of Australia; formed 1836, enlarged 1863. The surface consists mainly of arid plains, 3,000 to 4,000 ft. above the sea. The settled portion is on the s. coast. Copper mines were opened 1843, and gold 1846–52. The capital is Adelaide. Area

914,000 sq. m.; pop., 1891, 320,431, including 4,895 in the Northern Territory, annexed 1863.

South Bend. Capital of St. Joseph co., Ind., on St. Joseph River, 85 m. e. of Chicago; settled 1820 by Frenchmen; chartered 1835 and 1865; seat of Univ. Notre Dame. Its chief manufactures are of wagons and farming implements. Pop., 1890, 21,819.

South Bethlehem. Borough of Northampton co., Pa., on the Lehigh, opposite Bethlehem; seat of Lehigh Univ. and of the Bethlehem Iron Co., employing ab. 4,000 men. Its growth has been since 1865. Pop., 1890, 10,302.

South Carolina. One of the s. Atlantic States. The e. part is low and level, and near the coast marshy. This is succeeded on the w. by a gentle slope rising to the foot of the Blue Ridge, where it reaches 1,000 ft. All its streams flow s.e. into the Atlantic, and the larger of them are navigable to the Fall line. Geologically the State is extremely simple. The Archæan formation covers the upper part of the Atlantic plain. In the central part this is succeeded by Eocene, and that by Neocene formations, while the immediate coast is bordered by Quaternary beds. Its industries are agricultural, consisting in large measure of the cultivation of cotton. In 1890 farms were valued at $99,104,600; and the agricultural product, in 1889, at $51,337,985. It was originally a portion of the single colony, Carolina, which was divided 1729. A vain attempt to settle the region was made in 1562, when Coligny obtained permission from Charles IX. of France to establish a Protestant colony in Florida. It was not permanently settled until 1670, by a party of English colonists with grants from Charles III.; Port Royal was founded, and a settlement was made on the site of Charleston 1680. Important battles were fought in S. C. during the Revolution. It led in the Nullification movement, 1833, and was one of the first States to secede 1860. The Civil War began with the bombardment of Fort Sumter in Charleston harbor. S. C. suffered heavily during the war, and has been slow to regain its prosperity since. It is sometimes called the Palmetto State. Capital, Columbia. Area 30,570 sq. m.; pop., 1890, 1,151,149, three-fifths colored.

Southcott, JOANNA, 1750–1814. Prophetess of an English sect 1792, of which a remnant survived 1887; author of many alleged revelations. She professed to be the woman of Rev. xii., and expected to give birth to a new Messiah.

South Dakota. One of the n. central States. The e. part consists of the valley of the James, which is fertile and well watered, and is separated from the Missouri by a broad, low plateau, known as the Coteau du Missouri, which has a fertile soil, but is somewhat deficient in rainfall. W. of the Missouri the country is arid. The s.w. part is occupied by the Black Hills, which are covered with forests, and in which are located valuable mines of gold and tin; the former producing $4,266,897 in 1895, those of tin not being profitable. The State was formed 1889. The capital is Pierre on the Missouri. Area 76,700 sq. m.; pop., 1890, 328,808. See DAKOTA. (See Map, page 1422.)

South Dakota, UNIVERSITY OF. Opened 1883 at Vermillion as Univ. of Dakota; name changed 1891. It has 16 instructors and ab. 280 students.

Quadrant of the Southern Heavens from the Pole to the fortieth degree, showing the Southern Cross, *a*, and the Triangle, *b*. The two bright stars at *c* are α and β of Centauri.

Southern Confederacy. See CONFEDERACY, SOUTHERN.

Southern Cross. Constellation first noted 1679 by Royer. Right ascension 12 h., declination 60° S.

Southerne, THOMAS, ab. 1660–1746. English dramatist. *Oroonoko*, 1696.

Southernwood. *Artemisia abrotanum.* Shrub of the Composite family, with bitter aromatic foliage, native of s. Europe; much cultivated in gardens.

Southey, ROBERT, D.C.L., 1774–1843. English author, long associated with Coleridge and Wordsworth; pensioned 1807; poet laureate 1813. His epics, *Thalaba*, 1801, *Madoc*, 1805, *Curse of Kehama*, 1810, and *Roderick*, 1814, with a vast number of ballads and minor poems, are now less valued than his prose works, which include histories of Brazil, 1810–19, and the Peninsular War, 1823–32; lives of Nelson, 1813, J. Wesley, 1820, and Bunyan, 1830; *Book of the Ch.*, 1824; *Naval History*,

Robert Southey.

1833–40, and *The Doctor*, 1834–37.—His second wife, CAROLINE ANNE (BOWLES), 1787–1854, m. 1839, pub. much verse.

Southgate, HORATIO, D.D., 1812–1894. Missionary bp. of Constantinople 1844–50; rector in Boston 1852–58, and New York 1859–72. *Armenia*, etc., 1840; *Cross above Crescent*, 1877.

South Georgia. Group of islands in the s. Atlantic, belonging to Gt. Britain; lat. 54° 30′ S., long. 36°–38° W.; area ab. 1,000 sq. m.; discovered 1675; uninhabited.

South Mountain. In Md.; scene of a Confederate defeat Sept. 14, 1862.

South Park. Broad elevated valley in Colorado. Elevation 8,000 to 10,000 ft.

Southport. Watering-place in Lancashire, at the Ribble's mouth, 18 m. n. of Liverpool. Pop., 1891, 43,026.

South Sea. See PACIFIC.

South Sea Bubble. English speculation, initiated 1711. A company assumed the public debt, on which government was to pay 6 per cent after 5 years, with a grant of the monopoly of the South Sea trade; to secure this monopoly £7,500,000 were paid. The stock rose from £100 to £1,000; similar companies sprang up, supported by public infatuation. All collapsed 1720, entailing enormous loss.

South Shetland Islands. In the Antarctic Ocean, extending n.e. and s.w. between lat. 61°–63° 30′ S., and long. 53°–63° W. They are mountainous, covered with ice and snow, and surrounded by deep water. Area ab. 850 sq. m.

South Shields. See SHIELDS, SOUTH.

Southwell, ROBERT, 1560–1595. English Jesuit, poet, and martyr, imprisoned 1592, repeatedly tortured, and hanged at Tyburn. Some of his poems possess eminent devotional, philosophical, and poetical merit.

Southwest Territory. Organized 1790 from lands ceded by N. C. and S. C. Tenn was taken from it 1796, and it ceased to exist on the organization of Miss. Territory 1798.

Southworth, EMMA DOROTHY ELIZA (NEVITTE), b. 1819, m. 1840. American novelist.

Soutzo, ALEXANDER, 1803–1863. Greek satiric and dramatic poet.

Souvestre, ÉMILE, 1806–1854. French novelist. *Les Derniers Bretons*, 4 vols., 1835–37; *Riche et Pauvre*, 2 vols., 1836; *Foyer Breton*, 2 vols., 1844; *Un Philosophe sous les Toits*, 1854. His plays have less merit.

Souza, MME. ADELAIDE MARIE ÉMILIE (FILLEUL) DE, 1761–1836. French novelist. *Adèle de Sénanges*, 1794; *Eugénie et Mathilde*, 1811.

Souza, or **Sousa,** MARTIM AFFONSO DE, ab. 1500–1564. Gov.

and colonizer of Brazil 1530–32; Admiral or Gov. of Portuguese India 1534–45.—His brother, PEDRO LOPES, ab.1500–1539, assisted in these activities.—Their relative, THORNE, d. ab.1560, was first Gov.-gen. of Brazil, 1549–53, and founder of Bahia.

Sovereign. 1. Ruler of a state; usually, but not necessarily, a single person. 2. British gold coin, pound or 20 shillings; minted since 1817.

Sovereignty. Power to make and enforce law in a state. In the U. S. it is divided, so far as domestic affairs are concerned, between the State and Federal Governments, each being sovereign with respect to subjects committed to it by the U. S. Constitution. In international relations the Federal Government is the sovereign power.

Sower, or **Saur,** CHRISTOPHER, 1693–1758. German printer, in Germantown, Phila., from 1738. His Bible, 1743, was the first pub. in America after Eliot's.—His son, CHRISTOPHER, 1721–1784, reprinted this 1763 and 1776, and was a sufferer in the Revolution.

Sowerby, JAMES, 1757–1822. Illustrator of *English Botany*, 36 vols., 1792–1807; *Fungi*, 3 vols., 1797–1803; *Mineralogy*, 7 vols., 1804–17; and *Mineral Conchology*, 4 vols., 1812–20.—His son, JAMES DE CARLE, 1787–1871, pub. supplements to the first and last of these.—His nephew, GEORGE BRETTINGHAM, 1812–1884, wrote much on natural history.

Sowing. See DRILL, GRAIN.

Sow-Thistle. Coarse, spiny-toothed, yellow-flowered herbs of the genus *Sonchus*, natural family *Compositæ*, natives of the Old World, extensively naturalized as weeds in America.

Sow-Thistle (*Sonchus arvensis*).

Soy. *Glycine soja.* Herb of the natural family *Leguminosæ*, native of India; cultivated for its seeds.

Soyer, ALEXIS, 1809–1858. French chef, in London 1830–55; writer on cookery.

Sozobranchia. See PERENNIBRANCHIATA.

Sozomen, HERMIAS, ab.400–443. Of a Palestine family. Historian of the Ch. 323–439.

Sozura. See URODELA.

Spa. Belgian resort, 20 m. s.e. of Liege. Its chalybeate waters, known since ab.1370, are widely used; its name has become generic. Pop. ab.7,500.

Space. Indefinite extension in all directions, and something a definite portion of which is occupied by every material body as a condition of its existence. According to W. T. Harris, "the mind uses the idea of space as an indispensable instrument in thinking the idea of a body."

Space-Perception. The process by which the mind perceives things as extended is one of the most disputed questions of psychology. Perhaps the most widely accepted theory is that every sensation, at least of touch and sight, has an aspect known as extensity or bigness, which is original and innate. With this element as a basis, our developed spatial consciousness is a product of tactual, motor, and visual experience. The earliest space consciousness of the child is evidently largely the result of touch and movement, which with increasing years is supplemented and largely supplanted by the experience of the sense of sight.

Spadiceous. Resembling or pertaining to a spadix.

Spadicifloræ. Families of plants which bear their flowers in a spadix.

Spadix. 1. Fleshy, elongated flower-cluster, found especially in the natural families *Araceæ* and *Palmaceæ*. 2. Analogue in Nautilus of the hectocotylized arm of Cuttlefishes.

Spaeth, ADOLPH, D.D., b.1839 in Germany. Pastor in Phila. since 1867; Prof. Lutheran Theol. Sem. since 1874; author or compiler of sundry religious books.

Spagna, LO (GIOVANNI DI PIETRO), d. ab. 1530. Italian painter of the Umbrian School; of supposed Spanish birth; affiliated with Pinturicchio and Perugino, and a fellow-student with Raphael.

Spagnoletto. See RIBERA.

Spaight, RICHARD DOBBS, 1758–1802. Delegate to Congress 1783, and to the Constitutional Convention 1787; Gov. of N. C. 1792; M.C. 1798–1801.—His son and namesake, 1796–1850, was M.C. 1823–25, and Gov. of N. C. 1835–37.

Spain. Monarchy of s.w. Europe, occupying with Portugal the Iberian peninsula, separated from France by the Pyrenees. Area 197,670 sq. m. Its surface is mainly a plateau, having a mean elevation of 2,600 to 2,700 ft., capped by mountain ranges 8,000 to 11,000 ft. high. Its rivers are of little value for navigation. The climate as regards temperature varies with the altitude, being tropical in the low country along the seacoast, and temperate, with extremes of heat and cold, over the plateau. The rainfall is scanty. The forest area is very small. Agriculture is the most important industry, cereals and the grape being largely cultivated. Its mineral resources are considerable, consisting mainly of iron, lead, copper, mercury, and coal. Its manufactures are of little importance. It has a large foreign commerce, and in 1893 had 6,708 m. of railway in operation. Its principal colonial possessions are Cuba and the Philippine Islands, both now (1898) in revolt. The capital is Madrid.

S. was originally inhabited by Celtic and Iberian tribes. It was partly conquered by Carthaginians, became a flourishing province of Rome, was overrun ab.409 by the Vandals, whom the Visigoths expelled ab.414, and was won by the Arabs 711–714, who established a flourishing empire. The Christians, shut up in the n. mountains, gradually, during 8 centuries, reconquered the territory. Leon, Castile, Aragon, rose into separate Christian kingdoms: these were united under Ferdinand and Isabella. Granada was taken from the Moors 1492; Navarre was absorbed 1575. Under Ximenes the church became the unifying principle. The discovery of America raised

A Bull Fight in a Country Village in Spain.

S. to be the first power of Christendom: it reached its culmination under Charles V., 1517–56, who held the Netherlands, Franche Comté, the Sicilies, and Milan. With Philip II. the decline began: the great wealth from America destroyed productive energy at home, and a narrow policy fettered intellectual development. 1,000,000 industrious Moors were expelled; the church monopolized the state; heresy was furiously persecuted; and between 1678 and 1700 the population decreased from eleven millions to eight. The European possessions were gradually lost. The accession of the Bourbons, 1700 (Philip V.) brought war again, and by the Peace of Utrecht all possessions beyond the peninsula were lost. Napoleon placed his brother Joseph upon the throne 1808; a popular revolution followed, and Ferdinand VII. was restored 1813 to a constitutional monarchy. His reactionary policy caused a revolution; civil war followed 1821–28, and the war of succession 1833–40 between Don Carlos, brother of Ferdinand VII., and Maria Christina, his widow. Maria abdicated 1840; Isabella, her daughter, was proclaimed 1843, and driven out 1868 by an uprising of Liberals. An offer of the crown to Leopold of Hohenzollern-Sigmaringen was refused by him 1870. Amadeus of Savoy was chosen king 1870, and abdicated 1873: a republic followed, and a Carlist war. Alfonso XII., son of Isabella, reigned 1875–85; his widow, Christina (of Austria), has been regent during the minority of her son, Alfonso. Cuban revolution began 1895. Pop., 1887, 17,550,246.

Spalacotherium. Ancient Jurassic Marsupial, whose dentition somewhat resembled that of the Insectivores.

Spalato, or SPALATRO. Town of Dalmatia, near the Adriatic; noted for the remains of an immense palace built by Diocletian and occupied on his abdication 305. Pop., 1890, 15,697.

Spalding, MARTIN JOHN, D.D., 1810–1872. R. C. Bp. of Louisville, Ky., 1850; Abp. of Baltimore 1864. *Evidences of Catholicity*, 1847; *Hist. Reformation*, 1860.—His nephew and biographer, JOHN LANCASTER, b.1840, Bp. of Peoria, Ill., 1877, has pub. *Essays*, 1876, *Means and Ends of Education*, 1896.

Spallanzani, LAZARO, 1729–1799. Prof. Modena 1761, and Pavia 1768. He disputed Buffon's doctrine of spontaneous

generation, and explained the nature of reproduction and of digestion. *Viaggi alle duc Sicilie*, 6 vols., 1792.

Spalling. Process of breaking and sorting ore with the aid of small hammers; intermediate between coarse ragging and fine cobbing.

Span. Nine inches; distance between tips of thumb and little finger when the hand is stretched.

Span. Length of a bridge between two piers, either from center to center or in the clear. The longest span is that of the Forth bridge in Scotland, 1,700 ft. That of the East River Bridge at New York is 1,595 ft. That of the projected bridge over the Hudson at New York is 3,100 ft.

Spandau. Prussian town, on the Spree, 8 m. w. by n. of Berlin; taken by Swedes 1634; held by the French 1806–13. It has a strong citadel, government foundries and factories of arms, and a good trade. Pop., 1890, 44,611.

Spandrel. Space between the extrados of an arch and the roadway.

Spangenberg, AUGUST GOTTLIEB, 1704–1792. Prof. Halle 1731–33; Moravian missionary from 1733, bishop 1744; in America 1735–39 and 1744–62. *Life of Zinzendorf*, 1772–74, tr. 1838; *Exposition of Doctrine*, 1777, tr. 1784.

Spanheim, EZEKIEL, 1629–1710. German numismatist, envoy of the Palatinate in England and France. *Orbis Romanus*, 1704.—His brother, FRIEDRICH, 1632–1701, and father, FRIEDRICH, 1600–1648, were professors of theology at Leyden and controversial writers.

Spaniel. Medium to small dog, with silken hair and large pendulous ears, white and black or with liver-colored spots;

Sussex Spaniels.

most intelligent of dogs, with superior sense of smell and serviceable as a water dog and as a setter for the hunt.

Spanish. See ROMANCE LANGUAGES.

Spanish Ballads. Earliest form of Spanish poetry, and full of the national spirit. They deal with chivalry, history, Moorish themes, and national manners.

Spanish Bayonet. See BEAR-GRASS.

Spanish Blister-Beetle. See HETEROMERA.

Spanish Chronicles. 2d form of Spanish literature; work of different authors from the 13th century or earlier. Some are historical, some romantic.

Spanish Flies. See CANTHARIDES and HETEROMERA.

Spanish Literature. The first period extends ab.1200–1500. To this belong the poem of the Cid, the old ballads, chronicles and romances of chivalry, the early drama, a Provençal literature, and the courtly school of writers. Most of these works are marked by a strong flavor of nationality. The second period, 1500–1700, is the age of Cervantes, Lope de Vega, and Calderon; it is rich in lyric poetry, romantic fiction, and history. This is the golden age of Spanish letters. Then follows a period of decadence, 1700–1800. The writing, mainly dramatic, falls far below the drama of the preceding age. The 19th century has produced distinguished historians, novelists, and dramatists. The new school of writers have opened a brilliant era, and Spanish literature seems entering upon a new lease of life.

Spanish Main. Parts of S. and Central America skirting the Caribbean Sea. The term is used somewhat vaguely, and by some for the sea itself. See TIERRA FIRME.

Spanish Moss. See MOSS, BLACK.

Spanish Music. Special interest in Spanish music extends only to the rhythms and melodies which have been lent to the modern art by the characteristic dances of Spain. The music indigenous to Spain is that of the Basques, who have preserved it distinct from that of others. This has made no impression upon musical literature, and is not heard out of the Basque country. It is distinguished by its mixed rhythms, 5-8 and 5-4 time being common. The florid embellishments of the melodies of the other provinces, and also their intervallic characteristics, indicate that they are of Arabian origin. To the older set of dances belong the Fandangos, Malagueñas, and Rondeñas. Dances which have been introduced since the expulsion of the Moors are the Seguidilla, which came from La Mancha, and is sometimes called Manchega (referred to in Part II., Chap. xxxviii., of *Don Quixote*); the Jota, a kind of waltz of which nearly every province has its own (Glinka wrote a Jota Aragonesa for orchestra, and Sarasate introduced a Jota Navarra in his Spanish Dances); the Cachucha, an Andalusian dance which Fanny Elssler brought into the theater; the Zapateado, el Vito, el Polo, el Ole, and Bolero, of which a fine specimen is in Auber's *La Muette de Portici*. Spohr wrote a violin concerto on Spanish melodies; Weber introduced others in his *Preciosa;* Massenet has used Spanish dances in the ballet of his *Cid*, Moszkowski in his *Boabdil*, and there is charming use of Spanish color in Bizet's *Carmen*. The guitar, the national instrument of Spain, is also of Arabian origin.

Spanish Needles. *Bidens bipinnata.* Coarse herb of the natural family *Compositæ*, with small yellow flowers and awned achenia, which attach themselves to clothing or to the fur of animals; native of N. America.

Spanish Succession, WAR OF, 1702–1713. Waged to prevent Philip of Anjou, grandson of Louis XIV., from ascending the throne of Spain on the death of Charles II. The proposed union of France and Spain was regarded as a menace by the other Powers, and occasioned the alliance of England and Holland against France aided by Bavaria. The conflict was carried on chiefly in n. Italy and the Netherlands, the allies under Prince Eugene and Marlborough winning decisive victories at Blenheim, Ramillies, Oudenarde, and Malplaquet. The Archduke Charles, upon his accession to the throne of Austria, April, 1711, laying claim also to the Spanish crown, his allies preferred of the two the heir of the House of Bourbon, and, save that Austria continued the war for a year longer, it ended with the Peace of Utrecht, April 11, 1713, by the terms of which Spain lost her possessions in Italy and the Netherlands, England gained Nova Scotia, Newfoundland, Hudson's Bay, St. Kitts, Gibraltar and Minorca, and France engaged that the crowns of France and Spain should never be united.

Spanutius, FREDERICK WILLIAM, M.S., b.1868. American chemist; instructor Pa. State Coll. 1888, Ia. State Coll. 1889, Lehigh Univ. 1892.

Spar. In Mineralogy, heavy spar, fluor spar, calc spar, etc. Among miners, any soft, easily cleavable, light-colored, nonmetalliferous gangue.

Spark, ELECTRIC. Luminous phenomenon which takes place when two bodies in different electric conditions are brought sufficiently near. It is due to the incandescence of the air and minute particles of the solid which are carried across by the discharge. Experiment has shown that what seems to be a single spark is really a very rapid succession of separate discharges in alternate directions. The shape and character of the spark depends upon local conditions.

Sparks, JARED, 1789–1866. Prof. Harvard 1839–49, pres. 1849–53; editor of the writings of Washington, 1834–37, and Franklin, 1836–40; of a *Library of American Biography*, 25 vols., 1834–48; and of *Correspondence of the Revolution*, 1854.

Sparring, or BOXING. Originally considered a mimic fight; contest indulged in for exercise or amusement; distinguished from bare-knuckle fighting. Gloves were usually worn. Sparring is now regarded as rather more scientific, and in contests where a decision as to the better man is to be reached it is said to be "for points." The wearing of gloves does not necessarily make a sparring match, nor is an adept sparrer of necessity a strong fighter, though pugilists of the first rank must be clever in scientific boxing. See PUGILISM.

Sparrow, ANTHONY, D.D., d.1685. Bp. of Exeter 1667, of Norwich 1676. *Rationale of the Prayer Book*, 1643; *Collection of Articles, Canons*, etc., 1661.

Sparrow Hawk. See FALCONS.

Sparrows. Small plain-colored birds of family *Fringillidæ*, with narrow palates, small conical bills, and streaked plumage. The English House Sparrow (*Passer domesticus*) was introduced into U. S. 1853, and has since spread to a re-

markable extent, in cities, driving off other birds. The male has throat, lores, and chin black; the female is without black. They are not streaked below, have white bands in wing and a

Stone (*Passer petronius*), Neckband (*P. hispaniolensis*), Field (*P. montanus*) and House Sparrows (*P. domesticus*).

general chestnut-brown color, much streaked. Length 6 in., of which 2½ is tail. Each pair raises ab. 12 pairs of young per year in ab. 5 broods. Their destruction should be encouraged. They make excellent pot-pie.

Sparta, or LACEDÆMON. Capital of Laconia, on the Eurotas; ab. 6 m. in circuit. Its greatness dates from Lycurgus, ab. 825 B.C. It had chief command in the Persian war, and held the supremacy in Greece from the end of the Peloponnesian war, 405, to 376; but never recovered from its defeat by the Thebans at Leuctra, 371, and refused to share in Alexander's Asiatic expedition. It revived somewhat under Clomenes, 236–221 B.C., but was soon after compelled to join the Achæan league. The Spartans have been styled "stunted Romans."

Spartacus, d.71 B.C. Thracian bandit-chief, taken prisoner and trained for a gladiator. With 70 others he broke away from the school in Capua 73 B.C. and at the head of an army of runaway slaves for two years defied the Roman arms, but was defeated and slain by Crassus. He is the hero of several plays.

Spartianus, ÆLIUS, 2d cent. Latin biographer of the emperors to Septimius Severus. Five of his lives remain in the series of Augustan histories.

Spasm. Convulsive contraction of muscle. It may be general or confined to a part of the body. It is frequently the manifestation of an occupation disease, as drivers, sewing or smith's spasm, where the continuous use of a single set of muscles so reacts upon the nerves as to produce the convulsion.

Spasmodic School. Group of English poets, who displayed an overstrained and unnatural method of sentiment and expression. Among them were P. J. Bailey, S. Dobell and A. Smith. Burlesqued by Aytoun in *Firmilian*, 1854.

Spatangoidea (SPATANGIDEA, PETALOSTICHA). Irregular heart-shaped Sea-urchins, with mouth and anus eccentric in position. They have no teeth; the ambulacral rosette is four-leaved, with four genital plates. They are known as Heart-urchins.

Spathe. Modified leaf or bract which partially incloses a flower cluster (usually a spadix), as in the calla and Jack-in-the-pulpit.

Spathic Iron. See SIDERITE.

Spathilla. Small spathe, especially of palms.

Spatter-Dock. See WATER-LILY, YELLOW.

Spatulate. Leaves or other organs which in outline resemble a spatula.

Spaulding, ELBRIDGE GERRY, b.1809. M.C. from N. Y. 1849–51 and 1859–63; author of important financial measures; "father of Greenbacks." *Hist. Legal-tender Paper Money*, 1869.

Spaulding, LEVI, 1791–1873. American missionary in Ceylon from 1820; translator of books, etc., into Tamil. *Tamil Dictionary*, 1844.

Spaulding, NATHAN WESTON, b.1829. Inventor of an adjustable saw-tooth for mills, ab.1860; U. S. Treasurer at San Francisco 1881–85.

Spaulding, SOLOMON, 1761–1816. Author of a MS. novel alleged to have been procured by S. Rigdon, 1814, and made the basis of the *Book of Mormon*. The original, discovered 1840, supplies small foundation for this legend.

Spavin. Disease affecting the hock joint in horses.

Spawn. Mycelium of the mushroom, *Agaricus campestris*.

Speaker. Presiding officer of a British or American legislature. In the lower house of Congress he has great power.

Speaking-Trumpet. Instrument invented ab.1670 to carry the voice far; truncated cone; much needed and used on ships.

Spear. Wooden shaft, furnished with a sharp point, commonly of metal; of various length and weight, as lance, javelin, pike; used in war from earliest times till firearms were introduced, and still by savages, as the S. African assegai.

Spear-Grass. See MEADOW-GRASS.

Spearmint. See MINT.

Spearwort. Yellow-flowered species of the genus *Ranunculus* of the Buttercup family, natives of wet places in the n. temperate zone.

Specialized Ability. Manual dexterity and acquaintance with practical materials, processes and conditions, required for the special purposes of individual trades.

Specialized Capital. Capital in such a form that it is available for use in the trade for which it was designed, but cannot easily be diverted to another.

Specie Payments. Exchange, on demand, by the government or by a bank, of any amount of paper money for coin of the same face value.

Species. In Logic, a smaller class differentiated from a larger class, the genus, by some peculiar quality called the differentia.—In Natural History, once a fixed type but now a variable type under the influence of environment, heredity and natural selection.—In Biology, subdivision of a genus, consisting of individuals closely alike and congenitally related. According to the creationist, a species has descended from ancestors originally created in conformity to a plan or type which was definitely related to the types of the genus, order, and other higher divisions of the system of classification, being the final analysis of such systematic plan. The subdivisions of a species (*e.g.*, variety, race) are not aboriginal type ideas, but only modifications of an idea due to the action of environment. According to the evolutionist, a species is a group of individuals, differentiated in a definite way, from ancestors from which other species have also descended, by the action of forces at work breaking species into varieties, which are incipient species, species being incipient genera, and a genus an incipient family. In practice the line which divides nearly related species is drawn with a difficulty which increases with the number of specimens which the classifier has under consideration. If we could get a bird's-eye view of every being that ever lived, they would stand continuously related like the parts of a tree. The physiological species (viz., that including all animals that are interfertile) exists only in idea, for some evidently different species are interfertile, while certain members of the same species are intersterile. See CLASSIFICATION, DARWINISM, NATURAL SELECTION, and VARIATION.

Specifications. Rules for conducting work, embracing all matters relating to quality of materials and details of construction, which cannot be given on the drawings.

Specific Conductivity. Measured by the quantity of electricity transmitted per second across a unit of area of an equipotential surface, at which the electric force has unit value.

Specific Duties. Rates of import or export tax calculated according to the quantity, not value, of the article taxed.

Specific Gravity. See DENSITY.

Specific Gravity Bottle. Small flask of thin glass fitted with a ground stopper, and used to determine the specific gravity of a liquid or of small pieces of a solid. If the weight of the solid be w, that of the bottle when full of water w_1, and that of the bottle with the solid in it and then filled up with water w_2, $\rho=\frac{w}{w_2-(w+w_1)}$. For a liquid, if w be the weight of the empty bottle, w_1 its weight when filled with the liquid, and w_2 when filled with water, $\rho=\frac{w_1-w}{w_2-w}$. A temperature correction must be made for any variation from 4° C.

Specific Heat. Amount of heat, expressed in THERMAL UNITS (q.v.), required to raise one unit of weight of a solid substance through one thermometric degree. The English standard is one pound raised 1° F.; the French is one kilo raised 1° C. It is also called capacity for heat. The specific heat of gases will have two values, one for the gas when heated at a constant volume, another for the same gas when allowed to expand in volume. The former is less than the latter by the amount of heat necessary to do the internal work of enlarging the volume of the gas. The dynamical specific heat of a substance is the amount of heat expressed in units of work, which corresponds to one degree of absolute temperature. This is constant for all temperatures. The following table shows accepted values for specific heats:

Glass	0.1770	Hydrogen	3.4046
Iron	0.1090	Marsh Gas	0.5929
Copper	0.0949	Ammonia	0.5080
Zinc	0.0927	Nitrogen	0.2440
Silver	0.0557	Carbonic Oxide	0.2479
Antimony	0.0507	Air	0.2377
Platinum	0.0355	Carbon Dioxide	0.2164
Mercury	0.0330	Oxygen	0.2182
Water	1.0000	Sulphuric Acid	0.1553

The specific heats for the gases are at constant pressure.

Specific Inductive Capacity. Capacity of a dielectric to transmit inductive influence. It is equal to the ratio of the capacity of a condenser in which this dielectric is used to that of an air condenser of the same dimensions; or it is the coefficient by which the inductive power of air must be multiplied to give the inductive power of any dielectric. See DIELECTRIC CONSTANT.

Specific Performance. Equitable remedy by which one party to a contract forces the other to perform it in terms; not generally available if the complainant can obtain adequate relief by a common law action; nor if such performance is impossible or would be unjust.

Specific Resistance. See RESISTANCE.

Specific Rotatory Power. In 1811 Arago observed that when plane polarized light is transmitted through a plate of quartz in the direction of its optic axis, the plane of polarization is rotated through a certain angle depending on the thickness of the plate and color of the light. Other substances, liquids and vapors, as well as solids, were found to possess this property of rotation. The real specific rotatory power, α, of a substance is the rotation, for a given wave frequency, of a layer of the substance 1mm. thick. The apparent power $[\alpha]$ is the rotation of the substance when in solution. If e represent the amount of substance in one grain of solution, l the length of the column, usually given in decimeters, and ρ its density, $[\alpha]=\alpha/el\rho$. The molecular rotatory power is the product of the specific rotatory power by the molecular mass.

Specimen. Entire plant or animal, or portion of one, selected or preserved for study.

Speckbacher, JOSEPH, 1764–1820. Tyrolese revolutionist of 1809, who, in concert with Hofer, raised the lower valley of the Inn, took Hall, and attacked Innsbruck. He afterward besieged the fortress of Kufstein, and defeated the Bavarians at Lofer and Unken.

Spectacles. Mechanical device whereby lenses may be kept in position in front of the eyes to correct focal or other defects in seeing. It is usually restricted to that form of device resting on the nose and kept in place by temple pieces extending back over the ears. They are said to have been invented in the 13th century.

Spectator. English periodical, 1711–12 and 1714, to which Addison and Steele were the chief contributors.

Spectrometer. Instrument designed particularly for

Spectrometer.

measuring spectrum lines, indices of refraction, or wavelengths of light. It is similar in construction to the spectroscope, but has in addition several graduated circles, in order that the positions of the telescope, collimator, and dispersing apparatus may be accurately ascertained.

Spectroscope. See SPECTRUM ANALYSIS.

Spectrum. See SPECTRUM ANALYSIS.

Spectrum Analysis. Method of studying the composition of substances by an examination of the light they emit when their vapors are rendered luminous. The light is passed through a prism which separates it into its components, arranging them in the order of their refrangibilities. The result is a band of color which may be received on a screen or upon the retina. This band of color is a spectrum: if the luminous source be the sun, it is the solar spectrum. The instrument employed in spectrum analysis is a spectroscope, and consists of two telescopes and a prism. One of the telescopes, the COLLIMATOR (q.v.), is used to bring into a parallel beam the rays of light which are to pass through the prism. It has no eyepiece, but in its place is a narrow adjustable slit, placed in the principal focus of the object glass. The other telescope is used to view the spectrum formed by the prism. The spectrum consists of as many images of the slit as there are rays of different refrangibility in the given light. The light emitted by every elementary substance when its vapor becomes incandescent has its characteristic spectrum; hence the presence or absence of any element in a compound may be readily determined. Bunsen and Kirchhoff first used the prism for this purpose 1860.

Spectra may be classified as follows: 1. The spectrum of the sun, whether received directly or by reflection from the moon or planets, or of the fixed stars, consists of a band of color beginning with red and ending with violet, but crossed by a large number of dark lines. The number, position, and character of these lines varies with the source of the light. They are called absorption lines because they are due to the sifting out or absorbing of certain rays by the chromosphere of the sun or similar envelopes of the fixed stars. The dark lines in the solar spectrum were first observed by Wollaston 1802, but Fraunhofer was the first to map out and describe them 1814. Certain lines in the spectrum, due to the absorption of the earth's atmosphere, are called telluric lines.

2. Incandescent solids and liquids furnish spectra which are completely continuous, containing rays of all refrangibilities from extreme red to extreme violet, depending on the temperature.

3. Incandescent gases and vapors give discontinuous spectra, consisting of a definite number of bright lines, their position and character depending on the substance employed, thus furnishing a delicate qualitative test. By noting the coincidence of many of these bright lines with the dark lines of the solar spectrum, we have the best evidence for supposing that many of the elements with which we are familiar on the earth are present in the sun.

Spectroscope.

4. All transparent media have the power of absorbing certain colors of a continuous spectrum more or less completely, thus forming dark bands. Such are called absorption spectra; and the dark spaces are ABSORPTION BANDS (q.v.).

In astronomical work, the spectroscope is usually fitted to a telescope taking the place of the eyepiece and placed with the plane of its slit in the principal focus of the object glass. Thus the light from various parts of the luminous source can be examined separately. A combination of this sort is called a telespectroscope. If the dispersing prism be formed of several pieces of two kinds of glass, placed in such a way that the deviation is destroyed but the dispersion not, the instrument is known as a direct vision spectroscope.

Specular Iron. See HEMATITE.

Specular Reflection. That which takes place from polished surfaces; regular, as distinguished from irregular reflection, by means of which bodies are visible.

Speculum. Reflector of polished metal.—In Medicine, an instrument for examining inward parts.

Speculum Metal. Alloy of 1 part of tin, 2 of copper, and a small quantity of arsenic, used for making the mirrors of reflecting telescopes. Glass having a film of silver over it is taking its place.

Spedding, JAMES, 1808–1881. Editor and biographer of Bacon, 1857–78. *Publishers and Authors*, 1867; *Reviews*, 1879.

Speech. Form of language; means of expression of thought, characterized by the articulate utterance of audible sounds.

Speed. Rate of change of place along any path, without regard to the direction or its changes. Speed is a scalar quantity, while velocity, which involves direction, is a vector quantity.

Speed, JAMES, 1812–1887. Ky. loyalist, law prof. Univ. Louisville 1855–58, 1875–79; U. S. Atty.-gen. 1864–66.

Speed, JOHN, 1542–1629. English antiquarian and cartographer. *Hist. Britain*, 1611.

Speed of Locomotive. See LOCOMOTIVE.

Speedwell. Herbs of the genus *Veronica*, natural family *Scrophulariaceæ*, of wide geographical distribution, including several common weeds.

Speedwell (*Veronica officinalis*).

Speiss. Product first obtained when arsenical ores are smelted; an arsenide of the metal.

Speke, JOHN HANNING, 1827–1864. English explorer, in Africa with Burton 1854 and 1857–59, and with J. A. Grant 1860–63; discoverer of the Victoria Nyanza. *Source of the Nile*, 1863–64.

Spelling. See PHILOLOGY.

Spelman, SIR HENRY, 1562–1641. English antiquarian, knighted ab.1612. His *Glossarium Archæologicum*, 1626–64, and *Concilia Decreta*, etc., 1639–64, were completed by other hands.—His son, SIR JOHN, d.1643, knighted 1641, wrote a life of King Alfred, 1678.

Spelt. *Triticum spelta*. Tall grass, native of the Old World, cultivated to a limited extent for its grain, which resembles wheat and barley.

Spelter. Zinc in blocks or pigs. See ZINC, METALLURGY OF.

Spence, JOSEPH, 1699–1768. Prof. of Poetry at Oxford 1727; of History 1737; prebendary of Durham 1754. *Polymetis*, 1747; *Anecdotes*, pub. 1820.

Spence, ROBERT TRAILL, U.S.N., 1785–1827. Captain 1815; distinguished in the war with Tripoli 1804 and that of 1812.—His son, CARROLL, 1816–1896, was Minister to Turkey 1853–57.

Spencer, AMBROSE, LL.D., 1765–1848. Atty.-gen. of N. Y. 1802–4; Justice N. Y. Supreme Court 1804; Chief-justice 1819–23; M.C. 1829–31. *Chancery Reports*, 1814–23.—His son, JOHN CANFIELD, LL.D., 1788–1855, was M.C. 1817–19, Sec. of War 1841–43, and of the Treasury 1843–44.

Spencer, HERBERT, b.1820. English author of a *System of Synthetic Philosophy*, based on evolution and aiming at scientific precision and coherence. *Social Statics*, 1850; *Psychology*, 1855–72; *First Principles*, 1862; *Biology*, 1864–67; *Sociology*, 1876–85; *Ethics*, 1879–93. His writings cover a wide range of thought, exhibit the results of vast industry, and are exciting no little influence.

Spencer, ICHABOD SMITH, D.D., 1798–1854. Presb. minister in Brooklyn from 1832. His *Pastor's Sketches*, 1850–53, had a large circulation.

Spencer, JESSE AMES, D.D., b.1816. Prof. Coll. New York 1869–79; editor of classical text-books. *Hist. U. S.*, 1856–69.

Spencer, JOHN, D.D., ab.1630–1695. Dean of Ely 1677. *De Legibus Hebræorum ritualibus*, 1685–1727.

Spencer, JOHN CHARLES, 3D EARL (LORD ALTHORP), 1782–1845. M.P. 1804; in opposition 1807–30: Chancellor of the Exchequer and leader of the Commons 1830–34; active in carrying the Reform Bill 1832 and the Irish Ch. reform 1833; Earl 1834.

Spencer, JOHN POYNTZ, 5TH EARL (1857), b.1835. Lord-lieutenant of Ireland 1869–74 and 1882–85; pres. Council 1880 and 1886.

Spencer, JOSEPH WILLIAM, b.1850. Prof. King's Coll., Windsor, N. S., 1880; Univ. Mo. 1882, and Univ. Ga. 1890; State Geologist of Ga. 1890–93; chiefly engaged in the superficial geology of the Great Lakes.

Spencer, PLATT ROGERS, 1800–1864. American author and teacher of a system of penmanship; founder of business colleges.

Spencer, SARA (ANDREWS), b.1837, m.1864. American advocate of woman suffrage and other reforms. *Problems*, 1871.

Spencer, WILLIAM ROBERT, 1770–1834. English lyric poet.

Spencer Rifle. First magazine gun used during the rebellion, having been introduced into the army in 1860. The magazine carries seven metallic rim-fire cartridges, which are pushed forward toward the barrel by a spiral spring. The breech-block is curved on one face and flat on the other, which closes the breech, and is hinged to the trigger guard. When the latter is pushed forward the block is drawn, opening the breech and allowing a cartridge from the magazine to slip over it. Pulling the trigger guard back, the block rotates to the front and pushes the cartridge home. It is fired by releasing the hammer, which strikes a slide in the block and drives it against the rim of the cartridge. See MAGAZINE GUN.

Spence's Metal. Made by melting together a metallic sulphide and sulphur. When sulphide of iron is used, a grayish-black substance is formed which takes a good polish and can be colored to imitate bronze. It is used like lead in pipe joints and for making busts and medallions. It was first used 1879.

Spener, PHILIPP JAKOB, 1635–1705. Preacher at Frankfort 1666, Dresden 1686, and Berlin 1691; founder of the pietistic school, exerting great influence and encountering vehement opposition. *Pia Desideria*, 1675; *Theologische Bedenken*, 1700–2.

Spengel, LEONHARD, 1803–1880. Prof. Heidelberg 1842 and Munich 1847; writer on Aristotle, 1844–68, and Greek rhetoric.

Spenser, EDMUND, 1552–1599. English poet, whose *Faerie Queene*, 1590–96, is the greatest of allegorical poems. Some of his minor poems are of rare excellence: his *Epithalamion*,

Edmund Spenser.

1595, is the finest wedding-hymn in the language. He marks the resurrection of English poetry after long collapse. He was in Ireland 1580–98, and was ruined by an insurrection. *State of Ireland*, 1633.

Speratus, PAULUS, 1484–1551. German reformer and hymnist.

Spermaceti. $C_{16}H_{31}O_2.C_{16}H_{33}$. Palmitate of cetyl; solid fat, found in head and blubber of sperm whale and others, and *Delphinus edentulus;* sp. gr. 0.94, mpt. 38°–47° C. See CETYL ALCOHOL and SPERM WHALE.

Spermarium. See TESTIS.

Spermatheca. Sac in Tapeworm, in first abdominal segment of Cyclops, etc., for receiving and storing the spermatozoa to be used as needed when the eggs are mature and are passed down the oviducts one by one.

Spermatist. One who believes that the embryo is represented in the spermatozoön and enters the egg only to find a place to receive nourishment. This idea has been philosophically expressed by saying, "the soul is from the father and the

mother clothes it with a body." Aristotle advocated this view. The modern theory, that the female furnishes the conservative and the male the progressive factor in heredity, is at least analogous to the ancient view.

Spermatium. Propagative spore in certain *Fungi* and *Algæ*.

Spermatoblasts. See SPERMOSPHERE.

Spermatocyst. Cell containing a spermatozoid.

Spermatocytes. See SPERMOSPHERE.

Spermatogemme. See SPERMOSPHERE.

Spermatogonia. See SPERMOSPORES.

Spermatophores. Sac-like sheaths surrounding the spermatozoa in Cyclops, Cuttlefish, and other animals, to protect them during transference from the male to the female.

Spermatophyta. Sub-kingdom of plants, including all those which produce seed. See PHANEROGAMIA and ANTHOPHYTA.

Spermatozoid. Coiled protoplasmic body, the male element of fecundation in certain plants, in function similar to the spermatozoön in animals.

Spermatozoön. Microgamete, destined for conjugation with a macrogamete (or ovum) to produce an oösperm (or zygote) from which a new individual will develop. This is the all-inclusive biological definition. In popular terms, one of the animalcules of the male-fluid, essential to fruitful impregnation of the female. When semen fails to contain these, the male is sterile.

Spermoderm. See EPISPERM and TESTA.

Spermogone (SPERMOGONIUM). Sac containing reproductive spores (spermatia) in certain *Fungi* and *Algæ*.

Sperm Oil. Found with SPERMACETI (q.v.) in the head-cavities and blubber of the SPERM WHALES (q.v.). It remains liquid at 18° C., is saponified by potash, and yields the same fatty acids as spermaceti. It is used as a lubricant for machinery.

Spermosphere (SPERM-MORULA, SPERMATOGEMME). Ball of cells (spermatocytes), which, after completing multiplication, are known as spermatoblasts and are transformed into spermatozoa. They surround a central blastophore, consisting of a cell which plays no part in the multiplication, but probably functions in the nutrition of the other cells of the sperm ball.

Spermospores, or SPERMATOGONIA. Mother-cells of spermatozoa. They develop first into spermospheres.

Sperm Whales (PHYSETERIDÆ). Family of toothed Cetaceans, with united cervical vertebræ, and teeth in the lower jaw only. The blow-holes are on the end of the snout. On

Sperm Whale (*Catodon macrocephalus*).

the top of the head on the right side is a cavity containing fluid oil and spermaceti, ab. 15 bbls. capacity. The throat is large enough to admit a man. The fore-limbs are 6 ft. long. The color is black above and gray on breast. The females and young can stay under water half an hour, the old males more than an hour. They have 5 respirations per minute. They swim in schools in the temperate and warm parts of all oceans, but prefer the s. Pacific. When enraged they have sunk boats, and even ships. The period of gestation is 10 months. Ambergris is found in the intestines of some specimens, resulting from a peculiar decomposition of the cuttlefish food. See CATODONTIDÆ.

Sperrylite. $PtAs_2$. Natural mineral combination of platinum and arsenic, found in very small quantity near Sudbury, Ontario.

Speusippus, ab.394–339 B.C. Nephew of Plato, and his successor as head of the Academy at Athens.

Spey. River of Scotland, the most rapid in Britain. It rises in the hills between Badenoch and Lochaber and empties into Moray Firth. It affords valuable salmon fisheries. Length 110 m.

Speyer. See SPIRES.

Spezia. Principal naval station of Italy; 56 m. s.e. of Genoa. Pop. ab. 20,000.

Sphacelariaceæ. Order of minute marine *Algæ*, mainly parasitic on other plants of the same class.

Sphæraphides. Clusters of crystals of globular form, found in the parenchyma of a great number of plants.

Sphæridia. Small, transparent bodies on stalks, situated on the ambulacral and peristomial plates of Sea-urchins.

Sphærococcaceæ. Order of *Algæ*, of sub-class *Rhodophyceæ*.

Sphærogastra. See ARANEIDA.

Sphæro-Siderite. Impure varieties of carbonite of iron.

Sphærozoida. Group of *Polycyttaria*, including *Radiolaria*, which have no skeleton, or scattered spicules, outside of the central capsule. Examples are *Sphærozoum* and *Collozoum*.

Sphagnaceæ. Order of *Bryophyta*, comprising the Bog Mosses. All are of the genus *Sphagnum*. They grow in bogs or swamps, principally in regions of low annual temperature but high humidity, where, by their growth and accumulation, they form Peat. Such conditions are well afforded by Ireland, Scotland, and Scandinavia.

Sphalerite. ZnS. Mineral zinc sulphide, widely distributed in nature, and occurring in deposits of widely varying form and origin; important ore of zinc; also called Zinc-blende. See BLENDE.

Sphargidæ. Family of marine *Chelonia*, including the Leatherback. This is the largest of tortoises, attaining a

Leatherback (*Dermochelys coriacea*).

weight of 1,000 lbs. and a length of over 6 ft. Its carapace is undeveloped, and a tough leathery skin protects the body.

The anterior legs are modified into large flippers. It lays over 100 eggs palatable to the taste, as is also the coarse flesh.

Sphene. $CaTiSiO_5$. Mineral calcium titano-silicate, so called on account of the wedge form of its crystals; also called Titanite.

Spheniscomorphæ. See IMPENNES.

Sphenodon. See RHYNCHOCEPHALIA.

Sphenoid Bone. One of the bones of the skull forming a part of its base which, by articulating with them all, acts as a wedge. In shape it suggests the form of a bat.

Sphenotic. Anterior dorsal element of the ear capsule of the vertebrate skull, distinct as a postfrontal in some fishes.

Spheraster. Form of sponge spicule found in the genus *Tethya*, spherical in form yet consisting of numerous rays from a center.

Sphere. Solid generated by revolving a semicircle about its diameter. Every point of its surface is equidistant from the center of the generating semicircle, which is also the center of the sphere. The surface of a sphere whose radius is $R=4\pi R^2$, and its volume$=\frac{4}{3}\pi R^3$.

Spherical Aberration. See ABERRATION, SPHERICAL.

Spherical Angle. That between two arcs of great circles on the surface of a sphere. It is the angle between the tangents to those arcs at their point of intersection, and measures the dihedral angle formed by the planes of the two great circles.

Spherical Polygon. Portion of the surface of a sphere bounded by three or more arcs of great circles.

Spherical Pyramid. Solid bounded by a spherical polygon and the planes of the circles whose arcs are sides of the polygon.

Spherical Triangle. Portion of the surface of a sphere bounded by three arcs of great circles. The ordinary spherical triangle restricts the arcs to less than 180°: the general triangle is unrestricted. The area of a spherical triangle is the trirectangular triangle multiplied by the spherical excess.

Spherical Trigonometry. Discussion of the relations between the elements of the spherical triangle; three sides and three angles. It is based upon the trigonometry of the trihedral, whose vertex is the center of the sphere. The face angles of the trihedral are measured on a unit sphere by the arcs of the spherical triangle, and its dihedral angles have the same measure as the angles of the spherical triangle.

Spheroid. Solid generated by the revolution of a semiellipse about one of its axes; prolate when the revolution is about the transverse axis, oblate when about the conjugate axis.

Spheroidal. Geometric forms and concepts based upon the spheroid.

Spheroidal State. Condition of a small quantity of volatile liquid when placed upon a very hot metal surface. The liquid does not come into contact with the metal because of the rapid evaporation from the under surface of the drop, which forms a Crookes' layer. The surface tension changes rapidly at different points, and thus the drop oscillates symmetrically about its mean spheroidal form.

Separation between Globule and Plate.

Spherometer. Instrument designed for measuring the radius of curvature of curved surfaces. In its simplest form it consists of a nut in the shape of a tripod, supported by three feet, through which passes a screw terminating below in a sharp point and above in a graduated head. The adjustments are such that when the point of the tripod and that of the screw are in the same plane the reading is zero. When placed upon a curved surface the screw point must be turned backward until the apparatus is again in exact equilibrium on the surface. The reading of the screw gives the versed sine of the arc, from which the radius may be calculated. It was invented by the French optician De La Roue, to measure the radii of lenses. With it the focal length of the lens is determined.

Spherometer.

Sphincter. Circular muscle surrounding an orifice which closes it by its contraction, as the sphincter ani.

Sphingina. Tribe of *Lepidoptera*, including moths, having elongated bodies, pointed posteriorly. The proboscis is long and coiled. The anterior wings are long, the posterior short; they lie horizontally when at rest, and are united by a retinaculum. The caterpillars are flat, with sixteen legs and anal horns. The pupa-stage is passed in the earth. The moths are usually crepuscular; some are known as Hawk-moths and Humming-birds.

Sphinx. Fabulous monster, represented by the Greeks with a woman's head and a body displaying attributes of the serpent, lion, vulture, and eagle. The Egyptians gave their Sphinx proper the head of a man and the body of a lion. It guarded their temples and tombs, to ward off evil influences.

Great Sphinx at Gizeh.

The Great Sphinx at Gizeh is 150 feet long and incloses a small temple. Its date is unknown. The Sphinx of mythology set a riddle to the Thebans, and slew all who could not guess it; when Œdipus solved it, she slew herself. The Egyptian Sphinx is beneficent, a personification of the fruit-bearing earth, a deity of wisdom.

Sphygmoscope. Apparatus devised by Marey, which, in connection with a registering apparatus, may be used to measure the pressure of liquids. A small tube filled with the liquid and communicating with the point at which the pressure is desired is closed with an elastic capsule, which projects into the cavity of a short and wider tube. As this capsule distends or contracts from the variation in the pressure behind it, it causes compression or dilatation of the air in the larger tube, and this affects the registering apparatus. Variable pressures, as those produced in the blood by the beating of the heart, may be studied in this way.

Spicate. Flowers or other organs arranged in a spike; also other flower-clusters resembling a spike.

Spice. Pleasant or pungent vegetable substances, used for flavoring food and condiments, such as mace, nutmeg, pepper and pimento. They owe their pungency and aroma chiefly to the essential oils they contain.

Spice Bush. See BENJAMIN BUSH.

Spice Islands. See MOLUCCAS.

Spicer, WILLIAM FRANCIS, U.S.N., 1820–1878. Captain 1870, Commodore 1877; lyric poet.

Spicheren. Village of Rhenish Russia, s. of Saarbruck; scene of a French defeat Aug. 6, 1870.

Spicula. Chitinous needle-shaped organs in the cloaca of nematode worms, that serve generative purposes; spiculum amoris.

Spicule. Small soft pointed appendages; also needle-like crystals in the cells of certain plants.

Spicules. Inorganic (sometimes organic) crystal-like bodies of usually regular shapes, secreted by the protoplasm of the cells of the lower Invertebrates to form a skeleton, as in Sponges, Holothurians and Sea-fans.

Spicule Systems OF SPONGES. The material may be crystalline carbonate of lime, colloidal silica, or spongin (keratin). They may have one axis and be uniradiate, or bi-

radiate, according as growth is in one or two directions, or have three axes, triradiate and sexaradiate, or four axes (tetraxonal), or finally be polyaxonal. The ends of the arms or rays may be sharp (oxeate), round (strongylate), knobbed (tylotate), spined, or branched (cladose), with two, three, four, or more branches (dicladose to polycladose); the branching may be repeated (dichocladose, etc.). Each system has also a number of modified forms due to excessive or lessened growth, curvature, etc., of one or more rays. The principal spicules are: stylus, rhabdus, triod, hexactine, calthrops, desma, triæne, spire, aster, cymba, trichite, rosette, dagger, pinnulus, amphidisk, anchor, uncinaria, scopularia, clavula, and staurus.

Spider Monkey (ATELES). S. American monkey, with long, strong, prehensile tail and long slender limbs, with rudimentary thumbs. It is greatly relished as food by the natives.

Spiders (ARANEIDA). To the Tetrapneumones belong the Trap-door spiders, which do not build a web but hide in tubes in the earth, from which they spring upon their prey. To the Dipneumones belong the *Saltigradæ*, which construct sacs in which they live by night and place their eggs; also the *Citigradæ*, with strong, long legs: these run about for their prey,

Cross Spider (*Epeira diadema*), male, *a*, and female, *b*.

1, Single pin-organ: 2, Spin-warts; 3, Lower jaw, claws, and eyes; 4, Left lower jaw cut open to show entrance to poison sac; 5, Outside point of a foot.

and hide under stones and boards; also the *Laterigradæ*, which spin only isolated threads: they run backward and sidewise while pursuing game. The *Tubitelæ* make tubes in connection with their webs. The *Inæquitelæ* spin irregular webs, in which they live. The *Orbitelæ* spin a regular, wheel-shaped web in the center of which they wait for prey. Spiders stand at the head of the Arachnids in point of intelligence.

Spiderwort. Plants of the genus *Tradescantia*, showy-flowered herbs of the natural family *Commelinaceæ*, natives of warm and temperate regions.

Spiegel, FRIEDRICH, b.1820. Prof. Erlangen 1849; writer on Persian linguistics and antiquities. *Eran*, 1863.

Spiegeleisen. See MANGANESE, METALLURGY OF.

Spielhagen, FRIEDRICH, b.1829. German novelist, well known in English translations. *Problematic Characters*, 1860; *Hammer and Anvil*, 1869; *Quisisana*, 1880; *Angela*, 1881; *Autobiography*, 1889–90.

Spiera, FRANCESCO, ab.1498–1548. Italian reformer, who was forced to recant and died of remorse for his apostasy.

Spiers, ALEXANDER, 1807–1869. English teacher in France; author of a dictionary of French and English, 1846–49, and several grammars.

Spike. Elongated flower-cluster with the individual flowers sessile, as in the PLANTAIN (q.v.).

Spikelet. Flower-cluster of grasses and sedges.

Spikenard. *Aralia racemosa.* Large perennial woodland herb of the natural family *Araliaceæ*, with aromatic roots, native of e. N. America; also, in India, *Nardostachys jatamansi*, herb of the Valerian family, its roots yielding a hair perfume.

Spikenard, FALSE. *Vagnera racemosa.* Woodland herb of the Lily family, native of N. America.

Spike-Rush. Grass-like plants of the genus *Eleocharis*, natural family *Cyperaceæ*, of wide geographical distribution. Their minute flowers are borne in solitary terminal spikelets.

Spiking. Disabling of a muzzle-loading gun by driving an iron spike into the vent. In breech-loading guns, a part of the breech mechanism is removed.

Spilling. In sinking mine shafts or driving levels, method of holding back loose or running ground by means of pointed poles or planks, called spills or spiles, forced into the ground in advance of the face of the workings.

Spinach. *Spinacia oleracea.* Esculent herb of the natural family *Chenopodiaceæ*, supposed to be native of Asia; long cultivated as a garden vegetable.

Common Garden Spinach (*Spinacia oleracea.*

Spinal Caries. See POTT'S DISEASE.

Spinal Column. Bony axis of support of the body of vertebrates. In man it consists of 24 true vertebræ (7 cervical, the first, called the atlis, articulates with the occipital bone of the skull; 12 dorsal, articulating with the ribs, and 5 lumbar); the sacrum, which is inserted between the hip bones; and the coccyx. These last two are made up of co-ossified segments, sometimes designated false vertebræ. Each vertebra consists of a disk-like body and a spine extending posteriorly, the attachment to the body being forked, thus making an opening which, in the jointed bone, forms the spinal canal. The spinal column is also known as the backbone.

Spinal Cord. Prolongation of the brain into the spinal canal. The spinal nerves emerge from the cord and are distributed to the trunk and both extremities. The spinal cord is the great conductor of nervous impulse to and from the brain, besides being the great organ of reflex action. Like the brain, it is made up of red and white matter.

Spinal Curvature. Deviation of the spinal column from its normal shape, more particularly the lateral deviations, since the normal column has no sidewise curves. It results in a deformity of the trunk, and is frequently caused by faulty position in sitting at tables or desks during childhood. This faulty method of sitting is often due to the size or shape of desk and chair.

Spinal Fluid, CEREBRO-. Serous liquid occupying the ventricles of the brain, and spaces between the arachnoid and pia-mater membranes of brain and cord; ab. 2 oz. Fluid of ventricles can pass through foramina in roof of fourth ventricle, and perineural lymph spaces also communicate with sub-arachnoid space. Brain is cushioned against the skull by this liquid, and when circulation increases in it some fluid passes into the spinal canal, owing to inelasticity of the cranial walls: but if fluid is abnormally increased during development, the bones yield and hydrocephalus results. After bones are knit, an abnormal increase causes coma; a sudden subtraction causes convulsions.

Spindle. Solid generated by a curve revolving about a chord perpendicular to the curve axis; classified according to the generating curve, parabolic, etc.

Spindler, KARL, 1796–1855. German novelist. *The Jew*, 1827; *The Invalid*, 1831. *Works*, 1831–54.

Spindle-Tree. Shrubs of the genus *Euonymus*, natural family *Celastraceæ*, with showy red fruits, natives of the n. temperature zone; much cultivated for ornament.

Spine, or THORN. Leafless branch, or portion of one, greatly hardened and attenuated, serving as an organ for defense.

Spinel. $MgAl_2O_4$. Mineral compound of alumina and magnesia, frequently occurring in bluish black opaque octahedrons, harder than quartz. The transparent and brilliantly colored varieties are much used as gems, especially under the name of ruby, or spinel ruby.

Spinelli, SPINELLO. ab.1332–1410. Italian painter of the 14th century of the Florentine School. He has a fresco in the Campo Santo of Pisa.

Spinet. See PIANOFORTE.

Spinner, FRANCIS ELIAS. 1802–1890. M.C. from N. Y. 1855–61; U. S. Treas. 1861–75. His well-known signature on bills was elaborated to render counterfeiting difficult.

Spinning. Twisting of minute filaments into a thread or yarn for weaving, sewing or rope making. It is of ancient origin, as shown by the pictures on Egyptian monuments. See DISTAFF and SPINNING-JENNY.

Spinning Glands. See SERICTERIA.

Spinning-Jenny. Machine with a number of spindles turned by one wheel or cylinder; invented by Jas. Hargreaves

Hargreaves' Jenny.

ab.1764; Arkwright invented the spinning-frame 1767, which was followed by the mule-jenny, superseding both, invented by Samuel Crompton 1774–79; all of England.

Spinola, AMBROSIO, MARQUIS DE, 1571–1630. Italian leader of condottieri in the Spanish service; commander in the Netherlands 1603–9 and 1621–25; pitted against Maurice of Nassau. He took Ostend 1604. Aix 1622, and Breda 1625, but was ruined by non-payment of his claims.

Spinola, FRANCIS B., 1821-1891. Brig.-gen. U. S. Vols. 1862–65; active in N. Y. politics; M.C. 1887.

Spinoza, BARUCH, or BENEDICT, 1632–1677. Dutch Jew, excommunicated 1656; philosopher of the Cartesian school. He asserted the existence of a single substance which he called God, and ascribed to it the two properties of thought

Baruch Spinoza.

and extension; all individual things and beings were modes of the Absolute. Chief works *Ethica*, 1665, tr. 1876; *Tractatus Theologico-Politicus*, 1670. His life was secluded and ascetic. He was the greatest and most famous of so-called pantheists.

Spinule. Diminutive of spine.

Spiracles. 1. Breathing pores or holes as found in the sides of many or all the joints of the body of Tracheates (insects). 2. Relic of the cleft between the mandibular and the hyoid arch in the lower fishes, often known as the spiracular cleft.

Spiral. Polar curve in which the radius vector is a non-recurrent function of the polar angle. The most noted spirals are the Archimedean, hyperbolic, and logarithmic.

Spiral Joint. Method of making a metallic pipe from a long sheet by riveting the edges together, so that the joints form a helical spiral.

Spiral Zoöids. Tentacle-shaped polyps in the *Hydractinia* colony.

Spiraster. Form of sponge spicule found in the genus *Thenea*. It consists of a short spiral axis covered with spines.

Spire. Arc of a spiral traced in one revolution of the radius vector.

Spire. Form of sponge spicule which is of spiral shape. It may be simple, or may carry spines and branches. The spiral may be close or open; the varieties thus arising have distinct names.

Spire. Pointed termination of towers and turrets. In the Norman style, where they were first introduced, they were low; in the Early English they were somewhat higher; in the Decorated style they were very acute.

Spire. Tube made of some vegetable material, as straw, which, when filled with powder, can be used as a means of carrying fire to the charge in a hole drilled for blasting rock.

Spire. Turns above the body-whorl of a snail's shell.

Spires, or SPEYER. Capital of Rhenish Bavaria; on the Rhine; free imperial city 1294; many diets met here. That of 1529 revoked the permission given, 1526, to the princes to

Spires Cathedral.

regulate religious affairs. Against this act the reformers presented a protest; whence the term Protestant. Pop., 1890, 17,585.

Spirifer. Brachiopod having internal, spiral, calcareous framework for the support of its arms; Palæozoic, with one species surviving to the Lias. See TESTICARDINES.

Spirillum. Genus of corkscrew-shaped rigid bacteria that swim by rotatory movement.

Spirillum Choleræ Asiaticæ. See COMMA BACILLUS.

Spirit, HOLY. See HOLY GHOST.

Spirit, or SPIRITS. See ALCOHOL.

Spirit Blue. Mixture of salts of triphenylrosaniline and triphenylpararosaniline; green powders, insoluble in water, but soluble in alcohol; dyeing silk and wool blue; source for other colors. See NICHOLSON'S BLUE.

Spirit Colors. Artificial coal tar colors, soluble in alcohol, but insoluble or very slightly soluble in water.

Spirit Level. Instrument for determining the horizontality of a surface or line. It consists of a glass tube slightly curved and filled with alcohol, leaving a small bubble of air. This bubble always seeks the highest point. The tube is placed in a brass case with its convexity upward, and so ad-

justed that when the base is perfectly horizontal the bubble takes a position midway between two fiducial marks.

Spirit of Wine. See ALCOHOL.

Spirits of Hartshorn. See AMMONIA.

Spiritual Consanguinity. In R. C. theology, such relationship resulting among sponsors and administrators of baptism as voids intermarriages between them, without dispensation.

Spiritualism. Theory that consciousness has a subject other than the physical organism, and hence is the proper antithesis to materialism. It takes three radically distinct forms: (1) that the soul can materialize itself in physical forms through the agency of mediums, a conception based upon illusion and frauds; (2) that though materialization is impossible, there may be sporadic communications by telepathy or thought transference from a discarnate to an incarnate consciousness; (3) that there is an immortal soul, but no possible communication with the living. The last is the prevalent belief. The doctrine that a new revelation of truth and duty has come to mankind through spirits was first distinctly affirmed near Rochester, N. Y., 1848, by a family named Voss, later Fox.

Spiritus Fumans Libavii. See STANNIC CHLORIDE.

Spirochæte. Genus of spiral, flexible bacteria, swimming with rotatory motion.

Spirotrompe. Spiral proboscis formed of the antliæ in *Lepidoptera.*

Spirula. Cephalopod allied to *Argonauta*, having a nautilus-like coiled and chambered shell which is entirely internal, being lodged in the posterior part of the squid-like body.

Spite. An active desire to depress, mortify, or injure some one.

Spithead. Part of English Channel between Portsmouth and Isle of Wight. It is so secure from all winds except the s.e. as to have been termed by sailors the "king's bedchamber," and is the principal rendezvous of the British navy. There are circular forts on Horse, Norman and Sturbridge shoals. Portsmouth and Ryde are on its opposite sides. Length, n.w. and s.e., 2 m.; average breadth, 1½ m.

The Forts at Spithead.

Spitta, KARL JOHANN PHILIPP, D.D., 1801-1859. German hymnist. *Psalter und Harfe*, 1833-43, tr. 1860-64.

Spitting. The ancients considered spittle a charm against all kinds of fascination; the Romans believed that contagion could be repelled by spitting. Mungo Park tells of negroes spitting upon a stone as a charm at the beginning of a journey. In general, spitting has ever been regarded as a potent means of sorcery. Survivals of primitive notions regarding it are still common.

Spitz. Variety of Eskimo dog, common in the U. S. and Germany; mostly white.

Spitzbergen. Group of islands in the Arctic Ocean, n. of Norway; area ab. 27,000 sq. m.; discovered 1596 by Willem Barentz. They belong to Russia, and are uninhabited.

Spitzka, EDWARD CHARLES, M.D., b.1852. Prof. New York 1880-83. *Insanity*, 1883.

Splanchnology. Branch of Anatomy which treats of the digestive viscera. Comparative splanchnology treats of the homologous parts of the digestive system of different animals.

Splanchno-Skeleton. Hard structure developed in connection with the viscera.

Spleen. Ductless gland situated in the abdominal cavity to the left of the stomach. Its function is not certainly known, but it probably is concerned in the making of blood.

Spleenwort. Ferns of the genus *Asplenium*, bearing sporangia in elongated sori; of wide geographical distribution, most plenty in tropical regions.

Splenic Fever. Synonym for ANTHRAX (q.v.).

Splicing. See KNOTS AND SPLICES.

Spline. Rectangular groove cut in a shaft, into which fits a key on the hub of the driving or driven wheel. Both hub and key are a sliding fit on the shaft, and rotation of wheel and shaft must occur together, no matter to what point of the shaft the wheel may be slid. See KEY.

Splint. Piece of some rigid material, as wood, felt or metal, to be adjusted to a part to keep it in a fixed position by means of a bandage; *e.g.*, the keeping in position the fragments of a broken bone during the healing process.

Splint Coal. Hard variety of bituminous coal, that breaks up readily in the process of mining into large rectangular blocks or slabs.

Split. One of two or more parts into which a ventilating air current is divided in a mine.

Split Switch. One having the movable rails tapered so as to fit in close contact against the main rails.

Splügen. Alpine pass 6,946 ft. high, through which, in Dec. 1800, Macdonald led 15,000 men into Italy, with heavy losses by avalanches. A road was made 1810-22, and protected by galleries later.

Village of Splugen.

Spodumene. $LiAlSi_2O_6$. Mineral lithium aluminium silicate, nearly as hard as quartz and somewhat heavier. See HIDDENITE.

Spofford, AINSWORTH RAND, LL.D., b. 1825. Librarian of Congress 1864, Assistant Librarian 1897, and editor of several collections.—His brother, HENRY MARTYN, LL.D., 1821-1880, was a judge of La. Supreme Court 1854-58.

Spofford, MRS. HARRIET ELIZABETH (PRESCOTT), b.1835, m. 1865. American author, chiefly of short stories. *Amber Gods*, 1863; *Azarian*, 1864; *Ballads*, 1888.

Spohr, LUDWIG, 1784-1859. German violinist, composer, and conductor. Court chapelmaster at Cassel from 1822; previously traveling virtuoso of great renown throughout Europe, and still a living influence. Of his ten operas, *Faust* and *Jessonda* are still occasionally performed, as also one of his five oratorios, *Die Letzten Dinge*, and one of his nine sym-

phonies, *Die Weiheder Töne*. He also composed fifteen concertos for the violin, of which two, Nos. 8 and 9, have main-

Ludwig Spohr

tained great popularity. His *School for Violin-playing* is a classic. *Autobiography*, 1861.

Spoils System. That of appointments to office on mere partisan principles rather than with reference to fitness and the public good.

Spokane. Capital of S. co., Wash.; on the S.; settled ab. 1879; burned 1890. It has a large trade in lumber and flour. Pop., 1890, 19,992.

Spoleto. Italian town, 75 m. n. by e. of Rome; Roman colony 220 B.C.; notable for its ancient and mediæval remains. Pop. ab.7,700.

Spoliation. Mutilation of a legal instrument by one not a party to it. The legal effect is not thereby altered.

Spoliation Claims, FRENCH. These were for damages to American ships and cargoes by the French, before the treaty between the two nations, ratified 1801. They were estimated to amount to $20,000,000. The U. S. at that time assumed these claims; in 1885 a bill was passed by Congress referring the matter to the Court of Claims, and in 1891 a first appropriation of $1,304,095.37 was made to pay the findings of the court.

Sponges (PORIFERA). Animals whose bodies consist of amœboid cells imbedded in a gelatinous matrix hollowed out into chambers, into which inhalent canals open. The chambers open into a common exhalent canal or osculum. The simplest forms have only one chamber. An ectoderm is present in the young, and the chambers are lined by choanoflagellate

Diving for Sponges on the Coast of Syria.

cells. A skeleton of separate or united spicules, or of horny fibers, is usually present. Only one genus of the horny sponges have commercial value. Sponges are either monœcious or diœcious, and sometimes are viviparous. The sub-orders are: *Myxospongia* (gelatinous), *Ceraospongia* (horny), *Halichondriæ* (siliceous), *Hyalospongia* (glassy), and *Calcispongia* (calcareous). Sponges are prepared for commerce by rotting and washing away the animal matter, and then bleaching. These sponges come mainly from the Mediterranean and the Bahama Islands. See also PLETHOSPONGIÆ.

Spongiaria. See SPONGES.

Spongilla. See HALICHONDRIÆ, MONACTINELLIDÆ, and CARNEOSPONGIÆ.

Spongin, or SPONGIOLIN. See KERATODE.

Spongin Blasts. Special cells in sponges that secrete the substance of which the horny skeleton is formed. They are arranged into two sorts; one cluster secretes the axis (not true spongin) of the fiber which makes it grow in length; the others are on the sides of the fiber, and secrete the outer layers of true spongin.

Spongiole. Root-cap of plants; word now obsolete.

Spongomere. That part of a sponge which has the incurrent and excurrent canal system.

Sponsors. Godfathers and godmothers, who make the promises for the child at its baptism. In the R.C. Ch. one is sufficient, though more are usual; in that of England there should be three.

Spontaneity. Function of organic life by which it is capable of self-motion, or activity; contrasted with inertia, and sometimes identified with freedom, from which it differs in not necessarily implying the capacity for alternative choice.

Spontaneous Combustion. Combustion which takes place when no means are especially designed to produce that end. Substances which readily combine with oxygen cause spontaneous combustion. Mechanical division also increases it greatly. Rags soaked in linseed oil and damp charcoal powder are liable to take fire by oxidation in air.

Spontaneous Generation (ABIOGENESIS). Self-production of living matter from non-living matter, or of the organized from the unorganized. There is no evidence that any form of low life known to us originated in any other than a biogenetic way. All the evidence we have of the origination of living matter seems to show that the biogenetic law is absolute. It is to Biology what the law of the conservation of energy is to Physics or Chemistry. On purely philosophical grounds it is very doubtful if, strictly, spontaneous generation ever did occur, though it is generally assumed that life must have arisen through some evolutionary process. See PANÆSTHETISM.

Spontini, GASPARO LUIGI PACIFICO, 1774–1851. Italian opera composer and conductor, pupil of the conservatory at Naples and of Piccini. His operas were composed 1796–1829. From 1803–20, with a few interruptions, he was a power in the operatic affairs of Paris, and in Berlin 1820–40. He was Court Composer in France and Russia, and General Music Director in Prussia. His masterpieces are *La Vestale, Cortez,* and *Olympie.*

Spoonbills. 1. Ibis-like birds with long, large bills expanded at the end. *Platalea* is European and white; it nests

Spoonbill (*Platalea leucerodia*).

in trees or among reeds. *Ajaja* is the Roseate Spoonbill of the warmer parts of America. 2. Siberian Sandpiper. 3. Shoveler duck and Ruddy duck. 4. A genus of Sturgeons.

Spoonwood. See LAUREL, MOUNTAIN.

Sporades. Islands of the Ægean Sea, excluding the Cyclades; especially those near Asia Minor, from Samos to Rhodes.

Sporadic. Diseases which supervene indifferently in every season and situation, from accidental causes, and independently of any epidemic or contagious influence.

Sporange (SPORANGIUM). Spore case. The term is much employed in cryptogamic botany.

Sporangiophora. Sub-class of *Mucorinæ*.

Sporangiophore. Support or stalk of a sporange.

Spore. Specially modified vegetable cell, which, becoming detached from the parent plant, may grow directly or indirectly into a new individual; propagative bodies of the lower plants, as Ferns, Mosses, *Fungi*, and *Algæ*.

Spores of Bacteria. The majority of bacteria have a stage during which they are actively growing and splitting up by binary fission. In this stage a moderate heat is sufficient to kill them, 60° C. acting for 15 minutes. This is the vegetative stage. At other times cells are produced that can stand drying up, withstand steam at 100° C., and a dry heat of nearly 150° C. This power is in part due to their small size, and in part to special coats around the germ, which when the spore sprouts again are split open like a seed-coat. Two sorts of spores are produced: (1) arthrospores, (2) endospores, the latter being the smaller. Spores are produced when the bacterium forms a zoöglœa. Spores are very resistant to staining.

Sporidiifera. See SPOROCARPEÆ.

Sporids (SPORIDIA). See ZOÖSPORES.

Sporifera. Division of *Fungi*, characterized by bearing naked spores; *i.e.*, not inclosed in sporocarps.

Sporocarp. Conceptacle containing sporanges or spore-cases, as in many *Fungi*.

Sporocarpeæ. Division of *Fungi*, characterized by bearing their spores in sporocarps or sacs; also known as *Sporidiifera*.

Sporocladium. Spore-bearing branches in *Thallophyta*.

Sporocyst. Mother-cell from which spores are formed; sporocyte. See DISTOMUM.

Sporoderm. Cell-wall of a spore.

Sporodochium. Spore-bearing structures.

Sporogen. Spore-producing plant; term rarely used.

Sporogenesis. See SPOROGONY.

Sporogone (SPOROGONIUM). Fertilized oösphere of the *Bryophyta* and *Pteridophyta*.

Sporogony (SPOROGENESIS). Form of Monogenesis, in which reproduction takes place by spores. Either one or several spores may result from one cell, monosporogony and polysporogony.

Sporophore. Any portion of the mycelium of a fungus, developed for the bearing of propagative spores, as the cap of a toadstool.

Sporophyll. Leaf, or portion of a leaf, of a fern or other *Pteridophyte* which bears spores. Term also applied to the anther.

Sporophyte. Asexual generation of *Pteridophyta;* as the spore-bearing portions of ferns, club-mosses, etc.

Sporosac. Generative bud of a Hydroid, which never completely attains the structure of a medusa.

Sporozoa (LIPOSTOMA, GREGARINIDEA). Class of corticate *Protozoa*, including the *Gregarinidæ*, *Coccidiidea*, *Myxosporidea*, and *Sarcocystidea*.

Sport. In Botany and Zoölogy, sudden variation in an organ or organism.

Sports. Amusements of all kinds, but more particularly those pursued in the open air, as hunting, fishing, riding, and athletic games.

Sports, BOOK OF. Declaration of James I., 1618, recommending dancing, archery, and other recreations as proper on Sundays after service; renewed by Charles I. 1633; aimed at the Puritans, and detested by them; burned by order of Parliament 1644.

Sporule. In Mycology, small spores.

Spotswood, ALEXANDER, 1676–1740. Gov. of Va. 1710–22; explorer of the mountain region 1716; he built an iron furnace ab. 1715; Deputy Postmaster-gen. of the Colonies 1730–39. *Letters*, 1882–85.

Spotted Fever. See MENINGITIS.

Spottiswoode, or **Spotswood,** JOHN, 1565–1639. Abp. of Glasgow 1603; Abp. of St. Andrews and Primate 1615; Chancellor of Scotland 1635–38; ejected 1638 for introducing the liturgy. *Hist. Ch. of Scotland*, 1655.

Spottiswoode, WILLIAM, LL.D., D.C.L., F.R.S., 1825–1883. English printer and mathematician. *Polarization of Light*, 1874.

Spotts, JAMES HANNA, U.S.N., 1822–1882. Commander 1862, Captain 1866, Commodore 1873, Rear-admiral 1881.

Spottsylvania. In Va., 55 m. n. by w. of Richmond; scene of battles May 8–18, 1864. The Union loss was 4,170 killed, 19,680 wounded; the Confederate, ab. 1,000 killed, 5,000 wounded.

Sprag. Piece of wood used to block the wheels of a mine car on a down grade, so as to substitute sliding for rolling friction.

Sprague, CHARLES, 1791–1875. American poet.

Sprague, PELEG, LL.D., 1793–1880. M.C. from Mo. 1825–29; U. S. Senator 1829–35; U. S. Judge for Mass. 1841–65. *Speeches*, 1858; *Decisions*, 1861.

Sprague, WILLIAM, 1799–1856. M.C. 1835–37; Gov. of R. I. 1838–39; U. S. Senator 1842–44.—His nephew, WILLIAM, b.1830, was Gov. of R. I. 1860–63 and U. S. Senator 1863–75.

Sprague, WILLIAM BUEL, D.D., LL.D., 1795–1876. Presb. pastor at Albany 1829–69. His *Annals of the American Pulpit*, 10 vols., 1856–76, is a monumental work, invaluable as a thesaurus of clerical biography.

Sprain. Injury caused by too great traction on a part. The usual seat is in the ligaments of a joint, as the ankle joint, but a muscle or its tendon may also be sprained. The degree of the injury varies from a mere over-extension, which is quickly recovered from, to a rupture of some of the fibers of the part, making a serious injury. Surrounding the injured part with an abundance of water, as hot as can be borne, is one of the best methods of relieving the pain and removing the congestion. The water should be kept hot, and applied for some considerable time.

Spreader. In mine timbering, extra piece put in to keep the legs of a set of timber in position.

Spree. River rising in n.e. Saxony, and flowing n. and n.w. through Prussia and Berlin, to the Havel, a branch of the Elbe. Length 227 m., drainage area 3,655 sq. m.

Sprengel, HERMANN JOHAN PHILIPP, F.R.S., b.1834. German-English chemist, inventor of explosives, hellhoffite, rackarock and picric acid mixtures.

Sprengel, KURT, 1766–1833. Prof. of Botany at Halle from 1789. *Geschichte der Arzneikunde*, 5 vols., 1792–1803; *Kenntniss der Gewächse*, 1802–4, tr. 1807; *Historia rei herbariæ*, 1807–8; *Geschichte der Botanik*, 1817–18; *Jahrbücher der Gewächskunde*, 1818–20; *Umfang der Pflanzenkunde*, 1820–22.

Sprengel Pump. Apparatus devised by H. J. P. Sprengel 1861, for automatically exhausting a vessel of air or other gas. It consists in its simplest form of a long vertical tube provided with a side branch opening into the tube at 45° and communicating with the vessel to be exhausted. The top of the tube is connected with a supply vessel filled with mercury, which is allowed to pass down the tube, passing the open end of the branch. Bubbles of gas thus become entangled between the drops of mercury and are carried down with the column. The length of the tube below the side branch must be more than 30 in.

Sprengel Pump.

Sprenger, ALOYS, 1813–1893. Austrian Orientalist, in India 1843–57; prof. Berne 1857. *Leben und Lehre des Mohammed*, 1861–65; *Alte Geographie Arabicus*, 1875; *Babylonien*, 1886.

Sprenger, JACOB. German inquisitor 1484; author, with H. Krämer, of *Malleus Maleficarum*, 1489, concerning witchcraft and its punishment.

Spring, GARDINER, D.D., 1785–1873. Presb. pastor in New York from 1810. *Works*, collected in 10 vols., 1855; *Reminiscences*, 1866.

Spring, LEVERETT WILSON, D.D., b. 1840. Prof. Univ. Kansas 1881–86, and Williams Coll. from 1886. *Mark Hopkins*, 1885; *Kansas*, 1888.

Spring. Most of the rain water and snow falling upon the land sinks into the ground or evaporates, a small proportion flowing by brooks and rivers to the sea. This ground water percolates through the soils and rocks and accumulates in porous strata, the pressure of the descending column forcing it through fissures to the surface, at a lower level, where it issues, forming springs. Rain water carries into the soil the gases dissolved in the atmosphere, including oxygen, nitrogen, and carbon dioxide, the suspended dust and ammonium nitrate, all in very small quantities. As the water percolates the soil and rock it dissolves also more or less organic and mineral matter, depending upon the solubility of the constitu-

ents and the thickness of the strata. From siliceous rocks the water may contain as little as a grain of mineral matter to the gallon, from a limestone as much as 50 grs. Spring waters have the temperature of their source, and are generally cooler than surface waters; when derived from great depths or in volcanic districts, they may be warm or hot. Saratoga springs are ab. 50° F.; at Hot Springs, Ark., they range from 95° F. to 150° F.; in the Yellowstone Park, the temperature reaches 200° F. Ordinary spring waters have dissolved in them calcium and magnesium carbonates, sulphates and chlorides, sodium chloride and silica, with some organic matter of vegetable origin. The term mineral spring is applied to extraordinary waters which contain mineral matter with hygienic, curative or other valuable or useful qualities. Saline springs contain common salt and other chlorides and sulphates, in Michigan 20 grs. per gal.; Epsom spring, Eng., contains magnesium sulphate. Acidulous springs contain carbon dioxide, which renders them effervescing, and alkaline carbonates in solution. Saratoga springs contain as much as 250 grs. per gal. of the latter, with 500 grs. of sulphates. Chalybeate springs contain iron, the Pavilion spring, at Saratoga, contains 0.8 grs. per gal. Sulphur springs contain sulphur in the forms of sulphureted hydrogen gas and alkaline sulphides, Richfield, N. Y., springs contain ab. 2 grs. per gal. in these forms, and the sulphur springs of Virginia are also strong. Siliceous springs contain silica, especially the geysers. The Rockbridge alum springs contain as much as 72 grs. per gal. of aluminium sulphate. A spring in Cornwall, Eng., contains 26 grs. of lithium carbonate per gal. Near Borax Lake, Cal., is a spring containing 108 grs. per gal. of ammonium bicarbonate, and in the same region a spring with 103 grs. per gal. of borax. Artificial springs are made by boring down through the earth until a water bearing stratum is found. The result is very uncertain both as to the quality and quantity of water obtained. See GEYSER, INTERMITTENT SPRING and ARTESIAN WELL.

Spring-Balance. This consists of a coiled steel spring in a metallic case: the upper end is fixed to a ring at the top, by which it is suspended; to the lower end a rod is fastened, with a pointer extending through a slot upon a graduated scale. To a hook at the lower end the article to be weighed is attached. See JOLLY'S BALANCE.

Spring-Beauty. Showy-flowered vernal herbs of the genus *Claytonia*, natural family *Portulacaceæ*, natives of the n. hemisphere.

Spring-Beetle. See ELATERIDÆ.

Springbok (GAZELLA EUCHORE). S. African antelope, with white and black on the face, a white stripe down the back, and

Springbok (*Gazella euchore*).

white on belly. It has a habit of springing vertically upward before taking flight. It has been much hunted, and is scarce. See ANTELOPIDÆ.

Springer. Point at which an arch unites with its support; also the bottom stone of the coping of a gable.

Springer, WILLIAM MCKENDREE, b.1836. M.C. from Ill. since 1875.

Springfield. Capital of Clarke co., Ohio; on Mad River, 80 m. n.e. of Cincinnati; seat of Wittenberg College; noted for its extensive manufactures of farm tools. Pop., 1890, 31,895.

Springfield. Capital of Greene co., Mo.; in the Ozark Mts.: of recent growth; seat of Drury College. Pop., 1890, 21,850.

Springfield. Capital of Hampden co., Mass., on the left bank of the Connecticut; settled 1636 as Agawam; burned by Indians 1675; chartered 1852. Its manufactures are considerable and varied. The U. S. arsenal and manufactory of small arms was founded 1794. Pop., 1890, 44,179.

Springfield. Capital of Ill. since 1837 and of Sangamon co. since 1823; 185 m. s.w. of Chicago; chartered 1832 and 1840; home of Pres. Lincoln; center of a bituminous coal region. Pop., 1890, 24,963.

Springfield Rifle. Made at U. S. armory, Springfield, Mass.; used by the army from the rebellion until 1892, when it was superseded by the Krag-Jörgensen rifle. The breech of the Springfield rifle is closed by a block which rotates about a hinge on the forward upper surface, and is attached to the receiver at the rear of the barrel. A firing-pin passes through the block, and a stroke of the hammer forces it against the cartridge. When the block is closed it is locked in place by a cam latch at its rear end.

Spring Fog. Fog that forms over the ocean in certain localities in the n. Atlantic in the spring; due to the cooling at night of warm moist s. winds blowing over cool land and water near the shore.

Spring Gun. Gun so arranged that when a person or animal in any way touches the wires which are fastened to the trigger it will wound them. Illegal in Britain since 1827, except when set indoors.

Spring of the Air. Elasticity of the air; so called by Boyle 1660, and by others until ab.1750.

Springs. Elastic bars of metal to absorb shocks or to store up mechanical work that it may be given out when the equilibrium of the bar is restored. Springs are either spiral, helical, or flat. The strain which distorts them may be a push or a pull, and the strain in the bar is usually torsion or flexure. For compression in buffers and for car-springs rubber has been used. Compressed air is used in some machines.

Springs of Action. Such appetites and desires as stimulate the will into action.

Spring Tides. These occur when the sun and moon are in conjunction or opposition, at the new or the full moon: as their tide-raising action is then combined, the difference between high and low water is a maximum.

Sprouting. See BUDDING.

Spruce. Coniferous evergreen trees of the genus *Picea*, natives of the n. hemisphere; much planted for ornament. The white and black spruce are cut for timber in the U. S.

Spruce, STRENGTH OF. The ultimate tensile strength is ab. 10,000, and the ultimate compressive strength ab.5,000 lbs. per sq. in. of cross-section.

Spruce-Beer. Sugar and water are fermented by yeast, and essence of spruce and spices are added; a pound of sugar to a gallon of water.

Spudding. 1. Pipe driven from the surface down to rock in order to drill a hole in the latter. 2. Preliminary operations of drilling the first few feet of an oil-well, in order to get depth enough for the advantageous handling of the regular string of tools.

Spuller, EUGÈNE. 1835–1896. French journalist, ally of Gambetta; Deputy 1876; Minister of State 1881–82, 1887, and 1889–90; Senator 1892. *Second Empire,* 1870; *Loyola,* 1876; *Michelet,* 1876; *Conférences,* 1879–81.

Spur. Mediæval mark of knighthood, the spurs of knights being of gold, while those of squires were of silver. The degradation of a knight consisted in hacking the spurs from his

Various kinds of Spurs.

1, Bronze prick spur found at Linlithgow Palace; 2, iron spur found near Bannockburn; 3, bronze spur found at Colchester; 4, brass spur found at Culloden; 5, spur found at Halidon Hill; 6, spur found in making a drain in High Street, Edinburgh.

heels. Spurs are still worn on the heel by cavalrymen and other riders to urge horses to greater speed. The modern spurs, having only minute serrations, are not as cruel as the spiked spurs of former times.

Spur. Elongated hollow appendage to a petal, sepal, calyx or corolla.

Spur. Small offshoot or branch from a main vein of ore.

Spurge. Herbs and shrubs of the genus *Euphorbia*, natural family *Euphorbiaceæ*, of wide geographical distribution, including some common weeds.

Spurge-Laurel. *Daphne laureola.* Evergreen shrub of the natural family *Thymeleaceæ*, native of Europe; cultivated for ornament.

Spurge-Nettle. See TREAD-SOFTLY.

Spurgeon, CHARLES HADDON, 1834–1892. Baptist preacher in London from 1853, and from 1861 at the Metropolitan Tabernacle, where he had an immense audience; founder of many chapels, an orphanage, and a pastors' college; ed. *Sword and Trowel* from 1865; author of over 100 vols. By voice and pen he exerted enormous influence. *John Plowman's Talk*, 1868; *Treasury of David* (on the Psalms), 7 vols., 1865–80; *Storm Signals*, 1886.

Spurious Disks OF STARS. Small disks which fixed stars show when viewed with a telescope. As the diameter of the disk is not increased by increasing the magnifying power, it does not belong to the star. See DIFFRACTION OF OBJECT-GLASS.

Spurn Head. Cape on the coast of the e. Riding of Yorkshire, at the n. extremity of the estuary of the Humber.

Spurrey. *Spergula arvensis.* Low spreading herb of the natural family *Caryophyllaceæ*, native of Europe, introduced as a weed into America.

Spurs, BATTLE OF. 1. At Courtray, Belgium, July 11, 1302. Robert, Count of Artois, was defeated and slain by the Flemings. 5,000 gilt spurs were collected from the battlefield. 2. Battle at which Henry VIII. of England defeated the Duc de Longueville at Guinegate, Aug. 16, 1513; so styled from the fact that the French used their spurs rather than their swords.

Spurzheim, GASPER. 1776–1832. Pupil of GALL, F. J. (q.v.), and his associate 1805–13 in preaching the new doctrines of PHRENOLOGY (q.v.), which he later introduced by voice and pen in England and France.

Sputum. Secretion ejected from the mouth by spitting. Normally it consists of saliva and the mucous secretion of the posterior nares and fauces. In diseased conditions other secretions are added, as of the bronchial tubes in bronchitis. In some of the communicable diseases the sputa contain the germs of the disease, and care should be taken to disinfect them. This is especially true of consumption and diphtheria.

Spuyten Duyvil Creek. Narrow channel connecting Hudson River with Harlem River, and thence with East River on Long Island Sound; Harlem River Ship Canal by way of Spuyten Duyvil Creek and Harlem River was opened 1895, 15 ft. deep; cost was $2,700,000.

Spy. In war, a person employed to secretly obtain information regarding the movements and condition of the enemy. When captured they are usually hanged or shot. Political spies have been employed by many governments, both within their own domains and in foreign countries; Russia has an extensive system in both these directions.

Squails. Modification of the game of Shuffle Board, played by 4 or 6 persons, with disks of wood numbered or colored to distinguish them. The players sit around a smooth top-table, in the center of which is a short metal column called the Process. The squails are placed so that their edge projects over the table, and played toward the process by striking with the palm of the hand. The object is to get as near the Process as possible.

Squali (SQUALIDES). See SHARKS and PLAGIOSTOMI.

Squall. Short burst of violent wind, usually accompanied by rain.

Squalordontidæ. See MONODONTIDÆ.

Squama. In Botany, scale.

Squamariaceæ. Order of small red *Algæ*.

Squamata. See LEPIDOSAURIA.

Squarcione, FRANCESCO, 1394–1474. Paduan art professor, prominent in the early Renaissance as collector and academician. Teacher of Mantegna.

Square. Equilateral rectangle.

Square of Slate. Roofing slates are sold by the square, which is a quantity sufficient to cover 100 sq. ft. of roof. For slates 12x24 in., 114 make a square; for those 8x16 in. 277.

Square Root. One of two equal factors of a quantity. See INVOLUTION.

Squares, METHOD OF LEAST. See LEAST SQUARES.

Squash. Fruit belonging to one of the several species of *Cucurbita*. See CUCURBITACEÆ.

Squash-Bug (ANASA TRISTIS). Beetle ½ inch long, dark brown above, dull yellow beneath. The female lays eggs glued together on the under sides of leaves. They cause wilting. The remedy is to pick them by hand and destroy.

Squatinidæ. Family of Sharks, including the Angel fishes; so called from their large expanded and wing-like pectoral fins. They grow to a length of 5 ft., and resemble the Rays both in general appearance and their habit of feeding on the bottom. Their appearance is repulsive.

Squatter Sovereignty. In U.S., the principle of leaving to the settlers of the Territories themselves whether slavery should be permitted by the constitutions to be adopted when the Territories were admitted into the Union. See KANSAS.

Squaw-Root. See CANCER-ROOT.

Squaw-Weed. See RAGWORT.

Squeeze. Gradual settling of the roof of a coal mine after a portion of the coal has been worked out.

Squib. Piece of quill or straw, or paper tube, filled with powder and used to communicate fire to a blasting charge. See SPIRE.

Squid. See LOLIGO.

Squier, EPHRAIM GEORGE, 1821–1888. U. S. Chargé to Central America 1849–50; Commissioner to Peru 1863–65; eminent for archæological researches in those countries; first pres. Anthropological Society 1871. *Nicaragua*, 1852; *Serpent Symbols*, 1852; *Central America*, 1854–57; *Waikna*, 1855; *Peru*, 1877.

Squill. *Scilla maritima.* Bulbous herb of the Lily family, native of the Mediterranean region, yielding a valuable drug.

A, *Scilla verna;* B, Officinal Squill (*Scilla maritima*): *a*, plant with flowering scape in blossom; *b*, plant with full-grown leaves.

Squilla. See STOMATOPODA.

Squinch. In Gothic Architecture, small arches across angles of towers to support alternate sides of octagonal spires.

Squint, or HAGIOSCOPE. Aperture made in the interior walls of a church, generally in the sides of the chancel arch, to enable persons in the aisles, or side chapels, to see the elevation of the Host.

Squinting. See STRABISMUS.

Squire. In U. S., local judge or justice of the peace; in England, a country gentleman.

Squirrel Corn. *Bicuculla canadensis.* Low rose-flowered herb of the natural family *Papaveraceæ*, native of woodlands in n.e. N. America.

Squirrels. Rodents of family *Sciuridæ*, including two divisions, ground- and tree-squirrels, and ranging from chipmunks to flying squirrels. They occur everywhere except in Australia, but are most abundant in s. Asia. The Spermophiles, wrongly confounded with gophers, are abundant in Nebraska and adjacent States. Some are beautifully marked with spotted stripes. The *Tamias*, or Chipmunk, has plain stripes. Tree-

European Squirrels (*Sciurus vulgaris*).

squirrels have bushy tails. In U. S. are six species, with great variation of color. The Fox Squirrel is a foot long, and its tail as much more; it is gray, with red and black varieties. The Gray Squirrel, 10 in. long, and tail 13 in., also has a black variety. The common Red Squirrel, *Sciurus hudsonius*, also called Chickaree, is ab. 8 in. long, and tail 6 in. In Africa is the Hedgehog Squirrel, with Porcupine-like spines.

Squirrel-tail Grass. *Hordeum jubatum.* Common grass of n. central N. America.

Srinagar. Capital of Cashmere, n. India; on the Jhilam, near 5,300 ft. above the sea; noted for beauty of situation. Pop., 1891, 120,340.

Staal, MARGUERITE JEANNE (CORDIER DELAUNAY), BARONESS DE, 1684-1750. French author of *Memoirs*, 4 v., 1755. *Works*, 1821.

Stabat Mater. Latin hymn on the griefs of the Virgin Mary; doubtfully credited to Jacoponus (Jacobus de Benedictis), d.1306, and by some to Pope Innocent III., d.1216. It has frequently been set to music, the most celebrated settings being those of Palestrina, Astorga, and Pergolese.

Stability of Solar System. Laplace and Lagrange showed that the mutual perturbations of the system could never produce any material permanent changes; therefore it is stable.

Stable Equilibrium. Condition of equilibrium such that, if the body be slightly moved by an extraneous force, it returns to its original condition when that force is removed. See EQUILIBRIUM.

Stack. CHIMNEY (q.v.), especially of sheet-iron for locomotive boilers. Locomotive stacks for wood-burning engines are inverted cones with a fine gauze over the top to arrest flaming sparks which would be expelled by the draft. The casing is often double, with deflectors to throw cinders into the annular space between linings, whence they can be removed after the run. For coal, with the extended smoke-box (see LOCOMOTIVE) and the netting below, the straight stack is more usual. Without the extension, the diamond stack has a double cone enlargement near the top, the area of the large bases giving a sufficient open area for the netting, so that it may arrest sparks and not cause too great resistance. Besides the draft from the exhaust, such stacks have a steam jet blower, to compensate for their low height when the engine is still.

Stackhouse, THOMAS, 1680-1752. Anglican author of a *Body of Divinity*, 1729, and *Hist. Bible*, 1732, repub. 1836.

Stackhousiaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising 2 genera and ab. 20 species, confined to Australia and the neighboring islands.

Stadia Measurement. Method of measuring distances by reading the space intercepted on a vertical rod between two horizontal wires in the telescope of a surveyor's transit. The distance of the rod from the instrument is proportional to the space seen on the rod, and this is properly graduated so that the former can be directly read. If inclined distances are required, computations or tables are needed to obtain the horizontal distances and the differences of elevation. The method was devised by Porro, an Italian engineer, ab.1840, and is now extensively used in topographic surveying. It is not as accurate as measurements by a chain or tape but is more rapid.

Stadion, JOHANN PHILIPP KARL JOSEPH, COUNT, 1763-1824. Austrian Ambassador to Sweden, England, and Russia; Minister of Foreign Affairs 1806-9 and 1813.

Stadium. 1. Greek measure of distance, ab. ⅛ of a mile. 2. Course for foot-races, at Olympia, Athens, and elsewhere.

Stadtholder. Chief officer of the Dutch Republic till 1802; title of William the Silent, and of his son Maurice; originally viceroy of the Spanish king in any Dutch province.

Staël-Holstein, ANNE LOUISE GERMAINE (NECKER), 1766-

Baronne de Stael-Holstein.

1817. French author; married to the Swedish Ambassador 1786; in exile 1792-97 and 1803-15, mostly at Coppet near Geneva; hated and persecuted by Napoleon. Her salon was the most brilliant in Paris; her literary repute and social influence were great. Besides the novels *Delphine*, 1802, and *Corinne*, 1807, her chief works are *Letters on Rousseau*, 1789; *Literature and Social Institutions*, 1800; *De l'Allemagne*, 1810; *On the French Revolution*, 1818; *Ten Years of Exile*, 1821.—Her son, AUGUSTE LOUIS, BARON VON, 1790-1827, wrote *Letters from England*, 1826. *Works*, 3 vols., 1829.

Staff. Body of officers attached to the headquarters of a commanding officer to assist him in the military administration of his command. In the U. S. service the general staff comprises the various departments and corps which constitute the bureaus of the War Department: the adjutant-general, inspector-general, judge-advocate-general, quartermaster, subsistence, medical, pay, and ordnance departments, the corps of engineers and the signal corps. Control of the army is exercised by the Secretary of War through these bureaus, and the adjutant-general is the official channel by which orders are promulgated and correspondence conducted. The staff of a military department comprises officers of the general staff departments or corps assigned by the Secretary of War. The staff of a general officer consists of the aides-de-camp authorized by law, namely, three to a major-general, from the captains or lieutenants of the line, and two to a brigadier-general from the lieutenants. Regimental staff comprises the adjutant and the quartermaster: these are appointed by the colonel, subject to approval of the Secretary of War, and hold office for four years, selection being restricted to the lieutenants on duty with the regiment. The non-commissioned regimental staff consists of the sergeant-major and the quartermaster-sergeant. See OFFICERS, STAFF.

Staffa. Scottish islet, w. of Mull and n. of Iona; area 71 acres; noted for FINGAL'S CAVE (q.v.).

Staffeldt, ADOLF WILHELM SHACK, 1769-1826. Danish poet.

Stafford, WILLIAM HOWARD, VISCOUNT, 1612-1680. Victim of Titus Oates; beheaded for alleged complicity in the Popish Plot.

Staff-Tree. See BITTERSWEET.

Stag. Red-deer of Europe and Asia. Height at shoulder 4 ft., length 7 ft., of male; female much smaller. The horns (present in male) are beautiful; the brow antler turns forward and upward, making a dangerous weapon. An old stag is known as a hart; the hinds are mature at 3 years, but not the stags. The young animals go in herds, the old are solitary. The period of gestation is ten months.

Stag-Beetle. *Lamellicornia* of the genus *Lucanus*, which have branched mandibles resembling the antlers of a stag. The European variety is black in color and often 2 in. long. It is supposed by some to be the *Cossus* of the Romans, much esteemed by them as a delicacy.

Stage. In Gothic Architecture, the spaces between the setoffs of buttresses.

Stage. See DRAMA, THEATER, and INTERNATIONAL CONGRESS.

Stagger-Bush. *Pieris mariana.* White-flowered shrub of the natural family *Ericaceæ*, native of the e. U. S.

Staggers (OF SHEEP). Disease characterized by loss of appetite and flesh; the animal acts stupidly, and has jerky irregular movements, perhaps walking in a circle. The symptoms are caused by the presence in the brain of the young tapeworms of the dog (*Tænia cœnurus*). These are taken with the food, soiled by droppings from the dog. The dog gets these parasites by eating the brains of sheep. Hence care should be taken with animals having this disease.

Staghorn-Fern. *Platycerium alcicorne*, and other ferns of the same genus, bearing branching, divided leaves resembling the antlers of a stag, with other broad cup-shaped ones at the base of the plant.

Staghound. Large, wiry-haired dog, similar to the greyhound, but with more bone and power. It is supposed to be a cross between the bloodhound, which it rivals in power of scent, and the greyhound; used to hunt the stag in Europe and the antelope in the w. U. S. See HOUNDS.

Stagirite. Aristotle; so called from his birthplace, Stagira in Macedonia.

Stagnelius, ERIK JOHAN, 1793-1823. Swedish epic, lyric, and dramatic poet. *The Martyrs*, 1821.

Stahel, JULIUS, b.1825 in Hungary. Brig.-gen. U. S. Vols. 1861; Major-gen. 1863-65; U. S. Consul in Japan 1866-69 and 1877-85.

Stahl, FRIEDRICH JULIUS, 1802-1861. Prof. at Erlangen 1832 and Berlin 1840; writer on law and politics; extreme reactionary. *Philosophie des Rechts*, 1830-37; *Der Christliche Staat*, 1847.

Stahl, GEORG ERNEST, 1660-1734. Prof. of Chemistry and

Medicine at Halle 1693; royal physician 1716; father of the Phlogiston theory.

Stahr, ADOLF WILHELM THEODOR, 1805–1876. German art critic. *Lessing*, 1859, tr. 1866.

Staigg. RICHARD MORRELL, 1817–1881. Anglo-American painter, chiefly of portraits.

Stained Glass. Painted glass in windows was first used in France, at Le Mans in 11th century; in England, at Canterbury in 12th century, the greater part in 15th century. See GLASS.

Stainer, JACOB, 1621–1683. Tyrolese maker of violins, formerly of high repute.

Stainer, SIR JOHN, b.1840. English organist and composer, knighted 1888; Prof. of Music at Oxford 1889. *Dictionary of Musical Terms.*

Stair, JAMES DALRYMPLE, VISCOUNT, 1619–1695. Scottish lawyer; lord of Session from 1657, pres. Court of Session 1671–81; in Holland 1682–88; Viscount 1690. *Institutions of the Law*, 1681; *Decisions*, 1683–87.—His son, JOHN, "Master of Stair," 1648–1707, Lord-advocate 1685, Sec. of State 1691–95, Viscount 1695, and Earl 1703, is infamous as author of the massacre of Glencoe 1692.—His son, JOHN, 1673–1747, Earl 1707, was an officer under Marlborough 1703–11, Ambassador to Paris 1715–20, Field-marshal 1741, and victor at Dettingen 1743.

Stake Driver. See BITTERN.

Stalactite. Icicle-like incrustations, often fretting the roofs of caverns and fissures; formed by the dropping and

Stalactites and Stalagmites.

evaporation of water containing lime, iron, etc., in solution. Stalagmites are similarly formed on the floors of caverns.

Staley, CADY, LL.D., b.1840. Prof. Union Coll. 1867; pres. Case School of Applied Science at Cleveland, Ohio, 1884. *Separate System of Sewerage*, 1886.

Stalker, JAMES, D.D., b.1848. Pastor in Glasgow. *Life of Jesus*, 1879; *St. Paul*, 1884; *Imago Christi*, 1889.

Stall. Fixed seat, inclosed more or less at back and sides.

Stallbaum, JOHANN GOTTFRIED, 1793–1861. Prof. Leipzig; ed. *Plato*, 1821–25, *Herodotus*, and other classics.

Stallo, JOHN BERNHARD, b.1823 in Germany. Judge in Cincinnati 1853–55; U. S. Minister to Italy 1885. *Philosophy of Nature*, 1848; *Modern Physics*, 1882.

Stalwarts. Section of the Republican party headed by Roscoe Conkling 1881 and opposed to Pres. Garfield.

Stamboul. Wealthiest, most populous and important division of Constantinople.

Stambuloff, NICHOLAS STEFAN, 1853–1895. Bulgarian statesman; pres. Sobranje 1884–86; regent, with two others, 1886–87; Premier 1887–94; dismissed by Ferdinand, whom he had placed on the throne; assassinated.

Stamens. Spore-bearing organs of flowers, usually consisting of a stalk (filament) bearing a double sac (anther) which contains the pollen-grains (microspores).

Stamford. City of Fairfield co., Conn., on Long Island Sound, 33 m. n.e. of New York; settled 1641, chartered 1830 and 1893. Its manufactures are varied. Pop., 1890, 15,700.

Stamford Bridge. In Yorkshire, on the Derwent. Here Harold defeated the invading Northmen Sept. 1066; their king and Earl Tostig were slain.

Staminate. Flowers in which the stamens are present without pistils.

Staminodium. Vestigial stamen bearing no anther, usually occupying a position in the flower normally belonging to a perfect stamen.

Staminody. Change of other organs of a flower into stamens.

Stammering. Speech defect depending upon the want of harmonious action between the various sets of muscles concerned in speech, where in the effort to form words there is a more or less plainly marked spasmodic action interfering with their utterance. If there is a difficulty in producing a vocal sound, it is known as stuttering. Careful training of the muscles to act together will cure most cases of stammering.

Stamp Act. One of the measures of Parliament which led to the outbreak of revolution in the American colonies; passed March 1765 under the direct influence of George III. and as part of his repressive policy. It provided that no legal instrument should be valid in the colonies unless it bore the government stamp. Upon its promulgation in America bells were tolled, flags raised to half-mast, and newspapers put in mourning. It was repealed March 1766.

Stamp-Mill. 1. Machinery devised and constructed for breaking and crushing ores by the fall of heavy bodies upon them. The falling body (stamp) consists ordinarily of a stem provided with tappets, by which it is raised after each drop, and with a heavy iron or steel shoe at its lower end. In the steam stamps, of which there are several different types in use, the stem is connected with a piston, and is raised by the direct action of steam upon the piston. The ore to be crushed lies

Stamp-Mill.

on a hard and firm die or block, which may or may not be inclosed in a trough or mortar. In some mills the crushing is a dry process, in others a flow of water is employed to carry away the products of crushing as fast as formed. 2. Building with the machinery and apparatus needed, not only for crushing ore, but for the further mechanical treatment of the crushed product on jigging machines, vanners, slime-tables, buddles, etc.

Stamps. See PHILATELY.

Stamp Tax. Collected in the form of sale of stamps or stamped paper, the use of which is legally necessary to make certain documents valid. In U. S. they are required on tobacco, cigars, snuff, spirits, malt liquors, playing cards, and during the Civil War on many other articles.

Stanbery, HENRY, 1803–1881. Cincinnati lawyer; U. S. Atty.-gen. 1866; counsel of Pres. Johnson when under impeachment 1868.

Stanbridge, JOHN, ab.1450–ab.1524. Teacher at Oxford; writer of sundry pioneer text-books.

Stanchion. Stake or post used for a support.

Standard. See UNITS.

Standard (IN BOTANY). See VEXILLUM.

Standard, BATTLE OF THE. At Northallerton, Yorkshire, Aug. 22, 1138; so called from 3 banners of patron saints ranged about a tall cross mounted on a car which formed the English

center. The Scottish army under King David was defeated with loss of 11,000 men.

Standard-Bred. See HORSE.

Standard Candle. See CANDLE-POWER.

Standard Gauge. See BROAD GAUGE.

Standard of Deferred Payments. Money as fulfilling the function of measuring the value which will be ultimately received in settlement of a credit given.

Standard of Morality. Universally valid basis of ultimate decision of the rightfulness or wrongfulness of actions; such as general happiness, or moral intuition.

Standard of Value. See MEASURE OF VALUE.

Standards, MONETARY. There are three standards possible in the world; namely, gold or silver alone, and gold and silver together, the two former being MONOMETALLISM (q.v.) and the latter BIMETALLISM (q.v.). The tendency at present is toward a gold standard, though there are many persons who believe bimetallism possible. The demonetization of silver by several countries and large production of silver has lowered the relative value of that metal to $\frac{1}{36}$ that of gold. See SILVER STANDARD COUNTRIES and MONEY.

Standard Time. In N. America railroads employ five different standard meridians: Colonial, Eastern, Central, Mountain, and Pacific, the time differing 4, 5, 6, 7 and 8 hours from that of Greenwich; the minutes and seconds being the same everywhere. The Colonial meridian passes near Louisburg, N. S.; the Eastern, Phila.; the Central, St. Louis; the Mountain, Denver; the Pacific meridian is part of the boundary between Nevada and Cal.

Standing Army. Permanent peace establishment: in the U. S., that which has been fixed by legal enactment and for which Congress makes yearly appropriation. See U. S. ARMY and ARMED STRENGTH OF PRINCIPAL EUROPEAN COUNTRIES.

Standing Stones. Prehistoric monuments, consisting of tall stones, hewn or unhewn, are common in almost all parts of the world. In England they are found arranged in circles,

The Standing Stones of Stennis, Orkney.

as at Stonehenge, and are frequently called Druidical in mis take. Everywhere they are attributed to some past race, and without the pale of historic tradition.

Standish, MILES, 1584–1656. Associate of the pilgrims who came to America 1620 in the *Mayflower*, and their military leader in wars with the Indians; celebrated by Longfellow.

Stand Pipe. Large vertical pipe into which water is pumped and which transmits the head or pressure to the water in the street mains. It does not usually serve as a reservoir for storage, on account of its small size. See WATER TOWER.

Stanfield, WILLIAM CLARKSON, 1794–1867. English marine and military painter, R.A. 1835.

Stanford, CHARLES VILLIERS, b. 1852 in Dublin. Prof. Cambridge 1887, and now also Prof. of Composition and Orchestral Playing at Royal College of Music. He has composed operas, *The Veiled Prophet of Khorassan*, 1881, *Savonarola*, 1884, *Canterbury Pilgrims*, 1884, and *Shamus O'Brien*, 1896, besides symphonies and chamber music.

Stanford, LELAND, 1824–1893. Gov. of Cal. 1861–63; pres. Central Pacific R. R., completed 1869; U. S. Senator 1885–91; founder LELAND STANFORD JR. UNIV. (q.v.) 1887.

Stanhope, JAMES, 1ST EARL, 1675–1721. Major-gen. 1707; British commander in Spain 1708; victorious in Minorca and at Saragossa 1708–10; Sec. of State 1714 and 1718; Chancellor of the Exchequer and Viscount 1717, Earl 1718.—His grandson, CHARLES, 1753–1816, M.P. 1780, Earl 1786, was an extreme liberal and invented a printing-press.—His daughter, LADY HESTER LUCY, 1776–1839, noted for vigor and eccentricity, lived in Syria from 1810, and was revered by the Arabs as a chief and prophetess. *Memoirs*, 1845; *Travels*, 1846.—Her nephew, PHILIP HENRY, VISCOUNT MAHON, D.C.L., 1805–1875, M.P. 1830, Cabinet Minister 1834–35 and 1845–46, became Earl 1855. *War of Succession in Spain*, 1832; *Hist. England 1713–83*, 7 vols., 1836–54; *Life of Pitt*, 4 vols., 1861–62.—His son, EDWARD, b.1840, M.P. 1874, was Colonial Sec. 1886, and Sec. for War 1887.

Stanhope, PHILIP DORMER. See CHESTERFIELD.

Stanislas (LESZCYNSKI), 1677–1766. King of Poland 1705–9 and 1733–34; Duke of Lorraine 1735; resident mainly in France; patron of art and letters. *Works*, 1767.

Stanislaus, ST., 1030–1079. Bp. of Cracow; murdered, while at mass, by the King's order; canonized 1254; patron of Poland.

Stanley, ARTHUR PENRHYN, D.D., LL.D., 1815–1881. Prof. Oxford 1856–63; Dean of Westminster 1863; champion of liberal thought, and defender of Colenso; author of a few fine hymns. *Life of T. Arnold*, 1844; *Apostolic Age*, 1847; *Sinai and Palestine*, 1856; *Hist. Eastern Ch.*, 1861; *Hist. Jewish Ch.*, 1863–79; *Ch. of Scotland*, 1872; *Christian Institutions*, 1881.

Stanley, DAVID SLOAN, U.S.A., b.1828. Brig.-gen. U. S. Vols. 1861, Major-gen. 1862–66, serving in the West; prominent under Sherman and Thomas; Brig.-gen. U.S.A. 1884.

Stanley, EDWARD JOHN, BARON, 1802–1869. M.P. 1831, Peer 1848; member of several cabinets.

Stanley, FREDERICK ARTHUR, BARON, b.1841. M.P. 1865, Sec. for War 1878–80, Colonial Sec. 1885–86; Baron 1886; Gov.-gen. of Canada 1888–93; Earl of Derby 1893.

Stanley, HENRY MORTON, D.C.L., b.1841 in Wales. War correspondent of New York *Herald* 1868; sent to Africa 1871 to search for Dr. Livingstone, whom he found at Lake Tanganyika. On his second expedition, 1874–77, he explored the Nyanza lakes and the Congo. He founded the Congo Free State 1879–84, and in 1887 led an expedition to relieve Emin Bey, whom he brought to the e. coast 1889. His journeys and discoveries are recorded in: *How I found Livingstone*, 1872; *Coomassie and Magdala*, 1874; *Through the Dark Continent*, 1878; *The Congo*, 1885; *In Darkest Africa*, 1890. Other works are *My Kalulu*, 1873; *My Dark Companions*, 1893; *Slavery and the Slave-Trade*, 1893.

Stanley, THOMAS, 1625–1678. English translator of Æschylus 1663–64. *Hist. Philosophy*, 4 vols., 1655–62.

Stanley Pool. Expansion of the Congo just above the rapids, lat. 4° S.; ab. 80 sq. m. in extent, with a depth of 200 ft.; discovered by H. M. Stanley 1877. Nowhere else in the

Stanley Pool—View taken from Brazzaville.

whole Congo basin have more rapid changes been effected than at this point, where converge above the cataracts all the navigable waterways as far as the neighborhood of Tanganyika.

Stanly, FABIUS, U.S.N., 1815–1882. Commander 1861; on the Pacific 1862–64, on S. C. coast 1864–65; Captain 1866, Commodore 1870, Rear-admiral 1874.—His brother, EDWARD, ab. 1811–1872, was M.C. 1837–43 and 1849–53; military Gov. of N. C. 1862.

Stannard, GEORGE JERRISON, 1820–1886. Brig.-gen. U. S. Vols. 1863–66; active at Gettysburg and in Va.

Stannard, MRS. HENRIETTA ELIZA VAUGHAN (PALMER), ("JOHN STRANGE WINTER"), b.1856, m. Arthur 1884. English novelist. *Bootles' Baby*, 1885; *The Soul of the Bishop*, 1894.

Stannaries. Tin mines, especially those of Cornwall and Devon, which have charters, privileges, and courts, dating from 1201.

Stannates. Salts of stannic acid.

Stannic Acid. H_2SnO_3. Formed by boiling stannic chloride with water; soluble in the ordinary acids and in caustic alkalies. With the latter it forms stannates; *e.g.*, K_2SnO_3.

Stannic Bromide. $SnBr_4$. White crystalline mass, or large, transparent, colorless crystals; mpt. 30° C., bpt. 201° C.; soluble in water; made by heating tin in bromine vapor.

Stannic Chloride. $SnCl_4$. *Spiritus fumans Libavii.* Discovered 1605 by Libavius; strongly fuming liquid, bpt. 114° C.; made by treating tin with chlorine. It combines with water to form a number of crystallized hydrates. With other chlorides it forms double salts, the chlorstannates; *e.g.*, $SnCl_4,2NH_4Cl$. It is used as a mordant in dyeing.

Stannic Fluoride. $SnFl_4$. Found in solution obtained by treating tin dioxide with hydrofluoric acid.

Stannic Hydroxide. $Sn(OH)_4$. Formed perhaps when stannic chloride is boiled with water; if formed, it readily loses water, becoming stannic acid.

Stannic Iodide. SnI_4. Red crystalline mass. From a solution in carbon disulphide it crystallizes in octahedra. Mpt. 146° C. It is made by heating tin and iodine in closed tubes.

Stannic Nitrate. $Sn(NO_3)_4$?. Silky, lustrous scales, made by dissolving stannic hydroxide in nitric acid. The solution decomposes at 50° C.

Stannic Oxide. SnO_2. Found in nature as CASSITERITE (q.v.) or tinstone; obtained as a white powder by burning tin in the air; infusible, insoluble in nitric and hydrochloric acids: concentrated sulphuric acid converts it into a gelatinous liquid.

Stannic Phosphate. $2SnO_2.P_2O_5+10H_2O$. Formed by treating the dioxide with excess of phosphoric acid; insoluble in nitric acid.

Stannic Selenide. $SnSe_2$. Dark, reddish-brown powder; stable compound, soluble in aqua regia; made by precipitating a solution of stannic chloride with hydrogen selenide.

Stannic Sulphate. $Sn(SO_4)_2+2H_2O$. Small needles or rhombohedra, soluble in dilute sulphuric acid; made by precipitating stannic hydroxide from the chloride and dissolving in sulphuric acid.

Stannic Sulphide. SnS_2. Golden-yellow compound; the crystalline variety is known as Mosaic gold. It is made by heating tin filings with sulphur and ammonium chloride, and precipitated from stannic solutions by hydrogen sulphide. Mosaic gold is used as a pigment, especially for bronzing.

Stannite. Rare mineral compound of sulphur with tin, copper, and iron, not occurring in sufficient quantity to be reckoned a workable ore.

Stannotype. See PHOTO-MECHANICAL PRINTING.

Stannous Bromide. $SnBr_2$. Tin dibromide; hexagonal columns; mpt. 215.5° C.; partially decomposed by water; made by heating tin with mercurous bromide.

Stannous Carbonate. $2SnO.CO_2$. Basic carbonate; heavy crystalline powder, decomposing quickly in the air; made by bringing together sodium carbonate and stannous chloride in an atmosphere of carbon dioxide.

Stannous Chloride. $SnCl_2+2H_2O$. Tin salt; made by dissolving tin in hydrochloric acid; soluble in water, but the solution rapidly becomes turbid, owing to the formation of a basic salt, which redissolves upon adding a very small quantity of hydrochloric acid. It is an excellent reducing agent; extensively used as a mordant in dyeing. It forms double chlorides of the general formula $SnCl_2.2MCl$.

Stannous Fluoride. $SnFl_2$. Opaque columns or thin rhombohedral tablets, changing to the oxyfluoride on standing in the air; made by dissolving tin monoxide in hydrofluoric acid.

Stannous Hydroxide. $Sn(OH)_2$. Not known. A compound of the formula $Sn(OH)_2.SnO$ is obtained by treating stannous chloride with potassium carbonate. It readily loses water, forming a black powder, stannous oxide.

Stannous Iodide. SnI_2. Tin diiodide. Beautiful, lustrous, reddish-yellow prisms; made by treating tin with hydriodic acid.

Stannous Nitrate. $Sn(NO_3)_2$. Known only in solution; made by the action of very dilute nitric acid on tin. It rapidly becomes turbid on exposure to the air.

Stannous Oxide. SnO. Olive-colored or black powder; made by boiling stannous chloride with caustic soda. When heated in the air it takes fire, forming stannic oxide.

Stannous Phosphite. $SnHPO_3$. White precipitate, obtained on adding ammonium acid phosphite to a stannous chloride solution. It blackens on heating, with evolution of phosphine.

Stannous Selenide. SnSe. Bright gray, metallic, crystalline leaflets, melting at a red heat, giving a green vapor; obtained by fusing tin and selenium.

Stannous Sulphate. $SnSO_4$. Formed by dissolving tin or the hydroxide in dilute sulphuric acid. The solution is unstable.

Stannous Sulphide. SnS. Dark, bluish-gray, melting at a red heat; obtained by passing hydrogen sulphide into a stannous salt solution.

Stanovoi Mts. Range of e. Siberia, continuing the line of elevation of central Asia n.e. toward Bering Strait.

Stansbury, HOWARD, U.S.A., 1806–1863. Civil and military engineer, surveyor of lakes and rivers; explorer in Utah 1849–51.

Stanton, EDWIN MCMASTERS, 1814–1869. U. S. Atty.-gen. Dec. 1860; Sec. of War 1861–68; involved in difficulties with Pres. Johnson, who vainly attempted to remove him; Justice U. S. Supreme Court 1869. During the Civil War he was vigorous, aggressive, and tenacious, earning much fame and provoking the bitter enmity of many.

Stanton, ELIZABETH (CADY), b.1815, m.1840. American reformer, champion of woman's rights and suffrage since 1848.—Her husband, HENRY BREWSTER, 1805–1887, journalist, was active against slavery.—Their son, THEODORE, b.1851, is a correspondent in Paris. *Woman Question in Europe*, 1884.

Stanwix, JOHN, ab.1690–1765. British general, in America 1756–60; builder of Fort Stanwix, on the Mohawk, 1758; repairer of Fort Duquesne, Pittsburg, 1759.

Stanyhurst, RICHARD, ab.1545–1618. English R. C. theological and historical writer, chiefly in Latin; long in Flanders.

Staphylococcus. Solitary micrococcus or mass of solitary micrococci; also, generically, certain Bacteria.

Staples, WILLIAM READ, LL.D., 1798–1868. Judge R. I. Supreme Court 1835–54; Chief-justice 1854–56; historical writer.

Stapleton, THOMAS, 1535–1599. English R.C. divine, prof. at Douay and Louvain; author of much Latin polemic theology.

Star. See STARS, STAR CATALOGUES, and STAR GAUGES.

Star-Apple. *Chrysophyllum cainito.* Large tree of the natural family *Sapotaceæ*, native of the West Indies; bearing a large sweet fruit, which in section is of star-like appearance.

Starboard. Right side of a vessel, looking forward.

Starbuck, CHARLES CASEY, b.1827. American divine; collaborator on *Lange's Bible-work*, Post-Nicene Library, and *Johnson's Cyclopedia.*

Star Catalogues. Lists giving the right ascension and declination of a greater or less number of stars, with their magnitudes, and data for reducing their co-ordinates from one epoch to another. A few of the more important are: British Association Catalogue, 8,377 stars; Anwers' Reduction of Bradley's observations; *Piazzi precipuarium Stellarum Inerrantium positiones Mediæ;* Greenwich Catalogues, 8 or 10; Argelander's *Durchmusterung* of the Northern Heavens, giving the approximate places of over 324,000 stars.

Starch. $(C_6H_{10}O_5)_x$. White powder consisting of granules, often made up of concentric layers, very widely distributed in

Starch Granules: *a*, wheat; *b*, rice; *c*, potato; *d*, maize.

the vegetable world; insoluble in cold water, changed to starch paste by hot water. Acids and ferments readily cause the ad-

dition of water, thus forming a sugar. It is prepared commercially from the grains, rice, the sago palm, and various tubers such as potatoes. It is a carbohydrate, the commonest and most abundant of the solid contents of plant cells. It occurs in the form of rounded grains, which are developed from the protoplasmic granules called Leucoplastids. Wheat granules are $\frac{1}{1000}$ in. diameter and those of rice are $\frac{1}{3000}$ in. See NITROGEN FREE EXTRACT.

Star Chamber. Court of the Privy Council, established under Henry VII. It became oppressive, and was abolished 1640.

Starch Sugar. See GLUCOSES and DEXTROSE.

Star Clusters. Aggregations of stars having all degrees of condensation, from such examples as the Pleiades to those where a powerful telescope is required to show the individual stars; probably in most cases physically connected.

Star Cucumber. *Sicyos angulatus.* High-climbing vine of the natural family *Cucurbitaceæ*, native of N. America.

Stare Decisis. Policy of standing by decisions and not disturbing matters once judicially settled.

Starfishes. See ASTEROIDEA.

Star-Flower. See CHICKWEED WINTERGREEN.

Star Gauges. Method adopted by Herschel for determining the distribution of the stars. It consisted in counting the number of stars visible in certain definite small areas in different parts of the heavens. Assuming the stars to be distributed with some approach to uniformity in space, he hoped in this way to determine the general form of the stellar universe. The fundamental assumption is not now considered tenable.

Stargrass. Low yellow-flowered herbs of the genus *Hypoxys*, natural family *Amaryllidaceæ*, natives of N. America. See also COLIC ROOT.

Stargrass, WATER. *Heteranthera dubia.* Yellow-flowered aquatic herb of the natural family *Pontederiaceæ*, native of N. America.

Stark, JOHN, 1728–1822. Officer in the French war 1755–59; Col. of N. H. forces 1775–77; victor at Bennington, Vt., Aug. 16, 1777; Brig.-gen. 1777–83.

Starkie, THOMAS, 1782–1849. London judge. *Law of Slander*, 1812; *Criminal Pleading*, 1814; *Law of Evidence*, 1824.

Starkweather, JOHN CONVERSE, b.1830. Brig.-gen. U. S. Vols. 1863–65, serving chiefly in Tenn.

Starlings (STURNIDÆ). Old World Passerine birds, related to the New World Orioles (*Icteridæ*), but having 10 primaries.

Huia (*Creadion acutirostris*).

They are absent from Australia; but in New Zealand is the Huia Bird, the male of which has a long sharp straight beak, the female one still longer, which curves down, forming an arc of a circle nearly. The Sardinian Starling is uniformly black: the common European Starling is marked with white spots, each like the point of a flame. They otherwise resemble the American Blackbird. They destroy many insects, and nest in boxes put up for them. *Pastor* of S. Africa feeds on the insects that molest cattle.

Starnina, GHERARDO, 1354–ab.1407. Florentine painter.

Star of Bethlehem. A popular notion exists that the star which appeared at the birth of Christ is a periodic star appearing at intervals of ab. 300 years. There is no scientific basis for the notion.

Star-of-Bethlehem. *Ornithogalum umbellatum.* White-flowered herb of the Lily family, native of Europe, introduced as a weed into N. America.

Star of India, ORDER OF. Founded 1861, for the British possessions in India.

Staroverski, or PHILIPPINS. Branch of the RASKOLNIKS (q.v.), settled in e. Prussia and Luthania since 1700.

Starr, MOSES ALLEN, M.D., b.1854. Prof. in New York since 1886. *Nervous Diseases*, 1890; *Brain Surgery*, 1893.

Stars, NUMBER OF. Number of stars of 1st magnitude, 20; 2d, 34; 3d, 141; 4th, 327; 5th, 959; 6th, 4,424; total visible to the naked eye, 5,905. With a large telescope many millions are visible.

Stars and Stripes. See FLAG, AMERICAN.

Starstone. Variety of sapphire, which reflects the light perpendicular to the axis in form of a star, when cut in a hemispherical form.

Star-Thistle. *Centaurea calcitrapa.* Purple-flowered, spiny herb of the Composite family, native of Europe, introduced as a weed into N. America.

Starvation. Death from want of food and drink takes place in 5 to 8 days. With abundance of water alone a person may live 3 weeks. With desiccated food without water life can be prolonged a few days only. Starvation may be due to diseased condition of some of the digestive organs. Starving persons should be fed with great caution.

Starwort. See CHICKWEED and ASTER.

Starwort, WATER. Small, aquatic herbs of the genus *Callitriche*, natural family *Callitrichaceæ*, of wide geographical distribution.

Stas, JEAN SERVAIS, 1813–1891. Prof. of Chemistry at Brussels. He determined the atomic weights of many elements.

Stassfurt. Town of Prussia, 19 m. s.w. of Magdeburg, on the Bode. It owes its importance to deposits of potash salts and below these rock salt, the latter having a thickness of 750 ft.; first mined in 1839, but the production was greatly increased by borings 1851. In 1895 there was produced here 204,050 tons of potassium salts and 68,271 tons of rock salt. Pop. ab.20,000.

State. Society looked upon not as a mere assemblage of units, but as a collective person, declaring and enforcing laws, and acting in many ways as a moral agent; organized political community possessing sovereign powers; in the U. S., usually one of the members of the Union in contradistinction to the nation.

State Department. Portion of the Executive branch of the U. S. Government having charge of relations with foreign powers. Its functions in the various States must be sought in the State constitutions and statutes.

Staten Island. At entrance to New York Harbor, and adjoining N. J. Area 58 sq. m.; pop., 1890, 51,693.

Stater. Chief coin of the Greek standard, first struck in gold by Crœsus; found in gold, electrum, and silver. The weight varied in different standards, but the gold coin is

Macedonian Stater—British Museum.

the real stater; the Attic contained ab.132.5 grains of gold. Under Alexander it was worth nearly $6, and passed for 20 drachmæ.

State Religion. One established, endowed and maintained by the government of a nation. England and Scotland have a modified state religion which is Episcopalian. France subsidizes every communion of 100,000 adherents. Belgium aids Roman Catholics, Protestants and Jews. Italy is tolerant, but Roman Catholic is the state church; Spain and Portugal have the same, with little toleration. Turkey is Mohammedan. In Holland Protestants, Roman Catholics and Jews are subsidized. Austria-Hungary is tolerant, recognizing Roman Catholics, Greeks, Protestants, Armenians and Jews. Greece is tolerant, but the state church is Greek; Russia is also Greek, with no toleration. Denmark has full toleration, the state religion is Lutheranism, as in Norway and Sweden. Switzerland has absolute freedom of faith, as have the U. S.

State Religion of China. This has retained its main features during the past 3,000 years. The primary idea is that the emperor is the son of heaven, co-ordinate of heaven and earth. He cannot devolve on any other his function as high priest to offer oblations on the altars of heaven and earth at Peking. The members of the imperial clan and Board of Rites assist the emperor. No priests or women are admitted. The three regular annual services are at the winter solstice, the beginning of spring, and the summer solstice.

State Rights. Those possessed by the several States under the U. S. Constitution; their exact nature and extent are still a subject of controversy, though the civil war has negatived the right of a State to secede.

State's Evidence. That given by a criminal against his accomplices, on the understanding that he shall not be prosecuted.

States-General. Legislative assemblies of France before 1789; also those of the Netherlands.

State Socialism. Intervention of government in fields of industry which might be left to private enterprise; *e.g.*, state ownership of railroads, telegraphs, gas and waterworks, and loans for agricultural improvements.

States of the Church. See PAPAL STATES.

State Weather Service. Organization designed to determine by observation the local climates and meteorological phenomena of the respective States. Early attempts were made by Mass., N. Y., and Pa., but all had fallen into decay when, in 1881, Gen. Hazen by circular invited all States to organize such services in co-operation with the Signal Office. Thirty States are now covered by such organization: their observations are summarized in the *Monthly Weather Review* of the Signal Service.

Statical Baroscope. Apparatus adopted by Boyle 1666 to show the changes in density of the air. It consists of a thin large glass globe hanging counterpoised by a small glass weight: when the barometric column rises the glass globe also rises by its buoyancy.

Static Charge. When any body has been electrified and the electricity is in equilibrium, the body is said to have acquired an electrostatic charge. The charge of a condenser is of this sort. Deep sea cables and even long telegraph lines have a certain electrostatic capacity; on this account it takes an appreciable time to produce a signal at the far end, since the cable must be charged and discharged in the act.

Statics. Branch of dynamics which treats of forces in equilibrium. The statics of fluids is hydrostatics. The fundamental problem of statics considers the conditions which forces must fulfill in order that they may be in equilibrium when applied to a material particle or to a rigid body.

Statigraphy. Study of the strata in the order in which they occur.

Station. In Botany, locality where a plant was collected.

Stationary Wave. If a wave motion be propagated in an elastic medium, as a tube filled with air, and meet an obstacle in such position that it is reflected directly back on its path, the direct wave and the reflected wave will interfere in opposite phases at intervals of half a wave length, starting from the reflecting surface. The resultant motion is a stationary wave. The same phenomenon may be observed in the transverse vibrations of a stretched string.

Station Error IN LATITUDE DETERMINATION. Difference between the Geographical and Astronomical latitude, due to local deviations of the plumb line. There is a similar error in longitude. The deviation is usually small, but in extreme cases has been found to amount to 30 or 40 seconds of arc.

Stationers' Hall. Building in London, belonging to the Company of Stationers, incorporated 1557; here the registration of copyright began in 1554. This was compulsory until the passing of the Copyright Act in 1842, and all printers had to serve an apprenticeship to a member of the Company. The registration is advantageous in copyright claims.

Stations of the Cross. Pictures or other representations of the stages (usually 14) of the Passion, from Pilate's sentence to the interment; found in R. C. churches around or above the altar, and sometimes in roads and public places; places for special devotion since ab.1550.

Statistics. Branch of Political Science which collects and arranges the facts relating to the condition of a people, including population, industries, society, politics and morals. Upon this political economy and beneficial legislation depend. Censuses for military purposes and for taxation were made in ancient times. In the latter part of the 18th century the science was much broadened by Conring, Achenwall, and Süssmilch in Germany, and, in the present century, by Quetelet of Belgium. In the U. S. much is done in this direction by the national, state, and municipal governments.

Statius, C. See CÆCILIUS STATIUS.

Statius, PUBLIUS PAPINIUS, ab.43–ab.96. Latin poet. Author of the *Thebaid*, 12 books, *Silvæ*, 5 books, and *Achilleis*, 2 books, all extant. He has been ranked next after Virgil as an epic poet.

Statoblast. Hard-shelled, unfertilized egg, which appears in fresh water *Polyzoa* in autumn, rests during winter, and develops the following summer.

Status. Legal standing of a natural or artificial person; of more importance in Roman than in English law.

Statute Merchant and Statute Staple. Securities for debts, entered into pursuant to ancient English statutes, which gave to the creditor an estate in the debtor's lands until the debt was paid.

Statutes. Written legislative enactments; in Gt. Britain, supreme law of the land; in U. S., invalid if in conflict with constitutional provisions.

Staudlin, KARL FRIEDRICH, 1761–1826. Prof. Göttingen from 1790; writer on Ch. history and ethics.

Staudt, KARL GEORG CHRISTIAN VON, 1798–1867. Prof. Erlangen. *Geometrie der Lagi*, 1847–60.

Staunton, SIR GEORGE LEONARD, 1737–1801. Sec. to Lord Macartney in India; historian of the embassy to China 1792; Baronet 1784.—His son, SIR GEORGE THOMAS, 1781–1859, M.P. 1818–52, wrote much on China.

Staunton, HOWARD, 1810–1874. English writer on chess; editor of Shakespeare, 1858–60.

Staunton, WILLIAM, D.D., 1803–1889. American divine. *Ecclesiastical Dictionary*, 1844–61.

Staupitz, JOHANN VON, D.D., d.1524. Vicar-gen. of the Augustinians in Germany 1503–20; prior of a convent at Wittenberg, and first dean of the Univ. 1502; patron and friend of Luther, whose appointment as prof. he secured 1508. His works were collected 1867.

Stauraxonia. In Promorphology, animals having axes and cross axes; so named by Haeckel. There are two groups, *Homopola* and *Heteropola*.

Staurolite. Mineral of uncertain composition, containing aluminium, magnesium, iron, and silica, crystallizing in peculiar cross-shaped forms, and occurring as an accessory ingredient in some of the metamorphic schists.

Stauromedusæ (CALYCOZOA). Order of acraspedote Jellyfishes, having four wide perradial stomach pouches and four horseshoe-shaped reproductive glands in the wall of the umbrella. There are no sensory tentacles, *e.g.*, *Lucernaria*.

Stavanger. Town of s.w. Norway, 100 m. s. of Bergen. It has a gothic cathedral built in the 11th century. It exports large quantities of fish, sheep and minerals. Much visited by tourists.

Stavenhagen, BERNHARD, b.1862. German pianist and composer. He appeared in Berlin 1890, and in New York Dec. 1894.

Stay and Stay-bolt. A stay in a boiler is a tie-rod to hold together two flat surfaces (or areas of flat curvature) and to prevent deformation of such parts by internal pressure. The simplest stay is a round bar flattened at the ends and riveted through the flattened parts to the two surfaces. Better than this is to have the stay end in an eye, which is pinned to a socket on the plate. The socket may be double, or the eye double and the socket single. The pins should be in double shear. The socket is often a piece of T-iron, or two pieces of

angle iron. Gusset-stays are pieces of plate riveted in a radial plane to head and shell of a boiler to prevent bulging of the head. For staying distant surfaces to each other, the rods are often flat links like bridge eye-bars; to get them in conveniently they are short and several are pinned together. For staying crown-sheet bars to the dome of locomotives, the palm stay is used, a round bar flattened to an area to receive four rivets, which fits the cylindrical surface of the dome. For water-legs, or parallel surfaces exposed to pressure tending to separate them, stay-bolts are used. These are rivets of length sufficient to have the plates at desired distance, headed over on the outside of each. Such stay-bolts are either ordinary rivets, or rivets with a distance piece between the plates, to keep them parallel and prevent the buckling which occurs when it is not used with stays put in hot. The distance piece is usually a split tube, to allow water to cool the bolt. Cold stay-bolts are screwed into their holes and then headed over. Hollow bolts are also used, screwed and headed, and have the advantage of letting air into the fire-box, and revealing at once by leakage when corrosion has proceeded to a danger limit. Such stay-bolts are calculated for a strain of 6,000 lbs. per sq. in., and spaced at a distance between centers not so large as to exceed this strain at the calculated pressure.

Stay-Bar. Horizontal iron bar between the jambs of a window.

Stays, NAUTICAL. Large ropes from the masthead, brought down in front of the masts to prevent them from springing.

Stead, WILLIAM THOMAS, b.1849. English journalist and reformer; ed. *Pall Mall Gazette* 1880–89, and *Review of Reviews* since 1890. *Truth about Russia*, 1888; *If Christ Came to Chicago*, 1894.

Steam. Transparent and invisible vapor of water, having approximately, when superheated, the physical properties of a gas, the volume of which is inversely proportionate to the pressure. As used in an engine it is saturated steam, and the volume increases less rapidly. A cu. in. of water at the pressure of the atmosphere is converted into 1,645 cu. in. of steam. To raise a pound of water from 0° C. to 100° there are required 180 heat units, and to evaporate it at that temperature, 966.6 units in addition, this last heat being latent. The amount of heat for higher temperatures and pressures increases but slightly. See GAS, HEAT, LATENT HEAT, SATURATED STEAM, and SUPERHEATED STEAM.

Steamboats. In 1707 Papin used a steam engine to propel a model vessel on the Fulda at Cassel. Wm. Henry of Pa. made successful trial of a small steamboat 1763. Various experiments

North German Lloyd Twin-screw Steamship.

were made in France, England and U. S. from 1774, till Robert Fulton made his trip in the *Clermont* from New York to Albany, April 7–9, 1807. First steamboat in Gt. Britain was used 1812: the first to cross the Atlantic was the *Savannah*, of 300 tons, 1819; the voyage from Savannah to Liverpool occupied 25 days.

Steam Boiler. See BOILER.

Steam Engine. The steam-engines of the U. S. represent 7,500,000 horse-power, England 7,000,000, Germany 4,500,000, France 3,000,000, Austria 1,500,000; in addition there are 105,000 locomotives of 3,000,000 horse-power; a total of 26,500,000 horse-power, equal to 1,000,000,000 men. See ENGINE.

Steam Heating. Method of warming apartments by distributing heat to them from a fire external to them, using steam as a vehicle. The advantages of steam as such are, first, its rapid flow by differences of pressure; second, that its condensation on the radiating surfaces causes immense reduction of its volume and a rapid rush of fresh steam to the vacant space, without extraneous circulating devices, so that a much less volume has to be returned to the boiler if condensation is complete. Steam heating is done either by direct radiators (see RADIATORS) in the rooms to be warmed, where the hot metal heats both by radiation to objects and by contact with the air in the room, or by indirect radiators, where the metal surface is not in the room to be warmed and acts by contact only upon air, which is distributed by flues as required. The first method is much the more efficient and economical, but is objected to by many as giving a very dry heat. It is the only practicable method for large and high buildings with a multitude of rooms and of temperaments in the occupants, who may each control his temperature by valves on his radiator: the objection, moreover, is hardly valid with abundant supply of fresh air to the rooms. The second method by indirect radiation compels each flue to furnish fresh air, and is more applicable to buildings with few large volumes to be heated, such as private houses and institutions. Shops and mills are admirably heated by direct radiation from pipes overhead. Exhaust steam from engines can also be profitably used with pipes of larger area in the heating coils. Usual steam pressures are from 5 to 15 lbs. Condensed water is returned to the boiler by a TRAP (q.v.). By such systems of distributing heat the labor of heating a large building is concentrated, and thereby lessened. Fuel does not have to be carried up nor refuse carried down, and the starting and cleansing of room fires is avoided, while the fire risk in office buildings and hotels is much less.

Steam Jacket. Device to keep up the temperature of the walls of an engine cylinder by circulating steam from the boiler within an outer casing surrounding them. The casting of the cylinder is either made with double walls, and the heads cast hollow similarly (the first a matter of some difficulty, owing to unequal contraction in cooling, whereby the inner wall is put under strain and is likely to crack or break), or else the cylinder bore is inserted within the larger cylinder of the jacket, a steam-tight fit being secured at the ends. The water condensed from the jacket returns to the boiler. The object sought in the steam jacket is to diminish the amount of internal condensation and re-evaporation by supplying heat from outside to replace what is radiated to the moist vapor inside during expansion and the exhaust stroke. Experiments have shown that the steam jackets on a steam engine caused an economy of 11¾ per cent on a single-cylinder engine, but were without appreciable effect in causing economy on the small cylinder of a compound engine working at its most economical degree of expansion. On the large cylinder of a compound engine, the economy of the steam jacket is about the same as on a single engine cylinder.

Steam Vessels. See SHIPBUILDING.

Stearic Acid. $C_{18}H_{36}O_2$. White solid, insoluble in water, crystallizing in plates; mpt. 69° C. Combined with glycerin as stearin, it forms a main constituent of animal and some vegetable fats. Combined as a sodium salt, it is the main constituent of ordinary soap. It can be obtained by decomposing its soap with a mineral acid, or by the decomposition of fats by acids or water. The ordinary stearin candles consist of an impure stearic acid.

Stearins. GLYCERIDES (q.v.) of STEARIC ACID (q.v.). The common stearin or tri-stearin is a main constituent of animal fats. It is a white solid, softening at 55° C.

Stearns, WILLIAM AUGUSTUS, D.D., 1805–1876. Pres. Amherst Coll. from 1854.—His nephew, LEWIS FRENCH, D.D., 1847–1892, was prof. at Bangor, Me., from 1880. *Evidence of Experience*, 1891; *Present-day Theology*, 1893.

Steatite. Granular soapstone. See TALC.

Stebbins, HORATIO, D.D., b.1821. Unitarian pastor at San Francisco since 1864.

Steckel, LOUIS JOSEPH RENÉ, b.1844 in Alsace. Civil engineer in Canada.

Stedman, EDMUND CLARENCE, LL.D., b.1833. American poet and critic. *Alice of Monmouth*, 1864; *The Blameless Prince*, 1869; *Victorian Poets*, 1875; *Poets of America*, 1885; *Nature and Elements of Poetry*, 1892. He has edited a *Library of American Literature*, 11 vols., 1888–90; *A Victorian Anthology*, 1895, and Poe's Works, 10 vols., 1895–96.

Steedman, CHARLES, U.S.N., 1811–1890. Captain 1862; active on the Atlantic coast; Commodore 1866, Rear-admiral 1871.

Steedman, JAMES BARRETT, 1818–1883. Brig.-gen. U. S. Vols. 1862, Major-gen. 1864–66; distinguished at Chattanooga and Nashville.

Steel, METALLURGY OF. Steel was formerly defined as iron containing sufficient carbon to harden by sudden cooling from a high temperature, and not enough to prevent its being forged. It now includes all this, and, in addition, any other malleable form of iron which has been perfectly fused in the process of its manufacture; *i.e.*, all commercial forms of malleable iron excepting wrought-iron and malleable castings made by decarburizing cast-iron castings. Castings made by melting

down pig-iron and steel-scrap in a cupola are properly called steel, but are usually of very inferior quality. Malleable metal which has been fused but does not contain enough carbon to harden is called mild or soft steel; with less than 0.1 per cent of carbon it is dead-soft steel. The hardest steel contains 1.5 per cent of carbon; in general, over 0.4 per cent causes a steel to harden perceptibly; all containing over 1 per cent of carbon are called high-carbon steels. Steel for knives and tools contains 1 per cent; razors 1.5 per cent.

Blister or Cement Steel.—Made from the softest and purest wrought-iron by imbedding it in fine charcoal and keeping it there some time at a yellow heat. The carbon penetrates the metal at the rate of ab. one-eighth in. every 24 hrs. The process is called cementation, and is carried on in large furnaces containing many tons of wrought-iron bars packed in charcoal in large iron cases, tightly closed. The ancient process of imbedding soft iron in a fire was essentially the same process carried out on an open hearth. On opening the iron boxes, the steel bars are broken and graded by the appearance of their fractured surfaces.

Cementation Furnace.

Cast-Steel.—Originally that made by melting bars of blister or cement steel in crucibles, thus producing a perfectly uniform, homogeneous metal, which is cast into ingots and these hammered, rolled, or worked into any desired shape. The process was first introduced in Sheffield ab.1750, and made its steel renowned as the best made. An inferior quality of similar cast-steel is made by melting the same material on the hearth of a large furnace instead of in crucibles, but the product has not the quality of the finest crucible cast-steel.

Puddled Steel.—Made in the puddling furnace by arresting the process when part of the carbon has been removed from the pig-iron and enough left in to produce a malleable metal which will yet harden. The quality of the product is very uncertain, and its manufacture is rapidly falling out of commercial use.

Bessemer Steel.—Made by the invention of Sir Henry Bessemer, consisting in placing melted pig-iron in a pear-shaped vessel (converter) and blowing air rapidly through it. The air oxidizes the silicon, carbon, manganese, and some iron, the heat set free in this oxidation keeping the bath perfectly fluid even when it consists only of pure iron. After this stage is attained, the metal has sufficient carbon restored to it to form steel of any desired quality by introducing the proper quantity of spiegeleisen (an alloy of iron containing 8 to 15 per cent of manganese and 5 to 6 of carbon) or of ferromanganese (a similar alloy with 40 to 80 per cent of manganese). The manganese is necessary in order to remove any oxygen left in the metal from the blowing; the latter alloy is used when making low-carbon steels, as its use permits of the introduction of the necessary amount of manganese without at the same time adding much carbon. The converter used is lined with refractory material and mounted on trunnions, so that, on being rotated, the melted metal cannot run into the blast nozzles in the bottom lining when the air is shut off. Ordinary Bessemer steel is not the finest quality of steel. It usually has a tensile strength of 50,000 to 60,000 lbs., and an elongation before rupture of 15 to 25 per cent. Its principal use is for railroad rails and roof trusses. See BESSEMER and CONVERTER.

Bessemer Converter.

Basic Bessemer Steel.—When the lining of the converter is (as Bessemer used it) of silica bricks or siliceous matter, it is necessary to use pig-iron very low in phosphorus and sulphur, since these ingredients are not eliminated and injure the quality of the product, phosphorus making it brittle when cold, and sulphur brittle when hot. Thomas and Gilchrist lined their converter with basic material, such as burned magnesian limestone, and by adding lime to the bath were enabled to remove phosphorus and sulphur in the very basic slag formed. This process has largely supplanted the original one, particularly in Germany, as it permits using the cheaper grades of pig-iron for making the best of steel. The highly phosphoric slag is used as a fertilizer. This steel is largely used for bridge work and constructions in general.

Siemens-Martin Steel.—Frequently called acid open-hearth steel; made by melting pig-iron on the hearth of a regenerative gas furnace, and either oxidizing it down to steel, or diluting it down with pure iron. To oxidize the carbon out of the pig-iron, air may be admitted to pass over it, or a blast of air may be blown upon it, or, finally, iron oxide ore may be put into the bath, which is reduced to iron by the carbon in the pig-iron, thus removing the carbon and increasing the amount of iron present. The oxidation of the carbon may be arrested when it has reached the desired point, or, as is more usual, the bath is totally decarburized and then recarburized by spiegeleisen or ferromanganese, as in the Bessemer process. The advantages of this method of working over the Bessemer are that the reactions are much slower, and thus allow the end condition to be reached more exactly; moreover, if the quality is not just right, the metal can be kept melted in the furnace, and any necessary additions made to it, until it is perfectly right. The uniformity in quality of the metal produced is a great advantage, and is especially useful when making very soft steel, where slight variations in composition make great changes in the physical properties. See SIEMENS.

Basic Open-hearth Steel.—Made in the same kind of furnace as the former, excepting that the hearth is lined with basic material, such as roasted magnesite and bauxite. The production of a basic slag by throwing in lime permits the use of charges containing much phosphorus and sulphur, and the complete elimination of these harmful ingredients in the slag. This steel is very reliable, and is used for boiler sheets and in all places where great uniformity and reliability are needed, and particularly for the low-carbon steels.

Tempering Steel.—Process of first hardening the metal by chilling it from a red heat, and then softening it to any required degree by heating to a certain temperature. A low temperature draws out part of the hardness; a dull red draws out almost all. After heating to the temper heat, the metal may be cooled either slowly or quickly. The temper heat is generally noted by the color-film on the heated steel, but the temperature is a more accurate guide.

Color of Film.	Temperature.	Suitable for Tempering.
Faint yellow	220° C.	Lancets
Faint straw	230°	Razors
Full yellow	243°	Penknives
Brownish-yellow	255°	Chisels and metal shears
Brown, purple spots	265°	Axes and adzes
Purple	277°	Table knives, cloth shears
Bright blue	288°	Swords, watch springs
Fine blue	293°	Small shears
Dark blue	316°	Large saws

Special Steels.—These are such as contain several per cent of another element, imparting to the steel special physical properties. Nickel steel contains 3 to 6 per cent of nickel, and has great hardness, tensile strength, toughness, and reliability in general. It casts very well, and is largely used for armor-plates, which are superficially hardened by the Harvey method of cementation. Krupp hardens these plates by gas. Manganese steel contains 8 to 14 per cent of manganese, and possesses the unusual combination of extreme hardness and toughness, such as commend its use for rolls, jaws of squeezers, stamp heads, and material to stand the heaviest wear. Chrome steel, with 1 to 3 per cent of chromium, is intensely hard but somewhat brittle. It is principally used for tools intended for cutting or chiseling. Steel, containing tungsten, is used for tools. Many other special steels have been described, but none have come into such general use as the above.

Steel Production in 1896, in Metric Tons.

	U. S.	*Gt. Brit.*	*Germany.*	*France.*	*Aust.-Hung'y.*	*Sweden, 1895.*

Belgium produced 598,755 tons of steel billets; Spain, 104,577

tons; Italy, 157,899 tons; Russia 625,000 tons of steel. The production of the world is estimated at 17,581,131 tons.

Steel, STRENGTH OF. Average values are 100,000 lbs. per sq. in. in tension and 150,000 in compression; but the material is subject to great variations in strength, depending upon its chemical composition and the process of manufacture. Structural steel is usually from 60,000 to 70,000 lbs. per sq. in. in tensile strength.

Steel, MRS. FLORA ANNIE (WEBSTER), b.1847, m.1867. Scottish novelist, in India 1867–90. *Miss Stuart's Legacy*, 1893; *Tales of the Punjab*, 1894; *Red Rowans*, 1896; *On the Face of the Waters*, 1896; *In the Tideway*, 1897.

Steele, ANNE, 1716–1778. English hymnist. *Poems by Theodosia*, 1760. Many of her lyrics were long in extensive use.

Steele, FREDERICK, U.S.A., 1819–1868. Major-gen. U.S. Vols. 1862–67; distinguished in the West, especially in Arkansas.

Steele, JOEL DORMAN, 1836–1886. American author of scientific and historical textbooks.

Steele, SIR RICHARD, 1672–1729. Irish author, who first gave the periodical essay its prominence in literature by the

Sir Richard Steele.

Tatler, 1709–11; associated with Addison on the *Spectator*, 1711–12, and the *Guardian*, 1712; M.P. 1712, knighted 1715.

Steel Engraving. The steel plate, after being cleaned with Putz-pomade, is warmed and coated with white wax or an etching ground, to which the design is transferred by tracing or gelatin paper; through this ground the design is elaborated with the needle. The plate is now placed in the nitric acid bath and the drawing bitten in, after which the ground is removed with turpentine. With the graver the workman now carefully enters the etched lines, the color value of which is obtained by their width and depth. The thin and shallow lines carry little ink, and, in printing, the paper, being forced into the lines, takes the ink from them and they appear faint and delicate. The broad and deep lines, carrying more ink, have force and strength. The tools are a square and a lozenge graver, a scraper and a burnisher to remove the ridges on either side of the line made by the gravers. The graver is of good steel, 3 to 4 in. long, set in a wooden or cork handle. The parallel lines for skies in cheaper work are traced through the etching ground by a steel or diamond point in a ruling machine, and are then etched by the acid bath. For high-class commercial work, as bank bills and bonds, the tangled line work and borders are done by the geometric lathe, which cuts them into a soft steel plate; this is then hardened, and a cylinder of soft steel is rolled over the plate with a pressure of 20 tons, which reproduces the lines in relief on the cylinder. The latter is then hardened and the design can be transferred and repeated by this into soft plates, producing uniformity in duplicating parts. The printing on paper is done by steam-press, the best work by hand. The plate is laid upon a stone or iron plate heated from below and the ink forced into all the lines by a soft roller. The ink is then removed by a cloth from the surface, which is then polished by the palm of the hand and whiting, no ink being removed from the lines. Damp paper is then laid upon it, two thick soft blankets above, and the paper forced into the lines of the plate by the rollers of the printing press, bringing out the ink. The lines are thus brought out clear upon an unstained white paper. Great skill is required to produce a first-class plate, and years of training. There is not much demand for the prints except from collectors, and steel engraving as an art is a thing of the past. Copper-plate engraving is accomplished in a similar manner. For the history of engraving see WOOD ENGRAVING. See also AQUATINT, MEZZOTINT, and STIPPLE ENGRAVING.

Steell, SIR JOHN, 1804–1891. Scottish sculptor.

Steelton. Borough of Dauphin co., Pa., on the Susquehanna, 3 m. s.e. of Harrisburg; founded 1866, chartered 1880. It has important steel works and other mills. Pop., 1890, 9,250.

Steelyard, or ROMAN BALANCE. See SCALE.

Steen, JAN, 1626–1679. Dutch genre painter, who affected low life subjects with a satiric turn. His execution is of won-

The Sick Girl, by Jan Steen (in Amsterdam).

derful finish. His best works are at The Hague and in Amsterdam. He was a pupil of Brouwer and Van Ostade; the influence of the latter is evident in his principal works.

Steendam, JACOB, b.1616. First (Dutch) poet of New York. *Complaint of New Amsterdam*, 1659; *Praise of New Netherland*, 1661.

Steen Kerken. Village of Hainault, Belgium; scene of a defeat of British troops under William III. by the French under Luxembourg, Aug. 3, 1692.

Steenstrup, JOHANNES IAPETUS SMITH, b.1813. Prof. Copenhagen 1845–85; writer on zoölogy.—His son, JOHANNES, b.1844, archæologist, pub. *Normannerne*, 1876–82.

Steenwyck, HENDRICK, ab.1550–1603. Dutch painter and decorator; as was his son, HENDRICK, 1580–ab.1649, in London from 1629.

Steeple. Tower of a church, including the spire or lantern upon it.

Steeplebush. See HARDHACK.

Steeplechase. Modification of the board game, played with dice; best known in Europe as the Game of Goose, in which the circuit represents the course on a race-track. It is of English origin, but is now a common child's game in France, Germany, and the U. S. Similar games are extremely popular in Japan.

Steeplechase. Race in which the contestants originally selected some easily observed point in the distance, as a church steeple, and made a direct run for that point; now one of practically well-confined limits. The first race was in Ireland, 1752.

Steeple Engine. Compound engine in which the two pistons are attached on the same piston-rod, and the smaller

high-pressure cylinder stands on top of the larger low-pressure cylinder, in an inverted vertical engine. They have been much used in marine practice. See COMPOUND and TANDEM ENGINE.

Steeple-Jack. Person who repairs steeples and chimneys.

Steering. See STEERING-GEAR, STEAM.

Steering-Gear, STEAM. Machine for applying steam power to moving the rudders of large vessels. There are two general types. The first is an ordinary reversible hoisting engine of some approved type, on whose barrel are wound the tiller chains in opposite directions. This engine is placed below the pilot house, and its valve and reversing gear are controlled by wire ropes or a shaft from the barrel of a small hand-wheel which the steersman turns to port or starboard by similar motions as for hand-steering. The position of the tiller is

Combined Steam and Hand Bridge Steering-Gear.

indicated by a tell-tale, which moves as the former is pulled by the engine. The second type operates directly upon the rudder-post by links from nuts on right and left screws, so that the connection has fewer points for breakage than in the other type, but the mechanism is more bulky. The steam steering-gears enable one man easily to handle a boat which formerly needed four men in easy channels and currents, and more when rapid manipulation was required, as in tortuous channels with swift currents.

Steevens, GEORGE, 1736–1800. English editor of Shakespeare, 1773 and 1793.

Stefan, JOSEF, 1835–1893. Prof. Physics, Vienna, 1863.

Stefan's Law (OF RADIATION). The quantity of heat lost by radiation is proportional to the fourth power of the absolute temperature.

Steffens, HENRICH, 1773–1845. Norwegian-German theologian, novelist, geologist and mineralogist. Prof. Halle 1804, Breslau 1811, and Berlin 1831. *Handbuch der Oryktognosie*, 3 vols., 1811–19; *Anthropologie*, 1822; *Autobiography*, 1840–45, tr. 1863.

Stegani. 1. See STEGANOPODES. 2. Form of swimming foot of birds, characterized by having the hind toe included in a web with the three anterior toes.

Steganophthalma. See DISCOPHORA.

Steganopodes (DYSPOROMORPHÆ, STEGANI, TOTIPALMATÆ). Division of Natatores, including large swimming birds, with small head, well-developed wings, and four toes included in one web. Here belong the Pelicans, Frigate-birds, Tropic-birds, Cormorants, and Gannets (Solan-Geese), one species of which produces the true guano.

Stegocarpous. Sporanges in mosses which open by a terminal cap to emit the spores.

Stegocephali. Amphibians of the Coal and Permian (LABYRINTHODONTS (q.v.) and *Ganocephala*), on account of the bony plates protecting their heads; remarkable, generalized types, connecting together fishes, amphibians, and reptiles.

Stehedrin, MIKHAIL SALTIKOFF, 1826–1889. Russian story-writer and satirist.

Stein, CHARLOTTE VON, 1742–1827. Friend and correspondent of Goethe, whose letters to her were pub. 1848–51 and 1883–86.

Stein, CONRAD, 1701–1762. Prof. Breslau; writer on American history.

Stein, HEINRICH FRIEDRICH KARL, FREIHERR VON, 1757–1831. German statesman and patriot, in the Prussian civil service from 1780; Foreign Minister 1807. He signed the famous edict of emancipation, labored with Scharnhorst for reorganization of the army, and effected other fundamental reforms, preparing Prussia for the final struggle with Napoleon, who procured his dismissal and outlawed him 1808.

Heinrich Stein.

He became the unofficial adviser of Alexander I. of Russia 1812; with Yorck, aroused Prussia to arm against Napoleon, and brought about the treaty of Kalisch between Russia and Prussia. After the battle of Leipzig, 1813, he was pres. of the Central Commission appointed to administer the territory occupied by the allied armies. His later life was spent in retirement. In 1819 he founded the society for publishing *Monumenta Germaniæ Historica*.

Stein, HEINZ VON. Leader of the peasants' insurrection in Thurgau, Switzerland, 992.

Steinbel, ROGER NELSON, U.S.N., b.1810. Active in the West 1861–62; Captain 1866, Commodore 1870, Rear-admiral 1874.

Steinen, KARL VON, b. 1855. German explorer in Brazil 1884–85 and 1887–88.

Steiner, JACOB, 1796–1863. Prof. Berlin 1834; called "the greatest geometrician since the time of Apollonius." *Works*, 2 vols., 1881–82.

Steinheil, LOUIS CHARLES AUGUSTE, 1814–1885. French painter.

Steinitz, WILLIAM, b.1836 at Prague. Chess-player, long in England; in the U. S. from 1883.

Steinmetz, KARL FRIEDRICH VON, 1796–1877. Prussian general, distinguished in the war with Austria 1866; less successful in France; Gov.-gen. of Posen and Silesia Sept. 1870; Field-marshal 1871.

Steinschneider, MORITZ, b.1816. Teacher in Berlin from 1845; Hebrew bibliographer. *Jewish Literature*, tr. 1857; *Uebusetzungen des Mittelalters*, 1893.

Steinthal, HEYMANN, b.1823. Prof. of Comparative Philology at Berlin 1863. His investigations in the science of language have greatly advanced knowledge. *Ethik*, 1885.

Steinway, HENRY ENGELHARD, 1797–1871. German pianoforte maker, in New York from 1850; founder of a noted firm. —His son, WILLIAM, 1836–1896, succeeded him as its head.

Steinwehr, ADOLF WILLIAM AUGUST FREDERICK, FREIHERR VON, 1822–1877. Brig.-gen. U. S. Vols. 1861–65, serving chiefly in Va.; author of geographical text-books. *Gazetteer*, 1873.

Stellate. Plant-hairs of a radiating structure; also other organs or organisms resembling a star.

Stellerida. See ASTEROIDEA.

Stelmatopoda. See GYMNOLÆMATA.

Stelvio Pass. From Bormio to Meran in the Adige valley, n. Italy; famous for the highest carriage road in Europe, 9,046 ft. above sea, finished 1825.

Stelzner, ALFRED WILHELM, 1840–1895. Prof. of Geology at Freiberg 1871–74 and Cordova; writer on the phenomena of ore-deposits, and the geology and paleontology of Argentina.

Stem. Ascending axis of plants. It is composed of fibrous, spiral and cellular tissues, arranged in different ways; typically it assumes a cylindrical form and perpendicular position, bearing the remaining aerial parts of the plant. Sometimes it is so weak as to be procumbent, and in some plants the stem is so short as to seem to be wanting. Subterranean stems, as the tuber and rhizome, have been mistaken for roots.

Diagrammatic cross-sections of a young Dicotyledonous Stem:

A, a two-year old stem; B, a three-year old stem: *a*, pith; *b*, primary medullary rays; *c*, wood, in two layers in A, in three layers in B; *d*, cambium ring; *e*, bast; *f*, cambium (interfascicular) between the bundles; *g*, secondary medullary rays.

Stem. Piece of timber into which the sides of a vessel are united at the fore end.

Stemmata. Simple eyes. See OCELLI.

Stenciling. Printing by a metallic plate, out of which letters or patterns are cut, and transferred by brush to a wall or other surface on which the plate is laid.

Stendhal. See BEYLE, H.

Steneosauria. See CROCODILIA.

Stennett, SAMUEL, 1633–1713. English Baptist, whose *Hymns for the Lord's Supper*, 1697–1700, preceded the appearance of Dr. Watts.—His grandson, SAMUEL, D.D., 1727–1795, is better known as a hymnist.

Stennis. See STANDING STONES.

Steno, NICHOLAS, 1638–1687. Danish physician, anatomist and geologist, in Florence 1667–77; vicar-apostolic to n. Germany 1677.

Stenography. See SHORTHAND.

Stenopetalous. Flowers with narrow petals.

Stenosis. In Plant Physiology, cell-division, accompanied by the narrowing of the mother-cell around the plane of partition.

Stenostomata. See CTENOPHORA.

Stentor. One of the *Heterotricha;* trumpet-shaped, with a circle of long cilia around its broad end. Its nucleus is moniliform. It has a superficial resemblance to *Vorticella*, but is entirely covered by cilia.

Stentor. Greek herald in the Trojan war, noted for his loud voice.

Step-Gear. Gear wheels of same pitch diameter and number of teeth, set side by side on the same shaft, so that, starting from one side, a tooth on one wheel was set just a little in advance of the same tooth of the preceding wheel, and each tooth was thus made of a series of steps. Such wheels, separate and fastened together, or with the same effect secured in one casting, give the strength due to large pitch and thickness of tooth, and the smoothness due to large numbers of teeth, since the bottom step of a tooth is still in gear with its mate, when the next tooth is well under way. When the steps become infinitely small, the broken line is a curve, and HELICAL GEAR (q.v.) results.

Stephanite. $5Ag_2S+Sb_2S_3$. Rich ore of silver combined with sulphur and antimony; also known as brittle silver ore. It has been found in considerable quantity in the Saxon and Bohemian mines and in Nevada.

Stephanome. Instrument invented at Ben Nevis observatory for measuring the angular diameter of halos, fogbows, and glories.

Stephanus. Byzantine author of uncertain date. Of his geographical dictionary, *Ethnika*, we have an outline by Hermolaus.

Stephen, ST. d. ab.37. Hellenistic Jew, early Christian disciple, chosen one of the Seven Apostolic Assistants, or Deacons; stoned by the Jews, and thus the protomartyr of the Gospel. His day is Dec. 26.

Stephen, ST., 977–1038. First King of Hungary from 1,000; active as a missionary; crowned 1,000, canonized 1687. The national order of knighthood, instituted 1764 by Maria Theresa, is named from him.

Stephen I. Bp. of Rome 254–257. He opposed the rebaptism of heretics, is said to have been martyred, and was canonized.—II. Pope 752 for two days.—III. Pope 752–757. He crowned Pepin the Little, who in return drove out the Lombards and gave him the exarchate of Ravenna, with which the States of the Ch. began.—IV. 768–772.—V. 816–817.—VI. 885–891.—VII. 896–897.—VIII. 929–931.—IX. 939–942.—X. 1057–58.

Stephen, 1105–1154. King of England 1135; son of S., Count of Blois, and Adela, daughter of William the Conqueror. He disputed the succession with Matilda, daughter of Henry I.; her son Henry succeeded him.

Stephen, ADAM, ab.1730–1791. Va. soldier, Brig.-gen. 1776, Major-gen. 1777; engaged at Trenton and Brandywine; dismissed for the mishap at Germantown.

Stephen, SIR GEORGE, b.1829. Pres. Canadian Pacific R. R. 1881–88; Baronet 1886.

Stephen, JAMES, 1759–1832. M.P. for Tralee; Master in Chancery; associate of Wilberforce. *Slavery of British W. Indies*, 1824–30.—His son, HENRY JOHN, 1787–1864, pub. *Treatise on Pleading*, 1824; *Summary of Criminal Law*, 1834; and *New Commentaries*, 1841–45. The latter was revised by his son, JAMES, LL.D., b.1820, prof. King's Coll., London.—Henry's brother, SIR JAMES, 1789–1859, Under-Sec. for the Colonies 1834–47, was knighted 1847, prof. Cambridge from 1849, and a historical writer.—His son, SIR JAMES FITZJAMES, 1829–1894, one of the Council of India 1869–72, Judge of Queen's Bench 1877–91, was knighted 1877 and made Baronet 1891. *Hist. Criminal Law*, 1863; Digests of the *Law of Evidence* and of Criminal Law, 1876–77; *Nuncomar*, 1885; *Horæ Sabbaticæ*, 1892.—His brother, LESLIE, b.1832, edited *Cornhill Mag.* 1871–82, and vols. 1–25 *Dict. National Biography*, 1885–91. *Playground of Europe*, 1871; *Hours in a Library*, 1874–79; Lives of Johnson, Pope, Swift, H. Fawcett, and Sir J. F. Stephen, 1878–95; *Science of Ethics*, 1882; *An Agnostic's Apology*, 1893; *Social Rights and Duties*, 1896.

Stephen Bathori. See BATHORY, S.

Stephens, ALEXANDER HAMILTON, LL.D., 1812–1883. M.C. from Ga. 1843–59 and 1873–82; opposed to secession 1860; Vice-pres. C.S.A. 1861–65; Gov. of Ga. 1883. *War between the States*, 1867–70; *Hist. U. S.*, 1870–83.

Stephens, ANN SOPHIA (WINTERBOTHAM). 1813–1886, m.1831. American novelist. *Fashion and Famine*, 1854; *Works*, 23 vols., 1886.

Stephens, GEORGE, 1813–1895. English prof. Univ. Copenhagen 1855–93. *Runic Monuments*, 1866–84.

Stephens, JAMES, b.1824. Irish conspirator, long in France and America; imprisoned 1864.

Stephens, JOHN LLOYD, 1805–1852. American traveler. *Egypt, Arabia*, etc., 1837; *Greece, Turkey, Russia*, 1838. More important were his books on *Central America* and *Yucatan*, 1841–43.

Stephens, WILLIAM, 1671–1753. Sec. of Ga. 1737; pres. of the colony 1743–50. *Journal*, 1742.

Stephenson, GEORGE, 1781–1848. Father of railways. He built a road-traction engine 1812, a railroad engine with steam-blast 1815, and brought out a miner's safety-lamp. He was engineer of the Stockton and Darlington R.R. 1823, and of the Liverpool and Manchester R.R. 1825. For 15 years he was actively engaged in railroad and locomotive building.—His son, ROBERT, 1803–1859, assisted him in railroad engineering, especially in locomotive building at the Newcastle works, where he built the "Rocket" for the competitive trial of locomotives at Rainhill, Oct. 6, 1829, and attained with it a speed of 29 m. per hour; he became engineer of the

London and Birmingham R.R., opened 1838, and is best known for his iron bridges for railroads; viz., Conway tubular bridge,

George Stephenson.

Victoria bridge over the St. Lawrence, Britannia tubular bridge over the Menai Straits, high viaducts at Newcastle and Berwick, and some bridges in Egypt. He was an M.P. from 1847.

Stephenson's Link-Motion. Valve motion purchased by George Stephenson from Wm. Howe, to apply to his locomotives, to secure easy reversal of motion and variation in point of cut-off. On the axle are two eccentrics, one set behind the crank on that side the right amount to drive the valve for forward motion, the other set the similar amount ahead of the crank, or behind for going the other way. The rods on these two eccentrics are pinned to the link proper, which is a curved bar slotted on an arc whose radius is the distance from center of shaft to center of link. The rod for forward motion drives the upper end of this link; the back rod drives the lower end. In the slot fits a block upon a pin on a hanging arm from a rock-shaft; an arm from that shaft, projecting upward, drives the valve rod, which passes into the steam chest. The vertical position of the sliding-block is fixed by the lower rocker arm, but the link can be raised and lowered by a lever in the cab working a bell-crank lever, from whose lateral arm the link is hung. When the forward rod is opposite the slider block, the valve distributes steam for forward motion; when the link is raised, the back-rod is opposite the slider, and the back-eccentric controls the valve. In intermediate positions on each side of the center, the valve-travel is diminished, and an earlier cut-off is effected. The difficulty urged against the theory of this link-motion is that the lifting of the links swings the rods around the eccentrics, and hence makes the lead vary for the different points of cut-off; but the practical advantages are considered in most cases to outweigh this difficulty. See LINK-MOTION.

Stepniak, SERGIUS MICHAEL DRAGOMANOFF (KARTSCHEFFSKY), 1841–1895. Russian liberal, exiled 1876, in London from 1885. *Underground Russia*, tr. 1883; *Russia Under the Tsars*, tr. 1885; *King Stork and King Log*, 1896.

Steppe-Murrain. CATTLE PLAGUE (q.v.).

Steppes. Great plains of Siberia. Except in the late

Steppes of the Caucasus.

spring and early summer, when they are covered with grass and flowers, they are semi-deserts. They correspond in appearances and relations to the llanos and pampas of S. America and the prairies of the U. S. See PLAIN.

Step Vein. Mineral vein in which the angle of dip has frequent alternations between high and low.

Stercorite. Natural hydrous sodium ammonium phosphate, found as a mineral in some guano deposits.

Sterculiaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Dicotyledons*, comprising ab. 55 genera and ab. 900 species, widely distributed throughout the warmer regions of the whole globe.

Stere. Cubic meter, equal to 35.3156 cu. ft.

Stereid. Cell of the stereome in a fibro-vascular bundle.

Stereobate. Base of a wall.

Stereochemistry. Chemistry in space. Its fundamental conception is that every molecule is made up of atoms which occupy certain definite positions in space. Many compounds are known, two or more of which have exactly the same composition, being made up of the same kind and number of atoms. They differ in their properties, the difference in the physical properties being more pronounced than other characteristics. In order to account for this fact, it has been suggested by Van't Hoff and Le Bel that the differences are due to the different positions in space which the constituent atoms occupy. This is based upon the fact that compounds containing an asymmetric carbon atom, *i.e.*, a carbon atom which is united to four different groups (radicals) or elements, exist in two varieties. If it be imagined that a carbon atom is placed at the center of a tetrahedron holding in combination four different groups or elements, then from theoretical considerations it follows that there are two and only two possible arrangements of the groups or elements in space. If the tetrahedron idea be applied to those compounds containing the asymmetric carbon atom, a satisfactory explanation for the isomeric forms results.

Stereochrome. Fresco in which soluble glass is used as the medium between the paint and plastering. It is seen at its best at Munich, in the works of Kaulbach, Schnorr and Overbeck. See FRESCO.

Stereograph. Pair of pictures viewed by a stereoscope.

Stereome. In Plant Anatomy, elements of strength in a fibro-vascular bundle, as the wood-cells or liber-cells.

Stereometer. See VOLUMENOMETER.

Stereomonoscope. Modification of the stereoscope for producing the stereoscopic effect from a single picture.

Stereoplasma. In Plant Anatomy, solid portion of protoplasm.

Stereoscope. Optical instrument for giving to pictures the appearance of solid forms as seen in nature. In the earliest form, devised by Wheatstone, two plane reflectors are so placed in relation to two dissimilar perspective pictures of an object, one representing it as it appears to the right eye, the other as it appears to the left, as to superpose the virtual images, the combination appearing to be a solid body and a perfect counterpart of the object. A later form, called the lenticular stereoscope, devised by Sir D. Brewster, accomplishes the same result by refraction.

Sir David Brewster's Stereoscope.

Stereotyping. Art invented about 1725 by Wm. Ged of Edinburgh, who used a plaster mold of the forms for casting the type metal. In 1793 Wm. Carey, the missionary, devised a new method, using a matrix formed by letting a form of type fall on a surface of hot lead, a process improved by F. Didot of Paris. Curved plates for cylinder presses were patented in England 1815. By the papier-maché process plates can be made in six minutes, and several plates may be cast from the same matrix; a pad of damp tissue paper is impressed upon the forms, thus forming the mold.

Sterett, ANDREW, U.S.N., ab.1760–1807. Lieut. 1798; distinguished in the war with Tripoli 1801.—His cousin, ISAAC SEARS, U.S.N., 1801–1863, was active in the war with Mexico, and became captain 1857.

Sterigma. Short projection from the sporophore of a

fungus, bearing one or more spores; also similar projections from the prothallium of certain ferns, bearing gemmæ; and the supports of the leaves in spruces.

Sterility. Inability to produce offspring or seed: due to (1) absence of the sexual cells in the male, the female, or both; (2) structural differences in the sexual cells, or differences in their position, period of maturation, etc., preventing their conjugation, as in sterility between different species; (3) absence of mutual attraction between the sexual cells, as in some cases between members of same species (cases are known of childless married couples begetting children on both sides after divorce and remarriage); (4) presence of accidental conditions of nutrition, disease, etc.

Sterilization. Destruction of all the bacteria on or in a given body. This may be secured by heat, as a flame for non-combustible objects; steam for other objects; or by a chemical, as corrosive sublimate, a germicidal solution of carbolic acid, creolin, etc.; by insolation, or lastly by dessication (drying). In the canning of fruit, etc., it is sometimes needful to heat the substance over again the following day, as certain spores that resisted the first heating have had time to assume the vegetative stage. Usually three heatings of liquids to the boiling point for three successive days, each of 15 minutes' duration, is absolutely certain to sterilize the most refractory case. Milk can be sterilized at 150° F. by repeating the pasteurization daily for a week or so.

Sterilized Milk. See STERILIZATION.

Sterling, JOHN, 1806–1844. English essayist, novelist, and poet, of noble character and aims, greatly prized by Emerson and other select spirits; subject of memoirs by J. C. Hare, 1848, and Carlyle, 1851.

Stern, DANIEL. See AGOULT.

Sternberg, KASPAR, GRAF, 1761–1838. German botanist. *Revisio Saxifragarum iconibus illustrata*, 1810; *Pflanzenkunde in Böhmen*, 1818; *Flora der Vorwelt*, 1820–38.

Sternbergia. Sandstone casts of the pith of fossil trees, especially of the Carboniferous age.

Sterne, LAURENCE, 1713–1768. English humorist, prebendary of York 1739. *Tristram Shandy*, 1759–67; *Sermons*, 7 vols., 1760–69; *Sentimental Journey*, 1767; *Letters*, 1775. Though insincere, extravagant, and open to serious objection on grounds of taste and morals alike, his books show talent of an order allied to genius, and are still read.

Sterne, SIMON, b.1839. Lawyer and reformer in New York. *Personal Representation*, 1870; *Constitutional Hist. U. S.*, 1882.

Sterne, STUART. See BLOEDE, GERTRUDE.

Sternhold, THOMAS, ab.1500–1549. Groom of the Robes to Henry VIII., author of 40 renderings in the "Old Version" of the Psalms, ab.1547–62: 60 were by John Hopkins (d.1570), 26 by Thomas Norton, and 12 by Wm. Whittingham (d.1579).

Sternum, or BREASTBONE. Symmetrical bone to which the ribs are attached, situated at the fore part of the chest. See CLAVICLE and RIBS.

Sternutation. SNEEZING (q.v.).

Sterraster. Form of sponge spicule, present in the genus *Geodia*; spherical in form, with numerous short pointed rays, separate only at their apices.

Sterrett, JOHN ROBERT SITLINGTON, b.1851. Greek prof. at Amherst 1892; epigraphist. *Wolfe Expedition to Asia*, 1888.

Stesichorus, ab.635–ab.556 B.C. Sicilian Greek lyric poet, who wrote on epic subjects. Fragments only remain.

Stetefeldt, CARL AUGUST, b.1838. German-American mining engineer and metallurgist. Inventor of a roasting furnace.

Stethoscope. Instrument employed in physical diagnosis for mediate auscultation, invented by Laennec. It is an instrument whereby the sounds of the various organs of the body, more particularly the heart and the lungs, can be separated and listened to. It consists essentially of a perforated disk, to place over the part, connected by a tube to the ear-piece for the listener. The phonendoscope is a recent improvement wherein the sounds are intensified by the interposition of two metallic disks, so arranged as to be thrown in vibration and magnifying the original sound. See LAENNEC, R. T.

Stettin. Seaport of Old City of Pomerania, Prussia, on the Oder, near a gulf of the Baltic; one of the chief commercial centers of Prussia, with considerable manufactures: held by Sweden 1648–1720, and by France 1806–13. Pop., 1890, 116,139.

Steuart, SIR JAMES DENHAM, 1712–1780. Scottish Jacobite, in exile 1745–63. *Political Economy*, 1770.

Steuben, FREDERIC WILLIAM AUGUSTUS, BARON VON, 1730–1794. Prussian officer, in the American service; Major-gen. 1778. He proved of most efficient service in establishing a system of discipline and tactics, as well as in the field, especially in Va. After the war he lived in New York.

Steubenville. Capital of Jefferson co., O.; on the Ohio, 43 m. w. of Pittsburg; site of Fort Steuben, built 1787; settled 1798, chartered 1851; in a region rich in coal, gas, and oil. It has iron and other manufactures. Pop., 1890, 13,394.

Steudel, ERNST GOTTLIEB, 1783–1856. German botanist. *Enumeratio plantarum Germaniæ Helvetiæque indigenarum*, 1826; *Nomenclator botanicus*, 1840–41.

Stevens, ABEL, LL.D., 1815–1897. Ed. *Zion's Herald*, Boston, 1840–52, N. Y. *Christian Advocate*, 1856–60, and *Methodist*, 1865–74. *Hist. Methodism*, 3 vols., 1858–61; *Hist. M. E. Ch. U.S.A.*, 5 vols., 1864–96; *Mme. de Stael*, 1881.

Stevens, ALFRED, b.1828. Belgian-French painter of society scenes.

Stevens, ALFRED GEORGE, 1818–1875. English decorator and sculptor. His chief work is the monument of Wellington in St. Paul's Cathedral, begun 1856 and incomplete.

Stevens, CHARLES ELLIS, LL.D., D.C.L., b.1853. Rector in Phila. *Sources of the Constitution*, 1894.

Stevens, EBENEZER, 1751–1823. Officer in the war of independence.—His son, ALEXANDER HODGDON, M.D., LL.D., 1789–1869, was Prof. of Surgery in New York College of Physicians 1825–38, and pres. 1841–55. *Lithotomy*, 1838.—His nephew, JOHN AUSTIN, b.1827, pub. a life of Gallatin, 1883, and much on American history.

Stevens, EDWARD, 1745–1820. Col. 10th Va. 1776; Brig.-gen. 1777–82; distinguished in Pa., S. C., and Va.

Stevens, GEORGE BARKER, D.D., b.1854. Prof. Yale 1886. *Pauline and Johannine Theology*, 1892–94.

Stevens, HENRY, 1819–1886. American bibliographer, in London from 1845; prolific writer and compiler.

Stevens, ISAAC INGALLS, U.S.A., 1818–1862. Gov. of Washington Terr. 1853–57; surveyor for N. Pac. R.R.; M.C. 1857–61; Brig.-gen. U. S. Vols. 1861, Major-gen. 1862; killed near Chantilly, Va.

Stevens, JOHN, 1749–1838. Rival of Fulton in inventing steam vessels 1804 and later: promoter of steam navigation and of railways.—His son, ROBERT LIVINGSTON, 1787–1856, developed some of his plans, introduced tubular boilers and T-rails, and invented the balance valve (1831) for beam engines.—His brother, EDWIN AUGUSTUS, 1795–1868, was his associate in railroad and steamship work, and founded the STEVENS INSTITUTE (q.v.).

Stevens, JOHN LEAVITT, LL.D., 1820–1895. U. S. Minister to Uruguay 1873–76, to Sweden 1877–83, and to the Sandwich Islands 1889–93.

Stevens, THADDEUS, 1792–1868. M.C. from Pa. 1849–53 and from 1859; Republican leader. He proposed the impeachment of Pres. Johnson 1868, and was one of its managers.

Stevens, THOMAS HOLDUP, U.S.N., 1795–1841. Lieut. 1813; distinguished on Lake Erie, and against W. India pirates 1820; Captain 1836.—His son and namesake, 1819–1896, was engaged on the Atlantic and Gulf coasts 1861–65, became Captain 1866, Commodore 1872, and Rear-admiral 1879.

Stevens, WALTER HUSTED, 1827–1867. Brig.-gen. C.S.A. 1861; chief engineer under Gen. Lee.

Stevens, WALTER LE CONTE, b.1847. Prof. of Physics in Rensselaer Polytechnic Institute 1892.

Stevens, WILLIAM BACON, D.D., LL.D., 1815–1887. Bp. of Pa. 1865. *Hist. Ga.*, 1847; *Parables*, 1855.

Stevens Institute OF TECHNOLOGY. At Hoboken, N. J.; founded 1870. It has 23 in the faculty, ab. 266 students, and courses in mechanical and electrical engineering, chemistry and physics.

Stevenson, ADLAI EWING, b.1835. American statesman, M.C. 1875–77, 1879–81; Vice-President 1893–97.

Stevenson, ANDREW, 1784–1857. M.C. from Va. 1823–34, Speaker 1827–34; Minister to Gt. Britain 1836–41; rector Univ. Va. from 1841.—His son, JOHN WHITE, 1812–1886, was M.C. from Ky. 1857–61, Gov. 1867–71, U. S. Senator 1871–77, law prof. at Cincinnati 1877, and pres. American Bar Association 1884.

Stevenson, JAMES, 1840–1888. Ethnologist, connected with Western surveys under Hayden and Powell.

Stevenson, JOHN D., b.1821. Brig.-gen. U. S. Vols. 1862–67, serving chiefly in the Southwest; Col. U.S.A. 1866–71.

Stevenson, ROBERT, 1772–1850. Scottish engineer, inspector of lighthouses 1796–1843, builder of the Bell Rock and 22 others; inventor of intermittent and flashing lights.—His son and successor, ALAN, 1807–1865, did much similar work.

Stevenson, ROBERT LOUIS BALFOUR, 1850–1894. Scottish novelist and poet; grandson of Robert; eminent for wealth of imagination and purity of style. His chief works in fiction are: *New Arabian Nights*, 1882–90; *Treasure Island*, 1883; *Prince Otto*, 1885; *Dr. Jekyll and Mr. Hyde*, 1886; *Kidnapped*,

1886; *The Merry Men*, etc., 1887; *Master of Ballantrae*, 1889; *David Balfour*, 1893; *St. Ives*, 1897. Of essays, travels, etc., he wrote *An Inland Voyage*, 1877; *With a Donkey in the Cevennes*, 1879; *Virginibus Puerisque*, 1881; *Men and Books*, 1882; *Silverado Squatters*, 1884; *Memories and Portraits*, 1887; *Across the Plains*, etc., 1892; *Vailima Letters*, 1896; and in poetry, *A Child's Garden of Verse*, 1885; *Underwoods*, 1887, and *Ballads*, 1891. His last years were spent in Samoa. See OSBOURNE, LLOYD.

Stevenson, THOMAS GREELY, 1836–1864. Brig.-gen. U. S. Vols. 1862; active in N. C. and S. C.; killed at Spottsylvania.

Stevin, or **Stevinus,** SIMON, 1548–1620. Dutch mathematician and physicist. *Arithmetic*, 1585; *Statics and Hydrostatics*, 1586.

Stewards, HOSPITAL. Non-commissioned officers of the army belonging to the Hospital Corps; they make up prescriptions, administer medicines, and have general supervision of the sick and wounded under the direction of a medical officer.

Stewart (or STUART) **Dynasty.** Scottish sovereigns: Robert II., 1371.—III., 1390.—James I., 1424.—II., 1437.—III., 1460.—IV., 1488.—V., 1513. The female Stewart line was represented by Maria Theresa, wife of Prince Leopold of Bavaria, through Henrietta, daughter of Charles I. James VI. (1567), son of Mary Queen of Scots, was descended through his grandfather James V. from Margaret, elder sister of Henry VIII., lineal heir to the throne of England, when the direct line terminated with Elizabeth. He became James I. of England and Scotland 1603. His descendants were: Charles I., 1625, Charles II., 1660, James II., 1685, deposed 1688, when his daughter Mary and her husband, William of Orange, succeeded. The male line ceased 1807. The present royal family is descended indirectly from the Stewarts through Elizabeth, daughter of James I.

Stewart, ALEXANDER PETER, b.1821. Brig.-gen. C.S.A. 1861, Major-gen. 1863, Lieut.-gen. 1864; engaged chiefly in Tenn.; chancellor Univ. Miss. 1868.

Stewart, ALEXANDER TURNEY, 1803–1876. Irish-American merchant, founder of the then largest store in New York, and of Garden City, L. I., and its institutions.

Stewart, ALVAN, 1790–1849. Lawyer of Utica, N. Y.; anti-slavery agitator. *Speeches*, 1860.

Stewart, BALFOUR, LL.D., F.R.S., 1828–1887. Director Kew Observatory 1859; Prof. of Physics at Owens Coll., Manchester, 1870; one of the founders of spectrum analysis. His *Radiant Heat*, 1858, established the equality of the emissive and absorptive powers of bodies. Particularly valuable are his papers on the earth's magnetism. *Treatise on Heat*, 1866; *Elements of Physics*, 1870; *Conservation of Energy*, 1873.

Stewart, CHARLES, U.S.N., 1778–1869. Lieut. 1798, Captain 1806; distinguished in the wars with France, Tripoli, and England; in command of the Mediterranean and Pacific squadrons 1816–23; Commodore 1856, Rear-admiral 1862; grandfather of C. S. Parnell.

Stewart, DUGALD, 1753–1828. Prof. Edinburgh 1775–1810, disciple of Reid, advocate of the doctrine of common sense. *Elements of the Philosophy of the Human Mind*, 1792–1814; *Outlines of Moral Philosophy*, 1793; *Hist. Ethical Philosophy*, 1815–21; *Active and Moral Powers*, 1828.

Stewart, ELLIOTT WILLIAM, 1817–1894. American agricultural writer. *Feeding Animals*, 1883.

Stewart, ESME, ab.1555–1583. French intriguer of Scottish descent, cousin of James VI.; in Scotland 1579–82; enemy of Morton; Earl of Lennox 1580, Duke 1581; banished as a traitor 1582.

Stewart, MATTHEW, EARL OF LENNOX, ab.1510–1571. Father of Darnley, and grandfather of James VI. of Scotland; regent 1570; killed near Stirling.

Stewart, MATTHEW, 1717–1785. Prof. Edinburgh 1747–72. *Theorems*, 1746; *Tracts Physical and Mathematical*, 1761; *Propositiones Geometricæ*, 1763.

Stewart, ROBERT. See CASTLEREAGH, VISCOUNT.

Stewart, ROBERT MERCELLUS, 1815–1871. Gov. of Mo. 1857–61; promoter of railways.

Stewart, WILLIAM, D.D., b.1835. Prof. Glasgow 1873; theological writer.

Stewart, WILLIAM MORRIS, b.1827. U. S. Senator from Nevada 1864–75, and since 1887.

Stewart Island. S. constituent of New Zealand. Area 665 sq. m.

Stewart's Actinometer. Black bulb thermometer within a massive inclosure of iron, whose temperature changes slowly. The sun's rays are admitted to it for one minute and then cut off; its changes of temperature give the data for computing the radiation. See also BOLOMETER and PYRHELIOMETER.

Stewing. Method in cookery, used to prepare meats, differing from boiling in that only a small amount of water is added, and the heat gently applied. Meat prepared in this way is very tender and retains its savor, but is not very digestible.

Steyn, MARTHINUS THEUNIS, b.1857. Judge in Orange Free State, S. Africa, 1889; Pres. 1895.

Stibine. See ANTIMONIURETED HYDROGEN.

Stibnite. Sb_2S_3. Soft, lead-gray mineral, so easily fusible that a low heat suffices to separate it from the gangue. Workable deposits are found in Cal. and Nevada. Other important localities are in New Brunswick, Germany, Portugal, Borneo, and Australia. See ANTIMONY.

Stichid. Certain swollen branches of some of the red *Algæ*, containing the spores.

Stickeen. River of the n.w. coast of N. America, heading in the mountains of British Columbia and flowing across s.e. Alaska to the Pacific. Length 500 m.

Sticking Plaster. ADHESIVE PLASTER (q.v.).

Stickleback. Acanthopterygian fishes of the genus *Gasterosteus*, consisting of many species, several of which are American. They differ principally in their number of spines, and are named accordingly. See ACANTHOPTERI and GASTEROSTEIDÆ.

Sticklebacks and Nests.

Stickseed. Herbs of the genus *Lappula*, natural family *Boraginaceæ*, bearing prickly fruits; natives of n. temperate zone.

Stieler, ADOLF, 1775–1836. German cartographer. *Atlas*, 1817–23.

Stier, RUDOLF EWALD, 1800–1862. German commentator. *Words of the Lord Jesus*, 8 vols., tr. 1855–58; *Words of the Apostles*, tr. 1869.

Stifel, MICHAEL, 1487–1567. Augustine monk, adherent and friend of Luther. *Arithmetica Integra*, 1544.

Stigma. Summit of the pistil of flowers. It is devoid of epidermis and receives the pollen discharged from the anthers.

Stigmaria. Branching roots found in the Coal Measures, probably both of *Lepidodendron* and *Sigillaria*, with long, cylindrical rootlets, articulated to the main axis. See LEPIDODENDREÆ.

Stigmata. 1. Breathing pores of Insects and Arachnids. 2. Openings in the pharyngeal sac of Tunicates. 3. Openings of the segmental ducts of Leeches, etc.

Stigmata. Wounds like those of Christ, regarded as miraculously inflicted. The first example is found in the life of St. Francis of Assisi. Names of many, chiefly women, thus marked, are recorded, and cases are reported nearly to our own day. It is called Stigmatization.

Stilbene. $C_{14}H_{12}$. Diphenylethylene. Solid hydrocarbon, crystallizing in plates; mpt. 126° C.; prepared usually by the action of hot lead oxide on toluene, but also by that of heat on many aromatic substances. It unites directly with bromine.

Stilbite. One of the zeolite family of minerals; hydrous calcium aluminium silicate with some sodium, frequently occurring in cavities in igneous rocks, with its small crystals grouped in bunches of sheaf-like form.

Stiles, EZRA, D.D., LL.D., 1727–1795. Pres. Yale from 1778.

Stiles, HENRY REED, M.D., b.1832. Homeopathic practitioner and teacher in New York; genealogist. *Hist. Brooklyn*, 1867–84.

Stilicho, ab.359–408. General of Vandal origin; commander-in-chief under Theodosius; guardian and father-in-law of Honorius. He repressed the revolt of Gildo 398, forced Alaric to retreat 403, and crushed Radagaisus at Fiesole 405.

Still. See DISTILLATION and RETORT.

Still, JOHN, D.D., ab.1542–1607. Prof. Cambridge 1570; Bp.

of Bath and Wells 1592; author of *Gammer Gurton's Nedle*, 1575, the earliest English comedy except *Ralph Royster Doyster*.

Still Born. Delivery of a dead child. The determination of this fact is an important medico-legal question, in cases of supposed infanticide. If the child has breathed, then it is not a still birth, but the converse of the proposition is not always true.

Stille, ALFRED, M.D., LL.D., b.1813. Prof. Univ. Pa. 1864–84. *Pathology*, 1848.—His brother, CHARLES JANEWAY, b.1819, was provost Univ. Pa. 1868–80. *Hist. U. S. Sanitary Commission*, 1866; *Mediæval History*, 1881.

Stilling, JUNG. See JUNG-STILLING.

Stillingfleet, EDWARD, D.D., 1635–1699. Dean of St. Paul's 1677, Bp. of Worcester 1689; theologian and controversialist. *Irenicum*, 1659; *Origines Sacræ*, 1662; *Grounds of the Protestant Religion*, 1664; *Origines Britannicæ*, 1685; *Doctrines and Practices of Ch. of Rome*, 1686; *Doctrine of the Trinity*, 1697. *Works*, 6 vols., 1710.

Stillman, WILLIAM JAMES, b.1828. American author and artist; Consul at Rome 1861–65, and in Crete 1865–69; resident in Europe. *Acropolis of Athens*, 1870; *Cretan Insurrection*, 1874; *Herzegovina*, 1877; *On the Track of Ulysses*, 1887.

Stillwater. Capitol of Washington co., Minn., on St. Croix Lake, 18 m. n.e. of St. Paul. It has a large trade in lumber. Pop., 1890, 11,260.

Stillwater, BATTLE OF. See SARATOGA.

Stilo, LUCIUS, or ÆLIUS STILO, ab.100 B.C. Roman knight, considered the best learned man of his time, first Roman philologist, and teacher of Cicero and Varro.

Stilted Arch. This has the capital of the jambs below the springing of the curve, the moldings extending down to the impost.

Stilton Cheese. See CHEESE.

Stilts. Poles or crutches to raise the feet above the ground in walking. From the Maya MMS. it appears that they were anciently employed by the priests in their ceremonies in Central America; and elaborately carved specimens for ceremonial use occur in the Marquesas islands. They are a common means of amusement among boys in e. Asia, being known in Japan as Bamboo horses.

Stilwell, SILAS MOORE, 1800–1881. New York lawyer and writer on finance; framer of U. S. Banking Act, 1863.

Stimpson, WILLIAM, 1832–1872. Naturalist to n. Pacific expedition 1852–56; curator to Chicago Academy of Sciences 1864. *Crustacea*, 1857–71.

Stimson, FREDERIC JESUP (J. S. OF DALE), b.1855. American novelist and law-writer. *Guerndale*, 1882; *Crime of Henry Vane*, 1884; *Statute Law*, 1886; *First Harvests*, 1888; *Residuary Legatee*, 1888; *Labor in its Relations to Law*, 1895; *Pirate Gold*, 1896; *King Noanett*, 1897.

Stimulant. In Therapeutics, a remedy that increases the manifestation of the functional activity of a part. It is applied more especially to those drugs which increase the power and force of the circulation, either with or without the increase of the pulse rate. Ammonia is one of the most rapid in its action; alcohol is the one most commonly used, although it is not now thought to be good practice to administer alcohol in shock. Apart from the cardiac stimulants, there are stimulants of the skin, of the liver, etc., those that act locally (directly on the sensory nerves) or generally through the circulation.

Stimulus. In Physiology and Psychology, influence causing a functional reaction.

Sting. See ACULEUS.

Stink-Horns. *Fungi* of the order PHALLOIDEÆ (q.v.).

Stink-Pot. Shell or receptacle containing a mixture of combustible and foul-smelling substances, which when set on fire will emit a suffocating odor, and by this means withhold the enemy from advancing; said to have been a favorite weapon of the Chinese.

Stinkstone. Variety of limestone, which emits sulphureted hydrogen gas upon being struck with a hammer, which is in most cases due to imbedded organic matter.

Stipe. Stalk of a mushroom or toadstool; also, stem-like stalks of certain *Algæ*, slender stems of tree-ferns, and naked stalks of acaulescent flowering plants and other plant organs.

Stipels. Small attachments at the bases of leaflets in a compound leaf, as in the Bean and Wistaria.

Stipend Class. Persons employed, not as a means to increase the income of their employers, but for purposes of comfort, leisure, or luxury, or for the cultivation of art and the intellect; as menial servants, physicians, teachers of science, and artists.

Stipple Engraving. For this variety of engraving an etching ground is laid, and the subject is transferred in the usual way. The design is then worked in with small dots punctured through the etching ground with a graver, or needle. The closer together the dots are placed, the darker the tones become, after the plate has been subjected to the acid bath. The plate is then finished with the dry point or graver. This method is much used for portraits. It was first used by Jean Charles François, 1717–1769, a French engraver; Francesco Bartolozzi was the most noted stipple engraver.

Stipular. Resembling or pertaining to stipules.

Stipules. Pair of lateral out-growths at the base of the leaf-stalk in many flowering plants. They are characteristic of some families, and wanting in others.

Stirling. Old town of Scotland, 29 m. n.n.e of Glasgow; noted for its castle, relics, and memories of the past. Here Wallace defeated the English under Warrenne, Sept. 10, 1297. Pop., 1891, 16,974.

Stirling, JAMES HUTCHISON, LL.D., b.1820. Scottish philosopher. *Secret of Hegel*, 1865; *Sir W. Hamilton*, 1865; *Protoplasm*, 1869; *Text-book to Kant*, 1881; *Philosophy and Theology*, 1890.

Stirling, SIR THOMAS, ab.1735–1808. Scottish officer, in America ab.1757–83; Brig.-gen. 1780, Major-gen. 1782, Baronet 1796, General 1801.

Stirling, WILLIAM ALEXANDER, EARL OF, ab. 1567–1640. Scottish poet and dramatist, knighted 1609; grantee of Nova Scotia 1621; Sec. of State for Scotland from 1626; sole publisher of King James's Psalms 1631; Viscount 1630, Earl 1633. *Tragedies*, 1607; *Doomesday*, 1614–37; *Recreations*, 1637; *Poems*, 3 vols., 1870. The title expired 1739.

Stirling, WILLIAM ALEXANDER, called LORD, 1726–1783. Revolutionary patriot. In his youth he entered the British army, becoming aid-de-camp to Gov. Shirley. He entered the Revolutionary army 1775; Brig.-gen. 1776, Major-gen. 1777; in command of New York 1776. He was one of the founders and first governor of Columbia College.

Stirling-Maxwell. See MAXWELL.

Stirling's Engine. Form of air-engine originated by Rev. Robert Stirling 1816, and improved by James Stirling. The same volume of air was heated by being exposed in a thin film over the heating surface at one end of a cylinder. It was then passed over a refrigerating surface at the other end of the cylinder, such surface being given by a horizontal coil of fine copper pipe, in which cool water was circulated by a pump. Between the heater and the refrigerator was a series of thin vertical plates of oblong shape, of metal or glass, put very close together. The air passed through the spaces between these plates of the regenerator or economizer, on the rise and descent of the displacing piston, so that they alternately gave out and absorbed heat, and the heater and refrigerator had only to supply what was wasted by imperfect action of the regenerator. This was the first application of this principle of regeneration in an air-engine. The working cylinder was separate from the heating cylinder, so that the working piston did not touch the hot air; lubrication was less complicated; the displacing plunger did not touch the walls of the heater, and was filled with brick-dust or other non-conductor. Such an engine developed 20 horse-power on a consumption of 50 lbs. of coal per hour.

Stirling's Air-engine.

Stitch. In Surgery, a single loop or knot of a SUTURE (q.v.). —As a symptom, a sudden, sharp, lancinating pain, as the pain in the side from an attack of pleurisy or pleurodynia (rheumatism of the walls of the chest).

Stitchwort. White-flowered herbs of the genus *Alsine*, natural family *Caryophyllaceæ*, natives of the n. temperate zone, especially abundant in the cooler regions.

Stith, WILLIAM, 1689–1755. Pres. William and Mary Coll. 1752. *History of Virginia*, 1747.

Stiver. Coin of Holland and British Guiana; value ab. 2 cents.

Stjernhjelm, GEORG, 1598–1672. "Father of Swedish poetry." His works were reprinted 1856.

Stobæus, JOANNES, ab.500. Greek compiler of literary extracts. In his *Eclogæ* and *Florilegium* he quotes over 500 authors: the fragments given are of great value.

Stobo, ROBERT, 1727–after 1780. Scottish-American officer, prisoner at Quebec 1755–58; condemned as a spy 1756 for making a plan of Fort Duquesne: hero of Gilbert Parker's romance, *In the Seats of the Mighty*, 1896. *Memoirs*, 1800, repub. 1854.

Stock. Generally, money or property put into corporate funds by subscribers who become members of a corporation; commonly represented by certificates, whose form, method of transfer, and legal characteristics are determined by statutes and commercial usage.

Stockach. See OSTRACH.

Stockade. Strong palisade of closely joined heavy timbers, built across the gorge of a lunette or other advanced work, whose rear is commanded by the works of the main position.

Stockbridge, FRANCIS BROWN, 1826–1894. U. S. Senator from Mich. 1887.

Stockbridge, LEVI, b. 1820. Prof. Mass. Agricultural Coll. 1867, pres. 1880–82; introducer of special fertilizers.—His brother, HENRY, 1822–1895, was a lawyer, judge, and reformer in Baltimore. *Archives of Md.*, 1886.

Stock Exchange. Association of brokers in the securities of nations, states, counties, municipalities or corporations. Grain, petroleum and silver certificates have also been dealt in at some stock exchanges. New York Stock Exchange originated in 1792. The number of members is limited to 1,100. Applications for membership must be approved by a committee, but the right to a seat is sold by its owner or heirs, subject to this approval; these rights have sold at $15,000 to $30,000 each. London Stock Exchange was established in 1801; it has more than 3,000 members, entrance fee 500 guineas, annual dues 30 guineas. The Paris Bourse has 60 members. Many of the large cities in the U. S. and Europe have stock exchanges. The securities dealt in must be approved by a committee. The commission charged to outsiders is, in New York, ⅛ of 1 per cent; in Paris 1 per cent; in London ¼ of 1 per cent on U. S. securities. Clearing-house for stocks was established at Frankfort 1867, London 1876, New York 1892. The latter also has a system of money clearings for members. In the New York Stock Exchange 66,440,576 shares were sold in 1896; in 1882 there were sold 113,720,655 shares. See ARBITRAGE, BOND, BULLS AND BEARS, CLEARING-HOUSE, CORNER, OPTIONS, and STOCK.

Stockholm. Capital of Sweden, on the Baltic, at the mouth of an inlet known as Lake Mælar; founded ab. 1180; taken by Danes 1389 and 1520; scene of a massacre 1520. The

Stockholm.

harbor is excellent. The city is built partly on shore and partly on islands. It is beautifully laid out, and has a large commerce, and several academies and museums. Its chief growth is recent. Pop., 1890, 246,151.

Stockings. See HOSIERY.

Stockmar, CHRISTIAN FRIEDRICH, FREIHERR VON, 1787–1863. Physician and adviser to Leopold and Albert of Coburg; baron 1831; long in England. *Notabilia*, tr. 1872.

Stockport. Borough of Cheshire, on the Jersey, 6 m. s.s.e. of Manchester. It has large cotton manufactures. Pop., 1881, 59,553. Pop., 1891, 70,253.

Stocks. Boards with holes to confine the feet, and sometimes hands also, of culprits; much used in England from ab. 1350 till recently, and to some extent in America. See PILLORY.

Stockton. Capital of San Joaquin co., Cal., in San Joaquin valley, 103 m. e. of San Francisco; settled 1849; center of wheat trade. Pop., 1890, 14,424.

Stockton, FRANCIS RICHARD, b.1834. American humorist, whose chief vehicle is the short story. His effects depend on fantastic or unexpected situations, as in *The Lady or the Tiger?* 1884; *Rudder Grange*, 1879; *The Late Mrs. Null*, 1886; *Mrs. Lecks and Mrs. Aleshine*, 1886; *The Hundredth Man*, 1887; *Squirrel Inn*, 1891; *Captain Horn*, 1895; *Great Stone of Sardis*, 1897.—His half-brother, THOMAS HEWLINGS, 1808–1868, M. P. pastor in Phila. and reformer, wrote much in prose and verse.

Stockton, RICHARD, 1730–1781. Councilor of N. J. 1768; Judge of Supreme Court 1774; in Congress 1776; signer of the Declaration of Independence; prisoner in New York 1776, and sufferer in person and estate.—His son, RICHARD, LL.D., 1764–1828, was U. S. Senator 1796–99 and M.C. 1813–15.—His son, ROBERT FIELD, U.S.N., 1795–1866, Captain 1838, Commodore 1845, presided at the annexation of Cal. 1846, formed a State government there, left the navy 1850, and was U. S. Senator 1851–53.—His son, JOHN POTTER, LL.D., b.1826, was U. S. Minister to Rome 1857–61, Senator 1869–75, and Atty.-gen. of N. J. 1877–92.

Stockton-on-Tees. Seaport of Durham, near the mouth of the Tees. It has a large commerce in coal and iron. Pop., 1891, 68,895.

Stockwerk. Ore deposit of such character originally that it is best worked in stories or floors like those of a house; commonly a rock mass of irregular form, traversed in many directions by numerous small veins of ore, but not associated with any deep-seated fissure.

Stoddard, CHARLES AUGUSTUS, D.D., b.1833. Ed. *New York Observer* from 1883; author of books of travel.

Stoddard, CHARLES WARREN, b.1843. American author. *South Sea Idyls*, 1873; *Mashallah*, 1881.

Stoddard, DAVID TAPPAN, 1818–1857. American missionary in Persia 1843–48 and from 1851; writer in Syrian.

Stoddard, JOHN F., 1825–1873. American author of widely circulated text-books on Arithmetic, 1852–69.

Stoddard, RICHARD HENRY, b.1825. American poet and journalist.—His wife, ELIZABETH DREW (BARSTOW), b.1823, m. 1851, pub. 3 novels, *The Morgesons*, 1862; *Two Men*, 1865; and *Temple House*, 1867.

Stoddard, WILLIAM OSBORN, b.1835. American author, especially of books for boys. *Dab Kinzer*, 1881; *Lives of the Presidents*, 1886–89.

Stoddart, JAMES HENRY, b.1827. Anglo-American actor.

Stoddert, BENJAMIN, 1751–1813. First Sec. U. S. Navy, 1798–1801.

Stoeckel, GUSTAVE JACOB, b.1819. German-American organist and composer.

Stoever, MARTIN LUTHER, LL.D., 1820–1870. Prof. Pa. Coll., Gettysburg, from 1844; ed. *Evangelical Quarterly* from 1857.

Stoics. School of Greek philosophers, named from the stoa or porch, where they taught. Their philosophy was pantheistic in type and their ethics ascetic. Zeno (ab.310), Cleanthes, and Chrysippus were famous at Athens, Seneca, Epictetus, and Marcus Aurelius later in Rome: the two latter represent paganism at its ideal height of theory and practice. In common parlance, stoicism means the superiority of the mind to pain, pleasure, and the accidents of life.

Stoke, BATTLE OF. Near Newark, Nottinghamshire, June 16, 1487; defeat of Lambert Simnel the pretender by Henry VII.

Stokes, SIR GEORGE GABRIEL, b.1819. Prof. Cambridge 1849; M.P. 1886–93; Baronet 1889. *Mathematical and Physical Papers*, 1880–83; *Light*, 1887. See STOKES' LAW.

Stokes, JONATHAN, 1755–1831. English botanist. *Botanical Materia Medica*, 1812; *Botanical Commentaries*, 1830.

Stokes, MONTFORD, 1760–1842. U. S. Senator 1817–23; Gov. of N. C. 1830–31; Indian agent for Ark. 1831.

Stokes, WILLIAM, M.D., 1804–1877. Prof. Dublin 1845; medical writer.—His son, WHITLEY, b.1830, long in India, has edited sundry Celtic MSS. *Hindu Law Books*, 1865; *Anglo-Indian Codes*, 1887–88.

Stokes' Law. A body which when cold absorbs any particular kind of radiation will in general when heated emit radiation of the same kind. The same law applies to sounding bodies, as is shown in the phenomena of sympathetic vibrations.

Stoke-upon-Trent. Borough of Staffordshire, noted for its products of earthenware. Pop., 1891, 75,352.

Stolatz. Town of Herzegovina, 20 m. s.e. of Mostar. The surrounding country is mountainous and is a famous wine

Stolatz.

producing district. Scene of operations in the war between Russia and Turkey. Pop. ab.4,000.

Stolberg, FRIEDRICH LEOPOLD, GRAF VON, 1750–1819. German poet, translator, and religious writer.—His brother, CHRISTIAN, 1748–1821, was also a poet.

Stole. Scarf worn over the surplice by Latin and Anglican clergy.

Stolon. In Botany, slender creeping branch, produced from the base of a plant, striking root from its apex, and thus developing a new individual.

Stolon. In Zoölogy, process of the body from which zoöids are produced by budding or by segmentation, as in the proliferating stolon of Ascidians. It forms the connecting tube of the zoöids of a colony.

Stolz, FRIEDRICH, b.1850. Prof. Innsbruck 1887; writer on Latin grammar.

Stolzite. $PbWO_4$. Mineral lead tungstate, first found in Bohemia.

Stomach. Largest of the organs of digestion, situated on the left side of the body in front. It is partly covered by the ribs, but extends below their border. The food is conveyed from the mouth by the act of SWALLOWING (q.v.), and remains in the stomach for a varying length of time, in some cases for hours. The muscular fibers of the stomach are so arranged as to give the contents a churning motion, by which they are thoroughly mixed with the gastric secretions, more especially the pepsin which changes the proteids, or food-compounds containing nitrogen, into peptones. The partially digested mass, when the stomach digestion is complete, is called chyme.

Stomach Pump. Instrument for removing the contents of the stomach by mechanical means. A tube is introduced through the mouth and œsophagus, and the contents of the stomach is drawn out by producing a vacuum in the tube, either by the direct action of the pump or by means of a closed vessel to which the tube is attached and in which a partial vacuum has been made.

Stomadæum. Ectodermal invagination in the embryo, which produces the mouth cavity.

Stomata. Transpiration orifices in the epidermis of plants which open into the interior of leaves, stems, etc., affording free interchange of the gases within the plant with those of the atmosphere.

Stomata, or STOMATODE INFUSORIA. Most of the *Ciliata;* characterized by possessing a definite mouth orifice.

Stomatitis. Inflammation of the mouth. Four or five varieties are recognized, from the simplest form, attended by a slight reddening of the membranes, to the gangrenous form accompanied by extensive sloughing.

Stomatodendra. Polystomous, oval lobes of the *Rhizostomidæ.* They are much branched, bear many short tentacles, and are fused one with another, forming a large root-like mass dependent from the under surfaces of these jelly-fishes.

Stomatophora. See INFUSORIA.

Stomatopoda. Sub-order of *Thoracostraca,* characterized by having a short cephalothoracic shield, not covering the thoracic segments, which are movable. There are five pairs of maxillipeds, and three pairs of biramous thoracic feet. The abdomen is strong; its swimming feet bear branchial tufts. *Squilla* is an example.

Squilla mantis.

Stone. English legal weight of 14 lbs.; locally, of varying amount for different articles, as wool, hay, and meat.

Stone. In Botany, pit or hard endocarp of a drupe.

Stone. In Engineering, rock suitable for building purposes. See BUILDING STONE, LIMESTONE, SANDSTONE, etc.

Stone. See CALCULI, LITHOTRITY, and LITHOTOMY.

Stone, ARTIFICIAL. See ARTIFICIAL STONE and BETON.

Stone, STRENGTH OF. The average ultimate compressive strength of stone is 5,000 lbs. per sq. in., but this is subject to much variation with the kind and quality of the stone. Small blocks also are stronger than large ones.

Stone, BARTON WARREN, 1772–1844. Evangelist in Ky.; founder, with a few others, of a non-Calvinistic "Christian Ch.," on a basis of religious liberty.

Stone, CHARLES POMEROY, 1824–1887. He served in the Mexican War; in 1857 he was engaged in surveying Sonora and Lower California; Brig.-gen. U. S. Vols. 1861–64, serving in Va. and La.; in the Egyptian service 1870–83.

Stone, DAVID, 1770–1818. Judge of N. C. Supreme Court 1795–98 and 1807; M.C. 1799–1801 and 1811–13; U. S. Senator 1801–7 and 1813–14; Gov. of N. C. 1808–10.

Stone, DAVID MARVIN, 1817–1895. Ed. New York *Journal of Commerce* 1849–93. *Frank Forest,* 1849.

Stone, JOHN AUGUSTUS, 1801–1834. American playwright. *Metamora.*

Stone, JOHN SEELY, D.D., 1795–1882. Rector in Boston, Brooklyn, and Brookline, Mass.; Dean Cambridge Theol. School 1867–75; religious writer.—His son, JAMES KENT, D.D., b.1840. Pres. Kenyon Coll. 1867 and Hobart Coll. 1868–69, entered R. C. Ch. 1870. *Invitation Heeded,* 1870.

Stone, LUCY, 1818–1893. American advocate of Woman's Rights; ed. *Woman's Journal* from 1870. She became Mrs. H. B. Blackwell 1855, but retained her maiden name.

Stone, SAMUEL JOHN, b.1839. English hymnist.

Stone, THOMAS, 1743–1787. Delegate to Congress from Md. 1775–77 and 1783–84; signer of the Declaration of Independence. —His great-grandfather, WILLIAM, was Gov. of Md. 1649–55.

Stone, WILLIAM LEETS, 1792–1844. American historical writer, as is his son and namesake, b.1835.

Stone Age. Prehistoric era (in lands now civilized) preceding the Bronze Age. In Europe its implements are classi-

a, round-pointed, tongue-shaped implement, Biddenham, near Bedford; *b,* acutely-pointed implement made from rounded nodule of flint, St. Acheul, near Amiens; *c,* from Bemerton, Wilts; *d,* irregularly-ovate, sharp-rimmed instrument, Moulin Quignon, Abbeville.

fied as paleolithic and neolithic. It does not refer to general chronology, but to a period in the development of each race. Certain races of the South Sea islands belong to the stone age of the 19th century.

Stone Bridges. See ARCHED BRIDGE.

Stone Canal. Tube which leads from the madreporic plate to the circumoval water-tube of Starfishes. Its walls are calcified.

Stone Circles. See STANDING STONES.

Stonecrop. Herbs of the genus *Sedum*, natural family *Crassulaceæ*, with fleshy leaves and showy flowers; of wide geographical distribution.

Stonecrop, DITCH. *Penthorum sedoides.* Insignificant herb of the natural family *Crassulaceæ*, growing in wet places in e. N. America.

Stone Crusher. Portable machine having jaws in which stones are crushed for street pavements, for making concrete, etc. One jaw is stationary, while the other is moved by a cam which is driven by machinery. See ROCK CRUSHER.

Stone Fougass. Excavation in front of the covered way in the form of a cone frustrum, placed so as to have its greater opening looking toward the probable line of advance of the enemy. In it is placed a charge of powder and a collection of stones and other missiles, which, when the charge is fired, will do damage to the enemy. This is a device of the earlier sieges.

Stone-Fruit. See DRUPE.

Stonehead. In Mining, point where solid rock is first struck in sinking a shaft.

Stonehenge. On Salisbury Plain, Wiltshire; rude stone structures, consisting of 2 circles and 3 ovals with a large central stone, 15 ft. long, supposed to have been used for an altar. The outer ring, ab. 300 ft. in circumference, was formed of 30 (now 17) upright stones, some 16 ft. high and nearly 6 in diam-

Stonehenge.

eter, supporting 30 (now 7) others, laid horizontally on their tops. The inner circle had 40 smaller stones, the inner oval 19; a vallum and ditch of 1,100 ft. inclosed all. It was formerly thought to be of Druidical origin; and is of uncertain date. It is now generally considered to have been a burial place of the bronze-age people. Other groups of standing stones exist in various parts of Gt. Britain; one at Carnac, France, has over 1,000 still erect.

Stone Implements. See NEOLITHIC CAVES, NEOLITHIC MAN, PALEOLITHIC MAN, and STONE AGE.

Stoneman, GEORGE, U.S.A., 1822–1894. Brig.-gen. U. S. Vols. 1861, Major-gen. 1862–66; active in Va. and Ga., chiefly with cavalry commands; retired 1871; Gov. of Cal. 1883–87.

Stone Mortar. Large caliber bronze mortar for firing baskets of stones upon the besiegers, when near the covered way. Several of these, captured at the castle of Perote in the Mexican war, are among the trophies at West Point.

Stone River. See MURFREESBORO.

Stone-Root. See HORSE-BALM.

Stones, PRECIOUS. See PRECIOUS STONES.

Stone Throwing. Sport among street boys in American and European cities; national sport in e. Asia, especially Corea. In s. China, in the 1st month, the peasants of neighboring villages meet on the plains and attack each other with stones, the encounters being serious affairs, often attended with loss of life.

Stoneware. See PORCELAIN and POTTERY.

Stoneworts. See CHARACEÆ.

Stonington. Town of New London co., Conn., on L. I. Sound; assailed by British vessels 1814. Pop., 1890, 7,184.

Stony Point. In Rockland co., N. Y., on the Hudson; British stronghold, stormed by Gen. Wayne on the night of July 15, 1779. The British lost ab. 600 men, the Americans 98.

Stool of Repentance. In Scotland, stool in front of the pulpit or other prominent place, on which the subject requiring ecclesiastical discipline stood bareheaded, barefooted and clothed in sackcloth during the sermon. It was in use during the 18th century, but during the first half of the 19th century the public rebuke took its place.

Stoop and Room. In Scotland, method of coal mining similar to the pillar and stall method.

Stoping. In Vein Mining, method of working in which the ore is removed in successive stopes (or steps), in such way that the working-places present the appearance of a flight of steps as seen from above (underhand stoping), or from beneath (overhand).

Stoppage in Transit. Exercise of the right of an unpaid vender of goods to stop them while in transit, and regain possession thereof, on the buyer's insolvency.

Stop Valve. For preventing water from flowing from one pipe into another.

Storage Battery. See ACCUMULATOR.

Storage Reservoir. One in which water is stored, either to allow it to settle, or to provide a supply for dry months. Hence it is led into distributing reservoirs, and thence to the street mains. It is built both for purposes of irrigation and for the water supply of towns. San Mateo reservoir for San Francisco holds 31,000 million gallons; the new Croton reservoir for New York will hold 32,000 million gallons.

Storax. Shrubs and small trees of the genus *Styrax*, natural family *Styracaceæ*, natives of the s.e. U. S.

Storer, BELLAMY, LL.D., 1798–1875. Prof. and judge in Cincinnati; M.C. 1835–37.—His brother, DAVID HUMPHREYS, M.D., LL.D., 1804–1891, pub. *Fishes of N. America*, 1846, and *Fishes of Mass.*, 1853–67.—His son, HORATIO ROBINSON, M.D., b.1830, pub. *Why Not?* 1866, *Is it I?* 1867, and *Nurses and Nursing*, 1868.—His brother, FRANCIS HUMPHREYS, b.1832, prof. Harvard from 1870, pub. *Agriculture in its Relations with Chemistry*, 1887.—His cousin, GEORGE WASHINGTON, U.S.N., 1789–1864, became captain 1837 and rear-admiral 1862.

Stores, MILITARY. Arms, ammunition, clothing, camp and garrison equipage, provisions and all other articles needed for the equipment and support of an army.

Storey, WILBUR FISK, 1819–1884. Proprietor Chicago *Times* from 1861; prominent and influential in Western journalism.

Storks. Heron-like Old World birds, with anterior toes united at base, hind toe elevated, imperfect syrinx; hence voiceless except when clattering the mandibles together. They are diurnal and solitary except when migrating, when they travel in wedge-shaped flocks, flying with neck outstretched, unlike herons. 24 species are known, including the Wood-ibis,

Storks (*Ciconia alba*).

Jabiru, Adjutant, etc. The white-bellied black stork of Africa builds on houses, and is protected, like the sacred Ibis. The ordinary European stork (*Ciconia*) is white, with red beak and legs, and is held to be a bird of good omen. The same pair return to their old nest after wintering in the south, year after year. They feed on frogs, mice, etc., and stand over 3 ft. high. See HERODII.

Storksbill. Herbs of the genus *Erodium*, natural family *Geraniaceæ*, of wide geographical distribution.

Storm, GREAT. Nov. 26–27, 1703; one of the most terrible that ever raged in England. The loss on land and sea was immense. In London property worth £2,000,000 is said to have been destroyed, and 800 lives lost in s. England and Holland. 12 men-of-war in sight of shore, with 1,800 men, were lost. 17,000 trees were torn up in Kent. The Eddystone lighthouse was destroyed, with Winstanley, its designer. Multitudes of sheep and cattle perished.

Storm, JOHAN FREDERIK, b.1836. Prof. Univ. Christiania 1873; writer on Norse, English, and French philology.

Storm, THEODOR WOLDSEN, 1817–1888. German lyric poet and writer of tales.

Storm Circle. Diagram used by Reid to assist in determining the directions of the winds within the area of a cyclonic storm. These are constructed of transparent paper or horn, and were originally adapted to the circular theory of wind circulation, but are now made in accord with the observed spiral movement.

Storm Drum. Drum signal displayed by English and European weather bureaus to forewarn the approach of storm winds.

Storming Party. Troops selected to storm a breach in the works or to assault a position of exceptional danger. It is sometimes the practice to ask for volunteers for such exceptional service.

Storm's Eye, or OJO. Calm and fair spot at the center of a revolving storm, technically called Storm center, Low, or Vortex.

Storm Signal. Any signal displayed to the eye, or audible to the ear, intended to warn of an approaching storm. Otto Guericke in 1659 constructed a large apparatus equivalent to a barometer, which by the rise and fall of an index showed the approach of areas of low pressure with accompanying winds and rain. In 1857 Buys Ballot began in Holland to agitate the necessity and feasibility of the display of public storm signals based on telegraphic reports. In 1860 Admiral Fitzroy began the display of the cone and cylinder system of signals in England, which was soon adopted in all Europe. In 1866 Buys Ballot introduced the Aeroklinoscope signal into the Netherlands. In Oct. 1871 the U. S. Signal Office began the display of its cautionary signal (a red light at night and a red flag with black center by day) for winds over 25 m. per hour; in 1881 special signals for off-shore winds were added, and in 1883 an additional signal for winds stronger than 40 m. per hour. Storm signals of some sort are now displayed at every port of much importance throughout the world. Cannon discharges of minute guns have been tried in a few instances, but are not so effective as balls and flags.

Storm Track, or CYCLONE PATHS. Path over the earth of the central barometric depression characteristic of large storms, not that of the storm wind itself. The rain, wind, and other features of the weather at any place are approximately known when the storm track is known. Charts of storm tracks are published monthly by the U. S. and other government weather bureaus.

Storm Wave. General elevation of water within the region of a storm or area of low barometer, due to the greater hydrostatic pressure all around; also, special high wave caused by wind alone.

Stormy Petrels (MOTHER CAREY'S CHICKENS). *Procellaria pelagica.* N. Atlantic Petrels, ranging as far s. as the Banks

Stormy Petrels (*Thalassidroma pelagica*).

of Newfoundland; ab. size of and resembling swallows. They are believed to be the harbingers of bad weather.

Storrs, RICHARD SALTER, D.D., 1787–1873. Pastor at Braintree, Mass., from 1811; ed. *Boston Recorder*, 1817–25, and *Congregationalist*, 1850–56.—His son and namesake, b.1821, pastor in Brooklyn from 1846, has pub. *Preaching Without Notes*, 1875; *Divine Origin of Christianity*, 1884; *Bernard of Clairvaux*, 1892.

Storthing. Norwegian parliament, said to have been first held at Bergen by Haco V. in 1223. See NORWAY.

Story, JOSEPH, LL.D., 1779–1845. M.C. from Mass. 1809–11; Associate Justice of U. S. Supreme Court from 1811; Prof. of Law at Harvard Coll. from 1829. *Bailments*, 1832; *Commentaries on the Constitution of U. S.*, 1833; *Conflict of Laws*, 1834; *Equity Jurisprudence*, 1835–36; *Agency*, 1839; *Partnership*, 1841. —His *Life* was written by his son and biographer, WILLIAM WETMORE, D.C.L., 1819–1895, sculptor and poet, who lived in Italy from 1848. *Roba di Roma*, 1862–77. Many of his busts and statues are in U. S. and England.

Stosch, ALBRECHT VON, 1818–1896. Prussian general; Commissary 1870, Chief of Admiralty 1872, Admiral 1876–83.

Stothard, THOMAS, 1755–1834. English painter and illustrator, R. A. 1794. Some 4,000 of his designs have been engraved.—His son, CHARLES ALFRED, 1786–1821, painter, pub. *Monumental Effigies*, 1811–23.

Stoughton, EDWIN WALLACE, 1818–1882. New York lawyer; Minister to Russia 1877–79.—His nephew, EDWIN HENRY, U.S.A., 1838–1868, was Brig.-gen. U. S. Vols. 1862–63.

Stoughton, JOHN, D.D., b.1807. Cong. pastor and prof. in London; ed. *Evangelical Mag. Hist. Religion in England*, 9 vols., 1867–84; *Italian Reformers*, 1881; *Recollections*, 1894.

Stoughton, WILLIAM, 1632–1701. Mass. Councilor 1671–89; Lieut.-gov. from 1692; benefactor of Harvard.

Stourbridge Fair. One of the most prominent fairs of England. See FAIR.

Stout. See BEER.

Stove. Close fireplace for warming apartments or cooking. The ancients used stoves which concealed the fire, as the German stoves yet do. They lighted the fire also in a large tube in the middle of the room, the roof being open. Benjamin Franklin pointed out the waste of fuel in our open fires. They are of great diversity of forms, of cast iron, sheet iron, and soapstone. Iron stoves for burning coal are lined with fire-brick. In Asia and parts of Europe stoves are made of brick or clay; in Germany of tile. Stoves are made specifically for wood or coal, but they are also heated by coal-oil lamps, charcoal and gas. A cooking stove called the Aladdin, and invented by Edward Atkinson, greatly economizes heat and controls its operation. One pound of oil does the work of from 50 to 70 lbs. of coal in the ordinary stove. Electric stoves are also coming into use. In 1893 the stove manufactures of the U. S. amounted to $30,035,700.

Stover. Cured stalks of Indian corn from which the ears have been removed. When cut early and properly cured, it has considerable value as a fodder, in some respects nearly if not quite equal to meadow hay.

Stow, BARON, D.D., 1801–1869. Baptist pastor in Boston 1832–67; devotional and historical writer.

Stow, JOHN, 1525–1605. English antiquarian. *Chronicles*, 1561; *Annals*, 1580; *London and Westminster*, 1598.

Stowe, HARRIET ELIZABETH (BEECHER), 1811–1896, m. 1836. American novelist. Her *Uncle Tom's Cabin*, 1852, exerted wide and deep influence in the North and was widely circulated and tr. in Europe; it was supported by a *Key*, 1853. *Sunny Memories*, 1854; *Dred*, 1859; *Minister's Wooing*, 1859; *Pearl of Orr's Island*, 1862; *Agnes of Sorrento*, 1862; *Oldtown Folks*, 1869; and many minor juvenile tales, besides a few fine religious lyrics.—Her husband, CALVIN ELLIS, D.D., 1802–1886, was prof. at Dartmouth 1830–33, Lane Sem., Cincinnati, 1833–50, Bowdoin 1850–52, and Andover 1852–64. He pub. 2 vols. on the Bible, 1835–67.

Stowell, CHARLES HENRY, b.1850. Prof. Univ. Mich. *Histology*, 1882; *Microscopic Diagnosis*, 1882; *Physiology and Hygiene*, 1888.

Stowell, HUGH, 1799–1865. English hymnist.

Stowell, WILLIAM SCOTT, BARON, 1745–1836. Brother of Lord Eldon; Judge, Privy Councilor, and Knight 1788; Judge of Admiralty 1798–1828; Baron 1820.

Stowing. In Mining, filling in of underground excavations with rock or worthless material to prevent the overlying rock from sinking.

Strabismus. Visual defect in which there is a lack of harmony in the position of the eyes; one eye is fixed or looking at the object, the other eye deviates. This deviation may be in any direction, but is constant in each instance. The most common directions of deviation are directly toward the

nose, strabismus convergens; or outwardly, strabismus divergens. It may be due to a paralysis of some of the muscles that move the eye, or to some defect or difficulty in vision. One eye alone may deviate or the strabismus may alternate. In many cases of converging squint, the cause of the trouble is an abnormal dioptric arrangement, and the proper adjustment of lenses removes the cause and cures the defect.

Strabo, ab.64 B.C.–after 21. Greek geographer of Pontus. His work, pub. 1516, tr. 1854–57, is in 17 books, largely based

The Earth in the Time of Strabo.

on his own travels, and in parts of much value, but least concerning Greece proper. Of his history in 47 books, mainly a continuation of Polybius, only fragments remain.

Strabo, WALAHFRID, ab.809–849. Abbot of Reichenau 838; theologian and poet. His chief work, *Glossa*, a commentary, mainly extracted from the Fathers, pub. ab.1475, was long used and highly valued.

Strachan, JOHN, D.D., LL.D., 1778–1867. Bp. of Toronto 1839; active and influential.

Strachey, WILLIAM, b.ab.1585. Early writer on Bermuda and Virginia, 1612–18.

Strack, HERMANN LEBRECHT, D.D., b.1848. Prof. Berlin 1877; writer on O. T. *Hebrew Grammar*, 1883, tr. 1886.

Stradella, ALESSANDRO, ab.1645–1681. Italian singer and composer, hero of a romance which ended in his murder and has been told dramatically in an opera by Flotow; mistakenly credited with the church airs beginning *Pièta, Signore*, and *Se i miei sospiri*.

Stradivarius, ANTONIUS, 1644–1737. Greatest of all violin makers. He worked ab. 70 years in Cremona.—Two sons, FRANCESCO, 1671–1743, and OMOBONO, 1679–1742, were his assistants.

Strafford, THOMAS WENTWORTH, EARL OF, 1593–1641. M.P. 1614; moderate liberal till 1628, thenceforth royalist; made Baron and Viscount 1628, Privy Councilor 1629; Lord Deputy of Ireland 1633, where he ruled with great force and severity; Earl and Lord-lieut. 1640; impeached for subverting the public liberties, then attainted; beheaded, the king's consent having been extorted. As the ablest and most determined of Charles I.'s Ministers, he has been painted in dark colors by Macaulay. His policy of "Thorough" was the main support of tyranny, and he and Abp. Laud fell with it.

Stragglers. Soldiers who lag behind on the march or who seek the rear during a battle.

Straight Angle. That formed by two lines in exactly opposite directions; equal to 180 degrees.

Straight Line. In Elementary Mathematics, shortest distance between two points. In Analytical Geometry, path traced by a point moving continuously in one direction. It is indefinite in extent, unless limited by arbitrary points or given conditions. It can always be represented by an equation of the first degree between two variables, and every equation of the first degree represents a straight line.

Straight Line Gales. See DERECHO.

Straight University. At New Orleans, La.; chartered 1869 by American Missionary Association for the education of negroes. Both sexes admitted; instruction is given in academic, normal, collegiate, and theological departments, with manual training throughout the course. In 1897 there were 22 teachers and 579 students.

Strain, ISAAC G., U.S.N., 1821–1857. Lieut. 1850. As head of an expedition, 1854, to survey the Isthmus of Darien, he endured great perils and privations, and won much repute.

Strain. In Engineering, force or stress brought upon a bar, or elongation or compression of the bar caused by the stress; generally the latter in England, the former in the U. S. See FORCE.

Strain Ellipsoid. Result when any three mutually rectangular axes of an imaginary sphere, taken anywhere within a body before stress is applied, are found, after the body has been strained, to be changed in length in the ratios $1:\alpha$, $1:\beta$, $1:\gamma$ respectively.

Straining Beam. Horizontal beam connecting the tops of the struts of a queen-post truss, and acting as a compression member.

Strains on Guns. Stresses, arising from the explosion of the charge, produce deformations called the radial, tangential and longitudinal strains. In modern gun construction these are reduced by the method of initial compression; that is, by shrinking one or more jackets on the interior tube in building up a gun. The computation of the proper stresses each tube ought to bear, the thickness of each jacket and the radial dimensions at each point of the gun are problems in practical mechanics which have so far been satisfactorily deduced from the theory employed in gun construction.

Straits Settlements. British colony, including Singapore, Malacca, and other small islands, with part of the Malay peninsula; formed 1853, separated from India 1867, and since enlarged. Area 1,542 sq. m.; pop., 1891, 512,000, mostly Malays and Chinese. Connected with these are several protected Malay States, in area 34,610 sq. m.; pop., 1891, 412,440.

Strakosch, MAURICE, 1825–1887. Austrian pianist and composer, operatic manager in U. S. from 1855.—His brother, MAX, b.1835, was his associate.

Stralsund. Town of Pomerania, on the Baltic, near Rugen Is.; founded 1209; besieged 1628 by Wallenstein, who lost near half his army; held by Sweden 1628–1715, by the French 1807–9, by Denmark 1809 and 1814–15, and since by Prussia. Pop., 1890, 27,820.

Stramineous. Straw-colored organs or organisms.

Stramonium. *Datura stramonium.* Annual plant with smooth leaves and stem, white flowers and erect prickly cap-

Stramonium.

sules. It is a native of the E. Indies, and is one of the most powerful narcotic acrid poisons; rarely used in medicine. See DATURA and JAMESTOWN WEED.

Strandberg, KARL VILHELM AUGUST, 1818–1877. Swedish lyric poet and translator.

Strange, SIR ROBERT, 1721–1792. Engraver, b. in the Orkney Islands; in London from 1750; knighted 1787; member of the Academies of Rome, Florence, Bologna, Parma, and Paris.

Strange, ROBERT, LL.D., 1796–1854. Judge N. C. Superior Court 1826–36; U. S. Senator 1837–40.

Strangford, PERCY CLINTON SIDNEY SMYTHE, 6TH (Irish) VISCOUNT, 1780–1855. Envoy to Turkey and Russia; Baron Penshurst 1825. Tr. Camoens' *Rimas*, 1803.—His son, PERCY FREDERICK WILLIAM, 1825–1869, 8th Viscount 1857, was a noted Orientalist. *Writings*, 1869; *Letters and Papers*, 1878.

Strangles. Inflammation of the upper air passages of the horse. The nasal cavity is most likely to be affected, and is

associated suppuration of the lymphatic glands. The disease is communicable.

Strangle Weed. See ROOT PARASITES.

Strangury. Symptom of certain inflammatory conditions of the bladder or prostate gland, or of the poisoning by turpentine or cantharides, where the urine is voided drop by drop accompanied by pain.

Strapazola, GIOVAN FRANCESCO, ab.1490–ab.1560. Italian author and compiler of novelle or tales in the *Decameron* manner. His *Tredeci piacevoli notti*, 1550–54, was tr. into French 1560–73 and reprinted 1882.

Strap-Shaped. Ray flowers in many plants of the Composite family.

Strasburg. Capital of Alsace-Lorraine; on the Ill, 2 m. w. of the Rhine; ancient Roman colony; scene of Julian's victory over the Allemanni 357; seized by Louis XIV. 1681; fortified by Vauban 1682–84; surrendered to the German forces Sept. 1870 after a siege of 7 weeks. It has a large trade,

Strasburg Cathedral.

varied manufactures, a famous cathedral, rebuilt 1015–1439, with an astronomical clock partly made 1571, and a university, founded 1621, suspended 1793, reorganized 1872, with over 100 teachers, 980 students (1895), and a library of 600,000 vols. Pop., 1890, 123,566.

Strass. Glass of high refractive index, used for making artificial gems. It is a lead-glass, containing a large percentage of lead.

Strassburg, GOTTFRIED VON, 12th cent. German epic poet, author of one version of *Tristan and Isolde*.

Stratagem. Any military maneuver or disposition of troops undertaken to deceive the enemy, which, by its successful application, promises to yield a military advantage.

Strategy. That branch of the art of war by means of which a general may decide upon the best time, place and character of a battle, that will confer the greatest benefit or result in the least injury.

Stratford. Town of Essex, on the Lea, 4 m. e.n.e. of London. Pop., 1891, 42,982; of Stratford-le-Bow, or Bow, opposite, 40,378.

Stratford de Redcliffe, STRATFORD CANNING, VISCOUNT, 1786–1880. Minister to Turkey 1810; negotiator of the treaty of Bucharest 1812; Envoy to Switzerland 1814–19, and to U. S. 1820–23; M.P. 1828–41; Ambassador to Turkey 1825–28 and 1842–58, where he was trusted by the Sultan, and gained a diplomatic victory over Russia 1853.

Stratford-on-Avon. In Warwickshire, 110 m. n.w. of London; famous as Shakespeare's birthplace and residence. Pop., 1891, 8,318.

Strathclyde. Kingdom of s.w. Scotland ab.750–1124.

Strathmore. Plain in Kincardineshire, ab.100 m. long by 5 to 10 wide. It includes Perth.

Strathnairn, HUGH HENRY ROSE, LORD, 1803–1885. Commander in Central India 1857–58; prominent in repressing the Sepoy mutiny; Lieut.-gen. 1860; Commander-in-chief in India 1863, and in Ireland 1865–70; Baron 1866; Field-marshal 1877.

Strathspey. Scottish popular dance, resembling the reel, but slower and less regular; known since ab.1750.

Stratification. Arrangement of rock material in successive layers; generally the result of sedimentation.

Stratton, CHARLES SHERWOOD ("TOM THUMB"), 1838–1883. American dwarf, exhibited by P. T. Barnum from 1842; in Europe 1844 and 1857. He was 2 ft. high and weighed 16 lbs.; in 1863 he was 31 in. in height and later 40 in., weighing 70 lbs. —His wife, MERCY LAVINIA (BUMP), b.1841, m.1863, was 32 in. in height; her stage name was Livinia Warren. She increased to 40 in. and 50 lbs. weight. She married Perimo Magri, an Italian dwarf, 1885.

Stratton Hill. In Cornwall; scene of a royalist victory, May 13, 1643, over the parliamentary forces under Stamford, who lost 2,000 men, his ordnance and baggage train.

Stratum. Single bed of rock.

Stratus. See CLOUDS.

Straus, OSCAR SOLOMON, b.1850 in Bavaria. U. S. Minister to Turkey 1887–89.

Strauss, DAVID FRIEDRICH, 1808–1874. German rationalist. His *Life of Jesus*, 1835–36, tr. by George Eliot 1846, urged the mythical theory, and roused a storm of opposition. His

David Friedrich Strauss.

Christliche Glaubenslehre, 1840–41, a history of doctrine, received much less attention. *Ulrich von Hutten*, 1857, tr. 1874; *New Life of Jesus*, 1864, tr. 1865; *Voltaire*, 1870; *The Old Faith and the New*, 1872, tr. 1873. *Works*, 12 vols., 1876–78.

Strauss, JOHANN, b.1825 in Vienna. Composer of dance music, popularly termed "the Waltz King." The best known of his waltzes, *On the Beautiful Blue Danube*, was written for men's voices. He is equally successful as a composer of operettas: *Indigo*, 1871; *Carnival in Rome*, 1873; *The Bat*, 1874; *Cagliostro*, 1875; *Prince Methusalem*, 1877; *Blind Man's Buff*, 1878; *Queen's Lace Handkerchief*, 1880; *Merry War*, 1881; *A Night in Venice*, 1883; *Gypsy Baron*, 1885; *Simplicius*, 1887; *Ritter Pasman*, 1892; *Goddess of Reason*, 1897.—His brother, EDWARD, b.1835, composer of dances and conductor of Austrian court balls, made a tour in the U. S. with his orchestra 1890.—Their brother, JOSEF, 1827–1870, and their father, JOHANN, 1804–1849, were also composers of dances.

Strauss, RICHARD, b.1864 in Munich. Extremist in the tendency encouraged by Berlioz, Wagner, and Liszt, Court Chapelmaster at Munich since 1895. Lyric drama: *Guntram;* Symphonic poems: *Aus Italien, Don Juan, Tod und Verklärung, Till Eulenspiegel, Also sprach Zarathustra.*

Straw. Ripened and dried stalks of the cereal grains after the seeds have been removed. It takes the name of the grain which grew upon it, as oat straw, wheat straw, etc. Most straws are of small value as fodder, but are of value as absorbents for the liquid part of animal excrements and for adding a large amount of easily decaying vegetable matter to the soil, with some mineral fertilizing materials.

Straw. The stalks of wheat, rye, oats and barley have been wrought into a variety of articles from ancient times and by many races of people; such as hats, mats, baskets, shoes, bonnets, hammocks and furniture. Large quantities are used

in paper making, rye-straw being best suited for this purpose. For making hats and bonnets wheat-straw is used, sometimes whole, as with the Leghorn plaits, but generally split. It is spread upon the grass to bleach and is then plaited. Straw plait is imported into the U. S., for the manufacture of hats and bonnets, from England, Italy, France, Switzerland, Belgium, Germany, China and Japan. See PAPER.

Strawberry. Herbs of the genus *Fragaria*, natural family *Rosaceæ*, bearing white flowers and edible fruits. The species are of wide distribution and universally cultivated.

Strawberry (leaf, flower, fruit).

Strawberry Hill. See TWICKENHAM.

Strawberry Shrub. *Butneria.* Genus of purple-flowered shrubs of the s. Alleganies, much planted for their fragrant flowers.

Strawberry Tomato. *Physalis alkekengi.* Yellow-flowered herb of the natural family *Solanaceæ*, native of Europe, cultivated for its esculent red fruit; introduced as a weed into America.

Strawboard. Thick paperboard made principally of wheat or rye straw, after boiling in lime or soda to soften it; used in making boxes.

Streak. In Mineralogy, color of the powder of a mineral; so called because it can usually be obtained by making a mark with the mineral on a hard rough surface, like that of unglazed porcelain.

Stream Tin. See TIN, METALLURGY OF.

Streator. City of La Salle co., Ill., on the Vermilion, 94 m. s.w. of Chicago; founded 1868, chartered 1882. Its industries deal chiefly with coal, clay, and glass. Pop., 1890, 11,414.

Street, ALFRED BILLINGS, 1811–1881. Poet; State Librarian of N. Y. from 1848.

Street, GEORGE EDMUND, 1824–1881. English architect, R.A. 1871; builder or restorer of many churches, mostly Gothic; designer of the London law-courts 1868. *Architecture of N. Italy in Middle Ages*, 1855; *Gothic Architecture in Spain*, 1865.

Street Railways. The first street railway was operated by horses in Fourth Avenue, New York, 1831–35, by John Stevenson, without commercial success. In 1845 cars, similar to those now in use, were introduced. In 1852 several of the long lines were commenced there, followed by Boston 1856, Philadelphia 1857, New Orleans 1861. In Paris a line was opened 1853, and in Birkenhead and London in 1860, the latter being soon suspended; the first permanent line was opened there 1870. The first cable line was operated in San Francisco 1873. Electricity was first used near Berlin 1881, and in Cleveland 1884. The first trolley car was run in Kansas City 1886. Compressed air was first applied at Nantes, France, 1881. The first underground railway was built in London 1863; it was operated by locomotives; an electric underground road was opened there 1890. In Berlin an elevated railroad was operated 1882. In New York an elevated cable road was opened 1869, without success; in 1871 locomotives were used upon one successfully. See ELECTRIC RAILWAYS.

Street Sweeper. Wagon provided with scrapers and brushes for gathering up street-dust and mud. A sweeper

Street Sweeper.

with five rows of brushes was used in England in 1831. The cut shows one form drawn by two horses, the revolving broom being set obliquely, so that the refuse may be carried to one side of the street.

Streitberg, WILHELM, b.1864. Prof. Freiburg 1889; philological writer.

Streltzi. Russian militia guard, originated by Ivan the Terrible. It became unruly and turbulent, was decimated 1698, and nearly exterminated 1705 by Peter the Great.

Strength of Materials. Resistance of materials to rupture under forces of tension, compression, and shear, as also under flexure and torsion. It is properly concerned with the phenomena of ultimate strength rather than with those of elasticity. Galileo in 1638 experimented on the flexure of beams, but little precise knowledge was obtained until near 1800, and even now many things are not well understood (see RESISTANCE OF MATERIALS). The following table gives the mean values, in lbs. per sq. in., of the ultimate strengths of the principal materials:

Material.	Tensile Strength.	Compressive Strength.	Shearing Strength.
Timber	10,000	8,000	3,000
Brick	500	3,000	1,000
Stone		5,000	2,000
Cast Iron	20,000	90,000	25,000
Wrought Iron	50,000	50,000	45,000
Steel	100,000	150,000	75,000

Strepsiptera. Order of *Insecta* having rudimentary anterior wings and large posterior wings that can be folded longitudinally. The mouth parts are rudimentary. The females have no wings, legs, nor eyes, and resemble maggots. The larvæ are parasitic in the abdomen of wasps, etc., in which hosts they pass through the pupa-stage. *Stylops* is an example. The group is perhaps to be considered as a degenerated sub-order of *Coleoptera*.

Strepsirhine. See PROSIMII.

Streptococcus. See COCCUS BACTERIA.

Streptoneura. Division of Gastropods, including the Heteropods and Prosobranchs; they are also grouped as *Azygobranchia* and *Patella* (*Zygobranchia*). In these forms the visceral nerves may be conceived as united above the originally straight intestine, and when, during development, the latter is twisted, the nerve cords also suffer a twist into a figure 8 shape. See ANISONEURA and ISOPLEURA.

Streptostylica. *Lepidosauria*, referring to the loose articulation of quadrate bone to the postorbital bar when present.

Stress. In Engineering, tensile or compressive force acting upon a bar; in general, any internal resisting force which equilibriates an applied load. Stresses are measured in lbs. per sq. inch. See FORCE, COMPRESSIVE STRENGTH, and STRENGTH OF MATERIALS.

Stretcher. Light, but strong frame, covered with stout canvas and used to carry the sick or wounded to the hospital.

Stretcher. Stone whose longest dimension is parallel to the face of a wall. See HEADER.

Stretton, HESBA. See SMITH, HANNAH.

Striated. Streaked or marked with fine thread-like lines.

Stribling, CORNELIUS KINCHILOE, U.S.N., 1796–1880. Captain 1853, Commodore 1862, Rear-admiral 1866.

Strickland, AGNES, 1806–1874. English author, pensioned 1870. Her popular *Lives of the Queens of England*, 12 vols., 1840–48, and *of Scotland*, 8 vols., 1850–59, were in part the work of her sister ELIZABETH, 1794–1875. A brother, SAMUEL, 1809–1867, pub. *27 Years in Canada West*, 1853.

Strickland, WILLIAM, 1787–1854. American architect.

Strickland, WILLIAM PETER, D.D., 1809–1884. American writer on Methodism.

Strict. In Botany, upright organs, especially erect stems and branches.

Stricture. In Surgery, the narrowing of a tube-like organ, preventing or making difficult the performance of its function. Thus a stricture of the œsophagus interferes with swallowing. Strictures may be produced by accident (as frequently seen in the accidental swallowing of an irritating substance, such as carbolic acid, producing inflammation), by disease in the structure of the organ itself, or by the pressure of some growth on the outside of the organ.

Stridulantia. See HOMOPTERA.

Striges. See STRIGIDÆ.

Strigidæ. Family of Raptatorial birds, including the OWLS (q.v.).

Strike. In stratified rock, or in mineral veins, the direction of a horizontal line in the plane of the deposit. It is at

Strike, Water-level, Out-crop, and Dip.

right angles to the dip. It is nearly synonymous with course and BEARING (q.v.). See OUT-CROP and DIP.

Strike. Concerted refusal, on the part of all or many employees in any establishment, to work except under certain conditions of wages, hours, or other circumstances.

Strikes and Lockouts. A strike is the refusal of employés to work unless the employer accedes to some demand. A lockout is the refusal of the management to allow the employés to work except under some dictated condition. A boycott is preventing the sale of the goods of an employer by the employés. From 1881 to June 30, 1894, there were in the U. S. 14,390 strikes, affecting 69,167 establishments, throwing out of employment 3,614,406 employés; the percentage of establishments where strikes were successful was 44.49. The loss of wages to employés from strikes was $163,807,866, from lockouts $26,685,516; the business loss to employers from strikes was $82,590,386, from lockouts $12,235,451. See ARBITRATION, ARBITRATION BOARD, BOYCOTTING, COMBINATION LAWS, COMBINATION OF LABOR, LOCKOUTS, STRIKE, and TRADES UNIONS.

Striking a Center. Process of removing the timber false works upon which a stone arch has been erected.

Striking Distance. Maximum distance between two points across which, with a given difference of potential, an electric spark will pass. In a gas, it depends upon the nature of the gas and upon its pressure. It also depends upon the difference of potential, but is not in simple proportional to it, the curve indicating the ratio of striking distances to differences of potential being a parabola.

Strindberg, AUGUST, b.1849. Swedish dramatist, novelist and satirist. His *New Kingdom*, 1882, led to his virtual exile, and *Married Life*, 1884, to a trial for blasphemy. *Utopias*, 1885; *Tschandala*, 1889.

Stringcourse. In a building a projecting, horizontal line of molding; exteriorly it is carried over windows and across buttresses.

Stringer. Beam connecting or resting upon the cross floor beams and serving to support the roadway of a bridge; sometimes made of timber, but usually of wrought iron.

Stringhalt. Variety of chorea in the horse. It consists of a sudden picking up of one or both hind legs.

Stringham, SILAS HORTON, U.S.N., 1798–1876. Captain 1841; active at Vera Cruz, 1847, and Hatteras; Commodore 1861, Rear-admiral 1862.

Strobila. Stage in the development of discophorous Jelly-fishes in which the larva (scyphistoma) fixes itself and, after a period of budding, becomes transversely segmented into disks, which are successively set free as ephyræ or young medusæ.

Strobilaceous. In Botany, structures resembling or pertaining to cones.

Strobilation. Formation of metameres that are successively set free as independent zoöids, as in the strobila of discophorous Jelly-fishes, the Tapeworm, etc.

Strobile. See CONE.

Stroboscopic Disk. Device of Stampfer, consisting of a disk of card or metal, capable of rotating, around the edge of which is a row of equidistant narrow apertures. If a stream of water at a short distance from the opening through which it issues be viewed through the apertures as the disk rotates, through each opening a glimpse is caught of the jet in a certain position. If the rate of rotation of the disk be properly adjusted, each successive glimpse is caught just when each falling drop into which the stream breaks up has taken the place of its predecessor; thus a stationary drop seems to be suspended in the air. About the same time, 1833, Plateau devised a similar toy, called the Phenakistoscope. More recently another arrangement for showing the same illusion has been devised. See THAUMATROPE and ZOETROPE.

Stroma. Ground substance containing other objects; especially, form of the mycelium of certain *Fungi*, which, instead of remaining fibrous, has the hyphæ matted together into a dense structure.

Stromatoporidæ. Group of fossil *Hydrozoa*, abundant in the Palæozoic Period. The general appearance of some of them is similar to a wasp's nest, being sub-globular, composed of concentric lamellæ of calcareous substance, and at-

Stromatopora Rugosa.

tached by a stalk. The horizontal or concentric laminæ are connected by radiating or vertical fibers, and the whole forms a series of tubes, crossed by transverse partitions, at the outer end of which the zoöids lived. Some approach the *Millepores*, others the *Hydractinia*, in general structure.

Strombus. Leguminous pod which is spirally twisted.

Stromeyerite. Ag_2S,Cu_2S. Mineral compound of silver, copper, and sulphur, sometimes found, though not abundantly, associated with chalcopyrite.

Strong, AUGUSTUS HOPKINS, D.D., LL.D., b.1836. Pres. Rochester Theol. Sem. since 1872. *Systematic Theology*, 1886.

Strong, CALEB, 1745–1819. U. S. Senator 1789–96; Gov. of Mass. 1800–7 and 1812–16. He refused to furnish troops for the war with England, and used home resources for State defense.

Strong, GEORGE CROCKETT, U.S.A., 1832–1863. Active in La. 1861–62; Brig.-gen. U. S. Vols. 1862, Major-gen. 1863; mortally wounded in assaulting Fort Wagner, S. C.

Strong, GEORGE TEMPLETON, b.1856. American composer of pianoforte pieces, part-songs for men, symphonic poem *Undine*, symphonies, *In the Mountains* and *Sintram;* living in Europe.

Strong, JAMES, D.D., LL.D., 1822–1894. Prof. in Drew Seminary from 1868. *Cyclopædia of Biblical, Theological, and Ecclesiastical Literature* (partly with Dr. John McClintock), 10 vols., 1867–81; Supplement to the same, 2 vols., 1885–87; *Exhaustive Concordance*, 1894.

Strong, JAMES HOOKER, U.S.N., 1814–1882. Commander 1861, serving on the Atlantic and Gulf coasts; Captain 1865, Commodore 1870, Rear-admiral 1873.

Strong, JOSIAH, D.D., b.1847. American author. *Our Country*, 1886; *New Era*, 1893.

Strong, MOSES, d.1877. Geologist, author of a report on the Wis. lead region.

Strong, THEODORE, LL.D., 1790–1869. Prof. of Mathematics at Yale 1816–27, and Rutgers 1827–61. *Algebra*, 1859; *Calculus*, 1869.

Strong, WILLIAM, LL.D., 1808–1895. M.C. 1847–51; Justice Pa. Supreme Court 1857–68, and U. S. Supreme Court 1870–80; member Electoral Commission 1877.—His cousin, THERON JUDD, 1802–1873, was M.C. 1839–41, and Judge N. Y. Supreme Court 1852–60.

Strongbow, RICHARD DE CLARE, 2D EARL OF PEMBROKE, d.1176; in Ireland from 1170; Gov. 1173.

Strongyle. Strongylate rhabdus; *i.e.*, one rounded at the ends; form of sponge spicule.

Strongylidæ. Nematode worms, parasitic in the lungs and intestines; *e. g.*, *Dochmius.* They have usually six papillæ about a wide mouth, in the bottom of which, in some cases, are teeth. The male genital opening is at the end of the body, surrounded by an umbrella-shaped disk. Colic in horses, and the disease called Egyptian chlorosis, are due to their presence.

Dochmius

Strontianite. $SrCO_3$. Mineral strontium carbonate, formerly mined extensively in Westphalia for use in the process of making and purifying beet-sugar.

Strontium. Sr. Element. At. wt. 87.6, sp. gr. 2.5, mpt. 600° C., valence II.; discovered by Davy 1808. It occurs in nature as celestite, STRONTIANITE (q.v.), and is isolated by electrolysis of the molten chloride. It has a metallic luster and a brass-yellow color, oxidizes readily, and decomposes water rapidly. It is soluble in the common acids.

Strontium Bromate. $Sr(BrO_3)_2+H_2O$. Small, lustrous, prismatic crystals, isomorphous with barium chlorate; made by treating the hydroxide with bromine.

Strontium Bromide. $SrBr_2+6H_2O$. Crystals which melt in their water of crystallization; efflorescent; made by dissolving the hydroxide or carbonate in hydrobromic acid.

Strontium Carbide. SrC_2. Strontium acetylide; black substance, having a gold streak; made by heating the oxide with finely divided carbon. With water and acids it yields acetylene.

Strontium Carbonate. $SrCO_3$. Found in nature as STRONTIANITE (q.v.); white powder, obtained by treating the chloride in solution with ammonium carbonate solution; soluble with difficulty in water.

Strontium Chlorate. $Sr(ClO_3)_2$. Deliquescent, rhombic, pyramidal crystals; mpt. 290° C. with decomposition; made by passing chlorine into a boiling solution of the hydroxide; soluble in water.

Strontium Chloride. $SrCl_2$. White, soluble, crystalline salt, made by treating strontium carbonate with hydrochloric acid.

Strontium Cyanide. $Sr(CN)_2$. Obtained from strontium ferrocyanide on heating. It decomposes in the air.

Strontium Fluoride. SrF_2. White powder or regular octahedra, obtained by boiling the hydroxide or carbonate with hydrofluoric acid.

Strontium Hydroxide. $Sr(OH)_2$. Found as an amorphous powder and in tetragonal transparent crystals, containing 9 molecules of water; made by burning strontianite and treating with water. It has an alkaline reaction.

Strontium Iodate. $Sr(IO_3)_2.+H_2O$. Made by the action of iodine on a solution of the hydroxide. From cold water it crystallizes with 6 molecules of water.

Strontium Iodide. SrI_2+6H_2O. Six-sided tablets, made by treating a mixture of the sulphite and hydroxide with iodine.

Strontium Nitrate. $Sr(NO_3)_2$. White, soluble, crystallized salt, made by treating the carbonate with nitric acid; used in considerable quantities for preparing mixtures which when burned give a red light, as Bengal fire and red fire.

Strontium Nitrite. $Sr(NO_2)_2$. Anhydrous, hygroscopic needles, soluble in water and alcohol; made by heating the nitrate.

Strontium Oxide. SrO. White powder, resembling lime; made by heating strontium nitrate.

Strontium Phosphate. $Sr_3(PO_4)_2$. White precipitate, obtained by adding sodium hydrogen phosphate to an ammoniacal solution of strontium chloride; insoluble in water.

Strontium Sulphate. $SrSO_4$. Found in nature as CELESTITE (q.v.); obtained as a white powder by treating a soluble strontium salt with a soluble sulphate; soluble with difficulty.

Strontium Sulphide. SrS. White, phosphorescent powder, obtained by heating the sulphate with carbon; decomposed by water.

Strontium Sulphite. $SrSO_3$. White, crystalline kernels, or flat right-angled tablets. On heating, it gives a yellowish-green fluorescent mixture of the sulphide and sulphate; made by heating the oxide in an atmosphere of sulphur dioxide.

Strophiole. Small protuberance at the hilum of a seed; caruncle.

Strophogenesis. That form of Amphigenesis in which there is no alternation of generations, but a series of non-sexual buds, constituting a single generation, one or more of which reproduces the individual, as in the higher animals. In the higher plants there is apparently the same condition, but really a hidden sporophore generation which puts them into the category of hypogenesis. If a similar condition could be proven true of vertebrates, etc., strophogenesis and hypogenesis would be the same.

Strophoids. Class of curves generated by the intersections of two straight lines rotating uniformly about two points in space. The logocyclic curve is a form of the strophoid: other curves are found to be strophoids under particular conditions.

Strother, DAVID HUNTER ("PORTE-CRAYON"), 1816–1888. Va. author and illustrator; officer U. S. Vols. 1861–64; Consul-gen. to Mexico 1879–85. *Blackwater Chronicle*, 1853; *Va. Illustrated*, 1857.

Stroud, GEORGE MCDOWELL, 1795–1875. Pa. Judge. *Laws Relative to Slavery*, 1827–56.

Structural Botany. Science of the form and relations of the parts of plants, considered either anatomically or histologically.

Struensee, JOHANN FRIEDRICH, COUNT, 1737–1772. Physician to Christian VII. of Denmark 1768; paramour of Queen

Johann Friedrich Struensee.

Caroline Matilda (1751–1775), sister of George III. of England; Minister of State, and radical reformer; accused of sundry political offenses, and executed.

Struggle for Existence. See NATURAL SELECTION.

Struma. Abnormal tendency or condition of the body allied to scrofula or consumption (tubercle). Some writers make a distinction between scrofula and tubercle, when struma is used to include both conditions. Others consider them to be but different manifestations of the same disease, when struma becomes synonymous.

Strumose. Having an unsymmetrical swelling of one of several homologous parts, as of the tissues of one side of a moss-capsule.

Strümpell, GUSTAV ADOLF, b.1853 in Russia. Prof. Leipzig 1882, Erlangen 1886. *Pathologie und Therapie*, 1883.

Strut. Bar acting as a column, or post subject to compressive stress.

Struthiin. See SAPONIN.

Struthiones. See CURSORES (*Ratidæ*), and OSTRICH.

Strutt, JOHN W. See RAYLEIGH.

Strutt, JOSEPH. 1742–1802. English antiquarian. *Regal and Ecclesiastical Antiquities*, 1773; *Horda-Angel Cynnan*, 1774–76; *Chronicle* (to 1066), 1777–78; *Biog. Dict. of Engravers*, 1785–86; *Dress and Habits*, 1796–99; *Sports and Pastimes*, 1801.

Struve, FRIEDRICH GEORG WILHELM VON, 1793–1864. Prof. of Astronomy and Mathematics at Dorpat, Russia, 1813; appointed 1835 to superintend the erection of the great Russian observatory at Pulkowa, completed 1839, and its director till 1861, as was his son, OTTO WILHELM, b.1819, till 1890.

Struve, GUSTAV VON, 1805–1870. Bavarian radical, in America 1851–63; prolific writer.

Struvite. Natural hydrous ammonium magnesium phosphate, found as a mineral in some guano deposits.

Strychnine. $C_{21}H_{22}N_2O_2$. Exceedingly poisonous base or alkaloid, found in the seeds of *Strychnos nux-vomica;* rhombic crystals; mpt. 268° C.; it is intensely bitter to the taste. Spinal poison. ¼ of a grain having produced death. It is probably a derivative of quinoline. It is a valuable medicine, as a general tonic, as a nerve tonic in cases of nerve exhaustion apart from inflammatory conditions, and as a heart tonic. Chloroform and tannic acid have been given internally as antidotes. See NUX VOMICA.

Stryker, MELANCTHON WOOLSEY, D.D., b.1851. Pres. Hamilton Coll. 1892; compiler of hymn and tune books.

Strype, JOHN, 1643–1737. English author or compiler of sundry biographies, of *Annals of the Reformation*, 4 vols., 1709–31, and of *Ecclesiastical Memorials*, 3 vols., 1721. *Works*, 27 vols., 1821–43.

Stuart. See STEWART.

Stuart, ARABELLA, 1575–1615. Daughter of the Earl of Lenox, niece of Darnley, and cousin of James I.; pretender to the English throne 1603; married to Wm. Seymour 1610. She died in the Tower.

Stuart, GILBERT, 1755–1828. American painter, in Boston from 1805. He produced many portraits of Washington and other public men.

Stuart, HENRY BENEDICT MARIA CLEMENT, 1725–1807. Grandson of James II.; brother of Charles Edward; Cardinal York 1747; last of the Pretenders.

Stuart, JAMES. See MURRAY, EARL OF.

Stuart, JAMES, 1713–1788. English architect. *Antiquities of Athens*, 1762–94; *Buildings of London*, 1771.

Stuart, JAMES, 1776–1849. Scottish author and journalist. *Three Years in N. America*, 1833.

Stuart, JAMES EWELL BROWN, 1833–1864. Brig.-gen. C.S.A. 1861, Major-gen. 1862; active and prominent as a cavalry commander in Va.; captor of Chambersburg, Pa., Oct. 10, 1862; famous for his raids; killed near Richmond.—His father, ALEXANDER HUGH HOLMES, 1807–1891, was M.C. 1841–43, U. S. Sec. Interior 1850–53, and rector Univ. Va. 1876–82 and 1884–86.

Stuart, JAMES FRANCIS EDWARD, 1688–1766. Son of James II. and Mary of Modena; from 1701 regarded as king of England by France and the Jacobites. He led the rising of 1715: that of 1745, checked at Culloden, was headed by his son, CHARLES EDWARD, "the Young Pretender," 1720–1788.

Stuart, JOHN, LL.D., 1813–1877. Scottish antiquarian. *Sculptured Stones*, 1856–67.

Stuart, MOSES, 1780–1852. Prof. Andover 1810–48: pioneer of Biblical scholarship in America. *Hebrew Chrestomathy*, 1829; commentaries, 1827–52.

Stuart, ROBERT, 1785–1848. Scottish pioneer in Oregon, whence he journeyed to St. Louis 1812–13; celebrated in Irving's *Astoria*.

Stuart, ROBERT LEIGHTON, 1806–1882. New York merchant, noted, with his brother ALEXANDER, 1810–1879, for benefactions.

Stub, AMBROSIUS, 1705–1758. Danish lyric poet.

Stubbes, PHILIP. English puritan satirist. His *Anatomie of Abuses*, 1583, was repub. 1836 and 1879–82.—His relative, JOHN, ab.1541–ab.1600, lost his right hand for a supposedly seditious publication 1579.

Stubbs, WILLIAM, D.D., LL.D., b.1825. Prof. Oxford 1866; Bp. of Chester 1884, and of Oxford 1889. His *Constitutional History of England*, 1874–78, is of high value. *Early Plantagenets*, 1876.

Stub-Ends. Construction used for ends of connecting rods, or other rods which fit upon pins where wear is likely to occur. The contact on the pin is effected by two brasses, which are bored out, cylindrical on the inside, to fit the pin, and meet on the prolongation of one of its diameters. The outside is planed rectangular to fit within a strap which draws the brasses to the squared end of the rod proper by means of a GIB and KEYS (q.v.). An open stub draws the brasses toward the middle of the rod, as they wear, by drawing the strap back on the rod, since the key passes through a slot in the solid: the closed stub has the strap made a part of the rod, either by forging it solid with it, or by bolting or keying it fast. Then the gib and key bear against the brass, and the rod is lengthened as wear takes place. Instead of the gib and key, a taper wedge may be tightened by a screw in a closed stub. For parallel rods of locomotives which must not change in length by wear, there may be two keys, one at each side of the brasses of one end, or one end may be open and one closed, so that the change of length is the difference in amount of wear at the two pins. Split taper bushings of a hard composition, like phosphor-bronze, are somewhat used, being closed upon the pin as they are drawn into taper sockets by a screw-ring on the small end. For light pin connections, such as valve rods, hardened steel pins carefully ground, fitting upon similar steel bushings carefully lapped, are used, in place of more easily worn materials. The brasses of large work are easily and cheaply refitted or renewed, and the brass wears and not the expensive crank-pin.

Stub Switch. One in which the two rails of the main track are moved so as to allow trains to pass upon a turnout or to keep upon the main track; oldest form of railroad switch, now used only on branch lines and turnouts.

Stucco. Mixture of plaster of Paris, slaked lime, gelatin and water, used for the finishing coat of interior walls of buildings. Moldings and ornaments are of similar materials, the latter being cast in molds.

Stud-Book. Book giving the pedigree of thoroughbred animals; particularly horses, cattle, and dogs.

Studdle. In Mining, piece of timber placed in the corner of a shaft as a part of the support for a set of shaft timbering; also auxiliary props set for other purposes.

Stuffing-Box. Device to allow a moving rod to pass out into a less pressure from a greater, without leakage around it or excessive friction as it moves. Where the rod protrudes, an annular space is left concentric with it, the bottom being inclined toward the hole, which the rod fits easily. Into this annular space fits the gland, which is a cylinder fitting the rod with a sliding fit, the inner bottom being tapered inward toward the rod, and the outer end either cast with a flat flange or plain. Where a flanged end is used, stud bolts passing through holes in the flange draw the gland into the annular

Stuffing-Box.

space, when nuts are tightened down on them; in the plain type, it is intended that the gland be drawn in by a cap, which fits over it and upon a screw-thread on the outside or inside of the box. Between the gland and the bottom of the box is to be put the PACKING (q.v.), so that the pressure from the conical gland bottom and box-bottom shall force the elastic material against the rod with desired pressure. For very large rods, the nuts on the studs are often small pinions which gear in common into one large gear concentric with the rod, so that all nuts are tightened equally and at once. For plungers the same structure is used, or else the CUP LEATHER (q.v.) packing.

Stukeley, WILLIAM, M.D., 1687–1765. English antiquarian.

Stull. In Mining, timber platform or support, on which the deads and rubbish that accumulate in a mine are piled.

Stump. In Mining, a small pillar of coal, with a passageway on each side, left standing where a breast or stall is opened off from a gangway.

Stumpf, CARL, b.1848. Prof. Prague 1879, Munich 1889, and Berlin 1894. *Tonpsychologie*, 1885–90.

Stundists. Russian dissenters; numerous and varying sects.

Stupor. Diminished activity of the intellectual faculties, often amounting to lethargy; it occurs in many affections, especially in neurosis. It is easy to wake a person from sleep, difficult in stupor and impossible in coma. The mind may be active in sleep, but is as if dead in stupor.

Sturdy. See GID.

Sture, SVEN, ab.1450–1503. Regent of Sweden, as were his relatives SVANTE NILSSON, d.1512, and SVEN, d.1520. All opposed the nominal supremacy of Denmark.

Sturge, JOSEPH, 1793–1859. English Quaker, active against slavery. *West Indies*, 1838; *Visit to U. S.*, 1842.

Sturgeon. The genus *Acipenser* includes seven species in the U. S. Some of these may attain a length of over 20 ft. and a weight of nearly a ton. The roe of the female is very abun-

Sturgeon (*Acipenser sturio*).

dant, and is salted and dried as caviare, after being washed in vinegar. The flesh is esteemed as food in some localities. The dried air bladders furnish isinglass. See CHONDROSTEI.

Sturges, JONATHAN, LL.D., 1740–1819. M.C. 1789–93; Judge Conn. Supreme Court 1793–1806.—His grandson, JONATHAN, 1802–1874, New York merchant, was prominent in public, railway, and charitable work.

Sturges, OCTAVIUS, M.D., 1833–1894. London physician. *Clinical Medicine*, 1873; *Pneumonia*, 1876; *Chorea*, 1881.

Sturgis, RUSSELL, b. 1836. American architect, writer on art and archæology. *European Architecture*, 1896.

Sturgis, SAMUEL DAVIS, U.S.A., 1822–1889. Brig.-gen. U.S. Vols. 1861–65, serving chiefly in the West.

Sturlason. See SNORRE.

Sturm, JACOB, 1771–1848. Engraver in Nürnberg. *Deutschlands Flora*, 1798–1855.

Sturm, JACQUES, 1743–1802. French botanist, long in S. America; explorer of the Orinoco and Amazon; writer on the flora of Brazil, 1798–1801.

Sturm, JACQUES CHARLES FRANÇOIS, 1803–1855. Swiss mathematician, Prof. of Mechanics at the Sorbonne, Paris, 1836; author of a theorem concerning the roots of an equation.

Sturm, JOHANNES, 1507–1589. Director of education in Strasburg from 1536. His ideas were carried out in a gymnasium and academy, founded 1538 and 1564, which became famous and influential throughout Europe.

Sturnidæ. See DENTIROSTRES.

Sturt, SIR CHARLES, ab. 1800–1869. Explorer of inland Australia 1828, 1830, and 1844; knighted 1868. *Two Expeditions*, 1833; *Narrative*, 1849.

Sturtevant, EDWARD LEWIS, M.D., b.1842. Director N. Y. Agricultural Experiment Station 1881–87; author of its first six reports. He has given particular attention to agricultural and economic botany.

Sturtevant, JULIAN MONSON, 1805–1886. Prof. Illinois Coll. from 1831, and its pres. 1844–76. *Economics*, 1876; *Autobiography*, 1897.

Sturzenbecker, OSKAR PATRICK, 1811–1869. Swedish author.

Stuttering. See STAMMERING.

Stuttgart. Capital of Würtemburg since 1482; on the Niesembach, near its junction with the Neckar. Its leading industry is printing and book-binding. It has an old castle and three 15th century churches, but most of its principal buildings are modern. The royal library has over 400,000 vols., including near 9,000 Bibles. Pop., 1890, 139,659.

Stuyvesant, PETER, 1602–1682. Last Dutch Gov. of N. Y., 1647–64; celebrated by Irving. He made peace with the In-

Peter Stuyvesant.

dians, and settled the boundaries between New Netherlands and the English colonies. In 1655 he retook the fort on the Delaware which the Swedes had captured 1654.

Stye. Circumscribed inflammation of the eyelid near the edge, usually including an eyelash in the inflamed area. It is attended by swelling, pain and the formation of pus. Like all diseases resembling boils, there is apt to be a series. Bathing the part with a hot solution of boric acid several times a day soothes. It is seldom necessary to open it. The scientific name is Hordeolum.

Style. In Botany, part of the pistil above the ovary upon which the stigma is borne.

Style, OLD AND NEW. See OLD STYLE.

Styles. Upright pieces of a door frame or other panelwork; the horizontal pieces are called Rails.

Stylidieæ, or CANDOLLEACEÆ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 5 genera and ab. 105 species, nearly all in Australia.

Stylites. Pillar-saints; ascetics of Syria, whose cells, open to the sky, were built on the tops of pillars. The most famous one, Simeon, 387–459, spent 30 years on one pillar.

Stylobate. Basement of a temple below the columns, resembling a continuous pedestal.

Stylogonidium. Spore with a stalk; called also pycnogonidium or stylospore.

Stylommatophora. Sub-group of the *Pulmonata*, including forms having eyes on the ends of retractile tentacles, behind the two ordinary tentacles. The group includes the Slugs (*Limax* and *Arion*), Land-snails (*Helix*, etc.), and *Amphipneusta* (*Onchidium*, etc.), which, having the lung behind the heart, are also called *Opisthopulmonata*. The group may also be divided into the *Monotremata* and *Ditremata*, the latter including *Onchidium*.

Stylonychia. One of the hypotrichous *Infusoria*. It has cilia, styles, and hooks on the ventral surface, used as locomotor appendages.

Stylopodium. Fleshy expansion of the bases of the styles in *Umbelliferæ*, in the form of a disk crowning the ovary.

Stylospores. Accessory propagating bodies borne by the mycelium of certain *Fungi*.

Stylus. Sponge spicule, of single axis, but growing only at one end, which is pointed. They occur in the genus *Polymastia*.

Stymphalian Birds. On Lake Stymphalus in Arcadia. They had claws, wings, and beaks of brass; used their feathers as arrows, ate the flesh of men, and were destroyed or expelled by Hercules.

Styphnic Acid. $C_6H(OH)_2(NO_2)_3$. Trinitroresorcin; yellow crystalline body, formed by the action of nitric acid on resorcin and on many resins. It closely resembles picric acid.

Styptics. Sometimes used synonymously with astringents, but generally applied to a substance used to arrest hæmorrhage. Tannic acid and persulphate of iron are styptics. See BLEEDERS and HÆMORRHAGE.

Styracaceæ. Natural family of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Gamopetalæ*, comprising 7 genera and ab. 235 species, growing in the warmer regions of Asia, Australia and America; called the Storax family.

Styrene. $C_6H_5.CH:CH_2$. Phenylethylene; liquid hydrocarbon, boiling at 146° C. with a pleasant odor. It is present in storax and coal tar oil, and can be prepared from bromhydrocinnamic acid and soda. It unites with bromine.

Styria. Austrian province, w. of Hungary. Capital Gratz. Area 8,629 sq. m.; pop., 1890, 1,281,023.

Styrian Literature. See SLOVENIANS.

Styx. River in Arcadia; also a river feigned in mythology to flow around the lower regions. An oath of a deity by it was most sacredly binding.

Suabia, or SWABIA. Old duchy of s.w. Germany, n. and e. of the Rhine; held by the Hohenstaufens 1080–1268; important

St. John's Church, Swabasch Gmund.

in the Middle Ages; circle of the German Empire 1563–1806. During the reigns of the Hohenstaufens, this duchy was the richest, most powerful and civilized country of Germany.

Suabian League. Formed 1376 by sundry towns; headed later by the Duke of Würtemberg.

Suahili. Peoples of the Bantu group, occupying the Zanzibar coast of Africa. They have become mixed with Arabs, are Mohammedans, and great traders. Many tribes are included. Among the Bamjai the women command by right; the chief is chosen by freemen, the office not being hereditary. The Mashona are another tribe; they follow agriculture, and are skilled in iron work, making ornamented weapons. As traders they remind one of the Jews, whom they resemble in facial expression.

Suakim. Nubian port, on an island in Red Sea, lat. 19° 7′ N.; held by Britain since 1883; commercially important. Pop. ab. 11,000.

Suard, NICOLAS, ab.1740–1791. Haytian insurgent, executed by the French.

Suarez, FRANCISCO, 1548–1617. Spanish Jesuit, teacher of philosophy and theology at Rome and in Spanish universities. His *Defensio Fidei Catholicæ*, 1613, attacked James I. *De Statu Religionis*, tr. 1887. His works, as reprinted 1859, fill 29 vols.

Suarez, JOSÉ BERNARDO, b.1822. Chilian author.

Suarez y Romero, ANSELMO, 1818–1882. Cuban novelist and essayist. *Francisco*, 1860.

Suavolent. Plant or flower of pleasant odor.

Subahdar. Native captain in Indian army.

Subaltern. Commissioned officer of the army below the rank of captain; a first or a second lieutenant.

Subcarboniferous. Group of strata between the Devonian and the coal-measures.

Subcaulescent. Plant having a very short leafy stem.

Subclass. Group of orders, inferior in rank to a class.

Subcontrary Lines. When two straight lines make equal angles with other two straight lines not parallel, the pairs are mutually subcontraries. Chords of a circle, joining the points where two secants not parallel cut the circle, are subcontrary to the secants.

Subcontrary Sections. Plane sections of surfaces of the second order, similar though not parallel.

Subcortical Crypts (OF SPONGES). See SUBDERMAL CHAMBERS.

Subdeacon. In the R. C. hierarchy, lowest of the four major and highest of the five non-sacramental orders.

Subdermal Chambers (OF SPONGES). Cavities hollowed out in the cortex, and covered by a cribriform roof or sieve-plate full of inhalent pores. In some sponges there is a constriction near the outer end of such crypts, guarded by a true muscular sphincter, which keeps undesirable objects from entering with the inhaled water. These are chones, the outer chamber being the ectochone, the inner the endochone or subcortical crypt.

Subdivision of Labor. See DIVISION OF LABOR.

Subepidermal Tissue. In Botany, hypoderma, immediately underlying the epidermis.

Subercase, DANIEL AUGER DE, ab.1655–ab.1715. Gov. of Placentia, Newfoundland (Canada), 1703, and of Acadia 1706; active against the English; forced to surrender Port Royal 1710.

Suberification. See CUTINIZATION.

Suberin. See CORK.

Suberization. Modification of a tissue into cork.

Subfamily. Group of genera, inferior in rank to a family. See TRIBE.

Subgenital Pits. Four open cavities in the subumbrella of discophorous *Medusæ*, into which the generative glands project.

Subgenus. Division of a genus, consisting of a group of closely related species.

Subiaco. Ancient Sublaqueum. Town of Italy, 16 m. s.e. of Tivoli. A cave near Subiaco is the site of one of the earliest monastic institutions of w. Europe, founded by St.

Subiaco.

Benedict and rebuilt 817. Here also is the monastery of Santa Scolastica, founded in the 5th century, where the printing press was first used in Italy 1464; a Lactantius was the first book published 1465. Altitude 1,340 ft., pop. 7,300.

Subject. Thing, entity, or agent to which properties, static or dynamic, physical or psychical, belong; in Psychology, the Ego or Self, which is the ground of mental phenomena, and opposed to the object.

Subjective. Pertaining to the subject, and denoting either what is internal as opposed to external, or what is peculiar to the subject and not found in the object; individual as opposed to universal.

Subkingdom. One of the great subdivisions of the vegetable kingdom, as the *Spermatophyta* and *Bryophyta*. See BOTANY.

Subkingdoms (OF ANIMALS). First great groups into which the Animal Kingdom is divided; viz., *Protozoa*, *Spongiaria*, Cœlenterates, Vermes, Molluscoids, Mollusks, Arthropods, Tunicates, and Vertebrates. There are a few genera not easily included with the above, and sometimes placed by themselves, as *Mesozoa* and *Enteropneusta*. Some modern writers include the *Spongiaria* with the Cœlenterates, the Molluscoids with the Vermes, and the Tunicates with the Vertebrates (*Chordata*).

Sublapsarianism. Milder theory of predestination, which ascribes to the divine Decrees merely the election of

some to life, while others are left to fall by their own devices; opposed to SUPRALAPSARIANISM (q.v.).

Sublician Bridge. See PONS SUBLICIUS.

Sublimate, CORROSIVE. See MERCURIC CHLORIDE.

Sublimation. Process or result when a solid passes at once into the state of a vapor without passing through the intermediate state of liquidity. The sublimation of arsenic, of solid carbonic acid, and of snow are familiar examples.

Sublime Porte. See PORTE.

Submarine Forests. See PEAT and FOSSIL.

Submarine Mines. See MINES, MILITARY.

Submarine Navigation. Submarine boat was proposed by William Bourne of London 1578; Cornelius Drebell, a Dutchman, is said to have constructed one in London 1624, propelled by oars. Other experiments were made by Borelli and Papin 1672, Stapleton 1693, and David Bushnell of Conn. 1775. The latter was intended for submarine warfare, was propelled by a hand screw, and had an hour's supply of air; it carried a torpedo to fasten to the bottom of a ship. Robert Fulton in 1800 constructed a boat for the French government which carried a torpedo. In 1863 the Confederates, by means of a submarine boat, blew up the U. S. ship *Housatonic* off Charleston, but were carried down with the ship. Nordenfelt of Stockholm, in 1886, built a boat, propelled by steam, which sunk 30 feet and made a speed of 5 m. per hour; it was submerged by screws. In France the *Goubet* was successfully tried in 1889:

Section of the French Submarine or Surface Boat *Goubet*, built 1888.

a, the electric accumulators; *b*, tanks for compressed air; *c*, *d*, pumps; *e*, *e*, engines; *f*, cupola; *g*, the safety or emergency weight, which, in event of pumps or machines breaking down, can be detached, when the vessel at once rises to the surface. When proceeding on the surface only the cupola, *f*, is visible above water.

it was 16.4 ft. long, 3.5 ft. beam, 5.8 ft. deep, propelled with a screw by electricity from storage batteries, had a detachable keel and carried a torpedo. A later invention by Gustave Zede is 56 ft. long. In U. S. George C. Baker invented a boat, propelled by electricity from storage batteries acting on a screw, with two upright screws for perpendicular motion. J. P. Holland of New York has devised a boat propelled by a petroleum engine 8 m. per hour, 6 m. per hour under water, and compressing air for breathing and for projecting the torpedo. It also has rudders for vertical steering. The objection to submarine navigation is the slow speed so far attained and the difficulty of distinguishing objects at a greater distance than 25 ft. at a depth of 50 ft. To steer in anything but a straight line is very difficult, without losing the knowledge of the position. Moving just below the surface the boats are a success.

Submarine Telegraphy. See ATLANTIC CABLE and TELEGRAPHY.

Submentum. Piece in insects which articulates with the mentum (or palpiger), and attaches its parts to the gula or throat.

Submerged Weir. One where the level of the tail water is higher than the crest of the weir, so that the contraction is suppressed and the flow disturbed.

Subnormal FOR ANY POINT OF A CURVE. Projection of the normal, limited by the points of contact with the curve and of intersection with a fixed line, upon this line as a base of projection. In rectangular co-ordinates the axes are taken as bases; commonly the axis of X. In polar co-ordinates, the base is a line perpendicular to the radius vector of the point of normal contact.

Subœsophageal Ganglion. Most anterior ganglion of the ventral nerve-chain of Arthropods and annulated worms.

Suboperculum. Plate or scale lying ventral to the opercular plates.

Suborder. Group of families subordinate to an order.

Subordination. Willing submission to the direction and orders of superiors: the essential element of discipline in making the military organization efficient in carrying out the will of the commander.

Subpœna. Judicial writ for bringing parties or witnesses before a judicial tribunal. Its form, method of serving and enforcing, are regulated by statute, or by court rules.

Subrogative. Equitable right to succeed to the legal position of another; notably of a surety to succeed to the rights against his principal possessed by the creditor whose claim he has been compelled to discharge.

Subsidiary Quantities. Elements introduced to facilitate reduction or solution, as the angle used in the reduction of cubic equations.

Subsidy. Amount paid by government to a person or corporation to help in the foundation of some work that is expected to be of public as well as individual advantage.

Subsistence Department. This provides, under the direction of the Secretary of War, for the distribution and expenditure of funds appropriated for subsisting enlisted men and for purchasing articles kept for sale to officers and enlisted men. In the U. S. army it consists of 1 commissary-general (brigadier-general), 5 assistant-commissary generals (2 colonels and 3 lieutenant-colonels), 17 commissaries (8 majors and 9 captains), and 120 commissary-sergeants.

Subsoiling. Process of stirring the subsoil without lifting it to the surface; done by means of a special tool called a subsoil plow, following in the furrow of an ordinary plow. It is of advantage on heavy lands in allowing the water to sink more rapidly into the subsoil, thus in part performing the office of drains; and also, to some extent, in allowing the roots of plants more readily to enter and feed on the subsoil. It is scarcely profitable on drained lands for ordinary crops.

Substance. Permanent ground of phenomena which are changeable, or supposed reality which supports attributes, static or dynamic, and is synonymous with subject in its broader meaning. It is supposed to be material, spiritual, or both.

Substitute. Person accepted for military service in place of one who has been conscripted.

Substitution. In Chemistry, replacing of one element by another in a compound.

Substitution, LAW OF. Tendency of producers to choose just those factors of production the sum of whose supply prices is less than that of any other set.

Subtangent. At any point of a curve, projection of the tangent, limited by the points of tangency and of intersection with a fixed line, upon this fixed line as a base of projection. Bases of projection are taken, as for the subnormal.

Subtraction. In Arithmetic, process of ascertaining how much one number (minuend) exceeds another (subtrahend); in Algebra, process of finding such a quantity as, added to one of two quantities (subtrahend), will produce another (minuend). In either case, the result is the remainder. In algebraic subtraction, if the subtrahend be the greater (numerically), the remainder will be negative. Algebraic subtraction is performed by changing the signs of the subtrahend and then adding.

Subulate. In Botany and Zoölogy, awl-shaped organs of any kind.

Subumbrella. See UMBRELLA.

Subungulata (POLYDACTYLA). See UNGULATA.

Subura. District of ancient Rome, occupying the valley between the Esquiline, Quirinal, and Viminal hills; a crowded, noisy, disreputable region. See ROME.

Subverticillate. Imperfectly whorled.

Subway. Railroad track running through a city either in tunnel or beneath the surface. The most costly one in the U. S. is that in which the railroads enter New York City above

The up and down Tunnels, London Subway.

42d Street; its length is 4½ m., its cost was $6,400,000. The most extensive are in London. The inner circle, 8½ m. in extent, was opened 1863. Later extensions make the total length

nearly 40 m.; one of these runs under the Thames, and is operated by electric traction. In Baltimore an underground tunnel for the Baltimore and Ohio R.R., 10 m. long, was completed 1892.

Subzonal Membrane. Somatic mesoblast which lines the inside of the false ammon; in embryos of higher vertebrates.

Succession. In Roman Law, acquisition of another's legal rights or obligations; in English Law, continuance of the title to property in a corporation notwithstanding death or change of its members; sometimes devolution of title by will, deed, or the laws of descent.

Succession, WAR OF. See SPANISH SUCCESSION.

Succinamide. $CONH_2.CH_2.CH_2.CONH_2$. Amide of succinic acid; solid, mpt. 242° C.; prepared by the action of ammonia upon ethyl succinate.

Succinic Acid. $C_2H_4:(COOH)_2$. Dibasic acid; white crystalline solid, mpt. 235° C. It occurs in amber, in plants and fruits, and can be prepared synthetically by numerous reactions. It is made commercially by the distillation of scrap amber.

Succinyl. $.CO.CH_2.CH_2.CO.$ Group, $C_4H_4O_2$, conceived to be derived from succinic acid by the removal of two OH groups. The combination is of frequent occurrence. See SUCCINAMIDE.

Succory. See CHICORY.

Succoth. 1. Point in Lower Egypt, at which the Israelites stopped in their exodus (Ex. xii. 37). 2. Camping-place of Jacob, e. of Jordan, on leaving Esau; later its inhabitants refused to aid Gideon against the Midianites, and were punished (Judges viii.).

Succulent. Having a soft, juicy flesh or pulp.

Suchét, LOUIS GABRIEL, 1770–1826. French general, distinguished in Napoleon's campaigns, and especially in Spain 1809–12; Marshal 1811, Duke of Albuféra 1812. *Memoires*, 1829–34.

Suchet, PIERRE JOSEPH, 1734–1793. Haytian historical writer, guillotined in France.

Sucker. Branch or shoot from the base of a stem, rhizome, or root.

Suckling, SIR JOHN, 1609–1642. English lyric poet and playwright.

Sucre, or CHUQUISACA. Capital of Bolivia, on e. slope of the Andes; founded 1539. Pop. ab.26,000.

Sucre, ANTONIO JOSÉ DE, 1795–1830. Venezuelan general, prominent under Bolivar in the liberation of Ecuador and Peru; Pres. of Bolivia 1826–28. He repelled a Peruvian invasion of Ecuador 1829.

Sucrose. See SUGAR.

Suction Pump. One which exhausts the air from a tube, the water then rising. It will not work if placed more than 33 ft. above the level of the water to be raised.

Suction Pump.

Suctoria. See ACINETARIA and HIRUDINEA.

Suctoria (RHIZOCEPHALA). Group of parasitic Barnacles, with tubular or sac-like bodies, without segments or appendages; the peduncle has root-like branches that penetrate the tissues of the host, for absorbing nutriment. Neither mouth nor digestive canal is present.

Sudamina. Eruption consisting of minute vesicles, either clear or pearly, occurring near the termination of certain fevers, *e.g.*, typhus, typhoid, rheumatic. It is a symptom of depressed vitality.

Sudan. See SOUDAN.

Sudermann, HERMANN, b.1857. German dramatist and novelist. *Ehre* (*Honor*), 1888; *Sodoms Ende*, 1890; *Heimath*, 1892. His *Magda* was acted in French, Italian, and English versions 1895–96. Among his tales are *Dame Care*, 1888, tr. 1892; *Katzensteg*, 1889; *The Wish*, tr. 1895.

Sudetic Mts. Between Moravia and Silesia; extension eastward of the Reisengebirge. Ht. ab.3,000 ft.

Sue, MARIE JOSEPH EUGÈNE, 1804–1859. A French romancer, voluminous, popular, and readable, but of low tone; Deputy 1850, exiled 1852; best known by *The Mysteries of Paris*, 10 vols., 1842, and *The Wandering Jew*, 10 vols., 1845. His *Mysteries of the People*, 16 vols., 1849–57, was condemned by the courts.

Suet. Hard, solid fat, near the kidneys of sheep and oxen. Beef suet is used in cooking, and purified mutton suet in pharmacy as an ingredient in ointments.

Suetonius, CAIUS TRANQUILLUS, b.ab.70. Secretary of Hadrian. His *Lives of the Twelve Cæsars*, tr. 1732, are prized for the information which they contain: several other biographies and two grammatical treatises are attributed to him.

Suevi. German tribes, who in Cæsar's time occupied Suabia (named from them) and part of Gaul. Some of them were in Spain later.

Suez. Egyptian town at the head of the Red Sea; of commercial importance in ancient times, and since 1869. Pop. ab.13,000.

Suez, GULF OF. West arm of the Red Sea, between Egypt and the peninsula of Sinai. It is the Arabian Gulf of the Greeks and the Gulf of Heroöpolis of the ancients. Near the present head of the gulf the Israelites are supposed to have crossed. Length 200 m., average breadth 30 m.

Suez, ISTHMUS OF. Neck of land connecting Asia and Africa, having s. the Gulf of Suez and n. the Mediterranean, and crossed by the SUEZ CANAL (q.v.). The surface is mostly moving sands, interspersed with rocky elevations, and salt marshes, the ancient crocodile lakes.

Suez Canal. Between the Mediterranean and the Red Sea, 90 m. long, and of size sufficient to allow the passage of the largest vessels. Its cost was nearly $100,000,000. A canal existed here in ancient times: ab.1798 Napoleon conceived the idea of reopening it. De Lesseps organized 1854 a company with a capital of 200,000,000 francs, soon increased to 300,000,000 francs, of which England owns the controlling share. The canal was begun 1858, and opened Nov. 17, 1869. Since March 1, 1887, night navigation has been allowed through the entire length of the canal to all vessels provided with the necessary electric lighting apparatus. It is 325 ft. wide at top, 72 ft. at bottom, and 28 ft. deep. Of late some 3,000 vessels pass annually.

Map of Suez Canal.

Suffixes. Originally independent words, placed in a modifying capacity after other words, and acquiring in time an inflective force. Thus *like* becomes *ly*, and gives a purely adverbial meaning to the word to which it is attached. Pronouns suffixed to verbs become mere endings of a specific person, as the *m* in *am* indicates "I" or the first person.

Suffocation. See ASPHYXIA.

Suffolk. See SWINE.

Suffolk Punch. See HORSE.

Suffragan. Diocesan bishop in relation to his metropolitan; in Europe, sometimes an auxiliary bishop in relation to a diocesan.

Suffrage. Privilege of voting at political elections; regulated by constitutions and statutes; not a political right.

Sufism. Mohammedan mysticism; introduced by Rabia, 7th century; extended by Abu Said, founder of a monastery at Khorassan ab.815. It has exerted great influence on Persian literature and religion; its adherents have been variously pietists, pantheists, and freethinkers.

Sugar (CANE SUGAR, SUCROSE, or SACCHAROSE). $C_{12}H_{22}O_{11}$. This occurs in the juice of sugar cane, sugar beet, maple, palm trees, and many other plants. It forms monoclinic crystals, sp. gr. 1.61, mpt. 160° C.; at 200° C. it is converted into CARAMEL (q.v.). At 0° C. it is soluble in half its weight of water; at 50° C. it is soluble in ⅛ its weight of water. Its water solution is LÆVOROTATORY (q.v.). It is insoluble in absolute alcohol; with dilute alcohol it increases with the dilution. Acids and ferments invert it into dextrose and lævulose. This must take place before fermentation with yeast will take place. It is determined in water solution by a POLARISCOPE (q.v.).

The world's production of cane sugar in the year 1894–95 was estimated at 3,436,700 tons; Europe produced 4,866,000 tons of beet sugar and the U. S. ab. 20,000 tons. Of cane sugar Cuba produced 975,000 tons and the U. S. 285,000 tons. The U. S. also produce ab. 20,000 tons of maple sugar. India produces 100,000 tons of palm sugar.

See CANE SUGAR, CARAMEL, DEXTROSE, GLUCOSES, LACTOSE, LÆVULOSE, MALTOSE, MAPLE, MILK SUGAR, MOLASSES, and SORGHUM.

Sugar, BEET. The sugar beet is the result of cultivation, being derived from the wild *Beta maritima*, several varieties having been developed. It flourishes best in a northern temperate climate. The beets weigh from 1.5 lbs. to 2 lbs. and contain from 10 to 15 per cent of sugar. They are reduced to a pulp by circular saws, 25 per cent of water is added and the juice expressed by a hydraulic press, or extracted by the diffusion process. An excess of lime is added to the juice to neutralize acidity and precipitate the coloring matter; carbon dioxide is passed through to precipitate the lime and the whole is clarified by a filter press. The solution is then concentrated in a vacuum pan to crystallization. The yield in Germany is from 1,500 to 2,300 lbs. per acre, and in France, up to 2,700 lbs. The molasses is too saline for food and is used in making alcohol. Sugar was produced from the beet in Germany 1798 by Achard, in France 1782 by Rosier, in the U. S. 1830; in the latter were five factories in 1895.

Sugar, CANE. *Saccharum officinarum.* This was cultivated in India before the Christian era; the boiling of sugar was practiced on the Ganges in the 7th century. The Arabs first practiced sugar refining in the 7th century, and also carried the cultivation of the cane along the Mediterranean to Spain. The Spaniards carried it to San Domingo 1494. It was introduced into the U. S. 1791. Sugar cane flourishes best in subtropical countries. The cane, whole or in cuttings 2 ft. long, is laid in furrows 4 to 6 ft. apart in W. Indies, 8 ft. apart in Louisiana; the plants are from 2 to 5 ft. apart. In the W. Indies the planting takes place in the fall, the crop being gathered in the spring; in Louisiana the reverse of this. The young canes grow from the joints of the cane. Two or three annual crops are obtained from a planting in the U. S.; in the W. Indies as many as fifteen. The plant is from 6 to 15 ft. high, and from 1 to 2 in. diameter. The contents of sugar is from 12 to 18 per cent, of which up to 86 per cent is obtained by the mill, and by the diffusion process up to 95 per cent. The cane juice is expressed by passing between heavy rolls of the sugar mill, or it is extracted by the diffusion process. For the latter the cane is cut into chips and placed in a series of iron vessels, with perforated bottoms, each holding 2 tons. Water passes from one vessel to the next, and so on through the series; the cane in the first vessel being nearly exhausted and the last vessel having fresh cane, the solution thus becoming concentrated. The first vessel is then refilled with cane and becomes the last of the series, and what was the second becomes the first, and so on. This process is used to a limited extent with cane, but is largely used with beets. The juice is now strained and milk of lime added to it in a clarifier to neutralize the acidity and heated to 140° F. to coagulate the albuminous substances. It is then boiled down to crystallizing point in a series of copper pans, baled into a cooler and then into molds to crystallize. In 18 hours the plug in the bottom of the mold is drawn and the molasses drained off, the last being forced out by water from a layer of moist clay laid upon it. For muscovado the sugar is transferred from the cooler into hogsheads, the molasses draining from holes in the bottom. On some plantations the juice after skimming is run through bag- and bone-black filters for decolorization, concentrated in a vacuum-pan and, after crystallizing, the sugar is freed from molasses by a centrifugal machine. The yield of sugar per acre reaches 2,000 lbs. in the U. S., and 5,000 lbs. in W. Indies. The molasses consists of a solution of saccharose, dextrose and lævulose with saline substances of the juice. The first two are about equally sweet, the dextrose is less sweet, 3 parts being equal to 2 parts of the others.

Sugar-cane (*Saccharum officinarum*).

Sugar, MAPLE. This is obtained from *Acer saccharinum* of temperate climates. Two holes are bored in the tree two feet above the ground on the southern side and reeds or metallic spiles are introduced. The sap runs from February to April, and contains an average of 3.5 per cent sugar, requiring 4 gals. of sap for 1 lb. of sugar. It is evaporated in an open pan, flowing through devious furrows over it. The average yield of a tree per year is 3 lbs. besides the syrup; the trees last up to 30 years.

Sugar, PALM-TREE. This is obtained from several species of palm trees in India. The trees are tapped as with the maple, and the season is from November to February. A good tree yields 30 lbs. of sugar a year and lasts up to 30 years.

Sugar, SORGHUM. *Sorghum saccharatum* has been cultivated in the U. S. since 1853. It was originally from Africa. It contains up to 15 per cent of sugar. The presence of gum, starch and other substances interferes with the crystallization of the sugar. By adding alcohol to the somewhat concentrated juice, these substances are precipitated. After filtering the juice can be concentrated to crystallization. During the payment of sugar bounties, 1892–94, the average crop was 5.3 tons of cane per acre, yielding 82.5 lbs. of sugar per ton, equal to 437 lbs. of sugar per acre. 3,000,000 lbs. were produced 1892–94. Without the bounty this would not be profitable, and molasses with some incidental sugar is made. See SORGHUM.

Sugarberry. See HACKBERRY.

Sugar Bounties. These were granted by the U. S. to producers in that country of sugar from sugar cane, sorghum, beets and maple, 1892–94. for sugar 90° polariscope or over 2 cts. per lb., 80°–90°, 1¾ cts. Total bounties paid were $28,817,108.14, expenses $2,724,768.59, total $31,541,876.73.

Sugar Cane. See SUGAR.

Sugar Meal. See GLUTEN MEAL.

Sugar of Lead. See ACETATE OF LEAD.

Sugar of Milk. See LACTOSE.

Sugar Refining. With cane and beet sugar this is effected by dissolving the sugar in water to 30° B., adding to this calcium superphosphate and then lime to alkaline reaction. This is heated by steam, skimmed and strained, mixed with pine sawdust and passed through a filter press. The solution is then decolorized by passing through a bone-coal filter and evaporated to crystallizing point in a vacuum pan. The molasses is separated from it by centrifugal machine, or in molds by forcing it out by a sugar solution.

Lehigh Laboratory—Sugar Refinery Model.

Sugars. Many CARBOHYDRATES (q.v.) with saccharine properties. In constitution they are all alcohols, and also anhydrides, ketones, or aldehydes. See SUGAR.

Sugden, EDWARD BURTENSHAW, LORD ST. LEONARDS, 1781–1875. Knighted 1829. English jurist, recognized as the highest authority on the law of real property in his time. *Law of Vendors and Purchasers*, 1805.

Suggestion. 1. Process of one idea calling up another to consciousness by ASSOCIATION (q.v.). The whole mental life is a series of suggestions, each idea being determined by the preceding. 2. In HYPNOTISM (q.v.), arousing in the mind of the subject of an idea, belief, or impulse in any way, but usually by some definite sign or command by the operator.

Suhm, PETER FREDERIK, 1728–1798. Danish historian.

Suicide. In Law, deliberate and intentional self-murder; formerly a crime in Britain entailing a shameful burial and the forfeiture of property. In the U. S., only attempts at suicide are criminal. Annual suicide rate per 100,000 population: Saxony 31, Denmark 25.8, Austria 21.2, Switzerland 20.2, France 15.7, German Empire 14.3, Sweden 8.1, Norway 7.5,

Belgium 6.9, England and Wales 6.9. Scotland 4, Italy 3.7, Netherlands 3.6, United States 3.5, Russia 2.9, Ireland 1.7, Spain 1.4.

Suidæ (SETIGERA). Family of bunodont, even-toed *Ungulates*, having the lateral toes short, the skin covered with bristles, the canine teeth well developed and forming large tusks in the male. In the young pig there are 4 deciduous molars, but the first is retained up to the third year of life, when the 5 molars that stand behind it belong to the permanent or second set. Our domestic pig is descended from the

Wild Boars.

Wild Boar, *Sus scrofa*, but the pigs of China are referred to a distinct Indian species. In America, from Paraguay to Arkansas, the family is represented by the Peccaries. These occur in flocks, have no tail, have a cannon-bone, and the external toe of the hind foot is reduced to a metapodial splint. The Babyroussa, of the Malay Peninsula, is peculiar in the great growth of the upper canines, which grow, in the male, curved backward up over the face; they have also long lower canine tusks.

Suidas. Author of a Greek encyclopedic lexicon which gives a great variety of literary and linguistic information; personally unknown; probably before 1100.

Suine. See OLEOMARGARINE.

Suint. Peculiar grease found upon sheep's wool. It consists of a mixture of the potassium salts of stearic and other fatty acids, with a combination of these acids with cholesterin. See LANOLINE.

Suite. Composition for either solo instrument or orchestra, consisting of a series of pieces in the same key, but arranged to form an agreeable contrast in time. It was much cultivated ab.1650–1750, when the pieces were the admired dances of the period. In its fundamental form it embraced four movements, allemande, courante, sarabande and gigue; to these were sometimes added a gavotte, passepied, branle, minuet or bourrée. Modern forms are employed in the modern suite, and the old law of sameness of key has been abolished.

Suleiman. See SOLYMAN.

Suleiman Pasha, 1838–1883. Turkish general, prominent in the wars with Servia 1876 and Russia 1877; defeated near Philippopolis Jan. 1878.

Suliman Mts. Range of s. Asia, trending n. and s., separating Afghanistan from the Punjab. Length ab.360 m., greatest altitude 11,295 ft.

Sulina. Branch of the Danube, near its mouth.

Suliotes. Albanian Christians who resisted the Turks till 1803, and were then massacred or deported to the Ionian islands. In the Greek war of independence they bore a heroic part.

Sulla, LUCIUS CORNELIUS, 138–78 B.C. Officer under Marius in Africa 107, and against Teutones and Cimbri 104–101; proprætor of Cilicia 93–91; Consul 88; conqueror of Mithradates 87–83, and of the Marian party under the walls of Rome 82. As dictator, 82–79, he proscribed his enemies, caused the death or exile of thousands, and was eminent for cruelty and vice.

Sulla.

Sullivan, ALEXANDER MARTIN, 1830–1884. Irish journalist, imprisoned 1868; M.P. 1874–82.

Sullivan, SIR ARTHUR SEYMOUR. b.1842. English composer; prof. Royal Academy, principal National Training School of Music; knighted 1883. He began his career as composer in the severe style with oratorios, *Prodigal Son*, 1869, *Light of the World*, 1873, *Martyr of Antioch*, 1880, and has written overtures, services, songs, etc.; but his most lasting successes were obtained in the operettas with text of W. S. Gilbert: *Trial by Jury*, 1875; *The Sorcerer*, 1877: *H.M.S. "Pinafore,"* 1878; *Pirates of Penzance*, 1880; *Patience*, 1881; *Iolanthe*, 1882; *Princess Ida*, 1884: *Mikado*, 1885; *Ruddigore*, 1887; *Yeomen of the Guard*, 1888; *Gondoliers*, 1889, and *Utopia*, 1893. He also composed a grand opera, *Ivanhoe*, 1891, and a cantata, *Golden Legend*, 1886.

Sullivan, BARRY, 1824–1891. English tragedian, in U. S. 1857–60 and 1875.

Sullivan, FRANCIS STOUGHTON, LL.D., b. ab.1740. Prof. Dublin. *Constitution and Laws of England*, 1772–76.

Sullivan, JOHN, LL.D., 1740–1795. Delegate to Congress 1774 and 1780; Brig.-gen. 1775, Major-gen. 1776–80; active in Canada and N. J., at Brandywine and Germantown, and against the N. Y. Indians; Atty.-gen. of N. H. 1782–86, Pres. 1786–89; U. S. District Judge from 1789.—His brother, JAMES, LL.D., 1744–1808, was Judge of Mass. Superior Court 1776–82, in Congress 1784–85. Atty.-gen. 1790–1807, and Gov. 1807–8. *Hist. Maine*, 1795; *Land Titles in Mass.*, 1801.—His son, WILLIAM, LL.D., 1774–1839, pub. *Public Men of the Revolution*, 1834.—His brother, JOHN LANGDON, M.D., 1777–1865, patented a steamboat 1814.

Sullivan, JOHN LAWRENCE, b.1858 in Boston. Pugilist; victor in many contests; defeated by James J. Corbett 1892. See PUGILISM.

Sullivan, PETER JOHN, 1821–1883. Col. U. S. Vols., serving in the West; U. S. Minister to Colombia 1865–69. *Don Felix Letters.*

Sullivan's Island. Off Charleston, S. C.; 6 m. long; site of Fort Moultrie.

Sullivant, WILLIAM STARLING, 1803–1873. American bryologist. *Musci Alleghanienses*, 1846; *Musci and Hepaticæ of the U. S., e. of the Mississippi*, 1856; *Musci (of the Wilkes Expedition)*, 1859; *Icones Muscorum*, 1864.

Sully, MAXIMILIEN DE BETHUNE, DUKE OF, 1560–1641. Baron de Rosny; associate and Minister of Henry IV. of France; Duke 1606. By his resolute measures and personal supervision, he

Sully.

raised the finances from utmost disorder, lightened taxes, checked the dishonesty of officials, and encouraged trade, agriculture and internal improvements. *Memoires*, 1634–62, tr. 1834.

Sully, THOMAS, 1783–1872. American painter, of English birth. Many of his portraits have been engraved.—His son, ALFRED, U. S. A., 1821–1873, Brig.-gen. U. S. Vols. 1862–65, served in Va. 1861–62, and against Northwest Indians 1862–64.

Sully-Prudhomme, RENÉ FRANÇOIS ARMAND, b.1839. French poet, Academician 1881. *Works*, 5 vols., 1882–88.

Sulph. Prefix denoting compounds containing sulphur.

Sulphanilic Acid. $NH_2.C_6H_4.HSO_3$. Paramidobenzene sulphonic acid; monobasic; produced by the action of sulphuric acid upon aniline; magnificent rhombic crystals, not easily soluble in water; used in the manufacture of coal-tar colors.

Sulphates. Salts of sulphuric acid.

Sulphide, ORGANIC. Combination of sulphur with one or more organic groups or radicals; *e.g.*, ethylene sulphide, C_2H_4:S; phenyl sulphide, $(C_6H_5)_2$:S.

Sulphides. Salts derived from hydrogen sulphide; or compounds formed by the union of sulphur with some other element.

Sulphindigotic Acid. Product of the action of sulphuric acid upon indigo. See INDIGO EXTRACT.

Sulphites. Derivatives of sulphurous acid.

Sulphocarbamide. $S:C:(NH_2)_2$. Sulphourea; white crystalline solid, soluble in water; mpt. 171° C.; usually prepared by heating ammonium sulphocyanate. It is a weak base, and forms salts with mineral acids.

Sulphocyanic Acid. N : C·S·H. Yellow liquid, prepared from its salts. The potassium, ammonium and other salts are used in textile coloring. The potassium salt is made by fusing yellow prussiate of potash with sulphur and potash, the ammonium salt by heating carbon bisulphide with alcoholic ammonia. Sulphocyanates give a deep red coloration with ferric salts.

Sulpholeic Acid. Acid product, formed by the action of sulphuric acid on castor or olive oil. See ALIZARINE ASSISTANT.

Sulphonal. $(CH_3)_2:C:(SO_2.C_2H_5)_2$. Diethylsulphodimethylmethane; a disulphone; white crystalline solid, mpt. 126° C.; soluble in hot water; prepared by the oxidation of the corresponding sulphide; used in pharmacy as a hypnotic.

Sulphone. Combination of the group $:SO_2$ with two organic monobasic groups, ethyl sulphone $(C_2H_5)_2:SO_2$., phenylethyl sulphone, $C_6H_5.C_2H_5:SO_2$. These compounds are formed by the oxidation of the sulphides, and in the aromatic series by the action of sulphuric anhydride upon the hydrocarbons. See PHENYL SULPHONE.

Sulphonic Acids. Derived by the replacement of hydroxyl in sulphuric acid by an organic group. Thus from $\begin{matrix}HO.\\HO\end{matrix}SO_2$, ethyl sulphonic acid, $\begin{matrix}C_2H_5\\HO\end{matrix}:SO_2$ is derived. Some can be prepared by the oxidation of sulphides. Whenever strong sulphuric acid acts upon an aromatic compound, a sulphonic acid is formed. The acids are soluble in water, the salts usually crystallize well.

Sulpho Salts. Ordinary oxygen salts, in which the oxygen, either wholly or in part, has been replaced by sulphur; *e.g.*, potassium sulphocarbonate, K_2CS_3.

Sulphourea. See SULPHOCARBAMIDE.

Sulphur. S. At.wt. 32.06, sp. gr. 2.07, sp. ht. 0.177, mpt. 114.5° C., bpt. 440° C., valence II. IV. VI.; known to the ancients. It occurs in deposits in Sicily, Italy, Spain, California; also in

Sulphur Refining Apparatus.

many sulphides, sulphur waters, and sulphates. To extract it from its ores, the ores are piled up in such a way as to leave air passages, and the exterior is covered with earth or turf to prevent free access of air. The pile is ignited, a part of the sulphur burns; the heat thus generated is sufficient to melt the rest of the sulphur, which runs down to the bottom of the pile. At proper intervals it is drawn off. The crude brimstone thus obtained is distilled and run into molds, forming roll brimstone or stick sulphur. In the distillation the vapor which is first cooled is deposited as a fine powder, called flowers of sulphur. Stick sulphur is soluble in carbon disulphide; the flowers of sulphur is not. It is amorphous. Treated with oxidizing agents, it forms sulphuric acid. It is used for the manufacture of sulphuric acid, gunpowder, fireworks, matches, bleaching, and for vulcanizing rubber. Native sulphur abounds in regions of active and of extinct volcanoes, and also in connection with beds of gypsum or about the outlets of sulphur springs. Sicily has long furnished most of the native sulphur used in Europe and America.

Sulphur Auratum. Golden yellow powder; ANTIMONY PENTASULPHIDE (q.v.).

Sulphur Chlorides. See SULPHUR DICHLORIDE.

Sulphur Dichloride. SCl_2. Dark red liquid, sp. gr. 1.62, boiling at 62° C. with decomposition; decomposed by water in thiosulphuric acid; made by saturating the monochloride with chlorine at a temperature from 6° to 10° C. There are two other chlorides, S_2Cl_2 and SCl_4, both made by direct union of the elements. The tetrachloride exists only at low temperatures.

Sulphur Dioxide. SO_2. Density 2.21. Sulphurous anhydride; colorless, poisonous gas, of a pungent, suffocating odor; liquid at —17.8° C., sp. gr. 1.45, solid —79° C.; soluble in water, forming sulphurous acid; made by burning sulphur or iron pyrites in the air; used for bleaching straw, wool, silk, etc., as a disinfectant, and to prevent fermentation.

Sulphureted Hydrogen. H_2S. Hydrogen sulphide; colorless gas, with an odor of rotten eggs; found in sulphur waters; made by treating ferrous sulphide with hydrochloric or sulphuric acid; used extensively in chemical analysis; poisonous. The odor of sulphur waters and of rotten eggs is due to the presence of H_2S.

Sulphureted Hydrogen Group. Metals precipitated from solutions by sulphureted hydrogen; bismuth, silver, lead, copper, mercury, cadmium, gold, platinum, tin, antimony, and arsenic.

Sulphurets, or SULPHIDES. Combinations of sulphur with the metals; many are of great value as ores.

Sulphur Hexiodide. SI_6. Gray-black crystals, similar to those of iodine; obtained by diluting a solution of iodine and sulphur in carbon disulphide and allowing it to stand.

Sulphuric Acid. H_2SO_4. Sp. gr. 1.85, mpt. —26° C., bpt. 327° C. It distills without decomposition; it is a colorless, oily looking liquid when pure, and one of the strongest acids. It was known to the alchemists, Geber having made it from alum and Valentine in the 15th century by distilling ferrous sulphate. Its composition was determined by Berthellot 1782. The use of niter with sulphur was proposed 1740 by Lefevre and Lemery, and leaden chambers by Dr. Roebuck 1746, the absorption towers by Gay Lussac 1825, and the Glover tower by John Glover 1850. The use of pyrites dates from 1838. This acid is more largely used in the arts than any other. The strongest acid is used in making nitro-compounds and refining gold and silver; oil of vitriol in refining petroleum; tower and chamber acids in making superphosphates for fertilizers and a very large variety of manufactures. Most chemical industries make use of or are dependent upon it. 90 per cent of the world's product is used in the soda and superphosphate processes. England's product in 1878 was estimated at 850,000 tons, about half the world's product.

Sulphuric acid is made by burning sulphur or iron pyrites in a furnace with access of air, the oxygen of the latter converting the sulphur into sulphur dioxide. This is conducted, together with vapors of nitric acid, through a Glover tower filled with pieces of quartz or earthenware, and then through a series of large, sheet-lead chambers, into which steam or a spray of water is introduced. In these the sulphur dioxide is oxidized to sulphur trioxide by the nitric acid and combining with the water forms sulphuric acid. The waste gases from the last chamber, consisting of nitrogen and its oxides with a little sulphur dioxide, pass through two leaden Gay Lussac towers filled with coke over which sulphuric acid 1.7 sp. gr. drips; the latter combines with the nitrogen trioxide, tetroxide and pentoxide. The lower oxides and nitrogen are not combined and pass out the chimney connected with the last tower; this chimney serves to draw the gases through the entire apparatus. The loss of nitrogen in the lower oxides is compensated by the nitric acid, made from sodium nitrate and sulphuric acid, which is intro-

duced with the sulphur dioxide into the Glover tower, 2–6 parts of sodium nitrate being used to 100 parts of sulphur burned. The acid from the Gay Lussac towers is run into the top of the Glover tower with chamber acid and the nitrogen compounds are freed by the hot sulphur dioxide, and with the latter and water of the chamber acid pass into the chambers. The acid is thus concentrated in the tower, whose temperature is 300° C. The tower acid is further concentrated by evaporation in platinum pans or glass retorts, the water passing off leaving

Sulphuric Acid Apparatus.

the strongest acid, called oil of vitriol, sp. gr. 1.85. Chamber acid reaches sp. gr. 1.5 and tower acid 1.65.

Fuming sulphuric acid, $H_2S_2O_7$, sp. gr. 1.9, solid at 0° C., fumes in the air and is very corrosive. It was known in the 15th century. This is made in Bohemia by oxidizing pyrites contained in slate by exposure to moist air to iron persulphate and distilling the product in clay flasks, the acid passing off. It is also made by Winkler's process by passing sulphur dioxide and oxygen over platinized asbestos, where it is oxidized to sulphur trioxide, which is dissolved in sulphuric acid. This acid is used for dissolving indigo, and in the manufacture of aniline and anthracene dyes.

Sulphuric Acid, FUMING. See DISULPHURIC ACID.

Sulphuric Ether. See ETHYL ETHER.

Sulphur Monobromide. S_2Br_2. Deep red liquid, beginning to boil at 60° C.; decomposed by water; made by dissolving the requisite amount of sulphur in bromine. The higher bromides are not known with certainty.

Sulphur Monochloride. S_2Cl_2. Sulphurous chloride; yellowish red liquid; sp. gr. 1.70, bpt. 137° C. (uncor.); of characteristic, disagreeable odor. Its vapor irritates the mucous membrane. It is soluble in carbon bisulphide and benzene. It is made by distilling sulphur with stannous chloride, and is used in vulcanizing rubber.

Sulphur Monoiodide. S_2I_2. Lustrous crystals or gray crystalline mass; made by fusing sulphur and iodine.

Sulphur Rain. Rain which after evaporation leaves a yellowish powder, erroneously supposed to be sulphur; really the pollen of plants.

Sulphur Tetrachloride. SCl_4. Light, mobile, yellowish-brown liquid, decomposed by water into sulphur dioxide and hydrochloric acid; made by saturating the monochloride with chlorine at a temperature of —20° to —22° C. See SULPHUR DICHLORIDE.

Sulphur Trioxide. SO_3. Sulphuric anhydride; white, crystallized solids; mpt. 14.8° C. The liquid boils at 46° C. It is made by passing sulphur dioxide and oxygen over asbestos covered with finely divided platinum, and is used for making "solid sulphuric acid," which is almost pure $H_2S_2O_7$. It combines with water with violence to form sulphuric acid. It acts energetically as a dehydrating agent.

Sulphuryl Chloride. SO_2Cl_2. Liquid, easily decomposed by water; made by the action of chlorine on sulphur dioxide in direct sunlight.

Sulpicia, 1st cent. Roman poet, whose works are lost: a satire bearing her name is of later origin.—Another, somewhat earlier, is the supposed author of six elegies.

Sulpicians. Order founded 1642–45 at Paris to train youths for the priesthood.

Sulpicius Severus, ab.363–ab.420. French priest, biographer of St. Martin of Tours. His *Chronica* extend to 400.

Sultan. Mohammedan ruler, especially of the Turkish empire. The title was first assumed ab.1000.

Sulu (or SOOLOO) **Islands.** Between Borneo and the Philippines; first visited by the Spaniard Figueroa in 1578; in number 162; held by Spain since 1876. Area ab.1,550 sq. m., pop. ab. 100,000, chiefly Malays.

Sum. In arithmetical addition, number containing as many units as are contained in all the numbers added: in algebraic addition, aggregate of the expressions added, like quantities being united and others connected by plus or minus signs. In algebra the sum of two quantities having unlike signs is a difference, having the sign of the greater.

Sumach. Shrubs and small trees of the genus *Rhus*, natural order *Anacardiaceæ*, natives of N. America, Asia and s. Europe. The bark is used for tanning.

Sumach, POISON. *Rhus vernix*. Tall shrub of the Sumach family, growing wild in swamps in e. N. America, the foliage poisonous to the touch. The Venetian Sumach or Smoke-tree is not properly a sumach. Its leaves and twigs dye yellow and are used in tanning. The bark has been used as a substitute for Peruvian Bark.

Smoke-tree (*Rhus cotinus*), showing leaves, flowers, and fruit.

Sumarokov, ALEXANDER, 1718–1777. Russian dramatist, poet, and critic.

Sumatra. Island in the Indian Ocean, separated from the Malay Peninsula by Malacca Strait and from Java by the Strait of Sunda; 1,115 m. long, with a maximum breadth of 275 m. The interior is mountainous, with ranges running n.w. and s.e., parallel to the coast. It contains extensive fertile and highly cultivated plains. The s. part belongs to the Dutch. Its inhabitants are of Malay stock. The island was discovered by the Portuguese Lopez de Figuera 1508. Tobacco is exported to Europe and the U. S. Area ab. 163,000 sq. m., pop. ab. 3,000,000.

Sumbawa. One of the Sunda Isles, e. of Java; desolated 1815 by an eruption of its volcano Tambora. Area 54 sq. m., pop. ab. 150,000, Malays.

Sumerians. Supposed ancient inhabitants of Babylonia, preceding the Semites. The Akkadians were a branch of them.

Sumeru. See MERU.

Summary Proceedings. Those which are speedy and generally without a jury; *e.g.*, for evicting a tenant, collecting taxes, or punishment of contempt of court.

Summational Tone. See COMBINATIONAL TONES.

Summation of Stimuli. Physiological law of the nervous system; viz., that a stimulus inadequate by itself to bring about a response may, when acting with one or more other stimuli equally inadequate by themselves, produce the reaction.

Summer Eggs. Such as are produced from spring until autumn in many invertebrate animals, and which in many cases develop parthenogenetically and immediately; distinguished from winter eggs, which are generally fertilized, are protected by special shells, and rest over winter to develop the next spring.

Summerfield, JOHN, 1798–1825. English Methodist preacher, in the U. S. from 1821; noted for eloquence.

Summers, THOMAS OSMOND, D.D., LL.D., 1812–1882. Editor of many publications of M. E. Ch. South: author of commentaries and other books. *Refutation of Paine*, 1855.

Summer's Islands. See BERMUDAS.

Summons. Instrument in law, notifying a party of a suit commenced against him; to bring a defendant into court; to give a person sued an opportunity to appear and answer; generally a citation to appear before a judge or magistrate.

Summum Bonum. Highest good; ultimate end of reasonable human action.

Sumner, CHARLES, 1811–1874. Lecturer at Harvard Law School 1835–37 and 1843; in Europe 1837–40; U. S. Senator from Mass. from 1851; eminent for learning, eloquence, and uncompromising earnestness; long the most brilliant and powerful

opponent of slavery; assaulted May 22, 1856, by Preston S. Brooks, M.C. from S. C., receiving injuries which disabled him till Dec. 1859, and from which he never wholly recovered. His later career was less useful and illustrious, for his eccentricities kept him in conflict with his party and with the ad-

Charles Sumner.

ministration; but the loftiness of his motives and aims was never questioned. He was chairman of the Senate Committee on Foreign Relations 1861–71: his last years were given mainly to the Civil Rights bill. *Works*, 15 vols., 1870–83; *Memoirs and Letters*, 4 vols., 1877–92.

Sumner, CHARLES RICHARD, D.D., 1790–1874. Bp. of Llandaff 1826, and of Winchester 1827–69. *Ministerial Character of Christ*, 1824.—His brother, JOHN BIRD, D.D., 1780–1862, Bp. of Chester 1828, Abp. of Canterbury 1848, pub. *Apostolical Preaching* and other books.

Sumner, EDWIN VOSE, U.S.A., 1797–1863. Gov. of New Mexico 1851–53; Brig.-gen. U. S. Vols. 1861, Major-gen. 1862; prominent in the Va. battles.

Sumner, INCREASE, 1746–1799. Judge Mass. Supreme Court 1782–97; Gov. from 1797.

Sumner, WILLIAM GRAHAM, LL.D., b.1840. Prof. Yale since 1872. *Hist. American Currency*, 1874; *Andrew Jackson*, 1882; *Economic Problems*, 1884; *Protectionism*, 1885; *Political and Social Science*, 1885; *Robert Morris*, 1892; *Hist. Banking*, vol. i., 1896.

Sumner's Method OF DETERMINING THE POSITION OF A SHIP AT SEA. In the ordinary method, the place is found by the intersection of a circle of latitude with one of longitude. Sumner substitutes, for these, two circles from every part of the circumference of which the altitude of the sun is the same. His method has some advantages.

Sump. In Mining, extension of a shaft below the lowest working-level of a mine, into which the water of the mine is conducted, and from which it is pumped.

Sumptuary Laws. Laws, now generally obsolete, for the regulation of private habits, prescribing the quality and quantity of food, dress, and amusements, funerals, etc., in the supposed interest of economy and morality.

Sumter, THOMAS, 1734–1832. Officer of the American Revolution, serving with great gallantry in S. C. and N. C.; Brig.-gen. S. C. troops 1781; M.C. 1789–93 and 1797–1801; U. S. Senator 1801–9; Minister to Brazil 1809–11.

Sumter, FORT. At entrance to Charleston Harbor, S. C. On the secession of S. C., Dec. 1860, its surrender was demanded, and refused by Major Anderson. Gen. Beauregard opened fire April 12; it surrendered April 14, 1861: this marked the beginning of the Civil War. The fort was held by the Confederates during the war, and was shattered during the siege of Charleston.

Sun. Central body of the solar system. Diameter 866,500 m.; volume 1,300,000 times that of the earth; mass 332,000 that of the earth; gravity at surface 27.6 that at earth; density 1.41 that of water. The constitution is mainly if not en-

Sun.

Corona during Total Eclipse of the Sun, 12th December 1871, at Baikal, on the Malabar coast of India.

tirely gaseous, the heat being maintained by condensation and contraction of volume. See CORONA (SOLAR), EARTH (FIGURE OF), ECLIPSES OF THE SUN, and SUN SPOTS.

Sun, DURATION OF THE. From such data as are available it is believed that the sun cannot continue to give light and heat as at present for more than 10,000,000 years.

Sun, RADIATING POWER OF. See RADIATION.

Sun-Bittern (EURYPYGA). S. American heron-like bird with long tail, broad wings, plumage mottled and barred with white, brown, and blue: the neck is thin and short, the legs are short, and have all the toes on the same level. Allied species are found in Madagascar and in New Caledonia. They are connecting links between Herons and Plovers.

Sun-Crack. Formed at the time when the rock consolidated and due to heat. These cracks are oftentimes filled up by new material, which is often harder than the rock in which it occurs.

Sunda, STRAIT OF. Between Sumatra and Java.

Sunda Islands. E. of Java, including Flores and Timor. Sumatra and Java are sometimes included.

Sundanese. Malay tribes of w. Java; allied to the Javanese proper, but less cultured.

Sundarbans, or SUNDERBUNDS. Delta of the Ganges, from the Hoogli to the Megna, ab.165 m. Area ab.7,550 sq. m., mainly swamp and jungle.

Sunday. First day of the week; day upon which Christ rose from the dead, therefore called the Lord's day. At a very early date Christians met for worship on this day, and it has become the Christian Sabbath; Saturday being the Jewish Sabbath. There is no express authority in the New Testament for this substitution. See SABBATH.

Sunday Laws. For the preservation of the sacred character of the Lord's Day. Constantine, 321, ordered workshops to be closed. Alfred of England issued a similar decree 876. A statute of Charles II., 1676, forbade ordinary labor, trade, and legal processes. In the U. S. likewise Sunday is legally a *dies non*.

Sunday Letter. See DOMINICAL LETTER.

Sunday Schools. Begun 1780 by Robert Raikes at Gloucester, and in London 1784 by Rowland Hill; in America apparently by Asbury in Va. 1786. They spread rapidly, and soon became accessories of every place of worship, needing rooms or buildings of their own. The American Sunday School Union was organized 1824. Christendom in 1893 had about 225,000 schools, with ab.2,240,000 teachers and over 20,000,000 scholars: half of these are in the U. S. This does not include non-Evangelical Protestants or Roman Catholics; the latter are estimated to have 800,000 scholars in the U. S.

Sunderland. Seaport town of Durham, at the mouth of the Wear. It has a large shipbuilding interest and much commerce, especially in coal. Pop., 1891, 130,921.

Sunderland, Le Roy, 1802–1885. American M.E. preacher 1823–45, whose sermons produced strange physical effects; noted as a temperance and anti-slavery orator; denier of Christianity from 1845. *Pathetism*, 1847–50; *The Trance*, 1860.

Sunderland, Robert Spencer, Earl of, 1640–1702. Sec. of State 1679–81 and 1682–88; Lord Chamberlain 1697: a servile and treacherous politician.—His son, Charles, 3d Earl, 1675–1722, was Sec. of State 1706–10, Privy Seal 1715, and Prime Minister 1718–21. He was tried for corruption in connection with the South Sea scheme, and acquitted, though believed to be guilty.

Sundew. Insectivorous herbs of the genus *Drosera*, natural family *Droseraceæ*, natives of bogs in the n. hemisphere.

Sun Dial. See Dials.

Sun Dogs. Bright spots, resembling the sun, attendant upon solar halos, and accompanying the sun in his diurnal motion, as a dog follows its master. Two or more are frequently seen together, caused by refraction of solar rays through ice crystals suspended in the atmosphere.

Sundrops. *Kneiffia fruticosa.* Showy, yellow-flowered herb of the Evening Primrose family, native of e. N. America.

Sundt, Eilert, 1817–1875. Norwegian publicist.

Sunfish. 1. The true sunfishes belong to the *Centrarchidæ*. The body is deep and laterally compressed. The upper part of the operculum extends back, ear-like, and is dark-colored. There are ten or fewer spines in the dorsal fin. The sexes pair off during the breeding season, and excavate a circular nest which they guard until the young hatch. See Acanthopteri. 2. Mola, one of the *Plectognathi;* a bizarre looking fish apparently all head and higher than long.

Short Sunfish (*Orthagoriscus mola*).

Sunflower. Coarse yellow-flowered herbs of the genus *Helianthus*, natural order *Compositæ*, natives of America. The commonly cultivated large-flowered species is *H. annuus.* Native of tropical America, where it attains a height of 20 ft. Its seeds are an excellent food for poultry; an acre yields ab. 50 bu. of seeds, and each bu. 1 gal. of oil, which is little inferior to olive oil.

Sun-Grebes (Fin-Foots). Rail-like birds with lobed feet and the middle toe longest; they differ from true Grebes in having dull plumage and 18 tail feathers in their fan-shaped tail. Only four species are known, one in S. America, two in Africa, and one in s.e. Asia.

Sunnees, or Sunnites. Main body of Mohammedans, accepting the Sunna, or orthodox Tradition, as of equal authority with the Koran. See Mohammedanism.

Sunn Hemp. *Crotalaria juncea.* Leguminous plant cultivated in India for its fiber and as a forage plant. It is better than jute, but inferior to true hemp.

Sunsets, Red. During the volcanic eruption on Krakatoa in the E. Indies in 1883, volcanic dust rose to a height of 20 m., whence it was carried round the earth by the upper air currents, producing for three years twilight glows, called red sunsets.

Sunshine Recorder. Apparatus for automatic record of the time, direction and intensity of sunshine at any locality. Its earliest form was Campbell's burning lens recorder: at present various forms of photographic or blue-print records are more generally adopted, as those of Stokes, Jordan, and Curtis.

Sun's Motion in Space. The sun is found to be moving toward a point in the constellation Hercules, right ascension 267°, declination +31°, with a velocity variously estimated, but which may be 16 m. per sec.

Sun Spots. Openings in the photosphere of the sun, caused, according to one theory, by eruptions from below, according to another by cool matter rushing down from above; mostly confined to zones on each side of the equator between latitude 5° and 45°. Occasionally a spot is large enough to be visible to the naked eye. The duration may be only a few

Sun Spots observed on Sept. 2, 1839.

days, or it may extend to a year or more. See Period of Sun Spots.

Sun's Temperature. This has been variously estimated; the most reliable investigation seems to be that of Rosetti, who gives for the effective temperature 18,000° F.

Sunstone. Variety of feldspar (oligoclase or orthoclase) exhibiting internal yellowish, reddish, or salmon-colored reflections, from minute disseminated crystals of some accessory mineral. The best specimens come from Norway.

Sunstroke. Condition produced by exposure to excessive heat. There are two forms: (1) Heat exhaustion and (2) Heat stroke. 1. Prolonged exposure to high temperature, especially when combined with physical exertion, is apt to be followed by extreme prostration, collapse, and, in severe cases, delirium. The surface is usually cool, the pulse small, rapid and soft; the breathing easy though hurried; the temperature may be less than normal; while the vital forces fall into a collapse, the senses remain active. The individual need not be exposed to the direct rays of the sun, but the condition may come on when working in close, confined rooms during midsummer, or even be produced by artificial heat, as in the boiler room of an ocean steamship. The treatment includes the use of stimulants, ammonia is frequently valuable, and, whatever stimulant is used, it may be necessary to use it hyperdermically. When the temperature is below normal, a hot bath is indicated. 2. Heat stroke, thermic fever. This chiefly occurs in persons working very hard and exposed to the sun, especially if they have been drinking beer or whisky. There is unconsciousness with high temperature and the indications of a febrile condition. The indications for treatment are to reduce the temperature as rapidly as possible. Place the patient in a bath of the temperature of 70° F., use an ice pack, or rub the body with ice.

Sun Worship. Prominent element in many primitive religions, notably that of old Persia, and in Peru. The sun was

Temple of the Sun during the later reigns of the Incas.

generally regarded as associated with the masculine, as opposed to the moon, the symbol of the feminine principle in nature.

Superaxillary. Above the axil, as the buds of *Gymnocladus.*

Supererogation. In R. C. Theology, opinion that by following the counsels of perfection one may do more than enough for his salvation, leaving a surplus for others' shortcomings. It is not an article of faith.

Superfecundation. Entrance of more than one spermatozoön into an egg, particularly when more than one sperm unites with the female pronucleus. This takes place by fragmentation of the female nucleus and the consequent formation of as many embryos as there are zygotes. The result is monstrous and abortive development.

Superfetation. Fertilization of an ovum in a uterus already occupied by a product of conception from a previous ovulation. The possibility of superfetation is now pretty generally denied.

Superficial Energy. See CAPILLARITY.

Superflua. Order of the Linnæan class *Syngenesia* (natural family *Compositæ*), having the florets of the disk perfect, but those of the rays only pistillate, as in Tansy and Goldenrod.

Superheated Steam. Steam at a higher sensible temperature than that which corresponds to its boiling-point at that pressure (see SATURATED STEAM). It is used in engines, so that the heat lost by internal condensation in the cylinder may be supplied from the incoming steam without condensation. The water or mist from such condensation would be re-evaporated when the pressure was lowered by expansion of the steam after cut-off; for such evaporation additional demand for heat is made, which new steam and the hot cylinder walls must supply, and so on at each stroke.

Superintendence, WAGES OF. Amount which the organizer of industrial operations, the entrepreneur, receives over and above the usual rate of interest on the amount of money invested.

Superior. In Botany, ovary of a flower when it is entirely free from and above the calyx.

Superior. Capital of Douglas co., Wis.; at w. end of Lake S.; settled 1855, revived 1881. It has flour and lumber mills, ironworks, and a large trade. Pop., 1890, 11,983, since greatly increased.

Superior, LAKE. Highest and largest of the chain of Great Lakes of N. America, lying between Mich., Wis., Minn. and Canada. Its outlet is by the St. Mary's River to Lake

Storm on Lake Superior—View near the "Pictured Rocks."

Huron. Area 31,200 sq. m., extreme length 412 m., extreme breadth 167 m., maximum depth 1,008 ft., elevation 602 ft., drainage area 85,000 sq. m.

Superior Limit OF INTEGRATION. That toward which the definite integral is reckoned. When the limits are indicated, it is placed at the upper, the inferior at the lower extremity of the sign of integration.

Superior Limit OF ROOTS. Quantity larger than the largest root. The ordinary limit is found by subjecting the largest negative coefficient to the root indicated by the position of the first negative coefficient from the first term: the result increased by one is the superior limit. The least superior limit is found by Sturm's theorem as a basis for approximating to the incommensurable roots.

Superior Planets. Those whose orbits are outside that of the earth: Mars, the Asteroids, Jupiter, Saturn, Uranus, and Neptune.

Supernumerary. Extra men detailed for guard duty, to take the places of those of the regular detail in case any of the latter are found not fit to march on guard.

Supernumerary Buds. Buds in the axils of leaves in addition to the principal one.

Superphosphate. Fertilizers in which the phosphate of lime has been made soluble by treatment with sulphuric acid. In general they give the best results on wheat, oats, and barley, on land that does not contain much lime. On some limestone lands their use seems to be practically without result. See CALCIUM PHOSPHATES.

Supersaturation. Some solutions have a higher coefficient of solubility when hot than when cold. If such a hot saturated solution be carefully cooled, the salt does not immediately crystallize, but the liquid remains in a condition of supersaturation, and is in a state of unstable molecular equilibrium. If a crystal of the same salt be dropped in, the excess held in solution immediately crystallizes.

Suphis, or CHEOPS. Second king of 4th Egyptian dynasty.

Suppé, FRANZ VON, 1820–1895. Composer of German operettas. *Fatinitza*, 1876, *Boccaccio*, 1879, *A Trip to Africa*, 1883, *Bellman*, 1887, and *Clover*, 1888, became popular in English versions in America.

Supper, LORD'S. See EUCHARIST and LORD'S SUPPER.

Supple-Jack. 1. *Berchemia volubilis.* Climbing shrub of the natural family *Rhamneæ*, native of the s.e. U. S. 2. *Paullinia curassavica.* Climbing woody vine of the natural family *Sapindaceæ*, native of tropical America. Its stems are made into walking sticks.

Supplemental Chords. Those drawn from the same point on the curve to the extremities of a diameter. If the ellipse and hyperbola in one of two supplemental chords be parallel to any diameter, the other chord is parallel to the conjugate diameter. Supplemental chords thus determine conjugate diameters.

Supplementary Cost. That portion of the cost of production of any article which consists in its share of the general expenses of the business.

Supplement of an Angle. Remainder obtained by subtracting the given angle from 180°. If the angle exceed 180°, the supplement is negative.

Supply, IN ECONOMICS. Quantity of a given article which can be had at a given price.

Supply and Demand, EQUILIBRIUM OF. Balancing of the desire to acquire new economic goods with the desire to avoid certain efforts, or retain certain immediate enjoyments or other economic goods already possessed.

Supply Price. That required to call forth the exertion necessary for producing any given amount of a commodity.

Supported Joints. System of supporting the ends of rails upon cross-ties, as distinguished from that of suspended joints, where they are between the cross-ties.

Supporting Lamella. Thin lamella between the ectoderm and endoderm in Hydroids.

Suppression, IN BOTANY. See ABORTION.

Suppression of Contraction. Destruction of the contraction on one side of a contracted vein, thus increasing the flow of water.

Suppuration. Termination of inflammation when the pus producing bacteria have found lodgment and have developed. The tissues involved are liquefied and changed into pus. One of the fundamental causes for the great success of modern surgery is the exclusion of these bacteria from wound surfaces and the prevention of suppuration. Lister was a pioneer of antiseptic surgery, and a great deal of its popularity, before its value was incontestably demonstrated, was due to his enthusiastic teaching. See PUS.

Supra-axillary. See SUPERAXILLARY.

Supralapsarianism. Severer form of predestinarian doctrine, ascribing the fall of man and the reprobation of the non-elect, as well as the election of the chosen, to the eternal purpose and decree of God.

Supra-œsophageal Ganglion. Cerebral ganglion or brain of Invertebrates. It lies dorsal to the œsophagus, and is united to the infra- or sub-œsophageal ganglion and ventral nerve chain by nerve fibers, called circum-œsophageal commissures.

Supra-renal Capsule. Flat triangular body, weighing from one to two drms., which covers the top of the kidney, as with a helmet. A cavity in the interior contains a reddish or yellowish fluid. Their function is extremely obscure, but probably concerned in lymphosis. See ADDISON'S DISEASE.

Supremacy Act, JAN. 15, 1535. Henry VIII. of England assumed the style of "Supreme head of the Church of England."

It was repealed 1554, and re-enacted 1559. Many executions followed the denial of the king's supremacy.

Supreme Court. Usually, the court of last resort in the State. See COURT.

Supreme Good. See SUMMUM BONUM.

Supreme Rule OF ACTION. Ultimate rule of right and wrong, not with reference to any particular end, but according to an absolute standard.

Surabaya. Seaport on n.e. coast of Java, with a large export trade. Pop., 1890, 107,878.

Suraja Dowlah, d.1757. Nabob of Bengal 1756. He captured and plundered the old fort of Calcutta, June 1756, and shut 146 English prisoners in the Black Hole, where but 23 survived. He was defeated by Clive, Feb. 4, 1757, near Calcutta, and routed at Plassy, June 23. See BLACK HOLE.

Surakarta. Town of central Java; capital of the native prince, who is controlled by the Dutch. Pop., 1890, 91,368.

Surat. City of w. India, on the Tapti, 20 m. from its mouth; founded ab. 1510; thrice burned by the Portuguese;

View of Surat.

commercially important ab.1550–1670; repeatedly pillaged by Mahrattas; partly occupied by English and Dutch from 1612; held by Gt. Britain from 1800. Pop., 1891, 109,229.

Surcouf, ROBERT, 1773–1827. French privateer, long troublesome to the British in the E. Indies.

Surd. Indicated root of a quantity which is not a perfect power of the degree of the root.

Surety. One who has made himself liable for another's undertaking: any change made therein without his consent avoids his liability.

Surface Condensers. See CONDENSER.

Surface Tension. See CAPILLARITY.

Surf-Bird (APHRIZA). Plover-like bird of the Pacific coast of America.

Surfusion. Condition of a substance when liquid at a temperature below the fusing point. Sodium thiosulphate, *e.g.*, will be in this condition if melted and then carefully allowed to cool without disturbance. If, when cold, a crystal of the salt be brought in contact with the fluid, the mass instantly solidifies with the evolution of heat.

Surgeons, COLLEGE OF. Originated from 1460-61, and after various stages became the Royal Coll. of Surgeons of London in 1800. Its museum is the finest of its kind in Gt. Britain.

Surgery. Originally a branch of medicine involving the employment of manual operations. The term has been widened on the one hand to include more than this, and limited by the specialties on the other, making it difficult to draw a sharp dividing line. It may be considered to be that branch of medicine which takes cognizance of the diseases and accidents of those parts of the body that can be directly inspected, and the operative care of those parts that cannot be. Some writers do not use the term so comprehensively, as they exclude the specialties.

Surgical Instruments from Pompeii.

Surinam. Name given to Dutch Guiana. See GUIANA.

Surinam Toad. See AGLOSSA.

Surplice. White linen vestment worn by clergy during service; modification of the alb; objected to by Continental reformers and English Puritans; now universally used in Anglican and P. E. chancels, and generally by the choir also; used also in R. C. Ch., and in Scandinavia only during the Eucharist.

Surplus Produce OF LAND. Produce in excess of the amount which would have just recompensed the cultivator for his expenditure of labor and capital.

Surprise. In its simplest form, feeling aroused by a sudden, unexpected presentation. It seems to depend on a lack of harmony between the presentation and the expectant attention. This produces apparently a sort of mental shock, in its essence disagreeable. The characteristic facial expression of surprise, viz., intensified attention, is a preservative reaction, whose function is to obtain a clearer presentation of the object causing the feeling. Should the object continue strange and unrecognized, the feeling passes into wonder, which is a state much more intellectual and complex.

Surrey, EARL OF. See HOWARD, HENRY.

Surrogate. Originally, substitute of a bishop in his judicial capacity; in the U. S., local officer who exercises probate jurisdiction.

Surtees, ROBERT, 1779–1834. English antiquarian. *County of Durham*, 4 vols., 1816–40. The S. Society, established 1834, publishes similar works.

Survey, BOARD OF. Purely advisory board, comprising generally three military officers, called by the commanding officer of a military post for the purpose of ascertaining and reporting facts, submitting opinions, and making recommendations upon questions of responsibility which may arise through accident, mistake or neglect.

Surveying. See LAND SURVEYING.

Surveyor's Chain. See CHAIN and GUNTER'S CHAIN.

Surveyor's Compass. Instrument for measuring the bearings of lines; consisting of a magnetic needle mounted in a box with sights, the bearings being read off on the graduated circle. See TRANSIT.

Surveyor's Compass.

Surveys, GEOLOGICAL. The first State to provide for the investigation of its rock formations was N. C. in 1823, followed by Mass. in 1830, and by 1895 nearly all the States. Pa. made a second, more elaborate survey. In Ala., N. J. and Ohio a permanent survey is maintained. The U. S. government instituted geological examinations early in its history, and from 1834 has sent expeditions into the Western country for that purpose. The U. S. Geological Survey was established 1879; the British in 1832, Canada 1842, Austria and Spain 1849, and other countries later.

Survival of the Fittest. See NATURAL SELECTION.

Survivorship. Whether A outlives B is to be established, under English law, by evidence, and not by presumptions based on age, sex, or physical strength. If the survivor is joint-owner or obligor with the deceased, he becomes sole owner or obligor at common law. This doctrine has been largely swept away by equity, commercial usage, and statute.

Surya. God of the Sun, in Vedic pantheon; called Savitar and Aditya. According to the myth, he traverses the world with a sunflower in his hand, in a chariot drawn by seven red horses, and produces light and heat. His charioteer is Aruna, god of the dawn, who has no legs.

Susa. Ancient capital of Elam or Susiana, the Khusistan of modern Persia. Important excavations have been made here by Loftus and by Dieulafoy. To the latter is due the discovery of important friezes in colored tiles, now in the Louvre. One of these is a unique representation of a procession of Persian archers.

Susanna. Jewish matron, heroine of a brief apocryphal book, which recounts the attempt against her virtue by two elders, their rebuff, their revengeful impeachment of her chastity, and their detection by the youthful Daniel. The R. C. Ch. gives it as the 13th chapter of Daniel.

Susemihl, FRANZ, b.1826. Prof. Greifswald 1856; writer on Plato and Aristotle. *Hist. Greek Literature in the Alexandrian Age*, 1891.

Suso, or **von Berg,** HEINRICH, 1295–1366. Dominican

monk, mystical preacher and writer. *Book of Eternal Wisdom*, tr. 1500.

Suspended. In Botany, ovules which hang down from top of ovary.

Suspended Animation. Temporary cessation of some of the functions of life. See ASPHYXIA and HIBERNATION.

Suspended Joints. Joints of railroad rails placed between the cross-ties, as distinguished from those placed upon the cross-ties.

Suspender. Rod which hangs from the cable of a suspension bridge, and to whose lower end the roadway is attached.

Suspension Bridge. See BRIDGES, BROOKLYN BRIDGE, and NIAGARA BRIDGES.

Suspensor. See PROEMBRYO.

Susquehanna. River, chiefly of Pa. The e. or n. branch rises in Otsego co., N. Y., and flows some 300 m. s.w. then w. through N. Y., then s.e. and again s.w. through Pa. to Northumberland, where it joins the w. branch, which rises in Cambria co. and flows ab. 200 m. e. and then s. The united

Susquehanna—Junction of West and North Branch.

stream flows s. till joined by the Juniata, and then s.e. to Md. and Chesapeake Bay, ab. 150 m. It is not navigable, except for timber-rafts, etc., in spring, but is noted for beauty of scenery, especially in the Wyoming Valley, which is celebrated in history, legend, and poetry. Drainage area ab. 28,000 sq.m.

Sussex. Saxon kingdom in s. England, founded 477 by Ella; subject to Wessex 725.

Sussex. See CATTLE.

Sustermans, JUSTUS, 1597–1681. Flemish portrait painter, affiliated with Rubens and Van Dyck, but ranking much below them.

Sutcliffe, MATTHEW, ab. 1550–1629. Dean of Exeter 1588; controversial writer, chiefly in Latin.

Sutech. Egyptian deity, in later times identical with Set, and regarded as the god of foreigners.

Sutlej. Branch of the Indus, rising in Thibet, and flowing nearly 1,000 m. n.w., w., and s.w.; joined by four other rivers. See HYPHASIS.

Sutlers. See CAMP FOLLOWERS.

Sutras. Collections of Hindu aphorisms, partly commentaries on the Vedas.

Sutro, ADOLF HENRY JOSEPH, b.1830 in Prussia. Mining engineer in Cal. and Nev.; promotor of the tunnel, 1869–79, to reach the Comstock lode. He gave to San Francisco a copy of the Bartholdi statue of *Liberty*, 1887.

Suttee. Voluntary cremation of a widow on her husband's funeral pyre; practice once prevalent among the Hindus, but suppressed by the British 1829, and in the native States under their protection 1847.

Sutter, JOHN AUGUSTUS, 1803–1880. Swiss pioneer in Cal. 1839, at what is now Sacramento; useful to the Wilkes and Fremont expeditions; ruined by the discovery of gold 1848 on his premises.

Suture. Material used by the surgeon to stitch wounds together. It may be made of metallic wire (usually silver), of silk, of animal membrane (catgut), etc. The name is also applied to the character of the stitch employed, as a continuous or interrupted suture.—In Anatomy, the immovable articulations of the bones of the cranium.

Twisted Suture as used in the operation for harelip.

Sutures. In Botany, line along which the infolded edges of the carpellary leaf meet, in the metamorphosis of the pistil of a flower; also line opposite this, corresponding to the midrib of the leaf.

Sutures. 1. Lines where two structures, *e.g.*, bones, join, without forming a movable articulation. 2. Lines on the outside of the cephalopod shell, made by the margins of the septa.

Suwanee. River rising in s. Georgia in Okefinokee Swamp, flowing s. through Florida into the Gulf of Mexico, ab. 10 m. n. of Cedar Keys; it has been made navigable to White Springs.

Suwarow, or **Suvorof,** ALEXANDER, 1729–1800. Russian general, active against the Turks, Poles, and French; eminent especially for his captures of Ismail, 1790, and Praga, 1794.

Suzerain. Prince or chief in relation to his vassals; now, state or ruler holding nominal authority over another state.

Svanetia. District of the Caucasus. Area 1,250 sq. m., pop. ab. 13,000.

Svastika. Symbol found on ancient coins and monuments in Europe and Asia; supposed to refer to sun worship.

Svatopluk, or ZWENTIBOLD, ab.884. Ruler of Moravia.

Svendsen, JOHANN SEVERIN, b.1840. Norwegian musician, violinist and composer; conductor at Christiania 1872–77; Court Chapelmaster at Copenhagen since 1873. His compositions are chiefly chamber music and orchestral pieces.

Sven Tröst. Pen-name of SNOILSKY (q.v.).

Svetla, KAROLINA (JOHANNA MUZAK), b.1836. Bohemian novelist and poet.

Svir. River of n.w. Russia, flowing from Lake Onega, 135 m., into Lake Ladoga, making part of the Marûnsk system of navigation, connecting the Baltic with the Caspian and White Seas.

Svold. On coast of Pomerania; scene of defeat of Olaf Trygvasson, King of Norway, by Svend of Denmark, 1000.

Swabia. See SUABIA.

Swain, CHARLES, 1803–1874. English poet. Known as the "Manchester" poet.

Swain, DAVID LOWRY, LL.D., 1801–1868. Gov. of N. C. 1832–35; pres. Univ. N. C. from 1835.

Swain, GEORGE FILLMORE, b.1857. Prof. of Civil Engineering in Mass. Institute of Technology since 1883; engineer of the Mass. Railroad Commission.

Swain, JOSEPH, 1761–1796. English hymnist.

Swainson, WILLIAM, 1789–1855. English writer on ornithology and zoölogy, in New Zealand from 1841. *Naturalist's Guide*, 1840.

Swallowing. Act by which food or other material is conveyed from the mouth to the stomach. It is placed at the back of the mouth by voluntary action, where it excites a reflex movement by which it is carried down the œsophagus by peristaltic action.

Swallows (HIRUNDINIDÆ). Picarian birds with long pointed wings, small feet, short broad bill, deep gape without bristles, 9 primaries in wing, and 10 tail feathers. Ab.100 species are

European Barn Swallow (*Chelidon rustica*) and European Martin (*Hirundo urbica*).

known, almost universal in distribution. They feed while flying, catching insects. Some build nests in crevices, some dig holes in banks, and others make mud nests plastered against walls. *Chelidon erythrogaster*, the Barn Swallow of the U.

S., much like that of Europe, is lustrous steel blue, pale chestnut below, tail deeply forked. It arrives early in May and remains in n. U. S. until late August. The American Chimney Swallow is a SWIFT (q.v.). See FISSIROSTRES.

Swamp Oak. In Australia, *Casuarina suberosa*, a tree of the natural family *Casuarineæ*, producing very hard wood; in N. America, *Quercus palustris*.

Swan, JOSEPH ROCKWELL, 1802–1884. Judge Ohio Supreme Court 1854–59. *Statutes of Ohio*, 1841; *Pleading and Practice*, 1851.

Swanee River. See SUWANEE.

Swan Maidens. Widely diffused European tale, traced to the ancient Hindu cosmic myth of the Apsaras, personifications of the cirrus clouds. They were the houris of the Vedic heaven, receiving the souls of the heroes. The common tale is that of the man who surprised several maidens bathing. He seizes the swan robes of one which lie nearest him and makes her his wife. She usually escapes by recovering her feather robe.

Swann, THOMAS, 1805–1883. Pres. Baltimore and Ohio R.R. 1847–53; Mayor of Baltimore 1856–60; Gov. of Md. 1865–68; M.C. 1869–79.

Swans. Large duck-like birds with long necks, distributed throughout n. and s. temperate latitudes, but extinct in Africa. The color is a brilliant white, except in *Chenopis atrata* of Australia, which is black, but with white bars on wing and bill, and in the black-necked swan of S. America. The latter nests in July or Sept., building up from the bottom in water several feet deep. The Trumpeter Swan (*Cygnus buccinator*), of N. America, has the bill wholly black; the Whistling Swan

Mourning Swan (*Chenopis atrata*).

has a black bill, yellow at base. *C. olor*, the Mute Swan of Europe (now native to, but once introduced into England), is largely domesticated; it has red bill and black legs. The wild forms migrate s. to the Mediterranean, Egypt, and Persia. The young (cygnets) are sooty gray or brown, and do not become pure white for a year, but occasionally white cygnets are hatched from this species. Cygnets are a table delicacy in Europe. See ANATIDÆ.

Swansea. Seaport in s. Wales; seaside resort. It has large commerce, shipping tin, copper, iron, and coal. Pop., 1891, 90,423.

Swarm-Spores. See ZOÖSPORES.

Swarthmore College. In Delaware co., Pa.; founded 1864, opened 1869; controlled by Friends. It has (1897) 24 instructors and 172 students, of both sexes. It offers courses in arts, letters, science, and engineering.

Swartz, OLAF, 1760–1817. Prof. Stockholm. *Observationes botanicæ*, 1791; *Flora Indiæ occidentalis*, 1797–1806; *Synopsis Filicum*, 1806; *Lichenes Americani*, 1811.

Swastika. See SVASTIKA.

Swatow. Seaport of China, opened 1859; on the Hanu, near its mouth, 225 m. e. of Canton. Its chief exports are tea and sugar. Pop. ab.25,000.

Sway Bracing. Bracing used in a bridge for the purpose of preventing oscillations and stresses in case of wind.

Swayne, NOAH HAYNES, LL.D., 1804–1884. Justice U. S. Supreme Court 1862–81.—His son, JOHN WAGER, b.1834, was Major-gen. U. S. Vols. 1865–67.

Sweat. See PERSPIRATION.

Sweating Sickness, or MILIARY FEVER. Epidemic which visited England 1485, 1506, 1517, 1528, and 1551. It began with pains in various parts of the body, flushes of heat and sleepiness, followed by profuse sweating, and sometimes an eruption. The crisis usually passed in 24 to 48 hours, and the epidemic generally spent itself in a month. Its causes have been sought in unfavorable atmospheric conditions, lack of house and street drainage, unsanitary habits, and overfeeding.

Sweating System. Organization of labor existing in some industries, in which the employer gives out the work to a subcontractor, who in turn employs workmen, generally in his own rooms. It has invariably proved subject to abuse.

Sweden. Country of n. Europe, occupying with Norway the Scandinavian peninsula, and comprising most of its e. incline. Area 172,876.5 sq. m. Agriculture is the principal

Types and Costumes—Swedish Interior.

industry. It produces large amounts of iron and coal, and its forests are of great value. Manufactures are of secondary importance. It has a large commerce, 5,454 m. of railway, and an excellent public school system. The government is a limited monarchy. The capital is Stockholm. Norway and Sweden are united under one king, and act in their foreign affairs as a unit. Sweden was Christianized ab.1150, united with Denmark and Norway 1397–1524, and for near two centuries prominent in European affairs, especially under Gustavus Adolphus, 1611–32. The wars of Charles XII., 1697–1718, exhausted his realm, which ceased to be a first-class power. The present dynasty began with Charles XIV., Bernadotte 1809–18. Pop., 1890, 4,784,675, ab.28 to a sq. m.

Sweden, CHURCH OF. Branch of Lutheranism, governed by bishops, the metropolitan being the Abp. of Upsala. Its Episcopal succession is doubtful, and not held as of divine right.

Swedenborg, EMANUEL, 1688–1772. Swedish theosopher, founder of a profound and peculiar religious system, now widely

Emanuel Swedenborg.

diffused, and partially embodied in the NEW JERUSALEM CHURCH (q.v.). He was assessor of mines 1716–47, was ennobled 1719,

gained high scientific rank, and began to teach his system 1743. He was subject to visions, dreams, and strange psychologic experiences, which he interpreted as revelations. *Opera Philosophica et Mineralia*, 3 vols., 1734; *Animal Kingdom*, 5 vols., 1741–45; *Arcana Celestia*, 8 vols., 1749–56; *Heaven and Hell*, 1758; *Doctrines of the New Jerusalem*, 1763; *Angelic Wisdom*, 1764; *Conjugal Love*, 1768; *True Christian Religion*, 1771. His works were reprinted in 10 folio vols. 1869–70; most of them exist in English versions.

Swedish Green. See SCHEELE'S GREEN.

Swedish Language. Member of the Scandinavian family, closely allied to Danish, with which it made up the so-called East-Norse group, as opposed to the Norwegian (now represented only in dialects) and Icelandic. The literature of modern Swedish begins with the Reformation.

Swedish Literature. The Scandinavian literatures have much in common. In early times Sweden produced poetry similar to that of the other members of the group. In Mediæval times the writings were largely theological; the first Swedish work of importance was a paraphrase of the Bible by ST. BIRGITTA (q.v.) ab.1340. The oldest history is *Chronica Regni Gothorum*, by Ericus Olai (d.1486). In the 14th century the native literature of Norway became extinct, and that of Sweden increased, chiefly in rhyming chronicles, ballads and law compilations. In the Reformation in the 16th century the N. T. was translated by Laurentius Petri, and his brother, Olaus, wrote the first Swedish hymnal. The latter also wrote the earliest school drama, *Tobiæ Comodia*, 1550. Johan Messenius wrote six plays illustrating Swedish history. Under Gustavus Adolphus and his successors literature improved, philosophy and science were cultivated, and noted scholars invited to the country. The Swedish Academy was founded 1786. Bellman, Kellgren, Leopold, Thorild, Rosenstein and Adlerbeth are among the writers of this period, much under French influence. In science there were Linnæus, Celsius, Bergmann, Scheele and Swedenborg. In the present century the influence of the German romantic school has been great in all directions, poetry, the drama, philosophy and fiction. Runeberg, Oscar II., Frederika Bremer, Rydberg and Mellin are representatives of this period. In science are Retzius, Fries, Berzelius and Nordenskiöld. See SCANDINAVIAN LITERATURE.

Sweeny, THOMAS WILLIAM, U.S.A., 1820–1892. Brig.-gen. U. S. Vols. 1862–65; distinguished in Mo., at Shiloh, and in the Atlanta campaign.

Sweep. Long oar used on board ship to assist the rudder, during a calm, or the motion of the ship, as in the ancient galley.

Sweeping Table. Ore-dressing apparatus on which slimes are gently manipulated with a broom while a flowing current of water carries away the lighter and poorer portions.

Sweepstakes. Mode of gambling, especially at races. Tickets in a pool are sold for certain horses, the proceeds of which, less a certain percentage for the manager of the pool, is divided among those who bought tickets on the winning horse. The Pari Mutuel, the pool for the race for the Grand Prix at Paris, has paid 800 for 1. Pools are sold also for second and third place in the race.

Sweet, BENJAMIN JEFFREY, 1832–1874. Brig.-gen. U. S. Vols. 1864–65; commander of Camp Douglas, which he twice saved, with Chicago, from Confederate attacks.

Sweet, HENRY, b.1845. English philologist. *Phonetics*, 1877; *Current Shorthand*, 1892.

Sweet, JOHN EDSON, b.1832. American machinist, inventor of a straight-line engine.

Sweetbread. Pancreas of animals; that of ruminating animals is used as food.

Sweet-Brier. *Rosa rubiginosa.* Tall, climbing, odorous shrub of the Rose family, native of Europe, cultivated and introduced into N. America.

Sweet-Cicely. 1. Herbs of the genus *Washingtonia*, natural family *Umbelliferæ*, natives of the n. temperate zone. The roots are aromatic, with flavor of anise. 2. *Myrrhis odorata*, similar plant of the same family, native of Europe.

Sweet-Fern. *Comptonia peregrina.* Fragrant shrub of the natural family *Myricaceæ*, native of e. N. America.

Sweet-Flag. See CALAMUS.

Sweet-Gale. *Myrica gale.* Small shrub of the natural family *Myricaceæ*, native of the cooler portions of the n. hemisphere, growing in swampy places.

Sweet-Leaf. *Symplocos tinctoria.* Small tree of the natural family *Styracaceæ*, native of the s.e. U. S. Known as Horse Sugar.

Sweet Potato. *Ipomœa batatas.* Trailing vine of the natural family *Convolvulaceæ*, bearing thick fleshy edible roots; widely cultivated for food.

Sweet Potato (*Ipomœa batatas*).

Sweet-Sop. *Anona squamosa.* Tree of the natural family *Anonaceæ*, native of tropical America; cultivated for its edible fruit.

Sweet Spirits of Niter. See ETHYL NITRITE.

Sweet William, WILD. *Phlox maculata.* Showy-flowered herb of the natural family *Polemoniaceæ*, native of the e. U.S.

Swell of Muzzle. In the old bronze and cast-iron cannon that portion of the gun near the muzzle which was made of greater thickness than the portion a few calibers in rear. Modern guns do not have it.

Swetchine, ANNE SOPHIE (SOYMANOF), 1782–1857. Russian-French writer, m. 1799: maintainer of a noted salon in Paris from 1816. *Letters*, 1861, tr. 1867; *Writings*, tr. 1869.

Sweyn, or SVEN, d.1014. King of Denmark; father of Canute; invader of England 1003 and 1013.

Swift. 1. Fence-lizard. 2. More properly, 60 species of Picarian birds, of the family *Micropodidæ* or *Cypselidæ*, with long wings, rapid flight, crepuscular, short and wide bill, and deep gape. In these respects they resemble swallows, but they differ in having 10 primaries, 6 or 7 secondaries and 12 rectrices, and in being Picarian. Not all the family are "true" swifts. The latter have all four toes turned forward, and never more than 3 phalanges in any toe. Some build remarkable, pendent nests,

Swifts (*Micropus melba* and *Micropus apus*). *M melba* (upper figure) is Alpine Swift, *M. apus* (lower figure) is European Swift.

attached to walls and roofs and glued together with glutinous saliva. Among the other members of the family is *Chætura pelagica*, the Chimney Swallow (Swift), with its spine-pointed tail feathers, and the Swiftlets, among which the *Collocalia* species makes the edible birds' nests of almost pure mucus: one cave in n. Borneo yields three crops per year. 40 nests bring $9, and $25,000 worth are taken here annually. See FISSIROSTRES, CYPSELI, and PAMPRODACTYLOUS.

Swift, JONATHAN, 1667–1745. Irish satirist, long a power in British politics; Dean of St. Patrick's, Dublin, 1713; famous for genius, misanthropy, and disappointed ambition. His strange relations to "Stella" (Esther Johnson) and "Vanessa" (Esther Vanhomrigh), and his lamentable fate, are still matters of general interest. Besides many tracts and much rough but vigorous verse, he wrote *A Tale of a Tub* and *Battle of the Books*, 1697–1704; *Conduct of the Allies*, 1711; *Journal to Stella*, 1713; *Drapier's Letters*, 1724; and the immortal *Gulliver's Travels*, 1726. His mind gave way 1741.

Swift, LEWIS, b.1820. Director of an observatory at Rochester, N.Y.; discoverer of several comets.

Swift, WILLIAM HENRY, U.S.A., 1800–1879. Engineer, long on the coast survey, and later in railroad work.—His brother, JOSEPH GARDNER, U.S.A., 1783–1865, was similarly employed.

Swift, ZEPHANIAH, LL.D., 1759–1823. M.C. 1793–97; Judge Conn. Supreme Court 1801; Chief-justice 1806–19. *Laws of Conn.*, 1795–96; *Law of Evidence*, 1810; *Digest of Conn. Laws*, 1822–23.

Swimmerets (PLEOPODS). Flat or leaf-like exopodites and endopodites of the abdominal appendages of lobster-like *Crustacea;* particularly those of the last joint, which are greatly enlarged, and, with the telson, form the tail fin of these animals.

Swimming. Art of keeping the body afloat in water and propelling the person in any desired direction; properly not a sport only, but a most necessary equipment for any one

Swimming—Positions taken in making a stroke.

whose time is spent on or near the water. The sport includes diving and swimming under water. The most remarkable modern swimmers have been Capt. M. Webb, who in Aug. 1875 swum from Dover to Calais in 21 h. 45 min., and the Beckwiths, all of England. 100 yards in still water has been swum in one minute by Meadham of New S. Wales, 440 yards in 5 min. 49¼ sec. by Tyers of England, and a half mile in 12 min. 7½ sec. by Nuttal, an English professional. Beckwith, swimming 10 h. a day for six days, covered 94 m.; Miss Beckwith swum 20 m. in the Thames in 6 h. 25 min. P. S. McNally of Boston in July 1897 swum 35 m., nearly across the English Channel, in 15 h.

Swinburne, ALGERNON CHARLES, b.1837. English lyric and dramatic poet, noted for his unequaled mastery of melodious verse, and in early life for his radical opinions and the extreme freedom of his muse. These qualities are most apparent in *Laus Veneris*, 1866, and *Songs before Sunrise*, 1871. *Atalanta in Calydon*, 1864, is his best dramatic poem. He has also pub. *Essays and Studies*, 1875, a *Life of Victor Hugo*, 1886, and other critical prose.

Swine (SUIDÆ). The native pig of the New World is the Peccary; others have been introduced. The domestic pig, *Sus scrofa*, is descended from the European wild boar, but with admixture of a stock long bred in e. Asia. The boar's canines of both jaws turn upward, and are used in digging for food, as well as for defense. Wild swine are swift runners. They rut in the fall. The gestation period is 4 months, the young, which are striped, are hidden and well-defended by the mother. A number of species live in the E. Indies; others are the Bosch Vark in S. Africa and the Red River pig of Guinea. See WART HOG.

Swine are kept but for one purpose, meat; consequently all the breeds approach one type of form, that most profitable for meat production. Breeds differ mainly in size, color, and minor points. An adult male is a boar, a castrated male a barrow, an adult female a sow, a female that has not produced young a gilt, and the young are pigs.

Berkshire Pig.

Berkshire.—Breed that originated in Berkshire, Eng. They are of medium size, symmetrical form, black, with a strip in the face, the four feet, and a few hairs at the tip of the tail, white. They have a dished face and erect ears. Next to Poland China in numbers, they are much esteemed for the high quality of the bacon and hams they furnish.

Cheshire.—White breed resembling the Chester White; chiefly known in a few counties in central N. Y.

Chester White.—Large white breed, originating in Chester co., Pa. They are the largest and most popular of the white breeds. No black hair is admissible, but bluish spots in the skin are not a disqualification.

Duroc-Jersey.—American breed, characterized by large size and a red or reddish brown color. They are somewhat coarse in body, and are held in less esteem on that account. They are hardy and prolific.

Essex.—Small black English breed. They make a very good quality of pork, but are too small to enter into competition with the improved American breeds.

Poland China.—Breed that originated in central Ohio, by crossing, selection, and inbreeding. They are of large size, formerly largely spotted, but now nearly entirely black, and very smooth and symmetrical, with a slightly dished face and drooping ears. They far outnumber any other breed.

Suffolk.—Small white English breed. They have scanty hair and tender skins, rendering them liable to scurvy and other skin diseases, on which account they are little kept.

Victoria.—White breed of composite origin. There are claimed to be two different breeds; and one of them at least has not well-fixed characteristics. They are kept only in small numbers.

Yorkshire.—Small white breed of English origin, chiefly characterized by their short and very much dished faces. They

Improved Yorkshire Pigs.

mature early, fatten readily, and are much prized where a small carcass is desired for cutting up fresh. See PORK.

Swine-Cress. See WART-CRESS.

Swing. Common means of amusement in Asia, as well as Europe and America. In Corea, swinging is a spring sport and is practiced by girls even of 18 and 19 years. In Japan, men and boys swing, both the swing and the act of swinging being called Buranko.

Swing, CAPTAIN. Name assumed by certain persons in England between 1830–33, who sent threatening letters to those who used threshing-machines. Disregard to these demands resulted in the burning of grain-stacks and farm buildings. The laboring class believed that the use of machinery would lessen the demand for labor.

Swing, DAVID, 1830–1894. Prof. Miami Univ., Ohio. 1854–66; Presb. pastor in Chicago from 1866; independent from 1874, after a trial for heresy, of which he was acquitted. His influence was great. *Club Essays*, 1880.

Swing Bridge. One which swings on a central pivot. See BRIDGES and DRAWBRIDGE.

Swinton, WILLIAM, 1833–1892. Scottish-American writer of school-books and histories of the Civil War; prof. Univ. Cal. 1869–74. *Rambles Among Words*, 1859; *Word Analysis*, 1872. —His brother, JOHN, b.1830, is a journalist and radical lecturer.

Swiss Guards. In the French service from 1616; famous for fidelity and heroism; nearly annihilated in defending the Tuileries Aug. 10, 1792; in 1830 defeated and dispersed. The Pope employs Swiss Guards about his palace.

Swisshelm, JANE GREY (CANNON), 1815–1884. American journalist and anti-slavery agitator. *Half a Century*, 1881.

Switch. Arrangement of levers and movable rails,

whereby a train may be turned from one track upon another. The principal types are the STUB, SPLIT, and WHARTON SWITCHES (q.v.).

Switchback Railway. One in a mountainous country, so arranged that after a down grade the train runs by its momentum up a short grade, and then backward by gravity on another track; also, road where a car is drawn up an inclined plane, and then runs back in a circuit to the point of starting. The oldest in the U. S. is that at Mauch Chunk, Pa., built 1845 for coal transportation.

Switch-Grass. See QUACK-GRASS.

Swithin, ST., d.862. Bp. of Winchester 852; canonized 970. His bones were removed to the cathedral 971, and were supposed to work miracles.

Switzerland. Republic of Europe, between Italy, France, and Baden; of irregular shape; area 15,964 sq. m. Its surface consists mainly of an alternation of high, rugged mountains (the Alps) and narrow valleys. Its agricultural industries are extensive and varied. The manufactures are also large and varied, consisting largely of silk, cotton, watches, and condensed milk. Its railway mileage in 1893 was 2,220. Its early history is one of heroism, as shown in the compact of Uri, Schwyz, and Unterwalden 1307, and the legendary deeds of WM. TELL (q.v.). The Austrians were defeated at Morgarten 1315, at Sempach 1386, and at Næfels 1388. Lucerne joined the alliance 1332. The Helvetic Confederation was founded 1352 by eight Cantons. Independence was secured 1477 by the destruction of Charles the Bold. Five more Cantons were added 1513. Zurich was defeated by R. C. Cantons 1531. By the treaty of Westphalia (1648), S. was acknowledged as an independent State, and again, at the peace of 1815. A Helvetic Republic existed 1799–1803; French influence prevailed till 1814.

Lake Kloenthal, Switzerland.

The confederation consists of 22 Cantons, each represented in the Diet. The constitution was modified 1830, 1848, and 1874. The Cantons are divided into absolute and representative democracies. In the former, legislation is conducted by a yearly assembly of the adult male population; in the latter, by a great council, elected by the people. The control of the army, foreign affairs, police, post-office, settlement of disputes between Cantons, are handed over to a Federal Assembly of two Chambers, the State Council of 44 members, and the National, of 135. Executive power is delegated to a Federal Council of 7, holding office for 3 years, the President being merely one of the Council. The Federal Tribune, of 9 members, elected by the Federal Assembly, acts as a high court of appeal. Every citizen is obliged to serve as soldier; there is no standing army. Property is much subdivided, and there are no titles of Swiss origin. Systems of law differ in the different Cantons. Mountains and lakes produce the finest scenery, and make S. "the playground of Europe," and the resort of multitudes of summer visitors from all parts of the world: hotel-keeping is a leading and increasing industry. The chief cities are Zurich, Geneva, Basel, and Berne. Pop., 1894, 2,986,848.

Sword. Hand weapon used in all lands and ages, except by savages; of varying size and shape; in the past sometimes, but rarely, two-handed; sometimes curved, as the saber, but usually straight; formed for either cutting or thrusting, or for both. The edge may be single, or double, as in the Highland claymore. The hilt or handle has been variously formed, often elaborately decorated, and sometimes of basket pattern. It embraces the rapier, cutlass, broadsword, scimiter and saber. It is the official weapon of the commissioned officer and the symbol of his authority, of which he is temporarily deprived when placed in arrest.

Sword Bayonet. Bayonet shaped like a short broad sword, now used with the new service .30 caliber rifle. When detached from the rifle it may be used as a cutting implement.

Sword Dance. Dancing with swords is a ceremonial custom of great antiquity, and took the form either of a practical military exercise, in which it existed in n. Europe to a late time, or as a dramatic exhibition by youths or girls, such as the Pyrrhic dance of the Greeks and Romans. A sword dance by singing girls is a popular amusement of the gentry of Corea. In Scotland the person dances over two swords crossed upon the ground or floor.

Swordfish. See ACANTHOPTERI and XIPHIAS.

Syagrius. Ruler of the kingdom of Syagrius, between the Seine, Marne and Oise in France. Defeated by the Franks under Clovis at Soissons 486, by whom he was put to death. He was the last Roman ruler in Gaul.

Sybaris. Greek town in Lucania, on or near Gulf of Tarentum; founded ab. 720 B.C.; famous for luxury; taken and destroyed 510 B.C. by Crotonians, and a river turned on its site.

Sybel, HEINRICH VON, 1817–1895. German historian; prof. Bonn 1841 and 1861, Marburg 1846, and Munich 1856; member of several parliaments; director of archives at Berlin 1875; founder and ed. *Hist. Zeitschrift. Deutschen Königthums,* 1844; *Revolutionszeit, 1789–1800,* 5 vols., 1853–74: *Establishment of the German Empire,* 5 vols., 1885–90, tr. 1891.

Sycamine. In Scripture, the black mulberry tree.

Sycamore. *Ficus sycomorus.* Tree of the Fig family, native of the Mediterranean region. In Scripture, species of fig, with leaves slightly resembling the mulberry. The wood was light and porous, but lasted for very many ages.

Branch of *Ficus sycomorus*: *a*, fruit.

Sycamore, AMERICAN. See BUTTONWOOD.

Sycandra. Calcareous sponge, one of the Sycones. See SYCONIDÆ.

Syconidæ (SYCONES). Calcareous sponges, rarely colonial, with thick walls, pierced by straight radial tubes that project on the surface. The body is sac-like, opening by one osculum. The flagellated cells are confined to dilatations of the radial canals. *Sycandra* is an example.

Syconium. Fig-fruit. It consists of a hollow flower-stalk or receptacle, within which a large number of minute flowers are borne, some of which ripen small achenes, often considered the seeds, the structure becoming fleshy and edible. It is also called a Hypanthodium.

Sycon-Type. Sponge having simple or branched lateral or radial tubes, coming off from the paragaster and involving the entire body wall, or simply burrowing in a thick mesoderm. In this type, the endoderm cells are of two sorts, pavement cells and choanocytes; the latter are restricted to the radiating tubes.

Sycosis. Name given to various diseases of the hair follicles. Barber's itch, a contagious disease, is sometimes so called. True sycosis is non-parasitic and, consequently, not communicable.

Sydenham. In Kent, 8 m. s. of London; site of the Crystal Palace, built 1852–54, at a cost of ab. $7,000,000.

Sydenham, CHARLES EDWARD POULETT THOMSON, 1799–1841. M.P. 1826; Privy Councilor 1830; Gov.-gen. of Canada 1839; Baron 1840.

Sydenham, FLOYER, 1710–1787. English translator of Plato, 1760. *Onomasticon,* 1784.

Sydenham, THOMAS, M.D., 1624–1689. London practitioner, who introduced a method, then unfamiliar, ascribed to Hippocrates. His Latin works were collected and published as their first issue 1846 by the S. Society (formed 1843), and tr. 1848. This society prints medical works.

Sydney. Capital of New South Wales, Australia, on the shore of Port Jackson, an inlet which furnishes a fine harbor; founded 1788, but mainly of recent growth; long a penal settlement. It is in a coal region, and has a mint, a large commerce, and considerable manufactures. Its university dates from 1852. Pop. 1891, 112,000; with suburbs, 380,000.

Sydney Town Hall.

Sydney, ALGERNON. See SIDNEY.

Syenite. Crystalline rock consisting of feldspar and hornblende, with or without quartz, resembling granite in its mode of occurrence, but less common. The name was first given by Pliny to rock from Syene in Egypt, a hornblendic granite, and later by Werner to the rock from the Plauensche Grund near Dresden, which was mainly a mixture of hornblende and feldspar.

Sykes, GEORGE, U.S.A., 1822–1880. Brig.-gen. U. S. Vols. 1861, Major-gen. 1862–66; commander 5th corps at Gettysburg.

Sylburg, FRIEDRICH, 1536–1596. Librarian at Heidelberg; editor of sundry classics.

Sylla. See SULLA.

Syllabus. Encyclical of Pope Pius IX., Dec. 8, 1864, condemning eighty tenets, about half of which are condemned by Christians generally, while the others are regarded by most Protestants as true. Whether it is of dogmatic or only of disciplinary authority does not appear to be finally settled.

Syllogism. Form of mediate inference which consists of three terms and three propositions, major, minor and middle terms, major and minor premises, and conclusion. The conclusion is based upon the comparison, in the premises, of the major and minor with the middle term.

Sylphs. In mediæval legend, spirits of the air, as gnomes are of earth and salamanders of fire.

Sylva. Botany of the trees of a country.

Sylvanite. $(Au,Ag)Te_2$. Rich gold and silver telluride, formerly found in considerable quantity in Transylvania, but in recent years regarded as a very rare mineral, until the discovery of the Cripple Creek deposits in Col., where it is now one of the most important of the ores.

Sylvester I., ST. Bp. of Rome 314–335. His day is Dec. 31.—II. GERBERT, ab.950–1003. Abbot of Bobbio ab.990, Abp. of Ravenna 998. Pope 999. As a man of learning, some supposed him to be in league with the devil.—III. Antipope 1046.

Sylvester, JAMES JOSEPH, LL.D., D.C.L., F.R.S., b.1814. English mathematician. Prof. of Mathematics, Univ. Va., 1841–42, of Physics, London 1851, Woolwich 1855, and Johns Hopkins Univ. 1876; Prof. of Geometry at Oxford 1883; leader in modern analysis, especially in the advanced development of determinants.

Sylvester, JOSHUA, 1563–1618. English poet. His version of Du Bartas' *Divine Weeks and Works*, 1605, was a folio of over 1,000 pages. *Tobacco Battered*, 1615.

Sylviculture. See FORESTRY.

Sylvie, EDUARD, 1670–1739. French naturalist, in S. America and W. Indies 1701–10. *Voyages*, 10 vols., 1714–28.

Sylviidæ. See DENTIROSTRES.

Sylvite. KCl. Mineral potassium chloride, of infrequent occurrence, though found in some quantity associated with rock salt at STASSFURT (q.v.).

Sylvius, DE LA BOE, 1614–1672. Iatrochemist, Prof. of Medical Science at Leyden. He attempted to explain the phenomena of respiration, digestion, etc.

Sylvius, JACOBUS, 1478–1555. Prof. of Anatomy at Paris 1550. *Opera Medica*, 1630.

Symbiosis. Peculiar form of commensalism, more particularly referring to the habitation of animal cells by unicellular *Algæ*, as in the Green Hydra, and the yellow cells of Radiolarians. The plant cells absorb the carbonic acid secreted by the animal, and in sunlight produce oxygen, which is absorbed by the animal protoplasm. Thus there is mutual advantage.—In Botany, intimate coexistence of one organism with another, the two being mutually dependent, as the supposed combination of *Fungi* and *Algæ* in the structure of lichens; known also as Consortism.

Symbols. Creeds, confessions of faith, or formal statements of doctrine; so named by Cyprian ab.250; historically treated by Marheineke in *Symbolik*, 1810, by Winer 1824, Möhler (R. C.) 1832, and many recent writers, as Dr. Schaff in *Creeds of Christendom*, 1878.

Symbols. In Chemistry, used to designate the elements and their compounds. Of the elements, the symbols are usually the initial, or first and second, or other letters of their accepted name: *e.g.*, C of Carbon, Ca of Calcium, Ce of Cerium.

Symborodont Dentition. Molar teeth of the amœbodont-lophodont series, having the outer tubercles of their crowns longitudinally elongated and crescentic, while the inner tubercle remains isolated and conic, as in *Symborodon*.

Syme, JAMES, M.D., 1799–1870. Prof. Edinburgh 1833: eminent as teacher, operator, and introducer of new methods. *Principles of Surgery*, 1832; *Pathology and Practice of Surgery*, 1848.

Symington, ANDREW JAMES, b.1825. Scottish writer and compiler. *Chalmers*, 1878.

Symington, WILLIAM, 1764–1831. Scottish inventor of a steamboat, tried 1788. His *Charlotte Dundas* was used for towing on the Forth and Clyde Canal 1801–2, at the time of Fulton's failure on the Seine.

Symmachus, ab.200. Author of a Greek version of O. T., of which fragments remain.

Symmachus. Pope 498–514; opposed till 506 by Laurentius, who had imperial support. He was an active man, magnifying his office and holding several synods.

Symmachus, QUINTUS AURELIUS, ab.340–ab.403. Roman prefect 384, Consul 391; belated defender of Paganism; of pure and lofty type. His *Letters*, in 10 books, survive, with three eulogies and parts of six orations, pub. 1815.

Symmes, JOHN CLEVES, 1742–1814. Delegate to Congress 1785–86; Judge of Northwest Territory 1787; founder of Cincinnati.—His nephew, JOHN CLEVES, U.S.A., 1780–1829, put forth 1818 the theory of "Symmes' Hole," whereby the earth, being hollow, could be entered from the North Pole. This was resuscitated 1876 by his son, Americus Vespucius.

Symmetrical. 1. In Botany, having an equal number of parts in each floral whorl. 2. Having the parts on each side of the principal axis alike in form and size.

Symmetrical Determinant. One whose conjugate elements are equal. This may be either axi-symmetric, in reference to the diagonal of the determinant; or centro-symmetric, in reference to the center of the square array.

Symmetrical Figure. 1. In respect to a center of symmetry, when all lines through that point cut the figure at two symmetrical points. 2. In respect to an axis, where every point on one side of the axis has a corresponding symmetrical point on the other side. 3. In reference to a plane, the same criterion applies. Two figures are symmetrical when every point in one has a symmetrical point in the other.

Symmetrical Points. 1. In reference to a point (center of symmetry) when it bisects the line joining them. 2. In respect to a line (axis of symmetry) when it bisects at right angles the line joining them. 3. In reference to a plane, the same criterion applies.

Symmetry. Harmonious balance of parts along an axis which swings around a single fixed point in every direction. Geometrically, symmetry, as seen in living organisms, may be referred to a central point (centrostigma), a central axis (centraxonia), or a central plane (centrepipeda). See BILATERAL SYMMETRY, LIPOSTAURA, PROMORPHOLOGY, RADIAL SYMMETRY, and STAURAXONIA.—In Mathematics, likeness of position in reference to some fixed element.

Symmetry of Expression. An algebraic expression is symmetrical when its literal elements may be interchanged without affecting its form.

Symonds, JOHN ADDINGTON, 1840–1893. English historian and critic, long resident in Switzerland. *Renaissance in Italy*, 7 vols., 1875–86; *Life of Michelangelo*, 1892.

Symons, GEORGE JAMES, F.R.S., b.1838. English meteorologist, authority on rainfall.

Sympathetic Ink. See COBALT CHLORIDE.

Sympathetic Nervous System. See NERVOUS SYSTEM.

Sympathetic Vibrations. When one sounding body is placed near another, separated only by the air or other

elastic medium, both being of the same pitch, if one body be sounded the other will absorb from the air the note of that particular period which is equal to its own. Such vibrations are called sympathetic. The phenomenon may be practically illustrated by sounding the proper note before an open piano.

Sympathy. Feeling aroused by expression of a similar state of mind in another. The more developed and complete form exists where there is an imaginative reproduction of another's feelings; *i.e.*, fellow-feeling. The emotion depends upon social experience, and its development corresponds to the development of civilization. It is feeble in the lower animals and among the lower races. In Ethics and common use, it refers especially to the sorrows of others.

Sympetalous. See GAMOPETALOUS.

Symphonic Poem. Form of musical composition for orchestra, introduced by Liszt as a substitute for the symphony. It is in a single movement, though divided by changes in tempo, key and sentiment, is based upon a poetical idea, a sequence of incidents or moods to which a clew is given by the title, or a motto which serves as a programme, and frequently has a principal subject which the composer transforms so as to make it express variety of emotional or dramatic content.

Symphony. Musical composition for orchestra, whose characteristics are identical with those of the sonata. The form was established by Hadyn, and brought to its highest estate by Beethoven. Besides these, the greatest symphonists were Mozart, Schubert, Schumann, and Brahms.

Symphysis. In Botany, cohesion or adhesion of parts typically distinct.

Sympiesometer. Form of barometer invented by Adie of Edinburgh, which indicates the pressure of the atmosphere and its variations. It consists of a column of oil, supported in a tube closed at the top by atmospheric pressure, rising against a body of hydrogen gas, which acts like a spring against the oil.

Symplegades. Two small islands at the entrance of the Euxine, fabled to collide when ships passed through. Homer calls them "Wanderers."

Sympodial Dichotomy. In Botany, condition arising from the greater development of one branch of a bifurcation than of the other.

Sympodium. Stem whose main axis ceases to grow, while the branches, continuing to develop, build up the plant body.

Symptoms. Changes of condition, or the phenomena, which occur in the manifestation of diseases, and which serve to point out their nature. Symptoms may be subjective when, as pain, observed by the patient alone; objective, as the physical signs, when observed by the physician; pathognomonic, when they certainly indicate definite diseases. Symptoms complex is the group of individual symptoms together forming the distinctive picture of the disease.

Synacmy. See PROTERANDROUS.

Synagogue. Meeting-house of the Jews, who had one

Synagogue, Great Portland Street, London.

temple for sacrifice, but many synagogues for public worship and instruction. It originated after the return from Babylon, 538 B.C. According to express rabbinic law, it was always to be built on the highest point of the city and ten men were sufficent to form a congregation. In Palestine the entrance faces the south. The ark was the most important object in the building.

Synagogue, GREAT. In Jewish tradition, council of 120 men, assisting Ezra, and surviving him, which regulated the Hebrew Canon and the observance of the law.

Synangium. *Bulbus arteriosus* of *Amphibia.*—In Botany, boat-shaped sorus of certain ferns.

Synanthesis. Maturing of both pistils and stamens of a flower simultaneously.

Synapta. See APODA.

Synapticulæ. Bars that unite the septa of corals.

Synaptosauria. See HYDROSAURIA.

Syncarp. Aggregate or multiple fruits which become compact or fleshy at maturity.

Syncarpous. Gynœcium of a flower when consisting of coalescent carpels.

Synclastic. Curved surfaces are divided by Sir Wm. Thomson into two classes, synclastic and antisynclastic. A tangent plane at any point of a synclastic surface does not cut the surface: hence the curvatures of all normal sections are similarly directed; *e.g.*, a sphere, an ellipsoid. A plane tangent to an antisynclastic surface cuts it, and it bends away from the plane, part from one side, part from the other.

Synclinal Axis. Line toward which the strata dip from opposite sides.

Syncline. Trough or furrow between two anticlines formed by the bending of the strata, as in the Appalachian region.

Synclinorium. Mountain system originating in a submarine synclinal of great extent.

Syncopation. Binding of two similar notes so that the accent intended for the second appears to fall on the first. Its effect in the accompaniment of songs may be charming. See ACCENT IN MUSIC.

Syncope. Abridgment of a word by elision of a vowel or syllable.

Syncretism. Effort to reconcile contending sects or parties on a basis of common belief; especially that of G. Calixtus, 1586–1656, and his son, who sought to mediate between the Lutheran and Reformed systems. The controversy raged with much fury, and Calovius, 1612–1686, won the battle for severe confessional orthodoxy.—In Philosophy, compilation of systems without reference to unity or consistency; thus opposed to eclecticism.

Syncytium. Tissue formed of cells whose bounding walls are indistinct or absent.—In Botany, one in which cell-walls are not developed, as in the vegetative stage of slime-moulds. A plasmodium.

Syndactyli. See LEVIROSTRES.

Syndendrium. United bases of the stomatodendra in *Rhizostomidæ.*

Syndic. Officer of a town or corporation, chiefly in France, Italy, and Geneva.

Syndicate. Organization or association for commercial ends, usually in the way of large financial operations or of publication through various channels.

Syne. River in Burmah, ab. 20 m. n. of Moulmein. Curiously picturesque and almost inaccessible rocks rise abruptly

Syne River, with Burmese Race-boat

from the plain on the banks of the river; nevertheless the Burmese priests have erected a pagoda on the summit of the

highest rock, which is said to have been built by religious penances.

Synecdoche. Figure of speech which puts a part for the whole, a species for its genus, or the reverse, as "a sail" for "ship," or "Boston" for some of its inhabitants.

Synentognathi. See ANACANTHINI.

Synergism. Modification of Luther's doctrine by Melanchthon, making man a coworker with God in redemption. It was opposed by Flacius, and caused much commotion at Jena and elsewhere.

Synesius, ab.375–414. African Neoplatonist, friend and correspondent of Hypatia; Bp. of Ptolemais in Cyrene 410; remarkable for liberal opinions, wide culture, and lofty independence; author of hymns, orations, and letters, collected 1553 and often reprinted; celebrated by Kingsley in *Hypatia.*

Syngenesia. Linnæan class of plants, distinguished by having the anthers united into a tube or ring, as in the composite flowers (natural family *Compositæ*).

Syngenesious. Stamens whose anthers are united into a ring or tube about the style, as in *Compositæ.*

Syngenesis. Theory that each egg contains in miniature the organism which is to develop from it, and this in turn the germs and homunculi that are to come from it. Thus Eve must have had in her all the members of the human race (for all time) telescoped one within the other, in successive generations.

Syngeneticæ. Order of unicellular, colonial, fresh water *Algæ* of the subclass *Phæophyceæ.*

Syngeothermal. Lines joining places at which the temperature of the earth near the surface is the same at a given hour of Greenwich time; epithet applied by Hennessey 1867.

Syngnathous. See LOPHOBRANCHII.

Synod. Any larger church-council; especially, a Presbyterian assembly, including several presbyteries.

Synod, HOLY. Governing body of Russo-Greek Ch., replacing the old Patriarchate of Moscow. It has 12 members, appointed by the Czar.

Synodic Period. Interval between two conjunctions of a planet with the sun, as seen from the earth.

Synod of Dort. See DORT, SYNOD OF.

Synonym. In Botany, more recent or otherwise untenable generic or specific name which has given place to the original or earliest tenable one.

Synonyms. Words of nearly equivalent signification, but usually with some slight difference of shade; therefore important in literary use. The chief collections of them in English are those of Crabbe and Roget.

Synoptic Charts, or WEATHER CHARTS. Maps on which are displayed the meteorological conditions simultaneously prevailing over large regions. In Europe, they usually obtain for a certain hour of local time; in America, they are strictly simultaneous on standard time.

Synpelmous. Arrangement of the flexor tendons in a bird's foot, in which the tendon of the hallux unites with the common tendon of the other toes.

Synpetalous. See GAMOPETALOUS.

Synsepalous. See GAMOSEPALOUS.

Syntax. Division of grammar (so called) treating of the arrangement of words and construction of sentences.

Synthermal. Lines connecting places throughout the world having the same average temperature at the same hour of Greenwich time; epithet introduced by HENNESSY, H. (q.v.), 1867.

Synthesis. Process and method; as process, the psychological combination of different elements of consciousness to form a complex whole; as method in philosophy, the complement of ANALYSIS (q.v.), representing the formation of a unified system of beliefs by articulating them in a systematic whole.

Synthesis, CHEMICAL. Process by which a compound is made from its constituent elements.

Synthetic Type. Organism which connects, as a link, other organisms, because the separate characteristics of the latter are present in the one animal. Certain fossils have both bird and reptilian characters. As these appeared geologically at the beginning of the period when Reptiles and Birds (*Sauropsida*) first appeared, we may suppose that such forms retain most nearly the characters of the common ancestors of Birds and Reptiles.

Syphax. See MASINISSA.

Sypher, JOSIAH RHINEHART, b.1832. Journalist and lawyer in Pa. *Hist. Pa.*, 1868.

Syphilis. Specific disease of slow evolution, propagated by inoculation (acquired), or by hereditary transmission (congenital). In the acquired form the site of inoculation becomes the seat of the special tissue change (primary lesion); after an interval of 2 or 3 months, constitutional symptoms develop with affection of the skin and mucous membranes (secondary lesion); and, finally, after a period of 3 or 4 years growths develop in the viscera, muscles, bones or skin (tertiary lesion). It is a disease of social impurity, and because of its contagiousness can be conveyed to the innocent. It probably causes more suffering and discomfort than any other single disease. This is an ancient disease, with the Chinese dating back to 2637 B.C., and is claimed to have existed among the ancient Greeks. In 1494 it appeared in the army of Charles VIII. of France, then besieging Naples, and later was prevalent in Europe.

Syra. One of the Cyclades: area 43 sq. m. Its central position in the Ægean makes it an important calling-place

Syra.

of vessels in the Levant. It is the seat of a Greek Abp. and of a R. C. bishop. Its capital, Syra, or Hermoupolis, has some commercial importance. Pop., 1890, 22,104.

Syracuse. Chief city of ancient Sicily; on s.e. coast; founded ab.734 B.C. from Corinth; ruled by Gelo 484, Hiero 478–467, Dionysius 405–367, and other tyrants; attacked by an Athenian expedition 415, which was destroyed 413, ending the Peloponnesian war and the supremacy of Athens; besieged 396 by Carthaginians, who were routed by a pestilence; freed by the hero Timoleon, liberator of Sicily, 343; ruled by Agathocles 317–289, and Hiero II. 270–216, the latter being in alliance with Rome; besieged by Romans 214 (see ARCHIMEDES); taken and sacked 212 B.C.; pillaged and burned by Saracens 878; rebuilt in later times on Ortygia, a peninsula (once an island), its first site. Its coinage of ab.300 B.C. is the most beautiful known; its remains of antiquity are important. Pop. ab.25,000.

Syracuse. Capital of Onondaga co., N. Y.; on Onondaga Lake, in a salt-producing region; settled 1797; chartered 1826 and 1847. Its industries relate chiefly to salt and soda-ash manufacture. Pop., 1890, 88,143.

Syracuse University. At Syracuse, N. Y.; known as Genesee Coll. and located at Lima, N. Y., until 1871; founded 1848; coeducational; under Methodist control; organized in four colleges of liberal and fine arts, medicine, and law. It has 1,135 students, of whom 474 are in the liberal, and 516 in fine arts, with 89 instructors and a library of 47,000 vols., including Von Ranke's collection.

Syr-Darya. River of Turkestan, rising near the Chinese border and flowing w. and n.w. to the Aral Sea. Length ab. 1,300 m., drainage area 120,000 sq. m. As the ancient Jaxartes, described by Herodotus and Strabo, its outlet was into the Caspian.

Syria. Region of w. Asia, e. of Palestine; anciently occupied by Semites; long an independent kingdom, then (ab.740 B.C.) a province of Assyria, as later of Babylonia and Persia; conquered by Alexander 333 B.C.; ruled by the Seleucidæ 301–64 B.C., and then a Roman province till 636; thenceforth held by Mohammedans, and in part by Crusaders 1099–1291; subject to Egypt till 1516 and 1832–41; now part of the Turkish empire.

Antioch was its capital from ab.290 B.C., and Damascus 654–752, as in Hebrew times.

Syriac. See SEMITIC LANGUAGES and ARAMAIC.

Syriac Literature. This is mostly theological writings of the Syriac Church, dating from early Christianity, flourishing from 4th to 10th centuries and declining in the 13th century. Poetry and history were much written, the latter and philosophy being often written in verse. There were many translations from the Greek. The most learned writer was ABULFARAGIUS (q.v.).

Syrian Rite. Of R. C. Ch.; comprising United Syrians, Chaldeans, Maronites, and United St. Thomas Christians. They use a Syrian ritual, not the Latin.

Syringa. Showy, white-flowered shrubs of the genus *Philadelphus*, natural family *Saxifragaceæ*, natives of N. America. See LILAC.

Syrinx. Vocal organ of birds, situated at the point where the trachea divides into the two bronchi. The walls are modified into tympanic membranes, and membranous septa, like vocal cords, are stretched interiorly across the openings of the tubes, so they can vibrate in the passing air current.

Syrinx. Pan's pipe or shepherd's pipe of the ancients; as such a precursor of the modern organ. It consisted of a series of cane tubes of various lengths, fastened side by side and sounded by blowing across their open ends, as boys whistle on keys.

Syrphus Flies. Small two-winged flies whose larvæ, colored greenish to gray, are of service in that they feed on plant lice.

Syrphus Flies.

Syrtis. See SYRTIS MAJOR.

Syrtis Major, or GULF OF SIDRA. On n. coast of Africa, between Tripoli and Barca. Syrtis Minor, or Gulf of Cabes, projects into the coast of Tunis. Both are dangerous from quicksands.

Syrup. Boiled saturated water solution of sugar, with addition of fruit juices or other flavoring substances, as vanilla-bean, ginger or sarsaparilla, and drank with addition of water or soda water. For the latter saponin or egg white is added to produce foaming. Medicinal syrups contain remedial agents dissolved in simple syrup. The term is also applied to MOLASSES (q.v.).

Syrus, EPHREM. See EPHREM.

Syrus, PUBLILIUS, 1st cent. B.C. Roman comic playwright. Some of his *Mimi Sententiæ* survive.

System. In Botany, group of the parts of an organism of the same morphological significance or physiological function.

System, IN GEOLOGY. See INTERNATIONAL CONGRESS.

System, ARTIFICIAL or LINNÆAN. Classification of plants according to an arbitrary rule; as Natural System, that of Jussieu, is according to their relationship.

Systematic Botany. Branch treating of the classification of plants.

Systems of Artillery. The character and arrangement of the material of artillery adopted by a nation at a particular epoch. About the middle of the 16th century France first grouped her artillery into a system having six different calibers, varying from 33¼ pound shot to ¾ of a pound shot, each requiring a different carriage without interchangeable parts; also requiring three different sizes of powder grains. A second system, equally varied in its components, was adopted in the reign of Louis XIV. Valière's system, adopted in 1732, brought about some uniformity in guns, but not in carriages. Gribeauval in 1765 separated the field and siege artillery, making the former simpler and more mobile by improving the carriages; he introduced cartridges, elevating scales, and tangent screws for more rapid and correct firing. This last system was used in the wars of the French Republic and the Empire. In 1827 the stock-trail system was engrafted upon the Gribeauval and other improvements introduced. It was brought to this country by Captain Daniel Tyler, an officer of the U. S. artillery, and was made the basis of the American system, used in the Mexican war and in the Rebellion. In 1850 the 12-pounder bronze gun, firing shot and shell, was introduced by Louis Napoleon, and soon found its way into the services of all nations. Since 1870 the smooth-bores have been replaced by breech-loading rifled guns, so that at present the light artillery or field service systems possess the greatest mobility, simplicity and power they have ever attained. Equally valuable improvements have been made in the siege and seacoast systems, in which uniformity, simplicity, and efficiency have been the qualities sought.

Systems of Fortification. The form of the general outline of the main work in permanent fortification military engineers have classified under four heads, or systems of fortification; viz., (1) the Circular or Curvilinear; (2) the Polygonal or Caponière; (3) the Tenailled; and (4) the Bastioned. The method of fortification is applied to the manner adopted by a nation in fortifying its strategical points, as the German Method (Antwerp); or to those devised by distinguished military engineers, as, Vauban, Cormontaigne, etc. The former belong to the Polygonal system and the latter to the Bastioned.

Systyle. Intercolumniation in which the distance between the columns is equal to their diameter.

Syzygy. Duplex organism formed by external union of the bodies of two individuals that were previously separate, as in many Gregarines and in the worm *Diplozoön*. Except in the latter, this union is not apparently for sexual purposes; it resembles rather the plasmodium, and may secure the advantage that underlies the phenomena of colony-formation among animals, which is usually secured by retaining the primitive connection existing in asexual multiplication.

Syzygy OF THE MOON. Its conjunction or opposition with the sun.

Szabad, EMERIC, b. ab.1822. Hungarian soldier, in U. S. 1861–65. *Hungary*, 1854; *Policy of Europe*, 1857; *Modern War*, 1863.

Szabadka. Town of Hungary, 105 m. s.s.e. of Pesth; in a farming region, with a good trade. Pop., 1890, 73,526.

Szalay, LASZLO, 1813–1864. Hungarian biographer, historian, and political writer, in exile 1849–61.

Szarvas, GABRIEL, 1831–1895. Hungarian philologist; ed. *Nyelvör* from 1872.

Szechenyi, ISTVAN, COUNT, 1792–1860. Hungarian reformer and Minister of State.

Szegedin. Town of Hungary, on the Theiss, opposite the mouth of the Maros; held by Turks 1526–1686; scene of an Austrian victory Aug. 3, 1849; partly destroyed by flood 1879. It has a good trade and extensive manufactures. Pop., 1890, 87,410.

Szegedin, before the Inundation.

Szema Kwang, 1009–1086. Chinese historian and lexicographer.

Szema Tsien, ab.163–ab.85 B.C. Chinese historiographer and chronologer.

T

Taafe, EDUARD, COUNT, 1833–1895. Austrian Prime Minister 1869 and 1879–93.

Tabard. 1. Sleeveless cloak worn by mediæval knights over armor. 2. Official garment of heralds.

Tabari, 838–922. Moslem of Bagdad; commentator on the Koran. His *Annals* run from the creation to his time.

Tabasheer. Siliceous substance, of low specific gravity, secreted in the joints of the bamboo, *Bambusa vulgaris*.

Tabb, JOHN B., b.1845. Prof. St. Charles Coll., Ellicott City, Md., since 1884. *Poems*, 1894; *Lyrics*, 1896.

Tabernacle. Portable sanctuary of the Israelites, in the wilderness and in Palestine, on the model of which the Temple was built ab.1000 B.C. (see HOLY PLACE and MOST HOLY PLACE). It was made of acacia-wood, overlaid with gold, and protected by ample coverings of cloth and of seal or badger skins. The term is also applied to niches for images and sepulchral monuments, surmounted with rich canopy work.

Tabernacles, FEAST OF. One of the 3 great Jewish feasts, lasting a week in Sept. or Oct., during which the people dwelt in booths, and gave themselves up to rejoicing over the ingathering of the fruits. See PASSOVER and PENTECOST.

Tabes Dorsalis. See LOCOMOTOR ATAXIA.

Tableaux Vivants. "Living pictures"; introduced in France ab.1785; since familiar in England and America.

Table-Lands. Elevated plains, as in central Asia, w. U. S., and Spain. See PLATEAU.

Tables. Backgammon, played by two persons with men or pieces, according to the throws with two dice, upon a board divided vertically into two parts, and having 24 points. A variety of games were played upon this board or "tables," the origin of which may be traced to classical antiquity.

Tablet. In Pharmacy, a cylindrical or disk-shaped body formed from powdered drugs. The tablet may be composed of the drug without admixture, or it may be triturated with some inert substance, as sugar of milk; it may be caused to adhere by compression or by making a paste of the powder by mixing with a volatile liquid. This paste is filled into molds and removed. The liquid forming the paste volatilizes, leaving the triturate.

Table Turning. Phenomenon much talked of in U. S. and England ab.1850; credited to spirits, but probably caused by unconscious muscular action of hands clasped around or resting on the table.

Tabley, JOHN BYRNE LEICESTER WARREN DE, BARON, 1839–1895. English poet.

Taboo. Edict by a chief among Pacific Island tribes, declaring certain acts unlawful; *e.g.*, during a stated period certain trees, animals, crops, etc., are sacred and must not be touched or destroyed. It resembles the close season for game, etc., among civilized peoples. The penalty for violation of a taboo is death. This is supposed to explain the killing of Capt. Cook at the Hawaiian Islands.

Tabor. Instrument between drum and tambourine; associated with the fife.

Tabor, MT. Mountain of Galilee, 6 m. s.e. of Nazareth, in the plain of Esdraelon, 2,000 ft. above the sea; repeatedly

Mount Tabor.

named in O. T., but not in the New; traditional site of the transfiguration, and a Crusading church on the summit commemorates this event. Scene of Bonaparte's victory over the Turks, April 16, 1799. Altitude ab. 1,000 ft.

Tabor, HORACE AUSTIN WARNER, b.1830. Capitalist; Lieut.-gov. of Colorado 1878–84; U. S. Senator Feb.-March 1884.

Tabor College. Founded by Congregationalists as an academy at Tabor, Ia., 1854; chartered 1866. It has 13 instructors and ab. 230 students.

Taborites. Bohemian adherents of Huss, who took up arms ab.1420, led by ZISKA (q.v.); so called from their stronghold Mt. Tabor; opposed to the Calixtines or moderate reformers, with whom, after the defeat of their common foes, they waged a mutually destructive war.

Tabriz. Ancient city of n.w. Persia, ab.300 an Armenian capital; injured by several earthquakes and Turkish attacks; of some commercial importance. Pop. ab. 175,000.

Tabulæ. Horizontal partitions in the thecæ of some corals.

Tabular Spar. See WOLLASTONITE.

Tabular Standard. See MULTIPLE STANDARD.

Tabulata. See MADREPORARIA.

Tabulate Corals. Those having horizontal plates in the thecæ, and weak septa; not a natural group. See HELIOPORIDÆ.

Tac, SIXTUS LE, 1649–1699. French missionary in Canada from 1676. *Hist. Nouvelle France*, pub. 1888.

Tacahout. Nutgall growing on the tamarisk in India and Barbary; source of gallic acid.

Tacamahac. See POPLAR.

Taccaceæ. Natural family of flowering plants, of the class *Angiospermæ* and subclass *Monocotyledons*, comprising 2 genera and ab. 10 species, natives of the tropical lands of both hemispheres.

Taché, SIR ÉTIENNE PASCAL, 1795–1865. Canadian official and author, knighted 1858.—His nephew, JOSEPH CHARLES, b. 1820, pub. *Esquisse sur le Canada*, 1855, and other books.—His brother, ALEXANDER ANTOINE, 1823–1894, became Bp. of St. Boniface (Winnipeg) 1853, and Abp. 1871.

Tachhydrite. $CaMg_2Cl_6+12aq$. Extremely soluble hydrous magnesium calcium chloride, found associated with rock salt at Stassfurt.

Tachometer. Speed indicator. Special forms are adapted for measuring variations in the velocity of revolution of machines. A small cistern of mercury, from the center of which rises a glass tube partly full, is fixed concentric with the re-

Tachometer.

volving part. As the centrifugal tendency depresses the middle part of the mercury in the cistern, the column in the tube will fall and the tube may be empirically graduated to indicate any speed within certain limits.

Tachycardia. Excessively rapid heart action, due to various causes: nervous excitement, violent exertion, a weakening of the inhibitory nerves of the heart from pressure by tumor, or other cause. A very rare form is known as paroxysmal tachycardia, and is characterized by spells of rapid beating, sometimes at the rate of 200 or more beats in a minute. The attacks may follow each other at regular intervals, lasting in some instances but an hour or so.

Tachygraphy. See SHORTHAND.

Tachylite. Rapidly cooled BASALT (q.v.), differing from

obsidian in having less silica in its composition. Obsidian has from 60 to 80 per cent silica; tachylite from 50 to 55.

Tacitus, MARCUS CLAUDIUS, 200–276. Roman senator of high character and patriotic aims, supposed descendant of the historian; emperor from Sept. 275.

Tacitus, PUBLIUS CORNELIUS, ab.54–ab.118. Prætor 88, consul suffectus 98, proconsul of Asia ab. 114; author of *Dialogus de Oratoribus, Agricola, Germania, Histories,* and *Annals.* The two latter, which survive only in part, are remarkable for condensed and vigorous style, deep thought, and vehement hatred of tyranny and corruption. After Thucydides he is the first, as he is one of the greatest, of philosophic historians.

Tack, NAUTICAL. Course of a ship with reference to the position of the sails. Starboard tack when the vessel is close-hauled with the wind on the starboard side, larboard when on the other.

Tacking. Rule enforced by English (but not by American) courts of equity, that a third or subsequent incumbrancer may buy the first incumbrance and tack his to it, so as to compel intervening incumbrancers to pay both, if they would redeem from the first.

Tacoma. Capital of Pierce co., Wash.; on a bay e. of Puget Sound, 41 m. s. of Seattle; founded 1868, chartered 1883; of recent growth. It has a fine harbor, a large commerce, especially with Japan, considerable manufactures, and three colleges. Pop., 1890, 36,006, since much increased.—Mt. Tacoma or Rainier near by has a height of 14,440 ft.

Tacon, MIGUEL, 1777–1855. Spanish officer, b. in Colombia; Gov.-gen. of Cuba 1834–38.

Taconic. Rocks of the Taconic range, chiefly in e. N. Y., and now known to belong to different ages. The term, proposed by Emmons, is passing out of use.

Tactics. Science of organizing troops in proper formation for the march and for battle, and the art of handling them on the battlefield; called grand tactics when applied to large bodies comprising different arms of the service, and minor tactics when restricted to a single arm or to small bodies. Drill tactics pertains to the different formations of line or column and the methods of passing rapidly from one to the other, and at the same time keeping the troops under the complete control of their commander. The essential principles of all tactical movements are unity of command, concentration, and mobility consistent with the least loss and exposure when under fire. Historically the infantry formations exhibit an improvement in one or more of these essentials. The Greek phalanx of 1,024 files front and 16 ranks deep, comprising 16,384 men, was unwieldy and capable of moving only on selected ground. Greater mobility was obtained by the Roman legion, which was composed of three lines, each of ten maniples, each maniple having ten ranks deep and twelve files front in the first two lines and six files in the third line, the maniples being arranged in quincunx order to facilitate concentration and to give mobility. The Roman cohort followed, it being formed of ten ranks, each of 50 to 100 men front: the legion was made up of two or three cohorts, with light troops as skirmishers on the flanks. The formations of the early Germans and Franks more nearly resembled that of the phalanx, their troops being massed in large bodies until about the time of Charles Martel. Under Charlemagne cavalry began to assume more prominence, and infantry, then considered of less importance, suffered in its organization until about the commencement of the 12th century. It was then armed with the lance or pike and retained its depth until the middle of the 16th century, when, owing to a more general use of firearms, its depth gradually decreased from ten ranks to six or even three in the time of Gustavus Adolphus. With the adoption of the bayonet the number of ranks was reduced to four. Marshal Saxe introduced the cadenced and lock step: Frederick the Great adopted the three-rank formation, fully developed the marching and maneuvering power of his infantry, and greatly increased the accuracy and rapidity of musketry fire. In 1810 the English, and also the French and Swiss shortly afterward, adopted the two-rank formation. Other changes, increasing the flexibility of formations and mobility in handling troops, were brought about by introducing the various subdivisions of the army, such as corps, divisions, brigades, regiments, battalions and companies: these permitted the maneuvering of an army in fields which were formerly impossible when the army moved as a whole or by its wings. Battalion tactical units permitted the combinations of deployed lines and columns, giving a rapid extension for fire and mass formation for attack, as frequently exhibited in the Napoleonic wars. The introduction since 1861 of the modern rifled small arm and field gun have brought about fundamental changes in tactical formation for battle, eliminating all deep formations and bringing into prominence the open or skirmish order for the front of attack: the main element of weakness being a loss of unity and of concentration, and requiring in the individual soldier much finer qualities than ever before.

Taddeo. See GADDI.

Tadmor. City founded by Solomon as a trading-post in the Syrian desert: later, as PALMYRA (q.v.), a city of great wealth and magnificence, seat of Zenobia; now in ruins.

Tadousac. Oldest town in Canada, famous as a summer resort, near the confluence of the St. Lawrence and Saguenay Rivers. Pop. of the district 2,400.

Tael. Chinese monetary unit, equivalent to ab. 1,250 copper cash, or 1⅓ oz. silver.

Tænia. See TAPEWORM.

Tæniadæ. Family of *Cestoda,* which includes the Tapeworms. Each worm consists of a small head armed with suckers and hooks, for holding to the wall of the intestine of its host; from this grows out a chain of segments (proglottides), that increase in size toward the posterior end, where the oldest are. Each segment has its own reproductive organs; the eggs begin development before the proglottis is set free. The eggs finally may be eaten, with the food of some animal, and the gastric and other juices dissolve the shell and set the larva free. This then burrows into the tissues, becoming encysted, and changed to a sac, in which several tapeworm heads are budded out. This is the cysticercus stage. The flesh of this host being eaten, the scolices are set free as tapeworm heads that fasten on the alimentary canal of the new host. The cysticercus stage in man and domestic animals is also called the Echinococcus. See TÆNIA SOLIUM and TAPEWORM.

Tænia Echinococcus. Tapeworm infesting the dog. It has hooks and suckers, but only four segments, the last of which contains mature eggs. The ripe proglottis becomes freed, and new ones take its place successively. The eggs develop in water, and become proscolices in the intestine of any animal (including man) which drinks water containing them. The proscolex then bores into some internal organ and becomes a scolex, about $\frac{1}{100}$ of an inch in diameter. This has the power to produce other scolices indefinitely, all gifted with a similar power, until the organ becomes infested with a hydatid tumor, that may reach the size of an orange. If the flesh infested with hydatids be eaten by a dog, the scolices become tapeworms. Another tapeworm that infects the dog has its scolex stage in the common louse of the dog. Another species produces hydatids in the brain of sheep, which consequently suffer from staggers.

Tænia echinococcus.

Tænia Solium. Commonest of Tapeworms infesting man. On its head is a double circle of 26 hooks. The proglottides (joints) are ⅛ in. long, ¼ in. broad, and there are ab. 850 of them in a mature worm. The last hundred or so have ripe eggs, which are thrown off with the excrement: if swallowed by a pig, they hatch and become encysted in its flesh, causing the pork to be measly. Each cyst is ab. ¼ in. long. Similar

Head of *Tænia solium.*

Bladder-worm of the Pig (*T. solium*):

a, with invaginated head, about natural size; *b*, with evaginated head, a little larger than natural size.

cysts may form in man or other animals swallowing the eggs: sometimes they form in the brain. If some vital nerve cell is disturbed, death results, but otherwise, unless the cysts are very numerous, no serious disturbance may be felt. The measly flesh, when eaten uncooked, gives rise to the mature worm by simple growth from the back part of the head, which constitutes the main part of the cyst.

Tæniatæ. See CESTIDÆ.

Tæniodonta. Suborder of *Bunotheria,* including Eocene Mammals, with Edentata-like molars and Rodent-like inferior incisors, but with the upper incisors faced on both sides with enamel, and growing from persistent pulps.

Tænioglossa. Group of ctenobranchiate Gastropods, in-

cluding forms having two small jaws and a long radula with seven plates in each transverse row of teeth. Some are holostomatous, others are siphonostomatous. Examples of the former are the Winkles (*Littorinidæ*), freshwater Snails (*Paludinidæ*) and Vermetus. To the latter belong *Cypræa*, *Strombus*, *Natica*, etc. By a different division of the group we have the *Chiastoneura* (*Littorina*, *Paludina*, *Vermetus*, etc.), and *Orthoneura* (*Natica*, *Cypræa*, *Strombus*).

Tæniolæ, or TÆNIOLATA. See SCYPHOMEDUSÆ.

Taffeta. Plain silk, of varied quality and color, and sometimes mixed with wool.

Taffrail, or TAFFEREL. Upper part of a ship's stern.

Taft, ALPHONSO, LL.D., 1810–1891. Judge Cincinnati Superior Court 1866–72; U. S. Sec. of War 1876, and Atty.-gen. 1876–77; Minister to Austria 1882, and to Russia 1884–85.

Tag. Child's game, in which one player, known as It, pursues the others and endeavors to catch them. The one caught in turn becomes It and continues the game. There are many varieties, as Cross-tag and Squat-tag. In Japan, Tag is called *Oni gokko* or "Devil Touching," and It is *Oni* or Devil. In Corea, it is called Watchman-catching, the pursuer being the Watchman. In Canton the game is played between "soldiers" and "thieves."

Tagala. Most important of the Malay tribes of the Philippine Islands. They are of medium size, with straight black hair, low forehead, large eyes and mouth, flat nose, small hands and feet. The women wear pure white clothing. They are gentle, but love gambling, opium-smoking, and music. They can read and write, and are skilled carvers and weavers. They are closely related to the Formosans, but more civilized.

Taganrog. Seaport of Russia, on the shore of the Gulf of T., an inlet n.e. from the Sea of Azov; founded by Peter I. ab.1720. It has a large export trade. Pop. ab.50,000.

Tagliamento. River in Lombardy, near which Bonaparte defeated the Austrians under Duke Charles, March 16, 1797.

Taglioni, MARIA, 1804–1884. Italian dancer, famous through Europe 1822–47; Comtesse de Voisins 1832.—Her father, FILIPPO, 1777–1871, and brother, PAUL, 1808–1884, were noted ballet-masters.

Tagus. River of Spain, heading in the Castilian Mts., e. of Madrid, and flowing mainly s.w. across Portugal to the Atlantic, near Lisbon. Length 566 m., drainage area 34,000 sq. m.

Tahiti. Chief of the Society Islands: in the Pacific, ab. 2,100 m. n.e. of New Zealand; held by France. Area 400 sq. m., pop. ab.10,000.

Tahitians. Polynesian Malays, celebrated for physical beauty. Morally they stand low. The women are much smaller than the men. The principal weapon is the sling.

Tahitian Types.

They are good sailors, courteous but cruel, generous but deceitful, and fond of dissipation. Their cooking is done by baking and steaming on hot stones.

Tahlequah. Cherokee capital, in Indian Territory; founded 1840. Pop. ab.3,000.

Tahoe, LAKE. In the e. foothills of the Sierra Nevada, on the boundary between Cal. and Nevada. Elevation 6,225 ft., area 195 sq. m.

Tahpanhes. Town in Lower Egypt, seat of Pharaoh-Hophra, the ruins of whose palace, with the brick pavement (mistranslated *kiln*) on which Jeremiah prophesied (Jer. xliii. 9) have lately been discovered.

Tail. In Botany, long, slender appendage, as to a seed or achene.

Tailed Men. A Devonshire superstition attributes a tail to Cornishmen, which was referred to divine vengeance upon them for having insulted St. Thomas à Becket. Lord Monboddo argued that a tail was a desideratum. Common report attributed tails to the Niam-niams, and many stories are told of the belief in tailed men in Abyssinia. Among the American Indians there are stories of men once having tails, which they forfeited by some misdemeanor.

Tailings. Material of lowest value, separated from the richer portions of ore in a process of concentration. The tailings from any given stage of a concentration process may be further treated on machines devised for the purpose, or may run to waste.

Taillandier, RENÉ GASPARD ERNEST, or SAINT-RENÉ, 1817–1879. Prof. Montpellier 1843, and Paris 1863; Academician 1873; writer on Germany. *Scotus Erigena*, 1843; *Servia*, 1871; *Études*, 1881.

Tailor Bird. Name given to various genera of birds which skillfully construct their nests. They are found in tropical countries. The principal genera are *Suthora*, *Suya*, *Prinia*, *Sutoria*, and *Orthotomus*.

Tainan. See TAIWAN.

Taine, HIPPOLYTE ADOLPHE, D.C.L., 1828–1893. Prof. Paris 1864, Academician 1879; historian and critic. Chief among his numerous works are the familiar *History of English Literature*, 4 vols., 1863–64, tr. 1872–74, and *Origines de la France Contemporaine*, 5 vols., 1875–90. Both are monumental works, the result alike of genius and of conscientious industry.

Taiping (or TAEPING) **Rebellion.** In China 1850–64. The head of it styled himself the Heavenly Prince, proclaimed a spurious Christianity, and aimed to set up a native dynasty in place of the ruling Manchu. COL. C. G. GORDON (q.v.) was largely instrumental in suppressing the insurrection.

Tait, ARCHIBALD CAMPBELL, D.D., LL.D., 1811–1882. Headmaster of Rugby 1842, succeeding Dr. T. Arnold; Dean of Carlisle 1850, Bp. of London 1856, Abp. of Canterbury 1868; a moderate and judicious primate. *Modern Theology*, 1861.

Tait, ARTHUR FITZWILLIAM, b. 1819. Anglo-American painter. N.A. 1858.

Tait, LAWSON, M.D., b.1845. Scottish surgeon. *Diseases of Women.*

Tait, PETER GUTHRIE, b.1831. Prof. Belfast 1854, Edinburgh 1860; writer on physics and higher mathematics. *Thermodynamics*, 1868; *Paradoxical Philosophy*, 1878.

Taiwan, or TAINAN. Capital of FORMOSA (q.v.) till 1885; 3 m. from w. coast, and connected with the sea by canals; treaty port, with considerable commerce. Pop. ab. 135,000.

Tai-yuen. Chinese city, ab. 400 m. s.w. of Peking; capital of the Shansi province. It consists of an inner and outer

Cliff in yellow earth near Tai-yuen.

city, each surrounded by walls, the inner city being 2⅜ m. long and 1⅜ m. wide, and the wall being pierced by 8 gates. It is of no commercial importance, but contains the govern-

ment arsenal, powder mills, and cannon foundry. Pop. ab. 200,000.

Talavera de la Reina. Spanish town, on the Tagus, 75 m. s.w. of Madrid; scene of a French defeat, July 27–28, 1809, by the British and Spanish armies under Wellesley.

Talbot. Breed of dogs, formerly known as St. Hubert, and probably the original stock of the bloodhound.

Talbot, JOHN, 1645–1727. English missionary of the S.P.G., in America 1702–24; rector at Burlington, N. J., 1709–24; doubtfully alleged to have been consecrated by nonjuring bishops 1721.

Talbot, RICHARD. See TYRCONNEL.

Talbot, SILAS, U.S.N., 1751–1813. Mass. officer, distinguished in naval encounters 1776–80; prisoner in England 1780–81; M.C. from N. Y. 1793–95; Captain 1798–1801.

Talbot, THOMAS, 1818–1886. Gov. of Mass. 1873–74 and 1878–80.

Talbot, WILLIAM HENRY FOX, 1800–1877. M.P. 1832–34; discoverer of the calotype or talbotype process in photography 1841; decipherer of cuneiform inscriptions from Nineveh. *Hermes*, 1838–39; *Pencil of Nature*, 1844–46; *Etymologies*, 1846. See PHOTOGRAPHY.

Talbotype. See TALBOT, W.

Talc. $H_2Mg_3Si_4O_{12}$. Very soft, white or greenish white, hydrous magnesium silicate, with a greasy feel, that occurs as an essential mineral component in many schistose rocks, and also in independent masses and forms that find extensive use in the arts. A fibrous variety from n. N. Y. has been used in the manufacture of paper: the foliated forms add to the value of some solid lubricants. A coarser and more rock-like variety is known as soapstone or steatite. The latter has been quarried in large quantity in e. Pa. and Vt. for commercial uses.

Talcott, ANDREW, 1797–1883. U. S. engineer officer 1818–36; later employed on rivers, boundary surveys, and railways. —His brother, GEORGE, 1786–1862, was an officer of artillery and ordnance 1813–51.

Talent. See GENIUS.

Talent. Ancient Greek weight which was applied to silver and gold money, although no single coin could be made of this weight. Thus the Attic talent after Solon was 56 lbs., 15¼ oz., 14.09 grs. avoirdupois, and was divided into 100 minæ. At this time the talent, when used as a commercial weight, was made heavier than the coin talent, equaling over 85 lbs. The talent of Ægina seems to stand to the Attic in the proportion of 5 to 3. The coinage differs a little from this. The Hebrew talent was, in gold, ab.1,320,000 grs. Troy, twice the weight and ab. 24 times the value of the silver talent.

Talfourd, SIR THOMAS NOON, 1795–1854. English dramatist, biographer of Charles Lamb, 1837–48; M.P. 1835–41 and 1847–49; Judge and Knight 1849. *Ion*, 1835; *Essays*, 1842; *Vacation Rambles*, 1844–46.

Taliaferro, JOHN, 1768–1853. M.C. from Va. 1801–3, 1811–13, 1824–31, and 1835–43.—His relative, WILLIAM BOOTH, b.1822, became Brig.-gen. C.S.A. 1862 and Major-gen. 1865.

Taliesin. Welsh bard, probably of 12th century. Some of his reputed compositions are extant.

Talipes. See CLUBFOOT.

Talisman. Engraved charm intended to arrest evil influences; usually cut upon stone or metal, and referring to some planet or star; in a wider sense, all engraved charms, such as those used by the Mohammedans, with Arabic inscriptions. Among the Chinese, a common talisman worn by children bears the seven stars of the Great Bear.

Tallahassee. Capital of Fla. and of Leon co., midway between the Ga. line and Gulf of Mexico. Pop., 1890, 2,934.

Tallahatchie River. In Miss., flowing 250 m. s.s.w., and, uniting with the Yallobusha, forms the Yazoo.

Tallemant des Réaux, GÉDÉON, ab. 1619 - ab. 1692. French author. His *Historiettes*, 376 biographic and anecdotical sketches, were written ab. 1658, and pub. in 6 vols. 1834.

Talleyrand-Perigord, CHARLES ANGÉLIQUE, BARON, 1821–1896. French Ambassador at Berlin 1862, and at St. Petersburg 1864; Senator 1869.

Talleyrand-Perigord, CHARLES MAURICE, DUC DE, PRINCE OF BENEVENTO, 1754–1838. Abbot of St. Denis 1775; Bishop of Autun 1788; Deputy to States General 1789. He joined the Tiers État; proposed the suppression of tithes; was in England 1792–94, and in the U. S. 1794–96; was Minister of Foreign Affairs 1797–1807, and a power in Europe; intrigued

Talleyrand.

against Napoleon from 1811; was Pres. of Council 1814–15; and Ambassador to England 1830–34. He possessed marvelous penetration of intellect and great duplicity. His *Memoirs*, 5 vols., 1889–91, disappointed public expectation.

Tallien, JEAN LAMBERT, 1769–1820. French terrorist, violent at Paris and Bordeaux till converted by Mme. de Fontenay, whom he married Dec. 1794; Pres. of Convention March 1794, and chief agent in destroying Robespierre and his faction July 27; powerful for a time, but soon relegated to obscurity.

Tallis, THOMAS, ab.1516–1585. Organist of the Chapel Royal; composer of anthems, Te Deums, etc.; "father of English cathedral music."

Tallmadge, BENJAMIN, 1754–1835. Major 1777, Colonel 1779; Aid to Washington; especially distinguished for exploits near New York 1779–80; custodian and friend of André; M.C. from Conn. 1801–17. *Memoirs*, 1859.—His son, FREDERICK AUGUSTUS, 1792–1869, was Recorder of New York 1841–46 and 1849–51, M.C. 1847–49, and Supt. of Police 1857–1862. He suppressed the Astor Place riots May 1849.

Tallmadge, JAMES, LL.D., 1778–1853. M.C. from N.Y. 1817–19; member of N.Y. Constitutional Conventions 1821 and 1846; Lieut.-gov. 1825–26; pres. American Institute 1831–50.

Tallmadge, NATHANIEL PITCHER, 1795–1864. U. S. Senator from N. Y. 1833–44; Gov. of Wis. 1844–46.

Tallow. Fat rendered from the fatty tissues of cattle and sheep; known accordingly as beef and mutton tallow. It is used as lubricant and in making soap, candles and oleomargarine.

Tallow-Tree. *Stillingia sebifera*. Tree of the natural family *Euphorbiaceæ*, native of China; cultivated in warm regions for its fruit, which yields a tallow-like substance.

Talma, FRANÇOIS JOSEPH, 1763–1826. Greatest of French tragic actors. His first appearance was in 1787, his first eminent success 1789: in 1791 he founded the Théâtre de la République. He introduced historically correct costumes, and was most eminent in classic parts.

Talmage, THOMAS DEWITT, D.D., b.1832. Pastor Brooklyn Tabernacle 1869–94, where his audiences were immense; author of many volumes of sermons and addresses.

Talmud. Collection of Jewish law not included in the Pentateuch, usually regarded as comprising the Mishna or Midrash and Gemara. Two great collections exist, the Jerusalem and Babylonian, both dating from ab. 2d to 6th century. Numerous editions of both exist, with an enormous body of critical Talmudic literature. The Mishna includes the Mosaic traditions, maintained to have been transmitted orally till the early Christian centuries. The Gemara comprises commentaries and casuistical decisions as to the application of the Mishna.

Talon, JEAN BAPTISTE. 1625–1691. Second French intendant of Canada 1663, which he did much to develop.

Talpidæ (MOLES). Family of *Insectivora*, distinguished by having feet fitted for burrowing, small concealed eyes and ears, soft thick fur, strong clavicles, short arm, and rudimen-

Common Mole (*Talpa europæa*).

tary tail. The mole burrows rapidly underground, constructing its nest and galleries with radiating passageways, all subterranean. Its food is principally animal. In America we

a, section of the habitation of the mole; *b*, plan of ditto.

have also the Star-nosed Moles with longer tail and a fringe of fleshy processes surrounding the tip of the snout, and the Shrew Moles (*Scalops*), with elongated snout, short tail, and webbed feet.

Talvi. Pseudonym of the wife of E. ROBINSON (q.v.). It is simply the initials of her maiden name, T. A. L. von Iakob.

Tamarack. American Larch, *Larix laricina*. Large tree of the natural family *Pinaceæ*, native of n. N. America; also known as Hackmatack.

Tamarind. *Tamarindus indicus*. Tall tree of the natural family *Leguminosæ*, native of Arabia; naturalized in tropical America; planted for its fleshy pods, which are candied and esteemed as a delicacy.

Tamariscineæ. Natural family of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Polypetalæ*, comprising 5 genera and ab. 45 species, distributed throughout the temperate and warm regions of the n. hemisphere and in s. Africa.

Tamarisk. *Tamarix gallica* and other species of the natural family *Tamariscineæ*, natives of the Old World; planted for ornament. They are narrow-leaved shrubs with small flowers.

Common Tamarisk (*Tamarix gallica*): *a*, a flower.

Tambora. See SUMBAWA.

Tambour. Frame upon which material is stretched for embroidering; also the embroidered muslin or other material, the tambouring being performed by a small hook instead of a needle.

Tambourine. Musical instrument consisting of a hoop, on one side of which is stretched a vellum head, the other being open, with metallic clappers placed around it. It is beaten by the hand or shaken. It is probably of Oriental origin. It is much used in Spain.

Tamerlane. See TIMUR-LENK.

Tamiathis. See DAMIETTA.

Tamil Language. One of the Dravidian group.

Tammany. Political organization in New York City, founded by Wm. Mooney 1789 (ostensibly as a charitable society), as the Columbian Order; incorporated 1805, named from a Delaware chief. Since 1800 it has largely controlled the politics of New York, and often those of the State. The exposures resulting from the defeat of the Tweed Ring in 1871 brought it into discredit, but it was reorganized, and still retains much of its ancient power to control local elections and State legislation. In 1897 it carried the first election in Greater New York by a plurality, and thus obtained control of the city government for four years.

Tammuz. Idol worshiped in Babylon with obscene rites, especially in July; identified by Jerome with Adonis; mentioned by Ezekiel, viii. 14.

Tampa Bay. On w. coast of Florida; length ab. 35 m. The upper part of the bay forms the harbor of the city of T., and is the largest on the Gulf of Mexico. T. has manufactures of cigars and is one of the places of export of Florida phosphates. Pop. 5,500.

Tampon. Any material, as sponge, muslin bandage, etc., used to plug the cavity of an organ to control bleeding after the fashion of a bandage used externally. In view of the possibility of infection, care must be taken to use material that has been made aseptic. The tampon is used chiefly to control otherwise uncontrollable hæmorrhage in the uterus and the nose.

Tamsui. City of n. Formosa; seaport open to foreign commerce. Pop. ab. 95,000.

Tanagers. Small conirostral song birds, of bright colors, allied to Finches. There are over 350 species, most of which are S. American, mainly tropical: there are only 5 species in N. America, and but 2 go n. as far as Canada; viz., *Piranga erythromelas* (*rubra*), the Scarlet Tanager, and *P. rubra* (*æstiva*), the summer Redbird. They feed on beetles and are shy: the latter is rarer than the former in the U. S. The former has the cutting edge of the upper mandible toothed: the male is brilliant scarlet, with black wings and tail. The female is clear olive green above, greenish yellow below, with grayish wings and tail. The latter has mandible not toothed, male rose red, and wings dusky. The female is brownish olive above and dull yellow below.

Tanagra. Ancient city of e. Bœotia, on the Asopus; scene of a Spartan victory over Athenians 457 B.C. Here were discovered 1873 many figurines, terracotta statuettes, mostly of women, ht. 6 to 9 in. They are probably from tombs.

Terracotta Figure from Tanagra.

Tanais. Ancient name for the river DON (q.v.).

Tananarivo. See ANTANANARIVO.

Tancred. 1. 1078–1112. Sicilian, prominent in the first Crusade; notable for valor, wisdom, and generosity; became Prince of Tiberias 1100, and of Edessa 1112; celebrated by Tasso. 2. King of Sicily 1190, d. 1194.

Tandem Engine. Horizontal compound engine in which the pistons of high and low pressure cylinders are on the same rod, and one in front of the other. It is the STEEPLE ENGINE (q.v.) on its side.

Tandy, JAMES NAPPER, 1740–1803. Irish revolutionist, in exile 1793–98; tried for treason 1800; sentenced to death 1801, but allowed to escape.

Taney, ROGER BROOKE, LL.D., 1777–1864. Laywer of Md.; U. S. Atty.-gen. 1831; Sec. Treas. 1833. Pres. Jackson directed the removal of government deposits from the U. S. Bank to selected local banks, and Taney gave the necessary order, whereon the Senate refused 1835 to confirm him as Associate Justice of the U. S. Supreme Court. He succeeded Marshall, March 1836, as Chief-justice. The most conspicuous incidents of his career in this great position were the DRED SCOTT (q.v.) decision 1857, and his effort to maintain the writ of habeas corpus against Pres. Lincoln's suspension of it 1861. Though a man of great learning and high integrity, he was long regarded in the North as a tool of tyranny and of the slave power.

Tanganyika. Lake of e. central Africa, in lat. 3°–9° S.; 420 m. long (n. to s.), and 10 to 60 wide; elevation 2,756 ft.; drained by the headwaters of the Congo; discovered by Speke and Burton 1858, explored 1871–76.

Tangent, GEOMETRICAL. Limiting position of the secant. That to any locus has one element in common with that locus, and at this element the same direction.

Tangent, TRIGONOMETRICAL. Ratio of the ordinate of any point on the terminal line of an angle (the initial line being the axis of X) to the abscissa of that point.

Tangent Compass. See GALVANOMETER.

Tangent Screw. One having a thread of small pitch, which connects a movable with a fixed plate; used to give a slow motion to the former.

Tangent Surfaces. Two curved surfaces are tangent when they have a common tangent plane at a common point.

Tanghin. Powdered seed of *Tanghinia venenifera*, an ordeal poison used in Madagascar. It produces death by paralysis of the heart. It owes its properties to tanghinin, which forms crystalline salts.

Tangier. Port of Morocco, 38 m. s.w. of Gibraltar; held by Portugal 1471–1663; ceded to England, as a part of the

Tangier from the Market-place.

dowry of the Queen of Charles II., and held till Feb. 1684. Outside of the town are the ruins of a Roman bridge and ab. 3 m. s.e. are the remains of ancient Tingis. Pop. ab. 25,000.

Tangle, Blue. In N. America, *Gaylussacia frondosa*, one of the Huckleberries.

Tangle, or Sea Tangle. Different varieties of sea-weeds, especially *Laminaria digitata*. It is used for food; in making iodine, and as uterine probes. That growing in N. America has been found unfit for the last purpose.

Tanhäuser. See Tannhauser.

Tanis. See Zoan.

Tanjore. Town of s. India, 180 m. s.s.w. of Madras. It has an old palace, a large temple or Pagoda (q.v.), and manufactures of silks, carpets, jewelry, and copper utensils. Pop., 1891, 54,060.

Tank Worm. Larval form of the Guinea Worm (q.v.), found in the E. Indian fresh waters.

Tannahill, Robert, 1774–1810. Scottish lyric poet.

Tanner, Benjamin, 1775–1848. American engraver.—His brother, Henry S., 1786–1858, pub. many maps and atlases.

Tanner, Henry S., M.D., b. ab. 1830. Subject of a noted experiment in fasting, in New York, June 28–Aug. 7, 1880.

Tanner, Thomas, D.D., 1674–1735. Archdeacon of Norwich 1710, Bp. of St. Asaph 1732; ed. Wood's *Athenæ Oxonienses*, 1721. *Notitia Monastica*, 1695–1744; *Bibliotheca Britannico-Hibernica*, 1748.

Tannhäuser, or Tanhauser. Bavarian knight and minnesinger; described in German legend as dwelling in the Venusberg, and then seeking pardon from the Pope; celebrated by Wagner in opera.

Tannic Acid, or Tannin. $C_{14}H_{10}O_9.2H_2O$. Numerous tannins of this composition exist in nature. The common tannin of the nut-galls, sumach, etc., is an amorphous mass, of astringent taste, soluble in water. Boiled with water it furnishes gallic acid, with ferric salts a dark-blue tannate of iron, and with gelatin an insoluble gelatinous precipitate. The latter property causes its use in tanning to convert the hide into an insoluble compound, Leather (q.v.). The tannic acids from other sources have like properties.

Tanning. See Leather.

Tansa. River of w. India, which supplies water to Bombay by an immense dam, completed 1892, 2 m. long, 118 ft. high, area ab. 8 sq. m., and supplies 100,000,000 gals. per day.

Tansillo, Luigi, 1510–1568. Italian poet.

Tansy. *Tanacetum vulgare*. Bitter, yellow-flowered herb of the Composite family, native of Europe; cultivated and introduced into America. It is a tonic. Cakes and puddings flavored with the leaves were formerly eaten in England at Easter, representing the bitter herbs at the Paschal feast.

Tansy (*Tanacetum vulgare*).

Tantalates. Derived from the metatantalic acid $HTaO_3$ and from the hexa-acid $H_8Ta_6O_{19}$.

Tantalic Acid. $HTaO_3$. Gelatinous mass, obtained by mixing the chloride with water; soluble in potassium binoxalate and hydrofluoric acid.

Tantalite. $(Fe,Mn)Ta_2O_6$. Mineral compound of iron, manganese, and tantalum, closely related to Columbite (q.v.), a compound of iron, manganese, and niobium. In nature these two compounds frequently occur together, and, being isomorphous, are often combined in the same individual crystal. Large masses have been found in the Black Hills region of S. Dakota.

Tantalum. Ta. At. wt. 182.6, sp. gr. 10.6, valence IV. V.; discovered by Hatchett 1801; rare metal, occurring in the minerals columbite and tantalite. It is prepared by fusing potassium fluotantalate with potassium. This gives a black powder which takes fire when gently heated. It is soluble only in hydrofluoric acid.

Tantalum Pentabromide. $TaBr_5$. Volatile substance similar to Tantalum Pentachloride (q.v.); made by treating a strongly heated mixture of the pentoxide and carbon with bromine vapor.

Tantalum Pentachloride. $TaCl_5$. Yellow needles or prisms, made by heating a mixture of the pentoxide and carbon in chlorine. It decomposes in the air to form tantalic acid. Compounds of tantalum and the other halogens are known; similar in composition and properties to the pentachloride.

Tantalum Pentafluoride. $TaFl_5$. Known only in solution; made by dissolving the pentoxide in hydrofluoric acid.

Tantalum Pentoxide. Ta_2O_5. White amorphous powder, which becomes crystalline on heating. It does not dissolve in any acid.

Tantalum Tetrasulphide. Ta_2S_4. Lustrous, brass-yellow substance, not attacked by hydrochloric acid; made by heating the pentoxide in carbon disulphide vapor.

Tantalum Tetroxide. Ta_2O_4. Porous grayish mass, made by heating the pentoxide in a carbon crucible in the blast furnace. It is not attacked by any acids.

Tantalus. Phrygian king, who for variously stated offenses was placed in a lake whose waters eluded his lips. Over his head hung branches of fruit which he could not reach, and a huge rock which menaced his safety.

Tantalus' Cup. If a siphon be placed in a cup, the longer leg passing water-tight through the bottom and the shorter

Tantalus' Cup.

one terminating within and very near the bottom, the whole may illustrate the action of an intermittent spring. If water

be made continually to drop into the cup, the cup will be filled to the top of the siphon tube, and then will be almost entirely emptied through the tube; this process is repeated indefinitely. If the siphon be concealed within the figure of a man whose mouth is just above the top of it, the water will continually rise nearly to his lips and then descend.

Tantum Ergo (So great therefore). Fifth and sixth stanzas of Thomas Aquinas' hymn *Pange Lingua*, Eucharistic hymn in the R.C. church.

Tanystomata. Tribe of *Muscaria*, including flies with a long proboscis with stylet-shaped jaws. The larvæ have hooked jaws inclosed in a sheath. Here belong the blood-sucking, stinging Gadflies.

Taoism. System of philosophy founded upon the teachings of a Chinese mystic, Lao-tse or Láu Tsz', ab.600 B.C.; also a native religion. In the former, the search for purity, virtue and tranquillity of mind was urged as conducive to absorption in the great principle of Táu, or Nature. The religion, as it exists to-day, has largely borrowed from Buddhism. Only its priests are considered as members of this sect. They are permitted to marry, and take charge of the temples of the state gods of China. A trinity called the Three Pure Ones, which may be regarded as manifestations of its founder, hold the first place in the Taoist pantheon.

Taormina. See Sicily.

Tapajos. River of central Brazil. It receives the Arinos and the Jaruena, and flows ab.900 m. n.n.e. to the Amazon.

Tape. Steel measure used by surveyors instead of the Chain (q.v.). Very accurate measurements of base lines can be made by a tape if the errors due to temperature, stretch and sag be taken into account, as can be done by computation.

Tape-Grass. See Eel-grass.

Taper-Pointed. See Acuminate.

Tapetum. Epithelial lining of the pollen-sac of flowering plants.

Tapeworm. See Botriocephalidæ, Cestoda, Cysticercus, Tæniadæ, and Tænia solium. Besides these, man is infested by the Pork-measle, Fish-measle, and Beef-measle, *Tænia saginata* or *Cysticercus bovis* of cattle. The last is $\frac{3}{8}$ of an in. long in its first stage and grows in man to ab. 20 ft., with over 1,200 segments, the last 200 of which may contain ripe eggs, that escape by pores at the edge of the worm, placed alternately on opposite sides in successive segments. This tapeworm has suckers, but no hooks. Careful meat inspection and proper cooking are the precautions needed to prevent the development of these parasites.

Tapioca. Starch (q.v.) from the root of the *Manihot palmata* and *M. utilissima;* prepared by pressing the roots under water. It is obtained in granular form by heating the meal upon plates. It is used as an article of food. The name is sometimes given to Sago (q.v.).

Tapiridæ. Family of *Perissodactyla*. See Tapirs.

Tapirodont Dentition. Form of molar teeth belonging to the antio-lophodont series, as seen in the upper jaw of the tapir, rhinoceros, and hyrax. In this the outer tubercular ridges on the crown are crescentic, compressed longitudinally, while the inner are transverse ridges, extending to the outer ones.

Tapirs. Odd-toed ungulates, resembling swine and living in Central and S. America and s.e. Asia; 3 toed, but front feet bear small fourth toes. They are crepuscular, feed on shoots, and are hunted for their hides. The largest is the Indian Tapir, 8 ft. long by over 3 ft. high, of a black color, girdled with a broad belt of white, which also extends back over the rump. Its upper jaw ends in a prehensile snout. The S. American Tapir is uniform grayish black, has an erect mane and short hair, but the young are born (one to each female) marked with white, after ab. 4 months' gestation. The female is the larger, and attains a length of 7 ft. In the high Andes is the Hairy Tapir (ab. 5 ft. long), with hair an inch long, and white markings. In Central America is a still smaller Tapir. The earliest fossil tapirs were no larger than rabbits.

Tapir (*Tapirus indicus*).

Tappa. Bark cloth of the South Pacific Islands, beaten by the natives from the bark of the paper mulberry, prepared by steeping, by means of wooden mallets. It constituted the chief article of dress among the Polynesians, and was usually ornamented by painted or stamped patterns. Although still made, the art has declined and the present manufacture is inferior to the ancient fabrics.

Tappan, Benjamin, 1773–1857. U. S. Judge for Ohio 1833; U. S. Senator 1839–45.—His brother, Arthur, 1786–1865, merchant and philanthropist, founded the *Journal of Commerce* 1828 and the *Emancipator* 1833, and was first pres. of the New York and American Antislavery Societies 1833–34.—His brother and biographer, Lewis, 1788–1873, was associated in these activities, and founded the first mercantile agency in the U. S.

Tappan, Henry Philip, D.D., LL.D., 1805–1881. Prof. Univ. New York 1832–38; Chancellor Univ. Mich. 1852–63. *Doctrine of the Will*, 1840–41; *Logic*, 1844–58.

Tappan, William Bingham, 1794–1849. American sacred poet.

Tapping. Surgical operation performed when it is necessary to evacuate the collected fluid of some internal organ, as in dropsies of the chest and abdomen. A small bayonet-like instrument covered with a tube, called a trochar and cannula, is thrust into the cavity, the trochar withdrawn and the fluid allowed to run out through the tube.

Taprobane. Ancient name of Ceylon.

Tap-Root. One which grows nearly vertically downward and becomes the largest and most important; generally the primary root, as in the Beet.

Taps. Sound of a trumpet or of three taps of a drum given shortly after tattoo as a signal to extinguish lights in camp or in quarters.

Tar. Thick viscid oleoresin, obtained by distillation of pine-trees and used for coating the planks and cordage of ships. It is produced wherever pitch pine grows, chiefly in S. C., Va. and Ga. Turpentine, pitch and rosin are manufactured in connection. The oily distillate of tar is called oil of tar.

Tarantass. Russian vehicle, consisting of a seatless boat-shaped body on wooden bars, carried on four wheels, and drawn by three horses abreast.

Taranto. Town of s. Italy, on the gulf; anciently Tarentum; founded 708 B.C. from Sparta; long rich and powerful; held by Rome from 272 B.C. At the end of the 10th century it was rebuilt by Nicephorus and again became a Greek town. It is sheltered by the isles of St. Peter and St. Paul, each having a lighthouse. It trades in olive-oil and shell-fish. Pop., 1891, 25,246.

Coin of Tarentum.

Taranto, Gulf of. Arm of the Mediterranean, extending into s. Italy.

Tarantula. Large spider, *Lycosa tarantula apuliæ* of Europe, fabled to cause tarantism, a mania like St. Vitus' dance; in America any mygalid spider.

Taraxacum. See Dandelion.

Tarbox, Increase Niles, D.D., 1815–1888. Sec. American Education Society 1815–84; author of juvenile and other books.

Tardigrada (Arctisca or Macrobiotidæ). Group of Arachnids of small size, aquatic, hermaphrodite, and without respiratory organs or heart. The body is vermiform, and bears a suctorial proboscis and four pairs of clawed, stumpy legs, the

last pair being at the posterior end of the body. These animals are popularly known as Water-Bears, and require a low-magnifying microscope to see them. They live on moist moss.

Tardigrada (SLOTHS). See BRADYPODIDÆ.

Tare. See VETCH.

Tare and Tret. Deductions made from gross weight of goods; allowance for the packing.

Tarentum. See TARANTO.

Target. Mark to aim at in shooting. They are of different kinds, as, self-marking, swinging, disappearing, and running man target, the latter consisting of a figure running on wires. See SHARPSHOOTER.

Targum. Aramaic versions of parts of O. T., credited to Onkelos, Jonathan ben Uzziel, and others, ab.100 and later.

Tarifa. Seaport of s. Spain, 21 m. s.w. of Gibraltar; named from Tarif, leader of Saracens, who landed there 710; taken from the Moors 1292, by them 1340, and by the French 1812. Pop. ab.13,000.

Tariff. Classified list of prices, charges, or rates; more specifically, rates of duty on various articles of importation. The first U. S. Congress passed a tariff act 1789, laying on import duties which averaged ab. 8 per cent. These were slightly increased 1790 and 1792. The tariff of 1816 imposed duties of ab. 25 per cent on some manufactures. In 1824 a new act was passed, raising the duties on metals and products of the soil. The "tariff of abominations," so called by its opponents, was passed 1828, laying duties on raw materials. That of 1832 returned nearly to the rates of 1824. Lower tariffs were enacted 1846 and 1857. The Morrill tariff, with its high protective duties, went into effect 1861: its rates were set still higher 1862 and 1864. Some reductions were made 1883. The McKinley act was passed 1890, strengthening the protective system, but removing the duty on sugar. This was succeeded by the Democratic tariff of 1894, which admitted many raw materials free, the most important of which was wool, but laid a duty on sugar: it effected also a slight lowering of the general schedule. The Dingley act, 1897, placed most duties higher than the act of 1894.

Tarif ibn Zeyad, or ABU ZORA. Moslem general, gov. of Tangier and n. Africa. He invaded Spain with 10,000 men, landing at Jabal-Tarik, or Gibraltar, and routed Roderick near Xeres. With Musa he conquered all Spain in less than 3 years, and returned to Damascus 713.

Tarlatan. Variety of thin cotton cloth, made in France and Switzerland.

Tarleton, SIR BANASTRE, 1754–1833. English major, in America 1776–81; noted in S. C. and N. C. for daring and ferocity, so that his name was a terror to children; victor in many raids and skirmishes; defeated by Sumter Nov. 20, 1780, and by Morgan at Cowpens Jan. 17, 1781; M.P. 1790–1806 and 1807–12; intimate with the Prince of Wales, and habitual critic of Wellington; Lieut.-gen. 1817, Baronet 1818. *Campaigns of 1780–81*, 1787.

Tarlton, RICHARD, d.1588. Famous clown.

Taro. Arenaceous plant, *Alocasia macrorhiza*, of Polynesia, the tops of which are used as pot herbs, and the roots, which contain considerable starch, as food.

Tarocchino. Tarot cards of Bologna; diminutive of tarocchi, any game with tarots. The pack consists of 62 cards, 22 tarots proper, and 40 numerals, the 2, 3, 4, and 5 of each numeral suit being suppressed. This modification of the tarots game was invented at Bologna by Fibbia ab.1420.

Tarots. Kind of European playing cards in which the ordinary numeral suits are supplemented by 22 numbered cards with emblematic devices, which are traced to certain old Italian prints known as the Tarocchi of Mantegna, not, apparently, originally for card games. The earliest of European cards, tarots are still played in Italy, France, and parts of Germany.

Tarpaulin. Cloth or canvas covered with tar or some other substance to make it waterproof.

Tarpeia. Roman maiden, who admitted the Sabines to the fortress on the Capitoline hill, of which her father was governor, on condition that she should receive what they bore on their left arms (meaning their gold bracelets), and was crushed under their shields, which they threw upon her. The Tarpeian rock was named from her.

Tarpon. *Megalops thrissoides.* Large fish reaching a length of 6 ft. and weighing 150 lbs., found off the Florida coast. In spite of its size, it is taken with rod and line, furnishing rare sport, as it is very game and a vigorous leaper.

Tarquinii. See CORNETO.

Tarquinius, LUCIUS PRISCUS. In Roman legends, king 616–578 B.C.—His son, SUPERBUS, became king 534: slighted the Senate and oppressed the people; was banished 510, because of rape of Lucretia by his son, and d. at Cumæ 495 B.C.

Tarragon. *Artemisia dracunculus.* Shrub of the Composite family, native of Siberia, cultivated in gardens for flavoring dishes.

Tarragona. Seaport of n.e. Spain, 60 m. w. by s. of Barcelona; anciently Tarraco; founded from Carthage; prominent under Roman rule; taken by the French 1811, by the British 1813. It has some manufactures and a large trade. Pop. ab. 27,300.

Tar River. Rapid river rising in N. C., flowing e.s.e. into Pamlico Sound. Its estuary for ab. 40 m. is called Pamlico River. Length 180 m.

Tarshish. Probably Tartessus in Spain; often mentioned in O. T. as a far distant port.

Tarsia-Work. Inlaying of geometrical figures in wood, practiced in Italy in the 16th century.

Tarsiidæ. Family of *Prosimiæ* (Lemurs), including but one species, Tarsius.

Tarsius. Lemur of Sumatra, Borneo, etc., with long jerboa-like hind legs, due to a long calcaneum. It has suction pads on the ends of its fingers and toes, and lives like a tree frog. The tail is long and tufted at the end; its ears and

Tarsius (*Tarsius spectrum*).

muzzle are short. The color is brownish-yellowish gray. The eyes are remarkably large. It feeds on insects and by night. There are only 2 lower incisors, and the middle upper incisors are developed beyond the others. It is 7 in. long, and shows some close affinities to human structure.

Tarso-Metatarsus. Lower leg of birds, formed by the union of the long metatarsals with the distal row of tarsal bones; usually called the tarsus.

Tarsus. Ancient capital of Cilicia; long the most important city of s.e. Asia Minor; seat of learning and center of commerce; birthplace of St. Paul. Pop. ab.30,000, but much less in summer.

Tarsus. 1. Group of seven bones, forming the ankle joint, articulating with the leg above and the foot below. 2. Cartilage of the eyelid, usually called the tarsal cartilage. Hence the inflammation at the edge of the eyelids is frequently called tarsal ophthalmia.

Tartaglia, NICCOLO FONTANA, 1500–1557. Teacher of mathematics in Venice; real author of the solution of cubic equations known as Cardan's Method. *Nova Scienza*, 1537; *Arithmetic*, 1556; *On Number*, 1560. *Works*, 1606.

Tartans. Scotch plaid of various patterns, made either of cotton, silk, or worsted, or a combination of two of these.

Tartar. See CREAM OF TARTAR.

Tartar Emetic. $C_4H_4O_6KSbO$. White salt, somewhat soluble in water; prepared by boiling a solution of cream of tartar in water with oxide of antimony. It is a tartrate of potassium and antimony. It is used in textile coloring, and in pharmacy: ¼ gr. reduces the pulse; larger doses act as an emetic; 10 grs. act as a poison. Tannic acid, as in tea or oak bark, is an antidote.

Tartaric Acid. $C_2H_2 \vdots (OH)_2.(COOH)_2$. Dibasic acid, known in four modifications. That found in fruits, in the juice of the grape, etc., from which it is prepared, is the dextrotartaric acid which rotates polarized light to the right. Laevotartaric acid rotates polarized light to the left. Paratartaric

acid, racemic acid, is a mixture of the laevo and dextro acids and is optically inactive. The meso acid is also inactive, but is not a mixture. The common or dextrotartaric acid is a crystalline solid, melting at 135° C.; prepared from tartar, and used in the preparation of fruit syrups. See CREAM OF TARTAR.

Tartars, or TATARS. Division of the Ural-Altaic Turanians, including those who invaded s. Russia, the Caucasus, and Turkey, in the 13th century, and also the remnants of related

Tartar Soldiers.

tribes of Siberia and w. central Asia. Cossacks, Kirghiz, and Turks are included. The name Tatar is derived from a more easterly tribe, which drove the others w., but it has been erroneously extended to include also such tribes as the Chinese Tartars and the inhabitants of Tartary. The Tatar branch has been admixed on all sides with other Turanian tribes, Finns, Samoyeds, Kalmuks, Mongolians, Magyars, etc. All are nomadic, except the Osmanli or Turks proper. They number a million or more in Russia, and as many in the Caucasus. Nearly all are Mohammedans, but with pagan and tribal customs retained.

Tartarus. In Mythology, abyss far below Hades; in later poets, Hades.

Tartary. Part of Turkestan; name loosely and variously applied, mainly to e. or central Asia.

Tartary, CHANNEL OF. N. arm of Japan Sea, between Saghalien and s.e. Siberia.

Tartini, GUISEPPE, 1692–1770. Italian violinist, composer and theoretician. His sonata, *The Devil's Trill*, has held its place in the repertory of most violinists. He composed it under the inspiration of a dream in which he heard the devil "play with consummate skill a sonata of such exquisite beauty as surpassed the boldest flight of imagination."

Tartrazine. $C_{16}H_{12}N_4O_{10}S_2Na_2$. Sodium salt of the compound formed by the action of phenylhydrazine sulphonic acid upon dihydroxy-tartaric acid ($COOH.C(OH)_2.C(OH.)_2COOH$); yellow powder, which dyes wool yellow.

Tartuffe. Religious hypocrite and impostor who uses religion as a means of gaining money, covering deceit, and promoting self-indulgences. So named from the chief character of a comedy by Molière.

Taschereau, ELZÉAR ALEXANDRE, b.1820. Abp. of Quebec 1871; Cardinal 1886.—His relative, HENRI ELZÉAR, b.1836, became Judge of the Supreme Court of Quebec 1871, and of that of the Dominion 1876. *Criminal Law for Canada*, 1874–88.

Taschereau, JULES ANTOINE, 1801–1874. Parisian journalist and librarian; editor of Molière, 1823; biographer of Molière and Corneille, 1825–29.

Tashkend. Capital of Russian Turkestan; city of Asiatic Russia, on the Saralka, a branch of the Sir Daria; independent till 1810, then held by Khokand till 1867. It has a large trade and some manufactures. Pop. ab.125,000.

Tasimeter. Instrument invented by Edison which detects changes of temperature by the variation of a current of electricity passing through a disk of soft carbon, fixed between metallic supports and exposed to varying pressure produced by temperature changes.

Tasman, ABEL JANSZOON, ab.1602–1659. Dutch voyager, discoverer of Tasmania and other islands 1642–43.

Tasmania. Formerly Van Dieman's Land; island s. of Australia, separated from it by Bass Strait, and belonging to Gt. Britain; discovered 1642; settled from Sydney 1803; penal colony 1804–53. Its extreme dimensions are in each direction ab.200 m., and its area 26,215 sq. m. Most of the island is a table-land, averaging 3,000 ft. in height, with mts. 4,000 to 5,000 ft. high in w. part. The products are chiefly agricultural. Gold, silver, copper, tin and coal are mined. Capital, Hobart Town, on the s. shore. Pop. ab.155,000.

Tasmanian Devil (DASYURUS URSINUS). Bear-like marsupial of Tasmania, ab. the size of a badger. It has a bushy tail, black coat with narrow white throat band, and two small shoulder spots; is nocturnal, carnivorous and untamable. The dentition is $\frac{4}{3}\,\frac{1}{1}\,\frac{3}{2}\,\frac{4}{4}$.

Tasmanians. The aborigines of this island in 1800 numbered ab. 7,000, but through wars were rapidly reduced: the last pure blooded native died 1876. They were related to the aborigines of Australia but contained admixture of Negrito blood. In civilization they ranked lower than the Australians, but they were timorous and chaste. Their only manufactures were weapons of bone, wood, and stone, the latter not equal to those made by Neolithic man. The average height was a little over 5 ft.

Tasman Sea. Sea between New Zealand and the islands to the n.w. on the one hand and Australia and Tasmania on the other.

Tasso, TORQUATO, 1544–1595. Italian poet, ranking next to Dante. His fame rests on *Jerusalem Delivered*, 1581, tr. by E. Fairfax 1600, and in much less degree on his pastoral drama, *Aminta*, 1573, and a youthful epic, *Rinaldo*, 1562. He lived at the court of Ferrara 1572–77, but became the victim of morbid delusions, and was confined in a madhouse 1579–86. His last production, *Gerusalemme Conquistata*, 1593, was unworthy of his genius. Death prevented his being crowned by the Pope.

Tasso.

His works were collected in 33 vols. 1821–32.—His father, BERNARDO, 1493–1569, was an epic and lyric poet of repute in his time.

Tassoni, ALESSANDRO, 1565–1635. Italian poet, essayist, and political writer. *Pensieri*, 1608–20; *Secchia rapita*, 1615–22.

Taste, SENSATIONS OF. Changes of consciousness aroused by stimulation of certain specific end organs, situated in the mucous membrane of the tongue and soft palate. The usual classification of tastes is, sweet, bitter, sour, salt, and possibly alkaline and metallic, though the latter two are not so well defined as the other four and may be only modifications of them. The physical condition of taste is that the substance to be tasted be soluble in the fluids of the mouth. The end organs of taste are small modified nerve endings, known as taste-buds, situated on small papillæ, and directly connected with the special nerves of taste. The mucous membrane of the tongue is also sensitive to impressions of touch and temperature, which are apt to be confused with tastes in the case of pungent, astringent, hot, or cold substances. Taste is also

commonly confused with smell. The so-called flavor of most edible substances is largely smell and not taste.

Tate, NAHUM, 1652–1715. Irish dramatist, poet laureate 1692; author, with N. Brady, of the *New Version of the Psalms*, 1696, long used in the Ch. of England and in America. This, with its *Supplement* of a few hymns, 1703, contains his best work.

Tateno Gozo, b.1841. Gov. of Osaka 1880–90; Japanese Minister to the U. S. 1890–94.

Tatham, WILLIAM, 1752–1819. Va. author. *Inland Canals*, 1798; *Tobacco*, 1800.

Tatian, ab.115–ab.180. Christian apologist, b. in Assyria; disciple of Justin Martyr. His *Ad Græcos* was written in Greek and probably at Rome; his *Diatessaron*, probably in Syriac, was the first attempt at a harmony of the Gospels, and was much used in Syria. His other works are lost. After 167 he became a Gnostic and returned to the East.

Tatius, ACHILLES. Alexandrian Greek romancer, probably of 3d century. *Leucippe and Cleitophon.*

Tatler. Tri-weekly founded and conducted 1709–11 by Sir R. Steele, to which he contributed essays.

Tatnall, JOSIAH, 1762–1803. U. S. Senator 1796–99; Gov. of Ga. 1800.—His son, JOSIAH, U.S.N. and C.S.N., 1795–1871, became Captain 1850, and as Commodore C.S.N. defended the waters of Va. 1861–62 and of Ga. 1863–65.

Tattam, HENRY, D.D., LL.D., F.R.S., 1788–1868. Archdeacon of Bedford 1844; author of a Coptic grammar and lexicon 1828–35; editor of Coptic versions of Job and the Prophets 1847–52.

Tattersall's. Horse-market in London, chiefly for racers; founded 1766 by Richard Tattersall, 1724–1795.

Tattlers (TELL-TALES, SANDPIPERS, etc.). Plover-like birds with slender, straight, stiff, sharp bills and long legs. Yellow Shanks has yellow legs; the Solitary Tattler has blackish ones; the Semipalmated Tattler has its toes webbed at the base.

Tattoo. Sound of the trumpet or the music of the fife and drum at the close of the evening: a signal to the troops to attend roll-call preparatory to going to bed in camp or garrison.

Tattooing. This widespread primitive custom appears to have originated in the desire to fix permanently the various devices painted upon the human skin as family and tribal designations, and for ceremonial and religious purposes. It now exists especially among the natives of the Pacific Islands and s.e. Asia, in S. America, and in n. Africa. Among the black-

Japanese Tattooing.

skinned races it is replaced by scarification. The implements for it consist of a needle or chisel of bone or iron, which is often forced under the skin with a small hammer, and ink of one or more colors. The operation is extremely painful. Tattooing is disapproved by civilized races, and in Japan, where the art has reached great perfection, it is the subject of legislative enactments. In modern times, tattooing is practically confined to savages, sailors, criminals, and vagrants.

Tauchnitz, KARL CHRISTOPH TRAUGOTT, 1761–1836. Printer at Leipzig 1796; publisher of superior editions of Greek and Latin classics from 1809; introducer of stereotyping 1816; succeeded by his son, KARL C. P., 1798–1884.—His nephew, CHRISTIAN BERNHARD, BARON, 1816–1895, founded 1837 a yet more famous house in Leipzig, and from 1831 pub. ab. 3,000 English books. He was ennobled 1860, and made a Saxon Peer 1877.

Tauler, JOHANNES, ab.1300–1361. German mystic, Dominican monk, and famous preacher. His sermons were pub. 1498; 25 were tr. 1857.

Taunay, ALFREDO D'ESCRAGNOLLE, b.1843. Brazilian novelist, poet and critic; of French ancestry; Senator 1886.

Taunton. City and capital of Bristol co., Mass., on T. River, 34 m. s. of Boston. Its industries consist largely in iron and steel manufactures. Pop., 1890, 25,448.

Taurecs. See CENTETIDÆ.

Taurine. $NH_2.C_2H_4.HSO_3$. Amidoethylsulphonic acid; mpt. 240° C.; white crystalline compound, soluble in hot water; found in combination in considerable quantities in the bile, kidneys, etc., of oxen and other animals; made by treating chlorethylsulphonic acid with ammonia.

Taurus. See ZODIAC.

Taurus Mts. Range of e. Asia Minor, extending from the frontier of Transcaucasia s.w. to the Mediterranean. Greatest height ab. 10,000 ft.

Tausig, KARL, 1841–1871. Polish-German pianist and composer, pupil of Liszt; unsurpassed as a technician.

Taussig, FRANK WILLIAM, b.1859. Prof. Harvard 1887. *Tariff Hist. U. S.*, 1888; *Silver Situation*, 1892.

Tautog. See LABRIDÆ.

Tautphœus, BARONESS JEMIMA VON, 1808–1893. English novelist of Irish birth (b. Montgomery), resident in Bavaria. *The Initials*, 1850; *Cyrilla*, 1853; *Quits*, 1857; *At Odds*, 1863.

Tavern. Public house where both food and drink are sold. See HOTEL.

Tavernier, JACQUES, ab.1625–1673. French buccaneer, executed at Havana.

Tavernier, JEAN BAPTISTE, 1605–1689. French traveler in Asia. *Six Voyages*, 1676, repub. in 7 vols. 1810; *Travels in India*, tr. 1890. His specialty was precious stones.

Tavsen, HANS, 1494–1561. Leader of the Reformation in Denmark; Bp. of Ribe 1542.

Tawing and Tanning. See LEATHER.

Tax. Public burden imposed generally on the inhabitants of a community, for governmental purposes; to be distinguished from an assessment for local improvements. It is not a lien on property unless made so by statute. The methods of imposing and collecting, including the sale of personal and real property for delinquent taxes, are regulated by statute.

Taxeopoda. Order of placental Mammals, forming a connecting link between the *Bunotheria* and the true Ungulates (*Diplarthra*). The toes are hoofed: the two series of bones in the carpus and tarsus are placed so that each member of the proximal row articulates with but one member of the distal row (a primitive arrangement). The suborders are *Condylarthra*, *Taxodontia*, and *Hyracoidea*.

Taxidermy. Art of preparing and arranging the skins of animals intended for preservation in such a manner as to represent their natural appearance. The skin after its removal is rubbed with some preservative, as arsenious acid alone or mixed with alum, and a framework, with wires running to the different extremities of the body, is inserted. Cotton is then placed around the framework, and wires to fill the skin give the required shape. Butterflies and other insects are kept in close drawers in which camphor or petroleum is placed to preserve them and keep off moths.

Taxis. When any prolapsed organ, *e.g.*, the bowel in a hernia, is replaced by manipulation without the aid of instruments, the operation is known as taxis.

Taxonomy. Systematic arrangement (classification) of living beings. Its object is to make the general distribution of animals and plants conformable to the order of nature in their production.

Tax Sale. Sale of property of a delinquent taxpayer, made by authority of law, as a means of collecting or enforcing an unpaid tax. Power to make such sales is statutory.

Tay. River of Perthshire, largest in Scotland; flowing 118 m. e. and s.e. to the North Sea.

Tay Bridge. Built 1871, consisting of 85 spans with a total length of 10,320 ft. On the stormy night of Dec. 28, 1879, 13 spans fell into the river, and with them a passenger train containing 72 persons, all of whom perished. The cause of the

Tay Bridge, Scotland.

failure was the insufficient bracing of the structure against the action of wind. A new bridge was completed 1887, in length 10,780 ft, costing $3,200,000.

Taygetus. Mt. range of s. Greece, extending ab. 70 m. s. to Cape Matapan.

Tayler, JOHN JAMES, 1798–1869. Prof. New Coll., Manchester, 1840, and its head 1853. *Religious Life of England*, 1845; *Faith and Duty*, 1851; *Fourth Gospel*, 1867; *Letters*, 1872.

Taylor, ALFRED, U.S.N., 1810–1891. Captain 1862, Commodore 1866, Rear-admiral 1872.

Taylor, ALFRED SWAINE, M.D., F.R.S., 1806–1880. Prof. Guy's Hospital, London; ed. *Medical Gazette*. *Medical Jurisprudence*, 1843–65; *Poisons*, 1848.

Taylor, BAYARD, 1825–1878. American traveler, poet, journalist, and novelist; Minister to Germany 1877. Beginning with *Ximena*, 1844, and *Views Afoot*, 1846, he produced many volumes of travel and of verse, and four novels, *Hannah Thurston*, 1863; *John Godfrey's Fortunes*, 1864; *Kennett*, 1866; and *Joseph and his Friend*, 1870. His chief ambition was poetical, and his chief success the translation of *Faust*, 1870–71. *The Masque of the Gods*, 1872, and *The Echo Club*, 1876, though not popular, are more memorable than his longer poems, *The Picture of St. John*, 1866, *Lars*, 1873, and *The Prophet*, 1874.—His wife, MARIE (HANSEN), b.1829, edited and tr. into German several of his works, and with H. E. Scudder wrote his *Life*, 1884.

Taylor, BENJAMIN FRANKLIN, LL.D., 1819–1887. American journalist, lecturer, and poet. *Theophilus Trent*, 1887.

Taylor, BROOK, F.R.S., 1685–1731. English mathematician. *Methodus Incrementorum Directa et Inversa*, 1715; *Linear Perspective*, 1719.

Taylor, DAN, 1738–1816. English preacher, founder and leader of the General Baptist New Connection 1770.

Taylor, EDWARD THOMPSON ("FATHER TAYLOR"), 1793–1871. M.E. missionary to sailors in Boston; noted for wit, eloquence, and efficiency.

Taylor, GEORGE, 1716–1781. Iron-master near Easton, Pa.; delegate to Congress 1776–77; signer of the Declaration of Independence.

Taylor, HANNIS, b.1852. U. S. Minister to Spain 1893. *Origin and Growth of English Constitution*, 1892.

Taylor, SIR HENRY, D.C.L., 1800–1886. English poet, dramatist, and essayist; clerk in the Colonial Office 1824–72; knighted 1869. *Philip van Artevelde*, 1834, is his best play. *The Statesman*, 1836; *Notes*, 1847–49; *Autobiography*, 1885; *Correspondence*, 1888. *Works*, 5 vols., 1878.

Taylor, ISAAC, 1759–1829. Independent minister at Ongar in Essex from 1811; author of some 20 vols.—His daughter, JANE, 1783–1824, wrote *Contributions of Q. Q.*, 1826, and with her sister ANN (MRS. GILBERT), 1782–1866, the long popular *Original Poems*, 1805, and *Hymns for Infant Minds*, 1809.—Their brother, ISAAC, LL.D., 1787–1865, pub. *Natural History of Enthusiasm*, 1829, and *of Fanaticism*, 1833; *Spiritual Despotism*, 1835; *Physical Theory of Another Life*, 1836; *Ancient Christianity and the Oxford Tracts*, 1839; *Wesley and Methodism*, 1851; and other books.—His son, ISAAC, LL.D., b.1829, Canon of York 1885, has pub. *Words and Places*, 1864; *Taylor Family of Ongar*, 1867; *Greeks and Goths*, 1879; *The Alphabet*, 1883; *Origin of the Aryans*, 1890.

Taylor. ISIDORE SÉVERIN JUSTIN, BARON, 1789–1879. French writer of books of travel; Senator 1869.

Taylor, JAMES HUDSON, b.1832. English missionary in China 1853–60 and since 1866; founder of the Inland Mission 1865.

Taylor, JEREMY, D.D., 1613–1667. Bp. of Down and Connor 1660; most brilliant of Anglican writers; called by Emerson "the Shakespeare of divines." His *Liberty of Prophesying*, 1647, is a powerful argument against persecution. More popu-

Jeremy Taylor.

lar were his *Great Exemplar* (Life of Christ), 1649, and *Holy Living and Dying*, 1650–51. His few hymns are in *Golden Grove*, 1655. *Ductor Dubitantium*, 1660, is an immense book on casuistry. His works were collected in 15 vols. 1820–22.

Taylor, JOHN, 1580–1654. English "water" poet. His works were collected 1630 and repub. 1868–78.

Taylor, JOHN, LL.D., 1703–1766. Canon of St. Paul's 1757; editor of Lysias, 1739, and other Greek orators.

Taylor, JOHN, 1750–1826. English hymnist.

Taylor, JOHN, 1808–1887. Mormon apostle 1838; long missionary in Europe; Brigham Young's successor as pres. 1877; indicted for polygamy 1885, and thenceforth in hiding.

Taylor, JOHN LOUIS, 1769–1829. Judge N. C. Superior Court 1798; Chief-justice from 1808; reviser of N. C. statutes 1817. *Cases*, 1802; *Reports*, 1818; *Executors*, 1825.

Taylor, JOHN W., 1784–1854. M.C. from N. Y. 1813–33; Speaker 1820–21 and 1825–27.—His nephew, JOHN ORVILLE, 1807–1890, was prof. Univ. New York 1837–52, and a writer on education.

Taylor, MARY CECILIA (MRS. W. O. EWEN), 1827–1866. American actress.

Taylor, NATHANIEL WILLIAM, D.D., 1786–1858. Prof. Yale from 1822; author of the "New Haven theology," a mitigated form of Calvinism, which exerted great influence and caused much commotion in New England. *Works*, 4 vols., 1858–59.

Taylor, PHILIP MEADOWS, 1808–1876. English officer, in India 1826–66; author of *Confessions of a Thug*, 1839; *Tara*, 1863; *Secta*, 1873; and other romances. *Cromlechs*, *Cairns*, etc., 1853; *Hist. India*, 1870; *Story of my Life*, 1877.

Taylor, RICHARD COWLING, 1789–1851. English geologist, in the U. S. from 1830; surveyor of Pa. coal fields. *Fossil Fuel*, 1841; *Statistics of Coal*, 1848.

Taylor, ROWLAND, LL.D., d.1555. Martyr of the Reformation; chaplain to Cranmer; Archdeacon of Exeter; burned, after a year's imprisonment.

Taylor, SAMUEL HARVEY, LL.D., 1807–1871. Principal of

Phillips Academy at Andover, Mass., from 1837; editor of classical text-books.

Taylor, THOMAS, 1758–1835. English Platonist; translator of Plato, 1804, Aristotle, 1806–12, the Neo-platonists Iamblichus, Porphyry, Plotinus, Proclus, and other Greek writers.

Taylor, THOMAS RAWSON, 1807–1835. English hymnist.

Taylor, TOM, 1817–1880. English playwright; ed. *Punch* 1874.

Taylor, WILLIAM, 1765–1836. English author and translator. *Synonyms*, 1813; *German Poetry*, 1828–30.

Taylor, WILLIAM, D.D., b.1821. M. E. bp. for Africa 1884; prolific writer.

Taylor, WILLIAM MACKERGO, D.D., LL.D., 1829–1895. Pastor in Scotland, at Liverpool, and 1872–93 in New York; author of Scripture biographies and other works. *Knox*, 1885; *Parables*, 1886; *Miracles*, 1890.

Taylor, WILLIAM ROGERS, U.S.N., 1811–1889. Captain 1862; active on the Atlantic coast; Commodore 1866, Rear-admiral 1871.—His father, WILLIAM VIGNERON, U.S.N., 1781–1858, became Captain 1841.

Taylor, ZACHARY, U.S.A., 1784–1850. Twelfth Pres. U. S.; Captain 1810; defender of Ft. Harrison, Ind., 1812; Major 1816, Colonel 1832; distinguished in the Black Hawk war, 1832, and against the Seminoles, Fla., 1836–38; victor at Okechobee, Dec. 25, 1837; commander on the Texas frontier 1845, and in the Mexican war 1846; victor at Palo Alto May 8, Resaca de la Palma May 9, and Monterey Sept. 21–24; Major-gen. June 1846; weakened by transfer of his best troops to Gen. Scott, yet victorious at Buena Vista Feb. 23, 1847; popular and fa-

Zachary Taylor.

mous as "Old Rough and Ready"; Whig candidate for Pres. June 1848; elected by plurality over Cass and Van Buren. His brief administration is memorable for the admission of Cal. as a free state, the struggle over the extension of slavery, and the Clay compromise.—His son, RICHARD, 1826–1879, a brilliant and accomplished man, became Brig.-gen. C.S.A. 1861, Major-gen. 1862, and Lieut.-gen. 1864, serving in the southwest, and fighting Gen. Banks in two battles, April 8–9, 1864. He pub. *Destruction and Reconstruction*, 1879.

Taylor, MT. Volcanic peak in w. New Mexico. Altitude 11,391 ft.

Taylor's Theorem. Formula, devised 1715 by BROOK TAYLOR (q.v.), for developing a function of the sum of two variables in a series of the ascending powers of one variable with coefficients which are functions of the other.

$$f(x+y)=f(x)+f'(x)y+f''(x)\frac{y^2}{\lfloor 2}+\ldots f^{n-1}(x)\frac{y^{n-1}}{\lfloor n-1}+ \left.\begin{array}{l} f^n(x+\theta y)\frac{y^n}{\lfloor n} \text{ or} \\ f^n(x+\theta y)\frac{(1-\theta)^{n-1}y^n}{\lfloor n-1} \end{array}\right\}$$

Tazewell, HENRY, 1753–1799. Judge Va. Supreme Court 1785–93; U. S. Senator from 1794.—His son, LITTLETON WALLER, 1774–1860, was M.C. 1801–3, U. S. Senator 1825–33, and Gov. of Va. 1834–36.

Tchelynskin, CAPE. Northernmost point of the mainland of Asia, lat. 78°.

Tcherevin, d.1896. Russian general, prominent against the Poles 1863 and the Turks 1877; head of secret police 1878–80.

Tchernaya. River in Crimea, scene of a battle Aug. 16, 1855. The Russians, under Gortschakoff, were repulsed with loss of 5,000 killed and wounded and 600 prisoners; loss of allies, 1,200.

Tchernyshevsky, NIKOLAI GAVRILOVITCH, 1828–1889. Russian economist, sent to Siberia for life 1864, after two years' imprisonment, during which he wrote a novel, *Que Faire?* It exerted a deep influence in Russia, and was tr. 1886 as *A Vital Question*.

Tea. Shrubs of the genus *Thea*, of the natural family *Ternstromiaceæ*, natives of e. Asia, extensively cultivated

Tea (*Thea chinensis*).

for their leaves. The leaves of numerous other plants have been used as substitutes. It contains 2.57–4.89 per cent of THEINE (q.v.), the active principle. Tea is supposed to have originated in Assam, thence been introduced into China ab.400, and from China into Japan ab.850. It was brought to Europe by the Dutch 1610, and was sold in England at $30 to $50 a pound; in 1666 the price had fallen to $15. It began to be cultivated in India 1834, in Ceylon 1876. Gt. Britain and Ireland in 1894 consumed 214,000,000 lbs.; the U. S. in 1896 imported 93,998,372 lbs. The consumption in the U. S., 1897, was 1.55 lbs. per capita. Production in 1888, in millions of pounds, was estimated, China 290, India 90, Japan 40, Ceylon 19, Paraguay 10, Java 7.

View in the Black-Tea District of China.

Tea, PARAGUAY. See MATÉ.

Teaberry. See WINTERGREEN.

Teachers' College. At Morningside Heights, New York; founded 1887, chartered 1892. It has 11 professors, 40 assistants, and ab. 350 students; it was made the school of pedagogy of Columbia Univ. 1897.

Teachers' Institutes. Begun in the U. S. 1843, with informal precedents from ab.1834.

Teaching of the Twelve Apostles. Greek MS., discovered 1873 at Constantinople by Bp. Bryennios; pub. 1883, tr. 1884. As perhaps the earliest Christian document outside the N. T. canon, it is of great importance for the light it casts on primitive church usages.

Teak. *Tectona grandis.* Large tree of the natural family *Verbenaceæ*, native of India, yielding a very hard and durable wood, used in shipbuilding. Sp. gr. 5.85.

Teal. Ducks of several species in U. S. and Europe.

Tear. In Botany, resinous or gummy exudation from a plant in the form of a teardrop.

Tear Gland. See LACHRYMAL GLAND.

Tears. Secretion of the lachrymal gland. They assist in lubricating the eyeball, and strong emotions and odors produce an excessive flow, especially in the human race, but few animals shed tears at all. The normal discharge escapes through the nose. Tears are of alkaline reaction, have a saline taste, and consist of water and ab. 1 per cent common salt.

Tears of Strong Wine. Phenomenon first explained by Prof. J. Thomson. The alcohol evaporating from a layer of wine on the sides of a glass causes an increase of the surface tension at points where the evaporation is most rapid. The remaining liquid is thus drawn up in drops, the motion always taking place from the stronger wine to the weaker.

Tear-Thumb. Prickly, climbing herbs of the genus *Polygonum;* especially *P. sagittatum* and *P. hastatum*, natives of N. America.

Teasel. Coarse herbs of the genus *Dipsacus*, natural order *Dipsaceæ*, with lavender-colored flowers subtended by a prickly or spiny involucre; natives of the Old World, introduced into America. *D. fullonum* is cultivated for its dense flower heads, furnished with recurved bristles, and used by fullers in raising the nap on woolen cloth. Its cultivation is a local industry of some importance in parts of Onondaga co. and Cayuga co., N. Y., the headquarters of the trade being at Skeneateles. The plant also grows wild in many parts of the country as a wayside weed.

Fuller's Teasel (*D. fullonum*): *a*, a bract.

Teche Bayou. Large bayou of the Mississippi River in La., issuing from the Atchafalaya Bayou to the s. of lat. 31° N., and flowing into the s. end of Grand Lake.

Technical Schools. These are schools of applied science in distinction from industrial schools, which latter instruct in handicraft, as carpentry, blacksmithing, etc. They include civil, mechanical, mining, electrical and chemical engineering, industrial chemistry, metallurgy and architecture. The Rensselaer Polytechnic Institute at Troy, N. Y., established 1824, was the first in the U. S. The Sheffield Scientific School at New Haven was founded in 1847, Lawrence Scientific School at Cambridge, Mass., in 1847, Chandler Scientific School at Dartmouth Coll. in 1852, School of Mines of Columbia Coll., N. Y., 1864, the Lehigh Univ., Bethlehem, Pa., 1866, Stevens Institute 1871, Mass. Institute of Technology, and many others.

Technology. Science of the industrial arts, as brewing, spinning, calico-printing, etc.: a general name for industrial science. See INDUSTRIAL SCHOOLS and TECHNICAL SCHOOLS.

Tectibranchiata (PALLIATA). Suborder of *Opisthobranchiata*, including forms having the gill on the right side, in a special cavity or covered by the mantle-edge. A shell is usually present, though it may be concealed, as in *Aplysia*, by lobes of the foot. There are two groups, *Phyllidiobranchia* (*Phyllidiidæ*) and *Ctenobranchia* (*Bulla*, *Aplysia*, Sea-Hare).

Tectology (COMPARATIVE ANATOMY, or MORPHOLOGY). Study of the relations and development of animal units, of grades above the antimere (see INDIVIDUALITY): includes Histology, Organology, Blastology, Prosopology, and Cormology.

Tectonic. In Geology, structural arrangement of the materials of the earth considered as a whole.

Tectospondyli. See SHARKS.

Tectrices (COVERTS). Short feathers overlapping the bases of the remiges of the wing of birds.

Tecumseh, ab. 1768–1813. Shawnee chief: with his brother, ELSKWATAWA, "the Prophet," he sought to form an alliance of the western tribes against the whites, and in the battle of Tippecanoe, Nov. 7, 1811, was defeated by Gen. Harrison. In 1812 he joined the British, was made Brig.-gen., and was killed at the Thames.

Te Deum. Latin hymn of 5th century, perhaps based on a Greek original; valued as the noblest of Christian poems, and in universal use; sung as part of Morning Prayer and on special occasions of thanksgiving. The legendary ascription to Ambrose and Augustine is unsupported. See AMBROSIAN HYMN.

Teeswater. See CATTLE.

Teeth. Principal organ of mastication: bony bodies placed in sockets in the upper and lower jaws. In man (and most mammals), there are two sets: the first, the milk or temporary teeth, 20 in number, appear in the first three years of life, beginning with the central incisors at from the 6th to the 8th month and ending with the last molar at from the 20th to the 30th month. The permanent teeth number 32, arranged symmetrically 8 on each side in the upper and lower jaw. Beginning in the middle, we have in succession: 2 incisors, 1 canine, 2 bicuspids and 3 molars; the last molar is often but imperfectly developed. The shedding of the temporary teeth begins after the 5th year, when they are replaced by the permanent.

Vertical Section through a Tooth lodged in its socket: *a*, enamel; *b*, dentine; *c*, crusta petrosa, or cement; *d*, lining of the cavity in the gum; *e*, bony socket in gum; *f*, pulp cavity.

A, the separate human teeth as they occur in the half-jaw of the adult; B, the human teeth *in situ* in the upper jaw; *a*, *a*, incisors; *b*, *b*, canines; *c*, *c*, premolars; *d*, *d*, true molars.

The permanent teeth appear in the following sequence: the 1st molar, the central and lateral incisors, the 1st and 2d bicuspids, the canine and the 2d and 3d molars. This last seldom appears before the 17th or 18th year, and is known as the wisdom tooth. The upper canines are sometimes called the eye-teeth; the lower, the stomach teeth. See DENTITION.

Teething. Process of eruption or cutting the teeth. The teeth are developed in the sockets, and, as they grow, are pushed up through the gum. This pressure is apt to cause great pain, with constitutional disturbances of more or less severity caused by the irritation. This, in part, accounts for the added dangers in the second summer of a child's life.

Teeth of Wheels. See GEAR WHEELS.

Teetotalism. Total ABSTINENCE (q.v.) from intoxicating drink.

Teetotum, or SPINNING DIE. Common gaming implement usually having four or six faces, which are marked either with letters, numbers, or dots like dice. Among German Jews, one marked with Hebrew characters is used in the sports of the children at the Feast of Purim. In India, one (chukree) with six dotted sides is permitted at the Diwali Festival. The Chinese implement, ch'é mé, is apparently borrowed from India. In Japan it is called Coma, and used in the popular game of Sugoroku or Double Sixes.

Tegern See. Mountain lake in s. Bavaria, 30 m. s.e. from Munich, 3½ m. long; it is frequented as a summer resort.

Tegmen, or ENDOPLEURA. Inner seed-coat of flowering plants, resulting from the ripening of the secundine coat of the ovule.

Tegmina. ELYTRA (q.v.) of the Grasshopper, etc.

Tegnér, ESAIAS, 1782–1846. Swedish poet, called the "greatest of the Gothic School"; prof. Lund 1812, Bp. of Wexio 1824. *Svea*, 1811; *Axel*, 1821; *Frithiof's Saga*, 1825.

Tegucigalpa. Capital of Honduras, 125 m. e. by n. of San Salvador. Seat of Congress since 1880. Pop. ab. 18,000.

Tegulæ. Two small scales of the mesothorax, projecting over the bases of the wings in insects (Hymenopters).

Teheran. Capital of Persia; near the Elburz Mts., ab. 70 m. s. of the Caspian Sea. Pop. ab. 160,000 in winter; early in spring the wealthier citizens go to the mts. Its trade and manufactures are considerable. The mosques have colleges attached to them, and the king's college has European professors.

Tehcult Indians. See PATAGONIANS.

Tehuantepec, ISTHMUS OF. Narrowest part of N. America, in s. Mexico. Width 134 m. An inter-oceanic canal, and more recently a ship railway, have been projected across it. The Gulf of Tehuantepec is on its s. or Pacific side.

Teignmouth, JOHN SHORE, BARON, 1751–1834. Anglo-Indian official; Baronet 1792; legislator of Bengal; Gov.-gen. of India 1793–97; Baron 1797; Privy Councilor 1807; editor and biographer of Sir William Jones.

Teinds. Scottish tithes, secularized at the Reformation, and now chargeable on rents for support of the Kirk.

Teisias. True name of STERICHORUS (q.v.).

Tejeda, JUAN DE. First Captain-gen. of Cuba, 1589-95.

Telamon. In Etruria, Italy: here the Gauls, hemmed in by two Roman consular armies, were annihilated 225 B.C.; 10,000 were taken prisoners, and 40,000 killed.

Telautograph. Electrical device invented by Elisha Gray for transmitting autographs or copying designs. It is an ingenious application of the general principles of Morse's telegraphic alphabet.

Telegraph. The first electric telegraph, 13 m. long, was built in England 1839. The first overground line, on poles, was built at Calcutta 1839. The first in the U. S., between Baltimore and Washington, was completed May 1844, using Morse's system, of which a working model had been made 1836. In 1897 the telegraph systems of the world had an extent of ab. 5,000,000 m. An attempt to lay a cable across the Atlantic was made 1857; another was landed Aug. 5, 1858, but ceased to work within a month: the first which proved a success was landed in Newfoundland July 27, 1866. See TELEGRAPHY.

Morse Apparatus as used on the line between Washington and Baltimore.

Telegraph and telephone companies are not common carriers, but their business is impressed with a public interest, so that the State may authorize them to exercise the right of eminent domain and may regulate their charges. They are bound to serve the public without discrimination, and generally to send messages for which payment is made or tendered in the order of reception. They are liable to the sender for damages sustained by their negligence in transmission and delivery, and in some jurisdictions they are liable to the receiver. In some States they may limit such damages by contract stipulation, in others such stipulations are deemed void, as against public policy.

Telegraph, FIELD. During the last years of the Civil War the headquarters of an army were often connected with those of its important subdivisions and of its supply stations in rear by means of a light telegraph wire through which direct and rapid communication could be maintained even during battle. The wires were on rolls, carried in light-wheeled vehicles, and could be rapidly paid out: they were supported on light poles or lances or on trees with suitable insulation. The system has been carefully and thoroughly developed, and is now part of the duty of the signal corps of the army.

Telegrapher's Cramp. Form of NEUROSES (q.v.).

Telegraph Plant. *Meibomia gyrans.* Herbaceous plant of the natural family *Leguminosæ*, which exhibits a remarkable system of spontaneous movements of its lateral leaflets.

Telegraphy, ELECTRIC. Art of communicating between two distant stations by means of a code of prearranged signals conveyed by an electric current over a wire joining the two. Every telegraphic system comprises three parts, the generator of the electric current, the conductors or wires for conveying

Morse Electric Telegraph Instrument.

it, and the sending and receiving apparatus. The first to succeed in giving a practical character to the telegraph were Prof. Wheatstone, whose apparatus was known as the needle telegraph, and Morse, both 1837. This system, in a much simplified form, is now almost universally used. The transmitter is a key for making and breaking the electric circuit; the receiver is an electromagnet furnished with an armature, which is movable a short distance to and fro in front of the poles. Morse's code of signals, if recorded by the instrument as it was in the earlier

Hughes' Electric Telegraph.

forms, consists of a series of dots and dashes, a simple and different combination standing for each letter. At present the signals are interpreted almost entirely by the sound of the moving armature. Various forms of recording and printing telegraphs have been devised, as those of Hughes, Phelps, Edison, and Delany. The quadruplex system was invented by Edison 1877.

Telemachus. Son of Ulysses and Penelope; celebrated by Fénelon.

Telemachus, or **Alymachus,** ST. Monk killed at Rome 404 in attempt to check gladiatorial games. Public horror at the murder killed the practice.

Telemeter. Optical instrument for measuring distances. One form consists of a telescope in which a Rochon prism is placed between the object-glass and its principal focus: thus two images of a distant object are formed in the principal focus, whose interval is greater or less according to the distance of the prism from that point. When the instrument is used, the prism is moved till the two images appear in contact, and its distance from the focus is read off on a graduated scale. The divergence of the two rays is a constant of the prism, and

The De Peigne Telemeter.

may be determined by experiment. We have then the proportion that the visual angle of the object is to the deviation produced by the prism as the distance of the prism from the focus is to the focal length. With this instrument Arago determined the apparent diameters of the planets with great precision.—Also, an instrument for determining the distance by the velocity of sound. Le Boulenge's telemeter consists of a glass tube filled with liquid containing a metal disk of slightly greater specific gravity. When the tube is held vertical the disk falls with a nearly uniform motion. To use the telemeter for explosives, as with guns, the tube is held horizontal with the disk at zero mark. It is turned quickly to a vertical position at the instant the flash is seen, and when the report is heard it is turned back to a horizontal position. A scale on the tube gives the range directly, corresponding to the distance passed over by the disk.

Teleocephali. See PHYSOCLISTI.

Teleodactyla. See DIPLARTHRA.

Teleology. Study or doctrine of design or final causes; used in natural theology to prove the being and attributes of God.

Teleosauria. See CROCODILIA.

Teleostei, or TELEOSTOIDEA. Fishes with a bony skeleton, though remains of the primitive cartilaginous cranium and notochord often persist. There are usually four pairs of free gill arches, and an external operculum. The skin is usually covered by cycloid or ctenoid overlapping scales. The heart has a bulbus arteriosus with two valves. Most Teleosts are oviparous, and the ova are fertilized after being spawned. The suborders are *Lophobranchii*, *Plectognathi*, *Physostomi*, *Anacanthini*, and *Acanthopteri*. They may also be considered in the two sections *Physostomi* and *Physoclisti*, and, using a more minute subdivision, as is general with American ichthyologists, we have these groups: superorder *Physostomi* (with open pneumatic duct), including orders *Apodes* (Eels), *Nematognathi* (Catfishes); and the following subdivisions of *Teleocephali*, *Glanencheli* (*Gymnonoti*, Electric eels), *Eventognathi* (*Plectospondyli*, Minnows), *Isospondyli* (Herrings, Shad, *Salmonidæ*), *Haplomi* (Pike, Pickerel). Also a few orders from the deep sea or foreign shores, not well-known, among them *Lyomeri* (Pelican fish). Superorder *Physoclisti* (with closed pneumatic duct) includes the following subdivisions of order *Teleocephali*: *Synentognathi* (Flying-fishes, *Exocœtidæ*), *Persesoces* (Mullets), *Percomorpha* (*Acanthopterygii*, the spiny-finned fishes, Perch, Bass, Bluefish, Mackerel, Dolphins, Swordfish, *Xiphiidæ*, Bonitos, Weakfish, Sheepshead, Toadfish, and many others), *Anacanthini* (Cod, Haddock), *Discocephali* (*Remora*), *Tæniosomi* (Ribbonfish), *Heterosomata* (Flounders); also the orders: *Hemibranchii* (Sticklebacks), *Lophobranchii* (Sea Horses), *Plectognathi* (Globefishes, Triggerfishes, Trunkfishes), *Pediculati* (Anglers), and order *Opisthomi*.

Teleostomi. Subclass of *Pisces*, including the GANOIDS and TELEOSTEI (q.v.).

Telepathy. Thought-transference, or communication of an idea from one mind to another by some means other than the usual avenues of sense. Its possibility must still be regarded as doubtful, though surprising experiments under close restrictions have been apparently successfully carried out by reputable observers. Various theories have been advanced to account for the phenomenon, but until more exact and trustworthy information as to the facts is forthcoming, speculation is useless. The best experiments and theories are recorded in the Proceedings of the Society for Psychical Research.

Telephone. Apparatus for transmitting sounds to a distance; of two kinds, acoustic and electrical. In the former, sometimes known as the lover's telegraph, the sound-waves themselves are propagated along a stretched wire or string from one vibrating membrane to another. The magnetoelectric instrument, sometimes called the articulating telephone, invented by Prof. A. G. Bell, patented 1876, consists of a thin

Lover's Telegraph.

iron disk capable of vibrating in front of and very near to the pole of a strong steel magnet, around which is a coil of very fine insulated copper wire, connected to the line joining the two distant stations. The vibrations taken up by the elastic plate generate magneto-electric pulses in the coil, which are transmitted over the wire to a similar receiving instrument, where they are reconverted into sound-waves. The transmitting instruments usually employed depend for their action upon the principle of varying the resistance at the points of contact, first employed by Gray and by Edison (see MICROPHONE). The transmission of sounds by electricity seems to have been first effected by J. P. Reis of Friedrichsdorf 1860–61. Elisha Gray of Chicago constructed a "musical telegraph"

Early Telephones.

1, Magneto Telephone by A. G. Holcomb 1860–61; 2, Magneto Telephone by G. W. Beardslee prior to 1865; 3, Same inclosed for use; 4, Weyde Transmitter 1869; 5, Weyde Receiver ab.1869; 6, Weyde Receiver in 1870.

1866–67, and filed a caveat for transmitting a sound-wave through a wire Feb. 16, 1876. Graham Bell exhibited a different device for attaining the same result June 25, 1876. Edison's "loud-speaking" telephone was invented 1877. In 1897 there were 772,627 telephone instruments under lease in the U. S. See RECEIVER, TELEPHONE.

Telerpeton. Small lizard-like reptile from the Triassic sandstones of Elgin, Scotland. For many years this fossil was erroneously attributed to the Old Red Sandstone.

Telescope. Instrument for observing distant objects; of two classes, refracting or dioptric, and reflecting or catoptric. The simplest form is the astronomical instrument, which consists of two convex and preferably achromatic lenses at a distance apart nearly equal to the sum of their principal focal lengths. The lens directed toward the object is as large as convenient to secure as much light as possible, and of long focal length. It is called the OBJECT GLASS (q.v.), and forms an inverted real image of the object, just within the focus of the other lens, called the eyepiece. Thus the eye placed beyond the eyepiece sees a magnified virtual image of the real one. The terrestrial telescope differs from the above in having an arrangement for reinverting the image formed by the object-glass. This consists of a combination of two convex lenses, separated by a distance equal to the sum of their focal lengths, and so placed that the image to be inverted faces at the principal focus of the combination. Galileo, who was the first to examine the heavens, devised a simple form of instrument. The object-glass is a double convex lens; the eyepiece is a double concave lens, and so placed that the rays from the object-glass are incident upon it before they form an image. The result is a beam of divergent rays which the eye projects till they form an erect and virtual image of the object. By this means the length of the instrument is much lessened.

Lick Telescope. Aperture 36 in., focal length 57 ft. 10 in.

The common opera-glass is constructed on this principle. The chief forms of reflecting telescopes were those devised by Gregory, Newton, Herschel, and Cassegrain. In these the object-glass is replaced by a concave mirror, which forms the

real image to be viewed by the eyepiece; the instruments differ in the details of forming and examining this image. Astronomical telescopes are furnished with a smaller instrument, called finder, which has a much larger field, and has its axis parallel to that of the large one. Roughly, the magnifying power of a telescope is the ratio of the focal length of the objective to that of the eyepiece. Roger Bacon understood the principles on which the telescope depends ab.1250; so perhaps did Giambatista della Porta 1558; and Leonard Digges, by help of Bacon, before 1571; but the instrument was practically discovered in Holland 1608. The invention is claimed for Hans Lippershey, spectacle-maker of Middelburg; Descartes ascribes it to Metius (otherwise Andrianzoon) of Alkmaar. Another opinion is that Jansen, also of Middelburg, was the inventor in 1610. Galileo discovered satellites of Jupiter Jan. 1610; Kepler explained the telescope 1611. Newton invented the reflecting telescope 1668. An achromatic telescope was constructed by C. M. Hall 1723, and again by J. Dolland 1758.

Telesilla OF ARGOS. Heroine and lyric poet, who flourished ab.510 B.C. Her warlike deeds are probably mythical.

Telespectroscope. See SPECTRUM ANALYSIS.

Telesphorus. Bp. of Rome 128–139.

Teleutospores. Spores produced in the puccinia state of *Fungi* of the subclass *Uredineæ*. They are two-celled, and mark the third phase of the life-history of these parasites.

Telfair, EDWARD, 1735–1807. Delegate to Congress 1778 and 1780–83; Gov. of Ga. 1786 and 1790–93.

Telford, THOMAS, 1757–1834. English civil engineer; builder of many canals, of the Menai and Conway tubular bridges, and inventor of the Telford system of roadmaking; founder of Institution of Civil Engineers 1818. See MACADAM ROAD.

Tell, WILLIAM. Hero of Swiss legend. He shot an apple from the head of his son, at command of Gessler, whom he afterward slew. The story is connected with the Swiss revolt against Austria 1307–15.

Tell-el-Amarna. Village of central Egypt. Here were discovered, 1887–88, ab. 300 clay tablets containing correspondence in the cuneiform character from various courts of w. Asia; these have since been deciphered and published.

Tell-el-Kebir. Village of Egypt, e. of Cairo; site of Arabi's camp, taken by Sir G. Wolseley, Sept. 13, 1882, ending the rebellion.

Teller, HENRY MOORE, b.1830. U. S. Senator from Col. 1876–82 and since 1885; Sec. Interior 1882–85.

Teller, WILHELM ABRAHAM, 1734–1804. German rationalist, fined for his *Worterbuch des N. T.*, 1772.

Tellez, GABRIEL (TIRSO DE MOLINA), ab.1580–1648. Spanish dramatist and writer of tales; Prior of Soria 1645; author of some 300 comedies, interludes, and autos, of which 59 survive. His *Burlador de Sevilla* developed the legend of Don Juan.

Telluretted Hydrogen. H_2Te. Gas with a disagreeable odor, resembling that of sulphureted hydrogen; made by heating tellurium with zinc, and then treating this with hydrochloric acid. It precipitates many metals from their solutions in the form of tellurides. It burns with a blue flame, and is soluble in water.

Telluric Acid. $H_2TeO_4.+2H_2O$. Colorless crystals, made by converting the potassium salt into the barium salt and precipitating with sulphuric acid. It loses water on heating to 160° C., forming a white powder.

Telluric Anhydride. See TELLURIUM TRIOXIDE.

Telluric Lines. See SPECTRUM ANALYSIS.

Tellurite. TeO_2. Rare mineral compound of tellurium and oxygen, found with native tellurium.

Tellurites. Salts of tellurous acid.

Tellurium. Te. At. wt. 125?, sp. gr. 6.24, sp. ht. .047, mpt. 452° C., valence II. IV. VI.; discovered by Von Reichenstein, 1782; prepared from the ores by treating them with an oxidizing agent, isolating the tellurous acid thus formed, and then reducing with sulphurous acid; bluish-white substance of metallic luster; soluble in nitric and sulphuric acids; one of the rarer chemical elements, occasionally found in nature in a free state, but more abundantly in combination with gold, silver, and lead, as in the minerals nagyagite, sylvanite, and calaverite, the first being also known as foliated tellurium and graphic tellurium.

Tellurium Bromide. $TeBr_2$. Black substance, mpt. 280° C.; made by heating tellurium in bromine vapor. See the CHLORIDE.

Tellurium Chlorides. Two are known, $TeCl_2$ and $TeCl_4$. The former is a greenish-yellow powder, made by passing chlorine over melted tellurium. The latter is a white crystalline substance, made by treating the dichloride with chlorine. The corresponding bromine and iodine compounds are known.

Tellurium Dioxide. TeO_2. Tellurous anhydride; found as TELLURITE (q.v.); white crystalline solid, melting to a yellow liquid when heated; made by burning tellurium, or dissolving it in warm nitric acid.

Tellurium Fluoride. $TeFl_4$. Only compound of fluorine and tellurium; white mass, obtained by evaporating the solution of tellurium dioxide in hydrofluoric acid.

Tellurium Iodide. Similar to the chlorides and bromides.

Tellurium Tetrabromide. $TeBr_4$. Solid yellow substance, melting to a dark red liquid; sp. gr. 4.31; made by the direct union of the elements at ordinary temperature.

Tellurium Trioxide. TeO_3. Telluric anhydride; orange-yellow, crystalline substance, made by heating crystallized telluric acid.

Tellurous Acid. H_2TeO_3. White powder, made by mixing a solution of tellurium in nitric acid with water; slightly soluble in water; dibasic.

Tellurous Anhydride. See TELLURIUM DIOXIDE.

Telolecithal. Eggs in which the formative yelk is collected at one pole: hence the segmentation is discoidal. See EPIBOLE, GERMINAL DISK, and MESOBLAST.

Telotrocha. Annelid larva with a perianal and a præoral ring of cilia.

Telpherage. Transmission of vehicles hung from a wire to a distance by electricity, independently of any control exercised from the vehicle. Experimental telpher lines have been operated in various places, notably in Weston and Glynde, England.

Telson. Terminal joint, or median piece of the terminal joint, of higher *Crustacea*. In its base is situated the anal opening.

Telugu. Language of the Dravidian group.

Temesvar. Town of s. Hungary, 160 m. s.e. of Pesth; taken and sacked by Turks 1582; taken from them by Prince Eugene 1716; besieged by Hungarians April 1849; relieved by Haynau Aug. 10.

Temminck, CONRAD JACOB, 1778–1858. Dutch ornithologist; writer on Java.

Tempe. Narrow vale or ravine in n. Thessaly, between Mounts Olympus and Ossa, cleft through thick marble, through which flows the Peneus. It is ab. 6 m. long, and from 100 to

Vale of Tempe, Mount Olympus.

2,000 paces broad. The beauties of its scenery are much celebrated by ancient authors, and thus became a synonym for any beautiful valley.

Temper. That molecular property of steel by which it is made harder or softer for specific purposes. See TEMPERING OF STEEL.

Tempera. In Painting, same as DISTEMPER (q.v.).

Temperament. Distinguishing mental characteristics. Four classes are usually described: choleric, melancholic, sanguine, and phlegmatic. These classes correspond, in an imperfect way only, to certain well recognized types of disposition. Of late years a somewhat more promising attempt is being made on strictly psychological grounds to describe "types" in terms of mental method, but the whole subject is in an unsatisfactory state.

Temperance. Control of the appetites and desires by the moral sentiments and by reason. See ABSTINENCE.

Temperature. Maxwell defines the temperature of a body to be "its thermal state, considered with reference to its power of communicating heat to other bodies." It is then merely a condition of a body with which heat is temporarily associated, and can have no quantitative relations in any true

sense. The general principle of expansion by heat is employed in the devices for measuring or comparing temperatures. Two bodies are said to be in thermal equilibrium, and so to have the same temperature, if when brought into thermal communication neither loses heat to nor gains it from the other. Sensations of temperature are changes of consciousness aroused by the application of stimuli of heat or cold to the surface of the body. The end organs of the temperature sense are situated in minute points scattered over the skin in great numbers, and known as "temperature spots," some reacting to stimuli of cold and some to stimuli of heat, but not to both. The corpuscles and nerve endings which serve as recipients for temperature stimuli have not as yet been differentiated from those of TOUCH (q.v.) or pressure.

Temperature, CRITICAL. One in the cooling process of metals and alloys at which they have been found to have very much less tenacity than when hotter or colder. This is the temperature at which cracks occur in castings as they cool. For steel, experiments have seemed to show that this is ab. 600°, corresponding to a blue heat. For other metals such a temperature exists, but its limits have not yet been investigated. See CRITICAL TEMPERATURE.

Temperature Constant of Plants. Total quantity of heat or total excess of temperature above 40° required to bring a plant from budding up to the point of complete ripening of its fruit; sometimes known as Hoffman's or Linnsser's Constant.

Temperature of Reversal. See THERMOELECTRICITY.

Temperature of the Body. The normal temperature of the body averages 98.4° F. The human body can bear a high degree of heat diffused in the atmosphere, 400° F. and upward have been breathed for a short time, and cold 115° F. below freezing have been withstood. Excessive heat disposes the body to gastric and intestinal diseases, and particularly enlargement of the liver, which is of common occurrence in the torrid zone. Heat acts as an excitant, and cold as a sedative, inducing sleep, the tendency to which, after long exposure, becomes irresistible. See ANIMAL HEAT.

Temperature of the Earth. See EARTH.

Temperature of the Moon. Authorities have differed greatly. Langley, from his latest researches, concludes that it can never rise above the freezing point of water.

Tempering of Steel. Operation of giving to steel just the best relation between hardness and toughness to adapt it for use in cutting implements, etc. The action seems to be in hardening by sudden cooling to send the carbon into combination with the iron; in gradual cooling the carbon seems to separate out. The hotter the steel is when suddenly cooled, the more carbon unites with the metal, and the harder and more brittle the steel. In tempering, therefore, two methods are used. In one the metal is heated from a cold state to just the right temperature for the hardness desired, and is then quenched: in the other, the whole bar is heated to cherry-red, and the particular part to be tempered is quenched and hardened outright by immersing that part only. The heat is conducted to this hardened edge from the body of the bar, and softens or draws it until the desired point is reached, when the whole is quenched. The tempering process seems to depend on the rapidity with which the part passes from the limits of 930° to a temperature below that for forging, or to 400°. The temperatures are indicated on steel by the succession of tints which appear on a bright surface of the edge. These seem to be due to oxide forming. The following table gives these tints and temperatures, and the uses for which the steel is adapted when tempered by either process.

	F.	
Straw yellow, very pale . . .	430°	Steel engraving tools, hammer faces, planer tools.
" " darker	440°	Wood engraving tools, milling cutters.
" " "	470°	Wire-drawing dies, boring cutters.
Brown "	500°	Rock drills, taps, chasers. penknives.
Yellow with purple shade .	520°	Reamers, gouges, stone-cutting tools, twist drills.
Light purple	530°	Wood augers, drifts.
Dark "	550°	Cold chisels, axes.
" blue	570°	Framing chisels, planer knives.
Paler "	590°	Circular saws, screw drivers.
Paler " with green tinge .	630°	Springs, handsaws.

See STEEL, METALLURGY OF.

Temper Screw. Mechanical device attached to the upper end of the string of tools used in well-boring, by means of which the drill is lowered gradually, for three or four feet, as the hole deepens, without changing the point of attachment of the bore rod or cable.

Templars. See KNIGHTS TEMPLARS.

Temple. In London; originally headquarters of the Knights Templars, who occupied the New Temple in the Strand 1184. A

The Temple Church.

portion of it was first leased to students of the common law 1346. The Inner and Middle parts are now occupied by barristers, the Outer has been remodeled into the Exeter Buildings.

Temple, FREDERICK, D.D., b.1821. Author of the first and most memorable of the *Essays and Reviews*, 1860, on *The Education of the World*; head-master of Rugby 1858–69; Bp. of Exeter 1869, and of London 1885; Abp. of Canterbury 1896. *Religion and Science*, 1884.

Temple, H. J. See PALMERSTON.

Temple, SIR RICHARD, LL.D., D.C.L., b.1826. Anglo-Indian official 1846–80, knighted 1867; Gov. of Bengal and of Bombay; M.P. 1885; writer on India.

Temple, RICHARD GRENVILLE, EARL, 1711–1779. M.P. 1734; Lord Privy Seal 1757–61; adherent of Chatham till 1766. *Grenville Papers*, 4 vols., 1852–53.

Temple, SIR WILLIAM, 1628–1699. English diplomatist; Baronet 1666; Envoy to Holland 1668–70 and 1674; negotiator of several treaties. His *Miscellanea*, 1679–92, are notable for style: the paper on *Ancient and Modern Learning* led to a controversy. *Memoirs*, 1691–1709. Swift was his secretary and literary executor. *Works*, 1720, repub. 1814.

Temple, WILLIAM ERNEST, 1821–1889. Astronomer at Observatory Arcetre, Italy; discoverer of six asteroids and fifteen comets.

Temple, WILLIAM GRENVILLE, U.S.N., 1824–1894. Captain 1870, Commodore 1878, Rear-admiral 1884.

Temple Bar. Gate in London, between the Strand and Fleet Street, till 1878.

Temple Society. German Christians who separated from the church in Wurtemberg and settled in Palestine 1868. They await the second coming of Christ. They number ab. 5,000, of which 1,300 are in Palestine.

Temporal Bone. One of the bones of the skull forming that part of the head behind the brow and around the ear. The flat upper portion of the bone forms the temple, while the lower and more irregular part incloses the auditory apparatus. The name is given to this bone because the hair frequently first begins to turn gray in this region.

Temporal Power. Properly, the Pope's regal authority in the States of the Church, abolished 1871; also, more or less, the indirect civil authority resulting from his spiritual claims.

Temporary Stars. Stars which have appeared suddenly and after a time have again disappeared. Among recorded instances are those of Hipparchus 134 B.C., of Tycho Brahe 1572, Nova Cygni 1876, a star in the nebula of Andromeda 1885, and Nova Aurigæ 1892.

Tenacity. Maximum longitudinal stress which, when gradually applied, a rod or wire can sustain without rupture.

It is directly proportional to the breaking weight, and inversely proportional to the sectional area. It is also affected slightly by other considerations; *e.g.*, with the same cross section, a cylinder has greater tenacity than a prism. The most tenacious material is drawn cast-steel; a wire 1 millimeter in diameter can sustain a weight of 80 kilograms.

Tenaille. Rampart between two bastions raised in the main ditch in front of the curtain.

Tenant. Holder of lands by any title. If absolute owner he is tenant in fee; but he may hold for life, or for a fixed term of years, or from year to year, or at will or by sufferance. Again, he may be tenant in common, *i.e.*, he and others may hold several titles to a piece of land, but be united in possession; or joint tenant, when he and others own land by a joint title created expressly by one and the same deed or will; or in coparceny, when he and others take by descent as one heir. An ordinary tenant holds land from another, giving some consideration, either in money, produce, or personal service; or rents another's house.

Tenant Right. Supposed right to retain the use of land as long as the tenant continues to pay the customary rent or a slight advance thereon; and, on leaving the land, to dispose of its good-will to another tenant.

Tenasserim. S. part of Burmah, between Siam and Bay of Bengal; held by England since 1825. Area 46,590 sq. m.;

View at Tavoy, Tenasserim.

pop., 1891, 971,660. It is divided into seven districts. Tavoy, the chief town of the district of Tavoy, is 30 m. from the mouth of the Tavoy River.

Ten Brink. See BRINK.

Tencin, MME. CLAUDINE ALEXANDRINE GUÉRIN DE, 1681–1749. French social personage, mistress of the Regent and other eminent men, mother of D'Alembert; author of three romances, 1735–47. *Lettres*, 1790–1806.—Her brother, PIERRE, 1680–1758, was a Cardinal.

Tendai-Shin. Japanese Buddhist sect, founded from China ab.805, afterward in three branches.

Tender. Proffer of an act in accordance with the offerer's legal obligation.

Tendon. Tissue which binds a muscle to its place of attachment. It is white and fibrous; in many muscles cord-like in form. The contractile muscular tissue is attached to this inelastic substance, on which it pulls as one would pull on a rope, causing the desired movement through its attachment to the bone at the other end of the tendon.

Tendril. Slender leafless branch, or modified leaf developed into an organ adapted to aid a plant in climbing, as in the grape or pea.

Tenebræ Factæ Sunt. Responsorium following the fifth lesson on Good Friday in R.C. Ch.; descriptive of the last agonies of Christ. The service in which it occurs breathes the spirit of gloom, penitence, and mourning. The altar is shrouded in black, the bells are dumb, the candles on the altar are extinguished one by one, not to be relighted until Easter Eve.

Tenedos. Greek island in the Ægean Sea, off the Troad; ab. 8 m. by 3; held by Turkey, whose fleet was destroyed here by the Greeks Nov. 22, 1822. Pop. ab.15,000.

Tenement. Land, or anything of a permanent nature which may be holden.

Tenement Houses. Those which accommodate several tenants; in 1893 more than 70 per cent of the population of New York City were thus housed. At the present time these houses are, at the best, well provided with all modern conveniences, and, in proportion to the conveniences, are the most economical habitations, being provided with light and heat and other conveniences at the lowest price. Being under control of the Health Board, their sanitary condition is continually improving.

Tenerani, PIETRO, 1789–1869. Italian sculptor.

Teneriffe. Chief of the Canary Islands; area 780 sq. m., pop. ab.110,000. Its celebrated peak, Pico de Teide, is a volcano, dormant since 1798, 12,182 ft. high.

Teniers, DAVID, 1610–1690. Flemish genre painter of great reputation, his finest art being confined to scenes from peasant life, which lend themselves most thoroughly to his faculty

Village Tavern, by David Teniers. (In the Art Gallery in Schwerin.)

for rapid creation, for incisive, dexterous handling, and the cooler harmonies of color. He painted ab.700 pictures.—His father, DAVID, 1582–1649, was a painter of similar subjects.

Tenimber Islands. See TIMOR-LAUT.

Tenison, THOMAS, D.D., 1636–1715. Bp. of Lincoln 1691; Abp. of Canterbury 1694.

Ten Kate, JAN JACOB LODEWIJK, b.1819. Dutch poet; pastor at Amsterdam from 1860. *Creation*, 1866, tr. 1888.

Tennant, WILLIAM, 1784–1848. Scottish poet and Orientalist; prof. St. Andrews 1835. *Anster Fair*, 1812; *Syriac Grammar*, 1840.

Tennantite. $Cu_8As_2S_7$. Mineral copper sulph-arsenite, usually containing some antimony and passing by gradations into tetrahedrite.

Tennemann, WILHELM GOTTLIEB, 1761–1819. Prof. Marburg 1804. *Hist. Philosophy*, 11 vols., 1798–1819; *Manual*, 1812, tr.1832.

Tennent, SIR JAMES EMERSON, 1804–1869. Irish M.P. 1832; in India 1841–50; Sec. Board of Trade 1852–67; Baronet 1867. *Greece*, 1826–30; *Belgium*, 1841; *Ceylon*, 1859.

Tennent, WILLIAM, 1673–1745. Irish immigrant ab.1717; founder in Bucks co., Pa., 1726, of the "Log College," the first Presbyterian school in America.—Of his four sons, all pastors, the most noted were GILBERT, 1703–1764, of New Brunswick, N. J., and Phila., and WILLIAM, 1705–1777, of Freehold, N. J., whose trance-experiences in youth were much discussed.

Tennessee. One of the s. central States; area 42,050 sq. m. Its e. boundary follows the crest of the Great Smoky Mts., and their w. spurs occupy its e. portion. To these succeed the valley of the T., intersected by long, narrow, parallel ridges, succeeded on the w. by the escarpment of the Cumberland plateau, which rises to a height of ab.3,000 ft. From its summit the plateau slopes gently to the n.w., and is deeply eroded by streams. The remainder of the State is of undulating surface without decided features. The w. slopes of the Smoky Mts. are composed of Devonian beds; the T. valley is floored by Silurian, with ridges of Carboniferous sandstone. The Cumberland plateau is of the Carboniferous formation, and this extends w. to the lower T., except an area of Silurian about Nashville. It is succeeded on the w. by Cretaceous and Tertiary. Immediately along the Mississippi are Quaternary deposits. The principal river, excepting the Mississippi, which flows along the w. border, is the T., which, heading in the mts. in the e. part, flows s.w. beyond the limits of the State, and in its w. part returns, crossing it to reach its mouth in w. Ky.; it is navigable from its mouth up to Muscle Shoals. The Cumberland also flows across the n. part. The mineral resources consist mainly of coal and iron. The industries are mainly agricultural, cotton, corn, and tobacco being the principal crops. Of its area more than 20,000,000 acres are in farms, and the value of farms, farming implements and machinery is ab. $250,000,000. The value of farm products in 1889 was ab. $55,194,181. Its manufacturing interests are mainly confined to a few leading cities, and are not as yet very extensive. The total length of railroads in operation in 1891 was 2,767 m. The capital is Nashville. The other principal cities are Memphis, Chattanooga and Knoxville. T. was originally part of N. C. The Watauga region, settled 1769, was the scene of sundry battles with Indians and British. The State of Franklin existed 1784–88. N. C. ceded the region to the U. S. 1790, and T. was admitted 1796 as the 16th State.

At the outbreak of the Civil War it at first refused to secede, but joined the seceding States June 1861, furnished 50 regiments to the Confederate army, and was the scene of some of the most important battles during the war. Pop., 1890, 1,767,518, nearly one-fourth colored.

Tennessee, UNIVERSITY OF. At w. Knoxville; successor of Blount Coll., chartered 1794; this became 1807 E. Tenn. Coll., in 1840 E. Tenn. Univ., and in 1879 Univ. of Tenn. The State Experiment Station is connected with it. The academic department has a faculty of 22, with 334 students; the law school has 38 students under 3 instructors; the schools of medicine and dentistry, at Nashville, have 155 students and 28 instructors. Whole number of students 516; library 13,000 vols.

Tennessee River. Branch of the Ohio, rising in s.w. Va. and e. Tenn., in a valley between the high mts. of N. C. and the Cumberland plateau. It flows s.w., w., and n. Length ab. 1,200 m., drainage area 43,897 sq. m. It is navigable to Chattanooga, except for the rapids at Muscle Shoals.

Tenney, SAMUEL. 1748–1816. Surgeon in Revolutionary war; M.C. from N. H. 1800–7.—His wife, TABITHA (GILMAN), 1762–1837, m.1788, pub. *Female Quixotism*, 1807.

Tenney, SANBORN, 1827–1877. Prof. Vassar 1865, Williams 1868. *Geology*, 1859; *Zoology*, 1865–75.

Tenney, WILLIAM JEWETT, 1814–1883. N. Y. journalist; ed. *Appleton's Annual Cyclopædia*, 1861–82. *Hist. Rebellion*, 1865.—His wife, SARAH (BROWNSON), 1839–1876, pub. *Life of Galitzin*, 1873.

Tenniel, JOHN, b.1820. Cartoonist in *Punch* since 1851; illustrator of *Alice in Wonderland*, *Ingoldsby Legends*, and other books.

Tennis. Oldest of all existing games of ball; was played in Europe in the Middle Ages, coming from Italy to France, and from France to England. The ball is thrown against a wall and struck by a racket on its rebound. It was formerly played in the open air, now generally in courts with walls, or with walls and roof. See COURT TENNIS and RACKETS.

Tennis, or LAWN TENNIS. Game played by two or four players. It consists in driving a small felt-covered ball across a net so that it may strike within a certain prescribed area. The players take turns in serving, *i.e.*, putting the ball in play; it must strike within a certain space of the opponent's court. After that, it may be struck on the fly, volleyed, or after the first rebound. A player failing to hit the ball, or hitting it and failing to place it over the net and within the confines of the opponent's court, loses the stroke.

Tennyson, ALFRED, D.C.L., LORD, 1809–1892. Poet laureate 1850, Baron 1884. His first volumes, 1830–32, won little attention; those of 1842 made him famous. *The Princess* followed, 1847, the greater *In Memoriam*, 1850, *Maud*, 1855. Four *Idylls of the King*, 1859, contained much of his noblest

Tennyson, as a young man.

work; others were added 1869 and later. *Enoch Arden*, 1864, won great popularity. His later works include three historical plays, *Queen Mary*, 1875, *Harold*, 1877, and *Becket*, 1884, besides *The Cup*, 1884, and *The Foresters*, 1892; but his genius shone more brilliantly in the lyric and the minor epic than in the dramatic form. He was a consummate artist, unsurpassed in melody, as in purity of thought and feeling. His character was of the highest; his tastes were secluded. He lived from 1853 at Farringford, Isle of Wight, and from 1870 in the summer at Aldworth.—His brother, FREDERICK, b.1807, has pub. 3 vols. of poetry, 1854–91. See also TURNER, CHARLES T.

Tenochtitlan. Chief city of the Aztecs, founded ab.1325 on an island in Lake Tezcuco; besieged, taken, and largely destroyed by Cortes 1521. The new capital built on its site long bore the old name, since changed to Mexico. Mexitl was the Aztec name.

Tenon. See MORTISE.

Tenor. Highest adult male voice; also applied to instruments of about the same compass.

Tenore, MICHELE, 1780–1861. Prof. of Botany in Naples. *Flora Napolitana*, 1811–38; *Géographie physique et botanique de Naples*, 1827.

Tenorite. CuO. Mineral compound of copper and oxygen, occurring in small scales with metallic luster; black oxide of copper.

Tenos. One of the Cyclades, s.e. of Andros. Area 70 sq. m., pop. ab.20,000.

Ten Persecutions. See PERSECUTIONS.

Tenpins. See BOWLS.

Tenrec. See TANREC.

Tensas. River joining the Washita, at Trinity, La., after flowing 250 m. through the State in a s.e. direction.

Tense. Modification of a verbal root to express time of action. Augment and reduplication seem to have been the earliest means for indicating a change from present to past. For this purpose the Germanic tongues largely employed Ablaut, *i.e.*, a change of the radical vowel, as in drink—drank.

Tensile Strength. Force required to tear apart a rope or bar when pulling in the direction of its length; usually measured in pounds per sq. in. of the cross-section. Values for strength are given in the accompanying table:

Brass, cast	ab.	18,000		
" sheets and wire	"	45,000		
Bronze (for guns)	"	31,000		
" (Tobin's, Cu,Sn,Tn.)	"	68,000		
" Phosper, cast	"	50,000	to	75,000
" " wire	"	100,000	"	150,000
Copper, cast	"	19,000		
" sheets	"	33,000		
Iron, cast, ordinary	"	17,000		
" " best	"	26,000		
" " for ordnance	"	35,000		
" wrought, bars	"	42,000	to	55,000
" " plate, best	"	50,000	"	60,000
" " eye-bars	"	32,000	"	50,000
" " large forgings	"	30,000	"	50,000
" " wire	"	86,000	"	100,000
Steel, low carbon	"	50,000		
" high "	"	110,000		
Tin, cast	"	35,000		
Zinc, cast	"	7,500		
" rolled	"	16,000		

The strongest metal tested is a special alloy of steel with tungsten, which gave in a compressed ingot an ultimate strength of 161,000 lbs. per sq. in.

Tension. State of stress produced by two forces acting in the same line but in opposite directions, as when two men pull on the ends of a rope. In practical applications it is important that the tension should not be so great as to produce a permanent stretch, or, in engineering language, the elastic limit of the material should not be exceeded.

Tension of Vapor. See VAPOR TENSION.

Tensor. In Quaternions, coefficient of a unit vector to give any definite length.

Tent. This is a very ancient habitation, being made of bark or leaves of trees, skins of animals and textile fabrics successively. They are often made waterproof by alum or hydrocarbons. The usual material is cotton duck, and the best form is conical.

Ten Tables. See TWELVE TABLES.

Tentacle. In Botany, sensitive glandular hair, by which some plants, *e.g.*, *Drosera*, capture insects.

Tentacles. Feelers. Among *Protozoa*, the Acinetans possess them. In the Jellyfish, Hydroids, and other cœlenterates they are usually flexible and long processes of the body wall, into which frequently the body cavity extends. They may be extended a great length and retracted almost like pseudopodia, except that their substance never becomes incorporated into the general body. Tentacles of this nature are common in the Worms, Holothurians, and Molluscoids.

Tentaculocyst. Modified tentacle of the scyphomedusan Jellyfish, containing a part of the gastro-vascular canal-system, otocysts, visual organs, and olfactory hairs.

Tenterden, CHARLES ABBOTT, LORD, 1762–1832. Judge of

Common Pleas 1816; Chief-justice of King's Bench, and Knight, 1818; Baron 1827. *Merchant Ships and Seamen*, 1802.

Ten Thousand, RETREAT OF. See RETREAT.

Tenuirostres. Tribe of Passerine Birds, having long thin beak and feet ambulatorii or fissi; the hind toe is long. Here belong the beautiful clamatory Hoopoes (*Upupa*), the Oscinal Tree-creeper (*Certhia*), the Humming-birds (*Trochilidæ*), the Nuthatch (*Sitta*), and the Australian Lyre-bird.

Tenure. Legal form of holding land under English law.

Teocalli. Pyramidal Aztec temples, usually for human sacrifices. That of the City of Mexico, famous in the history of the Conquest, stood only 1486–1521: it was 375 ft. by 300, 80 ft. high, and terraced. The pyramid of Cholula, 1,440 ft. square and 177 high, is supposed to be of another and earlier class.

Teocalli at Palenque.

Teos. Ancient Greek city of Lydia, w. Asia Minor, 25 m. s.w. of Smyrna; birthplace of Anacreon.

Teosinte. *Euchlæana luxurians.* Forage plant of some value in the warmer portions of the U. S. In ordinary seasons it will not develop in the North.

Tephroite. Mn_2SiO_4. Mineral manganese silicate, similar to rhodonite, but of different percentage composition.

Teplitz. Town of n.w. Bohemia, noted for its hot springs, discovered 762; sanitary resort. The Triple Alliance against Napoleon was formed here Sept. 1813.

Teraphim. Small images idolatrously used in Hebrew houses from the time of the Judges to that of Ezekiel; repeatedly mentioned in O. T.

Terashima Munenori, 1832–1893. Japanese Minister to England 1872–73, and to the U. S. later; Count 1884.

Teratology. In Botany and Zoology, study o. monstrosities, or abnormal forms and structures, not resulting from postnatal disease.

Terbium. Tr. At. wt. 160° C., valence III. It was discovered by Delafontaine 1860. It occurs in LAMARSKITE (q.v.). Rare metal, forming colorless salts. Its oxide, Tr_2O_3, is a dark orange-yellow powder.

Terbium Nitrate. $Tr(NO_3)_3$. Deliquescent substance, made by treating the oxide with nitric acid. Heated to 500° C. it yields basic nitrates.

Terbium Sulphate. $Tr_2(SO_4)_3+8H_2O$. Colorless crystals, isomorphous with yttrium sulphate; made by treating the nitrate with sulphuric acid.

Terbium Trioxide. Tr_2O_3. Terbia; dark orange-colored powder: prepared from samarskite and cerite minerals; soluble in acids forming the corresponding salts.

Terburg, GERARD, 1617–1681. Dutch genre painter, who affected aristocratic types and subjects, and had a marvelously

Father's Warning, by Terburg.

fine finish; celebrated for his painting of satin dresses; confined to the small dimensions of panel befitting such execution.

Terceira. One of the Azores Islands. The surface is mountainous but the soil is fertile. The capital is Angra on the s. side. Exports are wine, oranges, and lumber. Area ab. 222 sq. m., pop. 45,000.

Terebenthene. See TURPENTINE.

Terebinth. *Pistacia terebinthus.* Turpentine tree growing about the Mediterranean, from 30–40 ft. high; source of Chian turpentine and noted for its longevity. Absalom was caught in its branches (II. Sam. xviii.).

Terebra. Ovipositor, when adapted for boring.

Terebrantia. Suborder of *Hymenoptera*, in which the female possesses a freely projecting or a retractile ovipositor, adapted for boring. There are three tribes, PHYTOPHAGA, GALLICOLA, and ENTOMOPHAGA (q.v.).

Terebratulina. See TESTICARDINES.

Teredo. See PHOLADIDÆ.

Teredo Navalis. See SHIPWORM and PHOLADIDÆ.

Terence (PUBLIUS TERENTIUS AFER), ab.185–159 B.C. Latin comic dramatist; b. at Carthage; brought to Rome a slave, and soon manumitted. Scipio, Lælius, and other nobles were his patrons. We possess six plays entire: *Andria; Hecyra*, or *Step-Mother; Heauton-Timoreumenos*, or *Self-Tormentor; The*

Scene from the Phormio of Terence.

Eunuch; Phormio; and *Adelphi*, or *Brothers.* These were all adaptations from the Greek of Menander, Apollodorus, and Diphilus. They have often been translated, and, from the modern tone which pervades them, are interesting to-day. The diction is good, the elaboration of the plots amusing and attractive.

Terentianus Maurus, 2d cent. African versifier. *De litteris, syllabis, metris*, pub. 1836.

Terentius Scaurus, QUINTUS, 2d cent. Commentator on Virgil and Horace; writer on grammar.

Terephthalic Acid. See PHTHALIC ACIDS.

Teresa, or THERESA, ST., 1515–1582. Spanish Carmelite nun, reformer of the order 1562; mystical writer; canonized 1622. Her day is Oct. 15. *Autobiography*, 1562; *Way of Perfection*, 1563; *Book of Foundations*, tr. 1853; *Interior Castle*, 1577, tr. 1852. *Works*, 1587.

Terete. In Botany, nearly cylindrical.

Tereus. See ITYS and PHILOMELA.

Terga. Posterior ventral plates of the barnacle's shell. In the position ordinarily assumed they are uppermost.

Tergum. Dorsal piece or notum of the arthropod segment.

Terhune, MRS. MARY VIRGINIA (HAWES: "MARION HARLAND"), b.ab.1832 in Va., m.1856. Author of many novels and several cook-books; founder of the *Home-maker*, 1888. *Alone*, 1853; *Hidden Path*, 1855; *Nemesis*, 1860; *Husks*, 1863; *His Great Self*, 1892. Her *Common Sense in the Household*, 1871, is widely used.

Term. Single algebraic quantity, unconnected with others by plus or minus sign. An aggregate of two or more terms bound together by a parenthesis may be an element in a complex term; *e.g.*, $3a(x+2y)^4$ is a single quantity in which the base is the sum of x and 2y, while 3a and 4 are respectively coefficient and exponent.

Term-Days. Days on which it is agreed that very frequent observations shall be made simultaneously at distant stations; first adopted 1825–30, when magnetic observations were made all over Europe.

Terminal. In Botany, belonging to the apex or end.

Terminal. Pillar, or pedestal, often in the form of a frustum of an inverted obelisk, to support a bust.

Terminal Inflorescence. Manner of flowering in which the flowers are produced at the ends of the stem and branches, instead of from the axils of leaves or bracts, as in lateral inflorescence.

Terminator of the Moon. Ragged line which separates the illuminated from the unilluminated part of the moon's surface.

Termini. Port of n. Sicily, rebuilt as Thermæ 408 B.C., on the site of Himera, destroyed by Carthaginians. Pop. ab. 23,000.

Terminos, LAGUNA DE. Inlet on the Gulf of Mexico in the s.w. of the State of Campeche, Mexico. Resort for buccaneers at the beginning of the 18th century, now frequented for its woods. Length 70 m., breadth 40 m.

Terminus. Roman god of boundaries and frontiers.

Termites. White ants of the tribe *Corrodentia*, suborder *Pseudo-neuroptera*. They possess a pair of 18 to 20-jointed antennæ, a pair of ocelli as well as compound eyes, strong mandibles, and delicate wings, which lie parallel to the body when at rest. They live in communities, in passages hollowed out in wood, trees, mounds of earth, or nests of clay. Each colony has a queen, or sexually mature female, a king also,

Termites.

according to some authorities, and neuters of two sorts; viz., soldiers, with large heads and powerful jaws, and workers, with shorter head and broader abdomen. The workers are larvæ of both sexes. Only the mature sexual forms have wings, but these organs are lost by the queen after copulation. Africa and S. America are the principal habitats. See COMPLEMENTARY MALES AND FEMALES.

Ternant, JEAN BAPTISTE DE, 1750–1816. French soldier, in the American service 1778–82; Minister to the U. S. 1790–93.

Ternate. Arranged in threes, as the parts of a compound leaf.

Ternaux-Compans, HENRI, 1807–1854. French student, compiler, and writer on Spanish-American history. *Bibliotheque Americaine*, 1836; *Voyages*, etc., 20 vols., 1836–40; *Archives*, 1840–41.

Terne Plate. See LEAD, METALLURGY OF.

Terns. Sea-birds, that with Gulls form the family *Laridæ*. Compared with Gulls they are slenderer, have the nostrils near

Caspian Tern.

the base of bill, whose extremity is not hooked: the tail is usually more forked than in Gulls. They have a graceful swallow-like flight, and secure their fish-food by diving from a height, and even swimming beneath the water to complete the capture. Most belong to the genus *Sterna*, as the Caspian Tern, Wilson's Tern (Sea-Swallow), Arctic Tern, Roseate Tern, and Least Tern. Other terns are *Hydrochelydon nigra*, the American Black Tern, and *Gelochelidon nilotica*, the Marsh Tern. In length terns range from 9 to 20 inches; the bill is colored red, carmine or yellow, with usually more or less of the outer end black. The feet are black, vermilion, red, or orange. The plumage is pearly-gray, marked with white and black. Some are northern, others tropical.

Ternstrœmiaceæ. Natural family of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Choripetalæ*, comprising 41 genera and ab. 300 species, almost all growing in the tropics; called the Camellia family.

Terpander, 7th cent. B.C. Greek lyric poet of Lesbos and Sparta; father of musical education.

Terpenes. 1. Volatile hydrocarbons, occurring in various plants; oil of turpentine is an example. Their composition is expressed by $C_{10}H_{16}$. They combine with hydrochloric acid, are optically active, polymerize with ease, and are closely related to cymene. 2. Compounds of this class prepared from conifers.

Terpsichore. Muse who presided over choral song and dancing.

Terrace. Area raised before a building above the level of the ground to serve as a walk; improperly used to denote a balcony or gallery.

Terracina. Town of central Italy, 60 m. s.e. of Rome. The Roman Tarracina was an important station on the Appian Way. Pop. ab. 6,500.

Terra Cotta. Variety of pottery, frequently used at an early period for architectural decoration. Statues were made of terra cotta in the time of Pausanias. It was also used to ornament the friezes of temples. In modern times it is again used in a variety of ways for ornamental and useful purposes. It is baked at a higher temperature than ordinary ware and withstands the weather.

Terra del Fuego. See TIERRA DEL FUEGO.

Terra Firma. 1. Land, as opposed to water. 2. Continents, as *vs.* islands. 3. Formerly, part of n.e. Italy subject to Venice, and n. part of S. America.

Terra Japonica. Gambier catechu, formerly supposed to be earth from Japan.

Terrapin. See EMYDIDÆ.

Terra Rosa. Red earth containing iron found in limestone regions. It is the undissolved residue of the calcareous rocks; often found in caverns.

Terre Haute. Capital of Vigo co., Ind., on the Wabash; settled 1816; site of the State normal school and the Rose Polytechnic Institute. Four railroads intersect here, and the Wabash and Erie Canal gives water communication with Lake Erie. Pop., 1890, 30,217.

Terrestrial. In Botany, neither aquatic nor arboreal in habit; growing upon land.

Terrestrial Magnetism. See MAGNETISM.

Terrestrial Paradise. Mediæval writers fix the location of the Terrestrial Paradise in e. Asia. Cosmas in the 7th century speaks of it as a continent e. of China; others regard it as an island s.e. of Asia, while by some it was fixed in China. Later we find it described as an island s. of India or in Armenia, and frequently as Ceylon. In the center was a fountain that watered it, near which grew the tree of life. These notions are largely drawn from the Book of Genesis, but similar conceptions are almost universal.

Terrestrial Radiation. Loss or radiation of heat by the earth into space, determined by Maurer to be 0.13 calorics per sq. centimeter per minute; heat radiated from the surface of land and water. It is partly absorbed by the atmosphere and partly transmitted directly through it into space; but that absorbed by the air is subsequently radiated by it, so that all terrestrial radiation eventually passes into space. Similarly, the heat communicated to the atmosphere by the sun directly or by convection from the earth's surface is eventually lost in space by atmosphere radiation. The sum total of radiation from land, ocean and air is terrestrial radiation in a general sense, and is just able to balance the solar radiation received.

Terricolæ. Oligochætous Annelids that live principally in the earth; *e.g.*, earthworm. See LUMBRICUS TERRESTRIS.

Terriers. Small to medium-sized dogs, of compact build, with slender but strong legs, erect ears, and tail curved up. They are good ratters and dig readily into the ground after prey. The English Terrier is smooth, and usually black and tan; the Scotch Terrier has a rough wiry coat of dirty white;

the Skye Terrier has long hair, long body, and short legs. The Turnspit has a long body and bandy legs. The Bull Ter-

Scotch Terriers.

rier, an extremely savage dog, is a cross between a terrier and a bulldog.

Terrill, WILLIAM RUFUS, U.S.A., 1834–1862. Brig.-gen. U. S. Vols. 1862; killed at Perryville.—His brother, JAMES BARBOUR, 1838–1864, became Brig.-gen. C.S.A. 1864.

Territellariæ. See TETRAPNEUMONES.

Territories of the U. S. New Mexico, Arizona, Oklahoma, Indian Territory, and Alaska, the last two unorganized.

Terror, REIGN OF. May 31, 1793–July 27, 1794; period in the French Revolution between the fall of the Girondists and the overthrow of Robespierre. Many eminent persons perished.

Terry, ALFRED HOWE, 1827–1890. Clerk Conn. Supreme Court 1854–60; Col. 7th Conn. 1861; Brig.-gen. U. S. Vols. 1862, serving in S. C. and Va.; captor (with Admiral Porter) of Fort Fisher, N. C., Jan. 15, 1865; Major-gen. U. S. Vols. and Brig.-gen. U.S.A. 1865; Major-gen. U.S.A. 1886.

Terry, ELI, 1772–1852. Clock-maker and inventor in Conn.

Terry, ELLEN, b.1848. English actress, on the stage from 1856; associated with Henry Irving from 1875; repeatedly in America; eminent in Shakespeare parts.

Terry, HENRY DWIGHT, 1812–1869. Brig.-gen. U. S. Vols. 1862–65, serving in Va.

Terry, MILTON SPENSER, D.D., b.1840. Prof. Garrett Inst., Evanston, Ill., 1884; O. T. commentator. *Hermeneutics*, 1883–90; *Sibylline Oracles*, 1890.

Tersteegen, GERHARD, 1697–1769. German hymnist and mystical preacher. *Spiritual Crumbs*, tr. 1837.

Tertian Fever. Form of intermittent or malarial fever where the chill and fever occurs every other day. It is so named because parts of three days are occupied by the cycle. It is a common form of the disease.

Tertiaries. Lay persons, attached to an order, especially the Franciscan, without taking vows or leaving the world; distinguished from monks proper, or Primaries, and nuns, or Secondaries.

Tertiaries. Quills (remiges) borne by the joint of birds' wings which is nearest the body.

Tertiary. Division of the Cænozoic Age, extending from the Chalk formation to the Glacial period; often called the era of Mammals. The Tertiary rocks are divided into the Eocene, Miocene and Pliocene, terms introduced by Lyell. See COLUMN.

Tertiary Alcohols. Derived from methyl alcohol, CH_3OH, by replacing the three hydrogen atoms with three similar or different hydrocarbon radicals. Upon oxidation they yield neither aldehydes nor ketones, but break down at once into an acid or acids containing a smaller number of carbon atoms. Example: Dimethylethylcarbinol, $C.CH_3.CH_3.C_2H_5.OH$.

Tertiary Compounds. Formed by replacing hydrogen in a CH group by a group or radical. Tertiary butyl alcohol is $(CH_3)_3COH$. See SECONDARY and PRIMARY COMPOUNDS.

Tertullianus, QUINTUS SEPTIMIUS FLORENS, ab.160–ab.235. Presbyter of N. Africa, originally a pagan jurist; from ab.200 a Montanist, but in general doctrine catholic; a fiery, stern, powerful writer, precursor of Latin ch. literature. His works exerted great influence, and are of historical importance.

Terwagne, ANNE JOSEPHE, 1762–1817. French revolutionist of bad character, prominent at the fall of the Bastile.

Teschemacher, JAMES ENGLEBERT, 1790–1853. Anglo-American chemist, mineralogist, and geologist. *Guano*, 1845.

Teschemacherite. Natural acid ammonium carbonate, occurring in connection with deposits of guano.

Teschen. Town of Austrian Silesia. Here a treaty was signed May 13, 1779, between Austria and Prussia, closing the war of Bavarian succession; Austria relinquished most of Bavaria. Pop. ab.13,000.

Tesla, NIKOLA, b.1857 in Croatia. Electrician in New York, associate and rival of Edison; T. C. Martin has described his *Inventions, Researches, and Writings*, 1894.

Tessellata. Palæozoic sea urchins, showing transitional forms to the Cystoids. Each interambulacral zone has five or six series of plates: and the ambulacral plates may be more than two rows. *Palæchinus* is an example. There are two

Palæchinus ellipticus.—The left-hand figure shows a portion of an ambulacral area enlarged; the right-hand figure exhibits a single interambulacral plate.

sections, the *Perischoëchinidæ* and *Bothrocidaridæ*. The former includes urchins having but one row of plates to each ambulacral zone; the latter includes forms with more than two vertical rows in each ambulacral or interambulacral zone. See CRINOIDS.

Tessellated. In Botany, having the surface divided into small geometric figures.

Tessellated Pavement. Roman pavement of pieces of brick or stone an inch square, forming geometrical patterns or animals and figures. See MOSAIC.

Tessceromedusæ (TESSERONLÆ, TETRAMERALIA). Group of Jellyfishes, including PEROMEDUSÆ, CUBOMEDUSÆ, and LUCERNARIDÆ (q.v.). They have their parts in fours.

Tessier, ULRIC JOSEPH, 1817–1892. Judge of Queen's Bench, Quebec, 1875.

Tessin. See TICINO.

Tessin, KARL GUSTAV, 1695–1770. Swedish official, orator, and author, tutor to Gustavus III.

Test (TESTA). Shell of Mollusks, Echinoderms, etc., or leathery tunic of Tunicates.

Testa. Outer seed-coat; ripened primine coat of the ovule of flowering plants; called also Spermoderm and Episperm.

Testacea. See ARCELLINA.

Test Acts. Passed in England 1661, 1672, and later, aiming to exclude Roman Catholics and Nonconformists from office and from membership in corporations; repealed 1829. Religious tests were enforced in the universities till 1871.

Testament. In English Law, originally, will bequeathing personal property. See WILL.

Testament, OLD AND NEW. Two great divisions of the BIBLE (q.v.), so called by a confusion, in the Greek, between Testament and Covenant.

Testamentary Guardian. GUARDIAN (q.v.) appointed by the father in his last will and testament.

Teste, LUCIEN AUGUSTE, 1765–1817. Swiss (German) writer on geology; prof. Vienna 1795, and Milan 1805; explorer in Brazil 1815.

Test Galvanometer. See GALVANOSCOPE.

Testi, FULVIO, 1597–1646. Italian poet.

Testicardines (ARTICULATA, CLISTENTERATA, ARTHROPOMATA). *Brachiopoda* with a calcareous shell, with hinge and brachial skeleton. There is no anus. *Rhynchonella* and the allied *Spirifer* are ancient fossil forms. *Terebratulina* is still extant.

Testicle. See TESTIS.

Testimony. Oral evidence of witnesses.

Testing Machine. Apparatus by which known or measurable stresses can be applied to specimens of materials or members of structures, for ascertaining experimentally their resistance to such strains. The usual types of machine are to apply tests in tension, in compression, in flexure, or in torsion. One type can usually make the first three investigations; torsion requires a special but inexpensive machine for the best work. The older testing machines loaded a pan with direct weights and multiplied their effect by levers which applied the multiplied load to the specimen; recent ones use either the hydraulic press or screw gearing to produce the load upon the specimen, that load passing through the sample and being balanced by counterpoises upon a graduated scale beam. The counterweights on the scale beam can thus be regarded as applying the load through the multiplying levers as before, the

Automatic and Autographic Testing Machine.

strain gearing being used only to neutralize deformation as it occurs. There are therefore two types of testing machine with respect to the applying of strain, hydraulic and screw. The hydraulic machines have the advantages of working easily by hand and rapidly, and of easy release of load for determining elastic limit; they are not so well adapted to keep specimens under prolonged strain. The screw machines are adapted for use by power, with slow and gradual increase of strain and its prolonged maintenance. The torsional machines twist the prepared specimen by worm gear, and record the strain by the deflection of a loaded pendulum. The best machines give an autographic record of the test of specimens, a tracing point usually indicating elongations as abscissas upon the loads as ordinates. The largest machines are of the hydraulic type. The most perfect one ever built is the EMERY MACHINE (q.v.). The most powerful machine is that at Phœnixville, Pa.; its capacity is 2,160,000 lbs., and it can break a bar 45 ft. long.

Testis (TESTICLE). Essential reproductive gland of a male animal; in it, the spermatozoa are developed. In its most perfect condition of development a testis consists of a number of chambers or lobules, in each of which lie several coiled tubules (in Man, ab.800 each 2 ft. long). In the walls of the tubules the spermatozoa are formed by multiplication and transformation of epithelial cells. The tubules empty by means of a few straight tubes into a network of tubes from which in Man there are ab. a dozen vasa efferentia uniting to form the vas deferens or sperm duct. The latter in Man is ab. 20 ft. in length coiled up into an epididymis, and thence passing by a length of 2 ft. to reach the urethra. Testes are always paired and are developed and originate in the body cavity in a position corresponding to that of the ovaries, *i.e.*, near the kidneys. In most Mammals they slip backward through the inguinal canal into scrotal sacs of the skin at the external opening of the urino-genital sinus. In the elephant, most Edentates, and lower among Mammals and all other Vertebrates, they never leave their primitive position. In Rodents and *Insectivora* they descend through the inguinal canals only during rutting.

Test Oath. Generally, affirmation of present loyalty to a government. If so imposed as to be ex post facto in effect, it is unconstitutional in the U. S.

Testudinata. Broadly, all the CHELONIA (q.v.); in a restricted sense, the *Testudinidæ*.

Testudinidæ, or CHERSIDÆ. Land Tortoises, a family of *Chelonia*, having high arched carapace, under which the head and feet can be retracted. The feet have separate toes, and are adapted for walking. They are strictly herbivorous. The *Emydidæ* are, by some, included as a subfamily. Examples of the family are the large and strong Gopher-tortoises of the Carolinas, which burrow in the earth, the massive Amazon Tortoise, used for food by the natives, the Galapagos Tortoise, and the small Garden Tortoise of Europe, also used as food.

Tetanus. Disease characterized by the continuous spasmodic contraction of certain muscles. Frequently the muscles of the jaws; whence the common name, lock-jaw. The origin is now traced to the presence of a specific microbe: the bacillus of tetanus. It usually is associated with an infected punctured wound, as the puncture of a rusty nail. It is one of the diseases where serum therapy seems to be curative, the results of the injection of tetanus antitoxin being very satisfactory as far as there has been opportunity to use it. Prevention is far better than to risk the employment of the remedy, hence every punctured wound should be enlarged by a free incision to give an opportunity to properly cleanse the wound. If this is done promptly and thoroughly, tetanus will not ensue. Tetanus should not be confounded with tetany, which is also a disease of tonic spasm, but not so serious in its manifestation, nor is it due to an infection.

Tethya. See TETRACTINELLIDÆ.

Tethyoidea (ASCIDIANS). Mostly fixed *Tunicata*, with saccular bodies. The inhalent and exhalent pores are close together; the branchial sac is large. Development is through a tailed-larva stage. There are four orders: *Copelatæ*, *Ascidiæ simplices*, *Ascidiæ compositæ*, and *Ascidiæ salpæformes*. The first order may be grouped as *Perennichordata*, the others as *Caducichordata*. See ASCIDIANS.

Tethys. Daughter of Uranus and Gæa; wife of Oceanus; mother of the ocean-nymphs and river-gods.

Tetraammonium Compounds. Formed by the union of a tri-substituted ammonia with the halogen compound of an organic group. They may be regarded as ammonium salts; thus trimethylamine, $(CH_3)_3N$, + methyl iodide, CH_3I, = tetramethylammonium iodide, $(CH_3)_4NI$.

Tetrabasic Acid. See ACID.

Tetraboric Acid. $H_2B_4O_7$. Pyroboric acid; brittle, glass-like substance, obtained by heating boric acid to 160° C. Its principal salt is borax, sodium tetraborate.

Tetrabranchiata. *Cephalopoda* with four gills, with a cleft funnel, and a many-chambered shell. The anterior chamber contains the animal; the others are united by a central siphuncle and contain air. *Nautilus* has 19 external tentacles (the dorsal pair can close the orifice of the shell), 2 ocular tentacles near each eye, and 12 internal tentacles, the four ventral of which, on left side, form the spadix; in the female

Pearly Nautilus:
a, The mantle; *b*, its dorsal fold; *e*, nidamental gland; *g*, shell muscle; *i i i*, siphon; *k*, funnel; *n*, hood; *o o o*, exterior digitations; *p*, tentacles; *s*, eye; *x x*, septa; *z*, last chamber.

there are 14 labial tentacles. The tentacles are perhaps homologous with the suckers of *Dibranchiata*. The Goniatites and Ammonites are fossil forms, and have the siphuncle external, the septa of the shell convex forward, and with edges

much folded. *Orthoceras*, of structure allied to *Nautilus* but with a straight (not spiral) shell, is also fossil.

Tetrabromfluorescein. See EOSIN.

Tetrachlornaphthalene. $C_{10}H_8Cl_4$. Naphthalene tetrachloride; mpt. 182° C.; solid, prepared by the action of chlorine or chlorate of potash and hydrochloric acid upon naphthalene; used in the manufacture of phthalic acid.

Tetrachord. System of four tones, which were the basis of the ancient Greek scales. It always compassed the interval of a fourth, but the middle tones were variable.

Tetracoralla. See RUGOSA.

Tetractinellidæ. Order of *Plethospongiæ*, including marine sponges with a more or less horny skeleton, inclosing a variable number of tetraxial spicules of flint: similar spicules are scattered freely throughout the sponge flesh. Other forms of spicules are present, but the prevailing form consists of a long ray bearing three short axes at one end. *Geodia* and *Tethya* are examples.

Tetrad. In Biology, group of four cells regularly placed in a square, resulting from a twice repeated binary division effected in vertically crossed planes.—In Botany, (1) four cells produced in the development of pollen grains from the mother-cells; (2) group of four chromosomes, formed in the primary egg-cell or pollen-cell preparatory to cell-division.

Tetradymite. Mineral compound of bismuth and tellurium, found in the gold regions of Va., N. C., and Ga.

Tetradynamia. Linnæan class of plants, comprising those having four longer and two shorter stamens, as in Cress, Mustard, Turnip, and Pepper-grass.

Tetragram. In Modern Geometry, complete quadrilateral; figure formed by four straight lines, no three of which are concurrent.

Tetragrammaton. Sacred quadriliteral name of God, J-h-v-h (Jehovah), which the Jews hold it unlawful to pronounce, substituting Adonai, Lord.

Tetragynia. Orders of plants having four pistils.

Tetrahedrite. $Cu_8Sb_2S_7$. Mineral copper sulphantimonite, in which the copper is often replaced in part by iron, silver, zinc, and mercury, and the antimony by arsenic; valuable as an ore of copper and, in the argentiferous varieties, of silver.

Tetrahedron. Polyhedron of four faces, necessarily triangles.

Tetralogy. Series of four plays or other writings.

Tetramera (PSEUDOTETRAMERA, or CRYPTOPENTAMERA). *Coleoptera*, with apparently four-jointed tarsus, but also an extra rudimentary joint. Here belong the *Bostrychidæ*, species of which injure pine trees by boring in the wood: the weevils (*Curculionidæ*), which have a proboscis, and whose larvæ live

1, *Bostrychus typographus*, Typographer beetle; 2, pupa; 3, foot; 4, larvæ; 5, leg; 6, feeler. 7, *Eccoptogaster scolytus*; 8, pupa; 9, larvæ. 10, *Eccoptogaster destructor*. A, borings of 1: B, borings of 7.

on fruit, grain, and plants in general (*Calandra granaria* is the Black Grain-worm); and the *Longicornia* or *Cerambycidæ*, with long antennæ. Some can produce a peculiar sound by rubbing the head against the thorax. The larvæ are elongated, have short antennæ and powerful jaws, and bore passages in wood.

Tetrameralia. See TESSEROMEDUSÆ.

Tetramerous. Flowers constructed on the quaternary plan, with four members in each circle of parts.

Tetrandria. Linnæan class of plants, comprising all those which have four stamens of equal length, as in many of the Madder family, the common Plantain, Dogwood, and Holly.

Tetraonidæ. Family of *Gallinacei*, having a stout body, with short neck, small feathered head, and short legs, usually feathered to the toes. Partridges and Grouse are examples. The latter are larger, with nostrils feathered, and usually a naked strip over the eye.

Tetrapetalous. Corolla consisting of four petals.

Tetraphyllous. Plant bearing four leaves, or calyx or corolla composed of four leaves (sepals or petals).

Tetrapleura. Zygopleural organisms with four antimeres, according to the promorphology of Haeckel. The Annelids are examples.

Tetrapneumona. Holothurians with flask-shaped bodies, at whose narrow end are both the mouth and anus. The in-

Tetrapneumona: a, *Ypsilothuria attenuata;* b, *Rhopalodina neurtali.*

testine has four gill-cæca. Ten tentacles are present, and five sets of double rows of ambulacral feet. *Rhopalodina* is an example. See APODA.

Tetrapneumones (TERRETELLARIÆ). See ARANEIDA and SPIDERS.

Tetrapolitan Confession. Prepared by Bucer and Capito in the Reformed interest; adopted by four cities, Strasburg, Constance, Lindau, and Memmingen; presented to the Diet of Augsburg July 11, 1530, but not read there, nor further accepted.

Tetraprionidian. Graptolites with four rows of hydrothecæ arranged down the stem of the polypary.

Tetraquetrous. In Botany, sharply four-angled; chiefly stems.

Tetrarch. Ruler of a fourth part; Galatian title, transferred by the Romans to Palestinian princes, as Herod Antipas, whom they were not willing to call king. The distinction was not much observed by their subjects. See Matt. xiv. 1, 9.

Tetrasepalous. Calyx composed of four sepals, as in St. John's Wort.

Tetraspores. Bright red spores formed by quadrate cell-division in many of the *Florideæ* or red *Algæ*. These are rarely in twos or eights, but ordinarily in fours; they propagate the plants independently of any sexual process.

Tetrastichous. Arranged on the stem in four longitudinal rows.

Tetrastigm. In Modern Geometry, complete quadrangle; figure formed by four points, no three of which are on the same straight line.

Tetrastoon. Courtyard with porticoes on its four sides.

Tetrastyle. Portico with four columns in front.

Tetrathionic Acid. See DITHIONIC ACID.

Tetrodon. See PLECTOGNATHI.

Tetter. Popular name given to several skin eruptions, more especially to various forms of ECZEMA and HERPES (q.v.).

Tetzel, JOHANN, ab.1455–1519. Dominican monk, whose abuse of Indulgences occasioned the breach of Luther with the Roman Church.

Teuffel, WILHELM SIGISMUND, 1820–1878. Prof. Tübingen from 1849; historian of Latin literature.

Teutones. German tribe, living probably near the Baltic. With the Cimbri, they invaded Gaul 113 B.C.

Teutonic. See GERMANIC.

Teutonic Knights. Military order founded 1190; its members took the three monastic vows. Herman von Salza 1210–39 transferred its sphere of operations from Palestine to heathen Prussia 1230, and founded an empire extending from the Oder to the Gulf of Finland. Its headquarters were removed from Venice to Marienburg 1309. It was the most im-

portant political power of n. Europe 1350–80. Internal decay and the rising power of Poland weakened it. It was defeated at Tannenberg (e. Prussia) July 15, 1410; gradually lost its territories; was suppressed by Napoleon 1809, and was reorganized 1840 and 1865.

Teutonic Mythology. The myths of the Germanic nations, which were transmitted from ancient times, and modified by association with other peoples. They had their gods and goddesses, which presided over the forces of nature, the elements, and the affairs of mankind, and the myths of the dead. See SCANDINAVIAN MYTHOLOGY.

Tewksbury. Town of Gloucestershire; scene of Edward IV.'s victory, May 4, 1471, over the Lancastrians. Queen Margaret was made prisoner and her son slain. Its Norman abbey

Portion of Choir, Tewksbury Abbey.

church, built 1123, measures 317 by 124 ft. across the transepts, with a massive tower 132 ft. high. It was restored by Scott in 1875–79, the later additions being in Early English, Perpendicular and Decorated styles. Pop., 1891, 5,269.

Tewfik Pasha, MOHAMMED, 1852–1892. Khedive of Egypt 1879; son of Ismail; succeeded by his son Abbas.

Texas. Largest of the States, on the Gulf of Mexico; area 265,780 sq. m. Stretching over 13 degrees of longitude and 10 of latitude, it contains all variations of surface and of climate. The e. part, along the Gulf coast, is low, marshy, and unhealthful. Further inland, it becomes higher and densely forested. Still further inland is a prairie region, more broken than the prairies of Illinois. This is succeeded by high arid tablelands, reaching their summit in the Llano Estacado, 3,500 to 5,000 ft. high; between, the Pecos and Rio Grande desert plains are intersected by short isolated ranges of mountains. Numerous rivers rise in the Llano Estacado and in the prairie region, and flow s.e. to the Gulf. Along the s.w. border, separating it from Mexico, flows the Rio Grande. Its principal branch is the Pecos, which joins it in the w. deserts. The geology of the State is as varied as its surface. The w. two-thirds are underlaid by Cretaceous formations, within which are found areas of Cambrian, Silurian, Carboniferous, and even Quaternary beds. Shoreward from this area of Cretaceous is a broad belt of Eocene, followed by Neocene, while along the Gulf, including all the low-lying country, are Quaternary beds. The industries differ widely in its different parts. In the e. the culture of cotton prevails; further w. that of the cereals as far as comparatively dense settlement has extended. Beyond that, on the w. and s., the ranging of cattle and sheep is the chief industry. In 1890 the value of farms was $399,971,289, of the agricultural product $111,699,430. In recent years the development of the railroad system of T. has gone on with extreme rapidity. In 1893 the mileage of railroads was 9,088. The State has not yet reached the stage of settlement where manufactures become of great importance. 585,000 tons of coal was mined in 1896. Its commerce is largely centered at the port of Galveston, and consists mainly of the shipments of cotton and cattle. Till 1821 the history of T. is that of a Spanish territory. After the purchase of La. by the U. S., Americans began to settle in T., and in 1821, when Mexico became independent of Spain, colonization from the U. S. was permitted and protected by the Mexican government; but in 1830 the American colonists were placed under military rule, and hence ensued the struggle for independence. The Mexicans were defeated 1836, and till 1845 T. was an independent State. In 1845 it was admitted, against the protest of Mexico, as one of the States. The result was a war, ending in Mexican defeat, the cession of Cal., New Mexico, and the intervening territory, now composing Nevada, Utah, and Arizona, and the payment of $15,000,000. T., on admission to the Union, sold to the U. S. the portion of its territory between the headwaters of the Rio Grande and Arkansas. The State seceded 1861, and was readmitted with a new constitution 1868. Capital, Austin. Pop., 1890, 2,235,523, over one-fourth colored.

Texas, UNIVERSITY OF. At Austin: opened 1883. It is coeducational, has 30 professors in the College of Arts, with 343 students. The Medical College, at Galveston, opened 1891, has 9 professors, 9 lecturers, and 248 students. The Law School has 144 students under 3 instructors. The Agricultural and Mechanical College, at Bryan, connected 1876, has 23 instructors and 354 students.

Texel. Island of n. Holland, in area ab. 35,000 acres; scene of naval battles 1653, 1673, and 1799. Pop. ab. 6,500.

Texier, CHARLES FÉLIX MARIE, 1802–1871. French explorer in Asia. *Asia Minor*, 4 vols., 1839 and later; *Armenia, Persia*, and *Mesopotamia*, 1842–45.

Textile Fabrics and Designing. See WEAVING.

Textularidea. Order of perforate *Foraminifera*, with small hyaline shells or large arenaceous ones, the chambers of which are usually arranged in a spiral or alternately.

Tezcatlipoca. God of the winter sun and of stern law; chief Aztec deity, with his brother Uitzilopochtli, god of the summer sun; worshiped with human sacrifices.

Tezcuco. City of Mexico, 17 m. e. of the capital; held from ab.1120 by a tribe often at war with the dominant race. Its remains are important. Pop. ab. 16,000. Its lake, between it and Mexico, covers ab. 80 sq. m., but is shallow.

Tezel. See TETZEL, J.

Thacher, GEORGE, 1754–1824. M.C. from Mass. (Me.) 1789–1801; Judge Supreme Court of Mass. and Me. from 1800.

Thacher, JAMES, 1754–1844. Surgeon in Continental army 1776–82, and at Plymouth, Mass. *Military Journal*, 1823; *Medical Biography*, 1828; *Hist. Plymouth*, 1832.

Thacher, THOMAS, 1620–1678. Pastor and physician in and near Boston; praised by Cotton Mather.—His son, PETER, 1651–1727, and great-grandson, PETER, D.D., 1752–1802, were noted preachers.—SAMUEL COOPER, 1785–1818, son of the last, was an early and able defender of Unitarianism.

Thackeray, ANNE ISABELLA. See RITCHIE.

Thackeray, WILLIAM MAKEPEACE, 1811–1863. English humorist and satirist, famous chiefly for the novels *Vanity Fair*, 1847–48; *Pendennis*, 1848–50; *Esmond*, 1852; and *The*

William Makepeace Thackeray.

Newcomes, 1853–55. These were followed by *The Virginians*, 1857–59; *Lovel*, 1860–61; *Adventures of Philip*, 1861–62; and the incomplete *Denis Duval*, 1867. Among his minor works are:

Longitude West 101 of Greenwich
Longitude West 24 of Washington
GULF OF MEXICO
EXPLANATION

The Paris Sketch-book, 1840; *Yellowplush Papers*, 1841; *Irish Sketch-book*. 1843; *Cornhill to Cairo*, 1846; *Book of Snobs*, 1848; *Titmarsh*, 1848; *Humorists of 18th Century*, 1852; *Four Georges*, 1857; and many ballads and lyrics. He was on the staff of *Punch* from 1842; illustrated several of his books; lectured in America 1855–56; founded the *Cornhill Mag.* 1859, and edited it till 1862. Though his keen satire was feared and resented, he was kindly, lovable. and eminently human, at heart "rather a sentimentalist than a cynic." For his daughter Anne, see RITCHIE, MRS. ANNE I.

Thaddæus, or LEBBÆUS. One of the twelve Apostles. See JUDE.

Thais. Athenian, mistress of Alexander and of Ptolemy, son of Lagus.

Thalamifloræ. Group of polypetalous Dicotyledons, having the stamens inserted on the receptacle.

Thalamophora. *Foraminifera* plus *Arcellina*.

Thalamus. See TORUS.

Thalassema. See CHÆTIFERA.

Thalassicolla. Genus of monozoic *Radiolaria*. It has no skeleton, but has a very complex nucleus. See PERIPYLÆA and THALASSICOLLIDA.

Thalassicollida. Family of peripylæan *Radiolaria*, including forms with a complex intra-capsular nucleus. The skeleton may be wanting or may consist of extra-capsular spicules.

Thalassophora. See BASOMMATOPHORA.

Thalberg, SIGISMOND, 1812–1871. Swiss-German pianist of high rank, well known in Europe and the U. S.; composer of many pieces for the piano, and of two unsuccessful operas.

Thaler. Silver coin of various German States, standard till 1871; nominal value ab. 72 cents.

Thales, ab.640–ab.548 B.C. Of Miletus; one of the Seven Sages; earlier of the Greek philosophers. He held that water or moisture was the principle out of which all things were developed, and is said to have brought to Greece from Egypt the earliest knowledge of mathematics.

Thalia. Muse of comedy.

Thaliacea (THALICEA, CONSERTA). Free-swimming, transparent, barrel-shaped Tunicates, with mantle orifices at opposite ends of the body. The branchiæ are band-shaped, and the animal moves by contractions of the branchial cavity. The

Salpa maxima, solitary; *S. democratica*, chain.

viscera are compressed into a small mass, the nucleus. They are solitary or are united in chains, in double rows usually. There are two orders, *Desmomyaria* (*Salpæ*) and *Cyclomyaria* (*Doliolidæ*).

Thallic Sulphate. $Tl_2(SO_4)_3+7H_2O$. Colorless tablets, made by dissolving thallium trioxide in dilute sulphuric acid and evaporating.

Thallium. Tl. At.wt. 204.18, sp. gr. 11.8, sp. ht. .032, mpt. 285° C., valence I. III.; discovered by Crookes in 1861; found in small quantities in a number of iron and copper pyrites and in a few micas; prepared by boiling the fine dust of sulphuric acid factories with sulphuric acid, and then precipitating with zinc; soft, bluish-white metal. It oxidizes when heated in the air, decomposes water at a red heat, and dissolves in dilute acids.

Thallium Carbonate. Tl_2CO_3. Long prismatic needles, obtained as a precipitate by treating the sulphate with barium carbonate.

Thallium Hydroxide. $TlOH+H_2O$. Long yellow needles, made by precipitating the sulphate with barium hydroxide.

Thallium Iodides. Similar to the chlorides and bromides.

Thallium Monobromide. TlBr. Yellow, crystalline precipitate, obtained by adding a solution of potassium bromide to a thallous salt; soluble with difficulty in water. It fuses at a red heat.

Thallium Monochloride. TlCl. White crystalline substance, turning violet when exposed to light; made by heating the metal in chlorine.

Thallium Monoxide. Tl_2O. Black powder, soluble in water; made by heating the hydroxide.

Thallium Nitrate. $TlNO_3$. Large, milk-white, rhombic columns, obtained by dissolving the carbonate in nitric acid.

Thallium Sulphide. Tl_2S. Black, lustrous, crystalline mass, obtained on fusing the precipitated sulphide.

Thallium Tribromide. $TlBr_3$. Yellow to brown crystalline, hygroscopic substance, soluble in alcohol; made by treating the monobromide, suspended in water, with bromine.

Thallium Trichloride. $TlCl_3+H_2O$. Colorless crystals, made by treating the monochloride with chlorine under water.

Thallium Trinitrate. $Tl(NO_3)_3.4H_2O$. Colorless, transparent, deliquescent crystals, made by dissolving the oxide in nitric acid.

Thallium Trioxide. Tl_2O_3. Reddish-brown powder, made by fusing thallium in an atmosphere of oxygen.

Thallium Trisulphide. Tl_2S_3. Black substance, obtained by heating the metal and sulphur together.

Thallogens. See THALLOPHYTA.

Thalloid. Having the characters of a thallus.

Thallophyta. Subkingdom of plants, having the vegetative organs in the form of a THALLUS (q.v.), including the *Algæ* or seaweeds, *Fungi*, and *Lichenes* or lichens; termed by some Thallogens.

Thallous Sulphate. Tl_2SO_4. Rhombic prisms, isomorphous with potassium sulphate; made by treating the hydroxide with sulphuric acid; soluble in water.

Thallus. Vegetative structure in which there is no distinction between stem and leaves. The typical thallus is a flat, broad structure of one or more layers of cells, as in the devil's-apron, sea-lettuce, and other sea-weeds; but it may be reduced to a filament of a single row of cells, as in many others.

Section of Stratified Thallus of *Ricasolia herbacea*: *a*, cortical stratum; *b*, gonidial stratum; *c*, medullary stratum.

Thames. Largest and most important river of Gt. Britain, rising in the Cotswold Hills and flowing e.; navigable for large vessels to London. Length ab. 250 m., drainage area 5,102 sq. m.

Thames. River of Ontario, Canada, flowing ab.160 m. s.w. to Lake St. Clair.

Thames Tunnel. At London; completed 1843; length 1,300 ft., width 35 ft., height 20 ft.; now used by a railway. Another tunnel was completed 1890 for the London and Southwark railway; it is 1½ miles long and consists of two tubes, 10 ft. in diameter, one over the other; the cost was $1,500,000. See SUBWAY.

Thamugas. See TIMGAD.

Thamyris. Legendary bard of Thrace, who challenged the Muses to a trial of skill, and, being overcome, was deprived of sight and the power of song.

Thane (THEGN). Anglo-Saxon noble, not by blood, but by service to the king; later, land-owner, knight, or baron.

Thanet, ISLE OF. At n.e. end of Kent. Area 26,180 acres; pop., 1891, 57,821. Ramsgate, Margate, and other resorts are on its shores.

Thanet, OCTAVE. See FRENCH, ALICE.

Thank-Offerings. See PEACE-OFFERINGS.

Thanksgiving Day. Usually the last Thursday of November; first observed as a harvest festival at Plymouth, Mass., 1621; long peculiar to New England; now universal in the U. S.

Thapsus. Town on the African coast, ab. 120 m. s. of Carthage; scene of Cæsar's victory over Scipio and Juba, 46 B.C.

Thasos. Greek island in the Ægean Sea, off the coast of Thrace; anciently noted for its gold mines; held by Turkey. Area 85 sq. m., pop. ab. 5,000.

Thatcher, BENJAMIN BUSSEY, 1809–1840. American historical writer. *Indians*, 1832; *Tales of the Revolution*, 1846.

Thatcher, HENRY KNOX, U.S.N., 1806–1880. Commodore 1862; engaged on the Atlantic and Gulf coasts, and in both attacks on Fort Fisher; Rear-admiral 1866.

Thaumantidæ. CAMPANULARIÆ (q.v.); by some authors restricted to one of the families of this group.

Thaumatrope. Optical apparatus or toy, depending on the principle of the persistence of visual impressions. A piece of cardboard is painted on one side with a bird, for example,

Thaumatrope.

and on the other with a cage; when turned about its diameter as an axis very rapidly, the bird appears to be in the cage. See ZOETROPE.

Thaumaturgus. See GREGORY.

Thaxter, MRS. CELIA (LAIGHTON), 1836–1894. American poet. *Among the Isles of Shoals*, 1873; *Drift Weed*, 1879; *An Island Garden*, 1894.

Thayer, ABBOTT HENDERSON, b.1849. American painter. His *Mary Enthroned* was shown at the World's Columbian Exposition, Chicago.

Thayer, ALEXANDER WHEELOCK, 1817–1897. U. S. Consul at Trieste 1859–82. His *Life of Beethoven*, 3 vols., 1866–87, was pub. only in German.

Thayer, ELI, b.1819. M.C. from Mass. 1857–61; inventor; founder Emigrant Aid Co. 1854, to promote free-state settlement in Kansas.

Thayer, EUGENE, b.1838. Organist in Boston and New York; composer.

Thayer, JOHN MILTON, b.1820. Brig.-gen. U. S. Vols. 1862–65, serving in the West; U. S. Senator from Neb. 1867–71; Gov. of Wyoming 1875–78; Gov. of Neb. 1887–91.

Thayer, JOSEPH HENRY, D.D., b. 1828. Prof. Andover 1864–82, and Cambridge (Mass.) 1884; tr. Wiener and Buttmann's N. T. grammars, 1869–73, and Wilke's N. T. lexicon, 1886.

Thayer, SYLVANUS, U.S.A., LL.D., 1785–1872. Supt. and organizer of the Military Academy, West Point, 1817–33; pres. Board of Engineers 1838–63; fortifier of Boston Harbor; Col. 1863. *Engineering*, 1844.—His cousin, MARTIN RUSSELL, b.1819, was M.C. 1863–67, judge in Phila. from 1867, and a historical writer.

Thayer, THOMAS BALDWIN, D D., 1812–1886. Pastor at Lowell, Mass., 1833–45 and 1851–59, Brooklyn 1845–51, and Boston 1859–67; ed. *Universalist Quarterly* from 1862. *Theology of Universalism*, 1862.

Thayer, WILLIAM MAKEPEACE, b.1820 in Mass. Prolific author of biographies and tales for boys. His books are widely read, and some have been tr. into several languages.

Theaki. See ITHACA.

Theater. The early Greek plays were performed on temporary scaffoldings. The first theater of stone was completed at Athens ab.335 B.C. Plato says the play could be witnessed by 30,000 people. The tickets were small round tokens of lead, bone, or ivory, and cost two oboli (ab. 8 cts.). Dramatic representations were not given at Rome until 240 B.C., and then in the circus upon a wooden stage. Theaters of wood were erected from 145 B.C.; that of Scaurus, built 58 B.C., had 80-,000 seats. Pompey built the first stone theater 55 B.C., seating 40,000, but wooden theaters were still erected under the Empire. After 68 B.C. the first 14 rows of the ordinary seats were assigned to the knights; admission was by ticket, but free to all citizens. Awnings shielded the spectators from sun and rain. The first theater in London was erected 1576–77. The Blackfriars and the Globe, where Shakespeare's plays were produced, date from 1596 and 1598. The first theater in the U. S. was opened at Williamsburg, Va., 1752, the second in

Small Theater of Pompeii—Reconstructed according to Strack.

New York 1753. The state may regulate theaters under its police power.

Theatines. R.C. order, formed 1524 by Caraffa, Bp. of Theato (Pope Paul IV. 1555); confirmed 1540. They labored against the Reformation. Orders of nuns were founded 1583 and 1610.

Théâtre Français, or COMÉDIE FRANÇAISE. Organized n Paris 1680, with Molière's troup and another; reorganized 1803. Its subvention, originally 12,000 francs, is now 240,000. In the selection and rendering of its plays, and in the ability and accomplishments of its actors, it maintains the highest artistic standards.

Thebaid. Upper Egypt, between lat. 24° and 27° 20′ N.

Thebaine. $C_{19}H_{21}NO_3$. Alkaloid, occurring in opium to the extent of ab. 1 per cent.

Thebaud, AUGUSTINE J., 1807–1885. French Jesuit, in the U. S. from 1838; pres. St. John's Coll., Fordham, N. Y., 1846–52; writer on Irish history.

Thebes. Ancient capital of Bœotia. Its acropolis was founded, according to tradition, by Cadmus, and its walls built by Amphion. It was the scene of Œdipus' adventures, a flourishing city when first known to history, and the first

Thebes.

power in Greece after the battle of Leuctra, 371 B.C., but lost its supremacy by the death of Epaminondas at Mantinea 362. It was destroyed by Alexander 336, rebuilt by Cassander 316, and taken in 290 by Demetrius Poliorcetes.

Thebes. Ancient city of Upper Egypt; called in Bible *No*, or *No Ammon;* 100-gated, according to Homer; on both banks of Nile; 140 stadia in circuit; capital of Egypt ab.1600 B.C. The ruins of Luxor and Karnak occupy part of the site. At Luxor are the two colossal statues of Memnon, one of which is said to have emitted a musical sound when touched by the morning sun.

Theca (THEKE). Spore-containing sac; sporanges of lichens and of mosses; sacs of the anther in flowering plants; calycle or coral cup of *Actinozoa*.

Thecaphora. See CALYPTOBLASTEA.

Thecaphore. Stipe supporting a single carpel or simple fruit; also pedicel of mosses.

Thecla, ST. Maiden of Iconium, converted by St. Paul; celebrated in the apocryphal *Acts of Paul and Thecla*, ab. 200.

Thecodontia. Order of extinct Lizards, with biconcave vertebræ, compressed teeth situated in alveolar cavities, and crowns covered with finely serrated striæ.

Thecomedusæ. Order of *Hydroida*, established by Allman to receive the *Stephanoscyphus mirabilis*, which consists of branched anastomosing chitinous tubes that ramify the substance of sponges, and open with expanded thecæ on the surface; out of these cups the medusoid polyp protrudes itself. Velum and sense organs are absent.

Thecosomata. *Pteropoda*, with a shell, an indistinct head, with rudimentary tentacles. The foot bears the epipodia (fins). The shell may be calcareous, horny, or cartilaginous. *Cymbulia* is an example.

Theed, WILLIAM, R.A., 1764–1817. English sculptor, as was also his son, WILLIAM, 1804–1891.

Theft. See LARCENY.

Thegn. See THANE.

Theine. See CAFFEINE.

Theiner, AUGUSTIN, 1804–1874. Keeper of the papal archives 1851–70; voluminous writer. *Clemens XIV.*, 1853; *Monumenta Poloniæ*, 1860–64; *Acta Concilii Tridentini*, 1874.—His brother, JOHANN ANTON, 1799–1860, of Breslau, was also a R. C. author.

Theism. Theory of the Divine existence, which opposes atheism in asserting the personality of the Absolute, pantheism in asserting the transcendency of God, and deism in asserting the supernatural and providential.

Theiss. Branch of the Danube, rising in the Carpathian Mts. and flowing 825 m. w. and s. through Hungary; mostly

Fishing on the Theiss.

navigable; full of fish. It is the ancient Tibiscus. In its lower half it flows parallel to the Danube, through a marshy plain, and with many windings.

Thellusson, PETER, d.1797. Swiss-English merchant, whose curious will led to the act of 1800 limiting the devising of property for accumulation to 21 years.

Thelwall, JOHN, 1764–1834. English author and radical politician.

Thelyblasts. Supposed female part of cells, separated (1) as mature ova after the polar globules are formed, and only the female pronucleus is left; (2) as the sperm blastophores, seminal granules, etc., in the testes.

Thelytoky. Sort of parthenogenesis which results usually in the production of females that are able to produce young without being impregnated, as in plant lice. See ARRENOTOKIA.

Themis. Daughter of Uranus, wife of Zeus, and mother of the Hours and the Fates; personification of order and equity.

Themistius, 4th cent. Orator and teacher at Constantinople; writer on Aristotle.

Themistocles, ab.515–449 B.C. Athenian statesman, of brilliant abilities but doubtful integrity. He procured the ostracism of Aristides 483; persuaded the Athenians to build a fleet, and commanded it on the invasion of Xerxes; induced Xerxes to fight the battle of Salamis, and so saved Greece; was accused of treason, ostracized 471, and spent his last years at the Persian court.

Thenard, LOUIS JACQUES, 1777–1857. Prof. of Chemistry in Paris, at Ecole Polytechnique 1837, and Coll. de France 1840. *Chimie Elementaire*, 1813–16.

Thenardite. Na_2SO_4. Natural sodium sulphate, one of the products of the evaporation of salt lakes; sometimes found in large quantity, as in Arizona.

Thenard's Salt. Blue mass, obtained by heating aluminium trioxide moistened with cobalt nitrate.

Theobald, LEWIS, ab.1688–1744. English dramatist and critic, attacked by Pope in the *Dunciad*. His edition of Shakespeare, 1733, is notable for its judicious emendations.

Theobromine. $C_7H_4N_4O_2$. Alkaloid, present in cacao butter; closely related to caffeine; colorless crystals, which sublime undecomposed; prepared from the butter.

Theocracy. Plan of a state in which God is regarded as the only sovereign, and the laws as His commands; *e.g.*, that of the Hebrews under Moses and the Judges.

Theocritus, 3d cent. B.C. Greek idyllic poet of Syracuse; model for Virgil; first among ancient pastoral poets.

Theoctistus, ab. 900. Monk and hymnist of Constantinople.

Theodectes, 4th cent. B.C. Dramatist and orator at Athens.

Theodicy. In particular, the Leibnitzian theology; in general, any philosophic theology, as opposed to dogmatism.

Theodolite. Engineer's instrument for measuring angles and running lines; distinguished from the transit by the fact that the telescope cannot be reversed by turning it on its horizontal axis.

Theodolite.

Theodora, ab.508–548. Wife of Justinian 524, over whom she had great influence; of low birth; Empress from 527; noted for beauty, ability and courage; heroine of Sardou's play 1884. The reflections on her character in a work ascribed to Procopius, and pub. 1623, may be slanderous. She patronized the Monophysites.

Theodora, d. 855. Empress of Theophilus; Regent 842; protector of icons. She convened the Synod of Constantinople, broke with the Pope, persecuted the Paulicians, and endangered the Empire through wars with the Saracens.

Theodore (BARON DE NEUHOFF), 1686–1756. German adventurer, "King of Corsica" for brief periods 1736, 1738, and 1743; in London from 1749.

Theodore OF CONSTANTINOPLE, 6th cent. Historian of the period 450–565. Fragments remain.

Theodore OF MOPSUESTIA (IN CILICIA), ab.350–428. Presbyter at Antioch 383, Bp. in Cilicia 392; commentator. His writings were unjustly condemned 431 and 553. Some remain.

Theodore OF TARSUS, 602–690. Greek monk, sent to England as 7th Abp. of Canterbury 668. He did much for unity, ecclesiastical and civil.

Theodore, ST., OF THE STUDIUM, ab.759–826. Monk of Constantinople, thrice banished. Dr. Neale tr. several of his hymns.

Theodore I. Pope 642–649. He excommunicated two patriarchs of Constantinople as Monothelites.

Theodore II., 1818–1868. King of Abyssinia. He usurped the throne 1855, and while influenced by John Bell, an Englishman, ruled well. On Bell's death 1860, he became a tyrant,

and imprisoned the English missionaries and ambassadors. Lord Napier with 10.000 men stormed his capital, Magdala. April 13, 1868. T. killed himself the same day. A period of anarchy ensued, till Prince Kassai was crowned as Johannes II. 1872.

Theodoret, ab.392–457. Bp. of Cyrrhus in Syria 423; deposed as a Nestorian by the "robber Council" of Ephesus 449; restored by that of Chalcedon 451; called by C. Kingsley "wisest and holiest man in the East." His works include commentaries, a *Hist. Ch.* 325–429, tr. 1851, *Hist. Heresies,* and many letters.

Theodoric, 455–526. King of the Ostrogoths. He entered Italy 489, defeated Odoacer, and ruled ably, though at the last tyrannically, as in the execution of Boethius. See GOTHS.

Theodosius, d.376. 1. Spanish-Roman general, victorious in Britain 367, on the Danube 370, and in Africa 372; executed at Carthage. 2. His son, THEODOSIUS THE GREAT, ab. 346–395, became Emperor of the East 379, made peace with

Gold Medallion of Theodosius the Great.

the Goths 382, defeated and executed Maximus 388, suppressed paganism and Arianism, had 7,000 massacred at Thessalonica 390 in punishment of a riot, and submitted meekly to temporary excommunication by Ambrose. 3. His grandson, 401–450, was Emperor of the East from 408.

Theodulf, ab.753–821. Bp. of Orleans 801; deposed 819; poet. Some of his hymns are still in use.

Theognis, ab.570–ab.485 B.C. Greek gnomic and elegiac poet of Megara.

Theogony. Greek poem, ascribed to Hesiod, on the generation of the gods. Others, not extant, bore the names of Orpheus and Musæus.

Theologia Germanica. Pietistic German treatise of unknown origin, pub. 1516 and 1851; tr. 1854.

Theology. Doctrine of the divine nature and works; alleged science of religion. The term was used by Plato and Aristotle, but not in N. T. The serious and continuous effort to formulate and systematize Christian doctrine began ab. 300, lasted for some two centuries, chiefly in the East, and was revived with great zeal at the Protestant Reformation. This is properly Dogmatic Theology; other departments (so-called) are Biblical or Exegetic, Apologetic, Practical, and Historical. Natural Theology is preliminary, meaning the effort to prove the being and attributes of God from the light of Nature: the others deal with revelation and its results. The claim of theology to be a science is much disputed, and its influence and honors have greatly decreased of late; but for many centuries it was one of the most powerful factors in human life and history.

Theon, 4th cent. Greek mathematician of Alexandria; father of Hypatia. He edited Euclid's *Elements,* and put forth a commentary on the *Almagest.*

Theopaschites. Greek for PATRIPASSIANS (q.v.).

Theophanes, ab. 758–816. Abbot of Ager, n.w. Asia Minor; banished 813. His *Chronographia,* extending ab.300–800, was pub. 1839.

Theophanes, ab.1020. Bp. of Tauromenium in Sicily; author of 62 Greek homilies, pub. 1644.

Theophania. Daughter of Romanus of Constantinople; wife of Otho II. 972; Regent 983; introducer of some Greek customs into Germany.

Theophany. Appearance of God to O. T. patriarchs and saints, in brief visions; distinguished from the incarnation in Jesus.

Theophilanthropists. French deistical sect, formed 1796, abolished 1802. A similar body, probably small and short-lived, arose later in England.

Theophilus. 1. Christian of rank to whom St. Luke addresses his Gospel and its sequel, the Acts of the Apostles. 2. Bp. of Antioch 171–185; author of an apology, pub. 1861. 3. Mythical Bp. of Adana, s.e. Asia Minor; hero of a legend popular in the Middle Ages and similar to that of Faust. 4. Byzantine emperor 829–842; warlike, just, and powerful.

Theophrastus, ab.368–288 B.C. Philosopher of Lesbos and Athens, successor of Aristotle. His *History of Plants, The Causes of Plants,* and, still more, his *Characters,* have been repeatedly edited.

Theophylact, d.ab.630. Byzantine author of a history of the reign of Maurice Tiberius, 582-602, pub. 1604 and 1834, and of 85 letters, pub. 1499.

Theophylact, d.ab.1110. Metropolitan of Bulgaria 1078; eminent as a biblical theologian. His works, including commentaries based partly on Chrysostom, were pub. 1754–63.

Theopompus, ab.378–305 B.C. Greek historian and rhetorician, of Chios and Athens. Fragments only remain.

Theory. Systematic explanation of a phenomenon or phenomena, usually implying a degree of uncertainty about its truth, until verified.

Theory of Exchanges. Originally promulgated by Prévost of Geneva, who called it the theory of mobile equilibrium of temperature; developed by Prof. Balfour Stewart. It asserts that all bodies are constantly giving out radiations at a rate depending upon their substance and temperature, but independent of their surroundings; and that, when a body is kept at a uniform temperature, it receives back as much heat as it gives out. Accordingly two bodies at the same temperature and exposed to mutual radiation exchange equal amounts of heat; but if two bodies have unequal temperatures, that which is at the higher temperature gives to the other more than it receives.

Theosophy. Mystical hybrid of philosophy and theology, found among ancient Oriental races; cultivated especially by the NEOPLATONISTS (q.v.); revived in varying forms by Paracelsus, Cornelius Agrippa, and later by Behmen, Swedenborg, and others, as in 1875 by Mme. Blavatsky, who founded in the U. S. a Theosophical Society, now claiming a large membership in many lands. It resorted to internal revelation, as opposed to external authority, for its doctrine. In modern times it rejects both philosophic method and religious revelation, as traditionally accepted, and relies upon certain ill investigated and abnormal or exceptional facts to establish a kind of pantheistic idealism.

Theotokos. God-bearer; title conferred by the Third General Council (Ephesus, 431) on the mother of Christ.

Thera. See SANTORIN.

Theramenes, d. ab.403 B.C. Athenian orator and soldier; one of the 30 Tyrants, but opposed to their excesses, and condemned to the hemlock. His previous career was less creditable.

Therapeutæ. Ascetic sect of Egyptian Jews, described in a book doubtfully ascribed to Philo, *On Contemplative Life.*

Therapeutics. Branch of medicine which treats of modes of curing diseases.

Therapic Acid. $C_{17}H_{26}O_2$. Form of glyceride found in Cod-liver oil, which contains ab. 20 per cent.

Theremin, LUDWIG FRIEDRICH FRANZ, 1780–1846. Pastor 1810 and prof. 1839 in Berlin. *Abendstunden,* 1833–39; *Eloquence,* tr. 1850.

Theresiopel, or MARIA THERESIOPEL. German city of Maria Theresa; the Hungarian SZABADKA (q.v.).

Thereza. CHRISTINA MARIA, 1822–1889. Empress of Brazil and wife of Pedro II. See PEDRO I.

Theriaca. Originally, as the derivation of the word indicates, an antidote to poisoning by beasts, more particularly to serpents' venom. As such, the various products known by this name were compounded with all the complexity of the pharmacopeia of the Middle Ages: the most noted of these mixtures was the Venice theriaca, containing ab. 70 ingredients mixed in honey. A preparation of opium flavored with spices and made in Persia also received this name, which survives in the Electuarium theriaca of the German pharmacopeia, corresponding to the Confectio opii of the British pharmacopeia. It is not now officinal in the U. S. Another meaning is attached to the word, as seen in the British pharmacopeia where theriaca is the officinal name for molasses; indeed treacle is a corruption of theriaca.

Theriodontia. Order of carnivorous, Triassic Reptiles, having affinities with carnivorous Mammals. Three kinds of teeth are present, large pointed canines, incisors and molars. There is also a supra-condyloid foramen on the humerus for the transmission of the brachial artery and median nerve as in

cats. *Cynodraco* is typical of the group, which is provisionally placed under the *Anomodontia*.

Thermæ. Public buildings of ancient Rome, inclosing, besides warm baths, colonnades for recreation and instruction.

Interior View of the Tepidarium in the Men's Baths of the smaller Thermæ, at Pompeii.

Those of Caracalla accommodated 1,600 bathers at once, those of Diocletian 3,200. The ruins of these remain. A theater was connected with the latter. See BATHS, ROMAN.

Thermal Constant. Number expressing, according to Linsser, 1860, and HOFFMANN (q.v.), the total amount of heat necessary for a plant in order to ripen its fruit. See PHÆNOLOGY.

Thermal Springs. See SPRINGS.

Thermal Unit. British thermal unit is the amount of heat necessary to raise 1 lb. of water from 39° F. to 40° F. The French and metric CALORIE (q.v.) is the heat required to raise 1 kilogram of water from 4° C. to 5° C.

Thermic Balance. See BOLOMETER.

Thermic Fever. See SUNSTROKE.

Thermics. See THERMODYNAMICS.

Thermic Wind-Rose. Diagram showing for any locality the average temperature during the prevalence of wind from each point of the compass.

Thermidor. Eleventh month of old French Republic, July 19–Aug. 18.

Thermobarometer. See HYPSOMETER.

Thermochemistry. Branch of chemistry dealing with the phenomena and laws of heat-changes taking place in chemical reactions.

Thermochrose. Property of some substances of transmitting certain radiation of long wave-length and of absorbing other kinds. It is now believed to be not merely analogous to color, but essentially identical with it.

Thermodynamics. Department of the science of dynamics which treats of the phenomena of heat as due to motion. The foundation of the modern theory was laid 1824 by Carnot. In 1850–60 the theory of heat was developed independently by Rankine, Clausius, and Thomson; and by the more recent investigators, Maxwell, Zeuner, Hirn, and Boltzmann. Its first law has been thus enunciated: Heat and mechanical energy are mutually convertible; and heat requires for its production and produces by its disappearance mechanical energy in the proportion of 772 foot-pounds for each British unit of heat (see THERMAL UNIT). Heat is thus considered due to certain molecular motions in the molecules of bodies. The three assumptions of pressure, volume and temperature must be made in the case of any body to ascertain its condition as to heat. If a gas is compressed, its pressure and temperature increase, its volume diminishes; if its volume increase, pressure and temperature diminish, and besides the external work, certain interior work in the body has also to be done or accounted for. The usual assumptions of technical interest as to the variations of pressure with volume are represented graphically by one of the curves known as the ADIABATIC, ISOTHERMAL, ISODYNAMIC (q.v.), and the curves of constant pressure and of constant volume for a gas or vapor (see GAY-LUSSAC and MARIOTTE'S LAWS). The second law is that of the equivalence of transformations of heat and work, and may be thus stated: Equal work is performed during equal changes in the absolute temperature of a body (see ABSOLUTE TEMPERATURE); or, "If the absolute temperature of any uniformly hot substance be divided into equal parts, the effects of those parts in causing work are equal." *I.e.*, a variation in the living force or heat of a body doing work bears the same relation to the whole or initial heat, or living force, that the difference between the initial and final absolute temperatures (which is the variation of such absolute temperatures) bears to the whole or initial absolute temperature; *i.e.*,

$$Q_0-Q_1:Q_0::T_0-T_1:T_0 \text{ or } \frac{Q_0-Q_1}{Q_0}=\frac{T_0-T_1}{T_0}$$

The formulæ of thermodynamics enable many problems of the conversion of heat into work to be solved, as also many relating to the flow and action of gases pure and mixed. The fundamental principles were brought out simultaneously by Rankine and Clausius 1850.

Thermoelectric Couple. See THERMOELECTRICITY.

Thermoelectricity. Seebeck of Berlin in 1821 discovered that the law of Volta, according to which there can be no resultant electromotive force in a circuit composed solely of different metals, is subject to exception when the junctions are not all at the same temperature. In this case a thermoelectric current flows through the circuit. If, *e.g.*, pieces of iron wire and copper wire be joined at the ends forming a circuit and one of the junctions be heated, a thermoelectric couple is formed, and a current flows from copper to iron through the hot junction. The electromotive force developed within the closed circuit is approximately proportional to the difference of temperature of the two junctions if this difference be very small; if measured in microvolts, it is equal to the difference of temperature multiplied by a number dependent on the nature of the metals in the circuit. This number is called the thermoelectric power of the two metals at the given mean

Thermoelectric Batteries.

temperature, and varies with the temperature. The thermoelectric power of iron and copper decreases as the temperature rises till a mean temperature of 274.5° C. is reached, when it is zero, while above this the current is reversed in direction. If the colder junction be at a fixed temperature below the NEUTRAL POINT (q.v.), and the other junction be heated, the electromotive force will increase till the higher temperature reaches the neutral point; then it will decrease, and become zero when the higher temperature is as much above the neutral point as the lower one is below it. The temperature of the hot junction is in this case called the temperature of reversal. A thermoelectric series was arranged by Seebeck so that the thermoelectric power of any two metals was the greater the further apart these metals were in the series. Antimony and bismuth are the extremes of this series. See THERMOELECTRIC POWER. Thermobatteries, called THERMOPILES (q.v.), have been constructed on this principle.

Thermoelectric Power. Potential-difference in a circuit of two metals at the mean temperature t°, when one junction is kept half a degree above t° and the other half a degree below it. The following table gives approximately the thermoelectric powers for certain metals, the mean temperature being 20°. The potential-differences are given in microvolts per degree, and are referred to that of lead taken as zero (Jenkin):

Bismuth	+97.0	Platinum	—0.9
Cobalt	+22.0	Copper (pure)	—3.8
German silver	+11.75	Antimony	—6.0
Mercury	+0.418	Iron	—17.5
Lead	0.	Tellurium	—502.0

See THERMOELECTRICITY.

Thermograph. See THERMOMETRY.

Thermoisopleths. Special form of ISOPLETHS (q.v.) in which the curves present temperatures, while the co-ordinate axes present times or places, or times and places. This term was first used by Erk of Munich, as applied to his diagram, where the co-ordinate axes are time of day and of year. S. A. Hill has given thermoisopleths for time of day and altitude above the ground.

Thermolysis. See DISSOCIATION.

Thermometer. Instrument for measuring temperature; *i.e.*, determining the condition of a body with respect to its sensible heat. Invented by Galileo before 1597. The alcohol thermometer also was invented by him ab.1612. Fahrenheit made a mercury thermometer 1721; his division of the scale dates from 1724. Linnæus introduced the present arrangement of the Centigrade scale. The minimum thermometer was produced by Casella 1861. See THERMOMETRY.

Thermometry. Science of measuring and comparing temperatures. The ordinary thermometer consists of a capillary glass tube terminating in a bulb, and the whole partly filled with mercury. The expansion and contraction of mercury is greater than that of glass; so, if the tube be properly graduated, the position of the mercury surface will indicate the temperature of the instrument. Any instrument used to detect the presence of heat is called a thermoscope, and its arbitrary graduation will enable it to be used as a thermometer. An apparatus for obtaining a continuous automatic record of the indications of a thermometer is called a thermograph. A sheet of sensitive paper is made to move

Thermograph.

uniformly behind and at right angles to the length of a thermometer placed in front of a narrow vertical slit in a blackened screen. If this be illuminated from the front, that part of the tube above the mercury only is transparent, and the rising and falling of the mercury, combined with the horizontal motion of the paper, causes the line of separation of the affected and unaffected parts of the paper to be curved or wavy; the height of the curve above a certain datum line is a measure of the temperature at each instant of the day. Self-registering thermometers are divided into MAXIMUM THERMOMETERS (q.v.) and MINIMUM THERMOMETERS (q.v.). Leslie of Edinburgh invented an instrument for detecting small differences of temperature, called a DIFFERENTIAL THERMOMETER (q.v.). See CENTIGRADE, FAHRENHEIT, and REAUMUR.

Thermophone. Electrical thermometer used to determine the temperature of a distant or inaccessible place. It is of the resistance type and depends upon the principle that the resistance of a conductor to the electrical current varies with

Thermophone.

its temperature. It is extremely sensitive and is used to take the temperature of water at different depths, the temperature of soils in agricultural work, and in places where a constant temperature is desired.

Thermopile. Thermoelectric generator, consisting in its simplest form of a circuit of two metals, one junction being maintained at a higher temperature than the other. That heat can thus be transformed into electric energy was discovered by Seebeck 1821. The thermomultiplier of Nobili and Melloni (1834), which may be used as a delicate thermoscope,

Thermopile.

was constructed of bismuth and antimony. The modern devices of Noë and Clamond are made of a zinc-antimony alloy, coupled with German silver or iron. The difference of potential due to a single couple is very small, and usually many couples are joined in series to increase the effect.

Thermopylæ. Pass from Thessaly s., between Mt. Œta and the Malice Gulf. At one point it offered room for but a single carriage. Here Leonidas with 300 Spartans and 700 Thespians withstood for two days the mighty host of Xerxes, 480 B.C. Here Brennus entered Greece 279 B.C., and here Antiochus was defeated by the Romans 191 B.C.

Thermoscope. See THERMOMETRY.

Thermostat. Self-acting instrument for regulating the temperature of a given space. Its action may depend upon the differential expansion principle, and it may be attached, *e.g.*, to heat-regulating part of a furnace.

Thermotropism. Phenomena of curvature of growing vegetable organs, induced by the dark rays of the spectrum.

Theroigne de Mericourt. Assumed named of TERWAGNE, ANNE JOSEPHE (q.v.).

Theromorpha. Order of extinct reptiles whose fossils are found in Permian and Triassic fresh-water deposits of s. Africa. They are connecting links to mammals. The limbs are ambulatory, the pelvis and shoulder-girdle firm. The vertebræ are biconcave, teeth few or none. *Dicynodon* had walrus-like tusks and a beak like a tortoise. Several suborders are here included, some of which connect with order RHYNCHOCEPHALIA (q.v.). The *Theromorpha* were so named by Cope as possessing characters connecting them with the lowest mammals, the Monotremes; they were remarkable generalized types connecting amphibians, reptiles, and mammals, and believed by Cope and Owen to be the probable ancestors of the marsupial mammals of the Upper Triassic.

Thersites. Character in the *Iliad*, deformed in body and mind. He railed at the Greek chiefs, and was slain by Achilles.

Théry, ANTOINE THÉODORE JOSEPH, 1807–1896. French life Senator 1875.

Theseus. Legendary hero of Attica, rival of the exploits of Hercules. He slew the Minotaur in Crete, and escaped from the labyrinth by help of Ariadne's clew; became King of Athens; fought the Amazons; was one of the Argonauts; joined in the Calydonian hunt; aided the Lapithæ against the Centaurs; and was believed to have come from the grave to aid the Athenians at Marathon.

Thesiger. See CHELMSFORD.

Thesmophoria. Greek festival in honor of Demeter; celebrated by the women of several cities, particularly Athens, Abdera, Sparta, and Thebes.

Thesocytes. Cells in sponges that serve the purpose of storing oil and amylin for the general use of the sponge economy.

Thespis, 6th cent. B.C. Traditional founder of Greek tragedy.

Thessalonians, EPISTLES TO. 13th and 14th N.T. books, written by St. Paul ab. 53 and 54.

Thessalonica. See SALONICA.

Thessaly. Largest section of Greece; e. of Epirus; never of great importance in Greek history; subjected by Philip of Macedon 344 B.C., and by Rome at the battle of Cynocephalæ

197 B.C.; ceded to Greece by Turkey 1881; occupied by Turkish troops 1897. It is a plain almost surrounded by moun-

The Mountain Monasteries.

tains and is divided by a series of transverse chains. Numerous monasteries are found here.

Thetis. Sea-nymph, daughter of Nereus. She had, like Proteus, the power of assuming any shape she pleased. Peleus, by Chiron's instruction, held her fast till she resumed her proper form and promised to marry him. By him she became the mother of Achilles.

Theudas. Leader of a Jewish revolt, mentioned Acts v. 36.

Theurgy. Supposed magical science, by which the will of the gods could be affected; believed in by some Neoplatonists ab. 400–500.

Theuriet, ANDRÉ, b. 1833. French novelist, poet, dramatist, and critic. *Mdlle. Guignon*, 1874; *Bastien-Lepage*, 1885.

Thévet, ANDRÉ, 1502–1590. French writer on America. *Cosmographie*, 1571; *Hommes illustres*, 1584.

Thian-Shan, or TIEN-SHAN. Range of high mountains between Russian and e. Turkestan; part of the n. boundary of the great plateau of central Asia.

Thibaud, PIERRE, 1739–1804. French ethnologist. *Origine des Indiens*, 1787–1801; *Hist. Aztec*, 1796.

Thibaudeau, ANTOINE CLAIRE, 1765–1854. French Deputy 1792, Councilor of State 1800, Count 1803; in exile 1815–30; Senator 1852; historian of the Directory 1824, of Napoleon 1827–28, and of the *Consulate and Empire*, 10 vols., 1835. *Mémoires*, 1875.

Thibaudin, GASTON LOUIS, 1727–1796. French botanist, in S. America and Cuba 1777–85, and from 1792. *Flore du Chili*, 4 vols., 1788; *Flore du Perou*, 4 vols., 1790.

Thibault, ANATOLE FRANCOIS ("ANATOLE FRANCE"), b. 1844. French novelist and dramatist; literary critic of *Le Temps*. *Jocaste; Jean Servan's Desires; Crime of Sylvestre Bonnard.*

Thibaut, 1201–1253. King of Navarre 1234. French lyrical poet.

Thibaut, ANTON FRIEDRICH JUSTUS, 1774–1840. Prof. Kiel 1798, Jena 1803, and Heidelberg from 1806; important writer on Roman law, 1799, and the Pandects, 1803.

Thibet. See TIBET.

Thick-knee (STONE PLOVER). Plover-like intertropical

Thick-knee (*Oedicnemus crepitans*).

bird, with enlarged tarsal joints, no hind toe, and pointed wings. A single species extends to England. It is nocturnal, and feeds in marshes on insects, snails, etc. In Central America it is protected because it destroys insects that attack cattle.

Thierry, JACQUES NICOLAS AUGUSTIN, 1795–1856. French historian of the Norman Conquest of England, 1825, and of the Merovingian Age, 1840. His works are noted for picturesque style, and are familiar in English versions.—His brother, AMÉDÉE SIMON DOMINIQUE, 1797–1873, Councilor 1838, Senator 1860, wrote histories of Gaul, 1828–47, and of Attila, 1856.

Thiers, LOUIS ADOLPHE, 1797–1877. French historian, journalist, and statesman; Deputy 1830, Minister 1832; Academician 1834; Premier 1836 and 1840; usually active in opposition; Pres. of the Republic 1871–73, Senator 1876. His *Hist. French Revolution*, 10 vols., 1823–27, and *Consulate and Empire*, 20 vols., 1845–60, are important works, but not of the highest rank.

Thiersch, FRIEDRICH WILHELM, 1784–1860. Classical prof. at Munich from 1812; writer on history and education.—His son, HEINRICH WILHELM JOSIAS, 1817–1885, was prof. at Marburg 1843–50, and thenceforth Irvingite pastor in Germany, Switzerland, and Austria. *Hist. Ch.*, tr. 1852; *Genesis*, tr. 1878.

Thietmar, 976–1018. Saxon chronicler; Bp. of Merseburg, near Leipzig, 1009.

Thieves' Jargon. Use of a special patter or dialect among thieves, partly to disguise their speech, is common throughout Europe, and in India and other parts of the East. English cant, or Thieves' Latin, is made up partly of archaic and foreign words, but in greater part of arbitrary and conventional expressions of a low, coarse and foolish character. In s. China, the secret language of thieves is characterized by the employment of substituted words in a metaphorical sense.

Thijm, JOSEPHUS ALBERTUS ALBERDINGK, 1820–1888. Dutch poet, historian, novelist, and critic.

Thilo, JOHANN CARL, 1794–1853. Prof. Halle 1822; ed. N. T. Apocrypha 1832–46.

Thimbleberry. See RASPBERRY.

Thin Plates, COLORS OF. Iridescence is produced by the interference of rays reflected from the upper and lower surfaces of thin plates, as in soap-bubbles or oil-films. See NEWTON'S RINGS.

Thio. Prefix used by many writers for sulp or sulpho, meaning that the compound to which it is applied contains sulphur.

Thio Acids. Acids in which more or less oxygen is replaced by sulphur. Thus thioacetic acid is $CH_3.COSH$.

Thio Alcohols. Alcoholic compounds containing the group .SH instead of .OH; also called Mercaptans. See ALCOHOLS.

Thio Aldehydes. ALDEHYDES (q.v.) containing the group .CHS instead of .CHO.

Thiocarbonates. Salts of the thiocarbonic acid; carbonates containing sulphur in place of oxygen, as K_2CS_3.

Thioketone. KETONE (q.v.) in which the group CO is replaced by CS.

Thionic Acids. See DITHIONIC ACID.

Thionine. $C_{12}H_{10}N_3SCl$. Hydrochloride of the substance produced by the oxidation of paraphenylenediamine in an acid solution containing sulphureted hydrogen; green powder, easily soluble in hot water.

Thionville. Town of Lorraine, 18 m. n. of Metz; taken by Condé 1643, and by the Germans Nov. 1870; since German. Pop., 1890, 8,928.

Thionyl Chloride. $SOCl_2$. Colorless or yellow fuming liquid of bad odor and irritating effect upon the mucous membrane; bpt. 82° C.; made by treating phosphorous pentachloride with dry sulphur dioxide, and fractionating the resulting compounds.

Thiophene. C_4H_4S. Liquid very similar to benzene, present in coal tar; hence usually present in benzene; bpt. 84° C. In chemical properties it is an aromatic substance.

Thiosulphates. Salts of thiosulphuric acid.

Thiosulphuric Acid. $H_2S_2O_3$. Formerly called hyposulphurous acid; very unstable. Salts are made by dissolving sulphur in sulphites.

Third. See INTERVALS.

Third Estate. See TIERS ÉTAT.

Thirion, EUGENE ROMAIN, b. 1839. French painter.

Thirlage. In Scotland, a servitude, by which the possessor of lands was bound to carry all his grain to a certain mill to be ground, paying from a thirtieth to a twelfth part therefor, besides perquisites to the servants.

Thirling, or THURLING. Small hole or passage, cut for

purposes of ventilation through the rib or pillar that separates two parallel drifts or rooms in a coal mine.

Thirlmere. Lake in s.w. of Cumberland, England. It belongs to the basin of the Derwent, and flows n. into the Greta. Its level has been raised from 533 ft. covering an area

Thirlmere and Helvellyn.

of 330 acres to 584 ft. covering an area of 793 acres, by an embankment at the natural outlet. By an aqueduct having a capacity of 50,000,000 gallons a day, it supplies 10,000,000 gallons to Manchester.

Thirlwall, CONNOP, D.D., 1797–1875. Bp. of St. David's 1840–74; O.T. reviser; most liberal prelate of his time, voting for Irish disestablishment and the admission of Jews to Parliament, and refusing to demand Bp. Colenso's resignation. His *History of Greece*, 1835–40, enlarged in 8 vols. 1845–52, is of high rank. *Remains*, 1875–76; *Letters*, 1881–82.

Thirst. Simple desire for, or absolute want of, liquids. Its symptoms are dryness of the mouth and pharynx. It is relieved by introduction of liquid into the stomach, where it is absorbed by the veins. It is a symptom in many diseases, particularly in those of vascular excitement.

Thirty-nine Articles. Framed 1552 by Cranmer, Ridley, and other reformers, as 42; abridged, and approved by Convocation in their Latin form 1562, and in English 1571; bound with the Prayer Book in England and America, and long regarded as part of it. Subscription to them was required of members of the universities till 1871.

Thirty Tyrants. 1. After the fall of Athens 404 B.C. the Athenian assembly appointed a committee of 30 to draw up laws for the city and temporarily administer the government. They ruled eight months and earned their name by extreme violence and cruelty; 1,500 citizens are said to have been put to death without trial. 2. Usurpers in various Roman provinces during the imbecile reign of Gallienus. The chief were Postumus, Victorinus, and Tetricus, in Gaul 258–273. Gibbon could name but 17 in all.

Thirty Years' War. In Germany 1618–48. Austria, in alliance with Spain, and most of the R.C. States of Germany, contended with different powers. It began with an uprising in Bohemia, provoked by violation of the edict of toleration of July 11, 1609. Ferdinand II. was deposed as King of Bohemia and the Elector Palatine chosen in his stead. 1618–24 the war was carried on between the princes of Germany; the chief Protestant leaders were Count Mansfeld, Christian of Brunswick, and Bethlem-Gabor. The emperor recovered Bohemia, and crushed Protestantism there, but lost much of Hungary and Transylvania. In 1624, Christian IV. of Denmark came to the aid of the Protestants: he was routed by Tilly Aug. 1626, as was Mansfeld by Wallenstein April 1626. The death of Mansfeld followed a successful raid through Silesia, Moravia, and Hungary. Christian was forced to conclude peace, at Lübeck, May 1629. Ferdinand's increasing persecutions and his insulting conduct toward Gustavus Adolphus brought in the Swedish army, 1630, who soon conquered Pomerania and Mecklenburg. Gustavus routed Tilly at Beltenfeld 1631, and on the Lech April 1632; and entered Munich, but was drawn back by Wallenstein to Saxony, where he fell at Lützen, his army gaining the victory. The defeat of Weimar at Nordlingen led to the treaty of Prague, May 1635, soon joined by all the Lutheran princes of Germany. Sweden now resigned the leadership to Richelieu, but her generals won a series of victories, till the Austrians were driven beyond the Danube. The power of Spain in the Netherlands was broken by France, and at Nordlingen, Aug. 3, 1645, Condé and Turenne obtained a decisive victory over the leaguers. An invasion of Austria was cut short by the Peace of Westphalia, signed 1648, after 7 years of negotiation. The war was terribly destructive to life, property, and every interest of civilization.

Thisbe. See PYRAMUS AND THISBE.

Thistle. Coarse, prickly herbs of the genus *Carduus*, natural order *Compositæ*, natives of the n. temperate zone. The Canada Thistle, *C. arvensis*, native of Europe, introduced as a weed into America, is particularly troublesome in both pastures and cultivated fields. It spreads from seeds and underground stems, and is eradicated or checked with great difficulty. When cut early it makes a hay of fair quality that is readily eaten by sheep and cattle. The other thistles are biennials, and may be killed by cutting the second year before the seed is formed.

Canada Thistle (*Carduus arvensis*).

Thistle, BLESSED. *Cnicus benedictus*. Native of Europe, sparingly introduced into the U. S.

Thistle, COTTON. See THISTLE, SCOTCH.

Thistle, ORDER OF THE. See ST. ANDREW, ORDER OF.

Thistle, RUSSIAN. *Salsola tragus*. Low, profusely branching, annual weed. Late in the season it breaks from the root and is blown about by the wind, thus widely scattering its abundant seeds. It has spread very rapidly on the Western prairies and is exceedingly troublesome. It is not a true thistle, but more nearly related to the pigweeds.

Thistle, SCOTCH. *Onopordon acanthium*. Coarse, prickly-leaved herb of the Composite family, with large purple flowers, native of Europe, introduced as a weed into America; also called Cotton Thistle.

Thlinkit. Pacific coast Indians from the Columbia n. to Mt. St. Elias, Alaska. They are of light color, have bristly black hair, and large eyes. They formerly inserted plugs in the under lip. Before the advent of the whites they worked copper. In war they wear wooden armor: prisoners were tortured to death. They live in houses of hewn logs, and are expert carvers. Cutting the hair is a sign of mourning; the dead are burned and their ashes preserved. Corpses are re-

Grave of Thlinkit Chief.

moved from the house by way of the roof rather than through the door. Though skilled canoeists, they knew not how to swim. Medicine men are wanting. The southern Thlinkit are the Haidah Indians; the Aht is their chief tribe. They flatten the head, live on salmon, which they cure, bury the dead in mounds, before which they burn salmon, and are noted for their theatrical performances.

Tholobate. Substructure below a cupola or dome.

Tholuck, FRIEDRICH AUGUST, 1799–1877. Prof. of Theology at Halle 1826; evangelical leader of wide influence. His commentaries and other books have been extensively tr. and read. *Sin and Redemption*, 1824, tr. 1854; *Hours of Devotion*, 1840, tr. 1875; *Rationalism*, 1853–65.

Thom, JOHN HAMILTON, ab.1810–1894. Unitarian pastor at Liverpool. *Revelation*, 1859.

Thom, WILLIAM, 1799–1848. Scottish weaver-poet.

Thomas, ST., or DIDYMUS. One of the twelve apostles; of a melancholy temperament, but deeply devoted to his Master; said to have preached in Persia and India and been martyred. His doubt of Christ's resurrection was the demand of an honest, accurate mind for evidence. Both his names mean "twin."

Thomas, ABEL CHARLES, 1807–1880. Pastor in Phila. *Centenary of Universalism*, 1872.

Thomas, ARTHUR GORING, 1851–1892. English composer of the operas *Esmeralda*, 1883, and *Nadeshda*, 1885, and cantatas *Sun Worshipers* and *Swan and the Skylark*.

Thomas, CHARLES LOUIS AMBROISE, 1811–1896. Director Paris Conservatoire from 1871; composer of 20 operas and many cantatas and minor pieces. *Le Songe d'une Nuit d'été*, 1850; *Mignon*, 1866; *Hamlet*, 1868.

Thomas, CYRUS, b.1825. Member U. S. Entomological Commission 1877, and Bureau of Ethnology 1882. *Insects of Illinois*, 5 vols., 1876–80; *Mt. Troano*, 1882; Maya and Mexican MSS., 1884; *Burial Mounds*, 1888.

Thomas, DAVID, 1794–1882. Welsh ironmaster, in Pa. from 1839.

Thomas, DAVID, D.D., b.1813. Independent minister in London 1845–74; ed. *Homilist*, 1851–82.

Thomas, EDITH MATILDA, b.1854. American poet and essayist.

Thomas, FRANCIS, 1799–1876. M.C. 1831–41 and 1861–69; Gov. of Md. 1841–44; U. S. Minister to Peru 1872–75.

Thomas, SIR GEORGE, ab.1705–1775. Gov. of Pa. 1738–47; Baronet 1766.

Thomas, GEORGE HENRY, U.S.A., 1816–1870. Major 1855; Brig.-gen. U. S. Vols. 1861; victor at Mill Springs, Ky., Jan. 20, 1862; Major-gen. April 1862. He turned defeat into victory at Murfreesboro, Tenn., Jan. 2, 1863, and as "the Rock of Chickamauga," Sept. 20, withstood a fierce attack of the best Confederate troops, and nullified their success, in one of the most critical actions of the war. He now became commander of

General Thomas.

the army of the Cumberland, and Brig.-gen. U.S.A. He won the battle of Nashville Dec. 15, 16, 1864, nearly annihilated Hood's army, and was made Major-gen. U.S.A. After the war he held commands in the Southwest, and did much for reconstruction. A Virginian, his loyalty involved great though silent sacrifices, and was long under unjust suspicion. He was a noble character, and the greatest of the Union generals after Grant, Sherman, and possibly Sheridan.

Thomas, HENRY GODDARD, b.1837. Col. 2d U. S. colored regiment Feb. 1863; Brig.-gen. U. S. Vols. 1864–66, serving in Va.—His brother, WILLIAM WIDGERY, b.1839, was U. S. Minister to Sweden 1883–85 and 1897.

Thomas, ISAAC, 1735–1819. Va. scout, active in border warfare and in the settlement of Tenn.

Thomas, ISAIAH, LL.D., 1749–1831. Printer and publisher of Boston and Worcester, Mass.; founder American Antiquarian Society 1812. *Hist. Printing in America*, 1810.

Thomas, JESSE BURGESS, 1777–1853. U. S. Senator from Ill. 1818–29; introducer of the Missouri Compromise 1820.—His great-nephew, JESSE BURGESS, D.D., b.1832, became prof. in Newton Theol. Inst., Mass., 1887. *Bible and Science*, 1877.

Thomas, JOHN, 1725–1776. Mass. surgeon; Brig.-gen. 1775, Major-gen. 1776; Montgomery's successor before Quebec.

Thomas, JOHN, 1805–1871. Founder of the Christadelphians, a non-trinitarian sect, in the U. S. ab.1855, and in England 1860.

Thomas, JOHN, 1813–1862. English sculptor and architect.

Thomas, JOSEPH, M.D., LL.D., 1811–1891. American compiler. His *Gazetteer*, 1855, *Medical Dictionary*, 1864, and *Dict. Biography and Mythology*, 1870–71, are widely used.—His brother, JOHN J., 1810–1895, edited the *Country Gentleman* from 1853. *Fruit Culturist*, 1846.

Thomas, LORENZO, U.S.A., 1804–1875. Brig.-gen. 1861, Adjutant-gen. 1861–63; organizer of colored regiments 1863–65.

Thomas, MARY F. (MYERS), M.D., 1816–1888. American reformer, champion of temperance and woman suffrage.

Thomas OF CELANO. Franciscan monk of 13th century, supposed author of the magnificent requiem, *Dies Iræ*.

Thomas OF LONDON. See THOMAS À BECKET.

Thomas, PHILIP FRANCIS, 1810–1890. M.C. 1839–41 and 1875–77; Gov. of Md. 1848–51; Sec. U. S. Treasury Dec. 1860–Jan. 1861.

Thomas, ROBERT BAILY, 1766–1846. Ed. *Farmer's Almanac*, Boston, from 1793.

Thomas, ST., CHRISTIANS OF. See CHRISTIANS OF ST. THOMAS.

Thomas, THEODORE, b.1835 in Germany. Organizer of symphony concerts in New York 1864; conductor of the Philharmonic Society 1877–90, and since of the Chicago Orchestra; director of the College of Music of Cincinnati 1878–80, of music festivals there since 1873, and of the music of World's Columbian Exposition in Chicago 1893.

Thomas, THEODORE GAILLARD, M.D., LL.D., b.1831. Prof. New York 1862; Pres. Gynæcological Society 1879. *Diseases of Women*, 1868.

Thomas à Becket. See BECKET.

Thomas à Kempis. See KEMPIS.

Thomas Aquinas. See AQUINAS.

Thomas-Gilchrist Process. See STEEL, METALLURGY OF.

Thomasius, CHRISTIAN, 1655–1728. Prof. of Jurisprudence at Leipzig 1681, and Halle 1694. He substituted German for Latin in teaching, opposed torture and trials for witchcraft, and defended Spener and the pietists. *Weisheit und Thorheit*, 1693; *Gedanken*, 1723–26.—His descendant, GOTTFRIED, 1802–1875, prof. Erlangen from 1842, pub. *Origenes*, 1837; *Christi Person und Werk*, 1852–61; and *Dogmengeschichte*, 1874–76.

Thomassin, LOUIS, 1619–1697. French oratorian. *Bénéfices*, 3 vols., 1678–79.

Thomas the Rhymer. See RHYMER.

Thomayer, JOSEF ("R. E. JAMOT"), b.1853. Prof. of Medicine at Prague; author of professional works and scientific novels.

Thomes, WILLIAM HENRY, b.1824. Californian writer of stories of travel.

Thomists. Followers of AQUINAS (q.v.).

Thompson, ALEXANDER RAMSAY, D.D., b.1822. Reformed pastor in New York and Brooklyn; hymnist and compiler.

Thompson, AUGUSTUS CHARLES, D.D., b. 1812. Cong. pastor at Roxbury, Mass.; devotional writer.

Thompson, BENJAMIN. See RUMFORD.

Thompson, CEPHAS GIOVANNI, 1809–1888. American painter, especially of portraits, as was his father, CEPHAS, 1775–1856.—His brother, JEROME, 1814–1886, was a landscape and genre painter. All three were mainly self-taught.

Thompson, DANIEL GREENLEAF, 1850–1897. New York lawyer and author, pres. 19th Century Club. *Psychology*, 1884; *Problem of Evil*, 1886; *Social Progress*, 1889; *Philosophy of Fiction*, 1892.

Thompson, DANIEL PIERCE, 1795–1868. American novelist. *Green Mountain Boys*, 1840; *Hist. Montpelier* (Vt.), 1860.

Thompson, DAVID, 1770–1857. Canadian explorer.

Thompson, EDWARD MAUNDE, b.1840. Librarian of the British Museum. *Greek and Latin Paleography*, 1893.

Thompson, ELIZABETH (ROWELL), b.1821; m. Thomas T. 1844. American philanthropist, interested in temperance and the condition of the poor. In 1885 she established a fund for scientific research.

Thompson, ELIZABETH S. See BUTLER, E. S.

Thompson, GEORGE, 1804–1878. English abolitionist, influential in the U. S. 1834–35; M.P. 1847.

Thompson, HENRY, 1797–1878. English author and translator; biographer of Hannah More 1838; editor of Horace and Virgil 1853–54.

Thompson, SIR HENRY, b.1820. English surgeon, painter, and novelist. *Lithotomy*, 1863; *Urinary Organs*, 1868; *Cremation*, 1890.

Thompson, HENRY DENMAN, b.1833. American actor, best known in *The Old Homestead*, 1891–95.

Thompson, HUGH MILLER, D.D., LL.D., b.1830 in Ireland. Prof. Nashotah Theol. Sem., Wis., 1860–71; ed. *American Churchman* 1860–71, and *Ch. Journal* 1871–79; rector in New York 1872–76, and New Orleans 1876–83; asst. Bp. of Miss. 1883, Bp. 1887. *First Principles*, 1868; *Copy*, 1872; *World and Logos*, 1885.

Thompson, JACOB, 1810–1885. M.C. from Miss. 1839–57; U. S. Sec. Interior 1857–61; Gov. of Miss. 1862–64; Commissioner C.S.A. to Canada 1864.

Thompson, JAMES, 1806–1874. M.C. 1845–51; Judge Pa. Supreme Court 1857–66; Chief-justice 1866–72.

Thompson, JOHN BURTON, 1810–1874. M.C. from Ky. 1840–43 and 1847–51; U. S. Senator 1853–59; Unionist.

Thompson, JOHN REUBEN, 1823–1873. Va. poet; ed. *Southern Literary Messenger* 1847–59.

Thompson, SIR JOHN SPARROW DAVID, 1844–1894. Atty.-gen. of Canada 1885; knighted 1888; Premier 1892.

Thompson, JOSEPH PARRISH, D.D., LL.D., 1819–1879. Cong. pastor in New York 1845–71; in Berlin from 1871. *Egypt*, 1856; *Theology of Christ*, 1870; *The U. S. as a Nation*, 1877.

Thompson, LAUNT, 1833–1894. Irish-American sculptor, in Italy 1875–81.

Thompson, MAURICE, b.1844. American poet, novelist, and essayist; State Geologist of Indiana 1885. *Witchery of Archery*, 1878; *A Tallahassee Girl*, 1882; *Sylvan Secrets*, 1887; *Story of Louisiana*, 1888.

Thompson, MERRIWETHER JEFF, 1826–1876. Brig.-gen. C.S.A. 1861–65, serving in the West; engineer and inventor.

Thompson, MORTIMER ("Q. K. PHILANDER DOESTICKS"), 1832–1875. American humorist. *Pluribustah*, 1856, a travesty on Longfellow's *Hiawatha*.

Thompson, RICHARD WIGGINGTON, b.1809. M.C. from Ind. 1841–43 and 1847–49; Sec. Navy 1877–81.

Thompson, ROBERT ANCHOR, b.1821. Anglican divine. *Theism*, 1855; *Becket*, 1889.

Thompson, ROBERT ELLIS, D.D., b.1844. Prof. Univ. Pa. 1870–92; pres. Phila. High School 1894; ed. *Penn. Monthly* 1870–80, and *American* 1880–91. *Social Science*, 1875–82; *Protection*, 1886.

Thompson, SILVANUS PHILLIPS, b.1851. English electrician. *Dynamo-electric Machinery*, 1885.

Thompson, SMITH, LL.D., 1768–1843. Justice N. Y. Supreme Court 1802–1814; Chief-justice 1814–18; Sec. Navy 1818–23; Justice U. S. Supreme Court from 1823.

Thompson, THOMAS PERRONET, 1783–1869. M.P. 1835; writer on politics, mathematics, and acoustics.

Thompson, WADDY, 1798–1868. M.C. from S. C. 1835–41; Minister to Mexico 1842–45. *Mexico*, 1846.

Thompson, WILLIAM, ab.1725–1781. Col. Pa. troops 1775; Brig.-gen. 1776.

Thompson, WILLIAM HEPWORTH, D.D., 1810–1886. Greek prof. at Cambridge 1853; master Trinity Coll. 1866.

Thompson, WILLIAM TAPPAN, 1812–1882. Georgia humorist. *Major Jones' Courtship*, 1840; *Chronicles of Pineville*, 1843; *Sketches*, 1848–83.

Thompson, WORDSWORTH, 1840–1896. N. A. 1874. American painter of colonial and early American life. His *Deserted Inn* was shown at the World's Columbian Exposition, Chicago, 1893.

Thompson, ZADOC, 1796–1856. Historian of Vermont 1833, 1841, 1853.

Thoms, WILLIAM JOHN, 1803–1885. English antiquarian and compiler; founder and ed. *Notes and Queries*, 1849–72. *Early Prose Romances*, 1828; *Lays and Legends*, 4 vols., 1834; *Anecdotes and Traditions*, 1838; *Longevity*, 1873.

Thomsen, CHRISTEN JÜRGENSEN, 1788–1865. Danish antiquarian.

Thomsenolite. $Na_2Ca_2Al_2F_{12}+2aq$. Hydrous calcium sodium aluminium fluoride, found associated with the cryolite of Greenland.

Thomson, ANTHONY TODD, M.D., 1778–1849. Prof. London. *Dispensatory*, 1811; *Materia Medica and Therapeutics*, 1832–33. —His wife, KATHERINE (BYERLY), 1800–1862, as "Grace Wharton," pub. *Jacobites of 1715 and 1745*, 3 vols., 1845–46; *Wits and Beaux of Society*, 1860, and similar books.

Thomson, CHARLES, 1729–1824. Sec. Congress 1774–89; tr. Bible 1808.

Thomson, SIR CHARLES WYVILLE, LL.D., 1830–1882. Prof. Cork 1853, Belfast 1854, and Edinburgh 1870–79; knighted 1876; head of the *Challenger* expedition 1872–76. From a study of the nature of the mud covering the Atlantic bed, he favored the theory that the present deep-sea basin of the Atlantic has been such during the entire Tertiary period and that some of the microscopic organisms now living there are the lineal descendants of those of the Cretaceous period. *Depths of the Sea*, 1872; *Voyage of the Challenger*, 1877.

Thomson, EDWARD, D.D., LL.D., 1810–1870. Pres. Ohio Wesleyan Univ. 1848–60; ed. *Christian Advocate* 1860–64; M.E. bishop 1864. *Essays*, 1856; *Letters*, 1856–70.

Thomson, ELIHU, b.1853. American electrician.

Thomson, JAMES, 1700–1748. Scottish descriptive and dramatic poet. His *Seasons*, 1726–30, and *Castle of Indolence*, 1748, are minor classics; his plays are of less importance.

Thomson, JAMES, 1834–1882. Scottish poet, of pessimistic views and unhappy life. *City of Dreadful Night*, 1874–80; *Shelley*, 1885; *Critical Studies*, 1896.

Thomson, JOHN EDGAR, 1808–1874. Chief engineer Pa. R.R. 1847, and its pres. from 1852.

Thomson, JOHN RENSHAW, 1800–1862. U. S. Senator from N. J. from 1853.

Thomson, JOSEPH, 1858–1895. Scottish explorer in Africa 1878, 1882, and 1890. *Through Masai Land*, 1885; *Ulu*, 1888; *In the Atlas*, 1889.

Thomson, JOSEPH JOHN, b.1856. Prof. Cambridge 1884; writer on physics, electricity, and magnetism.

Thomson, SAMUEL, 1769–1843. New England founder of a system of medicine. *Life and Discoveries*, 1825–32.

Thomson, THOMAS, 1768–1852. Scottish antiquarian.—His brother, JOHN, 1778–1840, minister of Duddingston from 1805, was eminent as a landscape painter.

Thomson, THOMAS, 1773–1852. Prof. of Chemistry Univ. Edinburgh 1818. *Hist. Chemistry*, 1830; *Mineralogy and Geology*, 1836.

Thomson, WILLIAM, D.D., F.R.S., 1819–1890. Bp. of Gloucester and Bristol 1861, Abp. of York 1863. *Laws of Thought*, 1842; *Atoning Work*, 1854.

Thomson, WILLIAM (LORD KELVIN), F.R.S., b.1824. Prof. of Natural Philosophy Univ. Glasgow since 1846; eminent as mathematician and physicist; knighted 1866 for services to Atlantic cable; pres. British Association 1871, and Royal Society 1891; Peer 1892. *Mathematical and Physical Papers*, 3 vols., 1882–90; *Lectures*, 1890–92.—His brother, JAMES, LL.D., F.R.S., 1822–1892, Prof. of Engineering at Belfast 1853–72, and Glasgow 1873–89, was especially learned in hydraulics.

Thomson, WILLIAM MCCLURE, D.D., 1806–1894. American missionary in Syria 1833–76. *The Land and the Book*, 1859, enlarged 1880–86; *Land of Promise*, 1865.

Thomson Effect. See PELTIER'S EFFECT.

Thomsonite. Zeolitic mineral; hydrous sodium calcium aluminium silicate. A fibrous or radiated variety, that takes a good polish, has been found in water-worn material on the shore of Lake Superior.

Thor. In Norse Mythology, god of the sky, of thunder,

war, fire, and the hearth; son of Odin; champion of the Æsir, or gods of Valhalla, against the Jötuns, or giant forces of Nature.

Thoracic Duct. In man this extends upward from the receptaculum chyli to the junction of the left jugular and subclavian veins, into which it delivers the lymph of the left side of the body and of both legs and all the chyle; valves permit only an upward flow. Birds have two such ducts.

Thoracic Fins. See FINS OF FISHES.

Thoracipoda. See MALACOSTRACA.

Thoracostraca (PODOPHTHALMATA). Division of *Crustacea*, *Malacostraca*, characterized by compound eyes, usually placed on movable stalks, and by a fold of skin which forms a dorsal shield or carapace, covering most of the thoracic segments, and uniting them to the head. The suborders *Cumacea*, *Stomatopoda*, *Schizopoda* and *Decapoda* are included.

Thorah. Jewish law or books of Moses; celebrated of old in Babylon after the Feast of Tabernacles.

Thorax. Chest; middle region of an insect's body (three segments bearing the legs), and portion of the body in *Crustacea* which bears the pereiopods (five pairs of walking legs on as many ankylosed segments in Lobster).

Thorburn, GRANT ("LAWRIE TODD"), 1773–1863. Scottish-American merchant and author. *40 Years in America*, 1834; *50 Years of New York*, 1845.

Thoreau, HENRY DAVID, 1817–1862. American essayist, noted for originality, independence of mind and character, aversion to conventionalities, and close observation and portraiture of nature. He lived at Concord, Mass., poor, secluded, known to few, a cheerful stoic, a severe critic of men and their

Henry David Thoreau.

ways, a lover of the woods and his own thoughts. Many of his sayings are memorable and stimulating. *A Week on the Concord and Merrimac*, 1849; *Walden*, 1854. His other books are reprints of fugitive articles, or collected from his MS. notebooks, posthumous, like his fame.

Thoresby, RALPH, F.R.S., 1658–1725. English antiquarian, writer on Leeds. *Museum Thoresbianum*, 1824; *Diary*, 1830; *Correspondence*, 1832.

Thoresen, ANNA MAGDALENA (KRAGH), b.1819. Norwegian novelist and dramatist.

Thorfinn. Norwegian navigator, who, the *Sagas* say, sailed for Greenland 1006 and for Vinland 1007, with 3 ships and 160 persons, and spent 3 years in a bay on the New England coast, returning 1611.

Thorild, THOMAS, 1759–1808. Prof. Greifswald; Swedish political writer. *Works*, 1873–74.

Thorite. $ThSiO_4$. Rare mineral thorium silicate, in some of its characters resembling zircon.

Thorium. Th. At. wt. 232.6, sp. gr. 7.65–7.79, sp. ht. .027, valence IV.; discovered by Berzelius 1828; found principally in THORITE and MONAZITE (q.v.); rare metal, prepared by igniting its chloride with sodium; gray powder, taking fire on being heated; soluble in nitric acid. Thorium oxide with the addition of 0.3 per cent cerium oxide is the basis of most incandescent lights.

Thorium Chloride. $ThCl_4$. White shining tablets, obtained by heating the oxide, ThO_2, with carbon, in a current of chlorine.

Thorn. Town of w. Prussia, on the Vistula; founded 1231; held by Poland 1454–1793; five times besieged; birthplace of Copernicus. A conference held here Oct.–Nov. 1645 vainly attempted to reunite Protestants and R. Catholics. Pop., 1890, 26,712.

Thorn. Spiny shrubs and small trees of the genus *Cratægus*, natural order *Rosaceæ*, natives of the n. temperate zone. See SPINE.

Thorn, BLACK. 1. *Prunus spinosa*. Native plum of Europe, introduced in America. 2. Locally *Cratægus tomentosa*, a native thorn of the e. U. S.

Thorn, BOX. *Lycium barbarum*. Vine of the natural family *Solanaceæ*, native of the Mediterranean region, much planted in old gardens.

Thorn, FRANK MANLY, b.1836. Supt. U. S. Coast Survey 1885–89.

Thorn-Apple. Plants of the genus *Datura*, that are in general narcotic, and productive of wild excitement. *D. stramonium*, the common Thorn-apple, contains the alkaloid da-

Common Thorn-apple (*D. stramonium*): *a*, ripe fruit.

turine. Its leaves and roots are used in medicine. *D. metel*, native of Asia, was employed by the Thugs of India to stupefy their victims. The Indians of Peru make the narcotic drink Tonga from *D. sanguinea*.

Thornbury, GEORGE WALTER, 1828–1876. English novelist, historical writer, and compiler.

Thorndike, HERBERT, ab.1598–1672. Canon of Westminster 1661. *Hebrew Lexicon*, 1635. *Works*, 6 vols., 1844–57.

Thornhill, SIR JAMES, 1676–1734. English painter, knighted 1715; teacher of Hogarth.

Thornton, SIR EDWARD, D.C.L., LL.D., b.1817. Minister to Brazil 1865–67, and to the U. S. 1867–81; Ambassador to Russia 1881, and to Turkey 1884–87.

Thornton, JAMES SHEPARD, U.S.N., 1826–1875. Executive officer of the *Kearsarge* when the *Alabama* was destroyed, June 19, 1864; Commander 1866, Captain 1872.

Thornton, JOHN WINGATE, 1818–1878. New England genealogist and historical writer.

Thornton, MATTHEW, ab.1714–1803. Delegate to Congress 1776–77; signer of the Declaration of Independence; Judge N. H. Superior Court 1776–82.

Thornton, ROBERT JOHN, 1760–1827. Prof. of Botany in London. *Herbal*, 1810; *British Flora*, 1812; *Botany*, 1812.

Thornton, WILLIAM, d.1827. Architect of the first Capitol at Washington; Supt. Patent Office from 1802. *Cadmus*, 1793.

Thornton, SIR WILLIAM, ab.1775–1840. English officer, made prisoner in Md. 1814; wounded at New Orleans 1815; Lieut.-gen. 1838.

Thornton, WILLIAM THOMAS, 1813–1880. English economist. *Peasant Proprietors*, 1848; *Labor*, 1869.

Thornwell, JAMES HENLEY, D.D., LL.D., 1812–1862. Prof. S. C. Coll. 1838–40, 1841–51, and its pres. 1852–55; prof. Colum-

bia Theol. Sem., S. C., from 1855; moderator O. S. Presb. General Assembly 1847; ed. *Southern Quarterly Review* 1855–57. *Works*, 4 vols., 1871–73.

Thornycroft, JOHN ISAAC, F.R.S., b.1843. English naval architect and inventor.

Thornycroft, WALTER HAMO, R.A., b. 1850. English sculptor.

Thorold, ANTHONY WILSON, D.D., 1825–1895. Bp. of Rochester 1877, of Winchester 1891. *Presence of Christ*, 1869.

Thorough. Epithet applied, in his correspondence, to the policy of the Earl of STRAFFORD (q.v.). He aimed to make Charles I. an absolute monarch, to deprive the courts of all independent authority, and to put the estates and liberties of the people at the disposal of the crown.

Thoroughbass. See HARMONY.

Thoroughbred. 1. Animal descended in all lines from ancestors who were accepted as standard specimens of the breed. The principal standard of improved stock-breeders' associations in the U. S., excepting trotting horses and several breeds of swine, is importation from the home of the breed in Europe. 2. English running horse. See HORSE.

Thorough-Wax. *Bupleurum rotundifolium.* Herb of the natural order *Umbelliferæ*, native of Europe, sparingly introduced as a weed into the U. S.

Thorpe, BENJAMIN, 1782–1870. English editor of many Anglo-Saxon writings. *Northern Mythology*, 1852.

Thorpe, JOHN, 16th cent. English architect.

Thorpe, ROSE HARTWICK, b.1850, m.1871. American poet, author of "Curfew must not ring to-night."

Thorpe, THOMAS BANGS, 1815–1878. American novelist and painter. *Lynde Weiss*, 1854; *Bee-hunter*, 1854; *Scenes in Arkansaw*, 1858.

Thorpe, THOMAS EDWARD, F.R.S., b.1845. English writer on chemistry; prof. at Glasgow, Leeds, and London. *Dict. Applied Chemistry*, 1890–93.

Thorpe, WILLIAM, d. after 1430. English Lollard, imprisoned 1407; celebrated in Foxe's *Book of Martyrs*.

Thorvald. Norse seaman, brother of Leif; said to have visited New England 1002, and been killed by natives 1004.

Thorwaldsen, BERTEL, 1770–1844. Danish sculptor of great fame, at Rome from 1796, except 1819–20, 1838–41, and 1844. Among his most familiar works are *Night*, *Morning*, *Mercury* and *Adonis*. His subjects were mostly classical.

A Blessing Christ, by Thorwaldsen.

Thorwaldsen Museum. At Copenhagen; founded by bequest of the sculptor to exhibit his own works.

Thoth. Egyptian deity, corresponding with Hermes; inventor and patron of letters; guide of departed souls; secretary of the gods.

Thothmes I. Fourth king of 18th Egyptian dynasty; conqueror of Ethiopia.—II. and III., his sons; the latter conquered Syria.—IV. Eighth king of 18th dynasty.

Thott, BRIGITTE, 1610–1662. Danish translator of Seneca and Epictetus.

Thou (THUANUS), JACQUES AUGUSTE DE, 1553–1617. French historian of high rank. His work is in Latin and of great length; it extends from 1543 to 1607, appeared 1604–19, and was tr. 1773. He was of the Moderate party, and in favor with Henry IV.

Thought. Active, voluntary, synthetic mental process, based upon data of perception, memory, and imagination; highest form of mental activity, and controlling principle of mental life. It deals with ideas and their relations, not with the particular objects of sense. There are three stages, CONCEPT, JUDGMENT, and REASON (q.v.).

Thought Reading. See MIND READING and TELEPATHY.

Thought Transference. See MIND READING and TELEPATHY.

Thousand and One Nights. See ARABIAN NIGHTS ENTERTAINMENT.

Thousand Islands. In the St. Lawrence, n.e. of Lake Ontario; ab.1,800; sites of many villas and hotels.

Thrace. Region limited by the Danube, the Euxine, the Ægean Sea, and the Strymon; inhabited by various savage and warlike tribes; said to have been conquered by Sesostris, king of Egypt, and by the Persian Megabazus 510 B.C.; from ab.490 B.C. independent, and for a time united under one king; conquered, most of it, by Philip of Macedon. The Roman province was s. of the Hæmus Mts. and e. of the Nestus.

Thrale, H. L. See PIOZZI.

Thrasimeno. See TRASIMENO.

Thrasybulus, d.389 B.C. Athenian general, banished 411; overthrower of the 30 Tyrants 403; commander at sea 391 B.C.; accused of treason; slain in s. Asia Minor.

Thread. Fine linen, cotton or silk yarn, made thicker than for weaving. In factory language thread always means two or more yarns twisted one around another, the yarns being doubled or trebled and then twisted around each other in a direction contrary to the twist of the yarn. It is sometimes bleached or dyed. The stronger kind of silk thread is called twist.

Thread-Cells. See NETTLE CELLS.

Thread-Worms. See NEMATODA.

Threats. To constitute an actionable private wrong, words of menace or intimidation must result in actual damages to another. Without such result, they may constitute a crime, or subject the utterer to being bound to keep the peace.

Three Chapters. Writings of Theodore of Mopsuestia, Theodoret and Ibas; condemned 544 by an edict of Justinian, which caused a fierce controversy, being repudiated in the West, though accepted in the East and by the Pope.

Three Estates. See TIERS ÉTAT.

Three Kings, FEAST OF THE. Mediæval festival, identical with Twelfth Night or Epiphany.

Three-Nerved. With three principal veins running longitudinally through the leaf.

Three-Ranked. Arranged in three vertical rows on the stem, as the leaves of *Cyperaceæ*.

Three Rivers. Town of Canada, on the St. Lawrence, at the mouth of the St. Maurice, 77 m. w.s.w. from Quebec; founded 1634; scene of an American defeat June 16, 1776. Pop., 1891, 8,334.

Three-Valved. Splitting into three portions at dehiscence.

Three-way Valve. One which may be turned so as to connect a pipe with either of two other pipes, or be shut off altogether.

Three-way Valve for the lifting bridge at La Villette.

Thremmatology. Science which treats of heredity and variation, the production of races and breeds; stirpiculture.

Threshing. Separation of grain or seeds of plants from the straw was accomplished in ancient times by beating with sticks or by the flail, consisting of two sticks, loosely tied together at one end; the ancient Egyptians freed the grain by driving cattle over the loosened sheaves. The first practical machine was invented by Andrew Meikie, a Scotchman, in 1787. The grain was separated by beaters attached to a revolving drum. Since 1840 the machines have been much improved in the U. S. A skeleton iron cylinder, provided with teeth, revolves in a cast-iron cylinder, provided with slots, through which the grain escapes, the straw being finally cleaned by a shaker and air blast. Another machine has an externally toothed cylinder

revolving in a cylinder provided internally with teeth. The machines are driven by horse or steam power.

Thrift. *Armeria vulgaris.* Maritime herb of the natural order *Plumbaginaceæ*, native of cooler parts of n. hemisphere.

Thring, EDWARD, 1821-1887. Headmaster from 1853 of Uppingham School, Eng., where his success was eminent.—His brother, GODFREY, b.1823, Prebendary of Wells 1876, is a well-known hymnist. *Ch. of England Hymn-book*, 1880–82.

Thrips. See PHYSOPODA.

Throat. In Botany, opening of the tube of a calyx or corolla.

Throat Diseases. Diseases invading the throat are those which attack its mucous membrane, forming varieties of catarrhal affections whose special names depend upon the location and special manifestations of the malady. Or they are diseases affecting special organs located in the parts included by the term. An example of latter class is TONSILLITIS (q.v.). The catarrhs are named from the seat of the disease, as pharyngitis, when it is an inflammation of the mucous membrane of the pharynx: laryngitis, when of the larynx, etc. They may be acute or chronic. Clergyman's and Costermonger's sore throat are familiar examples of a chronic pharyngitis. See DIPHTHERIA and QUINSY.

Throckmorton, JAMES WEBB, 1825–1894. Gov. of Texas 1866–67; M.C. 1875–79 and 1883–87.

Throgmorton, SIR NICHOLAS, 1513–1571. English envoy to Scotland and France; imprisoned 1569.

Thrombosis. Derangement of the circulatory apparatus causing coagulation of some of the contained blood. It may be simply pressure on a blood-vessel, or an inflammation of a vein. The symptoms are more frequently observed in the veins, where the resulting clot may be large enough to prevent the flow of blood through the vessel. This condition is sometimes sought, as in the operation of ligation for hemorrhoids. Frequently a part of a clot or a smaller clot is washed away and carried to another part of the body, eventually plugging the lumen of another blood-vessel. This migrating thrombus is called an embolus, and the resulting disease EMBOLISM (q.v.).

Throop, ENOS THOMPSON, 1784–1874. Gov. of N. Y. 1829–32.—His nephew, MONTGOMERY HUNT, b.1827, pub. *Revised Statutes of N. Y.*, 1878, and *Code of Civil Procedure*, 1880.

Throw. Amount of vertical displacement when rocks are faulted.

Throw of Switch. Distance the movable rail of a switch can be displaced horizontally by reversing the lever.

Thrush. One of the inflammatory diseases of the mouth, characterized by the appearance of a number of small, whitish points, afterward coalescing forming patches that resemble curd-like masses. These may eventually turn brown. It is a disease of childhood and lasts from two to three weeks, usually accompanied by some constitutional disturbances. It is due to the presence of a fungus, whence its scientific name, mycotic stomatitis. The precise species is not determined, but it is, probably, the oidium albicans. It is not dangerous unless the patient be otherwise much debilitated.

Thrush. Some members of genus *Seiurus*, of family *Mniotiltidæ*. The "wood-warblers" are known as Thrushes, *e.g.*, the Water Thrush and the Golden Crowned Thrush; but true Thrushes include the family *Turdidæ*, universally distributed; being found even on oceanic islands. They are most numerous in the Old World, including Old-World Warblers, Tailor-birds, Nightingales, the Ring Ouzel, Mistletoe Thrush, etc. In England the Song Thrush is famed as the rival of the Nightingale. In America the Thrushes are related to the Flycatchers and Blue-birds. The American Robin (Red-breast) is a member of the Thrush family, as is also the Oregon Robin. See DENTIROSTRES, WILSON'S THRUSH, and WOOD THRUSH.

Missel Thrush (*Turdus viscivorus*).

Thrust. 1. Outward push of a rafter or arch against a wall or abutment. It increases as the rise of the rafter or arch decreases. 2. In Mining, movement in the floor of a mine, caused by weight of overlying rock; practically synonymous with CREEP (q.v.).

Thrust-Bearing. Form of bearing for the last length of a propeller shaft close to the stern of a steamship, by which the reaction of the water against the wheel is received and transmitted to the hull for its forward motion; whatever work is necessary to drive the engine forward is in action at this point. It is a box-bearing (see BEARING) in which a number of square grooves are bored out to be the complements of similar rings or collars formed upon the shaft. The sides of the rings bear upon the sides of the grooves, and take the thrust of the screw. The grooves are faced and lined with Babbitt metal, and waterpipes can force circulating water in cored cavities around the bearing to keep it cool. Such bearings will be 4 ft. long for a 14 in. shaft.

Thrust Plane. Almost horizontal plane of movement, along which strata have been driven by tangential pressure developed in the crust of the earth. In some cases the upper strata have been thrust forward for miles over those that underlie them, as in the Highlands of Scotland.

Thucydides, ab.471–401 B.C. First of critical and philosophic historians; Athenian, in Thrace from 424 B.C. His *Hist. Peloponnesian War* is in every way of the very highest rank and value.

Thucydides.

Thugs. Secret confederacy of professional assassins which infested India from ab. 13th century till stamped out 1828–35. They traveled in gangs of 10 to 200, strangling and plundering wealthy wayfarers, as a religious duty owed to the goddess Devi or Kali. They had a jargon of their own, and signs by which to recognize one another. See THIEVES' JARGON.

Thule. Island alleged to have been visited by Pytheas of Massilia 4th cent. B.C.; six days' sail n. of Britain, with day and night each six months long; variously conjectured to be Iceland, the Shetland Islands, and Lapland. "Ultima Thule" is a synonym for any remote or unattainable goal.

Thulite. Rose-red variety of the mineral ZOISITE (q.v.), found in Norway.

Thulium. Tm. At. wt. 170.7, valence III. Element discovered by Cleve, 1879, in gadolinite. Its homogeneity is not established. Its oxide is white, Tm_2O_3.

Thumbscrew. Implement of torture, employed especially in Spain by the Inquisition, and in Scotland upon the Covenanters; last used 1682.

Thumbscrew.

Thümen, FELIX. FREIHERR VON, 1839–1892. German mycologist. *Fungi Austriaci*, 1871–75; *Mycotheca Universalis*, 1875–84.

Thummim. Worn with Urim by Jewish High Priests when they solicited the Divine oracles; compared to the sapphire image of Truth worn by the Chief Judge of Thebes, in Egypt.

Thun, LAKE. In Switzerland, above the town of Thun. Interlaken is on its e. shore. Length 10½ m., width 2½ m., depth 710 ft., altitude 1,837 ft.

Thunberg, CARL PETER, 1743–1822. Prof. of Botany in Upsala 1781. *Resa uti Europa, Africa, Asia*, 1770–79; *Flora Japonica*, 1784; *Flora Capensis*, 1807–13.

Thunder. See LIGHTNING.

Thunder Bay. In Canada, the inlet at the head of Lake Superior on which Port Arthur stands.

Thunder-Clap. Specially intense, loud, short roll of thunder.

Thundering Legion. Mythical body of Christians serving in the war against the Quadi, 174, whose prayers for rain, when the army was in great straits, were answered by a storm which destroyed numbers of the enemy by hail and lightning, and secured a Roman victory.

Thunder Storms. Brief local rain storms, with much thunder, lightning and wind, frequently changing to hail, and occurring in warm weather. They are very frequent in tropical regions, but rarely occur in temperate zones in winter.

Thunen, JOHANN HEINRICH VON, 1783–1850. German economist, noted for his practical experiments in agriculture and in profit-sharing at Tellow in Mecklenburg. *Der Isolierte Staat in Beziehung auf Landwirthschaft und Nationalökonomie,* 1826–63.

Thurible. See CENSER.

Thurifer. In R. C. services, acolyte who attends the priest, carrying the thurible or censer.

Thuringerwald. See THURINGIA.

Thuringia. Saxon region between the Werra and the Saale, s. of the Harz Mts. Its forest, Thuringerwald, is a range ab. 60 m. long, and reaches a height of 3,460 ft.

Thurlow, EDWARD, BARON, 1732–1806. M.P. 1768; Solicitor-gen. 1770, Atty.-gen. 1771; Lord Chancellor 1778–92, except part of 1783; Tory, of low character and offensive manners.

Thurman, ALLEN GRANBERY, 1813–1895. M.C. from Ohio 1845–47; Judge of Ohio Supreme Court 1851; Chief-justice 1854–56; U. S. Senator 1869–81; Chairman of Judiciary Committee; Democratic candidate for Vice-President 1888. The "Thurman Act" was designed to compel the Pacific railways to fulfill their obligations to the U. S.

Thurneysen, EDUARD RUDOLF, b.1857. Swiss philologist, prof. Jena 1882 and Freiburg 1887.

Thurn und Taxis. German family of Italian origin, princes since 1698; founders of posts from 1460; monopolists of mails in the empire from 1595 till recent times.

Thurot, FRANÇOIS, 1726–1760. French privateer, commander of a squadron 1755 and 1759; killed near Belfast.

Thursby, EMMA CECILIA, b.1857. American soprano singer, known since 1875.

Thursday. Fifth day of the week, named from THOR (q.v.). Thursday is in Latin dies Jovis, or Jupiter's day.

Thurston, ROBERT HENRY, b.1839. Prof. U. S. Naval Academy 1875, Stevens Institute 1871, and Cornell 1885; engineer and inventor. *Materials of Engineering,* 1882–86; *Steam Engine,* 1890–91.

Thusnelda. Daughter of Segestes, and wife of Hermann or Arminius; made prisoner by Germanicus 15, and led in triumph at Rome.

Thwaites, REUBEN GOLD, b.1853. American antiquarian. *Historic Waterways,* 1888.

Thyestes. Son of Pelops; his brother Atreus killed and served up his two sons at a banquet for him, for which the gods cursed Atreus and his house.

Thyine Wood. Mentioned in the Bible, and is probably SANDARACH (q.v.) wood. The Turks floor their mosques with it, believing it to be indestructible.

Thylacoleo. Large, extinct, probably carnivorous, Marsupial, with a broad trenchant premolar.

Thyme. *Thymus vulgaris.* Low aromatic shrub, native of s. Europe; cultivated in gardens. The Wild Thyme is *T. serpyllum,* a native of Europe, sparingly naturalized in N. America.

Thyme (*Thymus serpyllum*).

Thyme, OIL OF. Volatile oil obtained from *Thymus vulgaris* and *T. serpyllum,* of agreeable, strong and penetrating odor, and much used in Europe in culinary seasoning.

Thymelæaceæ. Natural family of flowering plants, of the class *Angiospermæ,* subclass *Dicotyledons,* and series *Apetalæ,* comprising 38 genera and ab. 400 species, distributed through the temperate and warm regions and the tropics of the whole earth; called the Mezereum family.

Thymol. C_6H_3,CH_3,C_3H_7,OH. Mpt. 50° C.; phenol, derived from methylpropylbenzene; prepared from oil of thyme; crystalline solid, with a strong but pleasant odor; used as an antiseptic and disinfectant.

Thymus Gland. Temporary, ductless gland, attaining its full size at the end of the second year, after which it dwindles away. It is located in the chest cavity behind the sternum. It has an uncertain function. In the calf it forms the true sweetbread. It has been claimed that an extract of the thymus gland was curative in cases of exophthalmic goitre, but the results of other observers do not substantiate this claim.

Thyroid Gland. Ductless gland surrounding the upper end of the windpipe in front. Its function is obscure and under discussion. It is of general interest, as the enlargement of the gland causes the condition known as GOITRE (q.v.). That form of imbecility known as CRETINISM (q.v.) is associated with a congenital absence of the gland: while a somewhat analogous disease of adult life, myxedema, follows the surgical removal of the gland or is accompanied by its atrophy. The exhibition of sheep's thyroids or of the extracts of thyroid glands has brought about a cure of this otherwise incurable disease in a number of instances. Thyroid extract also reduces flesh when administered for some time.

Group of Gland-vesicles from the Thyroid Gland of a Child:
a, connective tissue; *b*, membrane of the vesicles; *c*, epithelial cells.

Thyrsus. Compound kind of inflorescence, with the primary branching racemose and the ultimate branching cymose.

Thysanoptera. See PHYSOPODA.

Thysanura (including COLLEMBOLA). Wingless *Insecta,* having the body covered with hairs or metallic scales, and having rudimentary mouth parts. The abdomen terminates in setæ, which may serve as a springing apparatus. The development is without metamorphosis. Some forms like the *Campodidæ* have rudimentary legs on the abdomen. The *Poduridæ* or Spring-tails belong in this group. The group is considered as representing degenerated *Neuroptera.*

Tiara. Papal miter, surrounded with three crowns; used chiefly for state, as the Golden Miter for special solemnity.

Tibbu. People of the Sahara.

Tiber. River famous in Roman history. It rises in the Apennines, and flows 260 m. s. to the Mediterranean at Ostia.

Tiberias. Palestinian city, on w. shore of Gennesaret. After the fall of Jerusalem, it was for several centuries the western metropolis of Judaism, and a seat of Jewish learning. Saladin defeated the Crusaders here 1187.

Tiberias, SEA OF. See GENNESARET.

Tiberias (CLAUDIUS NERO), 42 B.C.–37. Stepson and son-in-law of Augustus; heir to the throne 4; Emperor 14. He ruled well at first, but later became a morose and gloomy tyrant, living in retirement at Capreæ from 26, debauched and perhaps insane. Tacitus' account of him may be overdrawn, and the facts are imperfectly known; but the murder of GERMANICUS (q.v.) and many other crimes are popularly credited to him. The chief events of the Gospel narrative occurred during his reign: his denarius is called "tribute-money."

Tibet. Region of central Asia. It constitutes a plateau, the highest of great extent upon the globe, having an estimated area of ab. 650,000 sq. m. and a mean altitude of probably 15,000 ft. It is bordered on the s. by the Himalayas, on the n. by the Kuenlun and Nushan Mts., and is intersected by other ranges. It is mainly desert, with little arborescent vegetation. The climate is very severe, and the country imperfectly known. It was conquered ab.1720 by China, and is still nominally subject. Capital Lhasa; pop. variously estimated, probably ab. 5,000,000.

Tibetan. Monosyllabic language of Asia, simple in grammatical structure, the words strongly consonantal. It has a considerable literature, derived mainly from Sanskrit sources.

Tibetans. Turanians of Tibet, more or less admixed with surrounding tribes. They have Chinese features, but are taller. Like some other tribes, they claim descent from an ape, who

lost his tail by eating a special heaven-sent grain. The religion is Lamaism, a modified Buddhism, introduced ab.639.

Tibetans.

In some parts half the population are priests. Woman holds a high place. All the land belongs to the priests.

Tibet Dog. See MASTIFF.

Tibio-Tarsus. Upper leg (crus) of birds, formed by the union of the tibia with the proximal tarsal bones; separated from the pelvis by the more or less concealed femur (thigh bone), and from the toes by the scaly TARSO-METATARSUS (q.v.).

Tibullus, ALBIUS, ab.54–19 B.C. Latin elegiac poet from whom we have many love songs of great tenderness and beauty. The third and fourth books which bear his name are probably not his.

Tic Douloureux. Name given to facial neuralgia in its violent form. Certain parts of the face may be attacked, as the neighborhood of the eye, the cheek with the lips, a portion of the jaw, apparently following the distribution of one of the branches of the trifacial nerve. At other times the pain shoots from one region to another, as if the source of irritation were in the nerve trunk.

Tichborne Case. Tried in London 1871-72. Arthur Orton, alias Thomas Castro, a butcher from Australia, claimed large estates in Hampshire, personating an heir, Roger Charles Tichborne, b.1829, who had died at sea 1854, and whose mother he had deceived. He was non-suited March 6, 1872, and after another long trial convicted of perjury Feb. 28, 1874, and imprisoned for 14 years. The two trials lasted 103 and 188 days, and cost some £90,000. The claimant confessed his imposture 1895.

Tichenor, ISAAC, LL.D., 1754–1838. Judge of Vt. Supreme Court 1791, Chief-justice 1795–96; U. S. Senator 1796–97 and 1815–21; Gov. of Vt. 1797–1807 and 1808–9.

Ticino, or TESSIN. S.e. canton of Switzerland; mostly Italian and R.C. Area 1,082 sq. m., pop. ab. 130,000.

Ticinus (now TESSINO). River in Cisalpine Gaul, on the bank of which Hannibal gained his first victory over the Romans, 218 B.C.

Tickell, THOMAS, 1686–1740. English poet, author of the ballad *Colin and Lucy*, and an elegy on Addison 1721. *Kensington Gardens*, 1722.

Ticket of Leave. In England, since 1840, abridgment of a convict's term: previously, in Australia, partial liberty; in either case, the reward of good conduct in prison.

Tickets. See TRAVELERS, RIGHTS OF.

Ticknor, GEORGE, 1791–1871. Prof. Harvard 1820–35. His *Hist. of Spanish Literature*, 1849, is highly valued. *Life of Prescott*, 1864.

Ticknor, WILLIAM DAVIS, 1810–1864. Publisher in Boston from 1832; head of a firm of high literary repute.

Ticks. See IXODIDÆ.

Tickseed. See COREOPSIS.

Tickseed-Sunflower. *Coreopsis trichosperma.* Yellow-flowered swamp herb of the Composite family, native of the e. U. S.

Tick-Trefoil. Herbs of the genus *Meibomia*, natural family *Leguminosæ*, natives of America, bearing small purple flowers and jointed prickly pods.

Ticonderoga. French fort, in Essex co., N. Y., on Lake Champlain; built 1755; taken by the British 1759, by Ethan Allen May 10, 1775, and by Gen. Burgoyne July 5, 1777, and

Ticonderoga.

again by the British 1780; dismantled at the close of the war, and now a picturesque ruin. The township has graphite and iron mines. Pop., 1890, 3,980.

Tidal Evolution. Gradual changes produced in the motions of two bodies composed wholly or in part of fluid, by the mutual tidal action upon each other. G. H. Darwin has shown that this has probably been a powerful factor in the evolution of the earth and moon.

Tidal Showers. Rains (apparently) brought up by the tide, either along the coast or up tidal rivers.

Tidball, JOHN CALDWELL, U.S.A., b.1825. Artillery officer, in Va. 1861–65; Col. 1885. *Heavy Artillery Service*, 1880.

Tiddledy Winks. Modern game in which small bone disks are made to spring into a basket or receptacle placed in the center of the board, by pressing them forcibly with a slip of bone upon their edge. An analogous game, of flipping small shells into a hole in the ground, is played by children in Siam and the Liu Kiu islands.

Tides. Periodic rise and fall of the waters of the ocean, twice every 24 h. 57 m. on the average; caused by the attraction of the moon, and to a smaller extent by that of the sun. When they act together, either in the same or opposite directions, as at new and full moon, the effect is greatest, and is known as Spring Tide. When they act at right angles to one

Lunar Tide. Luni-Solar Tide.

another, *i.e.*, when the moon is in its 1st or 3d quarter, the effect is least; Neap Tide. The tidal wave is never under the moon, but, owing to friction and the resistance of land masses, lags behind. The height of the tide in the open sea is small, being in the Pacific but 2 ft.; in gradually narrowing bays it rises to a great height. See FUNDY, BAY OF.

Tide Wheel. Form of water motor to utilize the current inshore on the rise of tide, and outward upon the ebb. It has two forms: (1) a simple current wheel, supported on an anchored float and turned by the alternating flow through a channel which connects an arm of the sea with an inner basin; (2) an intermittent type, involving reservoirs behind dykes which are filled with the rise of the tide. When the tide recedes, gates in the dyke are closed, and gates to the wheel allow the water to fall through the wheel and turn it on the way to the lower level. Current wheels of the first type utilize ab. 40 per cent of the theoretical efficiency, and of the latter type from 50 to 60 per cent.

Tie-Beam. Wooden lower chord of a roof truss or bridge truss; any wooden beam under a tensile stress.

Tiebout, CORNELIUS, 1777–ab.1830. American engraver, especially of portraits of public men.

Tieck, LUDWIG, 1773–1853. German poet, critic, novelist, and translator, long popular in his renderings of fairy tales and old traditions; leading romanticist.

Tiele, CORNELIS PETRUS, b.1830. Prof. Leyden 1877. *Egyptian Religion*, 1869, tr. 1882; *History of Religion*, 1876, tr. 1878.

Tiemannite. HgSe. Rare mineral compound of mercury and selenium, found in the Harz Mts. and a few other localities.

Tien-Shan, or THIAN-SHAN. Mountain range of Turkestan, n. of Kashgar; partial s.e. boundary of Russian territory. Length ab. 1,000 m.; greatest ht. 24,000 ft., average ab. 11,000.

Tientsin. City and port of China, the junction of the Yunling and Peiho Rivers; open to foreigners since 1863. It has a large commerce. Pop. ab. 950,000.

Tiepolo, GIOVANNI BATTISTA, 1696–1770. Venetian painter, who revived to some extent the color of his predecessors. He

The Holy Jacobus, by Tiepolo.

was chiefly known as a wall painter; his easel pictures have great merit.—His son, DOMENICO, ab.1726–1804, was also a painter.

Tiernan, MRS. FRANCES C. (FISHER), ("CHRISTIAN REID"), m.1887. American novelist. *Valerie Aylmer*, 1870; *Hearts of Steel*, 1882; *Las Cruces*, 1895.

Tierney, GEORGE, 1761–1830. M.P. 1789; Whig leader; Sec. for Ireland 1806. *East India Co.*, 1787.

Tie-Rod. Used to counteract the thrust of a rafter; any rod subject to tension. Such rods are frequently furnished with sleeve nuts or turnbuckles, so that they may be screwed up to stiffen the structure.

Tierra del Fuego. Large barren island, with many smaller ones, at s. extremity of S. America; separated from the continent by the Straits of Magellan; held by Argentina and Chili. Area ab. 21,000 sq. m., pop. ab. 8,000, savages. See FUEGIANS.

Tierra Firme. See TERRA FIRMA and SPANISH MAIN.

Tiers Etat. In France, the nobility and clergy formed, before the Revolution, the two privileged classes. The Third Estate comprised the rest of the nation, or rather the burghers, who could send representatives to the STATES-GENERAL (q.v.).

Tie-Strut. Bar subject to both tension and compression under different positions of the applied forces. It must be larger in cross-section than a bar subject only to one kind of stress.

Tietjens. See TITIENS.

Tiffany, CHARLES C., D.D., b.ab.1838. Archdeacon of New York. *Hist. P. E. Ch.*, 1895.

Tiffany, LOUIS COMFORT, b.1848, N.A. 1874. American painter, decorator, and artist in stained glass and mosaic. He has made important discoveries and improvements in this art.—His father, CHARLES LOUIS, b.1812; founder and head of a famous firm of jewelers in New York.

Tiffin. Capital of Seneca co., Ohio; on the Sandusky; seat of Heidelberg Univ. Pop., 1890, 10,801.

Tiffin, EDWARD, M.D., 1766–1829. Gov. of Ohio 1803–7; U. S. Senator 1807–9.

Tiflis. City of the Caucasus, Asiatic Russia, on the Kur, in a picturesque depression surrounded on all sides, except the n., by high mts.; annexed to Russia 1802; celebrated for its hot

Tiflis.

springs and metal work. It was for many centuries the stronghold of Eastern Christianity, against the Persians first, and later against the Moslems. A bridge across the Kur is 1,350 ft. high. Pop., 1883, 104,024; 1892, 146,792.

Tiger-Beetle. See CINCINDELIDÆ.

Tiger Eye, or TIGER STONE. See CROCIDOLITE.

Tigers. Largest and fiercest of the cats. They differ from the lion in lacking a mane and a tail-tuft, but have side whiskers. The coat is marked with dark vertical stripes on a tawny ground. The pupils are round. In the Royal Indian Tiger a length of 11 ft. is attained. Tigers range from Siberia to Java, and from Burmah to w. Asia. In India they are most

Tiger (*Felis tigris*).

common: one will destroy 60 head of cattle a year; they attack man and will devour their own species. They kill their prey by dislocating the neck with a bite. The JAGUAR (q.v.) is sometimes called the American or Clouded Tiger. The Arboreal Tiger, *Felis macrocelis* of s.e. Asia, attains a length of 4 ft. In Tibet is a Tiger Cat 2 ft. long, and in s.e. Asia is the Marbled Tiger Cat with a linear pupil. 546 people were killed by tigers in Central India 1886–89. See FELIDÆ.

Tighe, MARY (BLACHFORD), 1773–1810. Irish poet. *Psyche*, 1805. *Works*, 1811.

Tight Lacing. Device of fashion to transform the human form from the harmonious lines of a Venus de' Medici to the monstrosity exhibited in a Parisian fashion plate. Tight lacing produces a deformity of the trunk comparable to the results of foot-binding among the Chinese. The cavity of the chest is contracted and the contents of the abdominal cavity are displaced downward, crowding upon the organs in the pelvis, resulting in discomfort and disease.

Tiglath-Pileser III. King of Assyria ab.746–740 B.C.; mentioned II. Kings xv. as assisting Ahaz of Judah against Israel and Syria; conqueror of Damascus and Tyre. His inscriptions were mutilated by Sargon.

Tigranes II., THE GREAT, d.55 B.C. King of Armenia 96; master of all Syria to the Euphrates 83; conquered by Lucullus 69, and by Pompey 66.

Tigranocerta. City of Armenia, e. of the Tigris. Near it Lucullus defeated Tigranes 69 B.C.

Tigri, GIUSEPPE, 1806–1882. Italian author; compiler of Tuscan folk-songs, 1856.

Tigris. Left branch of the Euphrates, which it joins ab. 100 m. from the Persian Gulf, after a s.e. course of ab. 1,100 m. from w. Kurdistan. It is navigable to Ophir, 50 m. n. of Bagdad, by vessels having 4 ft. draught.

Tilden, SAMUEL JONES, 1814–1886. American lawyer and statesman; active in the struggle with the Tweed Ring; Gov. of N. Y. 1874–76; Democratic candidate for Pres. in 1876, receiving 250,960 more votes than Hayes, and 184 uncontested electoral votes, but one more being necessary for election. The case was decided against him by the ELECTORAL COMMISSION (q.v.). He bequeathed the bulk of his property to found a free library in New York City. The will was contested and decided in favor of the heirs, but one of them relinquished over $2,000,000 to carry out his intent. In 1895 the Astor Library, Lenox Library and Tilden Trust Fund were consolidated as the New York Public Library.

Tiles. Hard-burned clay pipes, used in making underground drains. They are of two main forms, round and horseshoe, the latter usually being laid upon boards. The use of tiles in this way for draining land has long been practiced.

Tiles. 1. Thin plates of baked clay used to cover roofs. The Romans had flat tiles, turned up at the edges, with inverted semi-cylindrical tiles to cover the joints. In England curved tiles are used, each tile overlapping the next; plain tiles are also used. Fireplaces are sometimes lined with tiles. 2. Glazed decorative tiles were used in ancient times for paving sacred edifices. Encaustic tiles were used in the Middle Ages for pavements and wall decoration; for these, squares of clay 4–6 in. sq. and 1 in. thick were impressed by a stamp, with a design in relief. Into the hollows thus made colored clays were inlaid, a metallic glaze applied and the tile baked in a furnace. At present the hollows are filled with semi-liquid slips of clay and water.

Tilghman, MATTHEW, 1718–1790. "Patriarch of Md."; delegate to Congress 1775–77; pres. Md. Constitutional Convention 1776.—His brother, JAMES, 1716–1793, sec. Pa. Land Office 1765–75, was regarded as a loyalist.—His son, WILLIAM, 1756–1827, became Chief-justice of Pa. 1806.—His brother, TENCH, 1744–1786, was sec. and aid to Washington 1776–82.

Tilgner, VICTOR OSCAR, 1842–1896. Austrian sculptor.

Tiliaceæ. Natural family of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Polypetalæ*, comprising 51 genera and ab. 470 species, widely distributed throughout all parts of the earth; called the Linden family.

Till. Thick deposit of commingled clay, sand, gravel, and bowlders, more or less firmly compacted together, often by the grinding and pressure of ice.

Tillemont, LOUIS SÉBASTIEN LE NAIN DE, 1637–1698. French Jansenist; ch. historian of the first six centuries. *Hist. des Empereurs et des Persecutions*, 6 vols., 1691–1738; *Mémoires pour servir à l'Histoire ecclésiastique*, 16 vols., 1694–1712.

Tiller. Beam attached to the head of the rudder, which is turned by it.

Tilley, SIR SAMUEL LEONARD, LL.D., 1818–1896. Lieut.-gov. of New Brunswick 1873–78 and 1885; Canadian Minister of Finance 1873 and 1878–85; knighted 1879.

Tillinghast, THOMAS, 1742–1821. Judge of R. I. Supreme Court 1780–87 and 1791–97; M.C. 1797–99 and 1801–3.

Tillman, BENJAMIN RYAN, b.1847. Gov. of S. C. 1890–94; U. S. Senator since 1895.

Tillman, SAMUEL DYER, 1815–1875. Prof. American Institute, New York; inventor of the revolving planisphere and musical scale or tonometer.

Tillman, SAMUEL ESCUE, U.S.A., b.1847. Prof. West Point from 1880. *Heat; Chemistry.*

Tillodonta. Suborder of *Bunotheria*, including Eocene Mammals with affinities to the *Rodentia*, in having incisors faced with enamel and growing from persistent pulps. In other respects they resemble the *Insectivora*. The canines are small. The molars are like those of Ungulates in their crowns, but in some cases grow from persistent pulps. The feet are plantigrade, pentadactyl, and unguiculate, as in bears.

Tillotson, JOHN, D.D., 1630–1694. Dean of Canterbury 1672; Dean of St. Paul's 1689; Abp. of Canterbury 1691. His sermons, pub. posthumously in 14 vols., were very popular, and are still models of style.

Tillson, DAVIS, b.1830. Brig.-gen. U. S. Vols. 1863–66, holding artillery commands, chiefly in the West.

Tilly, JOHANN TSERKLAES, GRAF VON, 1559–1632. Imperial general in the 30 Years' War; victor in 36 battles; Wallenstein's successor 1630; notorious for the pillage and slaughter at Magdeburg, May 1631; defeated at Breitenfeld Sept. 17, 1631; mortally wounded at the Lech, Bavaria.

Tilopteridaceæ. Order of filamentous brown *Algæ*.

Tilsit. Town of e. Prussia, on the Niemen. A treaty concluded here between Napoleon and the Czar, July 1807, bestowed on Jerome Bonaparte, as King of Westphalia, the Prussian do-

Tilsit.

minions between the Elbe and the Rhine; erected Prussian Poland into an independent Grandduchy of Warsaw, assigning it to the Elector of Saxony; closed the Prussian harbors to British trade, and reduced the Prussian army to 42,000. Pop., 1890, 24,545.

Tilth. Finely divided and loose condition of surface soil, brought about by continued use of plow, harrow, and cultivator, to fit it for the reception of seed.

Tilton, JAMES, M.D., 1745–1822. Surgeon in American armies 1776–82; in Congress 1783–85; Surgeon-gen. 1812–15. *Military Hospitals*, 1813.

Tilton, JOHN ROLLIN, 1833–1888. American landscape painter, working in Italy.

Tilton, THEODORE, b.1835. Ed. N. Y. *Independent* 1863–72, and *Golden Age* 1872–74; accuser of H. W. Beecher, and plaintiff in a famous trial, 1874, in which the jury disagreed; in Europe since 1883; author of many poems, and of a romance, *Tempest-tossed*, 1875.

Timæus, ab.352–256 B.C. Greek historian of Sicily. Fragments of his work remain.

Timanthes, ab.400 B.C. Greek painter, whose *Sacrifice of Iphigenia* was much praised.

Timber. U. S. forest area is 495,000,000 acres, 26 per cent of the total area. The white pine of the Northwest and New England is practically exhausted; of the long-leaf pine of the South there remains 1,500,000,000 cu. ft. The first to be exhausted will be the ash, followed by the tulip and walnut. Forest fires destroy annually $12,000,000 worth. See FORESTRY.

Timber, STRENGTH OF. As average values, 8,000 lbs. per sq. in. in compression and 10,000 in tension may be stated for the ultimate strength, but much variation exists in different varieties and qualities. The shearing strength across the

grain is ab. 3,000 lbs. per sq. in., while parallel with the grain it is only ab. 500.

Timber-Line. Limit in altitude of growth of trees on high mountains.

Timbre. Peculiar property of sound depending upon the number of overtones given out by the sonorous body; distinguishing feature of musical instruments and of human voices. On differences of timbre depend the characteristic sounds of bodies of different material and structure. See OVERTONES and QUALITY.

Timbrel. Small ancient musical instrument carried in the hand and similar to the modern tambourine. It was used by Miriam after the passage of the Red Sea.

Timbuctoo. Town of w. Africa, between the Sahara and the Niger, in lat. 16° 49′ N.; probably founded ab. 1100, visited

Timbuctoo.

by Ibn Batuta ab. 1350, and by Laing 1826; commercially important. Pop. perhaps 20,000, of mixed races.

Timby, THEODORE RUGGLES, Sc.D., b.1822. American inventor of the turbine water-wheel; of revolving turrets, and other military devices.

Time. Uniformly increasing one-dimensional variable, which in the present condition of the universe is being marked off into intervals by the constant recurrence of various natural phenomena. In the mere use of the word uniform, however, we are reasoning in a circle, as no notion of uniformity can be gained without the introduction of a time-element. The events most commonly employed to serve as terminal points of time intervals are: 1, the transits of the first point of Aries across the meridian; and 2, the transits of the sun. The period between any two successive transits of the fixed star is practically constant and called the sidereal day; it is evidently the time taken for the earth to turn on its axis once. The corresponding interval for the sun is not uniform from day to day, but its average, taken over a very long period, is used in all physical researches, and called the mean solar day. The $\frac{1}{86400}$ of the mean solar day is the unit of time employed in science, and is called a second. See DAY.

Time. See RHYTHM.

Time Earnings. Wages calculated by the time of work, not by the amount accomplished.

Times. Leading London newspaper, founded 1788 by John Walter, and managed by his descendants. The editors have been T. Barnes, 1816, J. T. Delane, 1841, T. Chenery, 1879, and G. E. Buckle, 1884.

Time-Value. That which an article owes to having been kept from a time when it was less valuable to a time when it is more so.

Timgad. Site in Algeria, 65 m. s.w. of Constantine, on one of the spurs of Aures, with numerous ruins of the ancient Roman Thamugas, a colony of veterans formed after the victories of Trajan over the Parthians. It has paved streets, forum, temples, and fountains.

Timocreon, 5th cent. B.C. Greek lyric poet of Rhodes. Fragments remain.

Timoleon, d.337 B.C. Corinthian patriot and hero, who slew his brother to prevent his becoming tyrant. He headed a force sent 344 B.C., at the petition of Syracuse, for its liberation; drove the tyrants thence and from the other Sicilian cities; and gained a brilliant victory over the Carthaginians on the Crimissus 339. He is the classic model of a devoted and efficient lover of liberty.

Timon, 5th cent. B.C. Athenian misanthrope, celebrated by Lucian and Shakespeare.

Timon OF PHLIUS, ab.280 B.C. Greek philosopher and poet of the skeptical school, at Chalcedon and Athens. Fragments of his *Silloi* or satires remain.

Timor. Island between Australia and Celebes; length ab. 300 m., area ab.12,000 sq. m.; nominally held in part by Portuguese and Dutch. Pop. ab.500,000, chiefly Papuan and Malay.

Timor-Laut, or TENIMBER. Islands e. of Timor. Area ab. 2,200 sq. m., pop. ab.25,000.

Timotheus, 4th cent. B.C. Greek musician.

Timothy, EPISTLES TO. 15th and 16th N. T. books, written probably 64 and 66 in Rome by St. Paul to his young convert and helper; making, with that to Titus, the three Pastoral Epistles.

Timothy Grass. *Phleum pratense.* Valuable fodder and pasture grass, native of Europe, introduced by cultivation into N. America; called also Cat's-tail Grass and Herd's Grass. It is a perennial and will grow in almost all soils and locations. It makes the best kind of hay, especially for horses, and on this account commands a price in cities above its nutritive value. Though not so well adapted to pasturing as Blue Grass, it may be successfully pastured, especially on moist rich soils. The chief objection to it is that it does not leave the land mellow and improved.

Timothy Grass (*Phleum pratense*).

Timperley, C. H., ab.1794–ab.1848. English printer and author. *Printer's Manual,* 1838; *Dict. Printing,* 1839–42; *Songs of the Press,* 1845.

Timrod, HENRY, 1829–1867. Lyric poet of S. C. His verse, collected 1873, has much force and fire.

Tims, THOMAS DILLON, b.1825 in Ireland. Canadian official; financial inspector 1870.

Timsah, LAKE. Since the completion of the Suez Canal, a lake of ab. 6 sq. m., before, a body of brackish water, on the Isthmus of Suez, and supposed to be the sea of reeds crossed by the Israelites at the Exodus. It appears to be the remains of an ancient strait separating Asia and Africa.

Timur. See TIMUR-LENK.

Timur-Lenk, or TAMERLANE, ab. 1336–1405. Son of a Mongol chief; became head of his clan and ruler of Samarkand by 1369. He pushed his conquests to the Dnieper 1393; took Delhi 1398; defeated the Turks under Bajazet on the Plain of Angora July 20, 1402, and prepared 1404 to invade China. He ruled from the Chinese Wall and the mouth of the Ganges to the w. limits of Asia. He was cruel and pitiless, but sagacious and capable.

Tin. Sn. At. wt. 119, sp. gr. 7.29, sp. ht. .056, mpt. 232° C., valence II. IV.; known to the ancients; nearly silver-white metal, with a shade of yellow. It boils at a white heat; expands $\frac{1}{368}$ of its length from 0° C. to 100° C.; latent heat of fusion 14.3 calories; conductivity for heat 15.2, for electricity 14 (silver = 100). It is harder than lead, but softer than gold; very malleable at ordinary temperatures, but brittle at 200° C., and by exposure to great cold undergoes a molecular change which renders it very brittle and granular. Commercial tin may contain iron, arsenic, antimony, lead, copper, bismuth, tungsten, molybdenum and tin oxide, all which tend to harden it and reduce its malleability. Tin is attacked rapidly by hot, concentrated hydrochloric and sulphuric acids, and by ordinary, cold nitric acid; the latter converts it into a white hydrous oxide. It is also soluble in aqua regia and hot, strong caustic soda or potassa; in the latter cases forming stannates of the alkalies. In nature it occurs only sparingly, except in combination with oxygen in the mineral CASSITERITE, SnO_2 (q.v.). This mineral has been found in small quantities in many parts of the world, but has been extensively utilized as a commercial source of tin only in Cornwall, Bolivia, Sumatra and the neighboring islands, and Australia. The tin mines of Saxony and Bohemia have been steady, though small, producers. The tin-bearing deposits of Cal. and the Black Hills do not appear to be in condition to pay for working at present.

Tin, METALLURGY OF. Stream tin is a deposit of grains or pebbles of cassiterite concentrated in pockets in the beds of

streams, and is obtained by dredging or by diverting the streams from their beds. Wood-tin is wood petrified by cassiterite. Vein tin is the mineral in veins. It is seldom that the vein rock as mined contains over 5 per cent of tinstone, the accompanying minerals being quartz, mica, fluorspar, apatite, feldspar, iron oxides, bismuth, and wolframite. The cassiterite can be separated from all these except the last by gravity concentration, as its specific gravity is so high, 6.5 to 7. The concentrates can be freed from the WOLFRAMITE (q.v.) only by treatment with acid.

The annual production of tin in 1894 was estimated at 83,387 long tons, four-fifths of which comes from the Malay Peninsula, Sumatra and Borneo; ab. one-tenth is mined in Europe, and nearly one-tenth in Bolivia. A large proportion of the ore is shipped to Europe for treatment. It is also found in Australia, Tasmania, S. Dakota and Cal.; the last two localities have not been commercially productive. The market price of tin is 13 cents per lb.

The methods of reducing tin ore are by reduction to impure metal and then refining. The ore is first crushed and concentrated on shaking tables. The ordinary rock, quartz, and metallic oxides are thus removed, while metallic sulphides and arsenides and tungsten compounds with iron and lime remain with the cassiterite. If the sulphides and arsenides are in considerable amount, they are next converted into oxides by roasting, followed by washing with acid to remove the oxides. In case much tungsten remains, this is sometimes removed by melting with a limited quantity of soda, which unites preferably with the tungsten and can be washed out as sodium tungstate, while not enough soda is used to attack the tin stone. Frequently the wolframite is picked out by hand. The concentrates thus obtained may contain 50 to 70 per cent of tin, from ore carrying only 1 or 2 per cent.

The reduction to metal is by a smelting with carbon. In doing this, no more slag must be formed than is absolutely necessary, as tin is always likely to form stannates, and thus pass into the slag. The furnaces used are either reverberatory or cupola, the former being preferred. In operating a reverberatory, 1 to 4 tons of ore is taken, ground fine with one-fifth its weight of anthracite coal, and a small quantity of lime or fluorspar for flux, slightly moistened, and then charged and heated upon the hearth for 5 to 8 hours, with a reducing flame and closed doors. Afterward the heat is raised for 1 to 3 hours to thoroughly separate the tin from the slag, which can then be run off very fluid. In Germany, Australia, and Malacca, shaft furnaces are largely used, of small size, in order to avoid the reduction of iron, etc., with the tin. The furnaces have a sloping bottom, so that the tin as fast as produced runs out of the furnace, and so avoids reoxidation by the blast. The furnaces are up to 10 ft. high, and about 2 by 3 ft. in horizontal section, and the blast is usually introduced by a single tuyere at the back.

The impure tin thus obtained is next refined. Careful heating on an inclined plate or the inclined hearth of a furnace will cause a purer metal to flow away, while such impurities as copper and iron remain largely as a mushy residue. The other

Tin Furnace, Perak; Vertical Section.

impurities can be mostly eliminated by stirring with a pole of green wood. The steam produced oxidizes impurities and also much tin, and vigorously stirs the bath. Various chemicals are used to remove special impurities, such as magnesium chloride stirred in to remove arsenic, but the nature of these reagents is little known outside of the works.

Tin is used alone for making water pipes, for tinfoil, for coating sheet-iron for tin-plate, and for lining copper culinary vessels. Tin amalgam is used for coating mirrors. See BELL METAL, BRITANNIA METAL, COPPER, FUSIBLE ALLOYS, GUN METAL, PEWTER, PHOSPHOR TIN, SOLDER, and TERNE PLATE.

Tinamomorphæ. See TINAMOUS.

Tinamous (type of the TYNAMIDÆ). Central and S. American ground bird, resembling grouse, but with primitive characters, so that recent authors raise it and its relatives to the rank of an order termed *Dromæognathæ* or *Crypturi*. Older authors called them *Gallinacei*. The bill is straight, but bent a little at the tip; the vomer is broad behind and interposed between the pterygoids and palatines; the quadrate bone

Tinamous (*Rhynchotus rufescens*).

has a single head; the wings are raised as in ostriches, and their flight is imperfect, being like that of a projectile, while the short rounded wings vibrate with great vigor, and the birds are quickly tired and easily captured. The pelvis also is ostrich-like, the hinder part of the ischium being free from the ilium. There are over 50 species in the family. The largest is *Rhynchotus rufescens* of the Brazilian Pampas.

Tincal. Crude borax of Tibet, imported into Europe and America.

Tinchebray, or TENCHEBRAY. Town of Normandy, where, Sept. 28, 1106, Henry I. of England defeated and took prisoner his brother Robert, Duke of Normandy.

Tincker, MARY AGNES, b.1833. American novelist, long resident in Rome. *Signor Monaldini's Niece*, 1879; *By the Tiber*, 1881; *Aurora*, 1885.

Tincture. In Pharmacy, an alcoholic solution of a drug, as tincture of opium; or of a combination of drugs, as the camphorated tincture of opium, the ordinary paregoric. The amount of alcohol varies with the drug employed and is determined by the formulæ furnished in the Pharmacopeia.

Tindal, MATTHEW, 1656–1733. English deist. His *Rights of the Christian Ch.*, 1706, was abused at home and valued in France and Germany: his *Christianity as old as the Creation*, 1730, called forth several answers.

Tindale, WILLIAM. See TYNDALE.

Tinder. Inflammable substance; charred lint or rags. German tinder is the soft AMADOU (q.v.).

Tinea. Name applied to several diseases of the skin, caused by the presence of a filamentous fungus. The older writers applied the name to certain forms of disease which more recent research places under other divisions, causing some confusion in the terminology. Ringworm and barber's itch are familiar forms of Tinea.

Tinel, EDGAR, b.1854. Belgian composer; organist at Mechlin 1881.

Tinfoil. Very thin sheets of tin, sometimes alloyed with lead, used for lining tea-chests and for wrapping tobacco and chocolate; also, with the addition of mercury, used in manufacturing mirrors. It is obtained by rolling the metal or by shaving it by machinery from block tin.

Tingey, THOMAS, 1750–1829. Captain U.S.N. 1798; in charge of Washington Navy-yard from 1804.

Tinker's Weed. Name given to FEVERWORT (q.v.).

Tinne, ALEXANDRINA PETRONELLA FRANCINA, 1839–1869. Dutch explorer of the Nile sources 1863–64; murdered by Arabian servants at Fezzan on another journey.

Tinned Meats. See PRESERVATION OF FOOD.

Tinneh (ATHABASCANS, CHIPPEWAYANS). Great group of Indians of related linguistic stock of w. N. America, including: 1. APACHES (q.v.) and Navajos of the s.w. U. S. 2. Group of tribes of region centering in Oregon: of these were probably the Modocs, nearly annihilated in war with U. S. 1873. 3. Indians of the Mackenzie River basin. 4. Alaska Indians, located between the Aleut and the Eskimo. The Canadian Tinneh shape the infant skull into sugar-loaf form. The nose is aquiline, sight keen, features large, and beard considerable. They are bloodthirsty and uncleanly, but temperate and frugal. They subsist by hunting, fishing, and trade in furs. They were polygamous, but have been converted to the R.C. faith. Wives are slaves. They are subject in summer to contagious illusions and dancing manias. The tribes nearest the Eskimo imitate the underground houses of the latter with long low passage. They were cannibals, and human sacrifices were offered.

Tinnitus Aurium. Ringing of the ears, heard in health and sickness. Commonly of no consequence, but often an accompaniment of cerebral disorder. It may be brought on by a large dose of quinine or salicine.

Tino. Same as TENOS (q.v.).

Tinoceras. See DINOCERAS.

Tin Ore, or TIN STONE. See CASSITERITE.

Tin-Plate. Carefully rolled sheet-iron, cleansed from oxide by dipping in dilute sulphuric acid, annealed in iron boxes and polished with emery and oil between rolls, is dipped in melted tin, covered with tallow. It is then dipped in another pot of tin, the excess of tin removed in a pot of hot tallow and polished with bran. Tin-plate was invented in Bohemia ab. 1500; in England it was first made 1670.

Tin Pyrites. See STANNITE.

Tin Salts. See STANNOUS CHLORIDE.

Tinsel. Thin sheets of glittering metal, used for decorations and theatrical costumes.

Tinstone. See CASSITERITE.

Tintagel. Ruined castle in w. Cornwall, legendary seat of King Arthur.

Tintern Abbey. In Monmouthshire, Eng., on the Wye, founded 1131 by Cistercians. Its ruins, especially those of its church, built ab.1290, are famed for beauty.

Tint of Passage. See TRANSITION TINT.

Tintoretto (ROBUSTI), JACOPO, 1518–1594. Venetian painter, unduly exalted by Ruskin, but possessed of great originality and ambition, though occasionally lacking the solid quality of the preceding generation. He has fine works in the Doge's

Miracle of St. Mark, by Tintoretto.

Palace. His *Paradise*, also there, is less admirable. *The Miracle of St. Mark*, in the Venice Academy, is one of his greatest pictures.—His son, DOMENICO, was also a painter of merit, though little known.

Tintype. See FERROTYPE.

Tip-Cat. Almost universal child's game, played with a small billet of wood, which is struck with a club from the ground and knocked into the air. The billet is usually pointed at the ends; otherwise, it is placed beside a small depression in the ground. Tip-cats with pointed ends were found with tops by Petrie in the Fayum, Egypt (ab.1600 B.C.). In Russia, tip-cat is called the goat game; among the Persians, the frog game. It is played as an apparently indigenous game by the Zuni children of New Mexico, who call it the jumping-frog game. It also occurs in parts of Japan, where the bat is called father and the billet son.

Tippecanoe. River of Indiana, ab. 200 m. long, branch of the Wabash; famous from a battle fought on its banks, Nov. 7, 1811, when the Indians were defeated by Gen. W. H. Harrison: his nickname during the Presidential campaign of 1840.

Tippoo Saib, 1749–1799. Son of Hyder Ali; Sultan of Mysore 1782; ally of the French; at war with the British till 1784, 1790–92, and 1798; defeated and slain at Seringapatam.

Tipton, JOHN, 1786–1850. U. S. Senator from Ind. 1831–39.

Tipton, THOMAS W., b.1817. U. S. Senator from Neb. 1867–75.

Tipula. See DADDY-LONGLEGS.

Tipulariæ. See NEMOCERA.

Tiraboschi, GIROLAMO, 1731–1794. Prof. Milan; librarian at Modena from 1770; historian of Italian literature. His chief work, 13 vols., 1772–82, extends to 1700; it was continued by Lombardi.

Tirard, PIERRE EMMANUEL, 1827–1893. French Deputy 1876, Minister 1879–81, Premier 1887–88 and 1889–90.

Tiresias. Theban seer, blind and aged; connected with many events in the mythical history of Greece.

Tirhakah, d.664 B.C. King of Ethiopia 702, and of Egypt ab.693 B.C.; at war with Assyria; ally of Hezekiah of Judah; called Taracus by Manetho, and Tearcho by Strabo. II. Kings xix. 9.

Tiro, MARCUS TULLIUS, 1st cent. B.C. Freedman of Cicero, and editor of his works; reputed inventor of Latin shorthand writing.

T-Iron. Wrought-iron or steel bar whose cross-section has the shape of a letter T; used in bridge and roof construction.

Tironian Notes. See SHORTHAND and TIRO.

Tirso de Molina. See TELLEZ.

Tiryns. Greek city in Argolis, destroyed ab.468 B.C.; noted for the vast walls of its citadel; excavated by Schlie-

Covered Passageway of Cyclopean Masonry in Tiryns.

mann 1884–85. The Cyclopean walls of Tiryns and of the neighboring city of Mycenæ are the grandest in Greece. The early life of Hercules was spent here.

Tischbein, JOHANN HEINRICH WILHELM, 1751–1829. German painter and engraver, in Naples 1787–99.

Tischendorf, LOBEGOTT FRIEDRICH KONSTANTIN VON, D.C.L., LL.D., 1815–1874. Prof. Leipzig from 1845; ed. N. T. text; discoverer, at the monastery on Mt. Sinai, of the *Codex Sinaiticus* (in instalments), 1844–59, pub. 1862.

Tisri. Hebrew month corresponding to part of Sept.–Oct. The 1st of the civil and the 7th of the ecclesiastical Hebrew year.

Tissandier, GASTON, b.1843. French aeronaut, who ascended 5½ m. 1875.

Tissaphernes, assassinated 395. Satrap in Asia Minor 414 B. C.; defeated by Agesilaus.

Tisserand, FRANCIS FELIX, 1845–1896. Director observatory at Toulouse 1873, and Paris 1892.

Tissot, JAMES, b.1836. French painter, long in London; noted of late for his biblical scenes.

Tissues. Vegetable or animal structures composed of cells.

'Tis the last Rose of Summer. Song by Moore, adapted by him to an old Irish tune, "The Groves of Blarney," which he greatly changed in character. Flotow introduced it in his opera *Martha* with fine effect; Beethoven arranged it for voice, pianoforte, violin, and violoncello, with words beginning "Sad and luckless was the season"; and Mendelssohn wrote a fantasia (Op. 15) on the melody.

Tisza, KOLOMAN BOROSJENO, b.1830. Hungarian Premier 1875–90.

Titania. Queen of the fairies and wife of OBERON (q.v.).

Titanic Acid. White powder; soluble in the common acids; varying in composition from $Ti(OH)_4$ to $Ti_2O_3(OH)_2$; prepared by precipitating a titanate. On ignition it yields titanium dioxide.

Titanichthys. Hugest Placoganoid yet known; found in the Devonian rocks of Ohio. The head-shield alone is ab. 5 ft. long by 5 wide: the jaws, a yard in length, are set with formidable teeth. See PLACODERM.

Titaniferous Iron Ore. Known as ilmenite, menaccanite, and by other names, according to the quantity of titanium present and its effect on the quality of the ore.

Titanite. See SPHENE.

Titanium. Ti. At. wt. 48, sp. gr. 3.58, sp. ht. .13, valence II. III. IV.; discovered by Gregor 1789; prepared by fusing potassium fluotitanate with potassium or sodium; gray amorphous powder, resembling reduced iron. It has not been prepared in pure condition. It unites energetically with oxygen, and readily with nitrogen at high temperatures. It is soluble in the common acids. It occurs combined with oxygen in several minerals, the more important of which are rutile and brookite, both having the composition TiO_2. It is frequently found in iron ores, increasing the difficulty of the smelting process by its infusibility, and sometimes in quantity so large as practically to destroy the value of the ore. It is used in porcelain painting and in the preparation of enamels.

Titanium Bromide. $TiBr_4$. Amber yellow, well crystallized substance; mpt. 39° C., bpt. 230° C.; made by passing bromine vapors over a heated mixture of carbon and titanium dioxide.

Titanium Chlorides. Dichloride. $TiCl_2$. Brown powder, which burns like tinder on exposure to the air.—Sesquichloride. Ti_2Cl_6. Violet scales, made by passing the vapor of the tetrachloride and hydrogen through a red-hot tube: powerful reducing agent.—Tetrachloride. $TiCl_4$. Mobile, colorless liquid, made by heating a mixture of the dioxide with carbon, in chlorine.

Titanium Dioxide. TiO_2. Found in nature as rutile, anatase, and brookite; white powder, prepared by heating titanic iron ore with hydrochloric acid and chlorine; soluble in concentrated sulphuric acid.

Titanium Disulphide. TiS_2. Substance resembling pyrites; made by fusing together rutile, sulphur, and sodium carbonate.

Titanium Iodide. TiI_4. Brownish-red octahedra or prismatic needles; mpt. 150° C.; made by passing iodine vapor over heated titanium.

Titanium Sesquisulphide. Ti_2S_3. Metallic looking, grayish-black substance; made by passing carbon disulphide vapor over the heated dioxide.

Titanium Tetrafluoride. TiF_4. Yellow oil, formed in small quantities by treating fluorspar with sulphuric acid.

Titanium Trifluoride. TiF_3. Violet powder, obtained by heating potassium fluotitanate in a stream of hydrogen.

Titanotherium. Genus of extinct mammals found in the Bad Lands of S. Dakota. Brontotherium is an allied genus. See BRONTOTHERIDÆ.

Titans. 1. Twelve children of Uranus and Gæa, who deposed their father; cast into Tartarus by Zeus. 2. Their descendants, as Prometheus and Hecate.

Titcomb, TIMOTHY. See HOLLAND, JOSIAH G.

Tite, SIR WILLIAM, F.R.S., 1802–1873. English architect and banker; M.P. 1855, knighted 1869.

Tithes. Tenth of produce, devoted to religious uses; first mentioned Gen. xiv. 20 and xxxiii. 22; paid to the Levites, and from ab.350 irregularly to the clergy; not enjoined in N. T. The connection of Church and State in England and elsewhere is based on a commutation of tithes.

Tithing-Man. In England, a kind of constable; in New England, a yearly elected officer who enforced attendance at public worship.

Tithonus. Son of Laomedon, beloved by Aurora (Eos), who obtained for him the gift of immortality but without eternal youth; changed to a grasshopper.

Titian (TITIANO VECCELLI or VECELLIO), 1477–1576. Greatest Venetian painter. His masterpieces are: in Rome, Borghese Gallery, *Divine and Earthly Love, Blindfolding of Cupid;* in Florence, the *Flora* and *Venus* of the Uffizi, the *Bella* of the Pitti; in Dresden, *Christ and the Tribute Money,* and *Venus;* in Venice, the *Presentation of the Virgin,* the *Assumption;* in

Christ and the Tribute Money.

the National Gallery, London, *Bacchus* and *Ariadne.* There are many fine Titians in Madrid, and others in galleries already named and elsewhere. The excellence of this artist is his coloring, which is unrivaled except by contemporary Venetians, none of whom are wholly his equals, except Giorgione, whose works are extremely rare.

Titicaca. Lake on the Andean plateau, in Peru. Area ab. 3,200 sq. m., elevation 12,846 ft., greatest depth ab. 750 ft.

Titiens, or **Tietjens,** TERESA CAROLINE JOHANNA, 1831–1877. Hungarian-German soprano singer, well known in England; in the U. S. 1876.

Titinius. Roman dramatist, writer of comediæ togatæ ab.170 B.C. Fragments remain.

Title. Means by which one becomes lawful owner of property. It includes, when complete in one person, possession, right of possession, and right of property.

Title-Deeds. Deeds evidencing a person's right or title to lands, otherwise muniments of title.

Tits (TOM-TITS, TITMICE). True tits include birds of the family *Paridæ,* mostly Old World forms, highly colored with azure, white, red, and black. They breed in holes in trees, but the Long-tail or Bottle-tit makes a pendent nest. 5 species are found in Gt. Britain, and 15, which are dull colored, are American: *e.g.,* the Chickadee and the white and red-breasted Nuthatches or Sap-suckers: they feed exclusively on insects. The Hill-tits, belonging to the family *Leiotrichidæ,* include 60 species of bright-colored birds of the Oriental region. Of these the Red-bill, falsely called Japanese Robin, is often kept in confinement: it is not native to Japan. The Ground-tit (Wren-tit) of Cal. lives on shrubby hillsides that are almost devoid of rain, and belongs to the family *Troglodytidæ.*

Tit-Tat-To. Child's game, played by two persons on a

slate, or with pencil and paper, on a diagram formed by two straight lines crossed by two lines at right angles. The players alternately put down a cross and a circle in the divisions, the object being to get three marks of the same kind in a row. There is no historical explanation of the game, but the form of the diagram and the symbols used, from comparative studies, suggest a divinatory origin and a primitive cosmical significance. See NOUGHTS AND CROSSES.

Titular Bishop. Formerly bp. "in partibus infidelium"; one consecrated to a merely titular diocese, now occupied by Mohammedans.

Titus, EPISTLE TO. 17th N. T. book; written ab.65 by St. Paul to a Gentile convert and helper. See TIMOTHY.

Titus Flavius Sabinus Vespasianus, 40–81. Tenth Roman emperor; son of Vespasian. He ended the Jewish

Titus.

war by the capture of Jerusalem Sept. 8, 70, became Cæsar ab.71, and emperor 79. In his reign occurred an eruption of Vesuvius, a destructive fire at Rome, and a pestilence. He finished the Colosseum, reigned wisely and well, and was called "the delight of mankind." See ROME.

Titus Livius. See LIVIUS, T.

Titusville. City of Crawford co., Pa., 100 m. n. of Pittsburg. It has been an important oil center since 1859, when Drake drilled the first successful well on Oil Creek, 2 m. s. of the city.

Tiuchev, FEDOR IVANOVICH, 1803–1873. Russian diplomat and writer of short poems, which suddenly became popular in 1854.

Tivoli. Ancient Latin town, 18 m. e. of Rome. As Tibur it was the summer-resort of Marius, Scipio, Mæcenas, Horace, and other Romans. It has some notable ruins, and works, opened 1892, for the electric lighting of Rome. Pop. ab. 11,000.

Tivoli. Simple form of bagatelle, played upon an inclined board set with pins, with a marble, which is either shot with a spring or shoved with a stick from a channel at one side. The marble, in rolling down the board, rebounds among the pins, and stops either in a hole on the board, or in numbered compartments at the bottom, which determine the count.

Tiza. Commercial name for an impure ULEXITE (q.v.) found in S. America.

Tlaloc. Mexican god of rain; worshiped with sacrifices of prisoners and children.

Tlascala, or TLAXCALA. Former republic and town near Mexico city. Its warriors fought the Mexicans, and aided Cortes in his conquest.

Toad-Fish. See BATRACHIDÆ.

Toad-Flax. See SNAPDRAGON and BUTTER-AND-EGGS.

Toads. See OXYDACTYLIA and BUFONIDÆ.

Toad's-Eye. Variety of wood-tin, occurring in small rounded grains with a concentric and radiated structure. See TIN, METALLURGY OF.

Toadstone. 1. That of antiquity, so named from some fancied resemblance of form, was probably a fossil. 2. That of Derbyshire, England, is a dark, compact rock, like basalt, intruded among Carboniferous strata. The name may be a corruption of the German todtstein (dead stone), with allusion to the absence of ore. 3. Varieties of rock with peculiar mottled surfaces.

Toadstool. Varieties of *Fungi* of the class *Hymenomycetes*, of very wide geographical distribution, many of them poisonous. See MUSHROOM.

Toast. Bread that has been toasted loses some of the water of composition, one evidence of this being the carbonizing or browning, and the starch is partially changed into compounds more quickly digested. To accomplish this the bread should be slowly browned. A very pleasant drink for invalids is made by pouring hot water over some well-browned toast and serving after it has cooled.

Toast. This was an addition to English drinks in the 16th century, sack and punch being drunk with it. In the 17th century it was customary to drink to the health of the host and guests, and especially woman, who was called the toast.

Tobacco. *Nicotiana tabacum.* Annual herb of the Potato family, native of America; widely cultivated for its leaves. It thrives best on rich alluvial soils. The young plants are started in beds, and transplanted to the field, ab. June 1, on soil that has been thoroughly prepared and well fertilized. Clean culture is given, and the seed stalk removed when it appears. When the leaves are mature, the plant is cut and hung up under cover to cure. When cured, the leaves are taken off, assorted, and packed in bundles for fermenting. *N. rustica* is the only other species much cultivated, and is grown in Asia, Africa and Europe. Tobacco contains 2 to 6 per cent of the alkaloid NICOTINE (q.v.), a cerebro-cardiac poison. Taken internally tobacco causes nausea; when smoked or chewed it is sedative or narcotic; in excess it affects the pulsations of the heart. Tobacco removes a large amount of mineral matter from the soil, and is therefore an exhausting crop. It was found to be in use by the Indians in all parts of America. Oviedo says the peculiar Y-shaped tube by which they inhaled the fumes was called tabaco; Benzoni says tabacco is the Mexican name of the herb. It is said to have been used by Spaniards in Yucatan 1520. It was first brought to Spain 1558, and to England ab. 1565. In 1586 Ralph Lane, Gov. of Va., and Sir Francis Drake

1. American Tobacco (*N. tabacum*); 2. Syrian Tobacco (*N. rustica*).

furnished Sir Walter Raleigh with materials for smoking. A Proclamation against it was issued 1584. James I. issued his "Counterblaste" against it 1604. Its cultivation in England was prohibited 1684; allowed in Ireland 1779, prohibited 1831. The U. S. in 1894 raised 406,678,385 lbs., valued at $27,760,739, and exported to the value of $23,849,996. The yield per acre

is ab. 678 lbs. Europe produces about the same amount as the U. S. In the U. S., in 1893, 84,428,797 lbs. were made

Gathering the Crop.

into 4,341,240,981 cigars, and 12,497,183 lbs. into 3,660.755.959 cigarettes. See PIPES, TOBACCO.

Tobacco, INDIAN. *Lobelia inflata.* Low, blue-flowered herb of the Lobelia family, with an intensely bitter foliage, native of e. N. America. The powdered leaves and seeds affect the brain and spinal marrow, and irritate the stomach and bowls; they have produced death. It contains a narcotic alkaloid, lobelin, a non-volatile oil, which forms crystalline salts.

Tobago. One of the Windward Isles, W. Indies; area 114 sq. m.; held by Dutch and French 1632–1763, and since by Britain; connected with Trinidad. Pop., 1891, 18,353.

Tobit. Apocryphal book, describing sundry marvelous deliverances and cures in the family of a Jewish exile; called in the Vulgate Tobias.

Tobler, TITUS, 1806–1871. Swiss traveler in Palestine. *Topographio von Jerusalem*, 1853–54; *Nazareth*, 1868; *Palestinæ Descriptiones* (300–1500), 1867–74.—His son, ADOLF, b.1835, prof. Berlin since 1867, is an authority on Romance philology.

Toboggan. This was originally an Indian pack-sled, peculiar especially to the Canadian-French. It was made of thin strips of wood curled up at the front. From this was developed the sled of sport, of birch ¼ in. thick, 16 in. wide, and carrying 3 to 8 persons; made to run on snow or ice with runners, or rollers to run in chutes. The term tobogganing is now used to include all sliding by means of low sleds on artificial hills of various kinds, some of which end in a prepared water-plunge.

Tobolsk. Capital of a district of w. Siberia; on the Irtish and the Tobol. It has manufactures of tallow, soap, and leather, and shipbuilding. Pop., 1891, 22,651.

Tocantins. River of e. Brazil, flowing ab. 1,500 m. n. to the Para; partly navigable. Its tributary, the Araguay, is ab. 1,300 m. long.

Toccata. Composition for keyed instruments of the organ and pianoforte kind; piece of persistent movement, with little variation in the time value of the notes, and frequently sounding like improvisations.

Tocogonia (BIOGENESIS). Production of living things (children) from pre-existing living things (parents).

Tocology. Science of child-birth: OBSTETRICS (q.v.).

Tocqueville, ALEXIS CHARLES HENRI CLÉREL DE, 1805–1859. French author; Deputy 1839, Academician 1841. His *Democracy in America*, 4 vols., 1835–40, is highly valued. *The Old Régime and the Revolution*, 1856; *Remains*, 1861; *Works*, 9 vols., 1860–65; *Recollections*, tr. 1897.

Tod, DAVID. 1805–1868. U. S. Minister to Brazil 1847–52; Gov. of Ohio 1862–63.

Toda, or TUDAWA. Dominant race of a section of s. India, though in number less than 750. They have a language, religion, and customs of their own.

Todd, CHARLES SCOTT. 1791–1871. Officer in the war of 1812; Ky. Sec. of State 1817; U. S. Minister to Russia 1841–45.—His father, THOMAS, 1765–1826, became Judge of Ky. Court of Appeals 1801, and Chief-justice 1806; Justice U. S. Supreme Court 1807.

Todd, DAVID PECK, b.1855. Prof. of Astronomy at Amherst since 1881; member of several expeditions to observe eclipses from distant points.

Todd, ELI, M.D., 1769–1833. Founder and supt. Retreat for the Insane at Hartford, Conn.

Todd, HENRY JOHN, 1763–1845. Archdeacon of Cleveland 1832; editor and biographer of Milton and Spenser.

Todd, JOHN, D.D., 1800–1873. Cong. pastor at Pittsfield, Mass., 1842–72; prolific writer. *Student's Manual*, 1835; *Lectures to Children*, 1834–58; *Autobiography*, 1876.

Todd, JOHN BLAIR SMITH, 1814–1872. Brig.-gen. U. S. Vols. 1861–62; M.C. from Dakota 1863–65; Gov. 1869–71.

Toddy. In the E. Indies, the fermented juice of the palm from which arrack is distilled. In Scotland, whisky punch, a mixture of hot water, sugar and whisky.

Todhunter, ISAAC, 1820–1884. English mathematician. Author of a valuable series of text-books. *Researches in the Calculus of Variations*, 1872; *Attraction and the Figure of the Earth*, 1873; *Hist. Theory of Elasticity*, 1886.

Todleben, FRANZ EDUARD, 1818–1884. Russian officer, whose engineering skill rendered possible the long defense of Sevastopol (349 days) against the Allied armies; Lieut.-gen. 1860. He besieged and took Plevna 1877. *Defense of Sevastopol*, 1863.

Toe of Switch. Ends of the movable rails of a railroad switch.

Tofana. See AQUA TOPHANIA.

Toggle Joint. Made by two hinged bars meeting at an angle of almost 180°; if a side force then acts upon the hinge, a large force of compression can be produced in the two bars. Such a joint is used in the stone crusher and in many printing presses.

Togo. Town of German W. Africa in Togoland, a German protectorate, on the e. shore of Lake T. It is one of the principal trading stations of Togoland. Pop. 3.000.

Tokay. Town of n.e. Hungary, on the Theiss; pop. 5,012. The wines hence exported are of high repute. Analysis of a Tokay wine showed 16 per cent alcohol, 74 grs. sugar per oz., and acidity equivalent to 9 grs. tartaric acid per oz. The annual product of the best varieties amounts to 4,000,000 gals. and of the second-class 2,500,000 gals.

Token Money. Coins whose intrinsic value is much less than their face value, as the 1-cent and 5-cent copper and nickel coins, and the silver coins of the U. S.

Tokens. Metallic cards, made in various countries for advertising and other purposes; especially those formerly issued in Scotland, admitting the holder to communion. They have an obscure place in numismatics.

Tokio (formerly YEDO). Capital of Japan; seaport, at the head of Yedo Bay, on the e. coast of Niphon; settled in 15th century, and important since 1590. It has a large trade and

Business Street in Tokio.

commerce, in this respect ranking next to Osaka, and is an educational center, but has been repeatedly devastated by fires. Pop., 1890, 1,376,280.

Tokugawa. Japanese dynasty, founded by Iyeyasu, who became Shogun 1603, after gaining a great victory over the daimios 1600. It lasted through 15 generations, to the resignation of Yoshinobu (Keiki) 1867.

Toland, JOHN, 1669–1722. Irish deist, driven from Dublin for his *Christianity not Mysterious*, 1696; editor and biographer of Milton, 1697–98. *Amyntor*, 1699; *Origines Judaicæ*, 1709; *Nazarenus*, 1719.

Toledo. Ancient city of Spain, on the Tagus, 40 m. s.s.w. of Madrid; capital of the Goths 467–714, then of the Moors till 1085, and of Castile till 1560; once prosperous, populous, and

Toledo.

famous for its sword-blades; now decayed. Its university, founded 1498, was suppressed 1807: its palace was burned 1887. Its fine cathedral, erected 1227–1493, is 404 ft. by 204, with a tower 329 ft. high. Pop. ab.21,000.

Toledo. Capital of Lucas co., Ohio, on the Maumee, at the w. end of Lake Erie; settled ab.1795, chartered 1837. It has 25 m. of docks, providing for a large lake trade, and extensive railroad connections, being touched by 23 lines. Its manufactures are varied. It has 356 m. of streets, and 95 m. of street railways. Water is supplied by pumping. Pop., 1890, 81,434.

Toledo, ANTONIO SEBASTIAN DE, MARQUIS DE MANCERA. Viceroy of Mexico 1664–73.

Toledo, FRANCISCO DE, ab.1517–1584. Viceroy of Peru 1569–81; able ruler; executioner of the last Inca; imprisoned in Spain.—His cousin, GARCIA, ab.1510–1583, drew up a code for Peru, and was provincial of the Dominicans there 1577–81.

Toledoth Jeshu (GENERATIONS OF JESUS). Mediæval Hebrew book, similar to the apocryphal gospels, but satirical and anti-Christian. Two forms exist, tr. into Latin 1681 and 1705.

Toledo War. Dispute as to Ohio-Mich. boundary, 1836–37. Mich. received the n. peninsula in lieu of her claim to the region about Toledo.

Toleration. Exemption from persecution; partial or entire liberty granted to dissenters from an established church. The idea scarcely existed before the Reformation, and thenceforth made its way slowly, being proclaimed by a few French, Swiss, and Polish thinkers, and enforced, so far as he could, by William the Silent in Holland. Religious freedom was secured in some degree in France by the Edict of Nantes 1598, and in Germany by the Peace of Westphalia 1648. The notions and practices of the past in this respect were practically antipodal to those which now prevail in civilized lands.

Tolidine. $C_{12}H_6.(CH_3)_2.(NH_2)_2$. Diamidoditolyl; compound analogous to benzidine, and similarly used in the preparation of dye-stuffs; prepared by the rearrangement of hydrazotoluene; known in various forms, as orthotolidine, mpt. 128° C., used in the manufacture of cotton dyes, *e.g.*, benzopurpurin, azoblue.

Tolima. Peak of the central Cordilleras in Colombia. It is a quiescent volcano, 18,425 ft. high, which showed signs of activity in 1595, 1826 and 1829.

Tollens, HENDRIK, 1780–1856. Dutch poet and dramatist, best known by his lyrics.

Tolly. See BARCLAY DE TOLLY.

Tolon, MIGUEL TEURBE, 1820–1858. Cuban poet, in New York 1848–57.

Tolosa. Town of n. Spain, taken by the French 1794 and 1808. Near it the kings of Castile, Aragon, and Navarre defeated the Moors July 16, 1212.

Tolsa, MANUEL, ab.1750–ab.1810. Spanish sculptor and architect, in Mexico from 1781; noted especially for an equestrian statue of Charles IV., erected in Mexico City 1803.

Tolstoi, ALEXEI, COUNT, 1817–1875. Russian dramatist and lyric poet. *Death of Ivan*, 1865, tr. 1869. His only novel, *Prince Serebryani*, was tr. 1893.

Tolstoi, DIMITRI, COUNT, 1823–1889. Russian Minister of Education, noted as a zealous instrument of tyranny. *Romanism in Russia*, tr. 1874.

Tolstoi, LEO or LYEFF, COUNT, b.1828. Russian novelist of highest rank. His chief works are *War and Peace*, 1865–68, and *Anna Karenina*, 1875–78. He has also pub. many shorter tales, sketches, and tracts, intended for the peasants to whom his later years have been devoted, or for the propagation of his peculiar religious ideas. Some venerate him as the chief apostle and model of realism, others as a missionary and reformer: whatever may be thought of his judgment, his genius and sincerity are alike undoubted. *The Kreutzer Sonata*, 1888; *Ivan Ilich*, 1884; *Master and Man*, 1895.

Toltecs. Indians of Mexico who emigrated s. into Yucatan, where they may have introduced the Mayan civilization, or perhaps gained their own from a more ancient type. Later they went n. and established a predecessor of the Aztec civilization in Mexico. They were conquered by the Nahuatt, also

Toltec Girl.

from the n., who as Aztecs were overthrown by Cortes. The theory that the T. culture was introduced from the Orient does not appear well supported. Their empire is said to have lasted ab.686–1070: its downfall was due in part to dissensions between priests and nobles.

Tolu Balsam. Viscid substance, obtained from trees of *Myroxylon toluifera*, found in S. America. Upon exposure it hardens to a vitreous mass. Its flavor suggests vanilla. It contains cinnamic and benzoic acids, benzyl benzoate, and cinnamate. It is used in perfumery and confectionery, and as a mild tonic in bronchial affections.

Toluene. $C_6H_5.CH_3$. Toluol. Methylbenzene; liquid hydrocarbon with pleasant odor; bpt. 110° C.; present in coal tar, and prepared from it by distillation. Oxidizing agents convert it into benzoic acid. It is used as a solvent, as a source for nitrotoluene, toluidine, and SACCHARIN (q.v.).

Toluic Acid. $CH_3.C_6H_4.COOH$. Known in three forms, prepared by the partial oxidation of the xylenes. α-Toluic acid is an isomer.

Toluidines. $CH_3.C_6H_4NH_2$. Bases closely resembling aniline; known in three forms, ortho, meta, and para; prepared by the action of reducing agents upon the three nitrotoluenes. Orthotoluidine is a liquid, boiling at 199°C.; metatoluidine boils at 197° C.; paratoluidine is a solid melting at 45° C. The ortho and para compounds are much used in making coal-tar colors.

Toluylene. $CH_3.C_6H_3$. Group or radical, recognized in

numerous forms; derived from toluene by the removal of two hydrogen atoms. $CH_3.C_6H_5—H_2=CH_3C_6H_3$:.

Toluylene Blue. $C_{15}H_{20}N_4Cl$. Product of the action of nitrosodimethylaniline on toluylenediamine.

Toluylenediamine. $CH_3.C_6H_3:(NH_2)_2$. Diamidotoluenes; bases formed by the reduction of the dinitrotoluenes, resembling in every way the PHENYLENEDIAMINES (q.v.).

Toluylene Red. $C_{14}H_{16}N_4.HCl$. Product of the oxidation of dimethylparaphenylenediamine and toluylenediamine. It dyes cotton red upon a tannin mordant.

Tom. River of w. Siberia, rising in Abakan Mts., flowing w., n., n.w. and joining the Ob, 27 m. below Tomsk. Length 525 m.

Tom, BLIND (THOMAS GREENE BETHUNE), b.1849 in Ga. Illiterate negro pianist, well known as a musical prodigy from 1861.

Tomahawk. War club of N. American Indians.

Tomato. *Lycopersicum lycopersicum.* Large herb of the Potato family, native of S. America; widely cultivated for its fruit; called also Love-Apple. The tomato blight is caused by

Large Early Red Tomato:
a, its fruit; *b*, fruit of common tomato.

Cladosporium fulvum, an imperfect fungus, which forms rusty brown patches on the under side of the leaves, causing the death of the plant. Spraying with copper sulphate solution destroys it.

Tomato Blight. See TOMATO.

Tomb. Monument over a grave. In early times the dead were sometimes placed in excavated sepulchers, especially in the East. The pyramids of Egypt, the rock-tombs of Persia, and the catacombs of Rome are examples. When the dead were cremated and the ashes placed in cinerary urns, the columbarium was provided to receive them. In some Spanish-American towns and in Italy, the niches for the coffins are built in terraces. In early Christianity the dead were not buried in churches. In the Middle Ages tombs were built in the churches, beginning with a stone coffin, followed in the 13th century by a sarcophagus with a recumbent figure in stone, beneath a canopy. Sometimes they were placed in arched recesses in the wall. See BURIAL OF THE DEAD.

Tombac. Red, hard alloy of copper and zinc, containing 15 per cent of zinc. White tombac consists of copper 75, arsenic 25. Imitation gold jewelry is made of the former.

Tombigbee River. River of Miss. and Ala. It heads in the broken plateau country of s.e. Miss., and flows 450 m., generally s., forming, with the Ala., Mobile River. Drainage area 18,896 sq. m.

Tombs, SIR HENRY, 1824–1874. Anglo-Indian officer, distinguished at Delhi and Lucknow in the Sepoy rebellion; Col. 1858, Major-gen. 1867.

Tomentose, or TOMENTULOSE. Having the surface covered with woolly pubescence.

Tomentum. Covering of woolly nature.

Tomes, ROBERT, M.D., 1817–1882. American historical writer and translator. *Battles of America*, 1861; *War with the South*, 1864–67.

Tomia. Outer part of gape of mouth of birds, from tip of beak to rictus.

Tomline, GEORGE, D.D., 1750–1827. Bp. of Lincoln 1787, and of Winchester 1820. *Christian Theology*, 1799.

Tomlinson, CHARLES, F.R.S., b.1808. Writer on science and letters. Tr. *Inferno*, 1877; *Essays*, 1887.

Tomlinson, GIDEON, 1780–1854. M.C. 1819–27; Gov. of Conn. 1827–31; U. S. Senator 1831–37.

Timlinson, HERBERT, b.1845. English physicist and electrician.

Tommaseo, NICCOLA, 1802–1874. Italian author and compiler. *Dell' Italia*, 1835; *Canti Populari*, 1841–42; *Studi critici*, 1843.

Tompkins, DANIEL D., 1774–1825. Judge N. Y. Supreme Court 1804–7; Gov. of N. Y. 1807–17: able and active, especially during the war of 1812; Vice-pres. U. S. 1817–25.

Tomsk. Town of w. Siberia, on the Tom; partly burned 1890; seat of a university, founded 1888. Entrepot for imports and exports of Siberia. Pop., 1891, 41,632.

Tom Thumb. See STRATTON, C. S.

Tom Tiddler's Ground. Variety of game of tag. The chaser or player who is "it" guards a certain piece of ground upon which the other players, trespassing, may be caught. The one caught then takes his place.

Ton. In the U. S. and Gt. Britain 2,240 lbs.; short ton in the U. S. is 2,000 lbs., metric ton is 2,204.6 lbs. In the measurement of ships the register ton is 100 cu. ft.; for cargo 40 cu. ft.; in Gt. Britain 42 cu. ft.

Tonalite. Igneous rock having a granitic structure; a quartz-mica diorite.

Tone. Musical sound due to sonorous bodies vibrating with a regular periodicity. Tones make up one of the two great classes of sounds, and are distinguished from noises, which are due to irregular vibrations. See HEARING.

Tone, THEOBALD WOLFE, 1763–1798. Irish revolutionist; officer in French expeditions of invasion 1797–98; capitally condemned. He cut his throat in prison. His autobiography, 1826, was edited by his son, WILLIAM THEOBALD WOLFE, U.S A., 1791-1828. *School of Cavalry*, 1824.

Tone-Color. Quality of spoken sounds. See PROSODY.

Toner, JOSEPH MEREDITH, M.D., 1825–1896. Practitioner at Washington, D.C.; medical and biographical writer.

Tonga. See FRIENDLY ISLANDS.

Tongue. Muscular organ in the cavity of the mouth. It has a single attachment at its base and is capable of quick and varied movement. It aids in sucking, in mastication, in articulation. The nerves concerned in the sense of taste are distributed in the tongue, making it the organ of taste.

Upper Surface of Tongue:
1, mesial line; 2, 2, lateral parts; 3, tip; 4, 4, sides or edges; 5, 5, V-shaped mass of circumvallate papillæ; 6, foramen cæcum; 7, mucous glands; 8, epiglottis; 9, 9, 9, fræna epiglottidis; 10, 10, greater horns of hyoid bone.

Tongue of a Frog. In a railroad, triangular piece which unites the ends of the two rails which meet.

Tongues, GIFT OF. Described in Acts ii. as a sudden communication of the skill to speak foreign languages; in I. Corinthians xiv. as ecstatic utterances, the vehicle of profound spiritual experiences, but not of distinct apprehension, even to the speaker.

Tonics. Class of remedies supposed to give tone to the system, without stimulation on the one hand or supplying nutriment on the other. Special tonics, as nervous tonics, are sometimes mentioned, indicating the characters of the tissue most affected. A large number of the vegetable tonics have one common characteristic, they are bitter to the taste. The physiologic research on the action of drugs is gradually making clear how each medicine acts and is causing a rearrangement of the classification. Hydrochloric, nitric, phosphoric acids, salts of iron, zinc and silver, quinine, gentian, quassia, and strychnine are tonics. Syrup of iron, quinine and strychnine is a much used tonic.

Tonic Sol-fa. Method of teaching vocal music, and notation used therein; based on the principle of key relationship. The names of the notes in the scale indicate relations only, not absolute pitches. To enforce this the ordinary staff notation is set aside in favor of the old syllables used in SOLMIZATION (q.v.), except that they are spelled in English and "si" is changed to "te" and "sol" to "soh" (Doh, Ray, Me, Fah, Soh, Lah, Te, Doh). These syllables are indicated by their initials. The system is most extensively used in England and Wales.

It was originated by Elizabeth Glover in Norwich, and developed by John Curwen. A college in London is devoted to instruction in this system.

Tonk. Town of n. India, near the Banas. Pop., 1891, 46,069.

Tonka (or TONQUIN) **Bean.** *Dipteryx odorata.* Large tree of the natural family *Leguminosæ*, native of n. S. America, bearing fragrant oval seeds, used in perfumery.

Tonka Bean.

Tonnage. Internal measurement of a ship, representing the capacity of the vessel to carry cargo; determined by a mode of measurement prescribed by law; not synonymous with the number of tons she may carry. It is made for the purpose of registry at her port and for the laying of dues. Tonnage is estimated by bulk or by weight. See TON.

Tonnage and Poundage. Ancient tariff on imports and exports, the proceeds of which were used in maintaining the navy. It was levied by all the early sovereigns of England. In the time of Edward I., 1303, all foreign merchants, trading in English ports, had to pay a duty of 2 shillings per tun on imported wine and 3 shillings per pound sterling on all other imported and exported merchandise.

Tonnage Dues. Duty imposed on vessels in proportion to their capacity as a fee for the privilege of using the harbors. It is of ancient origin, being in earlier times collected each time a vessel entered a harbor, but now, an annual tax calculated upon the vessel's registered tonnage. U. S. vessels in foreign trade pay annually 30 cts. per ton to the government; foreign vessels pay in addition 50 cts. light-money; ships built in the U. S., owned partly or wholly by foreigners, pay double rates. In 1886 the U. S. abolished all such duties on ships of those nations who would reciprocate; Germany, the Netherlands and Central American countries only have consented.

Tonometer. Instrument devised by Scheibler and constructed by Koenig, consisting of a set of 65 tuning-forks, such that any two consecutive ones differ four beats per second, and therefore differ in pitch by four vibrations per second. The lowest of the series makes 250 vibrations, the highest 512. Thus any note within the range can have its vibration frequency directly determined, and notes outside the compass may be studied by proceeding by octaves. By the aid of the tonometer a piano or other musical instrument may be tuned to any desired system of temperament.

Tonquin, or TONGKING. Region s. of China and e. of Burmah and Siam; held by France since 1884. Area ab.34,700 sq. m., pop. ab.9,000,000. See ANNAM.

Tonquin, GULF OF. Arm of the China Sea, extending into Tonquin and s. China.

Tonsils. Two almond-shaped bodies situated at the entrance of the throat, one on either side, as one looks into the mouth. They are compound lymphatic glands, and are liable to various diseases. In young children they are frequently found to be so greatly enlarged as to interfere with respiration, which, when accompanied by enlarged adenoid bodies in the naso-pharynx, produce a condition of danger, if not to life, at least to the healthy development of the child. The treatment is surgical.

Tonsilitis. Inflammation of the tonsils, of which there are several forms, of which follicular tonsilitis involves the follicles, and is characterized by the presence of white spots, which are sometimes confounded with diphtheretic patches and vice versa. The disease is a slight one. Suppurative tonsilitis is QUINSY (q.v.).

Tonson, JACOB, 1656–1736. London publisher of many important works and editions.

Tonsure. R. C. usage of shaving the crown of the head, as a preparation for orders. The Irish priests anciently shaved the front of the head and the Greeks and Orientals the whole head.

Tontine. System of annuities or insurance, in which all subscribers pay an equal amount, but the survivors after the death of each member receive an increased annuity or are credited with a corresponding amount on their premiums.

Tonty, or **Tonti,** HENRI, CHEVALIER DE, ab.1650–1704. Italian-French explorer, who came to Canada with La Salle 1678, followed him to the mouth of the Mississippi 1686, and died at the site of Mobile.—His father, LORENZO, devised the Tontine system 1653.

Tooke, JOHN HORNE (orig. HORNE), 1736–1812. English liberal, in orders 1760–73; associated with Wilkes 1765–71; imprisoned for alleged libel 1777–78; tried for treason 1794; M.P. 1801. His *Diversions of Purley*, 1786–1805, is still valued.

Tooke, WILLIAM, 1744–1820. English writer on Russia.—His son, THOMAS, 1774–1858, wrote much on political economy. *History of Prices*, 6 vols., 1838–57.

Toole, JOHN LAWRENCE, b.1832. English comedian, manager since 1879.

Toombs, ROBERT, 1810–1885. M.C. from Ga. 1845–53; U. S. Senator 1853–61; eminent champion of State rights and secession; brig.-gen. C.S.A. 1861–62; in exile 1865–67; vehement opponent of reconstruction; advocate of State taxation of railroads 1874–78.

Tootel, HUGH. See DODD, CHARLES.

Tooth. In Botany, sharp-pointed projection from the margin of a leaf, petal, or other organ.

Tooth. See TEETH.

Toothache. Neuralgic pain in a tooth caused by pressure upon a nerve, either as the product of inflammatory action or some abnormal growth, as an exostosis, or by an exposure of the nerve to the air. When there is a cavity, plugging it with a piece of absorbent cotton, on which has been placed a little baking soda and 2 or 3 drops of chloroform, will usually give relief.

Toothache-Grass. Pungent grasses of the genus *Clenium;* natives of warm regions.

Toothache-Tree. See ASH, PRICKLY.

Tooth-Brushes. The preservation of the teeth was an object of solicitude among many savage tribes. The tooth-brush was preceded by a fragment of soft wood, with which the teeth were rubbed. This custom exists among American Indians and in many parts of the East.

Toothed. See DENTATE.

Toothed Birds. See ODONTORNITHES.

Tooth-Ornament. Form of sculptured enrichment. It was much used in the Early English style, and in France in 12th century.

Tooth-ornament.

Tooth Powder. See DENTIFRICE.

Toothwort. See PEPPER-ROOT.

Top. See TOPS.

Topaz. 1. Oriental; yellow transparent variety of the mineral corundum. 2. Common; anhydrous aluminium silicate, containing ab. 18 per cent of fluorine, $Al_{12}Si_6O_{26}F_{10}$, of lower hardness than corundum, and usually yellow in color, though red and white are not rare. The topaz best for jewelry comes from Brazil and Siberia, but, in specimens of inferior value or as a constituent of rocks, it is a widely distributed mineral. An amorphous variety is found in Sweden, which can be used as an abrasive. 3. False; variety of transparent yellow quartz.

Topazolite. Yellow variety of the mineral GARNET (q.v.).

Top Crossing. Form of line breeding, in which animals of dissimilar character or family are mated, and then upon the offspring is used a sire of the same character as the first one; particularly successful when a pure-bred sire is used upon native or grade females.

Tope. Buddhist mound for the preservation of relics or the commemoration of some event. In the former case it is called a dagoba and in the latter a stupa. They are built of more or less solid masonry, and are surrounded by an elaborately carved railing with gateway. The chief one, at Sanchi, Central India, is 42 ft. high and 106 ft. in diameter.

Topeka. Capital of Shawnee co., Kan., and of the State since 1861; on the Kansas River; settled 1854, chartered 1857; seat of Washburn Coll. (Cong.) and that of the Sisters of Bethany (P. E.). It has 120 m. of streets, a capitol building

which cost $2,000,000, and some manufactures. Pop., 1890, 31,007.

Topelius, ZACHARIAS, b.1818. Finnish poet, dramatist, and writer of juvenile and other tales; ed. *Tidningar* 1842–60; prof. Helsingfors 1854–78. *Surgeon's Stories*, 6 vols., 1872–74.

Topete, JUAN BAUTISTA, b.1821. Spanish admiral 1867; Sec. Navy 1868, 1870, and 1874.

Töpffer, RUDOLF, 1799–1846. Swiss novelist; prof. Geneva 1832.

Tophet. In O. T., (1) garden in the Valley of Hinnom, s.e. of Jerusalem; (2) from the idolatrous orgies held there, symbol of all abominations, and of divine retribution attending them. See GEHENNA.

Toplady, AUGUSTUS MONTAGUE, 1740–1778. English sacred poet; extreme Calvinist and fierce polemic, especially against the Wesleys. His *Works*, 6 vols., 1794, afford less cheerful reading than his hymns, collected 1860, including "Rock of Ages," 1776.

Topography. Details of relief of the earth's surface, as distinguished from orography, which includes the grand features of relief; natural surface of a country, represented on a map by means of symbols. Elevations are represented by contour lines, or by lines running down the declivities; streams and streets are shown by curved and straight lines, forests and plains by symbols which have a rough resemblance to trees and grass, and water by wavy lines parallel to the shores.

Topolias. Modern name for LAKE COPAIS (q.v.).

Topolobampo Bay. On n.w. coast of Mexico; part of Gulf of Cal. An unsuccessful Socialist colony was planted here 1886.

Toponeura. See SCYPHOMEDUSÆ.

Tops. These familiar and universal toys are of two principal kinds, peg-top and humming-top. Both are known to savage and primitive people, and specimens of the former exist in America and Egypt from remote antiquity. The origin and precise significance of tops is unknown. They are invariably regarded as a toy for boys, and are associated with the season of ice and winter. They exist in the greatest complexity and variety of forms in Japan. Over twenty kinds of

1, 2, Whip-tops; 3, Peg-top; 4, Spanish Peg-top; 5, Humming-top and Fork.

Japanese tops have been described, of which one of the most primitive is made of the tip of a conch shell weighted with lead, which is spun on a mat and used in a kind of gambling. Peg-top is played by any number, the object being to drive tops out of a ring by striking them with the one which the player throws, which must spin unless a top be knocked out. Other varieties are Spanish peg-top, humming-top, and whip-top, which was known in Virgil's time.

Topsöe, VILHELM CHRISTIAN SIGURD, b.1840. Danish novelist and descriptive writer. *Jason*, 1875; *Tales*, 1890–91.

Torbanehill. See TORBANITE.

Torbanite. BOGHEAD COAL (q.v.) from Torbanehill, Scotland.

Torbernite. Rare mineral, hydrous uranium phosphate of complex composition and beautiful green color, sometimes called uranium mica.

Torbert, ALFRED THOMAS ARCHIMEDES, U.S.A., 1833–1880. Brig.-gen. U. S. Vols. 1862–66; Minister to San Salvador 1869–71; Consul-gen. at Havana 1871–73, and Paris 1873–78.

Torch Wood. *Amyris floridana.* Florida shrub having a resinous juice; much used for fuel on the Florida Keys.

Tordesillas, CONVENTION OF. Held at Tordesillas, Spain; here the treaty between Spain and Portugal was signed, June 7, 1494, in which it was agreed that the divisional meridian, relating to the rights of conquest of the two nations, should be 370 leagues w. of the Cape Verde islands; Spain to have the right of conquest w. of this line and Portugal that to the e. The vagueness of the terms of the treaty led to disputes.

Toreno, JOSÉ MARIA QUEIPO DE LLANO RUIZ DE SARAVIA, COUNT, 1786–1843. Spanish historian and official, repeatedly in exile. *War of Revolution*, 5 vols., 1835–37.

Torfason, or **Torfaeus,** THORMODR, 1636–1719. Icelandic scholar; historian of ancient Vinland and Greenland, 1705–6, and of the Danish and Norwegian kings, 1702–11.

Torgau. Town of Prussian Saxony, on the Elbe. Here, Nov. 3, 1760, the Austrians under Daun were routed by Fred-

East Wing of the Castle at Torgau. Rebuilt from 1532–36.

erick II. It has a castle (Hartensfels) used as a barracks and military prison. It has an extensive trade in gloves, pottery and mineral waters. Pop., 1890, 10,988.

Toribio, ST., (T. ALFONSO MONGROVEJO), 1538–1606. Abp. of Lima from 1581; protector of the natives; eminent for charity and devotion; beatified 1679, canonized 1726.

Torices, MANUEL RODRIGUEZ, 1788–1816. Pres. of Colombia 1812–14; defeated and executed by the Spaniards.

Tories. 1. Irish R. C. outlaws, ab. 1650–80. 2. Stiff adherents of Charles II. and James II. 3. English party, opposed to all changes in the State, supporters of privilege; called Conservatives since 1830. 4. American opponents of the Revolution, 1775–82.

Torii. Construction of bronze, stone or wood, consisting of two pillars, joined at the top by two cross-bars, projecting at both ends with an upward curve, and placed in front of every Shinto shrine in Japan; a perch for sacred fowls, who gave warning of daybreak.

Tornado. Violent storm of wind, usually destructive. Those of w. coast of Africa are said to form suddenly in a clear sky; those of America and India are characterized by

a horizontal and ascending whirl and the formation of a central cloud, extending from near the earth up to the main cloud, where the storm has its origin. In those observed by Bellamy on the upper Niger the central funnel-shaped cloud was absent.

Tornaria. See BALANOGLOSSUS.

Tornea. River of Finland, flowing s., into Gulf of Finland, forming the greater part of the Finnish-Norwegian frontier. Length 230 m.

Toronto. Capital of Ontario, Canada; near the head of Lake Ontario; settled, as York, 1794; twice burned by Americans 1812; chartered 1834. It has an excellent harbor and considerable commerce. Its university, founded 1829, burned 1890, has ab. 22 instructors and 400 students, besides several affiliated colleges of divinity and law. Pop., 1891, 181,220, chiefly of recent growth.

Torpedo. Apparatus containing explosives, which can be set off under water by contact with a vessel, thus exploding a percussion cap, which detonates the dry cotton and this the wet cotton. Sometimes they are stationary, or they may be automobile, and propelled through the water by electric or other motors attached to them. In 1585, at the siege of Antwerp, a bridge was destroyed by a floating mine. Submarine boats were used in the Revolution. In the Civil War torpedoes were used by both sides. The Whitehead torpedo was developed by Robert Whitehead, and dates from 1864; it is a cigar-shaped steel tube, 18 in. diameter, charged with 250 lbs. of guncotton, with 12 per cent moisture, and a dry guncotton detonator of 16 oz. Its propeller is driven by compressed air 900 yds., at a speed of 30 knots. The Howell torpedo has an internal fly-wheel, which is spun up to 10,000 revolutions per minute before launching, which acts upon the propeller. The torpedoes are launched from the tubes by compressed air or a small charge of gunpowder.

Torpedo. See RAYS.

Torpedo Vessels. Torpedo supply vessels are intended to transport small torpedo boats, torpedoes and submarine mines, and are provided with machinery for ordinary repairs. They are ab. 350 ft. long, 60 ft. beam, 20 ft. draught, 6,000 tons measurement, and a speed of 20 knots. They are armed with rapid-fire guns and automobile torpedoes. Torpedo vessels are used for defense of ports against torpedo boats, and are also sea-going. They are ab. 250 ft. long, 30 ft. beam, 10 ft. draught, 1,000 tons measurement, and a speed of 20 knots. They are armed with rapid-fire guns, 4 launching tubes, and 18 in. Whitehead torpedoes. Torpedo-boat destroyers are ab. 180 ft. long, 18½ ft. beam, 6 ft. draught, and a speed of 30 knots. They are armed with 3 launching tubes for 18 in. Whitehead torpedoes, and rapid-fire guns. First and second-class torpedo boats are used for defense of ports. These are 100 tons and 50 tons measurement, and armed with 3 launching tubes for 18 in. Whitehead torpedoes, and rapid-fire guns. First-class are 140 ft. long, 15½ ft. beam, 5½ ft. draught, 100 tons measurement, and a speed of 24 knots. Third-class torpedo boats are carried on torpedo supply vessels or on battleships, from which they are removed when required. Those of the U. S. are 58 ft. long, 9 ft. beam, 15 tons measurement, and a speed of 18 knots. They have one 1½ in. rapid-fire gun and one launching tube for 18 in. Whitehead torpedoes. See SUBMARINE BOATS.

Torquatus, TITUS MANLIUS. Dictator 353 B.C., Consul 347. Of the celebrated patrician family of ancient Rome. He had his son killed because he killed a Latin warrior in single combat, which was contrary to his orders; hence the expression Manliana imperia.

Torque. Gold ornaments, worn around the neck or arm in ancient times in Asia and Europe, found in Gt. Britain, Ireland and France. These ornaments seem to have formed an important part of the wealth of those times.

Torque.

Torquemada, JUAN DE. 1388–1468. Spanish Dominican, active at the Councils of Basel and Florence; Cardinal 1439, Bp. of Palestrina 1455; theological writer.

Torquemada, JUAN DE, ab.1550–ab.1625. Provincial of Franciscans in Mexico 1614. *Monarquia Indiana*, 1615.

Torquemada, TOMAS DE, 1420–1498. Spanish Dominican, Inquisitor-gen. of Castile and Aragon 1483; infamous as a persecutor. He brought thousands to the stake, and promoted the expulsion of the Jews 1492.

Torrelli, ACHILLE, b. 1844. Neapolitan dramatist and poet.

Torrens, LAKE. In S. Australia, 90 m. n. of Spencer Gulf: salt marsh or shallow lake, ab. 125 m. by 20, with no outlet.

Torrens, ROBERT, 1780–1864. Irish officer, M.P., and writer on trade and finance.

Torrens, WILLIAM (MCCULLAGH), 1813–1894. M.P. 1848–52 and 1865–70; reformer; biographer of R. L. Shiel, 1855, and Sir J. Graham, 1863. *Industrial History*, 1846; *Our Empire in Asia*, 1872.

Torrens System OF LAND REGISTRY. Devised ab.1850 by Robert R. Torrens (1814–1884) of Adelaide; adopted 1858 in S. Australia, and subsequently in most of the larger British colonies. It consists of a special form of official registry of the title to land, as distinct from the deed, on each occasion of transfer. The government examines, registers, certifies, and guarantees titles for a small fee.

Torres, CAMILLO, 1766–1816. Colombian jurist and patriot, supreme chief 1815–16; executed by the Spaniards.

Torres Strait. Between Australia and New Guinea; 80 m. wide.

Torres Vedras, LINES OF. Series of defensive works, 152 in all, in three lines from Lisbon ab.25 m. n., constructed by Wellington to resist the advance of the French. The allies fell back within these fortifications Oct. 1810: the invaders withdrew March 1811.

Torres y Ayala, LAUREANO, 1645–1722. Gov.-gen. of Cuba 1707–11 and 1713–16.

Torres y Rueda, MARCOS DE, 1591–1649. Bp. of Yucatan 1644; Gov. of Mexico 1648; author of a notable auto-da-fé 1649.

Torre-Tagle, JOSÉ BERNARDO, MARQUIS DE, 1779–1825. Pres. of Peru 1823; deposed 1824.

Torrey, BRADFORD, b.1843. American ornithologist and magazinist.

Torrey, CHARLES TURNER, 1813–1846. Anti-slavery martyr, imprisoned in Baltimore from 1844. *Home*, 1846.

Torrey, JOHN, M.D., LL.D., 1796–1873. Prof. Princeton 1830–54, and Columbia 1860–73; very eminent botanist. *Flora of Northern and Middle States*, 1826; *N. American Cyperaceæ*, 1836; *Flora of N. America*, with Asa Gray (incomplete), 1838–43; *Flora of New York*, 1843.

Torrey, JOSEPH, D.D., 1797–1867. Prof. Univ. Vt. from 1827; pres. 1862–66; tr. Neander's *Ch. History*, 1854. *Theory of Art*, 1874.

Torrey, JOSEPH WILLIAM, 1828–1884. Journalist in Boston and Hong Kong; Vice-consul in Siam; founder of a trading company in Borneo 1864; Rajah of Amboy 1865–79; Sec. U. S. legation in Siam 1879–83.

Torricelli, EVANGELISTA. 1608–1647. Italian mathematician and physicist; prof. Florence 1642. He wrote on the quadrature of the cycloid and conics. His works were collected 1644.

Torricellian Vacuum. If a vessel be filled with any liquid having a density ρ, and then inverted, so that its mouth is below the surface of the liquid in another vessel, the difference of level in the two vessels will be $\frac{P}{\rho g}$, in which P is the pressure of the air at the time, and g the force of gravity. The space above the liquid in the closed vessel will contain nothing but the vapor of the liquid. Torricelli first produced this vacuum 1643, using water in tubes 60 and 40 ft. long, attached to the sails or arms of a windmill.

Torricelli's Law. Theorem first stated 1644. 1. The speed with which a liquid issues from an orifice is the same as that which would be produced in the mass by falling freely from the same height. 2. This speed is directly proportional to the square root of the head, or depth of the orifice below the surface. 3. Since the speed of efflux is independent of the particular liquid used, all liquids issue under the same head with the same speed. See EFFUSION.

Torrigiano, PIETRO, 1470–1522. Italian sculptor, victim of the Spanish Inquisition.

Torrubia, JOSÉ, ab.1695–1768. Spanish naturalist and traveler.

Torsion. Twisting of a bar or shaft by an applied force acting at the end of a lever. The stresses developed in torsion

Torsional Wire-testing Machine.

are mostly those of shearing. The strength of a shaft is proportional to the cube of its diameter.

Torsion Balance. See COULOMB'S TORSION BALANCE.

Torstensson, LENNART, 1603–1651. Swedish commander of artillery in the battle of the Lech, April 5, 1632; Commander-in-chief in Germany 1641.

Tort. Unlawful invasion of a legal right not originating in contract; to be redressed by a common-law action. The same act may be a crime as well as a tort, as in the case of an assault and battery.

Tortoises. See CHELONIA.

Tortoise Shell. Scales of the carapace of the hawk's-bill turtles. They are used for making combs, toilet articles, and inlaying. It is easily worked, as under the influence of a gentle heat it can be molded into any shape desired and even can be welded. See CHELONIADÆ.

Tortola. Largest of the Virgin Islands, W. Indies, belonging to Gt. Britain since 1666; 11 m. by 4 m.; area 24 sq. m.

Tortricidæ. See COLUBRIFORMIA.

Tortuga. Island n. of Haiti, once headquarters of buccaneers. Area 80 sq. m.

Tortugas, DRY. Group of keys, or low islets, 120 m. w.s.w. from the s. extremity of Florida, to which they belong. On one of them, during the Civil War, Fort Jefferson was established and used as a military prison.

Tortuosity. Distinctive property of a curve in virtue of which it is called tortuous, or a curve of double curvature. The various points of such a curve do not all lie in one plane; *e.g.*, a helix.

Torture. Regarded by the Athenians as an important means of eliciting truth both from the accused and from witnesses, if slaves, and apparently also from foreigners; freemen were by special law exempt. This enforced testimony seems to have been preferred to that of citizens when freely given. In the Roman republic it was applied to witnesses and suspected persons (not freemen); but slaves might not be tortured to prove the guilt of their master, except in case of crimes against the gods, and, later, of adultery and crimes against the State. Under the emperors free persons, sometimes even knights and senators, were tortured to extract evidence in State cases. Christians of all ranks were subject to torture while Diocletian's edict was in force, 303–311. A wife could be tortured if accused of poisoning her husband; a freeman if there were inconsistencies in his testimony; but priests, pregnant women, and children under 14 were exempt. Torture was employed also in the punishment of criminals. The means used were the rack, barbed hooks, cords to compress the arm, and leaden balls attached to a thong. Crucifixion, mutilation, exposure to wild beasts, and other cruel modes of death were common, especially in the persecutions. Crucifixion was abolished by Constantine 315; mutilation was limited to loss of one hand by Justinian; slaves were scourged, adulterers also. By the Theodosian code heretics were to be flogged with lead before banishment; insult to a bishop or priest in church was punished by torture and exile. In the Middle Ages, wherever legislation was based on the Roman law, torture was adopted also. It was most elaborately systematized and minutely developed in Italy. As late as 1769 the Criminal Code of Maria Theresa illustrated the various methods by 45

Estrapade or Question Extraordinary.

Water Torture.

large plates of engravings. Torture was never legalized in England, though practiced there from before 1188 to 1640; it was generally inflicted by special order. The rack in the Tower of London was introduced in the reign of Henry VI., and often employed in those of Henry VIII., Mary, and especially Elizabeth. The PEINE FORTE ET DURE (q.v.) allowed by the common law differed from it, however, only in name. This was employed once for refusal to plead in a trial for witchcraft in Salem 1692, and was used in England as late as 1726, but was abolished in 1772. The Inquisition applied the principles of the Roman law to the punishment of heretics, regarding heresy as a sort of treason against God and the Church. In 1252 Pope Innocent IV. issued a bull directing the secular powers to torture persons suspected of heresy. From the Spanish reorganization of the Inquisition in 1480, the Holy Office made free use of fire, water, melted metals, mutilation, the thumb-screw, the Spanish boot, and other ingenious devices to compel confession. Torture was abolished in Scotland 1708, in Portugal 1776, in Sweden 1786, in France 1789, in Germany ab. 1800. Various instruments of torture are shown to-day in the town-house of Ratisbon, and in the Tower of London. Few jurists have attempted to justify the use of torture.

Toru Dutt. See DUTT.

Torula Cerevisiæ. Name first given to the yeast-plant. See FERMENT.

Torus. End of the peduncle of a flower, on which all

the floral parts are borne; called also the Receptacle or Thalamus.

Torus. In Classical Architecture, large molding, semicircular in section, used in the bases of columns. The ASTRAGAL (q.v.) is much smaller.

Tory. See TORIES.

Tosariu. Japanese school of painting, which flourished ab.1200, least affected by Chinese influence. It deals mostly with historical and mythological subjects.

Toschi, PAOLO, 1788–1854. Italian engraver, who reproduced many works of the Old Masters, and of modern artists. Among his finest works are: *Descent from the Cross, Repose in Egypt*, and *Venus and Adonis.*

Tosti, FRANCESCO PALO, b.1846. Italian composer of songs, in England since 1880.

Total Abstinence. See ABSTINENCE.

Total Benefit OF A MONOPOLY. Net benefits accruing to producers and consumers together from the sale of a monopolized commodity; made up of the sum of the monopoly revenue and the consumers' rent.

Total Cost. Sum of the prime cost of an article and of its supplementary cost; *i.e.*, its share in the general expenses of the business.

Total Differential OF A FUNCTION OF TWO OR MORE VARIABLES. That arising from the simultaneous change in all the variables; sum of the partial differentials.

Total Reflection. See REFLECTION and CRITICAL ANGLE.

Total Refraction. When the plane of polarization of a beam of plane polarized light is perpendicular to its plane of incidence, and the angle of incidence is equal to the polarizing angle, no light will be reflected from the surface of a transparent medium, and we have a case of total refraction, in which the incident angle and the refracting angle are complements.

Totem. Class of objects closely and peculiarly related to clans, sexes, or individuals; often tattooed or printed on the person; *e.g.*, a snake, crow, or tree. This is tabooed, may not be killed or eaten, sometimes may not be touched or looked at. Some tribes think themselves to be descended from their totem.

Totem in Alaska.

Persons of the same totem are bound to mutual protection, and may not intermarry. Totemism is a sort of religion, and prevails in many parts of N. and S. America, Africa, Asia, and the islands, and may be traced among the ancient Egyptians. See TATTOOING.

Totila, d.552. Ostrogothic king 542. He took Rome 546, and ruled much of Italy.

Totipalmatæ. See STEGANOPODES.

Totipalmate. See STEGANI.

Totten, BENJAMIN J., U.S.N., 1806–1877. Commodore 1867. *Naval Text-book*, 1841–62.

Totten, JOSEPH GILBERT, U.S.A., 1788–1864. Col. and chief engineer 1838; Brig.-gen. 1863. His work was chiefly on harbors and ports.

Toucans (RHAMPHASTIDÆ). Scansorial birds of the American tropics (but not W. Indies), noted for their enormous but light bills, the walls of which average $\frac{1}{30}$ in.; the interior is spongy, filled with air, admitted from an antorbital chamber of the skull. The tongue is horny, slender, and brush-like; their considerable tails are hinged next the pelvis, so that they can throw them over their backs when resting, where the bills lie also during sleep. They are omnivorous, but prefer fruit, live in flocks in forests, and nest in hollow trees. There are over 50 species, in size from that of a robin to a crow, and colored from green to black, variegated with red, yellow and white. The largest is 2 ft. long, with bill 8 in. long and 3 in. high. The group is related to Woodpeckers and Parrots.

Toucey, ISAAC, 1796–1869. M.C. 1835–39; Gov. of Conn. 1846–47; U. S. Atty.-gen. 1848–49; U. S. Senator 1852–57; Sec. Navy 1857–61.

Touch, SENSATIONS OF. Changes of consciousness aroused by stimuli of contact or pressure upon the surface of the body. Touch is one of the skin senses, and must be distinguished from the TEMPERATURE (q.v.) sense. The fineness of the tactile sense varies greatly in different regions of the body (see SENSATION AREAS). The end organs of touch or pressure are small modified nerve-endings, known as corpuscles of various kinds, situated in the skin and directly connected with the great sensory nerves.

Touch-me-not. See JEWEL-WEED.

Touch-Money. Gold coins, pierced; given by order of Charles II. to persons touched by him, to be healed of King's Evil (scrofula). As 92,107 persons came 1661–82, and each received a gold coin, it became necessary to limit the patients to those who obtained a certificate from their parish minister. Specimens of the money are in many numismatic collections.

Touch-piece (time of Queen Anne).

Touch Paper. Paper steeped in saltpeter and dried. It ignites slowly and burns in sparks. Sometimes burned in a room to relieve asthma paroxysms. See MATCH.

Touchstone. See BASANITE.

Touchwood. Fungus (*Polyporus igniarius*) growing on trees; that which grows on the oak is most esteemed: also, the wood of the ash or willow which has undergone dry rot. It is much improved by wetting with potassium nitrate or chloride; used for tinder. See AMADOU.

Tougaloo University. Founded 1869 in Madison co., Miss., by American Missionary Association; for colored persons. It has 8 departments, 23 teachers, and nearly 400 students.

Toulmin, JOSHUA, 1740–1815. Unitarian pastor at Birmingham from 1804; biographer of Socinus, 1777. *Internal Evidences*, 1785; *Dissenters under William*, 1814.—His son, HENRY, 1767–1823, was pres. of Transylvania Univ. 1794–96, Sec. of State of Ky. 1796–1804, and U. S. District Judge for Miss. 1804. *Acts of Ky.*, 1802; *Laws of Ala.*, 1823.

Toulon. Fortified seaport and naval station of s. France, on the Mediterranean; scene of English defeats 1707 and 1744. In 1793 they held the town four months, and were expelled by Bonaparte. Pop., 1891, 74,144.

Toulouse. Ancient city of s. France, on the Garonne; capital of the Visigoths 412, of dukes of Aquitaine 611–761, and of its counts ab.920–1271; long center of Provençal culture; harried in Albigensian crusade (see RAYMOND). Its university was founded 1229. Its cathedral dates from 1096, but is mostly of later erection. The town has other old buildings, and extended commerce and manufactures. Here the British under Wellington defeated a French army under Soult, April 10, 1814. Pop., 1891, 149,791.

Tour, CHARLES AMADOR DE ST. ÉTIENNE, SIEUR DE LA, d. ab.1665. Commandant of Fort St. Louis at Cape Sable, Nova Scotia, 1630, where he repelled an attack by his father,

then in the English service; Lieut.-gen. of Acadia 1631, 1638, and 1648; at war 1641–45 with De Charnisé, whose widow he married 1653. His first wife was celebrated by Mrs. Catherwood in *The Lady of Fort St. John*, 1891.

Touraine. Old province of central France; annexed 1204.

Tourbillon. Rotating mass of fluid, whether of eddies in water or whirlwinds in the atmosphere; with some writers, American tornado.

Tourcoing. Manufacturing town of n. France, 10 m. n.e. of Lille. Pop., 1891, 65,477.

Tourgee, ALBION WINEGAR, b.1838. Judge N. C. Superior Court 1868–74; U. S. Consul at Bordeaux 1897. His novels, *A Fool's Errand*, 1879, *Bricks Without Straw*, 1880, and *Hot Plowshares*, 1883, deal with the South after the war. *War of the Standards*, 1896.

Tourjee, EBEN, b.1834. Founder of musical conservatories in R. I. and Boston; compiler of tune-books.

Tourmaline. Mineral of complex and variable chemical composition, and of wide range of color, though constant in hardness and crystalline form. It is a silicate, containing aluminium and boron, with one or more of the elements, magnesium, iron, calcium, sodium, potassium, and lithium. The clear-colored transparent varieties are prized as gems, or find use in optical experiments in the polarization of light. The common black variety is of no special value. It is found especially at Mt. Mica, Paris, Me.

Tourmaline Pincette. Small apparatus for producing and studying polarized light. It consists of two tourmalines cut parallel to the crystallographic axis, each fitted in a circular frame fastened to a spring, bent so as to form a handle and at the same time keep the disks in contact with each other. One of the tourmalines may be made to rotate relatively to the other, and so their axes may be placed either perpendicular or parallel to each other, thus intercepting or transmitting the polarized beam.

Tourmaline Tongs.

Tournament, or TOURNEY. Encounter of armed knights on horseback; public exhibition of skill and prowess, held usually on the invitation of some prince, and conducted under

Tournaments in honor of the entry of Queen Isabel into Paris.

strict rules; institution of the Middle Ages, which ended 1559 in France, with the death of Henry II. from an accident in the tilt. See JOUST.

Tournefort, JOSEPH PITTON DE, 1656–1708. Prof. Paris 1683. French botanist. *Elemens de botanique*, 1694; *Histoire des plantes*, 1698; *Institutiones rei herbariæ*, 1719; *Traité de la matière médicale*, 1717.

Tourneur, CYRIL, d.1626. English dramatist and poet. *Revenger's Tragedy*, 1607; *Atheist's Tragedy*, 1611.

Tourniquet. Instrument to control the circulation of the blood by means of compression, used chiefly to prevent loss of blood during an operation or after a wound involving an artery. It can be extemporized by using a handkerchief, in which a knot has been tied to be placed over the artery, tied loosely around the limb and twisted by a stick until sufficient compression is produced: this is known as the Spanish Windlass.

Touro, JUDAH, 1775–1854. Jewish philanthropist of New Orleans.

Tours. City of France, on the Loire, near the mouth of the Cher. It has large manufactures, especially of silks, though much less than before 1685. Near it Charles Martel defeated the Saracens 732. It was the ancient capital of the Turones, long of Touraine, and the seat of French government Sept.–Dec. 1870. Pop., 1891, 60,335.

Tours, BERTHOLD, b.1838. Dutch composer, in England since 1861.

Tourville, ANNE HILARION DE COTENTIN, COMTE DE, 1642–1701. French admiral 1689; victorious over English and Dutch

Tourville.

fleets in the Channel 1690, and near s.w. Portugal 1693; defeated off Cape La Hogue May 19–24, 1692.

Tousey, SINCLAIR, 1818–1887. Founder and pres. American News Co. 1864.

Toussaint, DIEUDONNÉ GABRIEL, 1717–1799. Prof. of Botany at Prague 1760; traveler in America. *Prodromus Floræ Mexicanæ*, 4 vols., 1773–77; *Bibliotheca botanic*, 1779.

Toussaint, FRANCOIS DOMINIQUE (L'OUVERTURE), 1743–1803. Haitian slave; Brig.-gen. 1794; Commander-in-chief 1796. He accepted the proposals of the French Republic, and by successful operations against the Spanish and English reduced n. Haiti to the control of France; suppressed the insurrection of Rigaud 1797; sent the French Commissioner home for favoring the slave trade; assumed the civil government in name of the Directory Nov. 1800, and ruled with skill and success for a time. In Nov. 1801, Napoleon sent 66 warships and 30,000 veterans to Haiti. T. defended himself for some months in the mountains, but surrendered on assurances of personal immunity and the liberty of the negroes; was seized, and taken to France, where he died.

Tow. Waste fibers after the carding of flax and hemp, which are made into bags and yarn. Some kinds are called codilla.

Tower, CHARLEMAGNE, LL.D., b. 1848 in Phila. U. S. Minister to Austria 1897. *Lafayette in American Revolution*, 1895.

Tower, ZEALOUS BATES, U.S.A., b.1819. Major of engineers 1861; Brig.-gen. U. S. Vols. 1861–66, serving in Va. and the West; engaged on harbor defenses till 1883; Col. 1874.

Tower. See BELFRY, CAMPANILE, KEEP, LEANING TOWERS, ROUND TOWERS, ROOD TOWER, SPIRE, STEEPLE, and the various articles on the different styles of Architecture.

Tower Bridge. Over the Thames in London; built in 1893; having two high towers with a permanent roadway con-

necting their tops, while a lower roadway on the level of the street can be opened to allow the passage of vessels. Its length

Tower Bridge.

is 940 ft., the span between towers 200 ft., and the height of the upper roadway above the water 135 ft. Access to the upper footway is furnished by elevators in the towers.

Tower Hamlets. Parliamentary borough in e. London, comprising 7 divisions; namely, Whitechapel, St. George, Limehouse, Bow and Bromley, Poplar, Mile End, and Stepney. Originally they were outside the jurisdiction of London. Pop. 451,900.

Tower-Mustard. *Arabis glabra.* Herb of the natural family *Cruciferæ*, native of the n. temperate zone.

Tower of London. See LONDON, TOWER OF.

Towers of Silence. At Bombay, and elsewhere in India and Persia; used by the Parsees for the disposition of dead bodies; 20 to 30 ft. high and 60 to 90 ft. in diameter. As the burial or burning of the body would corrupt the elements, it is placed where vultures strip the flesh from the bones. See DISPOSAL OF THE DEAD.

Towianski, ANDREAS, 1799–1878. Polish enthusiast, revered as a prophet and Messiah by Mickiewicz and others; driven from Paris 1842, and later from Rome.

Towle, GEORGE MAKEPEACE, 1848–1893. American historical writer. *Heroes of History*, 6 vols., 1878–82.

Towler, JOHN, M.D., b.1811 in England. Prof. Hobart Coll. 1850–82; tr. German poems; writer on photography.

Town. Territorial subdivision of the State. The term is used in many senses. According to Coke, a place could not be a town unless it had had a church. It sometimes designates a thickly settled locality, at others a political subdivision. In the U. S., the meaning often depends upon statutory provisions. In New England it is a township, or division of a county.

Town, SALEM, 1779–1864. American author of schoolbooks. *Derivative Words*, 1830.

Town Council. Governing body of a municipality. See MUNICIPAL CORPORATIONS.

Townley, CHARLES, 1737–1805. English collector of Greek and Roman statues, coins, etc., now in British Museum.

Townley, JAMES, 1774–1833. English Wesleyan. *Illustrations of Biblical Literature*, 1821.

Towns, GEORGE WASHINGTON BONAPARTE, 1801–1854. M.C. 1835–39 and 1845–47; Gov. of Ga. 1847–51.

Townsend, EDWARD DAVIS, U.S.A., b.1817. Col. 1861; chief executive officer of War Dept. 1861–65.

Townsend, EDWARD W., b. 1855. American journalist and author. *Chimmie Fadden*, 1895; *A Daughter of the Tenements*, 1895.

Townsend, GEORGE ALFRED ("GATH"), b.1841. American journalist and novelist. *Tales of the Chesapeake*, 1880; *Katy of Katoctin*, 1886; *Mrs. Reynolds and Hamilton*, 1890.

Townsend, LUTHER TRACY, D.D., b.1836. Prof. Boston Univ. 1867–93. *Sword and Garment*, 1871; *Credo*, 1873; *Theology*, 1893.

Townshend, CHARLES, VISCOUNT, 1674–1738. Privy Councilor 1707–12; Envoy to Holland 1709–10; Sec. of State 1714–16 and 1721–30.—His grandson, GEORGE, 1724–1807, became M.P. 1747; was Brig.-gen. in Canada 1759, succeeding Wolfe at Quebec; served in Portugal 1762; was Lord-lieut. of Ireland 1767–72, and was made Marquis 1787.—His brother, CHARLES, 1725–1767, became M.P. 1747, Privy Councilor 1757, Sec. of War 1761, and Chancellor of the Exchequer 1766. He was noted as a wit and orator, had more ability than principle, and brought in the system of colonial taxation which led to the American Revolution.

Townshend, CHAUNCY HARE, 1798–1868. English poet and writer on mesmerism. *Religious Opinions*, 1869.

Township. Division of a county in some American States. See TOWN.

Town Truss. Bridge truss invented 1820 by Ithiel Town, having its chords and webbing made of planks fastened together with treenails. It was used for short spans until ab.1850, but

Town's Bridge.

is now rarely built. The timbers or chords take up the thrust strain and no lateral pressure is exerted against the piers or abutments. The slat pieces are arranged parallel at an angle of 45° to a horizontal line.

Towton. In Yorkshire; site of battle March 29, 1461, fatal to the Lancastrians, of whom more than 37,000 fell.

Toxæmia. Illness produced by poisoning the blood, either by the products of the body-cells that have not been thrown off from the system, or by the toxins due to the growth of mirco-organisms.

Toxicology. Science which investigates the nature of poisons, their effects upon animal life, the method of their detection either from the symptoms or by post mortem examination, and the treatment of the person poisoned.

Toxodon. S. American late Tertiary fossil, 5-toed, ungulate, and as large as a rhinoceros. Its legs and feet were elephant-like; the nasal openings were situated as in *Sirenia:* the incisors were rodent-like, the molars edentate-like, and other parts of the skeleton have rhinocerotic characters.

Toxodontia. Suborder of *Taxeopoda*, comprising certain large extinct Mammals of the Tertiary deposits of S. America. Some forms included here are by certain authors referred to the *Hyracoidea*. Others have affinities with Ungulates, some with Rodents, and others with Edentates. The teeth grow from persistent pulps: the grinders are flat-crowned and crescentic in cross-section, the convexity being outward. There is a wide diastema and small canines. See TOXODON.

Toxoglossa. Group of ctenobranchiate Gastropods, having siphon and a radula furnished with two rows of long hooks. *Conus* is an example.

Toy, CRAWFORD HOWELL, D.D., LL.D., b.1836 in Va. Prof. of Hebrew at Greenville, S. C., and Louisville, Ky., 1869–79, and since 1880 at Harvard. *Religion of Israel*, 1882; *Quotations in N.T.*, 1884; *Judaism and Christianity*, 1890.

Toys. Children's playthings and articles of all sorts designed for amusement to children. France, Germany, and Switzerland are the chief producers. See DOLL.

Toynbee, ARNOLD, 1852–1883. Lay missionary in London. *Industrial Revolution*, 1884. T. Hall, founded 1885 in Whitechapel for the improvement of the poor, and carried on by Oxford and Cambridge men, is his memorial. It has been the model for sundry college settlements and the like in American cities.

Trabeculæ. In Vegetable Anatomy, ducts provided with projections from their walls nearly or entirely across their cavities.

Trabeculæ OF SPONGES. Cross beams of tissue and of spicule elements, uniting the radial tubes (or side buds) of the paragastric cavity of sponges. They consist of mesoderm, are covered by ectoderm, and are therefore to be considered as really outside the body of the true sponge-wall.

Trabeculæ Cranii. Two bars of cartilage joined and shaped like a lyre, which lie in front of the notochord and em-

brace the pituitary body in vertebrate embryos. By their extensions upward they form the ethmoidal and nasal bones in front and the sphenoidal bones behind. See CARTILAGINOUS CRANIUM.

Trace. Line in which one surface intersects another; usually, intersection of a given surface with one of the co-ordinate planes.

Tracery. In Gothic Architecture, the intersection in various ways of the mullions in the head of a window, the subdivision of groined vaults, etc. See FLAMBOYANT, DECORATED STYLE, and PERPENDICULAR GOTHIC.

Trachea. Main air passage of the lungs; a cylindrical tube forming the front part of the neck, connecting the larynx above with the bronchi below; the wind-pipe. See RESPIRATION, ORGANS OF.

Tracheæ. Breathing tubes of Insects, etc. They consist of a main tube (whose walls are strengthened by the presence of a chitinous spiral thread) on each side, connected with the spiracles, and sending finer branches to all the important parts. The air is brought to the tissues by this arrangement, much as the blood of animals is distributed to their organs and tissues. See DUCTS.

Tracheata. Insects, in a broad sense; Arthropods that breathe by tracheæ, as HEXAPODS, MYRIAPODS, and PERIPATUS (q.v.).

Tracheids. Ordinary wood-cells of prosenchymatous vegetable tissue; elongated cells, closed at both ends; commonly, only those whose walls are pitted.

Trachelium. Neck or space immediately below the capital in the Roman orders.

Tracheopnoa. Division of Arthropods, including the *Arachnoidea*, *Hexapoda*, and *Myriapoda*.

Tracheotomy. Strictly a section of the walls of the trachea, but as usually employed it includes all the operations for cutting through the neck into the air-passage to the lungs. The operation is indicated when there is danger of suffocation, to supply air through the opening, or to remove a foreign body that cannot be reached through the mouth.

Trachoma. Prolific source of blindness through its results. It is the true granular lids, which by the scratching on the cornea causes irritation, with abnormal development of blood-vessels, and opacity (pannus). It is a disease largely due to the vitiated air and unhygienic surroundings consequent upon the congested parts of cities, and is communicable to the eyes of those living in a better environment. At the start, the mucous membrane is inflamed, and contains two or three or more translucent granules, resembling sago grains. No domestic remedy is of use.

Trachomedusæ. Group of *Hydromedusæ*, of which the *Geryonidæ* are typical. See TRACHYMEDUSÆ.

Trachymedusæ (TRACHYLINÆ). Suborder of the *Hydromedusæ*, including medusæ which have no asexual, hydroid stage, the medusæ developing from the egg by direct metamorphosis. They have a firm umbrella, supported by cartilaginous ridges, with stiff solid tentacles. The families included are: *Æginidæ*, *Geryonidæ*, *Trachynemidæ*. They fall into two groups, NARCOMEDUSÆ and TRACHOMEDUSÆ (q.v.).

Trachynemidæ. Family of *Trachymedusæ*, having stiff marginal tentacles nearly motionless. The generative organs are on the eight radial canals.

Trachyte. Light-colored eruptive rock, consisting essentially of crystalline feldspar, though quartz may sometimes be also present. It is one of the typical acidic lavas, standing in marked contrast to the basic lava, basalt.

Tracing Cloth. Transparent cloth used for drawing, particularly for copying drawings.

Track Athletics. Races on the cinder track and other sports connected with these, as broad and high jumping, pole vaulting, hammer-throwing and shot-putting. Certain points are usually awarded for victory in each of the contests, and the sum total declares the winner, when different teams, clubs, or organizations are engaged. When individuals contend for an all-round championship, only a few events are used, and a percentage based upon what is considered high performance is used to determine the winner. The first appearance of track athletics as an organized institution was at Oxford. Contests were soon inaugurated between Oxford and Cambridge. Some years later, as a sort of side show to the intercollegiate boat race in the U. S., running races were held, which developed later into the Mott Haven games.

Track Drill. Drill for making holes in the web of a railroad rail while in position in the track. The drill is worked

Track Drill.

with a ratchet and fastened to iron arms whose ends are bent in such a manner as to fit the flange of the rail, as shown in cut.

Tractarianism. Movement beginning at Oxford with Newman, Pusey, Keble, and others, for exalting the Catholic and disowning the Protestant side of Anglicanism; represented in *Tracts for the Times*, 1833–41. Its results were widespread, various, and momentous.

Tractellum. Opposite of pulsellum; flagellum which by a screw-like motion drags the cell to which it is attached after it. This sort is possessed by nearly all the *Infusoria flagellata*.

Traction. Force required to pull a load on a street pavement or railroad; usually measured in pounds per ton. Thus on a macadam road ab. 100 lbs. are required to pull one ton. The force of traction is larger at the moment of starting than at slow velocities, but at high velocities it rapidly increases. It is greater for small wheels than for large ones.

Traction Engine. See ROAD LOCOMOTIVE and TRACTION OF LOCOMOTIVES.

Traction of Horses. Force which a horse can exert in pulling a load on a horizontal road. This diminishes as his speed increases, being ab. 250 lbs. at 1 m. per hour, 125 at 2 m., 50 at 5 m., and so on.

Traction of Locomotives. On a level railroad track at common velocities a LOCOMOTIVE (q.v.) must pull 4 to 8 lbs. for each ton of train load. This coefficient of traction becomes greater for very low and for high speeds.

Tractrix. Path of the second particle when two particles are attached to a string and rest on a rough horizontal plane, and, starting with the string taut, one of them moves in a straight line at right angles to the initial position of the string, dragging the other after it. If the initial position of the string be in the axis of Y and the first particle be at the origin, the differential equation of the path of P will be

$$dx = \pm \frac{(a^2-y^2)^{\frac{1}{2}}dy}{y}$$

in which a is the length of the string. Integrating this, we get for the rectangular equation of the curve

$$X = -(a^2-y^2)^{\frac{1}{2}} + a \log \frac{a+(a^2-y^2)^{\frac{1}{2}}}{y}.$$

The intrinsic equation is easily shown to be $S = a \log \sec \tau$, in which S is measured from the starting point, and τ is the angle the string makes with the ordinate of P. Involute of the Catenary.

Tract Societies. Anticipated by the Society for Promoting Christian Knowledge, formed by Anglicans 1701, and by a similar one, undenominational, 1750. Hannah More, 1790, and a Scottish society, 1793, were workers in this field. The Religious Tract Society, founded in London 1799, has issued near 19,000 works in above 3,000,000,000 copies and 212 languages. Societies were formed in New York 1812 and Boston 1814; these were merged in the American Tract Society, organized 1825. This has circulated near 9,000 tracts, books, papers, etc., in vast quantities, largely through colporteurs. Similar societies, general or denominational, exist in almost every Christian land, and in India, China, and Africa.

Tracy, ALEXANDRE DE PROUVILLE, MARQUIS DE, 1603–1670. French general, Viceroy of Canada 1665–67. He subdued the Iroquois and Mohawks.

Tracy, Antoine Louis Charles Destutt, Comte de, 1754–1836. French metaphysician, of the school of Condillac; Senator and Academician. *Logique*, 1805: *La Volonté*, 1815; *Idéologie*, 4 vols., 1817–18; *Montesquieu*, 1828.

Tracy, Benjamin Franklin, b.1830. U. S. Dist.-atty. for e. N. Y. 1866–73; Justice N. Y. Court of Appeals 1881–83; Sec. Navy 1889–93.

Tracy, Joseph, D.D., 1794–1874. Sec. Mass. Colonization Society from 1835. *Great Awakening*, 1842; *Hist. A.B.C.F.M.*, 1842.

Tracy, Roger Sherman, b.1841. American writer on sanitation.

Tracy, Uriah, 1755–1807. M.C. from Conn. 1793–96; U. S. Senator from 1796.

Trade, Board of. See Board of Trade.

Trade Capital. That from which a money income is derived, including all those external commodities which the owner uses in his trade, both for direct sale and for the production of goods for sale.

Trade Cumulus. Small detached cumulus of uniform size and shape, characteristic of the trade-wind regions in mid-ocean.

Trade Dollar. Minted in the U. S. under the act of 1873 for use in e. Asia; not coined since 1883; never legal tender. It weighed 420 grs. and contained 378 grs. of silver. See Dollar.

Trade-Mark. That by which an owner's wares are known in trade. Its objects are to protect him from competition with inferior articles, and to protect the public from imposition. It may consist of a token, letter, sign, or seal. In many countries they are protected by registration and statute.

Trade Risks. Those which are common to all business establishments, as fluctuations in the markets for raw materials and for finished goods, sudden changes of fashion, new inventions, and the entrance of rivals into the field.

Tradescant, John, ab.1570–1638. Holland traveler and naturalist who traveled extensively in Europe, Asia Minor and n. Africa. He established a botanic garden at s. Lambeth, Eng.—His son, John, 1608–1662, added largely to the collection, which he presented to E. Ashmole, and which became the nucleus of the Ashmolean Museum, which was presented to Oxford Univ. 1682.

Trade Schools. See Industrial Training Schools and Manual Training.

Trades Councils. Organizations of delegates from the laborers in any city or other locality: so called usually in England; in America known as Central Labor Unions.

Trades-Union Congresses. Annual gatherings in England, since 1868, of delegates from various local, national, and international trades unions, and from trades councils, for the purpose of concerting united action on the part of the organized working classes.

Trades Unions. Organizations of laborers or artisans in any one industry, with the object of preserving or gaining advantageous wages, hours and other conditions of labor, and of taking such other united action as may seem desirable.

Trade-Wind Dust. Dust collected on the rigging of vessels in the region of trade winds. According to Ehrenberg, it consists of siliceous diatoms from the interior of the African continent.

Trade Winds. Winds which in the torrid zone, 30° either side of the equator, blow from the same quarter throughout the year, n. of the equator from N.E. to S.W., s. of it from S.E. to N.W. They are caused by the combination of the earth's velocity of rotation with that of the currents of air from the poles toward the equator.

Direction of the Trade Winds.

Tradition. Body of doctrine supposed to have been handed down orally from the Apostles, apart from books; defined by Vincent of Lerins 434 as that which was received always, everywhere, and by all. The R.C. Ch. has always laid great stress on this: Protestants rely mainly on the written Word.

Traditores. Early Christians, who, under threats, surrendered copies of the Scriptures to the Roman officers to be burned. Serious controversies occurred as to the measure of discipline deserved by them.

Traducianism. Doctrine that souls, like bodies, come through ancestry and parentage; held by several Fathers and some modern divines; opposed to the opinion that each soul is separately created.

Trafalgar. Cape on s. coast of Spain, w. of Strait of Gibraltar; scene of the victory of 33 British vessels, Oct. 21, 1808, over 40 French and Spanish ships, of which 20 were lost, and their three admirals taken. Nelson was slain, and near 1,600 of his men killed or wounded.

Tragacanth. Inodorous, nearly insipid, whitish, semi-transparent mucilaginous substance, obtained from several low, spiny shrubs of the genus *Astragalus* in Asia Minor and neighboring islands. The gum is the transformed cell of the pith and medullary ray and not a secretion of the sap. It is used as a demulcent and emollient.

Tragedy. Most serious form of dramatic composition, ending usually in the chief character's death: developed in Greece chiefly by Æschylus, Sophocles, and Euripides; less prominent among the Romans; revived in France and England ab.1540–62, and practiced most successfully by Shakespeare. It forms an essential and honored part of every modern literature.

Tragulina, or Schizopoda. Comprising the family *Tragulinidæ* or *Tragulidæ* (Chevrotains), of the suborder *Selenodontia*, characterized by absence of horns in both sexes, and presence of canines in both jaws, those in the males form-

Kanchil (*Tragulus kanchil*).

ing tusks. The psalterium is absent; the placenta is diffuse; a cannon-bone is absent or formed late in life; and the second and fifth digits, though small, are present. They are small animals of W. Africa and India, often mistaken for Musk Deer.

Trailing. Plants which bend over and run along on the ground without striking root.

Trailing Arbutus. See Arbutus, Trailing.

Trailing Switch. One so arranged that a train passes through it in a direction away from its points. See Facing Switch.

Traill, Catherine Parr (Strickland), b. 1802, m. 1832. Writer on Canada.

Traill, Robert, d.1847. Irish translator of Josephus, 1846.

Traill, Thomas Stewart, M.D., 1782–1862. Prof. Edinburgh from 1832; ed. *Encyc. Britannica*, 8th ed., 1853–61. *Medical Jurisprudence*, 1837.

Train, Elizabeth Phipps, b. ab.1860. Novelist of Mass. *Autobiography of a Professional Beauty*, 1896. Her *Social Highwayman*, 1895, was successfully dramatized.

Train, George Francis, b.1829. American traveler, lecturer, and writer. Noted of late years for eccentricity. *Union Speeches in England*, 4 vols., 1862.

Training Ship. See Nautical Schools.

Trainshed. Roofed part of a railroad station where trains arrive and depart. The Grand Central Station in New York has a main trainshed 200 ft. in span, 600 ft. long, 96 ft. high, with 12 tracks, and an annex 96 ft. span, 650 ft. long, 22½ ft. high, with 5 tracks. At St. Louis the trainshed is roofed with 5 spans, having a total width of 601 ft. and a length of 700 ft., covering 30 tracks. The Pa. R.R. trainshed at Jersey City is 256 ft. in span, 653 ft. long, 86 ft. high, with 12 tracks. The Phila. & Reading R.R. trainshed at Phila. is 266 ft. span, 507 ft. long, 88 ft. high, and has 13 tracks. The Pa. R.R. trainshed at Phila. is 304 ft. in span, 598 ft. long, 100 ft. high, with 16 tracks; this is the largest span in the world.

Traitor. One who betrays his country to its enemies, violates his allegiance, surrenders his command or the position intrusted to his defense, for the purposes of treason, or one who levies war or aids an enemy in acts of war against his country.

Trajan, MARCUS ULPIUS, 52–117. Roman Consul 91, Emperor 98; eminent as general, financier, and administrator. He twice subdued the Dacians, conquered most of the Parthian

Trajan.

empire 115–116, added Arabia Petræa to the empire, founded colonies, built roads, bridges, aqueducts, libraries, a theater, and a forum. Most of his conquests were afterward relinquished.

Trajan's Wall. 1. In Roumania; ab. 50 m. long; from the Danube to the Black Sea; built 377 by an officer of Valens, against the Visigoths. 2. Similar wall n. of the Danube, from the Pruth to the Black Sea.

Trajectory. Path described by the center of mass of a projectile after leaving the muzzle of the gun. In air it is a complex curve; in vacuo it is a plane curve, being a portion of an ellipse, having the center of the earth at the further focus. Under the supposition of the action line of gravity being always parallel to the vertical it is assumed to be in vacuo a portion of a parabola.

Trall, RUSSELL THACHER, 1812–1877. American medical writer, especially on hydropathy.

Trama. Dense layers in the pileus of *Fungi*, as toadstools, etc., of the order *Hymenomycetes*, which bear the hymenium.

Tramps. See VAGRANTS and VAGRANCY.

Tramway. Horse railroad, or one whose motive power is not steam, as a cable or electric road; so called chiefly in England. Street railways were first laid in New York 1831, in Paris 1853. See STREET RAILWAYS.

Tramway, AERIAL. This consists of two strong wire ropes, moving in opposite directions, supported in a cast-iron shoe on either end of a cross-bar, fastened to the top of a standard. The latter are placed from 40 to 100 yards apart; across rivers and deep valleys the span may be 600 yards. The rope ends are attached to chains, passing over pulleys and stretched by balance weights. The carriers consist of a small truck, with two grooved rollers which fit the rope; the bucket is suspended from the truck by a hanger, at the bottom of which is the grip for the hauling rope. The latter is an endless rope below the carrying ropes, worked by a grooved pulley and a motor at the station; it is kept taut by counterbalance weights. The stations should be not more than 6,000 yards apart, but two sections could be worked from an intermediate station. The capacity is about 80 tons per hour in both directions. This form of transportation is used to convey ores from the mines to the railroad or shipping, or to the works, and also about the works. There is a line from an iron mine in Spain 17,000 yards long. Their cost of erection and working is small, they are independent of atmospheric conditions and formation of the ground, and have great facility for loading and unloading.

Trance. Form of CATALEPSY (q.v.), wherein there is a prolonged condition of abnormal sleep, from which, ordinarily, the person cannot be aroused, the breathing is almost suspended and sensation is abolished. It is accompanied by a depressed condition of the vital functions. The sleep may last through a period of years with occasional brief returns to consciousness. It is frequently closely associated with hysteria, and is, apparently, a spontaneous going into the mesmeric state.

Tranquillus Suetonius. See SUETONIUS.

Transalpine. Beyond the Alps, the point of view being usually Roman.

Transcaspian Railway. From the Caspian Sea e. to Tashkend in Turkestan; opened to Merv 1886, to Samarkand 1888.

Transcaucasia. Region s. of the Caucasus, and n. of Turkey and Persia, from the Black Sea to the Caspian; held by Russia. Area 91,346 sq. m.; pop., 1890, 5,011,555.

Transcendental Curves. Formerly defined as those whose equations involved transcendental quantities; more recently, as those whose intersections with a right line are without limit.

Transcendental Functions. Those which require for their expression operations other than the ordinary operations of algebra; viz., addition, subtraction, multiplication, division, involution and evolution. They are classified either from their form, as Logarithmic, Exponential, etc., or from their substance, as Trigonometric.

Transcendentalism. 1. Philosophy and philosophic method of Kant. 2. Platonism as interpreted and applied by Emerson, Alcott, and their supposed followers; popular in New England about 1840, and sometimes carried to extremes.

Transcendental Quantities. Those involving operations other than the ordinary algebraic operations, addition, etc.

Transept. Transverse portion of a cruciform church. It is one of the arms projecting each way on the side of the stem of the cross, called the nave. The projections on both sides are frequently dissimilar in style and plan, and are generally placed north and south. Large churches have several transepts. See CROSS AISLE and NAVE.

Transfer of Heat. Where two bodies of unequal temperature are brought together they tend to equalize their amounts of heat, the hotter transferring its heat to the colder. Such transfer is done by radiation, by contact or by conduction; of the latter, convection and circulation are phenomena in fluids. The formula for radiation is: $Q=C(a^t-1)$ in metric units. For contact it is of the form $Q^1=C^1t^{1.233}$, in which Q is the number of metric calories emitted from a unit of surface in a unit of time; C is a constant, dependent on the surface of the body; a is the constant 1.0077 for many bodies, and t is the excess of temperature in Cent. degrees of the radiant over the absorbent body. Similarly, Q^1=the quantity of calories abstracted in a unit of time from a unit of surface, C^1 a constant varying with the form of the absorbing or heating surface, and t the difference of temperature of the two materials. The above contact formula is the one generally used for air. The relative radiating power of substances was determined by Leslie to be as follows:

Lamp black	100	Graphite	75
White lead	100	Tarnished lead	45
Resin	96	Mercury	20
Ordinary white glass	90	Polished iron	15
India ink	88	Tin, gold, silver, copper, etc	12
Ice	85		
Mica	80		

The conductivity of heat in various metals is shown in the following table:

Silver	100.00	Steel	11.60
Copper	73.60	Lead	8.5
Gold	53.20	Platinum	8.4
Tin	14.50	Rose's Alloy	2.8
Iron	11.90	Bismuth	1.8

Transfiguration. Divine splendor, on the Holy Mount, in which Jesus appeared before Peter, James and John, in converse with Moses, representing the Law, and Elijah, the Prophets. It is commemorated Aug. 6.

Transformation of Co-ordinates. Change of the reference of position from one system of co-ordinates to

another, or from one set of axes to another in the same system.

Transformation of Equations. Change of form without destroying the equality.

Transformer. See CONVERTER.

Transfusion of Blood. In cases of extreme debility, more especially when produced by hæmorrhage, fresh blood has been injected into the veins, frequently with happy results. Sometimes the blood has been transferred directly from the artery of the well to the vein of the ill, through a tube of rubber. At others, the blood is caught in a bowl and then injected, either at once before coagulation begins, or after removing the fibrin by whipping. The blood of a lamb has frequently been used. A solution of salt having the same density as the blood, normal salt solution, is probably equally efficacious, and has the advantage that it can be prepared and kept for emergencies.

Transgressions. Actions opposed to the dictates of the moral law.

Transit. See THEODOLITE.

Transit, SOLAR. See SOLAR TRANSIT.

Transit Instrument. Telescope attached to an axis perpendicularly; when revolved about this axis, the line of collimation describes a plane intersecting the celestial sphere in a great circle. It is ordinarily adjusted so that this circle shall be the meridian, and is used for determining the instant of the star's transit over that circle. This gives the data for determining either the clock correction, or the star's right ascension.

Transit Instrument.

Transition. So-called primitive rocks showing evidences of stratification and containing a few fossils. These have been distributed through the geological column according to the evidence of their organic remains, and the term, first used by Werner, is now obsolete.

Transition Tint. Purplish color seen in Soleil's SACCHARIMETER (q.v.) when the quartz wedges are in a position to give the maximum sensibility; so called because a smaller amount of rotation is required to produce a difference in the color of the two halves of the biquartz from that required for any other tint.

Transits OF MERCURY AND VENUS. These happen when the conjunction of the planet with the sun takes place near the

Mercury's Transit Nov. 5, 1868.

Venus during its Transit in 1709.

planet's node. The limiting distance is not constant, owing to eccentricity of the orbits; in the case of Mercury it is about 2° 10′, with Venus 1° 45′. The actual interval between two transits of Mercury at the same node is usually 13 years, occurring in May. These are ordinarily followed in 3½ years by a transit at the other node in November. The last pair of transits were May 9, 1891, and Nov. 10, 1894. The intervals for Venus at the same node are 8 and 235 years; the transits at one node occur in June, at the other in December. Some of the actual dates are:

Dec. 7, 1631,	June 5, 1761,
4, 1639,	3, 1769,
9, 1874,	8, 2004,
6, 1882,	6, 2012.

Translation. 1. Removal of Enoch and Elijah to heaven without death. 2. Transfer of the relics of a saint. 3. Transfer of a bishop to a new see.

Translation. Rendering into one language the words of another, or the ideas conveyed thereby; practiced largely, since the Revival of Learning, in all civilized lands; important as bringing within reach of all readers whatever is of value in ancient or foreign literatures.

Translation. See MOTION.

Transleithania. Hungary and other parts of the Austrian empire e. of the Leitha.

Translucent. Capable of transmitting light irregularly, as does thin paper; distinguished from TRANSPARENT (q.v.).

Transmigration. See METEMPSYCHOSIS.

Transmission of Power. See POWER TRANSMISSION.

Transmutation of Metals. Alchemy, or the art of transmuting base metals into gold, has been regarded as the parent of modern chemistry. Its basis was the widespread notion of the fundamental identity of matter, and that its individual properties were due to a separable formative force. The alchemists sought to discover a universal solvent, the philosopher's stone, by which this primal matter might be resolved. Its pursuit was bound up with that for the elixir of life, and flourished not only in Mediæval Europe, but especially in China, where it was one of the chief objects of the Taoist patriarchs. See ALCHEMY.

Trans-Neptunian Planets. Possible planets whose orbits are outside that of Neptune. There are some slight indications pointing to the existence of one or two such planets.

Transom. Beam or beams across a window, to divide it into two or more lights in height; the most ancient being from the Early English style. A window having no transom was formerly called a clearstory window.—Also, the cross-bar separating a door from the fanlight above it.

Transpadane Republic. See CISALPINE REPUBLIC.

Transparent. Bodies capable of transmitting luminous rays in such a way that objects can be clearly seen through the substance. See TRANSLUCENT.

Transpiration. Exhalation by plants of watery vapor through the epidermis and its various appendages and modifications.

Transpiration. Passage of a gas driven under pressure through long capillary tubes, or through a porous substance which offers considerable resistance. The action is best studied by forcing the gas through long capillary tubes; the velocity is given by the formula, $v=k.\frac{p\rho}{l}$, in which p is the pressure, ρ the density of the gas, l the length of the tube, and k a certain constant, depending on the various conditions and on the nature of the gas. K is called the coefficient of transpiration.

Transplanting. The bodily removing of a plant or tree from one place to another. It is most practicable in young plants. Frequent transplanting makes young fruit trees more fruitful. Large trees may be removed successfully if enough fibrous roots are allowed to remain uninjured; quick growing and free-rooting trees being most easily transplanted. Evergreens are best transplanted in the spring and deciduous trees after the leaf fall. Securing the tree against wind movement is particuluarly important after transplanting.

Transportation. Process of moving commodities from places in which they are in less demand to places where they are of more value. It is, economically speaking, as truly a productive process as agriculture or manufacturing.

Transportation. Removal of convicts to a distant penal settlement, usually beyond sea; long practiced by England, abolished 1867, and still by France (Guiana and New Caledonia), Russia (Siberia), and some other governments.

Transposing. In Music, the changing of music in performance from the key in which it is written to another key.

Transposition. A quantity is transposed when in an equation (or inequation) it is taken from one member and placed in the other. This change requires a change in the algebraic sign.

Transubstantiation. In R.C. theology, transmutation held to be effected by the Eucharistic consecration, after which the substance of bread and wine is thought to be replaced by the body and blood, soul and divinity of Christ, the accidents, that is, the physical properties and appearances, or species, alone remaining, so that the whole Christ is received under either species, or the least particle of each. See CONCOMITANCE.

Transvaal, or SOUTH AFRICAN REPUBLIC. Inland government of s. Africa, n.e. of the Orange Free State. The country consists mainly of plains, well watered and favorable for raising cattle. Area ab. 114,000 sq. m. Capital, Pretoria. The country was settled 1833–37 from Cape Colony by Dutch

Traveling in the Transvaal.

Boers who govern it, though under English suzerainty. Fresh gold fields were discovered 1886, and have attracted English and Americans, who are allowed no share in the government. Discontent thence arising led to Dr. Jameson's raid 1896. Pop., 1890, 120,000, since greatly increased; natives ab. 560,000.

Transversal. Straight line cutting a system of lines.

Transylvania. S.e. part of Hungary; anciently Dacia; conquered by Trajan 107; held by various races; made an Austrian principality 1690–1867. Area 21,518 sq. m.; pop., 1890, 2,247,049, chiefly Roumanian and Magyar.

Trap. Device for catching and separating water from steam in a current of the mixture, allowing the water to be drawn off without escape of the steam. There are two types, lifting or return-traps, and non-lifting or separating. Non-lifting simply catch and hold water, or else allow it to pass, but close when steam gets at them. The first kind are simply vessels into which the supply enters near the top, and which have a relatively large area, so that water falls to the bottom in the reduction of speed of flow, and steam goes out at an outlet at the highest point. The second kind have an expanding diaphragm filled with an expanding fluid (glycerin or a mixture) which, when cooled by a protecting body of water, allows a valve to open through which the water is blown by pressure. When the water is gone, the steam expands the imprisoned fluid, and closes the outlet. Of similar type are the float traps, in which a hollow cup in a pot is floated up by accumulated water, and opens a valve through which the water is blown. In the second great class, the traps catch the water, and deliver it on a higher level than that at which they stand or from which the water comes; they are used in heating systems where the boiler is higher than the lowest pipes of the system. The best is a vessel with a float. Water, lifting that float, opens the steam-valve of a pump which sucks from the vessel until the float drops and shuts off steam. Without a pump, the trap stands at sufficient elevation to allow the water to be discharged by gravity when pressure is equalized. Three pipes enter the trap, two at the top, one at the bottom. Water enters through one of the upper pipes, and lifts the float. The rise of the float closes the upper inlet pipe, and opens a valve in the second upper pipe which lets live steam in; the water is displaced through a check-valve in the bottom pipe. The fall of the float as the trap empties closes the live steam inlet and opens the water inlet; the vapor condensing allows the pot again to be filled to the tripping point. Instead of a float, the whole pot may be counterweighted, when its rise and fall will operate the valves as it empties and fills.

Steam Traps.

Trap. Several kinds of heavy, dark-colored rocks of igneous origin, occurring in dykes and other analogous forms.

Trapani. Seaport of n.w. Sicily, anciently Drapanura; scene of a Carthaginian victory over a Roman fleet 249 B.C. It was of naval and military importance ab.1550, and has a good trade. Pop. ab. 47,000.

Trap-Ball. One of the oldest ball games. Strutt places it before cricket and as early as ab.1325. It is played with a trap, bat, and ball. The trap is somewhat like a low shoe in shape, and has a pivoted tongue upon which the ball rests.

Trapezium. Quadrilateral having no parallel sides.

Trapezoid. Quadrilateral having only two sides parallel. Its area equals the half sum of the parallel sides multiplied by the distance between them.

Trapezuntios, GEORGIOS, 1395–1484. Cretan scholar, in Italy from 1430; Latin teacher and tr. of Greek works.

Trapp, JOHN, 1601–1669. Anglican author of commentaries on the Scriptures, 1646–56, repub. 1866–68.

Trappists. Austere French monastic order, founded 1140, reformed by De Rancé 1660. They have houses at Gethsemane, Ky., near Dubuque, Iowa, and at Tracadie, Nova Scotia.

Traquair, RAMSEY HEATLEY, b.1840. Prof. of Paleontology and director of the museum in Univ. Edinburgh; chiefly engaged in the study of fossil fishes.

Trasimeno, or TRASIMENUS. See PERUGIA.

Trask, GEORGE, 1798–1875. New England crusader against intemperance and the use of tobacco.

Trask, WILLIAM BLAKE, b.1812. New England antiquarian and genealogist.

Trattinick, LEOPOLD, 1764–1849. Curator of the Herbarium in Vienna. *Fungi Austriaci*, 1804–6; *Archiv der Gewächskunde*, 1812–18; *Flora des Oesterreichischen Kaiserthums*, 1816–22; *Botanisches Taschenbuch*, 1821; *Rosacearum Monographia*, 1823–24.

Trautwine, JOHN CRESSON, 1810–1883. American civil engineer. He located many railroads, and made the final survey for the Panama R. R. 1850 *Circular Curves for Railroads*, 1851; *Civil Engineer's Pocket-book*, 1871.

Travancore. State of s. India, tributary to Gt. Britain. Area 6,730 sq. m.; pop., 1891, 2,557,840, mostly Hindu, but ab. 500,000 Christian.

Travel Allowance. In the U. S. military service, when an officer travels without troops under orders, he is entitled to mileage at the rate of 4 cents per mile and to reimbursement of the cost of transportation actually paid by him, exclusive of sleeping and parlor car fares and charges for baggage and transfers.

Travelers. Those using the highway for the purposes to which it is dedicated. An organ-grinder, acrobat, or one using the road as a play-ground, has not the rights of a traveler therein.

Travelers, RIGHTS OF. The rights in railway cars and other means of transportation depend very much on statutes. A ticket is to some extent a contract and entitles the person to safe transportation to the point indicated and to a seat. They may be limited in time, and must be shown when requested. See CARRIERS (COMMON), NEGLIGENCE, and TRAVELERS.

Traveler's Joy. *Clematis vitalba.* Wayside plant, native of Britain, belonging to the natural order *Ranunculaceæ.*

Traveler's Tree. *Ravenala madagascariensis.* Found in great abundance in Madagascar. It derives its name from the fact that large quantities of pure water are found in the cup-like sheaths of its leaf stalks, which is obtained by tapping the sheaths at the base. A similar tree is found in the Malay Peninsula, and called Traveler's Fountain.

Traveler's Tree (*Ravenala madagascariensis*).

Traveling Crane. See CRANE.

Traveling Sidewalk. Movable platform, used as a means of transportation since 1892. There are a series of platforms side by side, traveling at different rates, varying from 2½–3 m. per hour, so as to make it easy to step from one to the other until the last is reached which moves fastest. The motive power is furnished by electric motors attached to the trucks.

Travemunde. Port of Lubeck, at mouth of Trave.

Traverse Table. Tabulation of the lengths of the sides of right-angled triangles for lengths of the hypotenuse ranging from 1 to 1,000; used by surveyors in computing distances and areas.

Travertine. Calcareous rock or variety of limestone formed by deposition from the water of springs or rivers; usually open in texture or irregularly banded; named from large deposits of the material found on the Tiber near Rome.

Travis, WILLIAM BARRETT, 1811–1836. Texan immigrant from Ala. ab. 1832. With 140 men he held Fort Alamo for ten days against 4,000 Mexicans under Santa Anna. It was taken by storm March 6, 1836, and all the Americans slain.

Trawling. Fishing by hooks or nets sunk to the bottom.

Trayastrinsha. Second of the DEVALOKAS (q.v.).

Treacle. See MOLASSES.

Treacle Mustard. See MUSTARD, TREACLE.

Treadmill. Devised by W. Cubitt ab.1818; used in English prisons for enforcing a portion of the sentences of imprisonment with hard labor. It consists of a wooden cylinder on an iron

Treadmill.

frame. The cylinder is ab. 6 ft. in diameter and on the outer circumference are steps ab. 7½ in. apart. The power obtained is utilized in grinding corn or pumping water.

Tread-Softly. *Jatropha stimulosa.* Stinging herb of the natural family *Euphorbiaceæ*, native of the s.e. U. S.; known as Spurge-nettle.

Treadwell, DANIEL, 1791–1872. Prof. Harvard 1834–45; inventor of a power press 1821, a hemp-spinning machine 1829, and improvements in cannon 1835.

Treadwell, JOHN, LL.D., 1745–1823. Delegate to Congress 1785–86; judge in Conn. 1789–1809; Gov. 1809–11.

Treadwell, SEYMOUR BOUGHTON, 1795–1867. Anti-slavery journalist in Mich. *American Liberties*, 1838.

Treason. Acts of violence against the person of the sovereign, against the state in favor of a foreign enemy, or against the internal government of the country. In the U. S. it is generally defined by statute.

Treasure Trove. Money found hidden in the earth, whose owner is unknown. At common law, it belonged to the crown. In the U. S. it generally belongs to the finder. Widespread belief in buried treasure naturally arose from the custom still practiced in India and other parts of the East of concealing jewelry and valuables for safe keeping in the ground. In the search for such treasure magical arts are commonly employed, the superstition being current that such treasure is guarded by demons or genii, who can only be overcome by magic. In America, the reputed treasures of the ancient Incas and of the pirates and buccaneers of the Spanish Main are still sought.

Treasury, U. S. Constituted by law Sept. 2, 1789; Alexander Hamilton was the first secretary. There are a treasurer, 3 assistant treasurers, 3 comptrollers, 6 auditors, register, commissioners of customs and internal revenue, solicitor, director of the mint. There are 18 bureaus, including the mint, statistics, coast survey, life-saving service, lighthouse board; most heads of bureaus are independent of the nominal head, many are appointed by the President.

Treat, ROBERT, 1622–1710. Gov. of Conn. 1683–87 and 1689–98.—His descendant, SAMUEL HUBBELL, 1811–1887, was Judge of Ill. Supreme Court 1841–55, and U. S. Judge for s. Ill. from 1855.

Treaty. Agreement, usually in writing, between nations. The manner of negotiating for it and of making it effective is determined by the law of each country. In the U. S., an authorized treaty becomes part of the supreme law of the land. It is made by the President and requires two-thirds of the votes of the Senate for ratification. If a payment of money is involved a majority of the House of Representatives must approve.

Trebbia. Branch of the Po, on whose bank Hannibal gained a victory over the Romans 218 B.C. Here the Russians under Suwarow defeated the French June 1799.

Trebelli, ZELIA, 1838–1892. Mezzo-soprano singer of German descent, known through Europe from 1859, and in the U. S. 1884.

Trebellius Pollio, 4th cent. Latin biographer of the emperors from Philip to Claudius, 244–270. His work from 254 survives.

Trebizond. Seaport of n.e. Asia Minor, on the Black Sea; anciently Trapezus; founded ab.700 B.C. from Sinope. Here Xenophon and the Ten Thousand Greeks emerged 400 B.C., after their retreat from Cunaxa in Babylonia: under

Trebizond.

Roman rule it was the capital of Pontus. Here Alexis Comnenus in 1204 founded an empire, or seacoast kingdom, including Pontus and most of Colchis, which was overthrown by the Turks 1462.

Treble. Highest voice in a chorus or other concerted vocal piece, and the upper parts in concerted instrumental music; also the soprano voice.

Trecul, AUGUSTE ADOLPHE LUCIEN, 1818–1896. French botanist.

Tredgold, THOMAS, 1788–1829. English engineer and architect. *Carpentry*, 1820; *Cast Iron*, 1821; *Steam-engine*, 1827.

Trediakofsky, VASILI, 1703–1769. Russian critic, versifier, and translator.

Tree, CHRISTMAS. The tree erected at the Christmas festival in the U. S. and in Germany, from whence it was introduced, is a survival from primitive times before Christianity, when it was connected with the festival of the revival of the sun after the winter-solstice. This festival was widely celebrated by the nations of antiquity with ceremonies relative to the new light which the new sun brought into the world. The tree with its candles, symbolic of the new light, is found widely distributed. It existed in China before the Christian era, and still survives in China and Japan, in a form not unlike our own Christmas tree, at the festival of the New Year.

Tree, HERBERT BEERBOHM, b.1853. English actor and manager.

Tree-Ducks (DENDROCYGNA). Ab. 12 species of arboreal, tropical ducks, with long necks and long hind toes. See ANATINÆ.

Tree Frog. See DISCODACTYLIA.

Treenails, or TRUNNELS. Wooden pins employed to fasten the planks of a ship's side and bottom to the timbers.

Tree of Heaven. See AILANTHUS.

Trees. Woody plants, generally forming a single main trunk of indefinite size and duration.

Tree-Snakes. The common southern green snake is one of the *Colubridæ*. The tropical Tree-snakes represent the families *Dendrophidæ*, *Dipsadidæ*, and *Dryophidæ*. They are all brightly colored, green as a rule predominating. In the first family, the ventral scutes are keeled; the largest (*Goniosoma*, of Borneo) attains a length of 8 ft. They are good climbers, can descend a smooth tree trunk, and are very swift in their motions. Some species dart ferociously at intruders. As in

Tree-Snake (*Dryophis pulverulentus*).

all non-poisonous snakes, the loreal scale is present. The second family includes crepuscular and nocturnal forms. An E. Indian species grows to a length of 7 ft.: it is black, with yellow bars, and gentle in captivity. The third family is characterized by great slenderness of body (1 in. diameter, to 5 ft. in length); the nose is a pointed proboscis. The green snake of India attains a length of 7 ft. and is greatly feared, as it darts at the eyes of travelers who come near.

Trefoil. Foliation in Gothic Architecture in window heads, paneling, etc., representing a three-lobed leaf.

Trefoil. See CLOVER.

Trefoil, SHRUBBY. See HOP-TREE.

Tregelles, SAMUEL PRIDEAUX, LL.D., 1813–1875. English editor *Greek New Testament*, 1857–72. *Concordance*, 1839–43; tr. Gesenius' *Hebrew Lexicon*, 1847.

Treitschke, HEINRICH GOTTHARDT VON, 1834–1896. Prof. Freiburg 1863, Heidelberg 1867, Berlin 1874; Prussian historiographer 1886. *Sozialismus*, 1875–78; *Deutsche Geschichte*, 5 vols., 1879–85.

Trelawney, EDWARD JOHN, 1792–1881. Companion of Shelley and Byron, of whom he pub. *Recollections*, 1858–78.

Trelease, WILLIAM, b.1857. Prof. Univ. Wis. 1881–85; director Mo. Botanic Garden 1889.

Tremandreæ. Natural family of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Polypetalæ*, comprising 3 genera and ab. 27 species, distributed throughout the tropical parts of Australia.

Tremarec, KERGUELEN-. Breton sailor who discovered Kerguelen's Land 1772, in the Antarctic Ocean, 48° 39′ S. lat. and 68° 42′ E. long. It is 85 m. by 79 m. It was called Desolation Island by Captain Cook 1776.

Trematoda (FLUKES). Parasitic Platyhelminths, with flattened, ovoid, unsegmented bodies, having one or more suckers for attachment. They have a forked intestine, a mouth, but no anus. Most are hermaphroditic, and many have complicated alternation of generations, developing by sporocysts or rediæ, and cercaria stages, as in *Distomum*. There are two suborders, DISTOMEA and POLYSTOMEA (q.v.).

Trembles. Two entirely different conditions, the one a disease of neat cattle, communicable to those who drink their milk or eat their flesh, and known as Milk-sickness. It is marked by chills, vomiting, and disordered nutrition. —The other condition is that of paralysis agitans or PALSY (q.v.).

Tremellineæ. Order of gelatinous *Fungi*, of indefinite forms, occurring on dead wood.

Tremellius, EMMANUEL, ab.1510–1580. Italian of Jewish parentage, prof. Sedan; author, with F. Junius, of a Latin version of the Bible, 1575–79.

Tremelloid. In Botany, gelatinous.

Tremie. Wooden rectangular closed trough, placed in a nearly vertical position in water. In it mortar is allowed to slide down to a foundation at the bottom of the stream; its office is to prevent the current from washing away the mortar.

Tremolite. Light-colored variety of the mineral amphibole, usually columnar or fibrous in texture; named from the Tremola Valley in the Alps.

Trench. Ditch with vertical sides, which are often held in place by sheet piling.

Trench, RICHARD CHENEVIX, D.D., 1807–1886. Prof. King's Coll., London, 1847; Dean of Westminster 1856; Abp. of Dublin 1864–84. *Poems*, 1835–65; *Parables*, 1841; *Miracles*, 1846; *Synonyms of N. T.*, 1854–63; *English Past and Present*, 1855. His *Study of Words*, 1851, was especially valued.

Trenchard, STEPHEN DECATUR, U.S.N., 1818–1883. Commander 1862; prominent in the two attacks on Fort Fisher; Captain 1866, Commodore 1871, Rear-admiral 1875.

Trench Cavalier. Earthen parapet constructed, during siege operations, a short distance from the covered way, to enable the besieger to command that defensive work and to drive the defenders from it by an enfilade fire.

Trenck, FRANZ, FREIHERR VON, 1711–1749. Austrian officer, notorious for his atrocities in Bavaria and elsewhere 1740–45. He committed suicide in prison.—His cousin, FRIEDRICH, 1726–1794, accused of an intrigue with Princess Amalia, sister of Frederick II., was imprisoned at Glatz 1746–47, and at Magdeburg 1758–63, after serving in Austria. His *Memoirs*, 1787, made him famous; his other writings are forgotten. After many travels and adventures he was guillotined in Paris.

Trendelenburg, FRIEDRICH ADOLF, 1802–1872. Prof. Berlin from 1833; reviver of the study of Aristotle; critic of the Kantian and Hegelian philosophy. *Logic*, 1837, tr. 1881; *Logische Untersuchungen*, 1840; *Naturrecht auf dem Grunde der Ethik*, 1860.

Trent. British mail steamer, from which Mason and Slidell, Confederate commissioners to England, were seized by Capt. Wilkes, U.S.N., Nov. 8, 1861. The affair threatened unpleasant relations with England, but the commissioners were surrendered Jan. 1, 1862, as the precedents were all against their detention.

Trent, COUNCIL OF. Held 1545–52 and 1562–63 at Trent, a Tyrolese city; esteemed by Roman Catholics the 20th Œcumeni-

Castle of Trent.

cal or General Council. It settled R.C. doctrine and discipline after the shock of the Reformation. Its decrees were confirmed 1564.

Trente et Quarante. See ROUGE ET NOIR.

Trente et Un. See ROUGE ET NOIR.

Trenton. Capital of N. J. (since 1790) and of Mercer co., on the Delaware, at the head of navigation; chartered 1792; chiefly noted for its manufactures of iron, steel, pottery, rubber and wool, and for Washington's capture of 1,000 Hessians, Dec. 26, 1776. Pop., 1890, 57,458.

Trenton. Fossiliferous limestone, first studied in N. Y., where it forms the main fossiliferous mass of the Lower Silurian strata, now known as Ordovician. It is in part the equivalent of the Llandeilo group of Wales. See ORDOVICIAN.

Trenton Falls. In Oneida co., N. Y., 17 m. n.w. of Utica; series of fine cascades, descending 312 ft. within two miles.

Trent River. Rising in Rice Lake, Ontario, it flows 150 m. into Bay of Quintè, Lake Ontario.—Also river of England which joins the Ouse ab.15 m. w. of Hull, forming the Humber, after a s.e. course of ab.150 m.

Trepang. Dried body of several species of sea-cucumbers, which are found on reefs on the s.e. coast of Asia. The animal is from 8 to 24 in. long. Large quantities are prepared for the Chinese market. See HOLOTHUROIDEA.

Trephining, or TREPANNING. Surgical operation, consisting in removing a circular section of bone, usually the skull, by means of a trephine; this is a cylindrical instrument, slightly conical, up to 2 in. diameter, burred in its sides, with saw-teeth on its lower edge and a center-pin on which it turns; a gimlet handle is attached to the top. It is performed to relieve pressure on the brain, as in case of fracture of the skull, for the drainage of abscesses or removal of tumors. Trephining was practiced in the Stone Age, and later to a considerable extent. Quite recently it was applied in most head injuries, but it is now much restricted.

Trepidation. Slow oscillation of the Ecliptic, imagined by the Arabian astronomers to account for the discrepancy in the determination of the precession of the equinoxes. The period was supposed to be 7,000 years. See PRECESSION OF THE EQUINOXES.

Trescott, WILLIAM HENRY, b.1822. American diplomat; plenipotentiary to China 1880, to Chili, Peru and Bolivia 1881, and to Mexico with Gen. Grant 1882. *Diplomatic Hist. of Washington and Adams*, 1857.

Trespass. Unlawful interference with another's person or property.

Trestle. Structure of wood or iron, built on land, instead of an embankment to carry a railroad track or roadway. See BENT.

Tretenterata. See ECARDINES.

Trevelyan, SIR CHARLES, 1807–1886. Anglo-Indian official and reformer, knighted 1848; Gov. of Madras 1859–60; Finance Minister of India 1862–65; opponent of the purchase of commissions in the army; Baronet 1874. *Christianity and Hinduism*, 1881.—His son, Sir GEORGE OTTO, b.1838, M.P. 1845, Cabinet Minister 1884, Sec. for Scotland 1886 and 1895, pub. a *Life* of his uncle, Lord Macaulay, 1876. *Cawnpore*, 1865; *Early Hist. of C. J. Fox*, 1880.

Trevelyan's Rocker. Mass of copper, the bottom of which is curved so that it may rest upon the long edges formed on either side of a groove in a block of lead, upon which it is placed. If this be heated and placed on the lead, the points of contact suddenly expand by the heat and the rocker is pushed upward; the temperature as suddenly falls at these points, and the piece settles back, only to be forced up again by the local expansion. The whole thus oscillates rapidly and emits a sound the pitch of which depends upon the conditions of the experiment.

Treves, or TRIER. Ancient city of Rhenish Prussia, prominent under Roman rule as Augusta Trevirorum; sacked by Attila 451; held by Lorraine 843–870 and 895–924; long ruled

Porta Nigra at Treves.

by its abps., who were Electors of the Empire from ab.1200. Its "Holy Coat," first mentioned 1106, attracts many pilgrims. Pop., 1891, 36,162. See HOLY COAT OF TREVES.

Treviranus, CHRISTIAN LUDOLF, 1779–1864. Prof. of Botany at Bonn. *Vom inwendigen Bau der Gewächse und von der Saftbewegung in denselben*, 1806; *Pflanzenphysiologie*, 1841; *Vermischte Schriften anatomischen und physiologischen Inhalts*, 1821, with G. R. Treviranus; *Physiologie der Gewächse*, 1835–38.

Trevithick, RICHARD, 1771–1833. English engineer, in Peru 1816–27. He introduced many improvements in engines, chiefly for mines, and did pioneer work on railways.

Trevor, GEORGE, D.D., 1809–1888. Canon of York 1847. *Convocation*, 1852; *India*, 1862; *Egypt*, 1866; *Rome*, 1869; *Eucharist*, 1869.

Trevor, SIR JOHN, 1633–1717. Speaker of the Commons 1685–88 and 1690–95, when he was expelled for corruption; Master of the Rolls 1685–88 and from 1693.

Triacetine. $C_3H_5(C_2H_3O_2)_3$. Thick liquid, prepared by the action of acetic acid upon glycerin; used in cotton printing. See ACETINES.

Triadelphous. Flowers whose stamens are united into three sets, as in St. John's Wort and related plants.

Triad Society. Chinese secret society, so called from the cosmical triad of Heaven, Earth, and Man. Its object is the overthrow of the present Manchu dynasty and the re-establishment of the last Chinese dynasty of the Mings. It is a common source of disturbance in s. China, and practically governs the Chinese in their foreign colonies.

Triæne. Cladose rhabdus, the branches (cladi) being usually at one end. Such spicules are present in *Geodia*, a genus

of sponges. There are several modifications, as amphitriæne, protriæne, dichotriæne, found in other genera.

Trial. Judicial examination of the issues of fact or of law involved in a legal proceeding.

Trial by Court-Martial. See COURT-MARTIAL.

Triandria. Linnæan class of plants, comprising those which have three stamens, as Crocus, Iris, and most of the Grass family.

Triangle. Musical instrument consisting of a steel rod bent in the form of an isosceles triangle, open at one angle. It is struck with a rod of the same metal. At the Grand Opera in Paris they are $7\frac{1}{2}$ in. on the longest sides and 7 in. on the short side; the rod is $\frac{7}{16}$ in. diameter. It has been used by many composers as an adjunct to the drums and in most military bands.

Triangle.

Triangle, AREA OF. Half the product of its base and altitude; half the product of two sides into the sine of the included angle; half the square of one side into the product of the sines of the adjacent angles, divided by the sine of the sum of these angles; square root of the continued product of the half sum of the three sides into this half sum diminished by each side successively.

Triangle, PLANE. Plane polygon of three sides. It is equilateral, isosceles or scalene, as the three sides are equal, two, or none: it is right, obtuse or acute, as one angle is right, one obtuse, or all acute. The sum of the interior angles equals two right angles. A spherical triangle is bounded by three arcs of circles. See SPHERICAL TRIANGLES.

Triangles.

Triangle of Forces. Whenever three forces acting at a common point are in equilibrium, they can be represented by the sides of a triangle whose lengths are proportional to the magnitudes of the forces, and whose directions are parallel to those of the forces. Several forces in equilibrium can be represented by a polygon. See FORCES, POLYGON OF.

Triangular Truss. Bridge truss in which the struts and ties of the webbing have the same inclination; generally one truss having a single system of webbing.

Triangulation. See PRIMARY TRIANGULATION and GEODESY.

Triassic. Lowest division of the Mesozoic rocks; named from its threefold division in Europe; often accompanied in America with erupted volcanic materials, and chiefly found in Nova Scotia, Connecticut Valley, N. J., Pa. and N. C. The oldest reptilian remains are found in this formation. See COLUMN.

Tribal State. That stage in the development of mankind in which the tribe is the only unit of social organization, land being held in common, and little or no complexity of industrial condition existing.

Tribasic Acid. See ACID.

Tribe. In Botany, group of genera subordinate to a family.

Tribes. Twelve divisions of Israel, descended from the twelve sons of Jacob, Reuben, Simeon, Levi, Judah, Issachar, Zebulun, Joseph, Benjamin, Gad, Asher, Dan, Naphtali. Levi having been made a priestly caste, Joseph was divided into the two tribes of Ephraim and Manasseh, to maintain the number.

Tribonianus, d. ab.545. Jurist and official under Justinian; one of the framers of the *Code* and *Institutes*, and chief compiler of the *Pandects* or *Digest*.

Tribromacetaldehyde. See BROMAL.

Tribromphenol. $C_6H_2 \vdots OH.Br_3$. White needles; mpt. 95° C.; prepared by the action of bromine upon phenol. The yellow compound produced by the immediate action of bromine water upon phenol is $C_6H_2 \vdots OBr,Br_3$.

Tribune. Originally the seat of the ruler or judge in a basilica, later of the bishop, and finally any elevated part of a church or public building.

Tribune. Roman official title, used to designate several different offices. The military tribunes were lieutenants of the commanders; when the contest between the orders was raging over the choice of Consuls, military tribunes were elected with consular power for a number of annual terms, and exercised the highest magistracy of the state. The tribunes of the treasury were, perhaps, army paymasters. The tribunes of the people were the most important, and were appointed first 490 B.C., to be the advocates of the oppressed plebeians. This office maintained itself with varying success, and its occupants were leaders in the struggle which won for the lower order equal political rights. Being endowed with an absolute power of veto in all public assemblies, it was a real menace, in the hands of demagogues, to the constitution, and under the Gracchi brought on revolution. The emperors chose to veil their power under the name of the tribunician office.

Tributer. Miner who engages to work a mine, or section of a mine, on condition of delivering to the owner a specified part of the gross yield, retaining the remainder.

Tributyrin. See BUTYRINES and BUTTER.

Trichechidæ. Family of *Pinnipedia*, including the Walrus. Except in the dentition and the absence of external ears, they are similar to the *Otariadæ*. Nearly all the incisors are lost in early life, while the upper canines grow from persistent pulps into two downward-turned tusks, which the animal uses for digging, for lifting itself upon ice floes, and for offense and defense. The Atlantic and Pacific species are distinct.

Trichechodont Dentition. Form of molar teeth of the antiodont-lophodont series, having the tubercular ridges of their crowns confluent into two or more transverse crests, as in the teeth of the elephant, dinotherium, kangaroo, manatee, and lower jaw of the tapir.

Trichechus. See MANATEE.

Trichiasis. Misplaced eyelashes, their malposition causing them to rub against and to irritate the eye-ball. Relief can be obtained by extracting the lash, which will return and irritate. A cure can be brought about by destroying the hair follicle producing the lash, or changing the direction of the growth of the lash.

Trichina Spiralis. Parasitic nematode, found in the alimentary canal of man, carnivorous mammals, the pig, and the rat; discovered by Richard Owen 1835. The eggs develop within its body, and the young burrow into the muscles of the host, where they become encysted. Then, if eaten, they escape from

Sexually mature female *Trichina spiralis* (highly magnified).

Trichina lying coiled up in muscle (magnified).

the cysts and become sexually mature. Each female can produce 1,000 young, which, by the pain and disturbance they cause, while burrowing through the tissues, give rise to the disease called Trichinosis. The rat is the natural host of the Trichina, which is thence transferred to the pig. Thorough cooking of pork kills the encysted Trichinas. See TRICHOTRACHELIDÆ.

Trichinopoli. Town of s.e. India, on the Caveri, 56 m. e. of Madras; seat of several missions, and burial-place of Bp. Heber. It has manufactures of tobacco, hardware, and jewelry. Pop., 1891, 90,730.

Trichinosis, or TRICHINIASIS. Disease due to food containing *Trichina spiralis*, first recognized by Zenker 1860. With man it has been produced by eating smoked, pickled or imperfectly cooked pork, containing the encysted worms: 90,000 have been found in a cubic inch of a man's shoulder. The symptoms are pains in the intestines, diarrhœa and vomiting; the muscles become swollen and tender to the touch; death is due to exhaustion, intestinal irritation or pneumonia, and takes place in four or five weeks. In an epidemic in Germany in 1865 nearly one-third of the cases proved fatal. Convalescence from a severe attack requires three or four months.

There is no means of destroying the parasite when in the muscles. When the disease is suspected calomel and castor oil are given to expel the embryos from the intestines; glycerin is said to kill them.

Trichites. Bundle of delicate spicules, originating in a single cell of a sponge.

Trichloracetaldehyde. See CHLORAL.

Trichloracetic Acid. $CCl_3.COOH$. Colorless prisms, exceedingly soluble in water; mpt. 52° C.; produced by the action of chlorine in sunlight upon acetic acid, or by the oxidation of chloral; strong monobasic acid.

Trichoblast. Vegetable cell of branching form, serving as a receptacle for some secretion.

Trichocephalus. See TRICHOTRACHELIDÆ.

Trichocysts. Organs present in some *Infusoria* (as in *Paramœcium*), resembling the nettle-cells of Cœlenterates.

Trichogyne. Simplest form of the female organ of reproduction, consisting of a single cell with a hair-like projection in certain *Algæ* and *Fungi*.

Trichomes. Various appendages to and outgrowths from the epidermis of plants, as hairs, glands, and scales.

Trichophore. Cells which aid in the conveyance of pollinoids to the carpogone or female organ of reproduction in certain *Algæ*, etc.

Trichoptera. Suborder of *Neuroptera*, including forms having the wings covered with hairs or scales; thus resembling *Lepidoptera*. The hind wings can be folded. The mandibles are aborted; the other mouth parts form a sucking proboscis,

Spring-flies.

or are sometimes aborted. The larvæ live in the water, in cases (cocoons) fastened to stones, and made from leaves, sticks, snail shells, grains of sand, etc., which they can drag about. The *Phryganidæ* or Spring-flies are examples.

Trichoscolices. Group of *Vermes*, including Rotifers and Platyhelminths.

Trichosporangium. Sporangium morphologically representing a hair.

Trichotrachelidæ. Nematode worms with a long thread-like neck and small mouth without papillæ. *Trichocephalus* lives half-buried in the intestinal walls of man and other animals. The eggs are passed out and develop in the water, which, if imbibed, introduces the larvæ into the intestine. TRICHINA (q.v.) is a member of this family.

Triclinium. Roman dining-room.—Also the couch on which they reclined at meals.

Tricolor. Flag of France, adopted ab.1790; white, red, and blue.

Triconodont Teeth. Molar teeth with three subequal, prominent, conic and cutting tubercles, as in the cat.

Tricoupis, SPIRIDION, 1788–1873. Greek Minister, diplomatist, and poet. *Speeches*, 1836; *Hist. Greek Revolution*, 1853–57.—His son, CHARILAOS, 1832–1896, was five times Premier, alternating with his rival, Delyannis, from 1875.

Trident. Three-pronged spear, associated with Neptune and Britannia on coins and other representations.

Tridentine Profession of Faith. Framed 1564 by order of Pius IV., summarizing the decrees of Trent; to be subscribed by R. C. priests, teachers, and converts.

Tridymite. Mineral having the chemical composition and the hardness of quartz, but with a lower specific gravity; found in many parts of the world as a constituent ingredient of volcanic rocks.

Trier. See TREVES.

Trieste. Seaport of Austria, on the Gulf of T., at the head of the Adriatic; anciently Tergestum; Austrian since 1382. Its chief importance dates from ab.1720; its main growth is

Trieste.

recent. It has a fine harbor, a large commerce, much shipbuilding, and extensive manufactures. Pop., 1890, 120,333; district 158,344.

Triewald, SAMUEL, 1688–1742. Swedish satirical poet.

Trifid. In Botany, cleft into three parts ab. half way to the base.

Trifoliolate. Compound leaf, composed of three leaflets, as in clover.

Triforium. Arcade or gallery in a church, above aisle or nave.

Trigeminus. Fifth pair of cranial nerves, the largest of the nerves derived from the brain. They are the great sensitive nerves of the head and face, being distributed to the forehead, the eyelids, cheeks, nose, and upper and lower jaws, including the teeth. They also supply motor impulses to the muscles of mastication, and the lingual branch is one of the nerves of the special sense of taste; known as the trifacial nerves.

Trigger. Pivoted lever, which acts against a projection on the long arm of the sear; the short arm of the sear fits into the full-cock, half-cock, or safety notch of the tumbler. When the trigger is pulled by the finger the sear is withdrawn from its notch and allows the main-spring to operate the tumbler and hammer and drive the firing-pin against the cartridge.

Triglycerides. Compounds, composed of three molecules of a monobasic fat acid and one of glycerin; *e.g.*, tripalmitin, $C_3H_5(O.C_{16}H_{31}O)_3$. See GLYCERIDES.

Triglyph. In the Doric frieze, three vertical angular flutes, separated by narrow flat spaces; in Roman Architecture, placed over the center of the column; in Grecian, close to the angle of the entablature.

Trigonometric Functions OF AN ANGLE. Ratios between the lines which determine the position of any point on the terminal line of the angle in reference to its initial line. They are constant for the same angle: they depend on the position of the terminal line, not upon the points on this line. They are periodic, the same value recurring at least once in each revolution. The primary functions are sine, cosine, tangent, cotangent, secant, cosecant; the secondary, versedsine, coversedsine.

Trigonometry. Branch of Mathematics which treats of the solution of triangles by establishing relations between their sides and functions of their angles, and of trigonometric functions of angles generally. Its divisions are Analytical, Plane, and Spherical.

Trigonous. Of triangular prismatic form.

Trigynia. Orders of plants having three pistils.

Trigynous. Tricarpellary; having three pistils.

Trihedral Angle. One formed by three intersecting planes meeting at a common point. Three planes intersecting

at right angles to each other divide the space about their common point into eight equal trihedral angles, each a right trihedral. Trihedrals are measured by the spherical surface included within the planes of their faces.

Trilobites. Fossil *Gigantostraca*, allied to the *Merostomata*, and found in rocks from the Cambrian to the Devonian. The group became extinct in the Carboniferous period. The body of a Trilobite is oval, with a central elevated ridge, the rhachis flanked on each side by broad flat pleural regions. From front to back are 3 regions, first the anterior crescentic cephalothorax, bearing compound eyes. Then follows the many-jointed abdomen, and finally the body terminates in a heart-shaped caudal plate or pygidium, whose base is as wide as the abdomen. No appendages had been found up to 1880, but in 1881 Walcott announced the discovery of biramous appendages, bearing gills, present on every segment. In 1892 Valiant discovered delicate but perfect antennæ in *Triarthrus beckii*, so that, with the mouth parts, the adult possessed 48 pairs of appendages. The nearest relative of this group now existing is *Limulus*, the king crab or horse-foot crab.

a, Phacops caudatus; *b*, Calymene blumenbachii.

Trilocular. Pericarp having three cells.

Trilogy. Series of three dramas, tragic or historical, usually with subjects more or less closely related. Æschylus, Shakespeare, and Schiller afford examples.

Trimble, ALLEN, 1783–1870. Gov. of Ohio 1826–30.—His brother, WILLIAM, 1786–1821, officer in the War of 1812, was U. S. Senator from 1819.

Trimble, ISAAC RIDGEWAY, 1802–1888. Engineer; Brig.-gen. C.S.A. 1861, Major-gen. 1863; active in Va. and at Gettysburg.—His uncle, DAVID, ab.1782–1842, was M.C. from Ky. 1817–27.

Trimble, ROBERT, 1777–1828. Chief-justice of Ky. 1810; U. S. District Judge 1816–26; Justice U. S. Supreme Court from 1826.

Trimera (PSEUDOTRIMERA, or CRYPTOTETRAMERA). *Coleoptera*, with apparently three-jointed tarsus, but with an extra rudimentary joint. The Lady-birds (*Coccinellidæ*) are examples.

Trimerous. Flowers constructed on the ternary plan; *i.e.*, with three members of each circle of parts.

Trimethylamine. $N(CH_3)_3$. Strong organic base, supposed to be derived from ammonia, NH_3, by the replacement of the hydrogen by methyl; gas, easily condensed to a liquid; found in the vegetable world and in herring brine; prepared by the distillation of beet-sugar molasses.

Trimethylcarbinol. $(CH_3)_3.C.OH$. Tertiary butylalcohol; liquid; bpt. 83° C., with an odor like spirits of camphor; present in fusel oil, but usually prepared by the action of dilute sulphuric acid on isobutylene. It solidifies easily, and is completely decomposed by oxidizing agents.

Trimethylene. $(CH_2)_3$. $\begin{array}{c} CH_2—CH_2. \\ \backslash\ \ / \\ CH_2. \end{array}$ Gaseous hydrocarbon, produced by heating trimethylene bromide, $CH_2Br.CH_2.CH_2Br$, with sodium; stable in character.

Trimmer. Piece of timber in a roof or floor to support the ends of joists, which cannot rest upon the walls, as at fireplaces and stairways.

Trimmer, SARAH (KIRBY), 1741–1810, m.1762. English author of historical manuals and juvenile tales. *Hist. Robins*, 1868.

Trimorphism. 1. Flowers whose stamens or pistils are of three different kinds, generally adapted for cross-fertilization, as in most species of *Oxalis*. 2. Species having three forms of animals, as in the sexual trimorphism of certain butterflies, in which males and two sorts of females are present. Essentially the same is true of bees, the workers being infertile females.

Trimountain. Earliest name of Boston, from the three summits of Beacon Hill. The name Boston was adopted Sept. 7, 1630, Old Style.

Trimurti. Hindu trinity, represented as one body with three heads, Brahma the creator in the middle, Vishnu the preserver on the right, Siva the destroyer on the left.

Trinacria. Sicily; supposed to be so called from its triangular shape.

Trine. In Astrology, aspect of two planets when 120° or one-third of a circumference apart.

Trinidad. Island off n.e. coast of Venezuela; discovered by Columbus 1498; settled by Spaniards 1532; held by Gt. Britain since 1797. The soil is extremely fertile and is seldom subject to drought. It exports sugar, molasses, cacao, coffee, fruit, and asphalt. La Brea is an asphalt lake of 100 acres. Port of Spain is the only harbor of commercial importance. Area 1,754 sq. m.; pop., 1891, 208,030.

Trinidad—Digging Asphalt.

Trinidad. Town on s. coast of Cuba. Pop. ab.30,000.

Trinitarians. 1. Believers in the Trinity. 2. Order founded 1197 to ransom Christian captives held by Mohammedans or pagans. See REDEMPTIONISTS.

Trinitrocellulose. See NITROCELLULOSE.

Trinitroglycerin. See NITROGLYCERIN.

Trinitrophenol. See PICRIC ACID.

Trinitroresorcin. See STYPHNIC ACID.

Trinity. Deity as existing in three Persons, Father, Son, and Holy Ghost. The doctrine is not formally stated in Scripture (I. John v. 7 being admittedly spurious), but is held by most Christians to be implied there, though denied by Arians, Socinians, and Unitarians.

Trinity Church, NEW YORK. This church was built by the colony of New York 1697, at the instigation of Gov. Benjamin Fletcher, the word Protestant in the Act being construed to mean Episcopal, thus compelling the inhabitants to support the Church of England. The church was enlarged 1735 and 1737, burned 1776, rebuilt 1788, consecrated by Bishop Provost 1791. There were two chapels attached to this church. In 1839 it was demolished for the building of the present church, which was opened 1846; it was designed by Richard Upjohn. The parish includes St. George's in Beekman Street, erected 1752; St. Paul's, Broadway, erected 1766; St. John's, Varick Street, erected 1807; and Trinity Chapel, Twenty-fifth Street, erected 1854. In 1703 a cemetery was donated to Trinity Church by the city and in the same year Queen Anne granted to the church King's Farm, originally the property of the Dutch West India Co., which had been increased by land of Aneka Jans or Jansen, bought from her heirs by the Colonial Government in 1671, one heir failing to join in the conveyance. This land was granted to Roelef Jansen, husband of Aneka, in 1636, by Wouter Van Twiller, Director-general of New Netherlands; it consisted of 62 acres. This grant was the foundation of the wealth of this church, fronting on Broadway, from Warren to Duane Street, thence northwest to Christopher Street and North River, forming an unequal triangle.

Trinity College. At Hartford, Conn.; chartered as Washington Coll. 1823; Episcopal; named Trinity 1845. Its former site is now occupied by the State Capitol, the college having been moved 1878. It has 11 professors, 9 lecturers, ab. 130 students, and a library of 37,000 vols.

Trinity College, DUBLIN. See DUBLIN UNIVERSITY.

Trinity House, CORPORATION OF. On Tower Hill, London; chartered 1514; charged with the licensing of coast pilots, and the maintenance of buoys, beacons, and lighthouses.

Trinity River. In e. Texas. It heads in two forks, and flows generally s.e. to Galveston Bay. Drainage area 17,960 sq. m., length 550 m.

Trinity Sunday. Next after Whitsunday; locally ob-

served from ab.1000, more generally from ab.1200; approved by Popes 1305 and 1334. The Sundays following till Advent are numbered from it.

Trinius, KARL BERNHARD, 1778–1844. German botanist. *Fundamenta Agrostographiæ*, 1820; *Clavis Agrostographiæ antiquioris*, 1822; *De graminibus paniceis*, 1826; *Species graminum iconibus et descriptionibus illustravit*, 1828–36; *Agrostidea*, 1840–41.

Triod. Sponge spicule having three equal rays making equal angles with each other.

Triolein. See OLEINES.

Trionychidæ (SOFT-SHELLED TORTOISES). Family of *Chelonia*, characterized by having the carapace covered with soft skin in place of epidermal plates: the webbed toes have three claws; the body is flat and circular. They are carnivorous, fond of mussels, and burrow in the mud, especially during drought. *Aspidonectes spinifer* has pointed nostrils on a flexible snout: it abounds in salt water creeks. *A. ferox* of the Gulf Coast grows to a length of 18 in. It lays over 60 eggs, and is palatable as food. It is aquatic and carnivorous, destroying many young alligators.

Tripalmitin. See PALMITINES.

Tripe. Dish prepared from the stomachs of sheep or cattle. Plain tripe is the paunch or rumen; honeycomb tripe is the reticulum. See RUMINANTS.

Tripe de Roche. Large, fleshy lichens of the genus *Umbillicaria*, natives of rocky, mountainous regions; sometimes used as food.

Tripestone. Variety of the mineral anhydrite, presenting a peculiar irregular appearance that suggested the name.

Triphenylmethane. $CH : (C_6H_5)_3$. Solid hydrocarbon, crystallizing in beautiful white plates; mpt. 93° C.; prepared from chloroform and benzene in the presence of aluminium chloride. The amido compounds derived from it are important coloring matters. See PARAFUCHSINE.

Triphenylrosaniline. $C_{38}H_{32}N_3$. Product of the action of aniline upon rosaniline. See SPIRIT BLUE.

Tripitaka. Sacred books of Buddhism, named from their having arranged in baskets the leaves of the palm, in time replaced by written paper.

Triple Alliance. 1. Between England, Sweden and the Netherlands, against France, Jan. 23, 1668. 2. Between England, France and Holland, against Spain and the Pretender, Jan. 1717. 3. Between England, Austria and Russia, Sept. 28, 1795. 4. Between Germany, Austria and Italy, 1883, intended to check Russia and France.

Triple Expansion. Compound engines in which expansion takes place in three cylinders instead of two. Higher

Triple Expansion Engine.

pressures of steam are thus applied, and the recent claims are that the triple forms give an increased economy of 25 per cent over the two-cylinder engines.

Triplicate Ratio. That of the third powers of two quantities.

Triploblastic. Having three layers in the embryo; viz., endoderm, mesoderm, and ectoderm, as in most *Metazoa*.

Triplopy. See DIPLOPY.

Tripoli. Easternmost of the Barbary States of n. Africa. The surface is low, with a fertile strip along the Mediterranean coast, but arid and sandy in the interior, which is imperfectly known. Area ab.400,000 sq. m. This region was anciently subject to Phœnicians, Cyrenians, Carthaginians, and Romans; was known in the 3d century as Regio Tripolitana, from its three chief cities, then leagued together; was conquered with the rest of n. Africa by the Arabs, and by the Turks 1551; became partly independent 1714, and was made a province of the Turkish empire 1835. It is governed by a pasha, appointed by the Sultan. War with the U. S. was begun 1801, to obtain increase of tribute; the Bashaw was brought to terms by a successful attack on Derne and the bombardment of Tripoli 1806. Pop. ab.1,000,000, chiefly Berbers and Arabs.

Tripoli. 1. Capital of Tripoli; on the Mediterranean, ab. 200 m. e. of the Tunisian boundary. It has a shallow harbor,

Tripoli.

but a large trade with the interior. Pop. ab. 35,000. 2. Seaport of Syria, 40 m. n.n.e. of Beyrout; anciently Tripolis, a Phœnician city; taken by Crusaders 1104, by Mamelukes 1289. Pop. ab. 20,000.

Tripoli, or TRIPOLITE. Diatomaceous earth; rotten stone, in part a decomposed siliceous limestone from which the calcareous portions have been removed, leaving the silica behind; used for the cleaning and polishing of metals. Some tripoli is an aggregation of the siliceous remains of minute animal and vegetable organisms, or infusorial earth.

Tripos. Examination for honors at Cambridge Univ., ab. June 1; covering ten or more subjects.

Tripp, BARTLETT, b.1843. Chief-justice of Dakota 1885; Minister to Austria 1893.

Triptych. Three tablets joined by hinges, to hold a painting or inscription. See DIPTYCH.

Triqueti, HENRI, BARON DE, 1802–1874. French painter and sculptor.

Triquetrous. See TRIGONOUS.

Trirectangular (or TRIQUADRANTAL) **Triangle.** Spherical triangle having all its angles right angles and all its arcs quadrants. It subtends a right trihedral, and is one-eighth the surface of the sphere.

Trireme. Galley with three banks of oars, first used 664 B.C. by Corinthians against Corcyra; it had a crew of 200 men; largest known to the ancients till ab. 350 B.C. Later, five (quiquireme) and even ten rows were used in war vessels.

Trisagion. Greek doxology, found in the Syriac and other liturgies.

Trismegistus. See HERMES.

Trissino, GIOVANNI GIORGIO, 1478–1550. Italian poet, reformer of the alphabet; author of a tragedy, *Sofonisba*, 1524, and an epic, *Italia liberata*, 1548.

Tristan, or TRISTRAM. Legendary nephew of King Mark of Cornwall, and lover of Yseult of Ireland; celebrated by M. Arnold and other poets. The story is of Celtic origin, and existed from 1100 or earlier in various forms.

Tristan da Cunha. Island in s. Atlantic, lat. 37° 6′ S., long. 12° 19′ W.; named from its discoverer, 1506; occupied by England 1817. Area ab. 40 sq. m.; pop., 1895, 61.

Tristearin. See STEARINES.

Tristichous. Three-ranked, as the arrangement of the alternate leaves in the Sedges and some other plants.

Tristram. See TRISTAN.

Tritheism. Belief in three gods; supposed to have been taught, in substance or tendency, by Philoponus in Egypt, ab. 600, and Roscelin in France, 1092, in their anxiety to maintain the doctrine of the Trinity.

Trithemius, JOHANN, 1462–1516. Abbot of Spanheim and Würzburg. Earliest German writer on Ch. history and on shorthand. *Polygraphia*, 1518.

Trithionic Acid. See DITHIONIC ACID.

Triton. In Greek Mythology, son of Poseidon and Amphitrite; marine deity, half man, half fish, who dwells with his parents in a golden palace at the bottom of the sea. He

Triton.

stilled the waves by blowing his shell trumpet. Later poets speak of Tritons as subordinate sea-deities. Pausanias describes them as having sea-green hair and eyes, scales on their bodies, and a dolphin's tail.

Triton. See SALAMANDRINA.

Triton (SEA-SLUG). See AILOBRANCHIA.

Tritozoöid. Zoöid of third generation, produced by a deuterozoöid.

Triumph. Highest honor paid in ancient Rome to a victorious general. He entered the city in a solemn procession, riding in a chariot with four horses. In his train marched his army, with their spoils, the principal captives, and musicians. The general wore a gold-embroidered toga and flowered tunic; his head was crowned with a laurel wreath. He held a laurel branch in his right hand and a scepter in his left. After marching up the Sacred Way, through the Forum, he dismounted, climbed the Capitol Hill, and offered a sacrifice to Jupiter. The festivities closed with a banquet.

Triumvirates, ROMAN. Julius Cæsar, Pompey, and Crassus formed the first, 60 B.C. It lasted 10 years, and was followed by civil war. The second, formed 43 B.C., consisted of Octavius Cæsar, Antony, and Lepidus; Octavius gained absolute power in 31 B.C.

Triurideæ. Natural family of flowering plants, of the class *Angiospermæ* and subclass *Monocotyledons*, comprising 2 genera and ab. 16 species, natives of e. S. America, e. India, and the Malayan Archipelago.

Trivium. Three rays or arms of the starfish, opposite the BIVIUM (q.v.).

Trivium. See SEVEN LIBERAL ARTS.

Troad. Territory of Troy, or Ilium, in n.w. Mysia, Asia Minor. It contained numerous cities. The siege of Troy by the Greeks is said to have occupied 10 years, ending 1184 B.C. The exact site of the city is disputed: Schliemann believed he had discovered it by his excavations at Hissarlik 1871–73.

Trocar. See CANNULA and TAPPING.

Trochal Disk. Expanded region around the Rotifer's mouth, which carries a circle of cilia.

Trochanter. Short ring-like second joint of the insect's leg, counting from the body. It may be in several parts; serves for attachment of muscles, and bears the thigh distally.

Trochee. Foot of one long and one short syllable; basis of trochaic meters.

Trochilidæ. See TENUIROSTRES.

Trochoids. Class of curves generated by a point on the radius, or radius extended, of a circle rolling upon a fixed base; often identified with cycloids, but usually confined to curves traced by points not on the circumference, while cycloids are curves traced by points on the circumference of the moving circle. See PROLATE CYCLOID.

Trochu, LOUIS JULES, 1815–1896. French general 1854; prominent in the Crimea and at Solferino; obnoxious to the emperor through a pamphlet exposing the condition of the army and approving the Prussian system 1867; Gov. and defender of Paris 1870; Deputy 1871–72. *Memoires*, 1896.

Troctolite. Variety of gabbro, composed of white feldspar and dark olivine.

Trœzen. City of e. Argolis, near the Myrtoum Sea; settled in remote antiquity by Ionians: supposed birthplace of Theseus; ally of Athens, and later of Sparta; important till 200 B.C. or later, but long since in ruins.

Troglodytes. See ANTHROPOMORPHA.

Troglodytes Gorilla. Largest of the *Anthropomorpha* or man-like Apes. When full grown, the male attains a height of five and a half feet. The canines, muzzle, and superciliary crest become enormously developed. The arms reach to the knees when the animal is erect. It is arboreal, and constructs

Gorilla (*Troglodytes gorilla*).

nests, in which the female brings forth its young. The palms and soles are black and naked, and the three middle digits are united at their bases by the integument. The cranial capacity is ab. 31 cu. in.; that of an Australian is 71 cu. in., and of an average European 93 cu. in.

Troglodytes Niger. Chimpanzee, one of the *Anthropomorpha*, inhabiting w. Africa e. to Abyssinia. The arms are long, and reach to the knees when the animal is erect, which is not its natural position when walking, though assumed at times when at rest. The body is covered with reddish-brown

Chimpanzee (*Troglodytes niger*).

hair, except the hands and face; the face is wrinkled. It lives in societies in forests, constructs nests, and can defend itself against its largest foes. The Bald-headed Chimpanzee is thought to be a distinct species, *T. calvus*. Other species

have been described, but they may be mere varieties. Chimpanzees average a foot shorter in height than gorillas. The nest is used only by the female during confinement. As in gorillas, 13 pairs of ribs are present.

Trogons. Picarian birds, frequenting retired tropical forests; in the Miocene they were more widely distributed. They have a character unique among birds, in that both the first and second toes are turned backward; but these are weak, and not used for climbing. They are schizognathic; ab. 50 species are known. The Old World forms feed on insects, but the New World ones eat fruit, snatching it from the tree while on the wing. They range in size from that of a thrush to a crow. The most brilliant species is the Quesal, with golden green color, black tail and crimson beneath. The male has the middle tail and the wing-coverts lengthened; the former are streamers 3 ft. long.

Trogus Pompeius, ab.40 B.C.–30. Latin author of a universal history in 44 books, of which an epitome by M. Junianus Justinus (2d cent.) survives.

Trolley. Small metallic wheel, fastened to a flexible conductor or trolley pole, which travels in contact with the overhead wire, thus conveying the electric current to the motors on an electric car. See ELECTRIC RAILWAYS.

Trollope, ANTHONY, 1815–1882. English realistic novelist, voluminous and popular; best in his sketches of clerical life, as *The Warden*, 1855, *Barchester Towers*, 1857, and *Last Chronicles of Barset*, 1867. *Autobiography*, 1883.—His mother, FRANCES (MILTON), 1780–1863, caused much wrath by her *Manners of the Americans*, 1832, and pub. several novels.

Trollope, EDWARD, D.D., b.1817. Bp. suffragan of Nottingham 1877; writer on history and architecture.

Trollope, THOMAS ADOLPHUS, 1810–1892. English novelist and historical writer, long resident in Florence and Rome; brother of Anthony. *Beppo*, 1864; *The Garstangs*, 1869.—His wife, FRANCES ELEANOR, is the 4th novelist of this family. *Aunt Margaret's Trouble*, 1866; *That Unfortunate Marriage*, 1888.

Trolls. Legendary giants of Scandinavia; dull-witted, and enemies of men.

Tröltsch, ANTON FRIEDRICH, FREIHERR VON, 1829–1890. Prof. Würzburg from 1864; eminent as an aurist. *Anatomie des Ohres*, 1860; *Ohrenheilkunde*, 1862.

Trombidium. Bright-colored Mite, with hairy body, with eyes and tracheal respiration. The young are hexapodous, and are parasitic on Insects, Arachnids, and Mammals.

Trombone. Large trumpet so constructed that its tube can be lengthened, one portion sliding over the other, so as to command a greater range of tones than would be possible in a tube of fixed length. Formerly there were four kinds, bearing the names of the voices, soprano, alto, tenor and bass; the first two are seldom seen now. A double quartet is used at Moravian funerals at Bethlehem, Pa. In a symphony orchestra there are generally three, two tenors and a bass. The instrument is ancient, having been found at Pompeii.

Tenor Trombone.

Trommel. See DRUM.

Tromp, MARTIN HARPERTZOON VAN, 1597–1653. Dutch admiral 1537; victorious over Spanish fleets Feb. and Oct. 1639, and over BLAKE (q.v.) Dec. 10, 1652; said to have sailed up the English Channel with a broom at his masthead; defeated by the British Feb. 28, 1653, June 12–13, and Aug. 8–9; slain in the last action.—His son, CORNELIS, 1629–1691, Admiral 1653, was prominent in several battles, especially 1666 and 1673. He was made an English baron 1675, and succeeded De Ruyter in chief command of the Dutch navy 1676.

Trompe. Water blowing-engine; used as a furnace blast in Europe and America. It can only be used where a fall of water can be obtained, as it is based upon the principle that water falling through a pipe, with an opening in the side, will draw in air, which, by a simple arrangement, can be made to supply a constant blast.

Tromsö. Commercial and fishing port of n. Norway, on e. coast of Tromsö Island, which is one of the most mountainous districts of n. Norway. Whaling expeditions set out from here annually. Pop. 6,100.

Trona. $Na_4C_3O_8+3aq$. Natural hydrous sodium sesquicarbonate, occurring with other similar compounds as an efflorescence or in beds left after the evaporation of salt lakes.

Trondhjem, or DRONTHEIM. Former capital of Norway, on a fiord, 250 m. n. of Christiania; founded 996. Its cathedral, mostly burned 1530, has lately been restored: the choir is old. The town has a good export trade, chiefly dried fish, sulphur and copper. Pop., 1891, 25,051.

Trondhjem.

Troop. Smallest tactical unit of cavalry. In the U. S. service it consists of a captain, 2 lieutenants, 6 sergeants, 4 corporals, 2 trumpeters, 2 farriers, 1 saddler, 1 wagoner, 50 privates: a total of 3 commissioned officers and 66 enlisted men. Four troops form a squadron. In the plural, any body of soldiers.

Troopial, or TROUPIAL. American tropical bird of genus *Icterus*, ab. size of a large robin; black, with beautiful yellow and white markings. It has a clear and pleasing but short whistling song, repeated at intervals.

Troost, GERARD, 1776–1850. B. in Holland; first pres. Phila. Academy of Natural Sciences 1817–21; Prof. of Mineralogy in Phila. Museum 1821; prof. Univ. Nashville from 1828; State geologist of Tenn. 1831–49.

Tropæolines. Sodium salts of compounds formed by the action of phenols upon the diazo compound of sulphanilic acid. They dye wool various shades of orange in an acid bath, and are used as indicators in alkalimetry and acidimetry.

Trope. Figure of speech involving a departure from literal and prosaic truth. Thus metaphor is a trope; simile is not, nor is antithesis.

Trophi. In Insects, parts of the mouth which function in the acquisition of food.

Trophonius, ORACLE OF. In a cave in Lebadeia, Bœotia. Whoever would consult it, drank first of the well of Oblivion, then of that of Recollection, then descended by a ladder and put his feet into an opening in the cave's side and was drawn in bodily by some invisible power. This oracle was highly esteemed, and in Plutarch's time was the only one where responses were given.

Trophoplast. Certain Leucites or Plastids found in vegetable cells; term applied by Meyer.

Trophosome. General assemblage of nutritive polyps of a Hydrozoön.

Trophy. Spoils of war, usually armor, set up by the Greeks and Romans on a battlefield, originally at the point where the enemy turned to flight.

Tropical Year. Time required for an apparent revolution of the sun from one equinox to the same. Owing to precession, the arc passed over is a little less than 360 degrees.

Tropic Birds. Three species (Red-billed, Yellow-billed, and White-tailed) of oceanic birds, resembling gulls; but in flight they beat their wings rapidly like ducks. The middle tail feathers are greatly elongated. The young are covered

with pure white down. The female lays a single egg (which is gathered for food in the Bahamas) on cliffs or old trees, with-

Red-billed Tropic Birds (*Phaeton aethereus*).

out making a nest. The Red-billed species is Indian and Pacific; the Yellow-billed has a body as large as a pigeon, and breeds in Bermuda.

Tropics. 1. Two small circles of the celestial sphere, parallel to the equator, and distant from it 23° 27′. That of Cancer is n., that of Capricorn s., of the equator. They are so called from the signs of the Zodiac, which begin at the points where these circles touch the ecliptic. 2. Two similar circles on the earth.

Tropidonotus. See WATER-SNAKES.

Tropine. $C_8H_{15}NO$. Base, mpt. 61° C.; prepared by the decomposing action of acids or alkalies on atropine or hyoscyamine.

Troplong, RAYMOND THÉODORE, 1795–1869. French judge, Peer 1846, Senator 1852. *Code civil expliqué*, 28 vols., 1833–58.

Troppau. Capital of Austrian Silesia; on the Oppa; scene of a futile congress of the powers Oct.–Nov. 1820. Pop., 1890, 22,867.

Trossachs. Glen of Perthshire, celebrated by Scott; much visited by tourists.

Trot. See GAITS and HORSE RACING.

Trott, NICHOLAS, 1663–1740. Judge in S. C. *Laws Relating to Ch. and Clergy*, 1721; *Laws of S. C.*, 1736.

Trotzendorf, VALENTIN. Name given to FRIEDLAND (q.v.); being born at Trotzendorf, Germany.

Troubadours. Knightly, noble, and royal minstrels of France 1000–1300, corresponding to the MINNESINGERS (q.v.) of Germany. The most famous were Raoul de Coucy, King Thibaut IV. of Navarre, ADAM DE LA HALLE (q.v.), and Guillaume Machault.

Trouble. In Mining, any disturbance of regularity in a formation or in a mass of ore, whether produced by faulting or otherwise.

Trough of Low Pressure. Long narrow region or very elongated oval portion of the earth's surface, over which the barometric pressure is lower than on either side. Usually the winds are found blowing toward such belts or troughs over which calms and rains prevail. The equatorial belt is a permanent belt of this kind; minor belts frequently occur in the U. S., lasting for from 1 to 3 days, and closing up into a circular storm center.

Troup, GEORGE MCINTOSH, 1780–1856. M.C. 1807–15; U. S. Senator 1816–19 and 1829–33; Gov. of Ga. 1823–27. During his term the Creeks ceded their lands to the State.

Troup, ROBERT, 1757–1832. American officer; U. S. Dist. Judge for N. Y. ab.1784.

Trousdale, WILLIAM, 1790–1872. Col. in war with Mexico; Gov. of Tenn. 1849–51; Minister to Brazil 1853–57.

Trout. See ISOSPONDYLI and SALMONIDÆ. The Sea Trout is *Salmo trutta*, the Black Spotted Trout is *Salmo fario*, *S. gairdneri* (Steel-head), *S. irideus* (Rainbow Trout), or *S. purpuratus* (Red-throat). The Brook and the Lake Trout are the

1. Atlantic Salmon (*Salmo salar*); 2. Sea or Salmon Trout (*Salmo trutta*).

Chars, including the genus *Salvelinus*, of which the species *S. alpinus*, *S. oquassa*, *S. fontinalis*, and *S. namaycush* are examples. See SALMO and SALVELINUS.

Trouvères. Mediæval poets of n. France. See TROUBADOURS.

Trouville. Seacoast resort of n. France, 10 m. s.w. of Honfleur. Pop. ab. 7,000.

Trover. Legal action for CONVERSION (q.v.).

Trow, JOHN FOWLER, 1810–1886. Printer in New York; publisher of directories from 1849.

Trowbridge, EDMUND, 1709–1792. Judge of Mass. Supreme Court 1767–72.

Trowbridge, JOHN, b.1843. Prof. Harvard since 1880; noted for electrical researches; author of many papers. *New Physics*, 1884.

Trowbridge, JOHN TOWNSEND, b.1827. American novelist, poet, and writer for boys. *Cudjo's Cave*, 1863.

Trowbridge, WILLIAM PETIT, LL.D., 1828–1892. Assistant on U. S. Coast Survey 1857–63; Prof. of Engineering in Yale 1870, and Columbia from 1877. *Heat*, 1874; *Turbine Wheels*, 1879.

Trowel Bayonet. Bayonet shaped like a trowel and intended to be used as an intrenching tool: invented by Lieut. Rice of the U. S. army.

Troy. Capital of Rensselaer co., N. Y., on the e. bank of the Hudson, at the head of steam navigation; 5 m. n. of Albany; founded 1659, incorporated 1816. It has several railroads, two canals, and varied manufactures, especially of iron, shirts, and collars. It is the seat of the Rensselaer Polytechnic Institute. Pop., 1890, 60,956.

Troy. See TROAD.

Troya, CARLO, 1785–1858. Italian historian.

Troyes. City of France, on the Seine, 104 m. e.s.e. of Paris; important in the later Middle Ages. It has a good trade, and cotton and other manufactures. By a treaty concluded here May 21, 1420, Henry V. of England agreed to marry Catherine, daughter of Charles VI., and was recognized as his heir and regent. Pop., 1891, 49,808.

Troyon, CONSTANT, 1810–1865. French painter of landscape and cattle; at his best the equal of any modern landscape painter, and superior of any in animals.

Troy Weight. See POUND.

Trübner, NICHOLAS, 1817–1884. German-English publisher and bibliographer.

Truce. Suspension of hostilities, either general or partial (local), for a definite period, during which each army is to refrain from aggression, and the status quo to be maintained.

Truce, FLAG OF. See FLAG OF TRUCE.

Truce of God. See PEACE OF GOD.

Truck. See BISSELL TRUCK and BOGIE.

Truck System. That of paying wages, in whole or part, in commodities instead of money. It has invariably been found injurious, and has been abolished by law in various countries.

True, CHARLES KITTRIDGE, D.D., 1809–1878. Prof. Wesleyan Univ. 1849–60; biographical writer.

Trueba y Quintana, ANTONIO DE, 1821–1889. Spanish poet and novelist.

True Cross. See HOLY ROOD.

True Reformed Dutch Church. Body which was absorbed into the Christian Reformed Church, 1889, and which had separated from the Reformed Dutch Church in America in 1822. See REFORMED CHURCH.

Truffle. Ascomycetous fungus of subterranean habit, its sporocarps large and highly esteemed for food. There are numerous species, mainly of the genus *Tuber*, most abundant in Europe.

Truffle (*Tuber æstivum*).

Trullan Councils. Held at Constantinople 680, to condemn the Monothelites, and 692 (Quinsext), to supplement the 5th and 6th General Councils; named from a domed hall in the palace.

Trumbull, BENJAMIN, D.D., 1735–1820. Pastor in Conn. *Hist. Conn.*, 1797; *Hist. U. S.* (to 1765), 1810.—His grandson, LYMAN, 1813–1896, was Justice Ill. Supreme Court 1848–53, and U. S. Senator 1855–73.

Trumbull, JAMES HAMMOND, LL.D., 1821–1897. Conn. antiquarian and philologist; writer on the Algonquin and other Indian languages.—His brother, HENRY CLAY, D.D., b.1831, sec. Sunday-School Union 1871, and long ed. *Sunday-School Times*, is a prolific writer. *Kadesh-Barnea*, 1884.

Trumbull, JOHN, LL.D., 1750–1831. Poet and essayist; Judge Conn. Superior Court 1801–19. His *McFingal*, 1774–82, a satire, was long popular; some of its lines are still quoted.

Trumbull, JONATHAN, LL.D., 1710–1785. Assistant or Councilor in Conn. 1740–69; Chief-justice 1766–69; Gov. 1769–83; called by Washington "first of patriots" and "Brother Jonathan," whence probably that name as applied to the country.—Of his sons, JOSEPH, 1737–1778, was in Congress 1774–75, and Commissary-gen. of the army 1775–77: JONATHAN, 1740–1809, was army paymaster 1775–80, aid to Washington 1780–83, M.C. 1789–95, Speaker 1791–95, U. S. Senator 1795–96, Lieut.-gov. of Conn. 1796–98, and Gov. from 1798: JOHN, 1756–1843, was in the army 1775–77, and later won fame as a painter, mainly of scenes from the Revolution and portraits of public men. He was long in England, and from 1816 mostly in New York. Four large pictures of his are in the rotunda of the Capitol at Washington. Most of his works, 57 in all, were sold ab.1827 to Yale Coll. for an annuity of $1,000, and are preserved in its museum. His importance is chiefly historical; but for his time he was no mean artist.

Trumbull, JOSEPH, LL.D., 1782–1861. Grandson of Jonathan; M.C. 1834–35 and 1839–43; Gov. of Conn. 1849–50.

Trumpet. Musical instrument of brass, consisting of a tube ab. 8 ft. long, bent on itself for convenience in handling, widening into a bell on one end and terminating in a cup-

Valved Trumpet.

shaped mouthpiece at the other. By means of crooks which vary the length of the tube, it can be set in a large number of keys. It now has valves like the CORNET (q.v.), but formerly it was capable of producing only the tones pertaining to a natural tube. It is the most ancient wind instrument.

Trumpet Creeper, or TRUMPET-FLOWER. *Tecoma radicans.* High climbing vine of the natural family *Bignoniaceæ*, native of the s.e. U. S., bearing showy scarlet flowers and long pods.

Trumpeter. Breed of pigeons, so called from the peculiarity of their cooing. The tarsi are well feathered, and the spreading crest overhanging the eyes must be trimmed, so that they can feed their young; white and black are the best colors.

Trumpets. *Sarracenia flava.* Yellow-flowered bog plant, with pitcher-like leaves, growing in bogs in the s.e. U. S.

Trumpet-Tree. *Cecropia peltata.* Tree of the Bread-fruit family, native of tropical America, so called in the W. Indies.

Trumpet-Weed. See JOE-PYE WEED.

Truncated Cone, or PYRAMID. Part included between the base and a secant plane not parallel to the base.

Truncus Arteriosus. Ventral aorta in Vertebrates from which the aortic arches spring; sometimes divided into a valvular conus arteriosus near the heart and a more distant bulbus arteriosus.

Trunk Engine. Form of steam engine, in which the connecting-rod is pinned to the piston instead of to a crosshead connected by a rod to the piston. To admit of the angular motion of the connecting-rod without leakage of steam at the head of the cylinder, the effective diameter of the piston is reduced by a hollow tube or trunk, whose bore is big enough to admit of the swing of the connecting-rod inside of it, and whose outer surface fits the cylinder head steam tight by means of a stuffing-box. The trunk may be cylindrical, or of an oval shape. The engine is much shortened and compacted in this design, but the power of the two strokes is different, unless a second trunk is used on the other side, when the piston and cylinder become annular.

Trunk-Fish. See PLECTOGNATHI.

Truro. Old town of Cornwall, on an inlet, 12 m. n.n.e. of Falmouth, on a peninsula, at the junction of rivers Allen and

Truro Cathedral.

Kenwyn. T. was formerly an important mining town, in a region of tin and copper mines; seat of a former bishopric, revived 1876. Pop., 1891, 11,131.

Truro, THOMAS WILDE, BARON, 1782–1855. M.P. 1831 and later; knighted 1840; Atty.-gen. 1841; Chief-justice of Common Pleas 1846; Baron 1850; Lord Chancellor 1850–52.

Truss. System of members consisting of an upper chord, a lower chord, and webbing, so arranged that each is strained only in tension or compression; everywhere used for roofs and bridges. The first trusses were employed in Italy and Germany in the 13th century, but the scientific method of arrangement was little studied until ab.1830. The first satisfactory theoretic discussion of the stresses in bridge trusses made in the U. S. was pub. by Whipple 1847. The Howe truss, introduced 1840, the Whipple 1850, the Pratt 1855, are those most extensively used for simple bridges. The stresses in the chords decrease, while those in the webbing increase, as the depth of the truss

is made greater; the economic depth is that which requires the least quantity of material. The word is not applicable to

Trussed Girder.

a structure which exerts a horizontal pull or thrust upon its supports.

Truss Bridge. One deriving its supporting power from trusses which bring only vertical pressures on the piers. See BRIDGE and TRUSS.

Trust. Beneficial interest in property, the legal title to which is in another. The owner of such interest is called the cestin que trust, the holder of the legal title, the trustee. This is one of the most important subjects in equity jurisprudence.

Trusts. Trade combinations, in which several previously competing producers enter into an agreement to produce only a certain quantity of goods within a specified time, and to sell these only at a certain price. They have excited much recent attention and opposition in the U. S.

Truth. Fact, reality, whether physical or spiritual; in a narrower sense, agreement of verbal expressions with the thought in the speaker's mind.

Truth, SOJOURNER. See SOJOURNER TRUTH.

Truthfulness. See VERACITY.

Truxtun, THOMAS, 1755–1822. Privateer 1776–82, distinguished in several engagements; Captain U.S.N. 1798. With the *Constellation* he fought and took a French frigate of superior force, *L'Insurgente*, Feb. 9, 1799; and defeated another, *La Vengéance*, Feb. 1, 1800. He left the navy 1802 through a misunderstanding.—His grandson, WILLIAM TALBOT, U.S.N., 1824–1887, served through the Civil War, became Commander 1866, Captain 1873, and Commodore 1882.

Trygon. See RAYS.

Trymberg, HUGO VON, d.ab.1300. German poet.

Tryon, DWIGHT WILLIAM, b.1849. American landscape painter. N.A. 1891.

Tryon, GEORGE WASHINGTON, 1838–1888. Curator Phila. Academy of Natural Sciences 1869, and of its conchological section from 1875. *Shells of N. America*, 4 vols., 1873; *Manual of Conchology*, 12 vols., 1879–85.

Tryon, WILLIAM, ab.1725–1788. Gov. of N. C. 1765–71, and of N. Y. 1771–78; obnoxious for cruelty to prisoners and destructive raids into Conn.; Major-gen. 1777, Lieut.-gen. 1782.

Tryphiodorus. Egyptian-Greek author of uncertain date. His poem on the Falling of Troy survives.

Trypsin. One of the four pancreatic ferments of PANCREATIN (q.v.), which digests proteids. It is the most important of the digestive ferments.

Tsad, LAKE. See CHAD.

Tsar. See CZAR.

Tsaritsin, or ZARITZIN. Town of s.e. Russia, on the Volga. It is surrounded by vineyards, and has flour mills and tanneries. Pop., 1890, 40,130.

Tsarskoye-Selo. Russian town, 14 m. s. of St. Petersburg; site of two summer palaces. Pop. ab.17,000.

Tschaikowsky, PETER ILITSCH, 1840–1893. Russian composer of great versatility, in New York 1891. His chief works are the operas *Woiwode*, 1869, *Opritschnik*, 1874, *Wakula*, 1876, *Eugen Onegin*, 1879, *Maid of Orleans*, 1881, *Mazeppa*, 1882, *Tscharavitschki*, 1886, *Tscharodeika*, 1887, *Piquedame*, 1890, and *Iolanthe*, 1893; two pianoforte concertos, in B-flat major and G minor; symphonic poems, and six symphonies, in G minor, C minor, D major, F minor, E minor, and B minor (*Pathétique*).

Tschermigite. Natural ammonia alum; named from Tschermig, Bohemia, one of the localities at which it has been found.

Tschudi, ÆGIDIUS, 1505–1572. Swiss chronicler. His work, extending to 1470, was pub. 1734–36, and carried on by J. von Müller.

Tschudi, JOHANN JAKOB VON, 1818–1889. Swiss naturalist, in Peru 1838–43; envoy at Vienna 1866–83. *Fauna Peruana*, 1844–47.

Tseng, KWOH-FAN, 1807–1872. Gov.-gen of Kiang provinces.—His son, KI-TSEH, MARQUIS, 1848–1890, was Chinese envoy to England, France, and Russia. 1878–86.

Tsetse (GLOSSINA MORSITANS). S. African fly, destructive to cattle and other animals.

Tsing. Ruling (Manchu) dynasty of China.

T-Square. Flat ruler furnished with a short crosshead, used by draughtsmen for drawing parallel lines.

Tuamotu. Group of coral islands in the s. Pacific, between 14° and 24° S. lat., and 135° and 150° W. long., forming a dependency of the French possession of Tahiti. Called Low Islands by Bougainville, who discovered them, and later named Dangerous Islands by Cook. There are ab. 80 in all, 3 being atolls. Area ab. 330 sq. m.

Tuaregs. Berber tribes of central Sahara; nomadic warriors who exact tribute from caravans; distinguished from the n. Berbers, who are admixed with Arab blood, and w. Berbers, who are shepherds and have the upper part of the body naked; the T. are well clothed and wear a veil wrapped about the head and face, though the women go unveiled. They are Moslems, but monogamy prevails. Some agriculture is practiced on the oases. They hold negro slaves, and have sharp distinctions of caste.

Tuaregs (Tuarics) on Journey.

Tuat. Group of oases, in w. Sahara, s. of Algeria. There is abundance of subterranean water, and the country is very fertile, producing mostly dates.

Tuatara. New Zealand name for the HATTERIA (q.v.).

Tuba. Bass musical instrument, belonging to the valved horns; sometimes called bombardon. Its tube is so long that it is either rolled in a spiral like a horn or bent on itself like a contrabassoon. See SAXHORN.

Tubal Cain. In Genesis, descendant of Cain; inventor of metallurgy.

Tube. Hollow organ formed by the union of sepals, petals, or stamens; also, projection from a germinating pollen-grain.

Tube, DRAWN. Cylindrical tubes for gun-barrels, etc., made without a weld (see PIPE). An ingot or other homogeneous mass of metal is perforated in the center to take a mandrel of the required size. This mass, of short length but considerable thickness, is then reduced by repeated pressures and rollings with reheatings, until its length and thinness has reached the desired limit, when the last mandrel is withdrawn. The process is expensive, but is best adapted for certain classes of work, as in copper and brass.

Tube, IN HYDRAULICS. Hollow cylinder whose length is ab. three times its interior diameter. The amount of water discharged through a tube is ab. 82 per cent of the theoretic amount.

Tube of Force. Space inclosed by lines of force drawn through all the points of contour of a portion of an equipotential surface in a field of force. Its lateral parts are always lines of force, while the ends are always equipotential surfaces.

Tuber. Thickened portion of a rhizome or subterranean stem, generally rendered fleshy by the accumulation of starchy matters, as in the potato.

Tuberaceæ. Order of *Fungi* of the subclass *Ascomycetes*, including the truffles.

Tubercle. 1. Conic or nodular projection or eminence, on the crown of a tooth, near the head of a rib, and elsewhere. 2. Nodular mass of varying size formed in the connective tissues of organs that are attacked by the germ of consumption. See TUBERCULOSIS and BACILLUS TUBERCULOSIS. 3. Wart-like projection on any part of a plant.

Tubercle Bacilli in phthisical expectoration (x ab.1,800 diameters):
a, bacilli; *b*, catarrhal cells.

Tubercular. Having the shape of a tubercle.

Tubercular Meningitis. See MENINGITIS.

Tubercular Process. In Anatomy, same as the DIAPOPHYSIS (q.v.).

Tuberculate. Surface covered with tubercles.

Tuberculin. See KOCH'S LYMPH.

Tuberculo-Sectorial Teeth. Molar teeth in carnivores, that have sharp-cutting projections in addition to crushing surfaces and tubercles on their crowns.

Tuberculosis. Ordinarily called consumption, phthisis, or pearl disease; characterized by the formation of tubercles on or in various organs, usually the lungs, intestines, and lymphatic glands, the result of irritation produced by the presence and multiplication of the *Bacillus tuberculosis*, a microbe or disease-germ, parasitic in the organ. From one-seventh to one-third of all deaths are due to this disease, which is undoubtedly contracted in all cases, in various ways: (1) as congenital, transmitted to the fœtus by a consumptive mother; (2) by nursing from a diseased mother or taking milk from a consumptive cow (see BOVINE TUBERCULOSIS); (3) by eating food containing germs that have not been killed by exposure to sufficient heat, as in meat from comsumptive animals, or any food exposed to air containing tubercular dust; (4) by breathing tubercular dust. In all cases, certain constitutions (and all constitutions when run down) are especially liable to fall prey to this germ, which in many cases is successfully resisted. The most potent factors aiding in this infection are lack of pure air and sunlight in dwellings, dissipation, and sexual excess. Close inbreeding is considered potent in evolving the consumptive diathesis, but some doubt this. See KOCH'S LYMPH.

Tubercle of Lung (x 50 diameters):
bb, giant cells; *c*, center of tubercle beginning to caseate; *d*, branch of pulmonary artery; *e* alveolar framework of lung.

Tuberose. *Polianthes tuberosa.* Bulbous, fragrant white-flowered plant of the Lily family, native of India, widely cultivated for ornament.

Tuberous. Irregularly thickened roots or subterranean stems, as the Jerusalem artichoke.

Tube Wells. See DRIVEN WELL.

Tubicolæ (TUBICOLOUS ANNELIDS). See SEDENTARIA.

Tubinares. See LONGIPENNES.

Tübingen. Town of Würtemberg, on the Neckar. Its university, founded 1477, had, in 1895, 1,184 students, ab. 100 instructors, and a library of 200,000 vols.

Tübingen School. Founded by F. C. Baur (1792–1860), for the free criticism of Scripture and of Church history. Its influence has been large and somewhat destructive, especially through D. F. Strauss' *Leben Jesu*, 1835–36. An earlier school, led by G. C. Storr (1746–1805), held Evangelical tenets; another was headed by J. A. Möhler (1796–1838), prof. of R. C. theology there.

Tubiporidæ. Family of *Alcyonaria*, in which the polyps are placed in parallel calcareous tubes, united by horizontal plates; *e.g.*, Organ-pipe coral.

Tubitelæ, or TUBITELARIÆ. See SPIDERS.

Tubman, HARRIET, b. ab.1821 in Md. Slave, who escaped 1849, and by 1861 had promoted the escape of over 300 negroes.

Tubular. In the form of a tube, as the calyx or corolla of a gamosepalous or gamopetalous flower; also hollow stems.

Tubular Bridge. Wrought-iron bridge having its sides, top and floor made of plate iron riveted together so as to form a rectangular tube, through which trains pass. The longest is the Britannia bridge in Wales, over Menai Straits, which has two spans each 230 ft. long, and two each 460 ft. Tubular bridges are very stiff, but expensive on account of the great amount of materal required. None have been built since 1870.

Britannia Tubular Bridge.

Tubular Bullet. Recent invention of Charles Kruka of Prague and Wm. Hebler of Küssnact, and called the Kruka-Hebler bullet. It is made of steel, having a copper rotating ring attached to the exterior. The hollow tube has a sabot fitting closely to act as a gas check, which drops off after the bullet leaves the gun. This projectile is still in its experimental stage, and it is claimed that an initial velocity of nearly 3,000 f. s. under a gas pressure of 2,650 atmospheres has been obtained.

Tubular Dispatch. See PNEUMATIC DISPATCH.

Tubular Floret. One of the disk flowers in the *Compositæ*, whose corolla is small and regular, in distinction from the ligulate corolla of the ray-flowers.

Tubulariæ (ATHECATA, TÆNIOLATA, GYMNOBLASTEA, CORYNIDA, GYMNOTOKA, OCELLATA, ANTHOMEDUSÆ). *Hydromedusæ* whose polyp-stocks either are naked or have a chitinous periderm, but no cup-shaped hydrothecæ, as in Campanularians. The Medusa-buds are sometimes rudimentary. The sexual cells arise on the manubrium. Four to six ocelli are present at the bases of the tentacles, and correspond in number to the radial canals. The families included are *Clavidæ*, *Hydractinidæ*, *Tubularidæ*, *Corynidæ*, *Eudendridæ*. The group is best termed *Gymnoblastea-Anthomedusæ*.

Tubularidæ. Family of *Tubulariæ* (*Tubularia* being typical). There is a chitinous periderm, and the proboscis has a circle of tentacles, as well as the peristome. The generative buds are sessile and arise between the two circles of tentacles. The branches of the colony arise from a root-like stolon. In *Tubularia* they are much like straws in appearance, slightly branched; at the tip of each is the polyp with its fringes of numerous tentacles. The young pass their embryonic stages in the manubrium of the gonophores.

Tubulosa. Fossil corals with imperfect partitions in their thecæ. See MADREPORARIA.

Tuck, FRIAR. Chaplain of Robin Hood, represented as wearing the Franciscan habit; humorous and combative; introduced by Scott in *Ivanhoe*.

Tuckahoe. Edible, but tasteless fungus, growing on the roots of trees in the s. U. S.; also called Indian Bread.

Tucker, ABRAHAM ("EDWARD SEARCH"), 1705–1774. English author. *Light of Nature Pursued*, 7 vols., 1768–78.

Tucker, CHARLOTTE MARIA ("A. L. O. E."), d.1895. English author of juvenile and religious tales, long a missionary in India.

Tucker, GEORGE, 1775–1861. M.C. from Va. 1819–25; prof. Univ. Va. 1825–45; writer on psychology and political economy; biographer of Jefferson 1837. *Hist. U. S. to 1841*, 4 vols., 1856–58.

Tucker, JOHN IRELAND, D.D., 1819–1895. Rector at Troy, N. Y.; compiler of tune-books, much used in P. E. Ch.

Tucker, JOSIAH, D.D., 1711–1799. Dean of Gloucester, Eng., 1758; writer on political economy. *Commerce and Taxes*, 1753.

Tucker, LUTHER, 1802–1873. Founder and ed. *Genessee Farmer*, 1831, and *Country Gentleman*, 1853.—His son, WILLIS GAYLORD, M.D., became pres. Albany Coll. of Pharmacy 1883.

Tucker, ST. GEORGE, LL.D., 1752–1828. Judge of Va. courts, and of U. S. District Court 1813–27; poet and legal writer; ed. Blackstone 1803. *Slavery*, 1796; *Alien and Sedition Laws*, 1799. —His son, NATHANIEL BEVERLEY, 1784–1851, was judge in Mo. 1816–30, and law prof. William and Mary Coll. from 1834. His *Partisan Leader*, 1836, a romance, was repub. 1861 as *A Key to the Disunion Conspiracy*.—His brother, HENRY ST. GEORGE, LL.D., 1780–1848, was M.C. 1815–19, Chancellor of Va. 1824–31, pres. Va. Court of Appeals 1831–41, prof. Univ. Va. 1841–45, and a writer on law.—His son, JOHN RANDOLPH, LL.D., 1823–1897, M.C. 1875–87, was noted as an orator and lawyer.—A cousin, JOHN RANDOLPH, 1812–1883, was an officer U.S.N. and C. S. N., and in 1866 a Peruvian admiral.

Tucker, SAMUEL, 1747–1833. Seaman of Mass.; Capt. U.S.N. 1776–85; pensioned 1821.

Tucker, TILGHMAN M., d.1859. Gov. of Miss. 1841–43; M.C. 1843–45.

Tucker, WILLIAM JEWETT, D.D., b.1839. Prof. Andover 1879; pres. Dartmouth 1892.

Tuckerman, EDWARD, LL.D., 1817–1886. Prof. Amherst from 1858; lichenologist. *N. American Lichens*, 1845; *Lichens of New England*, etc., 1848.—His cousin, BAYARD, b.1855, wrote several biographies. *Hist. English Prose Fiction*, 1882.

Tuckerman, HENRY THEODORE, 1813–1871. American critic and essayist.—His brother, CHARLES KEATING, 1821–1896, was U. S. Minister to Greece 1868–72.—Their uncle, JOSEPH, D.D., 1778–1840, minister at large in Boston 1826, left his mark on methods of philanthropic work at home and in Europe.

Tucson. Capital of Pima co., and of Arizona 1867–77; on the Santa Cruz; founded by Jesuits 1560; seat of State University. The surrounding country is arid and the climate hot and dry. The prevailing industry is mining. Pop., 1890, 5,150.

Tucuman. City of n. Argentina, 723 m. n.w. of Buenos

Tucuman.

Ayres; founded 1564; scene of a patriot victory 1812, and of the declaration of Platine independence 1816. Pop. ab.40,000.

Tudeschis, NICHOLAS DE (called PANORMITANUS), 1400–1445. Sicilian writer on canon law; Benedictine abbot; Cardinal 1440. His works were collected in 9 vols. 1617.

Tudor. English royal family 1485–1603; descended from Owen Tudor, of Welsh extraction, who married 1423 Catharine of Valois, widow of Henry V. Its sovereigns were Henry VII., 1485–1509, Henry VIII., 1509–47, Edward VI., 1547–53, Mary, 1553–58, and Elizabeth, 1558–1603.

Tudor, WILLIAM, 1779–1830. Founder and first ed. *N. American Review*, 1815–18; Consul at Lima 1823; Chargé in Brazil 1827. *Life of Jas. Otis*, 1823; *Gebel Teir*, 1829.—His father, WILLIAM, 1750–1819, was Col. and Judge-advocate 1775–78, and Mass. Sec. of State 1809–10.

Tudor Architecture. Usually applied to late Perpendicular Style, the chapel at Westminster being the most perfect specimen. Tudor flower is an upright flat leaf ornament, used in crests or cornices in Perpendicular architecture.

Tuesday. Day of Mars, the 3d day of the week, so called from Tuesco, a Saxon deity, worshiped on this day.

Tufa, or TUFF. Kind of rock characterized by a loose and open structure, formed by the accumulation of volcanic detritus, or by deposition from calcareous or siliceous springs.

Tufts College. At Medford, Mass.; founded 1852, opened 1855; comprising schools of letters, divinity, applied sciences, and medicine; controlled by Universalists; opened to women 1892. P. T. Barnum gave $95,000 to its museum. It has 14 buildings, 40 professors, 30 instructors, 251 students in letters, 35 in theology, 180 in medicine, and a library of 35,000 vols.

Tugenbund. League of Virtue. Formed at Konigsberg in Prussia soon after the Peace of Tilsit, for the revival of morality and patriotism, but really for throwing off the French yoke. Napoleon demanded its suppression 1809. It numbered ab. 400.

Tug of War. English school game, in which sides are chosen, and the opponents, taking the ends of a rope, endeavor to outpull each other; common amusement among schoolboys in Japan, as "rope pulling." It was formerly practiced in Japan between boys of rival villages on the 15th of the 8th month. In Corea it is still played about the 15th of the 1st month. In the country the entire population of districts and villages engage in the sport, and the village that wins expects to have a good harvest.

Tuilleries. Palace in Paris, joined by wings to the Louvre; begun 1564 by Catharine de' Medici, and subsequently much enlarged; stormed by the people 1792, 1830, and 1848; burned by

The Louvre and the Tuilleries (the latter in the background).

Communists 1871; ruins not removed till 1883. The garden, enlarged 1889, now extends over the site of the palace. Napoleon I. and III. resided here, and the kings who came between.

Tuke, DANIEL HACK, M.D., LL.D., 1827–1895. English writer on mental diseases. *Insanity*, 1878; *Dict. Psychological Medicine*, 1892.

Tuke, HENRY, 1756–1814. English writer on Quakerism. *Principles of Religion*, 1805.

Tula. Russian town, on the Upa, 110 m. s. of Moscow. It has large and varied manufactures, especially of arms and niello work. Pop., 1890, 66,111.

Tulane, PAUL, 1801–1887. Merchant of New Orleans, who gave ab. $1,100,000 to found Tulane University.

Tulane University. In New Orleans, La.; founded 1884. The Univ. of La., organized 1878, with all its property and franchises, was merged in it. It has also a medical department, dating from 1834, and a law school 1847. The Newcomb Memorial Coll., founded 1887 for women, has a separate foundation of $500,000, and an attendance of 96. There are 43 professors, 25 assistants, and 940 students.

Tulare Lake. In s. central Cal.; fed by several streams, and partly drained by the San Joaquin. Area ab. 200 sq. m.; formerly much larger.

Tulasne, LOUIS RENÉ, 1815–1885. French botanist, as was his brother, CHARLES, 1816–1884. They wrote chiefly on *Fungi*.

Tulchan Bishops. Scottish clergymen, appointed 1572 to episcopal sees, without consecration or authority, giving nearly all the revenues to lay patrons; so called from the

stuffed "Tulchan calves" used to persuade cows to give their milk.

Tulip. Plants of the genus *Tulipa*, of the Lily family; widely cultivated for ornament in many forms, all supposed to have originated from a single species. It is a native of the Levant and was brought to Augsburg 1559, whence it spread over Europe. A mania for tulips occurred in Holland in the 17th century; they are still much cultivated there.

Tulip Tree. *Liriodendron tulipifera.* Large forest tree of the Magnolia family, bearing large greenish-yellow flowers, native of e. N. America. Locally it is wrongly called Poplar.

Tulip Tree (*Liriodendron tulipifera*).

Tull, JETHRO, ab.1680–1740. English author of a system of improving agriculture by means of thorough culture without manure, exemplified in his *Horse Hoeing Husbandry*, 1733. See LOIS WEEDON.

Tulle. Thin silk fabric, used for trimming gowns, for veils, etc.; named from a French town, where it was formerly made.

Tullianum. Prison in ancient Rome. See MAMERTINE PRISON.

Tullin, CHRISTIAN BRAUNMANN, 1728–1765. Norwegian poet.

Tulloch, JOHN, D.D., LL.D., 1823–1886. Prof. St. Andrews 1854, principal 1860; a leader of liberal thought in the Scottish Church. *Theism*, 1855; *Leaders of the Reformation*, 1859; *Beginning Life*, 1862; *Rational Theology in 17th Century*, 1872; *Modern Theories*, 1884.

Tullus Hostilius. In Roman legends, third king of Rome 672–640 B.C. He destroyed Alba and transferred its inhabitants to Rome upon learning of the Albans' treason, who had acknowledged the supremacy of Rome as a result of the combat between the Horatii and Curiatii, which took place during his reign.

Tully. See CICERO.

Tumbling Lever. See GROUND LEVER.

Tumors. Enlargement or swelling, not the result of inflammation or of normal growth. The older classification of malignant and benign tumors, while not affording a sharp line of demarkation, affords a convenient grouping. Some tumors are of no concern except for the annoyance they may give; others, like the carcinoma, are very liable to terminate fatally. Cartilaginous tumors are composed of tissue similar to cartilage. They rank with the benign tumors. They are found chiefly at the ends of the long bones, especially in the fingers. Treatment is surgical. Benign tumors are abnormal growths, which do not produce constitutional derangement or general illness, except as a result of their pressure or location. They usually grow slowly and do not ulcerate.

Tun. In old wine measure 252 gals.; in old ale and beer measure 216 gals. The ton weight was probably taken from the tun measure, as a tun of water weighed a little more than 2,000 lbs.

Tunbridge Wells. Inland watering place, especially fashionable during the 18th century, 34 m. s.e. of London. Its chalybeate springs were discovered by Lord North in 1606. The local industry is in Tunbridge Ware, a kind of wood mosaic in veneer. Pop., 1891, 27,895.

Tundra. See PLAIN.

Tune. See MELODY.

Tungstates. Salts of tungstic acid.

Tungsten, or WOLFRAM. W. At. wt. 183.6, sp. gr. 19.1, sp. ht. .035. Element first isolated by Elhujar 1785; the oxide was obtained by Bergman and Scheele 1781–82. It occurs in wolframite, tungstite and scheelite. It is obtained by reducing the oxide by hydrogen at a red heat. It is a gray, infusible powder, which burns at a red heat. Introduced into steel in small percentages it gives great hardness for tools and projectiles. The conical points of Holtzer projectiles contain tungsten. Sodium tungstate is used as a mordant, and, with sodium phosphate, renders cloth uninflammable.

Tungsten Chlorides. Dichloride. WCl_2. Soluble, unstable gray substance, made by treating the higher chlorides with nascent hydrogen.—Tetrachloride. WCl_4. Soluble, grayish-brown substance obtained by distilling the pentachloride in carbon dioxide.—Pentachloride. WCl_5. Lustrous black, needle-like crystals; mpt. 248° C.; soluble in carbon disulphide to a blue color; made by distilling the hexachloride in carbon dioxide.—Hexachloride. WCl_6. Black violet crystals; mpt. 275° C. (Cor.); obtained by passing chlorine over the heated metal.

Tungsten Dibromide. WBr_2. Bluish-black compound, obtained by reducing the pentabromide with hydrogen.

Tungsten Dioxide. WO_2. Brown powder; sp. gr. 12.1; made by reducing the trioxide with carbon.

Tungsten Disulphide. WS_2. Black powder, made by melting tungsten with sulphur.

Tungsten Pentabromide. WBr_5. Dark brown needles; mpt. 276° C. (Cor.); obtained by heating tungsten in bromine vapor.

Tungsten Trioxide. WO_3. Tungstic anhydride; lemon-yellow powder, becoming darker on heating; sp. gr. 5.2 to 7.1. It melts in blast-flame, and is made by fusing wolframite with sodium carbonate and nitrate.

Tungsten Trisulphide. WS_3. Liver-brown substance, obtained by fusing wolframite with carbon, sulphur, and soda.

Tungstic Acid. $H_2WO_4+H_2O$. White solid, made by treating POTASSIUM TUNGSTATE (q.v.) with a strong acid; soluble in water. Colloidal tungstic acid is made by dialyzing a 5 per cent solution of sodium tungstate to which hydrochloric acid has been added. It is very soluble in water, forming a mucilaginous mass.

Tungstite. WO_3. Natural tungsten oxide, occurring in small quantity as a yellowish or greenish earthy product of the decomposition of other tungsten minerals.

Tungus. Important branch of the n. Turanians, inhabiting central and part of e. Siberia. The Manchurians are a closely related branch. The Tungus number ab. 80,000, but are disappearing before the encroachments of the Slav from the w. and the Yakut hoards of the n.e. They are considered the most moral of Mongolians. In height they average 5 ft. 4 in.; their figures are slender, their skulls square, mouth large, lips thin, beard scant. They use the reindeer as a beast of burden and for riding, as well as draught. A few are agriculturists, but most are hunters and live by barter in furs. Their food is meat carefully cooked. They are nominally Russian Christians, but at heart Shamanists.

Tunic. Scaly coats of certain bulbs, as the Onion.

Tunic. Shirt or inner garment worn by ancient Romans.

Tunicata (UROCHORDA, ASCIDIOIDEA). Bilateral, barrel or sac-shaped animals, inclosed in a leathery tunic or testa. The anterior portion of the alimentary tract is pierced by openings, forming a branchial sac. The cloacal cavity is continued as an atrial chamber around the branchial basket. The testa has two openings, one, the mouth or incurrent orifice, leading into the branchial sac; the other, the excurrent orifice, leading out of the peribranchial space. Between the two (on the dorsal side) lies the nerve ganglion. A heart is present. The forms are hermaphrodite, but also reproduce asexually by budding. There

Tunicata (*Ascidia microcosmus*).

are two classes: TETHYOIDEA and THALIACEA (q.v.). The development of the embryo Tunicate from the egg shows that these animals, which were once classed as Mollusks, are really closely allied to *Vertebrata*. There is a notochord in the caudal region, which persists in the lowest, least specialized Tunicates. The incurrent pore represents a mouth, and leads into a pharynx, whose walls are pierced by numerous pores representing the gill slits of fishes. The excurrent pore is an external gill opening, like that behind the operculum of a fish, but the cloaca has secured a secondary connection with the atrial or peripharyngeal chamber. Most of the Ascidians are sessile and undergo

a specialization to fit them for such a habit, which from a certain standpoint may be termed a degeneration, so they are degraded Vertebrates, but as much specialized in their way as any Vertebrate.

Tunicate. Provided with a thin, separable covering.

Tunicated Bulb. One whose scales are broad and overlap one another, forming a compact body.

Tuning Fork. Steel rod bent in the form of a U and attached to a steel handle at its center. If the prongs be set in vibration, the sound emitted is of constant pitch, depending upon the length and size of the fork. The fork is often mounted on a resonance box to intensify the sound.

Tunis. One of the Barbary States, of n. Africa, subject to France. It lies between Algeria and Tripoli upon the Mediterranean coast. The n. part is mountainous; the s. is low, some of it being below sea level; through this depression it has been proposed to let the waters of the Mediterranean into part of the Sahara. The country was held in ancient times by Carthage and Rome, in the Middle Ages by Caliphs of Bagdad, and later was governed by its own Beys. It was invaded by Louis IX. of France 1270, and was tributary to Turkey 1575–1871. Since 1881 it has been subject to France. The Bey abdicated 1897 and retired to Nice. Pop. ab. 1,500,000. The capital, T., near the site of Carthage, has some fine buildings, especially mosques and the Bey's palace, varied manufactures, tapestries, leather, soap, cloth, and olive oil, and a considerable trade. Pop. ab. 135,000.

Street in Tunis.

Tunkers. See DUNKERS.

Tunnel. Horizontal passage under the surface of the earth, built for an aqueduct, canal, or railroad. The Romans constructed several in connection with their water supply. The cost is, roughly, ab. $500,000 per mile. The Arlberg tunnel in the Tyrolese Alps is 6½ m. long; opened 1883. The subaqueous tunnel under the Severn for the Great Western Railway is 4⅛ m. long. That under the Mersey is, including approaches, 4½ m. long; opened 1886. The Simplon tunnel, the contract for which was made in Sept. 1893, is to be 12¼ m. long. That under the Hudson River, opposite Jersey City, was partly constructed 1880–86, 1,800 ft. being completed; work was resumed 1889, but again suspended. The north tunnel from the N. J. side is of brick, oval, 16 ft. by 18 ft. high inside, 2,000 ft. long, and beyond of cast-iron, 18 ft. 2 in. diameter, 2,000 ft., with ab. 1,600 ft. to build to reach the shaft; it is 5,680 ft. between the shafts, 5,400 ft. between bulkheads. The top of the tunnel is 14 ft. below the river bed. Lake Fucinus in Italy was drained by a tunnel begun by Claudius, 11 years in building, and ab. 3½ m. long. Prince Torlonia reconstructed this 1854–76, extending it by 2,200 ft., and reclaiming ab.40,000 acres of fertile land. See ADIT, HOOSIC, HUDSON RIVER, MT. CENIS, ST. GOTHARD, and THAMES TUNNELS.

Tunny (ORYCNUS THYNNUS, HORSE MACKEREL). Acanthopterygian fish, which sometimes attains a weight of 1,000 lbs. or more. It lives in the N. Atlantic, and is especially abundant in the Mediterranean, where it is caught in special pounds, several hundred fishermen uniting to raise the net which forms the bottom of the inclosure. On American shores it is caught by harpooning.

Tunstall, CUTHBERT, D.D., 1474–1559. Bp. of London 1522, and of Durham 1530; deprived 1552 and 1559, restored 1553; a learned and moderate prelate, who bore no part in the persecutions under Mary.

Tuomey, MICHAEL, 1808–1857. State Geologist of S. C. 1844, and of Ala. 1848; prof. Univ. Ala. from 1847; author of the geological map of Ala., 1853.

Tupac Amaru, ab.1543–1572. Inca of Peru, executed by the Spaniards.

Tupac Amaru II. (JOSÉ GABRIEL CONDORCANQUI), 1742–1781. Descendant of the Incas; acknowledged by the natives, whom he endeavored to protect. He led a rebellion Nov. 1780, and was put to death with cruel tortures, as were most of his relatives.

Tupac Yupanqui, ab.1420–1483. Inca of Peru 1453. He greatly extended his empire by conquests.

Tupaiidæ (SQUIRREL-SHREWS). Family of *Insectivora*, including the Banxrings of India and the Malay Archipelago.

Tana (*Tupaia tana*).

They have long bushy tails, five-toed, plantigrade, naked-soled feet, and are active both in trees and on the ground.

Tupelo. See PEPPERIDGE.

Tupi-Guarani. Numerous Brazilian Indian tribes, related linguistically. The territory they occupied includes ab. half of S. America. The Caribs of the n. are also closely related. Many of the Amazon tribes are Tupi, with admixed blood of tribes belonging properly outside the Tupi-Guarani stock. Some of these are terrible river-pirates; all are skilled in making arrow-poisons, of which a form of strychnine is the base. Some of the n. Tupi are, or were, cannibals; some compress the heads of infants. Of the central tribes, some tattoo; some were head-hunters, and prepared the heads taken as did the Maori of New Zealand. The mission-work among the s. tribes has fallen into decay since the expulsion of the Jesuits. They had in 1732 over 30 parishes, including 141,000 souls, under parochial, semi-communistic rule. True Tupi-Guarani are of copper-red color, and in disposition silent, patient, torpid. Considerable agriculture is practiced.

Tupper, SIR CHARLES, M.D., D.C.L., b. 1821. Prime Minister of Nova Scotia 1864–67; Canadian Minister of State 1870–73, 1878–84, and 1887–88; Commissioner in London and Baronet 1888.—His son, SIR CHARLES HIBBERT, b.1855, Canadian official, was knighted 1893.

Tupper, MARTIN FARQUHAR, D.C.L., F.R.S., 1810–1889. English author. His *Proverbial Philosophy*, 1838–42, written in unrhymed verse, was immensely popular, but little esteemed by critics. A 3d part appeared 1867. *My Life as an Author*, 1886.

Turan. Anciently, those parts of the Sasanian monarchy which did not belong to Iran, on the north; now sometimes applied to Turkestan. In philology Turanian has been mainly opposed to Aryan, serving as a general term for that family of languages otherwise known as SCYTHIAN (q.v.) and Ural-Altaic, mostly n. and w. of China and Tibet. It includes Mongols, Samoyeds, Hungarians, Turks, Finns, Lapps, etc.; but of late is falling into discredit and disuse.

Turbellaria, or PLANARIDA. Free-living Platyhelminths, with flat ovate bodies, covered with cilia. They have a mouth, but no anus, hooks, or suckers. They are divided into the suborders RHABDOCŒLA and DENDROCŒLA (q.v.).

Turberville, GEORGE, ab.1530–1600. English poet and translator. *Faulconrie*, 1575; *Venerie*, 1576.

Turbine. Form of water motor, revolving at a high velocity, and utilizing the impact and reaction upon curved blades of water moving at high speed, due to fall. There are 3 classes: 1st, those receiving water parallel with the axis and discharging in same direction, called parallel-flow wheels; of these the Fontaine and Jonval are historic types, and the Collins is a modern form: 2d, the outward flow, in which the water moves radially outward through guide blades, of which Fourneyron's wheel is the older type, and the Boyden is a modern form: 3d, the inward and downward flow or center-vent wheels, of which the Swain, Leffel, Burnham, Geyelin and Risdon are types. These may be combined. The axis is usually vertical (universally in earlier forms), but recently they have been

put on horizontal shafts in pairs to avoid the wear of the step which carries the weight of the fluid column in early designs. The draft-tube is an air-tight casing, water-sealed at its bottom in the tail race, so that the wheel need not be put at the lowest

Turbine Wheel.

point of the fall. The efficiency of turbines, according to recent tests, averages 70 to 86 per cent, according to differences in design and in performance at full or partial opening of gate. 87.8 is one of the highest authentic results. The first turbine was devised by Fourneyron in France 1838. They are now used more extensively than all other forms of hydraulic motors. The most powerful ever erected are those installed at Niagara Falls 1895, each wheel furnishing 5,000 horse-power under a head of 136 ft.; the entire plant is intended to include ten such wheels. The cut shows a small wheel and the manner in which it is supplied with water from a penstock. See CENTER FLOW WHEEL.

Turbine, STEAM. Charles A. Parsons of England invented a steam pressure turbine in 1882, which made 10,000 revolutions a minute, with the economic efficiency of a non-condensing steam-engine. The Westinghouse Co. in 1896 built a modification of this turbine, called the Westinghouse-Parsons, for the Nichols Chemical Co. of Brooklyn, N. Y. It is of 300 horse-power and makes 5,000 revolutions per minute. It is 12 ft. long, 2 ft. wide, and 4 to 6 ft. high. It consists of a drum-like shaft, of varying diameter, on which circular rows of inclined blades are mounted; this revolves within a cylinder, in which are circular rows of blades, inclined in the opposite direction to those on the revolving drum; the latter pass between the fixed blades; this secures the effect of expansion and impact of steam from section to section along the shaft. De Laval devised an impulse steam turbine in 1892, which made 30,000 revolutions a minute. The steam is delivered from nozzles upon the face of a wheel, with curved grooves radiating from the center. A 300 horse-power turbine of this form has been made for the Edison Electric Lighting Co. of New York. The wheels are 29.5 in. in diameter, and make 9,000 revolutions per minute. These two turbines are used for running dynamo-electric machines.

Turbot. See HETEROSOMATA.

Turdus. See DENTIROSTRES.

Turenne, HENRI DE LA TOUR D'AUVERGNE, VICOMTE DE, 1611–1675. French general of high rank; educated under his uncle, Maurice of Nassau; Marshal 1644; distinguished against Imperialists, Condé, Spaniards, and Montecuculi; killed at Sasbach. *Memoires*, 1782.

Turf. See SOD.

Turgenev, or **Turgenieff,** IVAN, 1818–1883. Russian novelist of highest rank, resident mainly in Paris from 1863. *Annals of a Sportsman*, 1846–51; *Dimitri Rudine*. 1852; *Lisa*, 1858; *On the Eve*, 1861; *Fathers and Sons*, 1861; *Smoke*, 1867; *Virgin Soil*, 1876; *Poems in Prose*, 1883. His works, which are all brief, and bear varying titles in the translations, were the first to reveal the inner life of Russia to w. Europe: they present a singular mixture of satire and sympathy, and are marked by an exquisite style, profound knowledge of human nature, and a gentle but hopeless pessimism.—Of his relatives, ANDREI, 1784–1845, wrote *Historiæ Russiæ Monumenta*, 1841–48; NIKOLAI, 1790–1871, was long in exile, and pub. *Russie et les Russes*, 1847.

Turgite. $H_2Fe_4O_7$. Hydrous ferric oxide, containing 5.3 per cent of water; much resembling and often occurring together with limonite, and of value as an iron ore. One of its best known American localities is at Salisbury, Conn. The name is of Siberian origin.

Turgot, ANNE ROBERT JACQUES, 1727–1781. French financial reformer and physiocrat. As Intendant of Limoges, 1761–74, he made that province the most prosperous of France. He became Controller-gen. of France 1774, but aroused enmity by his efforts to rectify the inequalities of taxation and to limit privilege, and was dismissed 1776. *Reflexions sur la Formation et la Distribution des Richesses*, 1776; *Works*, 9 vols., 1808–11.

Turin. City of n.w. Italy, at the junction of the Dora Riparia with the Po; ancient Ligurian town, sacked by Hannibal; Roman colony under Julius and Augustus; capital of a Lombard duchy, of Savoy, of Sardinia, and 1861–65 of Italy; held by the French 1506–65, 1640, and 1800–14. It has manufactures of silk and lace, some fine churches, squares, and gardens, several learned societies, and a university, with some 210 instructors, 2,000 students, and a library of ab. 225,000 vols. The growth has been chiefly since 1815. Pop., 1893, 335,900.

Turkestan, RUSSIAN. Region of w. central Asia, held by Russia since 1867. Area 257,134 sq. m.; pop., 1890, 2,670,035, of several races, chiefly Kirghiz and Sarts. The region e., Chinese Turkestan, is thinly peopled and largely desert.

Turkey (MELEAGRIS). American *Phasianidæ* of three wild species; *M. galopavo* (*americana*), with chestnut-tipped tail and wing coverts, wild turkey of U. S.; *M. mexicana*, with buffy white instead of chestnut; and *M. ocellata* of Central America, a gorgeous bird, colored with metallic blue, red, yellow, white, black, etc. The n. turkey may have been exported to England by the Cabots; the Mexican variety was imported by the Spaniards after 1518, and by 1530 had been

Turkey (*Meleagris ocellata*).

thoroughly established as a domesticated variety. By breeding and crossing between the n. and s. forms, the two main breeds of black and variegated are supposed to have arisen.

Turkey, or OTTOMAN EMPIRE. In s. Europe and w. Asia, with dependencies in n. Africa. The surface of European T. is mountainous, the principal range being the Balkans, on the n. Its area is 67,820 sq. m., and pop. ab. 6,000,000. That of Asiatic T. is greatly diversified, comprising high mountains, treeless plains and plateaus, and fertile valleys. Its area is ab. 700,000 sq. m., and pop. ab. 20,000,000. Its culture and industries everywhere are extremely backward. The empire comprises in Europe the s. part of the Balkan peninsula; in Asia, Asia Minor and s. to Suez and Arabia. The Turks belong to the Tataro-Finnic family of the Mongolian race; they originated in the Altai Mts. They subdued Asia Minor 1230–1350, gained possessions in Europe, and attacked Constantinople; were defeated by Tamerlane 1402, but recovered, and under Mohammed II. took Constantinople May 29, 1453; it became his capital. Further conquests followed in Europe and

Asia. Under Solyman I., the Magnificent, ruling 1519–66, the empire attained its culmination. He conquered Hungary, besieged Vienna 1529, and menaced w. Europe. Turkish fleets ruled the Mediterranean till the battle of Lepanto, 1571. Alternating victory and defeat followed, the latter predominating. Vienna was besieged again 1683, but relieved by the Poles. In 1770 Russia advanced her boundaries to the Balkans, assumed a protectorate over Moldavia and Wallachia, annexed the Crimea, and pushed over the Caucasus. This caused another war, in which England and Prussia, alarmed at the rapid expansion of Russia, interfered in behalf of T. From this time dates the singular situation of T. in Europe, her existence being supposed necessary to the equilibrium of the Great Powers. Sympathy with the struggle of Greece for independence, however, led unintentionally to the annihilation of the Turkish fleet by the allies at Navarino 1827. The Czar Nicholas improved the opportunity to assail T., but was forced by the allies to withdraw. A formidable revolt broke out in Egypt under Mehemet Ali, who led his victorious army to Constantinople 1832, but Russia feared the preponderance of French influence and joined the allies against Mehemet, who was forced to give up his conquests. The aggressions of Russia caused the Crimean war 1854, when France and England again defended T. Moldavia and Wallachia united as Roumania 1857, and secured a Hohenzollern prince for ruler. Bosnia and Herzegovina revolted 1875. Russia fomented discord at Constantinople; the Sultan was murdered. Bulgaria, Servia and Montenegro revolted, and in 1877 Russia declared war. T. was without an ally, and although her troops fought with their traditional valor, Russia was victorious and pressed forward to Constantinople. Again the allied powers interfered, and concluded the Treaty of Berlin 1878. Bulgaria became independent, e. Roumelia an autonomous tributary; Austria received Bosnia and Herzegovina; Servia and Montenegro became independent; Russia kept Kars and much adjoining territory. The frightful and repeated Armenian massacres of 1895–96 aroused much indignation in Christendom, but disclosed the inability of the Powers to agree on any action. The war with Greece, 1897, temporarily rehabilitated T. The Turks are valiant warriors, frugal, and capable of enduring great fatigue; religious fanaticism inspired their conquests. They are deficient in administrative capacity, and in peace settle down to sensuous enjoyment. The Porte rules over some of the finest territory of the globe, rich in soil, in mineral deposits, and in valuable timber: it has numerous excellent harbors, but a paralysis is over all. The debt in 1895 was $821,000,000. The Turks are an agricultural people; the business of the empire is in the hands of Greeks, Armenians and Jews. The government is a theocratic absolutism centering in the Sultan. The Vizier is Prime Minister, under whom are the department ministers. The governors of provinces are directly appointed by the Sultan, and the inferior officers are dependent upon them. All officials unite in their persons judicial and executive functions. The administration is exceedingly corrupt. Tripoli was made a province of T. 1835. Polygamy is practiced, and it was long the custom to supply the harem of the Sultan with captured Christians.

Turkey Buzzard. American vulture, resembling the carrion crow, but browner, with rounder tail: in flight it soars

Turkey Buzzard (*Catharista aura*).

by the hour. Its head and neck are red and naked all round. The plumage is black; length 30 in. It is a voracious scavenger, and ranges from Orange co., N. Y., s. and w. throughout the U. S.; the carrion crow rarely comes as far north.

Turkey-Red Oil. See ALIZARINE ASSISTANT.

Turkey Stone. Fine grained, siliceous rock, from Asia Minor, used for sharpening tools.

Turkish. Large and important branch of the Scythian family of languages, but with a literature greatly influenced by Arabic and kindred influences.

Turkomans, or TURCOMANS. Turkish tribes occupying the desert-steppes e. and s.e. of the Caspian Sea, ab. 1,000,000 in all. They are Sunnite Mohammedans, and recognize no

Turkoman Customs—Pursuit of the Bride.

chief. They love fine horses and are wild and predatory, though breeders and agriculturists. Physically they are thin but muscular, and have bronzed faces with fierce deep-set eyes. Some semi-nomadic tribes of Asia Minor are also so called.

Turks. Generic name applied to several tribes and races of people in Asia and Europe, who speak dialects of the Turkish language and are in great part members of the Turkish division of the Ural-Altaic family. The principal tribes are the BASHKIRS, KIRGHIZ, MONGOLIANS, OSMANLI, TARTARS, USBEKS, and YAKUTS (q.v.).

Turks Islands. Two islands s.e. of the Bahamas: Grand Turk, area 7 sq. m., pop. 2,500, and Salt Cay, area 2¼ sq. m., pop. 700. Chief products are salt from evaporating sea-water, fish, and tortoises. They were annexed to Jamaica 1874.

Turlupinus. Known also as BRETHREN OF THE FREE SPIRIT (q.v.).

Turmeric. *Curcuma longa.* Herb of the Ginger family, native of India; widely cultivated for its tubers, which yield a yellow dye.

Turn Buckle. Double stirrup having a female screw in each end; used to connect the ends of two rods. The threads of the screws being cut in opposite directions, the rods are tightened by turning in one direction and loosened by turning in the other.

Turnbull, LAURENCE, M.D., b.1821 in Scotland. Aural surgeon in Phila. *Diseases of the Ear*, 1881.—His son, CHARLES SMITH, M.D., b.1847, is also a specialist in the same branch.

Turnbull, ROBERT, D.D., 1809–1877. Baptist pastor at Hartford, Conn., 1845–69. *Olympia Morata*, 1842; *Theophany*, 1851.

Turnbull, ROBERT JAMES, 1775–1833. Leader of S. C. nullifiers. His *Crisis* was in that interest.

Turnbull, WILLIAM, U.S.A., 1800–1857. Engineer; designer of the Potomac aqueduct 1832–43.—His son, CHARLES NESBIT, U.S.A., 1832–1874, was an engineer with the Va. armies 1861–65.

Turnbull, WILLIAM BARCLAY, 1811–1863. Scottish antiquary.

Turnbull, WILLIAM PATERSON, 1830–1871. Scottish-American ornithologist. *Birds of e. Pa. and N. J.*, 1869.

Turnbull's Blue. See FERROUS FERRICYANIDE.

Turnèbe, ADRIEN, 1512–1565. Prof. Paris 1547; Greek scholar, praised by Montaigne; editor of sundry classics. *Opera*, 1600.

Turner, CHARLES TENNYSON, 1808–1879. English poet, brother of Lord Tennyson. His name was changed 1835. *Sonnets*, 1864–80.

Turner, CHARLES YARDLEY, b.1850. American painter. N.A. 1886.

Turner, DANIEL, U.S.N., 1794–1850. Active on the lakes 1813–14; Captain 1835.

Turner, DAWSON, 1775–1858. English botanist. *British Fuci*, 1802; *Muscologiæ Hibernicæ Spicilegium*, 1804; *Fuci*, 1808–19.

Turner, EDWARD, 1778–1860. Judge Miss. Supreme Court 1824 and 1840–43; Chief-justice 1829–32; Chancellor 1834–39. *Statutes of Miss.*, 1815.

Turner, JAMES, 1766–1824. Gov. of N. C. 1802–5; U. S. Senator 1805–16.

Turner, JOHN WESLEY, U.S.A., b.1833. Brig.-gen. U. S. Vols. 1863–66, serving chiefly in Va.

Turner, JOSEPH MALLORD WILLIAM, 1775–1851. Next to Constable, greatest English painter of his day; a man of great force of character and wonderfully true instincts in art; as a colorist not beyond criticism, but an artist of such power that no work of his can be overlooked or contemned. His later works may be considered rather as problems than as pictures. He amassed great wealth and devoted much of it to the repurchase of his own works, and bequeathed them to the nation, on condition that two of his landscapes should be hung beside two Claudes. The National Gallery has more than 100 of his paintings. A fine example is in the Metropolitan Museum, and two are in the Lenox Library, New York. *The Slave Ship*, now in the Boston Museum, is hardly one of his greatest pictures, though much praised by Ruskin, who once owned it. It was Ruskin's great merit to raise T. to due appreciation by his *Modern Painters*. The famous painter was also a clever etcher

Dover, by Turner.

in his way. He made no attempt to reach the degree of finish then common, but laid in his lines roughly and with force, trusting to the beauty of tone obtained by mezzotinting his plates: thus his etching, with all its masterly power, was little else than rough artistic notes of exceeding excellence. *Æsacus and Hesperia*, is highly prized by the collectors, as is *Devil's Bridge at Altdorf*. His *Liber Studiorum* is well known.

Turner, NAT, 1800–1831. Va. slave, who organized an insurrection 1831: 55 whites were killed and 17 negroes hanged.

Turner, SAMUEL HULBEART, D.D., 1790–1861. Prof. Gen. Theol. Sem. (P. E.), New York, from 1818, and Columbia Coll. from 1831; commentator. *Prophecy*, 1852; *Autobiography*, 1863.

Turner, SHARON, 1768–1847. English historian. *Anglo-Saxons*, 4 vols., 1799–1805; *Hist. England, 1066–1603*, 1814–23; *Sacred Hist. World*, 1832.

Turner, THOMAS, U.S.N., 1808–1883. Commodore 1862; prominent in attacks on Charleston 1863; Rear-admiral 1868.

Turner, WILLIAM, ab.1510–1568. Dean of Wells, Eng., 1550–53 and from 1560; controversial writer and pioneer botanist. *New Herball*, 1551–62.

Turner, SIR WILLIAM, LL.D., D.C.L., F.R.S., b.1832. Prof. Edinburgh since 1867; writer on anatomy.

Turner, WILLIAM WADDEN, 1810–1859. Prof. Union Theol. Sem., New York, 1842–52; Orientalist and translator.

Turneraceæ. Natural order of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Polypetalæ*, comprising 6 genera and ab. 85 species, mostly found in America, from N. C. and Mexico to the Argentine Republic.

Turnicimorphæ. Order of Birds, including paleotropical forms having ægithognathous skulls, straight bill, the upper mandible overhanging the lower at its tip, and the nostrils covered by a linear scale. *Turnix*, in which the hinder toe is absent, is an example.

Turning. Process by which a circular shape is given to wood, metal or other hard substance: also of engraving figures composed of curved lines upon a smooth surface. See LATHE, SHAPING MACHINE, and TURRET LATHE.

Turnip. *Brassica campestris*. Biennial, fleshy-rooted herb of the Mustard family, native of Europe; widely cultivated as a food plant in many forms. The common turnip is only occasionally grown in field culture. Many farmers sow turnip seed in their corn at the time of the last cultivation, often getting a fair crop. Turnips, though very watery, are relished by most kinds of stock, and make a desirable adjunct to the winter ration.

Turnip, INDIAN. *Arisæma triphyllum*. Herb of the natural order *Araceæ*, with a hard, dense, intensely acrid corm, native of e. N. America; also known as Jack-in-the-Pulpit.

Turnip, SWEDE. Important in England and Canada; scarcely raised in the U. S., their place being taken by the mangel and sugar beet. When grown, they are cultivated in the same way as the beet, except that they are not sown until June 15 or later.

Turnip Fly. Name given to several insects destructive to turnips. *Anthomyia radicum*, the proper turnip fly, is of the same genus as the cabbage fly and attacks the root of the turnip, as the cabbage fly does that of the cabbage. The larvæ lives in the root. See CABBAGE INSECTS.

Turnip Fly (*Anthomyia radicum*).
1, Maggot (magnified); 2, pupa; 3, natural size; 4, insect; 5, natural size.

Turnout. Side track, connecting with a main track by means of a switch; used to enable trains to pass each other, or for the temporary storage of cars; also called a railway siding.

Turnpike. Road constructed or improved by private parties, who have power to erect gates or pikes for turning back travelers who do not pay toll; kept in better condition than the public roads; first established in England 1346. Although some yet exist in the U. S., the tendency is to bring all roads under state, township, and municipal control. The word is sometimes applied to a macadamized road in a country district. See REBECCA RIOTS.

Turnsol. See LITMUS.

Turnspit. Dog allied to the DACHSHUND (q.v.), and formerly employed to turn the spit upon which meat was roasted.

Turnstone (ARENARIA). Plover, which has the habit of turning over stones to find the molluscan, crustacean, etc., food concealed beneath them. The bill is sharp-pointed, the chest deep black; the head, throat, tail and wing coverts are white; the rest of the plumage is dusky, varied with rufous.

Turntable. Railroad track ab. 100 ft. long, supported on girders and pivoted at the center; used to turn locomotives and cars around. See ROUND-HOUSE.

Turpene. See TERPENES.

Turpentine. Resinous substance secreted in intercellular spaces, as of conifers. Each tree is cut near the bottom so as

Collecting Turpentine.

to form a box, holding ab. one quart of crude turpentine. Each tree is partially stripped of its bark and every two weeks

is cut higher up, the cut being in the form of a V. This is termed hacking, and when it reaches an inconveniently high point the tree is felled and used for timber. The crude turpentine is distilled with water in copper stills having a capacity of from 10 to 60 barrels. The oil is distilled off and the rosin drawn off into barrels.

Turpentine, OIL OF. Bpt. 160° C.; prepared by submitting the exudation from the pine to distillation with water; the oil passes over, rosin remains behind. Its chief constituent is the terpene, pinene, which is a hydrocarbon of the symbol $C_{10}H_{16}$. It is used as a solvent. See TERPENES.

Turpeth, or TURBITH. Root of *Ipomœa turpethum*, found in India and Australia. It contains turpethine, $C_{34}H_{56}O_{16}$, which possesses purgative properties. The root is used as a cathartic.

Turpeth Mineral, or TURBITH MINERAL. Ancient name for the basic sulphate of mercuric oxide, Hg_3SO_6.

Turpie, DAVID, b.1829. U. S. Senator from Ind. 1863 and since 1887.

Turpilius, SEXTUS, d.103 B.C. Author of Latin comedies. Fragments remain.

Turpin, or TILPINUS, d.800. Abp. of Rheims. His name is attached to a *Hist. Karoli Magni*, probably of later date, though approved by a Pope 1122. It was pub, 1566 and later.

Turpin, EDMUND HART, b.1835. London organist, composer of cantatas, masses, and other music, mostly sacred.

Turpin, LOUIS GEORGES FRANÇOIS, 1790–1848. French Commodore 1837, Admiral 1843.

Turpin, PIERRE JEAN FRANÇOIS, 1775–1840. French botanist. *L'inflorescence des Graminées et des Cypérées*, 1819; *Iconographie élémentaire et philosophique des végéteaux*, 1820; *Iconographie végétale*, 1841.

Turpin, RICHARD, 1705–1739. English highwayman, hero of many legends; hanged at York for murder.

Turquoise. $Al_4P_2O_{11}+5aq$. Natural hydrous aluminium phosphate, a little softer than quartz, and with a blue, bluish-green, or green color, due to the presence of copper; not found in crystals, nor in large masses. The Persian turquoise is highly prized as a gem; the mineral from New Mexico, Arizona and Nevada has been similarly used to some extent. Occidental turquoise, bone turquoise, or ODONTOLITE (q.v.), is similar in appearance to the true turquoise, but is of organic origin.

Turretin, FRANÇOIS, 1623–1687. Prof. Geneva 1653; Calvinistic theologian of the strictest type. *Institutio Theologiæ*, 1679–85.—His son, JEAN ALPHONSE, 1674–1737, prof. at Geneva from 1697, held milder views, and strove for union with the Lutherans. *Fundamental Articles*, tr. 1720; *Cogitationes*, 1737. *Works*, 5 vols., 1775.

Turret Lathe. Machine tool much used in manufacturing, to produce numbers of the same article, particularly pins, screws, or studs. The head stock is like an ordinary lathe, with hollow spindle and centering chuck. A rod, of convenient size and section for the pieces to be made, passes through the spindle, is held by the chuck, and revolves with it. The tail stock carries a cylinder in which standardized tools are mounted like guns in a monitor turret: these tools can be presented successively to the work, and are fed by a lever up to stops which gauge length of cut. These tools may be six or more, and may size, turn thread, bore, point, and set for cutting off, without loss of time for measurements or calling for great ability of operator.

Turrets. Small towers used in Gothic architecture for ornament or at the angles as buttresses; they may carry a bell or include a staircase. In the Norman style they are square, in Early English they are polygonal and terminate in spires, and in Perpendicular style they have battlements and pinnacles.—Also revolving towers of iron, containing large guns, for defensive purposes on land or water, invented by J. R. Tirnley 1841. New York Bay is protected in this manner. See TURRET SHIP.

Turret Ship. Species of iron-clad war vessel, on which the guns are carried in one or more iron turrets, which are capable of revolution, so as to bring the embrasure opposite the gun, which is pointed in any direction and temporarily unmasked while firing. Sometimes the turret projects through the deck of an iron-plated war vessel. The monitor has one or two turrets and one or two guns in each turret. It is nearly submerged and the deck overhangs, protecting the rudder and propeller. A monitor was built by J. Ericsson in 1862; plans for such vessels were submitted by him to Napoleon III. 1854, but were rejected. See MONITOR.

Turtle Dove. 1. *Turtur communis.* Timid, gentle dove of Europe, e. Asia, and n. Africa. It walks easily on the ground and perches in trees, can fly at great speed, even through a forest, dodging the trees, shows great attachment for its mate, feeds on seeds, and lays 2 white eggs. 2. American Mourning

Turtle Dove (*Turtur communis*).

Dove, *Zenaidura macroura.* It differs from the American Wild Pigeon in having a bare tarsus, 2 more (14) feathers in the tail, and the plumage brownish olive, glossed with blue and wine-color, with metallic luster. It is 5 in. shorter (12 in.) than the Wild Pigeon. The tail is over 6 in.

Turtle-Head. See BALMONY.

Turtles. See CHELONIA.

Tuscaloosa. Former capital of Ala., and now of Tuscaloosa co.; on the Black Warrior, 55 m. s.w. of Birmingham; seat of the State University and other colleges. Pop., 1890, 4,215.

Tuscan Order. In Architecture; modification of the Doric, adopted by Etrurians or early Romans.

Tuscany. Grandduchy of Italy 1569–1859; ruled by the Medici till 1737. It passed to Sardinia 1860 and to Italy 1861.

Vintage time in Tuscany.

The greater part of the surface is mountainous. The climate is mild and salubrious, except in the Maremma, a marshy dis-

trict along the s. coast. The cultivation of the vine is rapidly extending, but the wine produced is generally of inferior quality, except the Chianti and Montepulciano, which have a high reputation. It is the ancient Etruria. Area 9,300 sq. m.; pop., 1890, 2,274,191.

Tuscaroras. Tribe of s. Iroquois of N. C. They massacred whites 1711: the English, aided by Cherokees, took many of them prisoners, who were sold as slaves. The others rejoined the n. Iroquois, and thus the Five Nations became Six.

Tusculum. Latin city, 15 m. s. of Rome; noted for villas of Cicero (some of whose works were written there) and other eminent men; ruined 1191. Frascati is near its site.

Tushita. Fourth of six Buddhist heavens.

Tuskegee Institute. For colored youth; established 1881 by Booker T. Washington at Tuskegee, Macon co., Ala.; modeled after the school at Hampton, Va. In 1897 it had 79 instructors, 867 students from 19 States, 37 buildings, and 2,460 acres of land, of which 650 were cultivated by the pupils. The property is valued at $300,000. 25 industries are prosecuted by the students, and all but 3 of the buildings were constructed by them, even to the making of the brick and the sawing of the timber. It has done much good, and sent forth missionary teachers to many parts of the South.

Tussaud, MARIE (GROSHOLTZ), 1760–1850. Swiss-French modeler in wax, from 1802 in London, where she established an exhibition of wax figures. It maintains its celebrity, and has been imitated elsewhere.

Tusser, THOMAS, ab.1525–1580. English versifier, whose *Good Husbandrie*, 1557–73, has some historical value.

Tussock. Dense tuft; frequent form of growth of swamp species of grasses and sedges.

Tuthill, LOUISA CORNELIA (HUGGINS), 1798–1879. American writer, chiefly for the young, as was also her daughter, CORNELIA (PIERSON), 1820–1870.

Tutmes. Same as THOTHMES (q.v.).

Tuttle, CHARLES WESLEY, 1829–1881. American astronomer and antiquarian.—His brother, HORACE PARNELL, b.1839, discovered several comets and asteroids. *Pay Tables of U. S. Navy*, 1872.

Tuttle, DANIEL SYLVESTER, D.D., b.1837. P.E. Bp. of Montana 1867, and of Mo. 1886.

Tuttle, HERBERT, 1846–1894. Prof. Cornell from 1881. *German Political Leaders*, 1876; *Hist. Prussia*, 4 vols., 1883–96. Gneist highly esteemed vols. 2, 3, 1884, on Frederick II.

Tuttle, JAMES MADISON, b.1823. Brig.-gen. U. S. Vols. 1862–64.

Tuttle, JOSEPH FARRAND, D.D., b. 1818. Pres. Wabash Coll., Ind., 1863–92; religious and historical writer.

Tutuila. One of the Samoan islands. The harbor Pago-Pago nearly divides it into two peninsulas. Length 11 m., area 15 sq. m.

Tutwork. In Cornish Mining, work in barren ground, dead work, or work paid for at a price independent of the value of the material excavated.

Tver. Russian town, on the Volga, 100 m. n.w. of Moscow. Pop., 1890, 40,962.

Twachtman, JOHN HENRY, b.1853 in Cincinnati. Landscape painter.

Twain, MARK. See CLEMENS.

Twayblade. Orchids of the genera *Listera* and *Leptorchis;* low woodland herbs of the n. hemisphere, bearing two leaves.

Tweed. River of s.e. Scotland, flowing 97 m. e. and n.e. to the North Sea at Berwick; drainage area 1,870 sq. m. Its last 18 m. form the English boundary. It is a noted trout and salmon stream.

Tweed, WILLIAM MARCY, 1823–1878. Politician of New York City; M.C. 1853–55; State Senator 1867–71; Commissioner of Public Works 1870; grand sachem of Tammany Society from 1863; leading spirit of a group of politicians known as the "Tweed Ring," who got control of the finances of the city, and plundered it of many millions. The ring was overthrown in the election of Nov. 1871. T., 1872–73, was arrested, tried, and sentenced to 12 years' imprisonment, on criminal suit, but was discharged by decision of Court of Appeals 1875. He was immediately arrested in a civil suit, and committed to prison for lack of bail, but escaped to Cuba, thence to Spain, whence he was returned 1876. His case was tried and heavy damages obtained against him, which were not paid, and he was confined in Ludlow Street jail until his death.

Twelfth Cake. See TWELFTH NIGHT.

Twelfth Night. Jan. 5. Close of the Christmas holidays, which lasted 12 days; formerly celebrated in England by choosing a king and queen who presided over the festivities until midnight. According to ancient custom, a bean and pea were baked in a cake, which was cut and distributed to the company. The one who received the bean was made king; the receiver of the pea became queen. This and other customs peculiar to the day have mostly fallen into disuse. See EPIPHANY.

Twelve Tables. Earliest code of Roman law, cut on bronze plates and set up in the Forum; the first ten tables were enacted 451 B.C., after study of Greek institutions by a commission. The 11th and 12th, the work of the unpopular second triumvirate, set up 450, are called by Cicero "the two tables of unjust laws." Roman boys in early times learned these laws by heart. The existing fragments of these laws have been several times edited.

Twenty-cent Piece. U. S. silver coin, issued only 1875–78.

Twesten, AUGUST DETLEV CHRISTIAN, 1789–1876. Prof. Kiel 1814, and Berlin from 1835, succeeding Schleiermacher, on whom he wrote. *Logik*, 1825; *Dogmatik*, 1826–37.

Twickenham. Town of Middlesex, on the Thames, 11 m. s.w. of London; residence of Bacon, Pope, and other notables. Pop., 1891, 16,026.

Twiggs, DAVID EMANUEL, U.S.A., 1790–1862. Captain 1815, Col. 1836, Brig.-gen. 1846; distinguished in the Mexican war; dismissed 1861 for surrendering his command and stores in Texas to Confederates; Major-gen. C.S.A. 1861.

Twilight. Caused by reflection of the sun's light from the atmosphere, or from particles of matter floating in the atmosphere. It continues until the sun is about 18° below the horizon.

Twill. Variety of textile goods, in which the weaver gives a sort of diagonal ribbed appearance to the surface. All twilled fabrics present a twill on both surfaces, though reversed in direction. Satin bombazine and kerseymere are varieties of twill.

Twillingate, or TOULINGUET. Port of Newfoundland, on two islands of same name, off n. coast, in 54° 44′ W. long.: the finest Newfoundland dogs come from this district. Pop. 2,8[illegible]0.

Twin Flower. *Linnæa borealis.* Low, creeping evergreen shrub of the natural family *Caprifoliaceæ*, bearing pairs of white flowers, native of the cooler parts of the n. hemisphere.

Twining, THOMAS, 1734–1804. English tr. of Aristotle's *Poetics*, 1789. *Recreations and Studies*, 1883.

Twin-Leaf. *Jeffersonia diphylla.* Low, white-flowered herb of the natural order *Berberideæ*, native of the e. U. S.; known also as Rheumatism-root.

Twirler. See TWISTER.

Twiss, SIR TRAVERS, D.C.L., F.R.S., b.1809. Prof. Oxford 1842–47 and 1855–72; knighted 1867; framer of a constitution for Congo Free State 1884. *International Law*, 1856; *Law of Nations*, 1861–63; *Monumenta Juridica*, 4 vols., 1871–76.

Twisted-Stalk. Herbs of the genus *Streptopus*, of the Lily family, bearing inconspicuous flowers, natives of n. temperate zone.

Twister, or TWIRLER. In w. U. S., tornado, or small revolving storm.

Two-cent Piece. U. S. bronze coin, issued 1864–73; first to bear the motto, "In God we Trust."

Two Old Cat. See ONE OLD CAT.

Tybee Island. In Georgia, at mouth of Savannah river. It is 6 m. long and 3 m. wide, and separated from the coast by Lazarreto Creek.

Tycho Brahe. See BRAHE.

Tycoon. Shogun, or military chief of Japan.

Tydides. Son of Tydeus. See DIOMEDES.

Tye, CHRISTOPHER, d.1572. Church composer; organist of Ely Cathedral 1541–62.

Tylari. Wart-like pads on the underside of the toes of birds.

Tyler, BENNETT, D.D., 1783–1858. Pres. Dartmouth Coll. 1822–28; pres. Theol. Institute, E. Windsor, Conn., from 1834. He maintained the older and stricter views against Dr. N. W. TAYLOR (q.v.) of Yale. *Hist. New Haven Theology*, 1837; *Lectures*, 1859.

Tyler, DANIEL, 1799–1882. Brig.-gen. U. S. Vols. 1862–64, serving in Miss., Va., and Md.

Tyler, JOHN, 1790–1862. Tenth pres. U. S.; M.C. 1816–21; Gov. of Va. 1825–27; U. S. Senator 1827–36; opponent both of U. S. Bank and of Pres. Jackson's measures against it; Whig candidate for Vice-Pres. 1836; elected 1840. He succeeded Pres. Harrison, April 1841, and had a rather stormy term,

John Tyler.

being at odds with most of the Whigs on the Bank question and other matters. Webster alone of Harrison's advisers remained in the Cabinet. From 1845 he was in private life till 1861, when he entered the Confederate Congress.—His son, LYON GARDINER, LL.D., b.1853, pres. William and Mary Coll. since 1888, pub. *Letters and Times of the Tylers*, 1884.

Tyler, MOSES COIT, LL.D., b. 1835. Prof. Univ. Mich. 1867–81, and Cornell since 1881. *Brawnville Papers*, 1868, *Hist. American Literature* (Colonial), 1878; *Patrick Henry*, 1887; *Literary Hist. Revolution*, vol. 1, 1897.

Tyler, RANSOM HEBBARD, 1813–1881. Judge of Oswego co., N. Y. *Law of Infancy*, 1868; *Usury, Pawns, and Loans*, 1873; *Boundaries and Fences*, 1874; *Fixtures*, 1877.

Tyler, ROBERT OGDEN, U.S.A., 1831–1874. Brig.-gen. U. S. Vols. 1862; artillery commander in Va.; disabled at Cold Harbor, June 1, 1864; Brevet major-gen. U.S.A.

Tyler, ROYALL, 1757–1826. Judge of Vt. Supreme Court 1794, Chief-justice 1800–6; author of three plays, produced 1786–97, a romance, *The Algerine Captive*, 1797, and other works. *Reports Vt. Supreme Court*, 1809–10.—His son, EDWARD ROYALL, 1800–1848, founded *The New Englander*.

Tyler, SAMUEL, LL.D., 1809–1878. Law prof. Columbian Coll., Washington, D.C., from 1867; biographer of R. B. Taney, 1872. *Burns*, 1848; *Progress of Philosophy*, 1858; *Law of Partnership*, 1877. His *Baconian Philosophy*, 1844, won praise from Sir Wm. Hamilton.

Tyler, WAT, d.1381. Leader of a revolt of English peasants, celebrated in Shakespeare's *Richard II.*

Tyler, WILLIAM SEYMOUR, D.D., LL.D., 1810–1897. Prof. Amherst since 1836; editor of Tacitus, 1847–49, and other classics. *Theology of Greek Poets*, 1867; *Hist. Amherst Coll.*, 1873.

Tylopa, or TYLOPODA. This comprises the family *Camelidæ* of the suborder *Selenodontia*, and is characterized by somewhat aberrant peculiarities. There are but two toes to each foot, and the hoof is nail-like. There are no horns, and the upper lip is cleft. The adult has but two incisors in the upper jaw (the young and fossil forms have four or six). There are also canines, and the first premolar is separated by a diastema from the other grinders. The nostrils can be closed at will. The red blood corpuscles are oval. The Old World camels are domesticated, have the toes united by a callous sole, and form two species that are interfertile, the Bactrian Camel of Central Asia and the African or Arabian Dromedary. The former has two humps of fat, the latter only one. These are drawn on for support of life during long fasts of the desert journey. The American forms are also two species, the Guanaco, domesticated as the Llama, of Peru, and the Vicuña, domesti-

Bactrian Camel (*Camelus bactrianus*).

cated as the Alpaca, noted for its wool. They differ from the true camels in having no hump, and in having a separate pad for each toe. See CAMEL, LLAMA, etc.

Tylor, EDWARD BURNETT, LL.D., D.C.L., F.R.S., b.1832. Keeper Oxford Univ. Museum 1883; pres. Anthropological Society 1891. *Mexico*, 1861; *Early History of Mankind*, 1865; *Primitive Culture*, 1871; *Anthropology*, 1881.

Tyloses. Delicate membranes of parenchymatous tissue, found within the vessels of woody plants.

Tylostyle. Spicule of the stylus type with the butt end clubbed (tylote), found in the sponge genus *Placospongia*.

Tylote. Rhabdus knobbed at the ends.

Tympani. See DRUM.

Tympanic Bulla. Projecting capsule of tympanic bone in carnivores.

Tympanic Membrane, or DRUM OF THE EAR. Membrane stretched across the bottom of the external auditory meatus, separating the external from the middle ear. It is closely connected with one of the small bones of the middle ear, and, receiving the sound vibrations, transmits them to the chain of ossicles. It vibrates with the same rapidity as the sonorous body. See EAR.

Tympanum. In Classical Architecture, triangular space between the horizontal and sloping cornices of a pediment.—In Mediæval Architecture, the space between the top of a square doorway and an arch about it; it is generally carved.

Tympanum. Wheel for lifting water, consisting of a horizontal shaft, to which spokes are attached, having buckets at their ends. As the wheel is turned, these buckets dip into water and are filled: later in the revolution they discharge the water at a higher level. Anciently used for drainage and irrigation. Another form consists of an open framed wheel, with curved radial partitions to scoop up the water and deliver it at a higher level.

Tyndale, HECTOR, 1821–1880. Major 28th Pa. 1861: Brig.-gen. U. S. Vols. 1862–64, serving with distinction in Va. and Tenn.

Tyndale, WILLIAM, ab.1484–1536. English reformer and martyr; on the Continent from 1524; imprisoned May 1535; strangled and burned at Vilvorde, S. Brabant, Oct. 6, 1536. His translations of N. T., 1526, and of the Pentateuch and other books, 1530–37, have great merit, and are the foundation of ours. His last words were memorable: "Lord, open the King of England's eyes."

Tyndall, JOHN, LL.D., D.C.L., F.R.S., 1820–1893. Prof. Royal Institution, London, 1853, and its head 1867–83; in the U. S. 1872; pres. British Association 1874; pre-eminent as a writer and lecturer on physics. *Glaciers of the Alps*, 1860; *Mountaineering*, 1862; *Heat as a Mode of Motion*, 1863; *Radiation*, 1865; *Sound*, 1867; *Faraday*, 1868; *Natural Philosophy*, 1869; *Light*, 1870; *Electrical Phenomena*, 1870; *Diamagnetism*, 1870; *Imagination in Science*, 1871; *Fragments of Science*, 1871–92; *Radiant Heat*, 1872; *Forms of Water*, 1872; *Exercise in the Alps*, 1873; *Floating Matter of the Air*, 1881.

Tyne. Branch on the main stem or beam of a deer's horn.

Tyne. River of n. England, flowing 32 m. through a coal region to North Sea; navigable for 18 m.

Tynemouth. Old town at mouth of the Tyne; seaside resort. The antiquities are the gateway of a castle (11th century), and the ruins of an ancient priory (7th century)

Tynemouth Priory.

and its church (11th to 14th century). The borough includes N. Shields and 4 other townships. In Saxon times it was a noted burial place for princes and bishops. Shipbuilding, rope-making and fishing are carried on. Pop., 1891, 46,267.

Tyner, James Noble, b.1826. M.C. from Ind. 1869–75; U. S. Postmaster-gen. 1876–77.

Tyng, Stephen Higginson, D.D., 1800–1885. Rector in Phila. 1829–45, and in New York 1845–78; leading Low Churchman and prolific writer.—His son and namesake, b.1839, was a prominent rector in New York 1863–81, as a brother, Dudley Atkins, 1825–1858, had been in Phila.

Type. Canopy over a pulpit.

Type. In Biology, etc., perfect individual, exhibiting all essential characteristics of its group.

Type. Prophetic symbol of spiritual truths to be disclosed or developed later, as the O. T. sacrifices of that of Christ. The search for types was carried to great lengths by Origen and other Fathers.

Type-Founding. Art of casting types used in printing. Until ab.1550 printers cast their own type, but from hereon it became a distinct business. A Frenchman named Garomond is the father of letter-founders. W. Caslon established a letter foundry in London 1718. In 1838 David Bruce invented the first successful type-casting machine, which has been improved by various inventors. See Printing, Invention of.

Type Metal. See Antimony, Metallurgy of.

Type-Setting Machines. These are built on two principles and are used extensively in the U. S. and in Europe.

Type-Setting Machine.

One class of machines sets movable types, which are released by operating a key-board, containing the alphabet, and assembles the letters in a long line, to be justified to any desired width. The second class of machines is the Linotype, which assembles the matrixes from which the entire line is cast automatically. Daily newspapers use the latter; for book composition printers prefer the former. A machine for setting type was first invented 1822 by W. Church of England. It is being constantly improved. For distributing the types, each letter has a distinctive nick or nicks on the shank, by means of which a machine distributes each into its proper compartment. 15,000 types have been set in an hour by a machine, one operator setting the line, while another does the spacing.

Type-Specimen. Individual used as a type in preparing the description of a species or group.

Typewriter. Mechanical writing-machine operated by hand and printing a combination of letters, or a single letter at a time. Henry Mill, of England, received the first patent in 1714. The first in the U. S. was invented in 1819 by W. A. Burt of Mich. That invented by Xavier Proyrin of France in 1833 embodied the principles of the modern successful machine. The first practical one, from which the modern Rem-

Typewriter.

ington was developed, was invented by C. L. Sholes, S. W. Soulé, and C. Glidden 1868 in Milwaukee, Wis., and, after extensive experimenting, it was put upon the market as the Remington in 1874; the fundamental principles alone surviving. Since then it has been greatly improved, and many others made, each claiming superiority in one respect or another. See Sholes, C. L.

Typhaceæ. Natural family of flowering plants, of the class *Angiospermæ* and subclass *Monocotyledons*, comprising two genera and ab. 16 species, growing in the waters and marshes of Europe, temperate and tropical Asia, Australia, and the temperate regions of N. America; called the Cat-tail family.

Typhlops. See Opoterodonta.

Typhlosole. Longitudinal fold of the dorsal wall of the intestine of the Earthworm and bivalved mollusks. Its use is to increase the digestive surface.

Typhoid Fever. Name given in 1829 by Louis, a distinguished French physician, to a form of low continued fever constantly accompanied with inflammation and ulceration of the lymph follicles of the intestines. It is an infectious disease caused by a bacillus of the intestines, which has been isolated, the bacillus of Eberth. It is a water borne disease, and the communication is usually through the water supply. It is the most common form of continued fever of temperate climes, and is most common in the autumn. It is a self-limited disease, lasting about six weeks, with a varying mortality rate in different epidemics. The great reduction in the general death-rate from typhoid fever, by the adoption of sanitary precautions, warrants the assertion that it is within our power to prevent every case of it. In 1895 there were 469 deaths from typhoid fever in Philadelphia; with a 10 per cent mortality this indicates a total of 4,690 cases. The deaths from this cause in the U. S. is estimated at 45,000 annually, indicating a total of 450,000 cases.

Typhon, or Typhœus. Monster of the archaic world, represented as a fire-breathing giant, or a destroying hurricane, and 100-headed. He tried to gain dominion over gods and men, but was subdued, and lies in Tartarus, beneath Mt. Ætna.

Typhoon. Violent whirlwind, such as occurs on the coasts of China and Japan, and on neighboring seas; not essentially different from the hurricanes of the Atlantic Ocean. Dr. Morrison says: "At Hainam is a temple dedicated to Tiphon the goddess and to the Mother Kenwoo, in allusion to the storm."

Typhus Fever. Acute disease with a sudden onset and markedly nervous symptoms lasting about two weeks. It is caused by overcrowding, insufficient food and unhealthy surroundings, as is indicated by the various names given to it, famine fever, ship fever, camp fever, jail fever. It is one of the most highly contagious of the fevers, but is not now known in the U. S., except possibly an occasional case in the most congested part of New York City.

Typography. See PRINTING.

Tyr. In Norse Mythology, god of war; son of Odin.

Tyrannidæ. See TYRANT BIRDS.

Tyrant. Ruler of an ancient Greek city, who had usurped his power, however he might exercise it.—In popular language, a cruel and oppressive sovereign.

Tyrant Birds (TYRANNIDÆ). Over 350 species, including tyrant chats, tyrant wrens, tyrant flycatchers, peewees, BEE MARTIN (q.v.), etc. They persistently attack other and larger birds. Most are tropical. The bill is hooked at the tip; the general color is grayish olive, with a yellowish wash, strongest on the belly, and a red spot on the top of the head of both sexes, visible when the crest-like feathers are raised. A noted member of this family is the Scissors Tail of Central America, but straying northward. Its body is 4 in. long; the outer tail feathers are 10 in.: they cross from the two sides, and open alternately. It is called the Bird of Paradise in Mexico.

Tyrants, THIRTY. See THIRTY TYRANTS.

Tyrconnel, RICHARD TALBOT, EARL OF, ab.1625–1691. Irish intriguer, banished for conspiracy 1677; created by James II. Earl 1685, commander of the army in Ireland 1686, and Lord-deputy 1687. He replaced the English Protestant officers by Irish Catholics, sought to place Ireland under French protection, supported James after the Revolution, was made Duke 1689, fled to France 1690, and brought French troops to Ireland 1691.

Tyre. Ancient city on the coast of Phœnicia, colonized from Sidon; ancient city on mainland, besieged by Assyrians ab.713 B.C.; taken after 13 years' siege by Nebuchadnezzar and destroyed 572 B.C. A new city on the island was taken after 7

Remains of Fort.

months' siege by Alexander 332 B.C.; captured by Crusaders 1124; destroyed by Selim I. 1516; taken by the French 1799, and by the allied fleet in war with Mehemet Ali 1841. Pop. ab. 5,000. Tyre and Sidon were the two most famous commercial cities of early antiquity, of which Carthage was a colony. They were of Canaanitish race, but mostly in friendly relations with the Hebrews, on whom they depended for food.

Tyrian Purple. Ancient dye prepared from certain mollusks, species of *Murex* and *Purpura*. Each shell-fish contained a minute quantity, which was obtained at a great cost, hence symbol of imperial power.

Tyrol. Province of Austria, between Bavaria and Italy, e. of Switzerland; anciently Rhætia; held by Austria since 1363, except 1806–14. Area 11,324 sq. m. It is mountainous, largely covered with forests, and the residue suitable chiefly for pasturage. Capital, Innsbruck. Pop., 1890, 928,769, mostly German Catholics.

Tyrolite. $Cu_5As_2O_{10}+Aq$. Natural hydrous copper arsenate, greenish or bluish, found in small quantity as one of the products of the alteration of other copper and arsenical minerals.

Tyrone, HUGH O'NEILL, EARL OF, ab.1550–1616. Irish conspirator, Earl 1587. He revolted 1597, defeated the English twice, and offered the sovereignty to Philip II. of Spain, but was defeated with his Spanish allies by Mountjoy 1601. Repeated rebellions led to confiscation of land, dispossession of Catholics, and planting of Protestant English and Scotch in Ulster, 1609–12.

Tyrosine. $C_9H_{11}NO_3$. Silky needles crystallizing in stellate forms, occurring abnormally in the liver and urine, and formed from casein, feathers and albumen by potash fusion.

Tyrotoxicon. Ptomaine extracted from putrid cheese by Vaughan; also formed in milk which has stood for some days. It is very poisonous, producing diarrhœa and vomiting.

Tyrrhenia. See ETRURIA.

Tyrrhenian Sea. W. of Italy, e. of Corsica and Sardinia, and n. of Sicily; part of the Mediterranean.

Tyrtæus, 7th cent. B.C. Greek poet of Attica. Noted for his war songs and elegies, which encouraged the Spartans in their wars with the Messenians. Fragments remain.

Tyrwhitt, THOMAS, 1730–1786. English philologist, editor of Chaucer, 1773–78, the Rowley poems, 1778, and Aristotle's *Poetics*, 1794.

Tyssens, PETER, 1624–ab.1678. Dutch painter.

Tytler, JAMES, 1747–1805. Scottish author, in America from ab.1796.

Tytler, WILLIAM, 1711–1792. Scottish historical writer. —His son, ALEXANDER FRASER, 1747–1813, prof. Edinburgh 1780, Judge-advocate of Scotland 1790, Judge of Session and Lord Woodhouselee 1802, pub. *Elements of History*, 1801, and other books.—His son, PATRICK FRASER, 1791–1849, wrote a valuable *History of Scotland*, 9 vols., 1828–43, and several biographies. —His daughter, SARAH FRASER, has pub. historical novels.

Tzana, or TANA. Fresh water lake on the plateau of Abyssinia, s. of Gondar. The Blue Nile flows into and out of it. It contains many islands, some inhabited. Length 60 m., breadth 30 to 40 m.

Tzarskoye. See TSARSKOYE SELO.

Tzetzes, JOHANNES, 12th cent. Constantinopolitan; Greek poet, whose voluminous works contain much information in a dull and uninteresting form. He quotes a vast number of authors, and treats of many grammatical and literary subjects.

Tzschirner, HEINRICH GOTTLIEB, 1778–1828. Prof. Leipzig 1809; theological writer.

U

Uberti, FAZIO DEGLI, ab.1306–ab.1370. Italian epic and lyric poet, follower of Dante. *Dittamondo*, pub. 1474.

Ubiquitarians. High Lutherans, holding Christ's glorified body to be everywhere in the Eucharist.

Ucayali. River of Peru, rising in the Andes, and flowing generally n. ab. 1,100 m. to the Amazon, of which it is the chief source.

Uccelli, PAOLO, 1396–1475. Florentine painter, celebrated for his interest in perspective. He has frescoes in Maria Novella, Florence, much injured.

Udaipur, or OUDIPUR. Capital of a native Rajput State of e. central India. Pop. ab. 40,000.

Udall, NICHOLAS, ab.1506–1556. Head-master of Eton 1534–43, and of Westminster 1555; author of the first English comedy, *Ralph Roister Doister*, pub. 1565.

Udine, GIOVANNI DA, 1487–1564. Italian painter.

Ueberweg, FRIEDRICH, 1826–1871. Prof. at Königsberg 1862. *Logic*, 1857, tr. 1871; *Hist. Philosophy*, 1863–66, tr. 1871.

Uffenbach, BERNARD VON, 1691–1759. Austrian Jesuit, missionary in S. America 1722–45; historian of the Guarani Indians 1755. *Guarani Lexicon*, 1756.

Uganda. African State, n.w. of Lake Victoria Nyanza; first visited by Speke and Grant 1862; now partly under British influence. Here Bp. Hannington and many native Christians were slain 1885. The people are Bantus, and number ab. 2,750,000; area ab. 50,000 sq. m.

Menga, Capital of Uganda.

Ugolino, d.1288. Count of Gheradesca, podestà of Pisa; was vanquished or betrayed by Abp. Rubaldino, and confined with two sons and two grandsons in a tower, where they perished of hunger. The story is in Dante's *Inferno*, canto 33.

Ugolino, 14th century. Painter of Siena, as were three more of this family.

Ugrians. Mongolians occupying northern Europe at the time of the Slavonic migrations, which separated them into n. and s. branches; now represented by the Finns, Lapps, Samoyeds, and Magyars; originals of the Ogres of mythic child-lore.

Uhland, LUDWIG, 1787–1862. German poet, dramatist, and essayist, notable for scholarship, patriotism, and lyric power.

Uhlans. Prussian lancers, prominent 1870–71 for their bravery and marvelous activity; originally German and other light cavalry, partly Oriental in their accouterments. They are of Asiatic origin and were introduced into the north of Europe by the Tartars, who established themselves in

Uhlans on Reconnaissance Duty.

Poland and Lithuania. An attempt was made to introduce the Uhlans into France in 1734.

Uhlhorn, JOHANN GERHARD WILHELM, 1826–1895. Court preacher at Hanover 1855. *Conflict of Christianity*, 1874, tr. 1879; *Ancient Ch.*, 1881, tr. 1883.

Uhrich, JEAN JACQUES ALEXIS, 1802–1886. French general, active in the Crimea 1854–55; defender of Strassburg, Aug.-Sept. 27, 1870.

Uintahite, or UINTAITE. See GILSONITE.

Uinta Range. In n.e. Utah, trending e. and w., and containing numerous peaks exceeding 13,000 ft. in height; composed mainly of older stratified rocks. Green River cuts a cañon through it.

Uist, N. AND S. Islands of outer Hebrides, 18 and 21 m. long. Pop. ab. 7,200.

Ujiji. African town, on Lake Tanganyika. Here Stanley found Livingstone Nov. 1871.

Ukase. Russian imperial or legislative edict.

Ukraine. E. part of Poland, long defended against Tartars and Cossacks. The portion e. of the Dnieper was ceded to Russia 1686.

Ulbach, LOUIS, 1822–1889. French poet and novelist; ed. *Revue de Paris*, 1853–58. *Gloriana*, 1844; *Mme. Gosselin*, 1878; *Steel Hammer*, 1882; *For Fifteen Years*, 1882.

Ulcer. When inflammatory action has progressed so far that the integument becomes necrosed and is removed forming an open sore, the process is known as ulceration and the product as an ulcer. Ulcers may occur exteriorly, by the breaking

down of the skin; or internally, through the mucous membrane, as an ulcer of the stomach.

Ulema. Collective term, in Mohammedan countries, for persons learned in religious law. They form the legal and judicial class, interpret the Koran, and are the prime movers in fanatical outbreaks.

Ulexite. $NaCaB_5O_9+5aq$. Natural sodium and calcium borate, containing 35.5 per cent of water, very soft and light, occurring in aggregates of fine silky fibers, especially in Chili, where it is known as tiza, and in Nevada in the form of so-called cotton-balls.

Ulfeldt, LEONORA CHRISTINA, 1621–1698. Daughter of Christian IV. of Denmark; wife of an alleged traitor; imprisoned 1663–85. Her narrative was pub. 1869.

Ulfilas, ULPHILAS, or WULFILA, ab. 311–381. Bp. 341; apostle of the GOTHS (q.v.), laboring s. of the Danube from 348. Portions of his notable Gothic Bible exist, chiefly the gospels: for it he invented an alphabet.

Ullmann, JOHANN CHRISTOPH, 1771–1821. Prof. Marburg; author of valuable papers on mineralogy and on the geology of Hesse-Cassel.

Ullmann, KARL, 1796–1865. Prof. Heidelberg 1821–29 and 1836–56; prof. Halle 1829–36; prelate 1856–61. *Gregory Nazianzen*, 1825, tr. 1851; *Sinlessness of Jesus*, 1828, tr. 1841; *Worship of Genius*, 1840, tr. 1846; *Reformers Before the Reformation*, 1840, tr. 1842; *Essence of Christianity*, 1846, tr. 1860.

Ullmannite. NiSbS. Mineral containing ab. 28 per cent of nickel combined with antimony and sulphur.

Ulloa, ANTONIO DE, 1716–1795. Spanish naturalist and astronomer, in Peru with J. Juan 1735–44; historian of this expedition, 1748–72; head of naval school at Cadiz from 1780; founder of a naval observatory and a school of metallurgy.

Ulloa, FRANCISCO DE, ab.1485–ab.1540. Spanish officer under Cortes 1520; explorer of the Gulf of California 1539–40.

Ulloa, FRANCISCO DE, ab.1498–1574. Spanish Dominican, missionary in Peru 1538–49 and ab.1551–70.

Ulloa y Pereira, LUIS DE, 1590–1660. Spanish poet.

Ullswater Lake. Between the counties of Cumberland and Westmoreland, Eng.; 9 m. long, 1 m. wide. See LAKE DISTRICT.

Ulm. City of Würtemberg, on the Danube, at the head of navigation. Its fine Lutheran cathedral, built 1377–1494 and

Ulm Cathedral.

restored 1844–90, is 455 by 186 ft., 134 ft. in height, tower and spire 530 ft. high, and an organ with 6,286 pipes, the largest in Germany. Here a peace was concluded July 3, 1620, between Catholics and Protestants; and here Mack surrendered an Austrian army of 30,000 to Napoleon, Oct. 19, 1805. It has manufactures of cotton, woolen, paper, leather and beer. Its ornamental pipe-bowls are noted. Pop., 1890, 36,201.

Ulmic Acid. Product of decaying vegetable matter. Found in earth-mould.

Ulna. Larger of the bones of the forearm, placed on the inner side. It forms, by its articulation with the humerus, the elbow joint, and extends as low as the wrist joint, but does not form a part of it.

Ulotrichaceæ. Small order of green *Algæ*.

Ulotrichi. See MAN.

Ulphilas. See ULFILAS.

Ulpianus, DOMITIUS, ab.170–228. Roman jurist, b. at Tyre; prefect of Prætorian Guards 222; slain by them. Justinian's *Digest* includes 2,462 excerpts from his writings. *Fragmenta*, pub. 1549.

Ulric, ST., ab.890–973. Bp. of Augsburg 923; celebrated for his defense of that city 954; canonized 993.

Ulrich I., 1498–1550. Duke of Würtemberg; twice expelled and restored; active patron of the Reformation.

Ulrici, HERMANN, 1806–1884. Prof. of Philosophy at Halle from 1834; writer on Hegel and Shakespeare. *Logik*, 1852; *Gott und der Mensch*, 1866; *Strauss*, 1873, tr. 1874.

Ultimate End. One to be sought for of itself, and not as a means to some other end; commonly identified in ethics with the Supreme Good.

Ultimate Good. That which is to be sought for as the proper object of reasonable human action.

Ultimate Strength. Force of tension, compression, or shear, which will cause the rupture of a body 1 sq. in. in section under tensile, compressive, or shearing stress. For ductile materials, like wrought iron or soft steel, it is less than the maximum strength, owing to the flow of metal. See STRENGTH OF MATERIALS.

Ultima Thule. See THULE.

Ultimus Hæres. In Law, final heir. The State, which receives the property of those who die intestate, without leaving next of kin.

Ultramarine. Blue coloring matter, occurring in nature as LAPIS-LAZULI (q.v.); made in large quantities by melting kaolin, sulphur and dry sodium carbonate, or clay, calcined sodium sulphate and charcoal. A number of ultramarines are now on the market; a red, a yellow, a white, a green, and a number of blue varieties are known.

Ultramontanism. Italian theories ascribing doctrinal infallibility and a universal episcopate, with ordinary and immediate authority, to the Pope. Both articles were established as necessary to Catholic faith by the Vatican Council 1870. The opposing principle was that of a national church, as Gallicanism.

Ultra Red. See DARK HEAT.

Ultra Violet. That part of the solar spectrum which is more refrangible than the visible violet. This invisible stretch beyond the violet comprises a very large part of the total spectrum and may be studied by receiving it on some fluorescent surface, as a piece of paper which has been dipped in a solution of sulphate of quinine.

Ultra Vires. Act beyond the legal authority of a corporation. An ultra vires contract is unenforceable, but if it has been executed by one party, the other may be liable on a quasi-contractual obligation. The term is inapplicable to torts of corporations.

Ulugh Beg, 1394–1449. Grandson of Timur-Lenk; prince of Samarkand 1447; murdered by his eldest son. He is more widely known as an astronomer than as prince, his most enduring work being a catalogue of 992 stars, the first of the kind attempted since the time of Ptolemy. It is accompanied by an introduction which throws much light upon the methods then in use.

Ulvaceæ. Order of green *Algæ*, including the sea-lettuce.

Ulwar. Town of India, 85 m. s.w. of Delhi. Pop. 52,357. It is the capital of the U. State, which is ab. 75 m. long and

Temples of the King at Ulwar.

has an area of ab. 3,573 sq. m. It is governed under British direction. The people are called Mewatties. Pop. 778,596.

Ulysses, or ODYSSEUS. One of the chief Greek heroes of the Trojan war; son of Laertes, husband of Penelope, and father of Telemachus; distinguished for valor and sagacity; hero of Homer's *Odyssey*, which recounts his ten years' wanderings and adventures, and his return to Ithaca.

Uma. Name given to Kali, wife of Siva.

Umatilla. Branch of the Columbia, in n.e. Oregon. Length ab. 150 m.

Umballa, or AMBALA. Town of n. India, 150 m. n.n.w. of Delhi; commercially important. Pop., 1891, 79,270.

Umbel. Flower-cluster having the pedicels all diverging from the same point, and nearly equal in length, as in Carrot and Milkweed.

Garden Angelica.

Umbellet. Partial umbel in a compound flower-cluster of that name, as in *Angelica*.

Umbelliferæ. Natural family of flowering plants of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Polypetalæ*, comprising 180 genera and ab. 1,400 species, distributed throughout the whole earth, especially through the temperate regions of the n. hemisphere; called the Parsley family.

Umber, RAW. Variety of ocher, dark brown, owing to the presence of manganese oxides; used in the manufacture of pigments. When the raw umber is heated to a redness, the brown hydrated oxide of iron is changed into the red oxide, and it is called Burnt Umber. It is redder in color.

Umberto. See HUMBERT.

Umbilical Cord. Cord-like structure, consisting chiefly of two arteries and a vein, uniting the fœtus with the placenta in the higher vertebrates.

Umbilicus. 1. Navel. 2. Aperture in the base of the *Columella* of Univalve shells. 3. Pit at the point of union of the calamus and the rhachis of the feather. 4. Passage from the intestine and ventrum of the embryo to the vitellus and allantois, or the various structures that go to make the navel string, as the vitelline duct, the allantoic stalk and the allantoic blood vessels.

Umbo. Eminence near the hinge in each valve of the shell of clams, etc., which marks the point where it began its growth. It usually points anteriorly.

Umbonate. Projecting in the center, like the boss of a shield.

Umbra. Consider a luminous body and an opaque body in its vicinity. If a cone be developed, every element of which is an external tangent to the surfaces of the two bodies, that region within the conical surface and beyond the opaque body is the umbra or complete shadow. See PENUMBRA.

Umbreit, FRIEDRICH WILHELM KARL, 1795–1860. German theologian; prof. Heidelberg 1820.

Umbrella. General body of a jelly-fish, its shape being like two open umbrellas, put one within or below the others uniting at their edges. The lower one (subumbrella) represents the ventral and peristomial surface, the upper (ex-umbrella) the dorsal surface.

Umbrella. Of high antiquity in the East, appearing on Assyrian and Persepolitan reliefs. Among the Arabs it is a mark of distinction, and generally throughout the East it is regarded as connected with royalty. Its origin has been traced by some to the tree under which sovereigns held court. In Siam, an umbrella with several rings is a prerogative of the sovereign; in Burmah, part of the royal title was Lord of the 24 Umbrellas. The first Englishman to carry an umbrella was Joseph Hanway, who died 1786; women used them a century earlier.

Umbrella-Bird (CEPHALOPTERUS ORNATUS). S. American, crow-like, fruit-eating bird, having a large crest of hair-like

Umbrella-Bird (*Cephalopterus ornatus*).

feathers that, when erected, radiate, and curve down at the ends producing an umbrella-like structure. It also has a fleshy plume-bearing process hanging from its breast.

Umbrella-Leaf. *Diphylleia cymosa.* White-flowered herb of the natural family *Berberidaceæ*, native of the s.e. U. S.

Umbrella-Tree. *Magnolia tripetala.* Small tree of the natural family *Magnoliaceæ*, bearing large white flowers, native of the s.e. U. S.

Umbria. Part of ancient Italy, on the Adriatic, e. of Etruria; finally conquered by Rome 295 B.C.

Umbrian. Italic dialect, akin to Latin, with a few inscriptions preserved from ab. 300 B.C.

Umlaut. In German Philology, influence exerted upon a vowel in the root of a word by a vowel in the succeeding syllable. Umlaut in English is best seen in certain plurals like men, geese, feet, mice, and is here due to an i formerly present in the plural of the noun, but not in the singular. The syllable containing this i fell away, but left its influence upon the preceding vowel.

Umnak, or OUMNAK. Alaskan island, of the Aleutian group; ab. 65 m. by 10; visited 1757.

Unalashka. Aleutian island, e. of Umnak; ab. 75 m. by 20; mentioned in a celebrated line by Campbell, "The wolf's long howl from Oonalaska's shore."

Umritsur, or AMRITSAR. Commercial city of the Punjab, India, 32 m. e. of Lahore; founded by Guru Ram Das, an

apostle of the Sikhs, in 1574, round a sacred tank, from the midst of which rises the great temple of the Sikh faith. U.

Temple of Umritsur and the Lake of Immortality.

manufactures shawls; inferior, however, to those of Kashmir. Pop., 1891, 137,000, including cantonment.

Unam Sanctam. Bull of Pope Boniface VIII., claiming unbounded authority. It provoked Philip the Fair of France to the outrages which caused the death of Boniface 1303, resulting in the removal of the Papacy to Avignon, and ultimately in the Great Schism.

Unanue, José Hippolite, 1758–1833. Peruvian scholar and statesman.

Uncas, ab.1600–1683. Chief of the Mohegan Indians in Conn.; ally of the English in their conflicts with the Pequots and other tribes; not to be confounded with Cooper's hero.

Uncial Letters. Prevalent in MSS. ab.320–720; distinguished from the angular capitals which they superseded.

Uncinaria. Form of spicule like a needle, but bearing spines along its sides. It is derived from a hexactine, and is present in the sponge genus *Valvulina*.

Unconformable Strata. When one stratum overlies the upturned edges of another with no parallelism of dip or position. In the figure, the lower series (*a*) must first have

Unconformable Strata.

been deposited and subsequently folded and eroded, which partly removed the anticlinal arches, and afterward (*b*) was deposited.

Unconscious Cerebration. Action which so far resembles physiological functions as to be called unconscious, like the reflexes, and which yet so closely resembles mental function as to be taken for it. Carpenter used the term to express brain action reproducing past mental experience. Subliminal mental action is a better term.

Unconsciousness. Lapse of mental continuity. The possibility of absolute discontinuity of consciousness is doubtful. At the same time there are apparent breaks in an individual's mental history which demand recognition and to which the terms unconscious or subconscious may be applied. Such states are seen in sleep, fainting, hypnotic trance, etc. The main characteristic of these lapses is loss of memory on awakening for what may have occurred either objectively or subjectively during the state. The evidence for mental activity of some sort in such periods is strong: *e.g.*, dream consciousness during sleep, the complex mental activity of hysterics and hypnotics in somnambulistic conditions, etc. The term now ordinarily used to denote this state in which the ideas do not rise above the threshold into the mental focus, is subconsciousness or subliminal consciousness. See Personality.

Unction. See Extreme Unction.

Undecagon. Polygon of eleven sides.

Underbasals. See Dicyclic Crinoids.

Under-Consumption. Rapidity of consumption of certain kinds of goods insufficient to absorb the amount produced.

Undercroft. Subterranean chapel or apartment. In the cloisters of Hereford Cathedral, Eng., there is a place called Mary-croft.

Undercutting. See Holing.

Underground Railroad. Secret movement which began with Pa. Quakers, became organized 1838, and till the Civil War aided the escape of fugitive slaves. There were various routes from the Northern slave States to Canada; on each of these were stations one day's journey apart, where the runaways were fed and cared for. The reputed pres., Levi Coffin, 1798–1877, is said to have helped ab. 100 slaves annually to freedom.

Underground Railway. See Subway and Tunnel.

Underhill, John, 1597–1672. English emigrant, in Mass. 1630–37, on Long Island from 1646. *Newes from America*, 1638.

Underlay, or Underlie. See Hade.

Underpinning. Lowest timbers in a wooden house, resting upon the cellar walls.

Undershot Wheel. Water motor, in which the water acts more by its velocity than by its weight, being laid on in a sluice or apron below the horizontal diameter of the wheel, which turns on a horizontal axis. It is a low Breast Wheel (q.v.) in its better forms, and is adapted only for very low falls with large volume of water, from which large power is sought. Efficiency of the wheels with straight blades is ab. ⅓. The

Poncelet Wheel.

Poncelet undershot or breast wheel, with curved vanes in which a reaction was manifested, gave an efficiency of 50 per cent when drowned, and 60 per cent when not. These wheels are but little used, except along the banks of streams where water can be led to them without the expense of building dams. They generally move slowly.

Understanding. Mental faculty of conception and judgment as opposed to perception on one hand, and to ratiocination and intuition, functions of reason, on the other.

Undertaker, in Economics. Person who assumes the risks and management of business, supplying or borrowing capital, employing labor, administering the buying of materials and selling of the product, and taking as his remuneration the net returns to the business enterprise.

Underwood, Francis Henry, LL.D., 1825–1894. U. S. Consul at Glasgow 1885–89, and Leith 1893–94; author of novels, Handbooks of English and American Literature, 1871–72, and Lives of Longfellow, Lowell, and Whittier, 1882–83. *Quabbin*, 1893; *Dr. Gray's Quest*, 1895.—His cousin, Lucius Marcus, b.1853, prof. Syracuse Univ. 1883–91, De Pauw Univ. 1891–93, Columbia Univ. since 1896, has pub. *Our Native Ferns*, 1881–82, and *Hepaticæ*, 1884–93.

Underwood, Joseph Rogers, 1791–1876. Ky. Judge of Appeals 1828–35; M.C. 1835–43; U. S. Senator 1847–53.

Underwriter. One who carries on the insurance business, especially marine insurance. See Insurance.

Undetermined Coefficients. Assumed quantities in the statement of known relations; their definite value becomes known in the process of reduction. The term is used as synonymous with indeterminate coefficients, but applies rather to the assumed constants in these, the values of which become known by the principles of indeterminate coefficients.

Undines. Female water-spirits of the Paracelsus system, who intermarry with human beings, and receive a soul, upon bearing a child. See Sylph.

Undulatory Theory. Propounded by Hooke 1664; developed later by Huygens, Fresnel, and Young, to explain the phenomena of light. It supposes light to consist of a wave motion set up by a luminous body in an elastic, rare, and all-

pervading medium, called the luminiferous æther. The waves are supposed to be propagated by vibrations of æther particles in directions perpendicular to the line of propagation.

Unearned Increment. That portion of the value of land which arises from the general advance of the community in wealth and population, not from any effort or sacrifice of the landowner.

Ungava Bay. Projection of Hudson's Strait into n.w. Labrador.

Unger, FRANZ. 1800–1870. Prof. of Botany at Vienna 1850. *Die exantheme der Pflanzen*, 1833; *Ueber den Einfluss des Bodens*, 1836; *Ueber den Bau und das Wachsthum des Dicotyledonenstammes*, 1840; *Genera et species plantarum fossilium* 1850; *Die fossile Flora*, 1850–67; *Anatomie und Physiologie der Pflanzen*, 1855.

Unger, JOSEPH. b.1828. Prof. of Jurisprudence at Prague 1853, and Vienna 1857; Minister of State; pres. Supreme Court 1881; writer on law.

Unger, WILHELM. b.1837. Prof. Vienna; etcher. His work is distinguished by strength and freedom. Among his noted plates are: *La Ronde du Miet*, after Rembrandt; *Catharine Canaro*, after Makart; and *Portraits*, after Velasquez.

Unguents. See OINTMENTS.

Unguiculate. Furnished with an unguis or claw, as the petals or sepals of many flowers.

Ungula Spherical, or WEDGE. Solid bounded by a spherical lune and the planes of the circles forming the lune. Its edge is a diameter of the sphere.

Ungulata (HOOFED MAMMALS). In a restricted sense this group comprises only the *Diplarthra* (*Perissodactyla* and *Artiodactyla*), mammals with cotyledonary non-deciduate placenta; but resent discoveries of Tertiary vertebrates in w. U. S. have so filled the gaps which separate the various groups of

Feet of Ungulata: A, Tapir; B, Rhinoceros; C, Pig.

Placentalia that certain authors include the Subungulates of the section *Zonaria* (including the *Taxeopoda*, *Proboscidæ*, and *Amblypoda*) and the Proungulates of the section *Discoidea* (including the *Bunotheria* and *Rodentia*), all of the division *Deciduata*. It appears probable that the character of the placenta cannot be used strictly for purposes of classification.

Unguligrade. Having the toes furnished with hoofs, as in the *Artiodactyla* and *Perissodactyla*.

Uniates. Greeks, Maronites, and other Eastern Christians, subject to Rome, but retaining their peculiar rites, discipline, and liturgical languages.

Unicapsular. Dry compound fruit.

Unicellular. Consisting of but one cell, as does the entire body in most of the *Protozoa* and *Protophyta*.

Unicorn. Mythical one-horned horse, believed in by the ancients. The word thus tr. in O. T. probably means the wild ox or buffalo. See MONODONTIDÆ and RHINOCEROTIDÆ.

Unicorn-Plant. *Martynia proboscidea*. Odorous, pubescent, coarse herb of the natural order *Pedalineæ*, bearing fleshy, long-beaked pods; cultivated as a vegetable; native of the s.w. U. S.

Unifoliolate. Compound leaf composed of a single leaflet, as in the barberry; distinguished from simple leaves by the presence of an articulation at the base of the leaflet.

Uniformitarianism. Doctrine in Geology, of which Lyell was the strongest exponent, maintaining that the past changes which the earth has undergone have been produced by causes still in action. The doctrine has been pushed by some of its more recent advocates to extreme conclusions, against which a reaction has set in.

Uniformity, ACTS OF. Enforcing the use of the English Prayer-book 1549, and its revised forms 1552, 1558, and 1662. The last caused the ejection of some 2,000 nonconforming clergy, and was revoked 1689.

Unigenitus. Bull of Pope Clement XI., Sept. 8, 1713, virtually condemning Jansenism through 101 statements of Quesnel. It caused great ecclesiastical commotions in France.

Unilabiate. Having one lip, as some gamopetalous corollas; or apparently one-lipped by the splitting of the tube of the corolla down one side, as in the *Ligulatæ*.

Unilateral. One-sided, or with parts arranged along one side.

Unilocular. In Biology, one-chambered ovary or other hollow organ.

Unimak. Alaskan island, largest of the Aleutian group and nearest mainland; ab. 50 m. by 20.

Union. See UNITED KINGDOM.

Union Christian College. Coeducational institution, founded 1859 at Merom, Ind., by a denomination called Christians.

Union College. See UNION UNIVERSITY.

Unionidæ (NAJADES, FRESHWATER MUSSELS). Lamellibranchs, with short siphons produced by the free apposition of the edges of the mantle, for a short distance. The valves of the shell are equal, but unsymmetrical; they are united by two adductor muscles, and covered externally by a smooth epidermis, and internally by a pearly layer. The foot has a

Stream Pearl-Mussel (*Margaritana margaritifera*). On the right is a half-open example with mantle pearl. 1–8, different forms of pearls.

sharp edge; the gills are united posteriorly. The outer pair of gills also function as a brood pouch for the developing young. Here belong *Anodon* and *Unio*, the freshwater clams. Some species of this family produce pearls of considerable value. A collection from Wis. was exhibited at the World's Columbian Exposition, Chicago, 1893. Many were discovered in Arkansas 1897. See PEARLS.

Union Jack. National banner of the United Kingdom of Great Britain and Ireland. The first one was proclaimed 1606, three years after the union of the English and Scottish crowns. It was a combination of the crosses of St. George and St. Andrew. On the union with Ireland the cross of St. Patrick was introduced. It consists of a blue ground, with the upright cross of St. George, in red, edged with white; and the saltire or diagonal cross of St. Patrick, red, edged on one side by the cross of St. Andrew, white.

Union Theological Seminary. In New York; Presbyterian, but open to all and free from ecclesiastical control; founded 1836; incorporated 1839; removed from University Place to 700 Park Avenue, Sept. 1884. It has 13 instructors, 134 students, over 1,800 graduates, and a library of 71,576 vols.

Union University. At Schenectady, N. Y.; chartered 1795 as Union Coll. Its present title was assumed 1873, when the Albany Medical Coll. and Law School, with the Dudley Observatory, were united under one board. In 1881 the Coll. of Pharmacy was organized. Pres. E. Nott directed the institution most successfully 1804–66. It was the first non-secta-

rian coll. in the U. S., and the first to place the modern languages in the curriculum. A school of civil engineering was organized 1845. It has (1897) 30 instructors, 221 students, and a library of 31,000 vols. The Greek letter fraternities originated here in 1825, Kappa Alpha being the first.

Unipetalous. Lacking all but one petal, as *Amorpha*.

Uniserial. Arranged in one row, or consisting of a single whorl.

Unisexual. See DICLINOUS.

Unit. Quantity taken together as a basis of comparison and combination. The abstract unit, one, is the base to which all finite quantity is referred.

Unitarians. Christians who deny the divinity of Christ; in the U. S., originally seceders from Trinitarian Congregationalism 1812 and later. They have ab. 437 congregations and 68,250 members, especially in New England. The movement was earlier but less extensive in England. It was anticipated at the Reformatian by Socinus.

Unitas Fratrum. See MORAVIANS.

United Armenians. Those subject to Rome; chiefly in the Turkish empire. Previous to the massacres there were ab. 100,000, with a patriarch, 6 abps., and 16 bishops.

United Brethren in Christ. Sect distinct from the Moravians, organized in Pa. 1800 by P. W. Otterbein (1726–1813); resembling the Methodists, but with quadrennial bishops. They have ab. 2,140 ministers, 4,200 congregations, and 210,000 communing members.

United Christians of St. Thomas. In s. India; mostly subject to Rome since 1599: these number ab. 235,000. See CHRISTIANS OF ST. THOMAS.

United Copts. R.C. Egyptians, numbering ab.12,000, and in Abyssinia possibly more.

United Evangelical Church. Lutheran and Reformed, united and established in Prussia since 1817.

United Greeks. Those subject to Rome; most numerous (over 4,000,000) in Austria-Hungary, under the Ruthenian rite. Others are in Poland and elsewhere.

United Irishmen. Secret organization formed ab.1793, designed to unite Catholics and Protestants in an attempt to establish a republic in Ireland. Its founder, Theobald Wolfe Tone (1763–1798), was arrested and sentenced to death by a military commission 1798, when he committed suicide. It ceased to exist when Ireland was united with Gt. Britain 1801.

United Kingdom. That of Gt. Britain, formed 1707 by England and Scotland, which had been under one sovereign from 1603, but as separate states, each having its own parliament. Ireland was added 1801.

United Nestorians. Roman Catholics of the Syrian rite dating from 1553; also called Chaldean Christians.

United Oriental Rites. See UNIATES.

United Original Seceders. Scottish body, formed 1820. See PRESBYTERIANS.

United Presbyterian Church OF N. AMERICA. Union, formed 1858, of Associate and Reformed synods. It has ab. 900 ministers and 120,000 members. The kindred body in Scotland, formed 1847 by union of the Secession and Relief synods, has ab. 580 ministers and 192,000 members. See PRESBYTERIANS.

United Provinces. Holland, Zealand, Utrecht, and other Dutch States, associated 1579 against Spanish tyranny.

United Secession Church. Religious body which was formed by the union of the Associate and General Associate Synods of Scotland in 1820 and united to the United Presbyterian Ch. in 1847.

United Society of Believers. See SHAKERS.

United States. Republic of N. America, by far the largest, most populous and powerful on the w. continent. Its area is 3,026,500 sq. m. (excluding Alaska, which has 530,000). It extends from long. 67° to 124° W. and from lat. 24° 30′ to 49° N. The w. part consists of a broad elevated tableland, extending from the n. to the s. boundary and from long. 105° W. nearly to the Pacific: this plateau is capped by many mountain ranges, trending nearly n. and s., parallel to its general direction, the highest being upon its e. and w. borders. The elevation of the plateau ranges from 10,000 ft. in central Col. down to 4,000 ft. near the n. and s. boundaries, while the mountain ranges rise from 4,000 ft. to 8,000 ft. higher, with many summits exceeding 14,000 ft. The e. slope of this plateau consists of the great plains, a long, gentle incline. A second system of elevation is found in the e. part of the country, known as the Appalachian system. It trends in a direction nearly n.e. and s.w., extending from Me. to Ala. In length, breadth, and altitude it is much inferior to the w. system. Between these two systems of elevations is a great depression or plain, the s. and greater part of which is drained by the Mississippi and its tributaries, while the n. part is occupied by the system of the Great Lakes. E. of the Appalachians is a plain extending with a gentle incline to the Atlantic coast, known as the Atlantic plain. The average elevation of the country is 2,600 ft.

The streams of the Atlantic plain are comparatively short, and few are navigable above the head of tide. On the n. boundary is a series of great lakes, drained by the St. Lawrence. The Mississippi is one of the great rivers of the world. With its numerous large branches, it drains an area of ab. 1,250,000 sq. m., and has a navigable length of ab. 10,000 m. It drains not only the great valley but the w. slopes of the Appalachians and the e. slopes of the w. mountain system. The principal streams of the Pacific from this region are the Columbia, Sacramento, and Colorado. Much of the interior of the plateau is drained to neither ocean.

The n. part of the Atlantic coast is rugged and broken. From N. Y. s. to and around the Gulf, the coast is low and sandy, with reefs extending along the shore, protecting marshy areas or bays behind them. The whole Atlantic coast abounds in deep bays and excellent harbors. The Pacific coast is bluff and rocky, with deep water immediately off shore, and very few harbors.

The temperature has a wide range, with the latitude and the altitude above sea level. Along the Gulf coast the mean annual temperature ranges from 70° to 75°, while in the n. parts

Appropriation of N. America by Europeans in 17th Century.

it is less than 40°, as also in the high plateau region of Col., Wy., and Mont. The range between summer and winter is, in general, great as compared with that of more humid countries, and becomes still more accented in the w. plateau region. The rainfall, too, varies through wide limits. It is heaviest upon the immediate Gulf coast, where it averages ab. 60 in. annually, and diminishes gradually n., and more rapidly w., being in the region about the Great Lakes from 30 to 40, on the w. plateaus 10 or 15, and in some regions not more than 4 or 5 in. Upon the n.w. coast there is a heavy rainfall, brought there by the warm air currents of the Pacific, which is deposited on the narrow strip of land w. of the Cascades. The e. and s. parts of the U. S. are, or were originally, covered with forests, which in the more densely settled parts have been largely cut away. Bordering this timbered area is a prairie region, forming a belt of separation between the forest area and the treeless plains, and including parts of Tex., I. T., Kan., Mo., Ill., Ind., Mich., Wis., Ia., Minn., and N. and S. Dak. From this region w. to the base of the mountains extend the Great Plains, which are almost entirely devoid of trees. Within the mountain region, the valleys, plains, and plateaus are generally treeless. The mountains are as a rule covered with forests, and upon the Cascades, and throughout the region w. of them to the Pacific, the country is densely covered with valuable timber. The lumber industry is very large. See FORESTRY and TIMBER.

The mineral resources are very great. Anthracite coal is extensively mined in Pa., and bituminous coal in a majority of the States and Territories. The distribution of iron ore is equally wide, but it is mined on a large scale mainly on the upper peninsula of Mich., and in Ala. and Pa. The precious metals are mined mainly in the w. States and Territories, copper principally on the upper peninsula of Mich. and in the w.

Lead is mined in the w. in connection with silver, in s. Mo., s.e. Kan., and in s.w. Wis. Petroleum is found mainly in w. Pa. and N. Y. Natural gas has recently come into very extensive use and is drawn from the earth mainly in w. Pa. and Ohio. Salt is obtained mainly from springs on the lower peninsula of Mich. and in w. N. Y. The salt mines of N. Y. are also large producers.

Agriculture is still the leading industry, although in many of the more densely settled e. States it has largely given place to manufactures. The value of farms, farming implements and machinery in 1890 was $13,773,500,116. The number of

farms in that year was 4,564,641, and their average size 137 acres, showing a continuous decrease in size. The area of improved land was 357,616,755 acres. The estimated value of agricultural products in 1889 was $2,460,107,454. Of these the principal product is wheat, which is raised mainly in the n. States of the Mississippi Valley. Cotton is raised almost exclusively in the s. States. The production of Indian corn is widespread. Tobacco is cultivated mainly in the States in middle latitude. Manufactures are very extensive and varied. They form the principal industry in the n.e. States, while in the s. and w. they are mainly confined to the larger cities. The fisheries are extensive, the product being valued in 1890 at $45,312,818. The railroad mileage in 1897 was 178,549.33, being greater than that of all Europe.

The population in 1890 was 62,831,900, of which 9,249,547 were of foreign birth, including 107,475 Chinese and 7,638,360 of the colored race. The average density of population was 20.7 to a sq. m., ranging from 276.4 in R. I., the most densely settled State, to absolutely uninhabited regions. The urban population is rapidly increasing, and in 1890 comprised 18,284,385, or more than 29 per cent of the entire number. Foreign immigration has been great since 1847. It was in 1897 230,832, mainly Irish and German. The total immigration from 1820 to 1897 inclusive was 17,775,524, not including that from Mexico and British America since 1885.

Each State has a public school system, upon which there was expended in 1894–95, in the entire country, the sum of $178,215,556. The government is a republic, the executive consisting of a President, Vice-president and Cabinet, the members of which form the heads of executive departments; namely, State, Treasury, War, Atty.-gen., Postmaster-gen., Navy, Interior, and Agriculture. The legislative department is represented by a Congress, consisting of two houses: Senate, 90 members, two from each State; and House of Representatives, 357 members, one for 173,901 inhabitants, and 3 delegates, one from each Territory, except Alaska and Indian Territory.

The receipts of the government are derived mainly from customs duties, and internal revenue levied upon tobacco and spirits. The total receipts in 1897 were $347,721,905, and expenditures for all purposes, including interest and payments on the principal of the public debt, were $365,774,159. Nov. 1, 1897, the net debt was $1,808,777,643.40. The number of post offices was, June 30, 1897, 70,022. The regular army comprised in 1897 2,179 officers and 25,353 men. The militia comprised 113,460 officers and men. The navy comprised 90 vessels, including 19 ironclads, with 726 officers, 8,250 men, and 2,177 marines. The naval militia comprised 3,871 officers and men.

There are 45 States, 5 Territories (including Alaska and Indian Territory), and one federal district. The governments of the States are in all essential respects similar to that of the U. S. The executive officers of the Territories are appointed by the President, and the legislatures elected by the people. The States and Territories are divided into counties. In the s. and most of the w. States and in the Territories the county is the smallest subdivision which has political power. In New England the county has little political power, the primary unit of governmental organization being a subdivision of the county known as a town or city. In the n. States of the Mississippi valley and in N. Y., N. J. and Pa. the counties are divided into townships or towns, and the political power is divided between them and the counties.

The roots of the history of the U. S. are in the colonial settlements. Among the earliest were, St. Augustine, Fla., by Spaniards in 1565; Jamestown, Va., by English in 1607; New Amsterdam by the Dutch in 1613; Plymouth, Mass., by the Pilgrims in 1620; Mass. Bay, 1630. All the thirteen original colonies were in existence by 1681, New Amsterdam having been wrested from the Dutch 1664–74, and named New York in honor of James II.'s brother, the Duke of York, who became proprietor of the colony. The first attempt at confederation was made by some of the New England settlements 1643, for mutual defense against French, Dutch, and Indians. Representative governments had forced their way into all the colonies, whether charter, proprietary, or royal. As the colonies were regarded as mere instruments for the enrichment of England, collisions were almost sure to arise, and the colonial feeling of loyalty was much shaken by the renewal in 1761 of regulations of trade, which had become practically obsolete, and which worked hardship and injustice to the colonies, such as the Navigation Acts, Writs of Assistance, Stamp Act, Billeting Act, and finally the Port Act, by which the port of Boston was declared closed. "The news of these acts of Parliament crystallized every element of union in the colonies", a union which had already been made possible by the experience, mutual confidence and esteem gained through the French and Indian War. The schism once formed widened and deepened. The feeling of resistance made itself felt in the organization of a Colonial Congress, the first national body in American history, the main result of which was the approval of Mass.'s resistance to the execution of the offensive Parliamentary acts, and the promise of support in case those acts were executed by force. This was the prelude to war, which broke out 1775 at Lexington and Concord in resistance to Gen. Gage's attempt to seize colonial munitions. From this dates the real political existence of the nation. At the assembling of the 2d Colonial Congress, revolution was a fact, and Congress proceeded to raise and equip an army. The idea of independence, against which the colonies had hitherto protested, was embodied in the Declaration of Independence 1776. The war was carried on with varying fortunes, mainly in the north until 1779, and after that mainly in the south until the surrender of Cornwallis, Oct. 17, 1781, which won from England a treaty of peace and the recognition of independence.

The era of struggle for a national government was introduced under the Articles of Confederation, adopted by the colonies during the progress of the war. A convention, called to frame a new Constitution, met in Phila. May 1787 and adjourned Sept., after having adopted the present Constitution

and provided for its execution after its ratification by nine of the colonies. N. H. was the ninth to ratify, whereupon Congress at once named the days for the choice of electors, the vote for President and Vice-President, and for their inauguration. The unanimous choice fell on Washington for President; John Adams, having received the next highest number of votes, was elected Vice-President.

The two terms of Washington and the one of Adams following were chiefly taken up with the organization of the new government and the development of internal affairs. Jefferson's two terms included the acquisition of the Louisiana ter-

ritory, more than doubling the area of the U. S.: Madison had to deal with the first serious foreign complication since the Revolution, the WAR OF 1812 (q.v.), which was concluded by the Peace of Ghent 1815.

The most important subsequent events before the Civil War were connected with the annexation of Texas. This was favored by the South, for the reason that it would thereby gain the balance of power. Mexico declared that the annexation of Texas would be occasion of war, and, as soon as Texas was recognized as a State 1845, began hostilities on the U. S. side of the Rio Grande. The war was concluded 1847 by the entrance of the Americans into the city of Mexico. By the treaty of peace the U. S. gained possession of New Mexico and upper California.

By far the most serious internal difficulties of the Republic were caused by the fact of slavery and by the theory, which was in part the outgrowth of this fact, that the government was a league of States which might be dissolved at will by any of the States within the league. This interpretation of the Constitution, of which Calhoun was chief representative, easily lent itself to the slave interest, and the menace of schism and secession was a constant element in the history of the quarter century preceding the outbreak of the Civil War, which came at last in the secession of the Southern States immediately after the election of Lincoln by the newly formed Republican party. War was practically begun by the bombardment of Fort Sumter April 14, 1861; the first blood was shed in the streets of Baltimore April 19, when a mob attempted to stop Mass. troops on their way to Washington.

At the beginning of the war the extermination of slavery was not in the purpose of the North, and Pres. Lincoln had

Great Seal of the United States.

expressly declared his intention not to suppress it in the States where it existed. But the issue was vaster than men dreamed; pent-up forces found a way for themselves; it was actually the "irrepressible conflict," and the war which began with the purpose of suppressing rebellion ended with the emancipation of the slaves. The war was concluded by the surrender of Gen. Lee's army at Appomattox, April 9, 1865, which was almost immediately followed by the assassination of Pres. Lincoln, April 15.

The period since the war has been a period of reconstruction and recuperation. The seceding States were admitted again to the Union on condition of their acceptance of the 14th Amendment to the Constitution, which provided for the suffrage of the emancipated slaves and the recognition of the war debts of the loyal States. It was not until 1871 that all the States were again readmitted and represented in Congress.

The social reconstruction necessarily walks at a slower pace than the political reconstruction. The customs and prejudices of a hundred years are not to be overcome by an act of Congress or a resolution of the will. The new social status will establish itself with the lapse of time. The new era of the U. S. is industrial and economic. The recent national elections have been influenced chiefly by questions of legislative and tariff reform and of finance; the interests of labor are rapidly coming to be the controlling factors both in theoretical and practical politics. In this new era into which the U. S. are entering they "must meet and solve a new problem—the reconciliation of democracy with the modern conditions of production." See CONGRESS (CONTINENTAL), EMANCIPATION PROCLAMATION, U. S. NAVY, and ORGANIZATION OF U. S. ARMY; also the executive departments under their respective titles.

United States Bank. See BANK.

U. S. Military Academy. At West Point, N. Y.; founded 1802. Each Congressional district, Territory, and the District of Columbia, is entitled to one cadet: the whole number authorized is 370; the Pres. appoints 10 cadets at large. There were in 1896 8 professors, 55 commissioned officers, a chaplain, a sword-master, a teacher of music, and 332 cadets. The library contained 39,141 vols. Besides mathematical, scientific, and military courses, instruction is given in English, French and Spanish, history and ethics, international law, and U. S. Constitution. Discipline is more strict here than in the army. Cadets are required to take an oath of allegiance and to bind themselves to serve the U. S. for 8 years from admission. The reservation contains ab. 2,300 acres, the jurisdiction of which has been ceded by New York to the U. S. government. During the Revolutionary War, West Point was one of the most important posts for the defense of the Hudson, owing to the narrowness of the river and the bold character of the heights of the plateau of West Point and of Constitution Island opposite. Washington occupied Moore's house, the owner of the grant, in 1779 from July 25 to Nov. 28 as his headquarters.

U. S. Naval Academy. At Annapolis Md.; was founded 1845 by G. Bancroft, Sec. Navy. During 1861–65 instruction was given at Newport, R. I. One cadet is allowed for each member of the House, one for the District of Columbia, and ten for the country at large: the latter are appointed by the Pres. A four years' course of study is supplemented by two years' service at sea, after which come the final examinations. The instructors are mainly naval officers. See NAVAL ACADEMY.

U. S. Navy. This dates from Oct. 13, 1775, when two cruisers, of 10 and 14 guns respectively, were authorized by Congress. By the end of the year 15 more vessels, of 20 to 30 guns, were added. The present department was established in 1798. In 1897 this comprised, with vessels under construction, 11 battleships, 2 armored cruisers, 13 protected cruisers, 6 double-turret monitors, 13 single-turret monitors, 1 ram, 3 cruisers, 9 gunboats, 6 composite gunboats, 22 torpedo boats, 1 dynamite cruiser, 1 submarine torpedo boat, 1 dispatch boat, 1 training ship, 6 old iron vessels, 10 old wooden vessels, 6 sailing vessels and 12 tugs. There are 726 officers, 8,250 men and 2,177 marines enrolled in the navy. See NAVY DEPARTMENT.

U. S. Treasury. See TREASURY, U. S.

United Synod of the Presbyterian Church. Name taken by the Southern members in 1858 on the withdrawal of the New School Presbyterians in the U. S.

United Syrians. Syrian Catholics, who comprise the Syrian rite in the Eastern rite of the R.C. Ch.

Unities, DRAMATIC. Of action, time, and place; insisted on by some on the alleged authority of Aristotle; long observed, especially in France, but now, except the first, less regarded.

Units. A unit of measurement is a concrete quantity of the same kind as the quantity to be measured, arbitrarily chosen, in terms of which the result of the measurement may be expressed. There are as many kinds of units as of physical quantities to be measured. The full expression of the result of a measurement consists of two parts, a symbol denoting the concrete unit employed, and a number showing how many times the unit is contained in the quantity measured. For example, if a quantity is expressed by q [Q], q is the number of times that [Q] the unit is contained in the quantity. The selection of [Q] is entirely arbitrary, but for the more ready comparison of results it has been agreed among scientific men to use the same units, and where these have been fixed by law they are called standards. The British yard and the meter are examples. If a certain number of fundamental units be arbitrarily chosen as a basis, and all other units be derived from these, the system thus formed is called an absolute system of units. If three fundamental units be chosen, viz., those of length, mass, and time, most of the others necessary for physical measurements can be derived from these. The fundamental units adopted 1861 by the British Association, viz., the centimeter, gramme, and second, form the basis of the most important absolute system; from the initial letters of the units, this is known as the C.G.S. system. The system based upon the foot, pound, and second is called the F.P.S. system, and this the British government uses in magnetic surveying.

The U. S. standards are the yard, equal to the English imperial yard; the troy pound of 5,760 grs., from which the avoirdupois pound of 7,000 grs. is derived; the gallon of 231 cu. in. capacity. In France the unit of length is the meter; of volume, the litre, 1,000 cu. cm.; of mass the kilogramme, 1,000 gm. The meter is equal to 39.37 in. The unit of time is the solar second.

In the centimeter-gramme-second system the unit of area is the square centimeter; of volume, cubic centimeter; of velocity, a body moving through 1 cm. in 1 sec.; of acceleration, that which produces in 1 sec. an increase of 1 cm. a sec.; of force, the dyne, which acting on 1 gm. produces a velocity of 1 cm. per sec.; of work and energy, the erg, the work and energy of 1 dyne through 1 cm.; of power, that of 1 erg per sec.

The electrical units adopted by the International Electrical Congress at Chicago in 1893 are as follows: Ohm, unit of resistance, that of a column of mercury 0° C., 14.4521 gm., 106.3 cm. long. Ampere, unit of current, that which precipitates 0.001118 gm. silver per sec. from a solution of silver nitrate in water. Volt, unit of electromotive force, that which applied to a conductor of 1 ohm resistance produces a current of 1 ampere. Coulomb, unit of quantity, that transferred by 1 ampere in 1 sec. Farad, unit of capacity, that of a condenser charged to a potential of 1 volt by 1 coulomb. Joule, unit of work, energy by an ampere in an ohm in 1 sec. Watt, unit of power, work at rate of 1 joule per sec. Henry, unit of induction, that in a circuit when electromotive force is 1 volt, while inducing current varies 1 ampere per sec. See THERMOMETRY.

Unity. Measure of the ratio of equality between two magnitudes.

Univalent Elements. Those having a VALENCE (q.v.) of I.

Univalve. Shell all in one piece, as that of the snail.

Univalvular. Having but one valve, in consequence of dehiscence taking place on one side only, as in the follicle.

Universal Expositions. See EXPOSITIONS, INTERNATIONAL.

Universal Happiness. That of all beings capable of pleasure and pain, whose feelings are affected by human conduct, thus including the lower sentient beings as well as man.

Universal Joint. In Mechanics, an arrangement which allows one piece of a machine to be moved freely in all directions in relation to another. The ball and socket joint is an example. See FLEXIBLE JOINT.

Universalism. Doctrine that all rational creatures will eventually be reconciled to God and enter into eternal life; preached in America by John Murray from 1770. The first congregation was formed in Mass. 1779; organization was effected 1803. There are now over 1,000 parishes with ab. 46,000 members. The government is Congregational.

Universal Language. One intended to serve as a medium of communication throughout the world for commercial purposes or for educational men. Numerous schemes have been presented, but all have been found wanting. See PIDGIN-ENGLISH and VOLAPUK.

Universe. The world; collective name of heaven and earth, and all that belongs to them; the whole system of created things.

Universities of Europe. The dates given for these are partly of the charters, and partly of the schools from which they developed. Paris 1109, Salamanca 1209, Bologna 1116, Padua 1222, Naples 1224, Rome 1303, Perugia 1306, Florence 1320, Pavia 1361, Ferrara 1391, Oxford 1133, Cambridge 1257, St. Andrews 1411, Glasgow 1453, Edinburgh 1582, Dublin 1592,

University of Berlin.

Prague 1348, Cracow 1364, Vienna 1365, Heidelberg 1385, Cologne 1388, Leipzig 1409, Basel 1460, Tübingen 1477, Göttingen 1737, Berlin 1809, Bonn 1818, Upsala 1477, Copenhagen 1475, Leyden 1575, Dorpat 1622, Moscow 1755, St. Petersburg 1819. See COLLEGES.

University College. In London; established 1825, chartered 1826, opened 1828; then known as London University. In 1836 it received a charter as University College, and as such still exists. At the same date London University was chartered, which gives no instruction, and confers degrees upon candidates from other colleges upon examination.

University Extension. Educational movement under the supervision of some institution of higher learning or a group of such institutions. Instruction is given by lectures at stated periods, part of the time being given up to the answering of questions. James Stuart in 1867 delivered such a course before some women's clubs in England, and in 1873 Cambridge Univ. took up the work. J. N. Larned introduced them into the U. S. in 1887, but the movement did not succeed, until the Univ. of Pa. sent George Henderson to England to study the work. The work has spread to all parts of the country, the Univ. of Chicago supporting a special department for this work.

University of the South. At Sewanee, Tenn.; founded 1858. The Civil War swept away its buildings and endowment, except 10,000 acres of land. The college department was opened 1870, the theological 1873, medical 1892, and law school 1893. It is directed by representatives of the P. E. Ch., has 38 instructors, ab. 300 students, and 36,000 vols. in its library.

University of the State of New York. Incorporated institution, including, in 1895, 466 institutions, 381 of which were academies and high schools, and 85 professional and degree-conferring institutions, besides the State Museum and State Library. It was incorporated 1784, and its power increased 1889 and 1892. It is governed by a board of regents elected by the Legislature. It confers degrees.

University Settlements. Homes in the poorer quarters of a city, where cultivated people may go and live among the destitute and try to make a common life for both. Edward Denison in 1867 and Arnold Toynbee in 1875 called attention to the worth of scholars in the elevation of the poor. Cambridge Univ. entered upon the task, but the plan has passed beyond university impulse. Lectures and studies, and every ingenious device which helps to build up society and personal character, enters into it. From England it passed to Scotland, and in 1887 appeared in New York as a Neighborhood Guild. By 1896 it had appeared in all the principal cities of the U. S. The Coll. Settlement in New York, the Hull House in Chicago, Denison and Andover houses in Boston, and the Phila. Coll. Settlement, are the best examples in the U. S.

Unknown Quantities. In Elementary Algebra, those which are sought as the result of given conditions.

Unkpapas. One of the seven tribes of the SIOUX (q.v.) confederacy.

Unlawful Assembly. Meeting of three or more persons with a riotous purpose. If they fall short of their purpose, the offense is a rout.

Unleavened Bread. See PASSOVER.

Unproductive Labor. That which does not tend to the increase either of necessaries, of capital, or of accumulated wealth.

Unsaturated Compounds. Those capable of uniting with elements, radicals, or other compounds: *e.g.*, ammonia, NH_3, will unite with hydrochloric acid to form ammonium chloride, NH_4Cl; ethylene, C_2H_4, will unite with bromine to form ethylene dibromide, $C_2H_4Br_2$.

Unselfishness. Disposition of one who can forego his own gratification when that of another comes in competition with it.

Unstable Equilibrium. Condition such that, if an extraneous force slightly displace the body, it does not tend to return to its original position on the removal of the force. See EQUILIBRIUM.

Unsymmetrical. Having parts differing in number, or indivisible into like parts by an axis.

Unterwalden. One of the four "Forest Cantons" of Switzerland; s.w. of Lake Lucerne. It is divided into two parts, Upper and Lower. Capital of the Nidwald, Stanz; of the Obwald, Sarnen. Area 295 sq. m., pop. ab. 27,600, chiefly R. C. and German.

Unwin, WILLIAM CAWTHORNE, F.R.S., b.1838. English engineer. *Iron Bridges and Roofs*, 1869; *Machine Design*, 1877; *Testing of Materials*, 1888.

Unyoro. Native African state, s.e. of Lake Albert Nyanza and n. of Uganda. Pop. ab. 1,500,000.

Unzaga, LUIS DE, ab.1720–ab.1790. Gov. of La. 1769, of Caracas 1776, and of Cuba 1783–85.

Upanishads. Latest portions of the Vedantic literature, dating from ab.500 B.C. and later; foundation of modern pantheistic Hinduism, and earliest theological speculation of India.

Upas-Tree. *Antiaris toxicaria.* Tall tree of the natural family *Urticaceæ*, native of Java, where it grows to a height of 60 to 80 ft. before branching. Its juice is poisonous; the

Upas-Tree.

slightest wound by an arrow tipped with it is fatal. The old stories of the desolation amid which it grows are apocryphal. No evil effects followed its introduction into hothouses 1844.

Upcast. Shaft in a mine through which the vitiated air rises to the surface; opposite of downcast.

Upchurch, JOHN JORDEN, 1822–1887. Founder (in Pa.) of the order of United Workmen 1868.

Upcott, WILLIAM, 1779–1845. English antiquarian.

Upernivik. Town in Greenland, on an islet off the w. coast in 72° 48′ N. lat. It is the northernmost Danish set-

General View of Upernivik.

tlement in Greenland. Its mean yearly temperature for eleven years was 17.4° F. It varies from 6° F. in January to 41° F. in July.

Upfold, GEORGE, 1796–1872. P.E. Bishop of Ind. 1849.

Upham, CHARLES WENTWORTH, 1802–1875. M.C. from Mass. 1853–55; author of several biographies. *The Logos*, 1828; *Witchcraft*, 1831–67; *Prophecy*, 1835.

Upham, THOMAS COGSWELL, D.D., LL.D., 1799–1872. Prof. Bowdoin Coll. 1825–67. *Mental Philosophy*, 1827; *The Will*, 1834; *Life of Faith*, 1846; *Life of Mme. Guyon*, 1847; *Divine Union*, 1851; *Christ in the Soul* (hymns), 1872.—Of his brothers, NATHANIEL GOOKIN, LL.D., 1801–1879, was Judge N. H. Supreme Court 1833–43; FRANCIS WILLIAM, LL.D., 1817–1895, wrote *Church and Science*, 1860, and other religious books.

Upington, SIR THOMAS, b.1844 in Ireland. Atty.-gen. of Cape Colony 1878–81 and 1886–90; Premier 1884–86; Judge Supreme Court 1892.

Upjohn, RICHARD, 1802–1878. Anglo-American architect; designer of Trinity Ch., New York, and of many other notable buildings.—His son, RICHARD MICHELL, b.1828, planned the capitol at Hartford, Conn., a cathedral at Fond du Lac, Wis., and many churches.

Upolu. One of the Samoan Islands, lat. 14° S., long. 172½° W.; pop. 25,000, two-thirds Christians.

Upper Klamath Lake. In s. Oregon, on Klamath River. Area 163 sq. m.

Upper Peru. Colonial name for Bolivia.

Upsala. Ancient Swedish town, 44 m. n.n.e. of Stockholm; noted for its cathedral, erected 1289–1435, and partly burned 1702. The univ., founded 1477 and newly housed 1877, has ab. 2,000 students and a library of 250,000 vols., and 11,000 MSS., among which is the famous *Codex Argenteus* of Ulfilas's translation of the Gospels into Gothic. Here dwelt till 1056 the ancient kings of Sweden, of two dynasties, supposed descendants of Woden; and here was Woden's great temple, the last seat of paganism, burned ab.1060. Pop., 1891, 21,511.

Upset Rods. Rods having the ends enlarged so that the effective section may not be diminished by cutting screw threads upon them.

Upshur, ABEL PARKER, 1790–1844. Va. Judge 1826; Sec. Navy 1841; Sec. of State 1843; killed on the *Princeton* by the bursting of a gun.—His nephew, JOHN HENRY, U.S.N., b.1823, served on the Atlantic coast 1861–65, became Captain 1872, and Rear-admiral 1884.

Upson, ANSEL JUDD, D.D., LL.D., b.1823. Prof. Hamilton Coll. 1853–70, and Auburn Theol. Sem. 1880–87; Chancellor of Univ. State of N. Y. 1893.

Upthrow. Amount of dislocation in a faulted bed of ore, or of coal measured in a vertical direction upward.

Upton, EMORY, U.S.A., 1839–1881. Brig.-gen. U. S. Vols. 1864–66; distinguished in Va. campaigns; commandant at West Point 1870–75. *Infantry Tactics*, 1867; *Armies of Asia and Europe*, 1878.

Upton, FRANCIS HENRY, 1814–1876. Lawyer in New York. *Law of Trade Marks*, 1860; *Commerce during War*, 1863.

Upton, GEORGE PUTNAM, b. 1834. Musical critic of Chicago *Tribune* from 1862 to 1881. *Woman in Music*, 1880–86; *Standard Operas*, 1885; *Oratorios*, 1886; *Cantatas*, 1887; *Symphonies*, 1888.

Upton, WINSLOW, b.1853. Prof. Brown Univ. 1884; writer on astronomy.

Ur. Birthplace of Abraham; formerly placed in Upper Mesopotamia, but probably much nearer the Persian Gulf, in the true Chaldea.

Uræmia. When, from any cause, the excrementitious substances, usually secreted by the kidneys, are retained in the blood, there results a condition known as uræmia. The most prominent symptoms are headache, with dimness of vision, vomiting, diarrhœa, convulsions and stupor.

Ural. River of e. Russia, heading in the Ural Mts. and flowing e. and s., between Europe and Asia, to the Caspian Sea through a delta. Length 930 m., drainage area 90,889 sq. m.

Ural-Altaic. See SCYTHIAN.

Uralite. Variety of the mineral AMPHIBOLE (q.v.), formed by a kind of paramorphic alteration of pyroxene; first observed in rocks from the Ural Mts.

Ural Mountains. Range between Russia and Siberia. It extends from lat. 52° to the Arctic Sea, lat. 69°, and separates the waters of the Volga and the Petchora on the w. from those of the Obi on the e. Its height exceeds 5,000 ft. in but few places, and it contains numerous easy passes. It is composed of Archæan and volcanic rocks, and contains mines of gold, platinum, copper, and iron.

Uralorthite. Variety of the mineral ALLANITE (q.v.), found in the Ural Mts.

Uranates. Salts of uranic acid.

Urania. 1. She was regarded as the Muse of Astronomy,

and is usually represented with a staff and a globe in her hands. 2. Surname of Aphrodite. In Mythology, one of the

Urania.

nine MUSES (q.v.), represented as the daughter of Zeus and Mnemosyne.

Uranine. $C_{20}H_{12}Na_2O_5$. Sodium salt of fluorescein. It is a yellow solution employed in volumetric analysis, as its fluorescence is destroyed by an acid solution.

Uraninite. Mineral consisting chiefly of two uranium oxides, UO_3 and UO_2, with smaller quantities of lead and some of the rarer chemical elements. In some varieties nitrogen has also been detected. In a massive form, as it occurs in Bohemia, from which most of the uranium of commerce is obtained, it is known as pitchblende.

Uranite. TORBERNITE (q.v.), or uranium mica.

Uranium. U. At. wt. 239.6, sp. gr. 18.7, sp. ht. .0276, valence II, IV, VI. One of the rarer chemical elements; discovered by Klaproth 1789; found in small quantities in several minerals, and as an essential element in uraninite. The metal is prepared from the tetrachloride by treating it with sodium. It has the color of nickel, oxidizes when heated, and is soluble in the ordinary acids. Its compounds are used in coloring glass fluorescent greenish-yellow and painting on porcelain.

Uranium Bromides. Tribromide. UBr_3. Dark-red, volatile, hygroscopic needles, made by treating the tetrabromide with hydrogen.—Tetrabromide. UBr_4. Brown to black fusible leaflets, made by fusing the oxide, U_3O_8, with carbon in presence of bromine vapors.

Uranium Chlorides. Uranium Tetrachloride, Uranous Chloride. UCl_4. Dark-green octahedra, prepared by passing chlorine over heated uranium.—Uranium Trichloride. UCl_3. Dark-brown powder, obtained by passing hydrogen over the tetrachloride.—Uranium Pentachloride. UCl_5. Found in two forms: in black crystals, and a brown powder; made by passing chlorine over the tetrachloride.

Uranium Oxides. Green Oxide. U_3O_8. Found in pitchblende; made by heating the di- or trioxide; dark-green powder of satiny luster.—Uranic Trioxide, UO_3, or Uranyl Oxide, $(UO_2)O$. Formed by heating uranic nitrate in a tube to 250° C.; brownish-yellow powder.—Uranium Dioxide. UO_2. Brown or copper-red powder, formed by heating the trioxide or uranic oxalate in a stream of hydrogen. It takes fire when heated, and is soluble in strong acids.—Uranium Tetroxide. UO_4. Colorless, crystalline powder, formed by adding a solution of uranyl nitrate to a mixture of hydrogen dioxide and sulphuric acid, and allowing it to stand.

Uranium Sulphate. $U(SO_4)_2+4H_2O$. Deep-green crystals, made by treating the oxide, U_3O_8, with sulphuric acid.

Uranium Sulphides. Monosulphide. US. Black amorphous powder, made by the reduction of the sesquisulphide.—Sesquisulphide. U_2S_3. Grayish-black substance, made by treating the heated tribromide with hydrogen sulphide.—Disulphide. US_2. Dark gray powder, obtained by the action of hydrogen sulphide upon the heated tetrachloride.

Uranium Tetrafluoride. UFl_4. Green insoluble powder, made by treating the oxide, U_3O_8, with hydrofluoric acid.

Uranium Yellow. See SODIUM DIURANATE.

Uranoliths. See METEORITES.

Uranometria. Understood by astronomers to mean a catalogue of naked-eye stars, as the U. Nova of Argelander, and the U. Argentina of Gould.

Uranus. Except Neptune, furthest planet from the Sun, 1,781,900,000 m.; diameter 31,900 m.; volume 65 times that of the earth, mass 14.7 that of the earth: density 1.22 that of water; time of revolution about sun 84.02 years; time of revolution about axis not known: discovered March 13, 1781, by Herschel, who supposed it to be a comet. Belts have been seen on the surface similar to those of Jupiter, but they are of the faintest possible character. After the computation of

Approximate position of Uranus at time of its discovery.

the orbit it was found that the planet had been previously observed no less than 19 times, none of the former observers suspecting it to be other than a fixed star. There are 4 satellites, as follows:

Names.	Discovery.	Distance from Uranus.	Period.				Diameter.
		miles.	d.	h.	m.	s.	mi le.
Ariel	Lassell 1851	120,000	2	12	29	21.1	500?
Umbriel	" "	167,000	4	3	27	37.2	700?
Titania	W. Herschel 1787	273,000	8	16	56	29.5	1,000?
Oberon	" "	365,000	13	11	7	6.4	800?

The inclination of the orbits to the plane of the ecliptic is 75° 18′: the motion is retrograde.

Uranus. Son and husband of Gæa (Earth); father of Oceanus, Themis, Cronos, the Cyclopes, etc. He hated his children and shut them up in Tartarus, for which he was dethroned by Cronos at Gæa's instigation.

Uranyl Compounds. Those derived from acids by the replacement of the hydrogen by the bivalent group uranyl, UO_2; *e.g.*, uranyl sulphate, UO_2SO_4.

Urao. Variety of TRONA (q.v.) found in Venezuela.

Urari. *Strychnos toxifera.* Small tree of the natural family *Loganiaceæ*, native of n. S. America. Its sap is poisonous, and is used by the Indians in tipping arrows. See CURARA.

Urashimo Taro. The Rip Van Winkle in Japanese folklore. The story furnishes subjects for art treatment.

Urates. Salts of uric acid.

Urban I. Bp. of Rome 222–230; supposed martyr.—II. EUDES DE LAGNY, monk of Cluny; Bp. of Ostia; pope 1088–99. He expelled the Emperor Henry IV. from Rome, and raised the first crusade, and was opposed by an antipope, Clement III.—III. UBERTO CRIVELLI, Abp. of Milan, pope 1185–87. He quarreled with Barbarossa.—IV. JACQUES PANTALÉON, Bp. of Verdun and Patriarch of Jerusalem; pope 1261–64; at war with Manfred of Sicily.—V. GUILLAUME DE GRIMOARD, Abbot at Marseilles; pope 1362–70; at Avignon till 1367, then at Rome till near his end.—VI. BARTOLOMMEO PRIGNANI, Abp. of Bari; pope 1378–89; opposed by a French antipope, Clement VII., 1378–94.—VII. J. B. CASTAGNA, pope Sept. 15–27, 1590.—VIII. MAFFEO BARBERINI, 1568–1644; cardinal 1605; pope 1623. He

Monument over the grave of Pope Urban VIII., by Bernini, in St. Peter's at Rome.

wrote hymns, revised the bull *In Cœna Domini*, canonized Loyola and Xavier, and supported France against Spain and the Empire. Under him Galileo was condemned.

Urbanists. Followers of the Order of St. Clara, who adhered to the rules as modified by Urban IV. See CLARA, ST.

Urbi et Orbi. Phrase signifying univeral application; used in papal bulls.

Urbino. Ancient town of e. Italy, birthplace of Raphael; governed by dukes 1474–1631; part of the papal states 1631–1860; now secluded and decayed, as is its univ., founded 1564. It has a fine palace and other notable old buildings. Pop. ab. 5,100, commune ab. 17,250.

Urceolate. Cup-shaped, with a narrowed top; urn-shaped.

Urdaneta, RAFAEL, 1789–1845. Venezuelan general, active in the war of liberation; Sec. of War; acting Pres. of Colombia 1830–31.—His cousin, FRANCISCO, 1791–1861, was a Colombian general.

Ure, ANDREW, M.D., F.R.S. 1778–1857. Scottish chemist, in London from 1830. *Dict. Chemistry*, 1821; *Geology*, 1829; *Manufactures*, 1835; *Cotton Manufacture*, 1836; *Dict. of Arts, Manufactures, and Mines*, 1837.

Urea. $O{:}C{:}(NH_2)_2$. Solid base, contained in the urine of mammals, birds, and in other animal fluids; prisms, mpt. 132° C.; separated from urine as a nitrate, or prepared by heating ammonium cyanate; by the latter process, discovered by Wöhler 1828, it was the first organic compound made artificially.

Uredineæ. Subclass of *Fungi*, including an immense number of minute species, mainly parasitic on flowering plants and ferns, and often extremely destructive; also called RUST and SMUT (q.v.).

Uredospores. Spores produced in the Uredo state of *Fungi*, of the subclass *Uredineæ*. It is this phase of the life-history of these parasites which is so destructive to their hosts.

Ureides. Combinations into which dibasic acids and urea enter with the splitting out of water. Thus from oxalic acid and urea we have parabanic acid,

$$\begin{matrix} CO.OH \\ CO.OH \end{matrix} + O{:}C{:}\begin{matrix} NH_2 \\ NH_2 \end{matrix} = O{:}C\begin{matrix} .NH{:}CO \\ .NH{:}CO \end{matrix} + 2H_2O$$

Ureter. When the urine is secreted by the kidneys it is gathered into a cavity of that organ known as the pelvis of the kidney, whence it is conveyed to the bladder by a duct, known as the ureter. It is from 16 to 18 in. long, is placed along the back of the abdomen and enters the bladder at its base.

Urethane. $O{:}C{:}NH_2.OC_2H_5$. Ethyl carbamate: colorless plates, mpt. 50° C., formed by the action of ammonia on ethyl chlorocarbonate; soporific, used in pharmacy. See CARBAMIC ACID.

Urethra. Canal through which the urine is voided from the bladder.

Urga. Capital of n. Mongolia; on the Tola; noted for its Buddhist monasteries. Pop. ab. 30,000.

Uri. Rural Swiss canton, s. of Lake Lucerne. Area 416 sq. m.; pop. ab. 17,250, mostly R. C. and German.

Uriah. Officer and victim of King David. His wrongs were denounced by the prophet Nathan, II. Sam. xii. 1–12.

Uric Acid. $C_5H_4N_4O_3$. Weak dibasic acid of complicated structure, occurring in urine and other animal fluids; white powder, soluble with difficulty in water. Upon oxidation it furnishes urea, alloxan and other products. It occurs in urinary calculi; ab. 5 grams are daily excreted in human urine.

Magnified view of Uric Acid in different forms:

The dumb-bell shaped forms seen in upper part of the figure were formerly supposed to consist of oxalate of lime. It has recently been shown that they are a form of uric acid crystals.

Uriel. In Jewish (not Biblical) Angelology, one of the seven archangels.

Urim. See THUMMIM.

Urinary Calculi. See CALCULI and STONE.

Urinary Organs. Those organs concerned in the secretion and excretion of urine; more especially the kidneys with their ducts, the ureters, the bladder and its canal, the urethra.

Urinatores. Group of Natatores, with short or rudimentary wings, and feet placed far back and webbed. They are all strong swimmers, and mostly confined to cold seas. Here belong the Auks (*Alcidæ*), Guillemots, Divers, and Grebes. The last group has its toes more or less separately webbed. The second and third have completely webbed feet with rudimentary hallux in the former, and free hallux in the latter.

Urine. Fluid secreted by the kidneys, conveyed to the bladder by the ureters, and voided by the urethra. The normal urine of man is a clear yellowish fluid with a specific gravity approximating 1.020, having an acid reaction. The more important solids held in solution are urea and uric acid (nitrogenous crystalline bodies), sodium chloride, sodium, calcium and magnesium phosphates. Urine may become abnormal by the presence of unusual components, as albumen in Bright's disease, or sugar in diabetes; or by an excess of a normal constituent, as uric acid in a gouty diathesis. Urine contains a large part of the nitrogen of animal voidings, and is therefore valuable as a fertilizer, but it so readily undergoes fermentation and decomposition that great care is necessary to prevent the escape of the nitrogen into the atmosphere.

Urine, RETENTION OF. See RETENTION OF URINE.

Urinogenital. See UROGENITAL.

Urinometer. Form of hydrometer for determination of the density of urine.

Urmia. See URUMIAH.

Urn. In general any vase; specially, the vessel in which the ashes of the dead are preserved. See CREMATION.

Urochorda. Tunicates; so called because some of the forms, and the young generally, possess a notochord in the tail. See CHORDATA.

Urocyst. Urinary bladder.

Urodæum. Middle portion of the cloaca, into which the urinogenital organs open.

Urodela (SAUROBATRACHIA, SOZURA, ICHTHYOMORPHA, CAUDATA). Elongated, naked-skinned *Amphibia*, having a persistent tail and two pairs of short limbs. External gills are present, at least in the early stages. Two suborders are included, ICHTHYOIDEA and SALAMANDRINA (q.v.).

Urogenital Sinus. Sort of cloaca into which the urinary and genital ducts open, the intestinal opening being shut off by itself. Better Urinogenital Sinus.

Uropeltidæ. See COLUBRIFORMIA.

Uropods (SWIMMERETS). Hindmost pair of abdominal appendages in *Crustacea*, particularly in *Macroura*.

Uropygial Gland. Oil gland in the pygostyle of birds.

Urostyle. Long central bone which forms the hinder portion of the vertebral column in frogs and toads. It is formed from the two anterior caudal vertebræ.

Urpethite. Natural hydrocarbon compound, brownish in color and very soft, allied to ozokerite.

Urquhart, DAVID, 1805–1877. Scottish writer on Russia and Asia. *Spirit of the East*, 1838; *Progress of Russia*, 1853.

Urquhart, SIR THOMAS, 1605–1660. Scottish royalist, translator of Rabelais 1653–61. *Epigrams*, 1461; *Works*, 1834.

Urquiza, JUSTO JOSÉ DE, 1800–1870. Argentine general and despot, ally of Rosas till 1851, then his foe and conqueror; Pres. 1853–59; slain by malcontents.

Urrutia, IGNACIO DE, 1730–1798. Cuban historian 1795.

Ursa Major AND **Minor.** Two constellations, known to the ancients; so named by Ptolemy. The former includes the Dipper, the latter the Pole Star. In Ursa Major, the seven

Ursa Major.

principal stars are arranged as shown in the figure, and are known as the Plow or Charles's Wain in England. The two brightest stars, α and β, are termed the pointers, because they always point to the Pole Star.

Ursidæ. Family of *Arctoidea*, including the BEARS (q.v.), characterized among *Carnivora* by possessing short tails, elongated muzzle, long but non-retractile claws fitted for digging, circular pupil, short ears, smooth tongue, and teeth partly vegetarian in character, the carnassial teeth having tuberculated crowns. None exist in Australia and Africa. S. America has but one species, the Spectacled Bear of Peru.

Ursinus, ZACHARIAS, 1534–1583. Prof. Heidelberg 1561–68; framer, with Olevianus, of the Heidelberg Catechism. He wrote against the Lutheran *Formula Concordiæ*.

Ursinus College. At Collegeville, Pa.; incorporated 1869; controlled by Reformed Ch. It maintains collegiate, preparatory, and theological departments. Teaching staff, 23: students, 24 theological, 80 collegiate, total 213.

Ursua, or **Orsua,** PEDRO DE, ab.1510–1561. Spanish soldier and explorer in S. America; murdered on the Amazon.

Ursula, ST. Legendary daughter of a British chief, slain by Huns near Cologne, with her "11,000 virgins," while returning from a pilgrimage to Rome, in the 3d, 4th, or 5th century.

Ursulines. Order of nuns, founded 1537 in Italy, confirmed 1544. They are engaged in teaching and charitable work, and have spread widely.

Urticaceæ. Natural order of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Apetalæ*, comprising 110 genera and ab.1,560 species, widely distributed throughout the temperate and warm regions of the globe; called the Nettle family.

Urticaria. See HIVES.

Urticating Cells. See NETTLE CELLS.

Uruguay. Branch of the Rio de la Plata, heading in s. Brazil, and flowing s.w. and s., forming the boundary between Brazil and U. on the e., and the Argentine Republic on the w. Length 1,020 m.

Uruguay. Republic of S. America, s. of Brazil and e. of Argentina; area 72,170 sq. m. Near the coast the surface is low, level and open: it becomes more undulating inland, gradually rising to forest-clad hills in the interior. The raising of horses and cattle constitute the principal industry. The capital is Montevideo. It was first explored 1512 by Solis, who found it occupied by the Charruas and other tribes. Unsuccessful attempts to subdue the natives were made through a series of years. The Spaniards were finally established ab. 1729. After a long struggle between Brazil and the revolutionists in Buenos Ayres for supremacy in U., it was declared independent 1828; but for years its history was filled with invasions from without and financial and political disasters from within. Pop., 1892, 728,447.

Urumiah, or URMIA. Town of n.w. Persia, 75 m. s.w. of Tabriz; seat of important missions. Pop. ab. 35,000. The lake of the same name is 12 m. from the town; altitude 4,100 ft., area 1,600 sq. m., greatest depth 46 ft. It has no outlet. The water contains saline matter 8.5 times that in ocean water.

Urumtsi. City of Zungaria, w. China, n. of Tian-Shan Mts.; important commercially. Pop. ab. 40,000.

Urus. Species of ox, now extinct, which lived in the forests of Europe, and was described by Cæsar. It is said to have survived to the 16th century.

Usage. Business practice which has become habitual. If known to both parties to a contract, it may modify its written terms. It must be proved by the party who depends on its existence.

Usance of Wealth. Benefits derived by the owner; more than interest, which is only the money income arising from the use of that part of wealth known as capital.

Usbeks, or UZBEGS. Principal tribe of Turkestan, extending w. to the Caspian Sea. It consists of a union of heterogeneous Turkish and Mongolian elements, cowardly, though

Usbek.

passionate and revengeful, noted robbers, and fanatical Mohammedans. Some are agriculturists, some nomads. They number ab. 2,000,000, half of whom are in Bokhara.

Use and Occupation. Action brought for the use of real property, when no rent has been agreed upon.

Usener, HERMANN, b.1834. Prof. Bonn 1866; prolific writer on ancient Greek topics. *Pelagia*, 1879; *Epicurea*, 1887.

Usertessen. Names of three kings of the 12th Egyptian dynasty.

Uses. Equitable interests in land, the legal title to which is in another. They originated in the English Statute of Uses under Henry VIII., and are regulated to a great extent by statute in America.

Usk. Beautiful river of s. Wales, celebrated for its salmon. It rises in the Black Mts. and flows 57 m. s.e. into the Bristol Channel.

Ussher, or **Usher,** JAMES, D.D., 1581–1656. Prof. Dublin 1607; Bp. of Meath 1621; Abp. of Armagh 1625; in England from 1640; acting Bp. of Carlisle; preacher at Lincoln's Inn 1647–55; respected by all parties for learning and moderation. The chronology of his *Annales V. et N. Test.*, 1650–54, tr. 1658, was long accepted.

Ustilagineæ. Order of *Fungi*, of the subclass *Zygomycetes*, parasitic on flowering plants, causing the diseases of grasses commonly known as Rust and Smut.

Ust Urt. Desert plateau from 600 to 1,000 ft. high between the Caspian and Sea of Aral. Area ab. 92,000 sq. m.

Usufruct. Civil law term for the right of using and taking the fruits of any property of another, without, however, consuming or injuring it.

Usumacinta. River of Central America, formed by several branches, rising in the e. part of Guatemala, flowing n.w. 400 m. and joining the Tobasco or Grijalva.

Usury. Originally, interest, payment for the use of money; in modern usage, excessive interest, higher than a certain maximum rate prescribed by law. Such laws are mostly retained in the U. S., though repealed 1854 in England. The Jews were forbidden to receive interest, except from foreigners.

Utah. One of the w. States, between Col. and Nev.; area 84,970 sq. m. It is divided into two parts by the Wasatch Mts. and by a line of high plateaus. Extending s.e. of this is a plateau region descending to the Col. and Green rivers; w. of it is the Great Basin, a region which has no outlet to either ocean, and consists of narrow mountain ranges, separated by broad desert valleys. The industries consist of agriculture, which is carried on universally by the aid of irrigation, with some stock-raising and mining. The capital is Salt Lake City, near the shore of Great Salt Lake. U. was a portion of the territory ceded by Mexico to the U. S. 1848. It was organized as a territory 1850, and then included the area covered by Nev., Col., and Wyo., which were subsequently set off and have become States. U. is the center of the Mormon Church; its settlement in the region of Salt Lake was begun under the leadership of Brigham Young 1847 (see MORMONS and NAUVOO). U. was admitted Jan. 1896 as the 45th State. Pop., 1890, 207,905; estimated, 1895, 254,743.

Utah, UNIVERSITY OF. At Salt Lake City; head of the school system; successor of the Univ. of Deseret, incorporated 1850; rechartered 1892 with the present name. It has 12 professors, 11 instructors, 65 collegiate students, 320 in the normal courses, and 520 in all.

Utah Lake. In n. central Utah, at w. base of the Wasatch Mts. It is drained into Great Salt Lake by Jordan River. Area 150 sq. m.

Utah State Agricultural College. At Logan, founded 1888. It has 22 instructors, 129 students in college courses, and a total of 497.

Uterine Diseases. Uterus is liable to disease depending upon a pathological change in any of the tissues which enter into its composition; *e.g.*, there may be a catarrh of its lining mucous membrane; upon a malposition, either in whole or in part of the organ itself, as retroversion or retroflexion; or upon an abnormal manifestation of its function, as metrorrhagia. Because of the large distribution of nerve tissue to the organ and its surrounding parts, uterine diseases often assume a seriousness far beyond the extent of the local lesion.

Uterus. In the *Mammalia*, the organ that receives and cares for the fecundated ovum, after conception, during the period of embryonic life, and expels it by the process of parturition at the expiration of the period of gestation. In woman the non-gravid uterus is pear shaped, ab. 3 in. in length, 2 in. broad at its upper and broader portion, 1 in. in thickness, and weighing from 1 oz. to 1½ oz. During pregnancy it increases enormously in size, weighing from 1½ lb. to 3 lbs.

Utes. Utahs, including the Pah-utes, Gosh-utes, Pi-utes, etc.; ab. 15,000 Indians of Shoshone stock, inhabiting Utah, Colorado, New Mexico, and Arizona; now on various reservations. They stand lowest among N. American aborigines, feeding on whatever they find, as roots, seeds, grasshoppers, and reptiles.

Utica. Capital of Oneida co., N. Y.: on s. bank of the Mohawk; site of Fort Schuyler; chartered 1798 and 1832; noted

Utica in 1830.

for its benevolent institutions and cotton mills. It is ab. 500 ft. above sea level, and has 13 public parks and squares. A State asylum for the insane is here. Pop., 1890, 44,007.

Utica. Phœnician city of n. Africa, founded ab. 1100 B.C., 20 m. n.w. of Carthage; capital of a Roman colony from 146 B.C.; held for the republicans by Cato, who killed himself here 46 B.C.; destroyed by Arabs ab. 750. Its ruins are extensive.

Utica Shale. Thick bed overlying the Trenton Limestone in the Eastern States. See ORDOVICIAN.

Utilitarianism. Form of ethics and politics which judges the rightfulness or wrongfulness of all institutions and actions by their utility to society; opposed to idealism; advocated by Cumberland, Hume, Bentham, and Mill.

Utility. Quality of answering to some felt human want. It is to be carefully distinguished from value, which supposes a process of exchange as well as one of use.—In Ethics, either that which will be of ultimate advantage, as Hume uses the term, or that which gives immediate happiness, as Bentham uses it.

Utopia. 1. Latin political romance pub. by Sir Thomas More 1516; tr. 1551. 2. Any imaginary community with institutions supposed to be perfect.

Utraquists. See CALIXTINES.

Utrecht. Ancient city of the Netherlands, on the "Old" Rhine. It has important manufactures, a large trade, two

Utrecht in 1820.

cathedrals, and a university, founded 1634, with ab. 700 students and a library of 160,000 vols. Pop., 1890, 86,116.

Utrecht, PEACE OF. Made up of nine separate treaties, signed April 11, 1713. It ended the war of the Spanish Succession; secured the separation of the French and Spanish crowns, the Protestant succession in England, and satisfaction for claims of the allies.

Utrecht, UNION OF. League of the seven Protestant provinces of n. Netherlands under William of Orange, 1579, for defense against Parma, who controlled the ten Catholic provinces.

Utricle. Indehiscent one-seeded dry fruit having a loose pericarp; bladder on the leaf of an aquatic plant.

Utriculate. Bladder-like, or furnished with bladders.

Uttlett, MARY ("MAXWELL GREY"). English novelist. *Silence of Dean Maitland*, 1890.

Uvarovite. See OUVAROVITE.

Uvula. See PALATE.

Uxmal. Ruined city of n.w. Yucatan, famous for its immense buildings, and important for archæological study, but imperfectly understood.

Uz, LAND OF. Country assigned to Job; identical with Batanæa, or Hauran, e. of the Jordan.

Uzbegs. See USBEKS.

Uzziah. Ninth successor of Solomon as king of Judah, ab. 810–758 B.C.

V

V. Term applied by Abercromby 1881 to that formation of isobars in which two curves form a cusp or sharp junction, usually between two areas of low pressure, or attending a line squall.

Vaal. River of S. Africa rising in the Drakenberg Mts. and emptying into the Orange River, after flowing 500 m. in a w.s.w. direction. It forms the northern boundary of the Orange Free State.

Vaca, ALVAR NUNEZ CABEZA DE, 1507–1564. Spanish explorer in Mexico 1528–36, and Paraguay 1538–44. His narrative appeared 1542.

Vaca de Castro, CRISTOVAL, 1492–1562. Viceroy of Peru 1540–44.

Vaccination. A century ago smallpox was the great destroyer of the human race. It was known that one attack prevented a second and many people were inoculated with the disease when in a state of health, and the disease could be better controlled, to render them immune. Dr. Edward Jenner (1749–1823), an English physician, had his attention called to the belief among the country people of Gloucestershire that an attack of cowpox rendered the person immune to smallpox. This was while he was a medical student, prior to 1770. He made a careful study of the subject after he entered upon practice and became convinced of its truth. He made his first vaccination in 1796. The value of his discovery was recognized, and as its employment became general, the number of cases of smallpox became fewer and its relative mortality became less. At the present time, many physicians after years of extended practice have never seen a case of smallpox. Cowpox (vaccinia) is a disease of the bovidæ, manifesting itself in an eruption on the udder. The virus, secured from the developed vesicle on a heifer, is inoculated by removing a small area of the epidermis of the arm, or other portion of the body, and applying the vaccine lymph to the denuded part. This, when it "takes," induces a well-marked eruption, and the individual is rendered immune to smallpox; or, if not entirely immune, the resulting attack is much lighter and seldom fatal. The protection from vaccination is lost after a time, and it is well to be vaccinated from time to time, especially should there be an outbreak of smallpox in the vicinity.

Vacciniaceæ. Natural family of flowering plants of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Gamopetalæ*, comprising 27 genera and ab. 230 species, growing commonly in marshes and moors of the temperate and cold regions of the n. hemisphere, and abundantly in the tropics of Asia and America. The Cranberry and Whortleberry are included here.

Vacuoles. Clear spaces or cavities in the protoplasm of cells.—In *Protozoa*, they are usually either food vacuoles containing food in some stage of digestion, or contractile vacuoles (see CONTRACTILE VESICLE).—In plant cells they are sap spaces.

Vacuum. Any portion of space void of matter. A perfect vacuum cannot be obtained with the air-pump. The Torricellian vacuum is nearly perfect, but contains the vapor of mercury. The air-pump reduces the pressure to $\frac{1}{1000}$ atm.; the Sprengel pump to $\frac{1}{1000000}$ atm.; by removing the vapors the pressure has been reduced to $\frac{1}{2000000000}$ atm.

Vacuum-Brake. See BRAKE, VACUUM.

Vacuum-Chamber. See AIR-CHAMBER.

Vacuum-Pan. Apparatus for evaporating liquids at low temperatures, invented by Howard, an Englishman, 1813. In sugar refineries the pan is made of copper, with a hemispherical top and bottom, connected with a cylinder. The bottom is sometimes double, steam circulating in the space between the two bottoms. Within the pan are several series of copper steam pipes. Connected with the top of the pan is a condenser, an iron box, with series of cold water pipes, by which the spray of sweet water from the pan is condensed. Connected with the latter is the condenser, a large iron box, where a shower of water condenses the steam, and, by its long tail pipe, assists in maintaining the vacuum in the pan. Beyond the condenser is the vacuum-pump which completes the vacuum. The sugar solution is evaporated by the heat of the steam in the steam-pipes and jacket at a temperature of 150° F., with a vacuum of 27 in., thus avoiding the risk of decomposing the sugar. These pans are used for condensing milk, glycerin, and other organic liquids.

Vacuum Process. Method of sinking foundations by exhausting the air from a hollow cylinder, in order to sink it in soft soil.

Vadantes. Wading or swimming legs of birds. They have unfeathered tibial regions.

Vadimonian Lake. In Umbria, Italy. Near it the Etruscans were totally defeated by Fabius 309 B.C., and by Dolabella 283 B.C.

Vaenius, OTHO. See VAN VEEN.

Vaga, PERINO DEL, 1500–1547. Florentine painter, one of Raphael's assistants, but influenced by Michelangelo in his later work, as shown by his frescoes, much injured, in the Doria Palace at Genoa.

Holy Conversation (Borghese Gallery), by Vaga.

Vagabundæ. Spiders that make no webs, but wander about seeking prey. See CITIGRADÆ.

Vagantes, or GOLIARDS. Wandering clerks of the Middle Ages. They flourished mostly in France and England during the 12th and 13th centuries. They became the terror of the community into which they came. They produced profane Latin poetry.

Vagina. See SHEATH.

Vagrants and Vagrancy. Vagrants are persons belonging to either of the classes who, by reason of having no fixed home or subsistence, and pursuing courses which tend toward crime, may by statute be confined and disciplined. These statutes give lists of various descriptions of persons who may be treated as vagrants. An act of Pa., passed 1879, distinguished a tramp from a vagrant, as being any person going from place to place, begging, asking, or subsisting upon charity, who shall have no fixed place of residence or lawful occupation in the city or county in which he shall be arrested.

Vagus Nerve. See PNEUMOGASTRIC NERVE.

Vahl, MARTIN, 1749–1804. Prof. of Botany in Copenhagen. *Symbolæ botanicæ*, 1790–94; *Eclogæ Americanæ*, 1796–1807; *Enumeratio plantarum*, 1804–6.

Vahlen, JOHANNES, b.1830. Prof. Vienna 1858, and Berlin 1874; editor of Aristotle's *Poetics* and other classics.

Vaiceshika Philosophy. One of the systems of Brahmanical philosophy.

Vail, ALFRED, 1807–1859. N. J. inventor, associated with Morse in developing the electric telegraph. — His brother, GEORGE, 1809–1875, was M.C. from N. J. 1853–57, and U. S. Consul at Glasgow 1858–61.

Vail, THOMAS HUBBARD, D.D., LL.D., 1812–1889. P. E. Bp. of Kansas 1864. *Comprehensive Ch.*, 1841.

Vaillant, LE. See LEVAILLANT, F.

Vaishnavas. Worshipers of Vishnu in Hindustan.

Valais, or WALLIS. S.w. Swiss canton. Area 2,027 sq. m.; pop., 1893, 103,236, chiefly R. C. and French; engaged in cattle-raising and agriculture.

Valckenaer, LODEWYCK KASPAR, 1715–1785. Prof. Franeker 1741, Leyden 1766; editor of sundry Greek texts. *Opuscula critica*, 1809; *Selecta*, 1817.

Valdes, ANTONIO JOSÉ, 1770–1824. Cuban historian.

Valdés, ARMANDO PALACIO. Spanish novelist; Marquis of Peñalta 1886. *Maximina*, tr. 1888. His *Origin of Thought*, tr. 1894, is a cumbrous satire.

Valdes, GABRIEL DE LA CONCEPTION, 1809–1844. Cuban poet of color, executed for alleged conspiracy.

Valdes, JUAN DE, 1500–1541. Spanish reformer, at Naples from 1533. He aimed to work within the R. C. Ch., not by withdrawal from it. Some of his books were tr. 1860–82.—His twin brother, ALONZO, 1500–1532, pub. a satire, *Lactantius*, 1527, and lived at Brussels. Both escaped the Inquisition.

Val-de-Travers. Valley in Switzerland, in which is Travers, in Neuchâtel. Here are asphalt mines.

Valdez Melendez. See MELENDEZ, VALDEZ JUAN.

Valdivia, PEDRO DE, ab.1500–1554. Spanish adventurer, companion of Pizarro; conqueror of Chili; founder of Santiago; killed by Araucanians.

Valdivieso, JOSÉ DE, 16th cent. Spanish priest, author of biblical and allegorical plays, collected 1622.

Vale. In Scandinavian Mythology, son of Odin and Rind; also son of Loke and Sigyn.

Valence. That property of an element by virtue of which its atom has the power of holding a definite number of other atoms in combination. When hydrogen and chlorine unite, it is believed that one atom of each enter into combination: these elements are called univalent. If an element has the power to hold two hydrogen or two chlorine atoms in combination it is bivalent; *e.g.*, oxygen and calcium. Nitrogen is trivalent in NH_3, pentavalent in NH_4Cl. The highest valence is VIII.; *e.g.*, OsO_4. Valence is variable according to the conditions; thus nitrogen forms five different compounds with oxygen.

Valencia. City of Venezuela, on Lake Tacarigua. Pop. ab. 39,000.

Valencia. Seaport of e. Spain, on the Mediterranean at

The Puerta de Serranos, Valencia.

the mouth of the Guadalaviar; taken by Goths 413, Moors 715, by the Cid 1094, and by the French 1812. It manufactures silks and velvets, and exports grain and rice. It has a large commerce, and contains a university and a cathedral, in which are many noted works of art. Pop. ab. 170,000.

Valencia, DUKE OF. See NARVAEZ, R. M.

Valenciennes. Ancient town of n. France, on the Scheldt; part of Hainault till 1678; formerly noted for its lace. Froissart and Watteau were born here. Pop., 1891, 24,520.

Valenciennes, ACHILLE, 1794–1865. Prof. Paris 1830; coworker with Cuvier. *Poissons*, 22 vols., 1829–49; *Mollusques*, 1833.

Valens, FLAVIUS, ab.328–378. Emperor of the East from 364, brother of Valentinian; defeated and slain by Huns at Adrianople.

Valentine, BASIL, ab.1500. German alchemist. *Triumphwagen des Antimonii; Letztes Testament.*

Valentine, DAVID THOMAS, 1801–1869. Clerk of New York Common Council from 1837, and its historian. His *Manual* appeared annually from 1843.

Valentine, MILTON, D.D., LL.D., b.1825. Pres. Pa. Coll., Gettysburg, 1868–84; prof. theol. sem. there since 1884; writer on religious topics.

Valentine, ST. Roman presbyter, martyred 270. His day, Feb. 14, owes its peculiar observance to the festival LUPERCALIA (q.v.).

Valentines. Love-tokens accompanied by amatory verses, exchanged Feb. 14. They were formerly drawn, the names of boys and girls being written on slips. The origin of the custom is traced to usage among the Romans at the Lupercalia.

Valentinian I., 321–375. Emperor of the West from 364. —II., 371–392, his younger son and successor.—III., ab.419–455; son of Constantius III. and grandson of Theodosius; Emperor of the West from 425.

Valentinians. Followers of Valentinus, an Alexandrian Gnostic, at Rome ab.140–160.

Valentinite. See SENARMONTITE.

Valentinois, DUCHESS OF. See DIANA DE POITIERS.

Valera y Alcalá-Galiano, JUAN, b.1824. Spanish novelist, poet, critic, diplomatist, and minister of state. *Estudios críticos*, 1864–88; *Pepita Jiménez*, 1874, tr. 1891; *Doña Luz*, 1878; *Cuentos*, 1882.

Valerian. Herbs of the genus *Valeriana*, natural family *Valerianaceæ*, bearing small flowers in panicles and strong-scented roots; of wide geographical distribution; cultivated for their medicinal properties and for ornament.

Valerian (*Valeriana officinalis*).

Valerian, GREEK. Herbs of the genus *Polemonium*, of the Phlox family, natives of the cooler portions of the n. hemisphere.

Valerianaceæ. Natural family of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Gamopetalæ*, comprising 9 genera and ab.275 species, distributed throughout all parts of the earth except Australia; called the Valerian family.

Valerianus, PUBLIUS LICINIUS, ab.190–263. Roman emperor 253–260; defeated and made prisoner by the Persians. The tales of his being used as a horseblock by Sapor, and his stuffed skin kept in a temple, are doubtful.

Valeric Acids. $C_5H_{10}O_2$. Monobasic acids of the acetic acid series, existing in four forms. The common one is the isovaleric acid, which is found free and combined in the animal and vegetable kingdoms. The main sources are the valerian and the angelica root. It is a liquid with an unpleasant odor, bpt. 175° C., used in the manufacture of its compound ethers for flavors and perfumery. Ammonium valerate has a disgusting odor, and is used in medicine.

Valerius, ANTIAS, 1st cent. B.C. Historian of Rome, who wrote its history down to Sulla in ab. 75 vols. He exaggerated largely.

Valerius, MAXIMUS, 1st cent. Roman author of *De Factis Dictisque Memorabilibus*, in nine books, a collection of historical anecdotes.

Valerius, PROBUS. See PROBUS, M. A.

Valerius Flaccus, GAIUS. See FLACCUS, G. V.

Valetta. Capital of Malta; on n.e. coast; founded ab.1566. It has two good harbors, and is well fortified. The town is

built mainly on a rocky peninsula and the ground is so uneven that the streets are connected by stairs. It has a large depot

Valetta, Malta.

of coal, and is the headquarters of the British fleet in the Mediterranean. It was occupied by the French 1798 and passed to the English 1801. Pop., 1891, 37,350, or, with suburbs, 62,152.

Valette, JEAN PARISOT DE LA, 1494–1568. Grandmaster Knights of St. John 1557; defender of Malta against the Turks May 18–Sept. 8, 1565.

Valgius Rufus, b.81 B.C. Roman author, in prose and verse, under Augustus; Consul 12 B.C.; friend of Horace.

Valhalla. Hall of immortality, in Scandinavian mythology, for heroes who fell in battle; described as situated in Gladsheim, large and resplendent with gold. The heroes pass their days there in feasting.

Valkyries. Maids sent by Odin to choose those who are to be slain, and carry them heroes to Valhalla, where they bear drink, take care of the drinking-horns, and serve the table.

Valla, LAURENTIUS (LORENZO DELLA VALLE), 1405–1457. Italian scholar, rationalist, and polemic, a chief herald and promoter of the Renaissance; prof. at Rome 1450; translator of Herodotus, Thucydides, and Xenophon; N. T. critic. *De Donatione Constantini*, 1440; *Elegantiæ Latinæ*, 1444.

Valladolid. Old city of n. Spain, on the Pisuerga; royal residence ab.1400–1560; held by the French 1808–10. Its univ.,

House in Valladolid where Columbus died, 1506.

founded 1346, has ab. 900 students. It has some manufactures of silk and wool and a fair grain trade. Pop. ab. 65,000.

Vallancey, CHARLES, LL.D., 1722–1812. English officer and antiquarian, writing on Ireland. *De Rebus Hibernicis*, 6 vols., 1770–1808.

Vallandigham, CLEMENT LAIRD, 1820–1871. M.C. from Ohio 1857–63. He opposed the prosecution of the Civil War and attacked the government, was tried by court-martial and carried across the lines. After a stay in Canada, he was candidate for Gov. of Ohio 1864. He expended much ability and earnestness on a hopeless cause.

Vallauri, TOMMASO, b.1805. Prof. Turin 1843; editor of Latin classics; writer on Piedmontese literature. *Opuscula*, 1875.

Vallentine, BENJAMIN BENNATON, b.1843. Anglo-American journalist, satirist, and playwright.

Valleria, ALWINA (LOHMANN), b.1848. American singer.

Valley. Internal angle formed by the meeting of the sides of a roof, where there is more than one ridge.—Space between the ridges of a vault as seen from above.

Valley Forge. Village 24 m. w. of Phila.; scene of Washington's encampment in the winter of 1777–78. His force of 11,000 men was ill supplied with food and clothing.

Valley Rains. Rain produced by hot moist air rising from valleys; term used by Abercromby.

Valleys. Depressions of the earth's surface generally with sloping sides. They have been formed by wrinkling of the earth's crust by internal forces; by volcanic eruptions; by erosion of plateaus by water or ice.

Vallombrosa. Benedictine abbey in the Apennines, founded 1039; first to admit lay brothers; noticed by Ariosto and Milton; suppressed 1869, and its fine buildings secularized.

Valmiki, ab.900 B.C. Epic poet of India.

Valmore, MARCELINE FÉLICITÉ JOSÈPHE (DESBORDES), 1785–1859, m.1817. French singer, poet, and novelist.

Valmy. Village of n.e. France, 20 m. n.e. of Chalons. Here, Sept. 20, 1792, the French Republicans under Kellerman defeated the Prussian invaders, deciding the campaign.

Valmy, FRANÇOIS CHRISTOPHE KELLERMAN, DUC DE, 1735–1820. Bavarian general, in the French service; victor at Valmy 1792; imprisoned 1793–94; Duke 1804.—His son, FRANÇOIS ÉTIENNE, 1770–1835, was prominent at Marengo and Austerlitz.

Valois Dynasty, 1327–1589. Named from a portion of Isle de France (Oise), given by Philip III. to his youngest son Charles, 1270–1325. His son became king as Philip VI. 1327. The house is subdivided into (1) older Valois, direct line, 1327–1498, with 7 kings, ending with Charles VIII.; (2) Valois-Orleans, Louis XII., 1498–1515; (3) Valois-Angoulême, 1515–89, 5 kings, Francis I. to Henry III. The Valois claim to the throne was disputed by Edward III. of England, son of Isabella, daughter of Philip IV. of France: this claim occasioned the 100 Years' War. The marriage of Charles of Valois with Margaret of Anjou-Sicily brought a claim to the Two Sicilies, which was pressed by Charles VIII. and his immediate successors, and involved Europe in numerous wars. The dynasty ended with the assassination of Henry III.

Valonia. Vegetable product rich in tannic acid and used by tanners. It is the acorn cup of a species of oak, *Quercus ægilops*, found in Greece and Turkey.

Valparaiso. Principal seaport of Chili, 68 m. w.n.w. of Santiago; founded 1544; partly destroyed by earthquakes 1822

Valparaiso from the Hills southeast of the City.

and 1851, by a Spanish fleet 1866, and by insurgents 1891. It has a fine harbor and a large foreign commerce. Pop. ab. 150,000.

Valpy, RICHARD, D.D., 1754–1838. Headmaster of Reading School, Eng., 1781–1830; author of widely used Greek and Latin grammars.—His brother, EDWARD, 1764–1832, headmaster at Norwich, edited the Greek Testament 1810, and pub. *Elegantiæ Latinæ*, 1803.—Their nephew, ABRAHAM JOHN, ab.1787–1854, publisher in London, issued an extensive series of Latin authors, a *Family Classical Library*, and other important works.

Value in Exchange. Power which an article confers

upon its possessor of commanding the labor, or the products of the labor, of others. Value alone should be equivalent to this, though it is sometimes confused with utility.

Value in Use. Equivalent of utility; power which any article possesses of satisfying some human want.

Valvate. Manner of æstivation, where the margins of the sepals merely touch without overlapping, as in the Hollyhock.

Valve. In Botany, one of the separating parts of a dehiscing capsule.—In Zoölogy, one of the parts of a diatom-shell.

Valverde, VICENTE, ab.1490–1543. Spanish Dominican, in Peru ab.1530–34, and from 1536 as Bp. of Cuzco. He attempted the conversion of Inca Atahualpa, and caused his arrest and execution 1532–33. As inquisitor and Protector of the Indians he cruelly oppressed the natives, who rose in despair and slew him.

Valves. Means of closure of openings in pipes through which fluids move. Valves lift or slide, and are automatic or are opened from outside. Automatic lifting valves are represented by all pump and check-valves (see CHECK, CORNISH and POPPET VALVES); non-automatic are the usual globe valves, in which the spindle of the valve is fitted with a screw, and by turning that spindle the valve rises from its seat. The stem has a STUFFING-BOX (q.v.) to keep it tight. Sliding valves are represented by the engine SLIDE-VALVE (q.v.), plug-cock, and gate-valves. Cocks are conical frusta with a hole through them, which fit a taper casing in which are openings from the pipe. The cock opens when the holes in the frustrum slide opposite to those in the seat. Such cocks may be 3-way. The taper is ab. 1 in 32, and is given so that the fit may be ground anew as it becomes unequally worn, owing to unequal wearing areas. Gate or straight-way valves have disks which slide in guides across the section of the casing, and when withdrawn open the entire area of the pipe. The gate is made double, and is forced tight to its two seats by the wedging action, which may be caused as the spindle is crowded down after the disks have bottomed. Throttle valves are usually poppet or slide valves: sometimes in steamboat practice a simple disk pivoted on a diameter is made to fit a seat in the section of the pipe. Angle valves have one outlet at bottom and one at side. A cross valve opens an inlet from the bottom to two outlets at the sides, by lifting the disk with screw-spindle and hand-wheel. Valves operate by right-handed screws usually; a few large ones use left-screws.

Valves, MITRAL. Pair of membranous folds in the left ventricle of the heart, at the opening from the left auricle. When the blood flowing from the auricle fills the ventricle and it contracts, it forces the blood into these folds, causing them to close the opening, preventing the return of the blood into the auricle, enabling it to be forced through the aorta into the circulatory system. Sometimes through disease these valves do not properly close, permitting a leakage, causing what is known as a mitral regurgitant murmur.

Valves of the Heart. The heart as a hydraulic apparatus receives and pumps the blood into the arteries, and the mechanisms preventing the back flow are known as the valves of the heart. The venous blood enters the right auricle, whence it flows into the empty right ventricle. When the ventricle contracts to force the blood into the pulmonary artery, it presses against three membranous folds, situated on the ventricle side of the opening from the auricle, which close the opening and prevent the return of the blood; these are called the tricuspid valves. In the same way the blood from the left ventricle is prevented from flowing back into the left auricle by the mitral valve, consisting of two membranous folds. The blood cannot flow back from the pulmonary artery or the aorta into the dilating ventricles, because of the semilunar valves, three membranous folds found in the arteries at their insertion into the heart. Disease frequently produces a condition causing a leakage of the valves, which is recognized by the production of a peculiar murmur, known as a regurgitant murmur.

Vambéry, ARMINIUS, b.1832 in Hungary. Traveler in central Asia; prof. Pesth 1865; prolific writer on Oriental ethnology and philology. His *Travels and Adventures*, 1864, described regions previously unvisited by Europeans.

Vampire. Supposititious monster, usually a witch, suicide, or person excommunicated, who rose from the grave to feed on human blood. This hideous superstition prevailed in the Dark Ages, and was revived in e. and central Europe ab. 1710.

Vampire Bats. True Vampires are small bats of the family *Desmodontidæ* of S. and Central America, which subsist solely by sucking the blood of mammals while asleep or resting. They make the blood flow by shaving off the skin surface sufficiently, by means of a pair of sharp, projecting upper incisors. Their molars are rudimentary. They are related to the *Phyllostomidæ*, like them having a nose-leaf.

Vampire (*Phyllostoma spectrum*).

Their stomach is very slender, but bears a long cardiac cæcum for storing blood. The false Vampires are large, frugivorous, phyllostomine bats, as *Vampyrus spectrum* of S. America: allied species exist in the Old World. False Vampires are harmless.

Vampyrella. Animalcule, one of the *Lepomonera*. It lives upon confervoid *Algæ* by piercing the cell-wall and sucking out the contents.

Vampyrelleæ. Order of *Myxomycetes*.

Van. Armenian-Turkish town, 145 m. s.e. of Erzerum, on Lake Van, which is brackish, and in area ab.1,200 sq. m. It has some manufactures. Pop. ab.35,000.

Vanadates. Salts of vanadic acid.

Vanadic Acid. H_3VO_4. Not known in free condition.

Vanadic Acid, META. HVO_3. Beautiful golden-yellow compound, obtained by boiling copper vanadate with sulphurous acid; used as a substitute for gold bronze.

Vanadic Anhydride. V_2O_5. Vanadium Pentoxide. Found in three forms, yellow, red, and crystalline; made by heating ammonium vanadate.

Vanadinite. $3Pb_3V_2O_8+PbCl_2$. Mineral lead vanadate and chloride, found in very small quantity in several localities, and relatively abundant in Arizona and New Mexico.

Vanadite. Same as DESCLOIZITE (q.v.).

Vanadium. V. At. wt. 51.4, sp. gr. 5.5, valence III.–V. Rare element, discovered by Del Rio 1801; found in nature principally as lead and copper salts of vanadic acid and in some iron ores; obtained from its ores by treating with hydrochloric acid and evaporating in presence of an excess of ammonium chloride. The ammonium metavanadate thus obtained is converted into the pentoxide, which is then reduced by hydrogen. It is a light, whitish-gray powder, oxidizing slowly in the air, soluble in hydrofluoric acid. It forms five oxides, similar to those of nitrogen.

Vanadium Chlorides. VCl_4. Tetrachloride: dark, brownish red, thick liquid; bpt. 154° C., sp. gr. 1.85; made by treating the metal with chlorine. There are also a di- and trichloride.

Vanadium Oxides. These are represented by V_2O, V_2O_2, V_2O_3, V_2O_4 and V_2O_5. They are all rare. The pentoxide is the most important: it crystallizes in yellowish-red rhombic prisms, and is prepared from mottramite.

Vanadium Oxychloride. $VOCl_3$. Yellow fuming liquid, made by passing chlorine over a heated mixture of vanadium pentoxide and charcoal.

Vanadium Sulphides. Disulphide. V_2S_2. Brownish black powder; sp. gr. 4.2 to 4.4; not acted upon by boiling hydrochloric acid; made by treating the trisulphide with hydrogen.—Trisulphide. V_2S_3. Black leaflets or gray powder; made by heating the trioxide in a stream of hydrogen sulphide.—Pentasulphide. V_2S_5. Black powder, made by heating the trisulphide with sulphur; soluble in ammonium sulphide.

Vanadium Tribromide. VBr_3. Grayish, amorphous,

opaque sublimate, made by heating a mixture of carbon and the sesquioxide in presence of bromine.

Van Bemmel, EUGÈNE, 1824–1880. Prof. Brussels 1849; critical and biographical writer.

Van Beneden, PIERRE JOSEPH, 1801–1894. Prof. Louvain; writer on zoölogy, as is also his son, EDOUARD, b.1846, prof. Liège.

Vanbrugh, SIR JOHN, ab.1666–1726. English dramatist and architect, knighted 1714; builder of Blenheim palace. His comedies, *The Relapse*, 1697, *Provoked Wife*, 1698, *Confederacy*, 1705, and his last play, *Journey to London*, completed as *Provoked Husband* by Cibber, are vigorous, easy, and indecent.

Van Brunt, GERSHOM JAQUES, U.S.N., 1798–1863. Captain 1855, Commodore 1862; active on N. C. and Va. coast. —His son, HENRY, b.1832, was the architect of Harvard Memorial Hall (with W. R. Ware), and of many other buildings.

Van Buren, MARTIN, 1782–1862. Eighth Pres. of the U. S.; U. S. Senator 1821–28; Gov. of N. Y. 1828; Sec. of State 1829–31; Minister to England 1831, but not confirmed. He was Vice-Pres. 1833–37; Pres. 1837–41. The country was in distressed

Martin Van Buren.

financial condition during his administration, and his policy was unpopular with the masses. He was an unsuccessful candidate for the presidency 1840 and 1848.—His son, JOHN (PRINCE JOHN), 1810–1866, was a noted lawyer.

Van Buren, WILLIAM HOLME, M.D., LL.D., 1819–1883. Prof. Univ. New York 1852, and Bellevue 1866. *Surgery*, 1865.

Vance, JOSEPH, 1786–1852. M.C. 1823–35 and 1843–47; Gov. of Ohio 1836–38.

Vance, ZEBULON BAIRD, 1830–1894. M.C. 1858–61; Gov. of N. C. 1862–66 and 1876–78; U. S. Senator from 1879.

Van Cortlandt, OLOFF STEVENSE, 1600–1684. Dutch emigrant 1638; burgomaster of New York 1655–64.—His son, STEPHANUS, 1643–1700, was Mayor from 1677, and long a judge.—His grandson, PIERRE, 1721–1814, was Lieut.-gov. of N. Y. from 1777.—His son, PHILIP, 1749–1821, was an officer in the Revolutionary War, and M.C. 1793–1809.

Vancouver. Capital of Clarke co., Wash., on Willamette River, 6 m. above mouth, 6 m. n. of Portland, Ore. Founded 1828; headquarters of military department of the Columbia. Products lumber, fruit and dairy. Pop., 1890, 3,545.

Vancouver. City of British Columbia, 85 m. n. by e. of Victoria, on Buzzard Inlet. It is the terminus of the Canadian Pacific R. R., and has a steamship service to China, Japan, San Francisco and Alaska. Pop., 1891, 13,685.

Vancouver, GEORGE, R.N., 1758–1798. Officer under Cook 1771–80; explorer of n. Pacific coasts 1791–94. *Voyage of Discovery*, 1798.

Vancouver Island. Part of British Columbia; in the Pacific, lat. 48° 19′—50° 53′ N.; discovered 1592 by Apostolos Valerianos, or Juan de Fuca, a Greek in the service of Spain. In 1844 it was settled by the Hudson's Bay Co., to which the whole island was assigned in 1849; in 1858 it was bought back

Vancouver Island.

by the crown and in 1866 united with British Columbia. The industries are coal-mining, lumber, fishing and shipbuilding. Area ab.16,000 sq. m.; pop., 1891, 37,000.

Van Curler, or **Van Corlear,** ARENDT, ab.1600–1667. Dutch emigrant 1630; founder of Schenectady, N. Y., 1661; of great influence with the Indians, and thus important in Colonial history.

Vandals. Gothic tribe, who moved s. from a region near the Baltic, and became Arians in Pannonia. They entered Gaul 406, Spain 409, and Africa 429; were victorious and destructive under Genseric, who sacked Rome 455; and were overthrown 533 near Carthage by Belisarius.

Vam Dam, RIP, ab.1662–ab.1738. Councilor of N. Y. from 1707; Acting-gov. 1731 and 1736.

Vandamme, DOMINIQUE JOSEPH, 1771–1830. French general 1793; active at Austerlitz and in Silesia; made Comte d'Huningen; in America 1815–24.

Vandegrift, MARGARET. See JANVIER.

Vandenhoff, GEORGE, b.1820. Anglo-American actor, elocutionist and author.—His wife (MAKEATH), m.1855, d.1883, was an actress of merit.

Van Depoele, CHARLES J., 1844–1892. Belgian-American inventor of trolley cars. The first line was established at South Bend, Ind., 1882.

Vanderbilt, CORNELIUS, 1794–1877. Called "Commodore" from his boats plying on the Hudson and Long Island Sound. In 1863 he gave to the U. S. Government his finest steamer, the *Vanderbilt*, which had cost $800,000. He gained control successively of the N. Y. and Harlem, Hudson River, and N. Y. Central railroads, in 1869 consolidated these, and in 1873 controlled 2,000 miles of track. He left a fortune estimated at $100,000,000.—His son, WILLIAM HENRY, 1821–1885, and grandson, CORNELIUS, b. 1843, succeeded to the control of his roads.

Vanderbilt University. At Nashville, Tenn.; founded 1872, under control of the M. E. Ch. South. C. Vanderbilt gave it $1,000,000; his son and grandson added $500,000. It is co-educational, and has 70 instructors and ab.700 students. It maintains, besides the academic courses, schools of law, medicine, theology, and engineering.

Vanderdecken. See FLYING DUTCHMAN.

Van der Goes, HUGO, ab.1405–1482. Flemish painter.

Vanderheyden, DIRK, ab.1680–1738. Grantee of the site of Troy, N. Y., 1720. His house, built 1725, was described by Irving in *Bracebridge Hall*.

Van der Heyden, JAN, 1637–1712. Dutch painter.

Van der Hoeven, JAN, 1801–1868. Prof. Leyden 1826; writer on zoölogy.

Vanderlyn, JOHN, 1776–1852. American painter of superior talent. Few accessible works of his are extant.

Van der Meer, JAN, ab.1625–ab.1685. Dutch landscape and marine painter, as was also his son, JAN, ab. 1660–ab. 1704.

Van der Meulen, ANTOINE FRANÇOIS, 1634–1690. Belgian-French historical painter.

Vanderpool, AARON, 1799–1871. M.C. 1833–37 and 1839–

41; Judge N. Y. Superior Court 1842–50.—His nephew, AARON J., LL.D., 1825–1887, was prominent at the New York bar.

Van der Stucken, FRANK, b.1858 in Texas. Conductor Breslau Theater 1881–82, Männergesangverein Arion, New York, 1884–95, and Cincinnati Orchestra 1895; composer of an opera, *Vlasda*, music for Shakespeare's *Tempest*, overture to Heine's *Ratcliff*, etc.

Van de Velde, WILLEM, 1610–1693. Dutch marine painter, in England from 1675.—His son, WILLEM, 1633–1707, followed in his steps with still greater success.—His brother, ADRIAAN, 1639–1672, painted landscapes and animals.

Van Diemen's Land. See TASMANIA.

Van Dorn, EARL, 1820–1863. Major U.S.A. 1860; Major-gen. C.S.A. 1861; defeated at Pea Ridge, Ark., and Corinth, Miss., 1862.

Van Dyck, or **Van Dyke,** SIR ANTHONY, 1599–1641. Flemish painter, in England from 1632; pupil of Rubens, and superior to him in color, but not in strength of conception. The sentiment of his religious paintings is rather weak: in portraits he is at his best, and a master of the first rank. The *Children*

Children of Charles I., by Van Dyck.

of Charles I. in Dresden, similar paintings in Amsterdam, in Turin, and at Windsor, and the portrait of *Charles I.* in the Louvre, are among his greatest works. The Antwerp Gallery is especially rich in fine specimens. Several are in the Metropolitan Museum of New York.

Van Dyke, HENRY, D.D., b.1852. Presb. pastor in New York since 1882. *Poetry of Tennyson*, 1889–94; *Christ-Child in Art*, 1894; *Little Rivers*, 1895; *Age of Doubt*, 1896.—His father, HENRY JACKSON, D.D., 1822–1891, pastor in Brooklyn from 1853, pub. *The Church*, 1890.

Van Dyke, JOHN, 1807–1878. M.C. 1847–51; Judge N. J. Supreme Court 1859–66; Judge in Minn. 1868.—Of his sons, THEODORE STRONG, b.1842, has written on Cal., and JOHN CHARLES, b.1856, prof. of Art, Rutgers, 1891.

Van Dyke, NICHOLAS, 1738–1789. Delegate to Congress 1777–83; Pres. of Delaware 1783–86.—His son, NICHOLAS, 1769–1826, was M.C. 1807–11, and U. S. Senator from 1817.

Vane. Plate of metal turning on a vertical spindle to show the direction of the wind, fixed to the tops of spires and pinnacles; often in the form of a cock, hence called a weather-cock. They were in use by the Saxons, sometimes heraldic devices. In the Perpendicular and Elizabethan styles figures supported the vanes in elevated situations.

Vane (OF FEATHERS). See VEXILLUM.

Vane, CHARLES W. See LONDONDERRY, MARQUIS OF.

Vane, SIR HENRY, 1612–1662. English Puritan, in Mass. 1635–37; Gov. 1636; M.P., knight, and treasurer of the navy 1640; Republican leader, active in public affairs till 1653; opposed to Cromwell as Protector; imprisoned 1656 and from 1660; executed for alleged high-treason. His writings are mystical and millenarian.

Van Eyck. See EYCK.

Van Helmont, JAN BAPTISTA, 1577–1644. Dutch iatrochemist. *Pharmacopolium ac Dispensatorium Modernum; Ortus Medicinæ, vel Opera Omnia*, 1648.

Vanilla. *Vanilla planifolia.* Epiphyte of the Orchid family, native of tropical America. Its fruit is collected in quantity and furnishes the well-known flavoring substance. The fruit is a pulpy pod ab. 6 to 12 in. long and ½ in. thick, containing many black seeds. The best comes from Mexico, and contains from 1.7 to 2 per cent vanillin. Sweetened tincture of the dried fruit in alcohol is used for flavoring.

Vanilla (*Vanilla planifolia*).

Vanilla-Plant. *Trilisia odoratissima.* Tall herb of the Composite family, bearing purple flowers and foliage with the odor of vanilla; native of the s.e. U. S.

Vanillin. $C_6H_3 : OH,OCH_3,CHO$. Compound at once aldehyde and phenol, derived from benzene; beautiful needles of vanilla odor; mpt. 81°C.; present in the vanilla bean, from which it is prepared, and in numerous other plants; also prepared by the oxidation of coniferin.

Vanini, LUCILIO, 1585–1619. Italian rationalist, falsely accused of atheism and burned at Toulouse. *Amphitheatrum æternæ Providentiæ*, 1615; *De Admirandis Naturæ Arcanis*, 1616.

Vanishing Fraction. One having for some value of its variable the indeterminate form $\frac{0}{0}$; as $\frac{x^2-a^2}{x-a}$, in which, if $x=a$, each term of the fraction becomes zero. Such fractions may, in some cases, be evaluated algebraically by dividing both terms by a common factor: in other cases the differential calculus is required.

Vanity. Readiness to believe that one is admired, and elation of spirit accompanying such belief.

Van Laun, HENRY, 1820–1896. Dutch scholar in Great Britain from ab. 1845; teacher in Edinburgh; tr. of Taine's *Hist. English Literature*, 1872–73, of Molière, 1875–76, and of *Gil Blas*, 1885–86. *Hist. French Literature*, 3 vols., 1876–77; *French Revolutionary Epoch, 1774–1870*, 1879.

Van Lennep, HENRY JOHN, D.D., 1815–1889. American missionary in Turkey 1839–69. *Travels in Asia Minor*, 1870; *Bible Lands*, 1875.

Van Lennep, JACOB. See LENNEP, J.

Van Loo, CHARLES ANDRÉ, 1705–1765. French decadence painter.—His brother, JEAN BAPTISTE, 1684–1745, gained eminence by his portraits in Italy, London, and Paris, and was admitted to the French Academy 1731.

Van Marcke, ÉMILE, 1827–1890. French painter.

Van Mildert, WILLIAM, D.D., 1765–1836. Prof. Oxford 1813; Dean of St. Paul's 1820; Bp. of Llandaff 1819, and of Durham 1826. *Historical View of Infidelity*, 1806; *Scripture Interpretation*, 1815.

Vanner. Ore-testing or ore-dressing apparatus on which the ore, in the shape of a fine sand or pulp, is agitated with water in such a way as to wash off the lighter and less valu-

Vanner.

able portions and to collect the richer grains by themselves. In hand-vanning a shovel is used, to which a peculiar jerky and rotary motion, to be learned only by practice, is given. Many machines of this general type are in use.

Van Ness, CORNELIUS PETER, LL.D., 1782–1852. Chief-justice of Vt. 1821–23; Gov. 1823–29; U. S. Minister to Spain 1829–37.—His brother, WILLIAM PETER, 1778–1826, was Burr's second in the duel with Hamilton 1804, and U. S. judge for s.

N. Y. from 1812.—His cousin, WILLIAM W., 1776–1826, was Justice N. Y. Supreme Court 1807–22.

Van Nostrand, DAVID, 1811–1886. Publisher of scientific books in New York; founder *Engineering Mag.* 1869.

Vannucci. See PERUGINO.

Vannuchi. Family name of SARTO (q.v.).

Van Oosterzee, JAN. See OOSTERZEE, JAN.

Van Ostade. See OSTADE.

Van Rensselaer, HENRY KILLIAN, 1744–1816. Great-great-grandson of Killian; Col. of N. Y. troops; distinguished in battles with Burgoyne 1777.—His son, SOLOMON, 1774–1852, served with distinction in Wayne's Ohio campaign 1794, and at Queenston 1812. He was M.C. from N. Y. 1819–22.

Van Rensselaer, MARIANA (GRISWOLD), b.1851, m.1874. American writer on art and architecture.

Van Rensselaer, STEPHEN, 1765–1839. Eighth patroon; inheritor of the American estates of Killian Van Rensselaer (1595–1644) of Amsterdam, who bought 1630 a tract on both sides of the Hudson, 24 by 48 m., including Albany and Rensselaer counties; Lieut.-gov. 1795; Major-gen. 1801; member of Constitutional Convention 1821; M.C. 1823–29; pres. of the boards in control of Erie and Champlain canals 1811–25; founder of the Rensselaer Polytechnic Institute at Troy 1824.—His son, STEPHEN, 1789–1868, was the last patroon. The anti-rent movement began 1839, and soon led to riot and bloodshed. In 1847–48 it formed an important issue in State politics; but was quieted by a decision of the Court of Appeals 1852, which favored the recusant tenants.

Van Santvoord, GEORGE, 1819–1863. N. Y. lawyer. *Pleading in Civil Actions*, 1852–54; *Lives of Chief Justices*, 1854; *Equity Actions*, 1860–62.

Van Schaack, PETER, LL.D., 1747–1832. Lawyer of Kinderhook, N. Y. *Laws of N. Y.*, 1773; *Conductor Generalis*, 1788.

Van Schooten, FRANK, 1620–1661. Prof. Leyden; ed. Descartes' *Geometry* and Vieta's works.

Vansittart, HENRY, R.N., 1779–1844. Rear-admiral 1830.

Vansittart, NICHOLAS, 1766–1851. M.P. 1796; diplomatist; Chancellor of the Exchequer 1812; Baron Bexley 1823.

Van Tromp. See TROMP.

Van Twiller, WOUTER, ab.1580–ab.1650. Gov. of New Netherlands 1633–37; involved in difficulties with Mass.; noted for lavish expenditures.

Vanuxem, LARDNER, 1792–1848. Prof. S. C. Coll. 1820–26; geologist of 3d district of N. Y. 1836–41; author of a Report on the same 1842.

Vanuxemite. Clayey product of the decomposition of some of the zinc ores in n.w. N. J.

Van Valkenburg, ROBERT BRUCE, 1821–1888. M.C. from N. Y. 1861–65; U. S. Minister to Japan 1866–69; Justice Fla. Supreme Court from 1872.

Van Veen, OCTAVIO, 1558–1629. Dutch historical and portrait painter of the Flemish school. At Antwerp he painted for the churches and had Rubens for his pupil. He was a good poet and scholar, publishing several books, which he illustrated himself. He is known by various names; the name Van Veen being sometimes given to HEEMSKERK (q.v.).

Nothing lasts so that everything may last, by Van Veen.

Vanvitelli, LUIGI, 1700–1773. Neapolitan architect of Dutch parentage.

Van Winkle, PETER G., 1808–1872. U. S. Senator from W. Va. 1863–69.

Van Winkle, RIP. See RIP VAN WINKLE.

Van Wyck, CHARLES HENRY, 1824–1895. M.C. from N. Y. 1859–63 and 1867–71; U. S. Senator from Neb. 1881–87.

Van Zandt, MARIE, b.1861 in Tex. Opera singer.

Van Zile, EDWARD S., b.1863. American novelist. *Manhattaners*, 1896.

Vapereau, LOUIS GUSTAVE, b.1819. French lexicographer and historian of literature. *Année littéraire et dramatique*, 11 vols., 1859–69.

Vapor. Gas near its liquefying point. If the gas be partly condensed or be just at the condensing point, it is called a saturated vapor; in general, a saturated vapor is one in contact with its liquid. The term vapor is often used in a much wider sense: all gases are frequently called unsaturated vapors.

Vaporization. Process of changing a liquid into a vapor. See EVAPORATION and EBULLITION.

Vapor Tension. Pressure exerted by a vapor on the surface of its liquid and the walls of the containing vessel; better called vapor pressure. It is different for the different vapors, and proportional to the temperature. Carefully prepared tables give the results of numerous experiments for many different vapors and for the various temperatures.

Varahran. See BAHRAM.

Varangians. Scandinavian invaders of Russia, who settled at Novgorod in 862 and became the ruling class; so named by Nestor.

Varano, ALFONSO, MARQUIS DE, 1705–1788. Italian Dantesque poet.

Varas, ANTONIO, 1817–1886. Chilian jurist; Minister of Justice 1845–50; Premier 1850–56 and 1861.

Varchi, BENEDETTO, 1503–1565. Florentine poet, critic, and historian.

Vardö. Island of Norway, in the Arctic Ocean, in lat. 70° 20′ N., long. 31° 10′ E., 175 m. e.s.e. of Hammerfest. It contains a town and fort, the latter being built in 1310, and exports salt and dried fish, whale and cod oil, guano, etc. It is one of the most northerly inhabited towns of Europe. Pop. ab. 3,000.

Vardo in 1594.

Varela, FLORENCIO, 1807–1848. Argentine author and journalist, as is also his son, HECTOR FLORENCIO, b. 1832.

Varela y Morales, FÉLIX, 1788–1853. Cuban priest and author, in New York 1824–49. *Filosofia*, 1819.

Vargas, JOSÉ MARIA, 1786–1854. Venezuelan physician and legislator; rector Univ. of Caracas 1827; Pres. 1835–36; Senator 1838–46.

Vargas, LUIS DE, 1502–1568. Spanish painter, chiefly of biblical scenes.

Vargas y Ponce, JUAN JOSÉ, 1755–1821. Spanish geographer.

Variability. Changes above or below a normal condition; changeability or uncertainty of any phenomena; expressed by a COEFFICIENT (q.v.) of variability. The relative variability of any climatic element at any two stations is determined by a comparison of the two coefficients.

Variable. Quantity which assumes in a discussion a series of consecutive values. A general variable passes through all values from zero to infinity. A limited variable passes through

consecutive values intermediate between those fixed by its law of movement. A variable is continuous between two points when all its values between those points are real; it is discontinuous when any of its values between those points become imaginary. Variables are also considered as independent, when considered as primary in the discussion, and dependent, when they are functions of other variables.

Variable Period. Period of adjustment between the instant at which a current of electricity begins to flow into a wire and that at which it becomes steady.

Variables. 1. Winds of certain latitudes. 2. Latitudes where these winds prevail.

Variable Stars. Stars whose light regularly increases to a maximum, then diminishes to a minimum. The period may be from 1 or 2 days to a year, or perhaps in some cases several years.

Variable State. See CONDUCTION.

Variation. Tendency of offspring to differ slightly from the parent forms. Biologists fall into two schools according to their view of the nature of variation. Darwinians believe that the variations are fortuitous, and that natural selection alone determines a definite line of progress. The Lamarckians believe that there is a tendency toward the transmission of definite characters acquired by an organism which is under a strain from imperfect adaptation to its environment. Both schools adopt the evolutionary theory; viz., that species become established through the emphasis of variations in definite and different directions among the offspring of nearly similar ancestors. Darwinians look to outside forces as the sole determinants, Lamarckians to factors internal to the organism.

Variation. In Algebra, increase or decrease of one quantity proportionally to the change in another. Its sign is α. Variation is direct if the two quantities change in the same sense, inverse if in different senses. Direct variation implies a constant quotient, indirect a constant product.—In the Calculus of Variations, arbitrary indeterminate increment added to a primitive function of two or more variables, whence is deduced the variation of the derived function.

Variation. In Botany, slight difference between an individual and the type of its species.

Variation, LUNAR. Inequality in the moon's motion, due to the tangential component of the sun's disturbing action; discovered by Tycho Brahe.

Variation of the Needle. Due to solar influences or to magnetic storms. The daily variation often equals one-quarter of a degree. The secular variation has a period of two or three centuries: its amount is several degrees. The absolute variation from the true meridian is called the declination of the needle.

Variations. Departure in kind or quality or quantity of any phenomenon from an average or normal condition; *e.g.*, magnetic variation is the difference in azimuth between the meridian and magnetic needle. The variations of temperature and pressure from the normal values are now generally called departures. Variations are classified as irregular or accidental, when they follow no known law; periodic or cyclic, when they go through a systematic series of changes, diurnal, annual, or secular, returning to their original value and then repeating themselves; non-periodic or acyclic, when the changes follow some system, but do not repeat themselves after a definite period.

Variations. In Music, transformations by means of embellishments, or other melodic, rhythmic, or harmonic devices, of a fundamental melody called a theme. It was formerly customary to leave the harmony unchanged, but now the greatest latitude is allowed in every particular. The variation form is frequently chosen for slow movements in SONATAS (q.v.) and symphonies.

Varices. Ridges that cross the whorls of the shell of Gastropods.

Varick, THEODORE ROMEYN, M.D., 1825–1887. Practitioner in Jersey City; introducer of improvements in surgery.

Varicose Veins. Condition of enlarged and twisted veins, usually of the lower extremities, due first to some obstacle in the venous circulation whereby the veins become overdistended, then tortuous, and enlarged or knotted, with thinned walls. The walls may eventually give away, causing hemorrhages or varicose ulcers. Persons inflicted with varicose veins should wear an elastic bandage or stocking to support the parts.

Variegated Copper. BORNITE (q.v.); so called from an iridescent tarnish on the surface.

Variegation in Plants. This is a condition in which other colors are found in parts of which the normal color is green. The chlorophyll is more or less suppressed. It is regarded as a disease, of which the causes are not known. It may be made permanent by proper methods and is compatible with health. It is rarely perpetuated by seed; it can be increased by cuttings, layers, division, budding or grafting. Sometimes the stock causes the cion to revert to the normal state as in budding; sometimes the stock develops variegation in other branches. In the former case the bud should be pruned away. These variegations in color are much used in ornamental gardening.

Variety. Group of plants subordinate to a species, differing from the type by small and inconstant characters.

Variola. See SMALLPOX.

Varna. Town of Bulgaria, on the Black Sea; scene of a Turkish victory over Hungarians Nov. 11, 1444; taken by Russians 1828; occupied by French and British 1854 as the depot for the allied armies fighting against Russia at Sebastopol; strongly fortified till 1878. Pop., 1893, 28,174.

Varna.

Varnhagen, FRANCISCO ADOLPHE DE, 1816–1878. Brazilian historian, of German parentage; Viscount 1874.

Varnhagen von Ense, KARL AUGUST, 1785–1858. German literary biographer of Goethe, 1823, of his wife, Rahel Levin (1771–1833), 1834–36, and others. *Tagebucher*, 14 vols., 1861–71; *Schriften*, 19 vols., 1871–77.

Varnish. Gum resins dissolved in spirit or some other liquid. There are many varieties; copal, mastic, shellac, benzoin, colophony, amber and sandarac are among the gum resins; and alcohol, methyl alcohol, ether, naphtha, linseed oil and sweet oil are among the liquids employed. Various colors are given to varnishes by the use of gamboge, cochineal, annatto, turmeric and other substances. Oil varnishes are the most durable and take the highest polish. Spirit varnishes are not suited for much exposure to the air, but are adapted for cabinet work, maps and toys. If too much spirit is used they crack in drying, and too much oil keeps them from drying.

Varnish Tree. Name given to trees whose resinous juice is used for varnishing. They belong to several distinct natural orders. Among these are the Black Varnish tree of India, and the Japan, New Granada and Sylhet Varnish trees.

Varnum, JAMES MITCHEL, 1748–1789. Col. R. I. troops 1775; Brig.-gen. 1776–79; in Congress 1780–82 and 1786–87; Judge of Northwest Territory 1788.—His brother, JOSEPH BRADLEY, 1750–1821, was M.C. from Mass. 1795–1811, Speaker 1807–11, U. S. Senator 1811–17, and Major-gen. Mass. militia from 1805.

Varoli, COSTANZO, 1543–1575. Prof. Bologna; writer on anatomy.

Varona, ENRIQUE JOSÉ, b.1849. Cuban poet and philosopher. *Logica*, 1880.

Varotari, ALESSANDRO, 1590–1650. Italian painter.

Varro, MARCUS TERENTIUS, 116–27 B.C. Roman writer, celebrated for learning. He took the side of Pompey in the civil wars, but was pardoned by Cæsar. Under the second triumvirate he was proscribed, but escaped. He wrote on a wide range of subjects, as Agriculture, the Latin Language, and Antiquities. Fragments of his *Menippean Satires* and of other treatises survive.

Varro, PUBLIUS TERENTIUS ("ATACINUS"), 82–37 B.C. Latin poet, tr. *Argonautica*.

Varus, PUBLIUS QUINTILIUS, d.9. Consul 13 B.C.; Gov. of Syria 6–4 B.C., of Germany A.D. 6. Marching with 3 legions and auxiliaries through a pass in the Lippische Wald, he was attacked by Arminius, and his army utterly destroyed after 3 days' battle.

Vasa. Surname of Gustavus I., King of Sweden 1523. The male line of the V. dynasty expired with Charles XII. 1682–1718: other branches reigned till 1818. See GUSTAVUS I.

Vasa Aberrentia. Relics of branches from the Wolffian

tubules, posterior to the vasa efferentia in the male. They form the paro-ophoron in the female, which also includes part of the posterior portion of the Wolffian duct, present as the par-epididymis (paradidymis) in the male.

Vasa Efferentia. Branches from the Wolffian tubules that enter the testes to convey the semen to the Wolffian duct; present as rudiments in some female vertebrates. In the male they form the head of the epididymis, the remainder being the coiled Wolffian duct.

Vasarhely, HOD MEZO. Town of e. central Hungary, 20 m. n.e. of Szegedin. It has a good trade and a large cattle-market. Pop., 1890, 55,483.

Vasari, GIORGIO, 1511-1574. Florentine painter of the decadence period, and architect of the Uffizi palace; famous for his history of Italian artists, 1550, tr. 1850, our main

The Six Poets, by Vasari.

original authority. Its value does not lie in its critical accuracy, but in its nearness to the life-time of the men described and substantial fidelity to the facts then known.

Vasco da Gama. See GAMA.

Vasco Nunez. See BALBOA.

Vasconcellos, ANDRES DE. Portuguese seaman who sailed with De Soto 1538 and explored the Florida coast. His narrative appeared in a Spanish version 1545.

Vasconcellos, JOAQUIM ANTONIO FONSECA DE, b. 1849. Prof. Oporto 1883; historian of music and art.—His wife, KAROLINA WILHELMA (MICHAELIS), b.1851 in Berlin, m.1876, is an authority on old Spanish and Portuguese literature.

Vasconcellos, SIMAO DE, 1599-1670. Historian of the Jesuits in Brazil, 1663.

Vascular. Composed of vessels or ducts, either wholly or in part.

Vascular Cryptogams. See PTERIDOPHYTA.

Vascular Cylinder. That of woody tissue in herbaceous stems and young shoots of woody plants.

Vascular Pore. Opening in the anterior and ventral part of the body of nematode worms of the lateral line organs (segmental tubes).

Vascular System. Portions of a plant or one of its organs which are composed of vascular tissue, collectively considered.

Vasculose. Modification of cellulose, not readily soluble in sulphuric acid.

Vasculum. Metallic case used in the field for malling botanical collections.

Vase. Large cup with handles; a kind of urn. Modern vases are solely ornamental. Ancient vases were made of glass, earthenware, metal or stone. See GLASS, ANCIENT.

Vaseline. Lubricant consisting of semi-solid and high boiling hydrocarbons present in petroleum; prepared usually by distilling off the volatile portions in vacuo and filtering the residuum, sometimes by dissolving paraffine in a heavy oil. It does not become rancid on standing.

Vasey, GEORGE, M.D., 1822-1893. Botanist of U. S. Dept. of Agriculture from 1872; writer on grasses.

Vashti. Persian queen, wife of Ahasuerus (supposed to be Xerxes). He divorced her and married Esther, the Jewess.

Vasquez, FRANCISCO, ab.1600-ab.1660. Historian of the conquest of Guatemala 1714-16.

Vasquez de Coronado, FRANCISCO, ab.1500-ab.1543. Explorer of n. Mexico 1540-42.—His relative, JUAN, 1525-1565, was an official and explorer in Central America.

Vassar, MATTHEW, 1792-1868. Brewer of Poughkeepsie, N. Y., founder of V. Coll.—His nephews, MATTHEW, 1809-1881, and JOHN GUY, 1811-1888, were benefactors of it and of other institutions.—Their cousin, JOHN ELLISON, 1813-1878, was noted as a lay evangelist.

Vassar College. For women; at Poughkeepsie, N. Y.; founded 1861, opened 1865. Its endowment is over $1,100,000, with buildings and collections worth as much. It has an astronomical observatory, with laboratories for the study of chemistry, physics, biology, mineralogy, and geology. It has (1897) 20 professors and 31 assistants of both sexes, 537 students, and a library of 25,000 volumes.

Vater, JOHANN SEVERIN, 1771-1826. Prof. Jena 1796, Halle 1800-9 and from 1820, and Königsberg 1809-20; author of Hebrew and other grammars, and of a commentary on the Pentateuch, 1802-5. *Tables of Ch. History*, 1809, tr. 1831.

Vatican Codex. Uncial manuscript of the Greek Bible in the Vatican Library, dating from the 4th century. Tischendorf considers it one of the 30 copies of the Scriptures which Eusebius had prepared by order of Constantine in 330. It contains the greater part of the O.T. and the new as far as Hebrews ix. 14. The first reproduction of it appeared 1857.

Vatican Council. Dec. 8, 1869-July 18, 1870; reckoned in R. C. Ch. the 21st Œcumenical Council. It defined the doctrinal infallibility and universal episcopate of the Pope, and led to the Old Catholic secession.

Vatican Palace. Usual residence of the popes since 1377; enlarged 1450 and later. It is 1,151 ft. long and 767 ft.

Vatican Library.

wide, contains ab.11,000 rooms, and communicates with St. Peter's, which is the Vatican Basilica. Its collections of books, MSS., statuary, and antiquities are large and valuable.

Vatke, JOHANN KARL WILHELM, 1806-1882. Prof. Berlin from 1837. His *Religion des Alten Test.*, 1835, and other works, were of some importance in the early history of the higher criticism. *Religionsphilosophie*, 1888.

Vatry, MARC ANTOINE BOURDON, BARON DE, 1761-1828. French official and writer; Sec. to De Grasse 1780-82, and then to Vaudreuil; Sec. Navy 1798-1800; Minister to U. S. 1800; in office till 1815.

Vattel, EMMERIC DE, 1714-1767. Swiss jurist, Saxon envoy at Berne 1746-58. His *Law of Nations*, 1758, tr. 1760, had great repute. *Droit naturel*, 1762.

Vattemare, ALEXANDRE, 1796-1864. French ventriloquist, advocate of international exchanges of books, maps, museum specimens, and art objects.

Vauban, SEBASTIEN LE PRESTRE DE, 1633-1707. French military engineer of highest rank. He created or perfected the bastioned system of fortification, invented parallels in sieges and the ricochet fire, conducted 53 sieges, bore part in 140 battles, built 33 fortresses, repaired ab. 100 others, and was made marshal of France 1703. His chief writings were reprinted 1796.

Vaucanson, JACQUES DE, 1709-1782. French inventor of

a player of musical instruments, a weaving ass, and other automatons.

Vaucher, JEAN PIERRE ÉTIENNE, 1763–1841. Prof. Geneva. *Histoire des Conferves*, 1803; *Plantes d'Europe*, 1841.

Vaucluse. Village of s.e. France, 19 m. e. of Avignon; noted for its scenery, and as a residence of Petrarch.

Vaud. Canton of w. Switzerland, held successively by Burgundy, Savoy, and Berne till 1803. Area 1,244 sq. m.; pop., 1894, 256,242, chiefly French Protestants.

Vaudeville. Light comic drama, including songs and dances. See BASSELIN, O.

Vaudois. See WALDENSES.

Vaudreuil, PHILIPPE DE RIGAUD, MARQUIS DE, 1640–1725. French commander in Canada 1687; defender of Quebec 1690 and 1710; Gov. of Montreal 1698, and of Canada from 1703.—His son, PIERRE, 1698–1765, Gov. of La. 1742, and of Canada 1755, was defeated at Quebec 1759, and at Montreal 1760.—His brother, LOUIS PHILIPPE, 1691–1763, served through many campaigns in Europe, and became Lieut.-gen. 1753.—His son, LOUIS PHILIPPE, 1724–1802, held command in American waters 1779–82, won several victories, became Lieut.-gen. 1782, and was in England 1791–1800.

Vaughan, BENJAMIN, M.D., LL.D., 1751–1835. Anglo-American diplomatist. *Calm Observer*, 1793; *Klyogg, or Rural Socrates*, 1806.

Vaughan, CHARLES JOHN, D.D., b.1816. Headmaster of Harrow 1844–59; master of the Temple, London, 1869–94; Dean of Llandaff since 1879; N. T. reviser and commentator.

Vaughan, HENRY, 1621–1695. English poet of Herbert's school. *Silex Scintillans*, 1650–55. His fame is chiefly since the reprint of 1847. *Works*, 4 vols., 1868–71.

Vaughan, HERBERT, D.D., b.1832. R. C. Bp. of Salford 1872; Abp. of Westminster 1892; Cardinal 1893.

Vaughan, ROBERT, D.D., 1795–1868. Prof. London Univ. 1830–42; pres. Lancashire Coll. 1843–57; founder and ed. *British Quarterly*, 1845–66; prolific writer. *Life of Wycliffe*, 1828–53; *Revolutions in English History*, 1859–63; *Nonconformity*, 1862.

Vaughan, SIR WILLIAM, LL.D., 1577–1640. Welsh settler in Newfoundland ab.1625; poet. *Golden Fleece*, 1626; *Ch. Militant*, 1640.

Vaugiraud, PIERRE RENÉ MARIE, COMTE DE, 1741–1819. French naval officer, in America 1780–82; Gov.-gen. of the Antilles 1815–18.

Vault. Continuous arch, which may be cylindrical or pointed. This was used by the Romans and to the end of

Vaulting in Westminster Abbey 1260.

the Norman style. The Romans also used groining, formed by the intersection of vaults crossing at right angles, some-

Groined Arch.

Cylindrical Arch.

times of different widths and heights; they also practiced hemispherical vaulting. The Pantheon is a magnificent example of this, 142 ft. diameter. In the Norman style, cylindrical and groined vaulting are used. In the Early English style, ribs were used, and often the main vault has double the width of the cross-vault. In the Perpendicular style, pendants were used at the junction of ribs.

Vaulting-Shaft. Small column supporting the ribs of a vault; sometimes the shaft rises from the floor, as in the Norman and Early English styles; or from the capital of a pillar or a corbel or other projection, as in the 14th century.

Vauquelin, LOUIS NICOLAS, 1763–1829. French chemist, discoverer of the element chromium 1497, and author of numerous papers.

Vauquelinite. Rare mineral, containing lead, phosphorus and chromium; found in Siberia and, very sparingly, in a few U. S. localities.

Vautier, BENJAMIN, b.1829. Swiss genre painter.

Vauvenargues, LUC DE CLAPIERS, MARQUIS DE, 1715–1747. French moralist. *Connaissance de l'Esprit Humain*, 1746.

Vaux, CALVERT, 1824–1895. Anglo-American landscape architect, designer of many parks and buildings. *Villas and Cottages*, 1860.

Vaux, RICHARD, 1816–1895. Recorder of Phila. 1842–49; inspector of State prison 1843; Mayor 1856; M.C. 1890–91. *Reports of Penitentiary*, 45 vols., 1842–86; *Recorder's Decisions*, 1845.—His father, ROBERTS, 1786–1836, was an eminent lawyer and penologist.

Vaux, THOMAS, LORD, ab.1510–1556. English lyric poet.

Vaux, WILLIAM SANSOM, 1811–1882. American mineralogist and archæologist. His extensive collections were bequeathed to the Phila. Academy of Natural Sciences.

Vauxhall. Place of amusement in Lambeth, London, open 1660–1859.

Veatch, JAMES CLIFFORD, b.1819. Brig.-gen. U. S. Vols. 1862–65, serving chiefly in Tenn., Miss., Ga., and Ala.

Vecellio. See TITIAN.

Vector. Directed line or expression of transference in a given direction. Its symbol is V. The unit vector is usually indicated by a Greek letter, and becomes a finite vector by means of a coefficient called a Tensor. Addition and subtraction of vectors give the result rather than the amount of movement. Multiplication and division of vectors are called geometric, and produce QUATERNIONS (q.v.). Physical quantities involving the element of direction, as velocity, acceleration, force, are vector quantities. Quantities without direction, as time, mass, speed, are called scalar quantities.

Vectorial Angle. That between the initial line and the radius vector in the polar system of co-ordinates.

Vedanta. Most orthodox of the six Brahmanical philosophies.

Vedas. See VEDISM.

Veddahs. Primitive people of e. Ceylon, probaby representing the Yakkos of Sanskrit writers. Their dwellings are

Veddahs.

caves or the forest trees; they clothe themselves with foliage, and they devour uncooked vermin and reptiles. They can

neither read, count, or mark the succession of time, nor distinguish colors, and never laugh. They speak an Aryan language and are fast disappearing.

Vedder, ELIHU, b.1836. Most imaginative and intellectual of American painters; active at Rome; draughtsman of great power; illustrator of Fitzgerald's *Rubaiyat of Omar Khayyam* 1883–84. His *Lair of the Sea Serpent* is in the Boston Museum. N.A. 1863.

Vedel, ANDERS SÖRENSEN, 1542–1616. Danish preacher, tr. Saxo Grammaticus' history.

Vedette. Sentinel, usually mounted, in advance of troops.

Vedism. Primitive religion of the Aryans, named from its sacred books, believed to be inspired by Brahma; viz., *Rig-Veda*, the most ancient, comprising a collection of hymns, *Yajur-Veda*, *Sama-Veda*, and *Atharva-Veda*. There are three great gods in Vedism, Agni, India, and Soma. The generally accepted date of its origin is 1200 B.C. The Vedic Aryans built no temples, nor are idols or divine images of their epoch known.

Veer. Changes of the wind when in the order e., s., w., n., or in the same direction as the apparent diurnal course of the sun to an observer in high n. latitudes, or with the motion of the hands of a watch when held face upward. See HAUL.

Veering, or WEARING. Changing a ship's course from one tack to the other by turning the stern to windward. There

Fig. 1.

are two periods when veering is a perilous operation, when a heavy sea is running; namely, soon after a ship's head has payed broad off, when she is liable to be caught in the trough

Fig. 2.

of the sea as in fig. 1; and when she has come with her head right off the wind, and is scudding, as in fig. 2.

Vega. α-Lyræ; brightest star of the n. heavens, right ascension 18h. 33m., declination 38° 40′, parallax 0″.161.

Vega, GARCILASO (INCA) DE LA, 1539–ab.1620. Son of a Spanish officer and a Peruvian princess; in Europe from 1560. His *Commentarios reales de los Incas*, 1605, and *Hist. Peru*, 1617, are important sources. *Florida del Inca*, 1605, deals with De Soto.

Vega, GEORG, FREIHERR VON, 1756–1802. Austrian officer, writer on mathematics. *Logarithmentafeln*, 1783.

Vega, VENTURA DE LA, 1807–1865. Spanish poet and dramatist, b. in Argentina.

Vega Carpio, FELIX LOPE DE, 1562–1635. Chief founder of Spanish drama, and its most prolific and popular representative; author of some 600 known plays, and, it is supposed, twice as many lost, besides 21 vols. of poems and romances; unsurpassed in fluency and invention. In later life he was a priest. The Spanish Academy is reprinting his plays.

Vegetable. Any plant, especially those of which parts, other than the fruit and seed, are used for food.

Vegetable Alkali. Name given to POTASSIUM CARBONATE (q.v.).

Vegetable Anatomy. Structure of plants.

Vegetable Butter. Name given to vegetable fats, such as cacao, cocoanut, nutmeg, palm and shea. The latter is used as a substitute for butter in Africa.

Vegetable Flannel. Material woven from pine leaves, and supposed to have medicinal properties. It is worn by persons afflicted with rheumatism and pulmonary complaints.

Vegetable Ivory. See IVORY, VEGETABLE.

Vegetable Marrow. *Cucurbita ovifera.* Trailing vine of the Gourd family. Its large fruit is extensively used for food.

Vegetable Pathology. That part of Botany which deals with the diseases of plants and their treatment.

Vegetable Physiology. See PHYSIOLOGY, VEGETABLE.

Vegetable Silk. See PULU.

Vegetable Wax. Protective secretion of the surfaces of many leaves and fruits; on the latter it constitutes the bloom.

Vegetarianism. Practice of abstaining from animal food, and subsisting wholly upon vegetables and cereals; advocated by an English Society, founded 1847.

Vegetation. Plants in general, especially in relation to scenery.

Vegetative Cell. Active somatic cell, as distinguished from a reproductive one.

Vegetative Nucleus. That of a vegetative cell, especially in pollen-tubes.

Vegetative Stage. Period during which bacteria are actively growing and multiplying. It precedes the zoöglœa stage. The corresponding stage for disease germs lasts from the time of infection to the crisis of the disease. Bacteria in the vegetative condition are easily stained. See SPORES OF BACTERIA.

Vegetius, FLAVIUS RENATUS, ab.400. Writer or compiler of a work on military science, long highly valued.

Vehmgerichte. Tribunals of the Middle Ages, especially in the 14th and 15th centuries in Westphalia, with sittings usually secret. Accused persons, unable to prove their innocence before the open court, were brought before a secret tribunal, as also those guilty of sorcery, rape, theft, robbery, or murder. The Freischöffen executed sentence by putting the condemned person to death wherever met, leaving a knife near the corpse as a sign of the Vehmgerichte.

Vehse, KARL EDUARD, 1802–1870. German historian. *Shakespeare*, 1851; *Der Deutschen Höfe*, 1851–58.

Veigl, FRANZ XAVIER, 1723–1798. Austrian Jesuit, in S. America 1753–77; writer on the missions there.

Veii. Etrurian city, long at war with Rome, till subdued by Camillus 396 B.C.

Veil. Membrane which in early stages of growth protects the spore-bearing surfaces in mushrooms. It extends from the stem to the margin of the pileus.

Veiled Prophet. See MOKANNA.

Veil of the Temple. Embroidered curtain which separated the Most Holy Place from the Holy Place. Luke xxiii. 45 describes it as rent at the Crucifixion, as indicating that the way into the Divine Presence was then laid open.

Vein. In Geology, plate or sheet of rock, relatively thin, but of great extent in length and depth, that intersects other rocks and differs from them in time of formation, in character, structure, or other important respects. Frequently, though not always, they are repositories of metalliferous ores;

Granite Veins.

most ores and many crystalline minerals occur thus; hence they have especial interest for the miner and the student of economic geology. In some cases a vein is doubtless the filling of a previously existing fissure; in other cases a tabular band or zone of rock appears to have furnished an easier

channel for passage of mineralizing solutions than the inclosing walls, and thus given rise to vein phenomena. No simple classification of veins yet proposed has met universal adoption.

Veinlets. Minute subdivisions of the veins of a leaf.

Veins. Circulatory apparatus which receives the blood from the capillaries and returns it to the heart. Hæmorrhage from a vein is constant, not in jets, and of dark blood. Should the cut be a large one and an effort be made to stop its flow by pressure, the cut should be between the bandage and the heart.

Veins. In Botany, bundles of woody tissue which traverse leaves in various ways, serving as conducting channels for the distribution of sap; also known as Ribs and Nerves.

Veintemilla, IGNACIO, b.1830. Ecuadorian general, leader of a revolution 1876; pres. or dictator 1878–83; since in exile.

Veit, PHILIPP, 1793–1877. Prussian painter, chiefly of allegorical and religious subjects; stepson of F. Schlegel; director Art Institute at Frankfort 1830–43.

Veitch, JOHN, 1829–1894. Prof. St. Andrews 1860, Glasgow 1864; editor and biographer of Sir W. Hamilton. *History and Poetry of the Scottish Border*, 1877.

Veitch, WILLIAM, LL.D., 1794–1885. Scottish scholar and critic; contributor to Liddell and Scott's *Lexicon* and many other works.

Vela, VINCENZO, 1822–1891. Swiss-Italian sculptor.

Velamen. Layers of cells, filled with air, which invest the tips of ærial roots of orchids, etc.

Velarium. Velum-like fringe on the edge of the umbrella of the *Charybdeidæ* (Jelly-fish); differing from a true velum in containing prolongations of the gastro-vascular spaces.

Velasco, JOSÉ MIGUEL DE, 1790–1859. Acting Pres. of Bolivia 1829–30; Pres. 1839–41 and 1847–48.

Velasco, JUAN DE, 1727–1819. Prof. Lima, expelled with the Jesuits, and resident in Italy. *Hist. Quito*, 1841–44.

Velasco, LUIS DE, COUNT OF SANTIAGO, ab.1500–1564. Viceroy of Mexico from 1550.—His son, LUIS, MARQUIS OF SALINAS, 1535–1614, was Viceroy of Mexico 1590–95 and 1607–11, and of Peru 1596–1604.

Velasco, LUIS VICENTE, ab.1710–1762. Spanish officer, slain in defending Havana against the British.

Velasquez, DIEGO DE, ab.1460–ab.1532. Spanish adventurer, in Hispaniola 1493; conqueror and Gov. of Cuba 1511. He promoted or ordered the expeditions of Cordova, Grijalva, and Cortes, 1517–18, and sent Narvaez against Cortes 1520.

Velasquez, DIEGO RODRIGUEZ DE SILVA Y, 1599–1660. Greatest Spanish painter, having no superior in his age;

Herzog Olivarez, by Velasquez.

only Rembrandt may be considered his equal. His *Æsop*, *Menippus*, *Surrender of Breda*, and many other works, are in the Madrid Gallery: fine portraits of his are in most European collections.

Velasquez de la Cadena, MARIANO, 1778–1860. Mexican official, in New York from 1810; prof. Columbia from 1830; author of Spanish text-books and a *Dictionary*, 1852.

Velde, ADRIAAN and WILLEM VAN DE. See VAN DE VELDE.

Veldeke, HEINRICH VON, 12th cent. German epic and lyric poet.

Veleda, 1st cent. German prophetess, carried a prisoner to Rome.

Veleia. Italian city, 20 m. s. of Piacenza; buried ab.280; excavated 1860–65.

Velella. See DISCOIDEÆ.

Veley, VICTOR HERBERT, F.R.S., b.1856. English chemist.

Velez-Herrera, RAMON, 1808–1887. Cuban poet and dramatist.

Veliger. Larvæ of Mollusks; generally provided with a velum.

Velius Longus, ab.110. Commentator on the *Æneid*. His *De Orthographia* is extant.

Velleius Paterculus. See PATERCULUS.

Velletri. Ancient Volscian town, 25 m. s.e. of Rome. Pop. ab. 14,000.

Vellore. Town of s. India, 80 m. w. of Madras. Its fort was held against Hyder Ali 1780–82. Pop., 1891, 44,925.

Velloso, JOSÉ MARIANNO DA CONCEIÇAO, 1743–1812. Brazilian botanist. *Alographia dos alkalis fixos vegetal on potassa*, 1798; *Quinografia Portugueza*, 1799; *Floræ fluminensis*, 11 vols., 1790–1825.

Vellum. See PARCHMENT.

Velo. Unit of velocity; equal to the velocity of a point which, moving uniformly, passes over one foot in one second; name proposed by Lock.

Velocimeter. Any apparatus for determining the velocity of a movement. Ordinary anemometers and water gauges measure the total movement in a given time, but the velocimeter proper shows the velocity at any moment.

Velocimeter. Apparatus designed to measure the average velocity of projectiles between any two points; especially used to test gunpowders, and ascertain the pressures in the bore of a gun due to the explosion of the charge. The most recent and by far the most accurate is the new polarizing photo-chronograph, designed by Prof. Crehore of Dartmouth Coll. and Lieut. Squier, U.S.A., which has been tested recently at Fort Monroe with most satisfactory results.

Velocipede. Originally a BICYCLE (q.v.), which the rider propelled by striking the ground with his feet; now called unicycle, bicycle or tricycle, according to the number of wheels.

Velocity. Space passed over in a unit of time (see ANGULAR VELOCITY). In English and French writings it is denoted by v. The scientific time unit is the second. It is always found by dividing the space passed over by the time consumed in such passage $\left(\frac{s}{t}\right)$.

Velocity, COEFFICIENT OF. Ratio of the actual to the theoretic velocity in flow of water. For an orifice in a thin plate its value is 0.98, for a short tube 0.82. The square of the coefficient of velocity gives the ratio of the effective head to the theoretic head.

Velocity Head. Height through which a body must fall to acquire a given velocity. If h be the velocity head in ft. and v the velocity in ft. per sec., then $h=0.0155v^2$. Thus, a velocity of 10 ft. per sec. will be produced by a fall through about $1\frac{1}{2}$ ft.

Velocity of Approach. Mean velocity of a stream above a weir or dam. The head due to this is added to the head on the crest as the total effective head causing the flow.

Velocity of the Wind. Speed of horizontal motion of the air, measured in miles per hour in the English system, but in meters per second in the Metric system. 1 mile per hour= $\frac{1}{2}$ meter per second.

Veloudakes, COSTA, b.1802. Cretan patriot, commander-in-chief of revolutionary forces in 1878.

Velum. 1. Ciliated lobes borne by larval Gastropods and

other mollusks, which become the buccal lobes of the adult. 2. Diaphragm-like membrane attached to the edge of the umbrella in jelly-fish and closing in the subumbrellar cavity; perforated in the center by the codonostome. 3. Indusium in *Isoetes* or the veil of mushrooms.

Velvet. Silk fabric having the ordinary warp and weft as in plain weaving, or as in twills, and also additional warp threads which are woven into the ground of the cloth and passed over wires on the surface. These threads are cut by a knife before removing the wire, producing a cut pile; this is then singed or sheared, producing a surface like fur. When the looped threads are not cut, it is called uncut velvet. Velveteen is a mixture of silk and cotton. Fustian is all cotton. Figured velvets are also made. It is considered to have originated in Italy or Sicily ab.1150. They are largely made in Crefeld, Prussia, and Lyons.

Velvet-Leaf. *Abutilon abutilon.* Coarse, densely tomentose herb of the Mallow family, native of India, introduced into N. America; known as Indian Mallow and American Jute.

Venable, CHARLES SCOTT, LL.D., b.1827. Prof. Univ. Va. since 1865; writer on mathematics.—His uncle, ABRAHAM, 1760–1811, was M.C. from Va. 1791–99 and U. S. Senator 1803–4.

Venables, EDMUND, 1819–1895. Canon of Lincoln, Eng., 1867; archæologist; contributor to religious cyclopedias.

Vena Contracta. See CONTRACTED VEIN.

Venæ Advehentes. 1. Veins that leave the ductus venosus where it enters the liver to ramify the tissues of this organ. 2. Posterior cardinals in reptiles when they pass to the kidneys, and there break up into capillaries, forming a renal-portal system.

Venæ Revehentes. Veins that collect the blood from the liver into the ductus venosus.

Venant, JEAN BARRÉ DE, 1737–1810. French writer on agriculture, long in San Domingo.

Venantius. See FORTUNATUS.

Venation. Arrangement of fibrovascular bundles in a leaf or other organ.

Vendee, LA, WAR OF. Royalists of w. France rose against the Republicans Aug. 1792, and defeated them at Saumur June 10, 1793, but were worsted at Le Mans Dec. 12, 1793. Brittany also was involved in the struggle, which lasted till 1796.

Vendemiaire. First month of the French revolutionary calendar, beginning (in 1793) Sept. 22 and ending Oct. 21.

Vender's Lien. That of the unpaid seller of land or chattels. In case of land it is avoidable against any one but a purchaser for value without notice: in case of chattels it entitles the vender to retain the goods until payment, where the sale is for cash, or the term of credit has expired, or the buyer is insolvent.

Vendetta. Form of blood-feud, by which the next of kin, and in a less degree all relatives of a murdered man, are bound to take vengeance on the murderer. If he escape, some blood-relation of his may pay the penalty. In Corsica 7,000 murders are said to have occurred 1770–1800 owing to this custom, which prevails also, though to less extent, in Sicily, Sardinia, and Calabria.

Vendôme, LOUIS JOSEPH, DUC DE, 1654–1712. French general, commanding in Spain 1695, and in Italy 1702; defeated by Marlborough at Oudenarde 1708, and retired; recalled to Spain 1710, where he defeated English and Austrian armies, and restored the king, ending the war.

Venedey, JACOB, 1805–1871. German liberal, in France 1832–48. *Römerthum*, 1840; *Irland*, 1844; *England*, 1845; *Des Deutschen Volks*, 4 vols., 1854–62.

Veneer. Thin layer of ornamental wood glued upon some common variety.

Venegas, FRANCISCO JAVIER DE, ab.1760–ab.1820. Viceroy of Mexico 1810–13.

Venegas, MIGUEL, 1680–1764. Mexican Jesuit. *Hist. California*, 1757, tr. 1759.

Venema, HERMANN, 1697–1787. Prof. Francker (Frisia). *Institutes of Theology*, tr. 1850.

Venerable. Title of an Anglican Archdeacon; in R. C. Ch., sometimes given to a departed saint as preliminary to beatification.

Venereal Ulcer. See CHANCROID.

Veneridæ (ROUND CLAMS). Family of Lamellibranchs, including forms having the shell round or oblong, with three cardinal hinge-teeth on each valve. There is a pallial sinus; the siphons are of unequal size and are fused at their base, leaving a long ventral slit for the foot to pass through. *Venus mercenaria*, the quahaug, is abundant all along the N. J. coast. The principal fishing grounds are at Keyport and Tuckerton; the latter exports ab. $100,000 worth annually, over 20,000,000 clams.

Venesection. See PHLEBOTOMY and BLOOD-LETTING.

Veneti. People living near the mouths of the Po, many of whom in the 5th century took refuge from the Huns in the islands where now is Venice.

Venetian Carpet. One of the poorest grades of carpet made. It is composed of woolen warp and coarse hemp filling, and is mostly used as a stair-covering.

Venetian Chalk. FRENCH CHALK (q.v.) used in cosmetics and in making pastels.

Venetian Style. That style of modern ITALIAN ARCHITECTURE (q.v.) formed by architects of the Venetian states from the 15th to the early part of the 17th centuries.

Veneziano. Venetian for PIOMBO (q.v.).

Venezuela. Republic of n. S. America. Its area is 439,120 sq. m. The w. part is crossed by a spur from the Andes, which rises to a great elevation. Most of the remaining part consists of vast treeless plains, known as llanos, a desert in the dry season, but covered with verdure after the annual rains. Cattle-raising, cultivation of cotton, coffee, and sugar-cane are the principal industries. The capital is Caracas. The coast was visited by Columbus 1498, and V. became the seat of some of the oldest settlements in the New World: the chief were made under the auspices of a Spanish company formed for the cultivation of indigo and cacao. A revolution occurred 1810. A republican union was first formed with Ecuador and Colombia, which was dissolved 1830. The republic was engaged in a series of civil wars 1846–70, between the Unionists, who favored a strong central government, and the Federalists, who aimed at the independence of the several States. Quiet was at last restored under Blanco, who was practically dictator until in 1873 he was elected constitutional president. The emancipation of slaves took place 1854. Pop., 1891, 2,323,520.

Traveling in Venezuela.

Venezuela, or **Maracaibo,** GULF OF. Inlet from Caribbean Sea, in n.w. Venezuela.

Venezuelan Boundary. The long dispute over the boundary line between V. and British Guiana was raised to a serious international question by Pres. Cleveland's message to Congress Dec. 17, 1895, in which he gave what was regarded by some as a novel interpretation of the Monroe Doctrine. A commission, of which Justice Brewer of the Supreme Court was chairman, was appointed to investigate the subject, and $100,000 appropriated. Lord Salisbury announced Nov. 9, 1896, that England had agreed to submit the matter to arbitration.

The arbiters appointed on the part of the U. S. were Chief-justice Fuller and Justice Brewer of the U. S. Supreme Court; Baron Herschell (ex-Lord Chancellor) and Justice Collins of the Privy Council, on the part of Great Britain; and a fifth to be named by these four, or, in case of failure to agree, by the King of Sweden. V. claimed territory e. of long. 60° W., from the Orinoko River to the Cuyani-Essequibo.

Venial Sin. In R. C. Theology, one which impairs but does not extinguish baptismal grace, and may therefore render the transgressor liable to purgatory, but not to hell.

Venice. City of n. Italy, at the head of the Adriatic Sea, on a salt lagoon. It is built mainly on piles, on a group of small islands, where canals take the place of streets and gondolas that of wheeled vehicles. The region was settled 452 by refugees fleeing before Attila: they lived by fishing and salt-making. The first form of government was republican. As the city grew, factions increased. To remedy this, a Doge was elected 697. V. was nominally subject to the Greek empire.

Bird's-eye View of Venice.

It joined the emperor against the Franks 808, and was invaded 809 by Pepin, whose ships were stranded and taken. In 829 the body of St. Mark is said to have been brought to V.; crowds of pilgrims were thus attracted, and St. Mark was adopted as patron saint. Commercial relations were enlarged through the crusades. A great fire, 1106, led to the use of stone or marble in building. Johannes Comnenus having expelled the Venetians from his territories, they launched a fleet 1123, captured Rhodes, and sacked the Greek islands. In 1177, they defeated the Ghibellines, in defense of Pope Alexander III., who gave the Doge Ziani a ring, with which he bade him wed the Adriatic. The 4th crusade, which set out from V. 1202, having overthrown the Byzantine empire, the best of the territory acquired fell to V.; a fourth part of Constantinople was assigned as the Venetian quarter. Wealth and magnificence increased; art was cultivated; Venetian noblemen were the most polished in Europe. War with Genoa lasted 1256–80. The Council of 10 was formed 1310. A pestilence, 1348, reduced the population. The conspiracy of the Doge Marino Faliero led to his execution 1355. V. lost the carrying trade of the world after the discovery of Cape of Good Hope. The government became a reign of terror; the high character of her citizens departed. In 1797 Napoleon ceded the province to Austria by the treaty of Campo Formio. It was annexed to Italy 1806 by the treaty of Presburg; transferred to Austria 1814, and incorporated with kingdom of Italy 1866. V. has considerable commerce in hemp, cotton, silk, grain, oil, wine and petroleum. In the 15th century the trade was large. The manufactures are lace, silk, velvet, glass, mosaics, artificial pearls and flowers, jewelry and furniture, and shipbuilding. Pop., 1893, ab.151,000.

Venice, PEACE OF. 1177; between Frederick I. and Pope Alexander III.

Veni Creator Spiritus. One of the greatest of Latin hymns; variously ascribed, on inadequate evidence, to St. Ambrose, Gregory I., Charlemagne, Rabanus and Maurus; used in the Breviary for ordinations, and in English or other versions since ab.1520 by all Protestants.

Venire. Common law writ by which the sheriff was authorized to enforce the attendance of jurors upon a session of court.

Veni Sancte Spiritus. One of the sweetest of Latin hymns; usually ascribed, without reason, to Robert II. of France, and by S. W. Duffield to Herrmannus Contractus. It dates from ab.1200, and is in general use through English versions.

Venius, OTHO. See VAN VEEN.

Venn, HENRY, 1724–1797. Anglican Evangelical leader. His *Complete Duty of Man*, 1763, was long popular.

Venn, JOHN, F.R.S., b.1834. English writer on logic.

Vennor, HENRY GEORGE, 1840–1884. Canadian scientist, engaged on surveys 1865–81. *Our Birds of Prey*, 1875; *Almanac*, 1876–84; *Weather Bulletin*, 1882–83.

Venom. Secretion of certain reptiles and insects which proves poisonous when injected into the system by their bite or sting. See BITES and SOLENOGLYPHA.

Venomous Bites. See BITES and SOLENOGLYPHA.

Venous Blood. One of the uses of the blood is to convey oxygen from the air to the various tissues, where it assists in the performance of the vital activities, forming carbonic acid as one of the products. The conveying of the oxygen from the lungs to the part and of carbonic acid back to the lungs is performed by a substance of definite chemical composition, hemaglobin, found in the red corpuscles of the blood. When charged with oxygen it is known as oxyhemaglobin, is of a bright red color, and is carried by the arteries. The blood is distributed to the various parts of the body, the oxygen is given up and the carbonic acid is absorbed; the hemaglobin is then known as reduced hemaglobin, giving a darker red color to the blood, which is taken up by the veins to be conveyed to the heart, constituting venous blood.

Ventadour, HENRI DE LEVIS LA VOUTÉ, DUC DE, 1595–1651. Third Viceroy of Canada, 1625–27, which he administered from France, and endeavored to colonize with Jesuits, neglecting material interests.

Ventenat, ETIENNE PIERRE, 1757–1808. Librarian of the Pantheon in Paris. *Tableau du règne végétal*, 1794; *Principes de botanique*, 1795.

Ventilation. Combined operations of removing foul or vitiated air, and replacing it by fresh pure air. In buildings it is usually combined with heating. It may be natural, depending on differences of weight of two columns of equal height, one of impure and the other of pure air, which are of different temperatures; or it may be mechanical, using machines to displace the air. Mechanical ventilation may be by two systems, one exhausting foul air, depending on atmospheric pressure to supply the pure, the other, forcing in fresh air, which is expected to drive out the foul. These are known as the vacuum and plenum systems: both combined give the best results. Fan blowers are the most usual machines for this purpose (see BLOWER and FAN). Coils of steam pipes can be used to heat outlet flues and stimulate outflow. Each person requires 1,000 cubic ft. of air per hour, and should be furnished with from 3,000 to 3,600.

Ventimiglia. Fortified town of the Italian Riviera, near the French frontier, 3 m. from San Remo. Its cathedral, in

Ventimiglia.

the Gothic style, stands on the site of a temple of Juno. By the sea are nine grottoes, with prehistoric human remains. Pop. 5,000.

Ventral. Relating to the belly or lower surface of an animal.

Ventral Plate. Thickened portion of the blastoderm of insects, destined to form the belly part of the larva.

Ventral Segment. See LOOP.

Ventral Suture. Line of union of the margins of a carpellary leaf.

Ventricles. In Anatomy, the word is applied to certain cavities to be found in various organs, the most prominent being the ventricles of the heart and of the brain. The mammalian heart has four cavities: two auricles, receiving the blood from the veins, from which it flows into the other cavities, the ventricles, whence it is forced by the right ventricle through the pulmonary artery to the lungs, by the left through the general arterial system of the body.

Ventriloquism. Art of emitting sounds so that hearers are deceived as to their source and locality; dependent on the method of breathing, and not, as formerly supposed, on the abdomen; known from antiquity, and employed by prestidigitators.

Ventura de Raulica, GIOACCHINO, 1792–1861. Sicilian priest, noted for eloquence and liberalism; general of Theatines; in Rome 1824–49, in Paris from 1851; prolific writer.

Venturi, LUIGI, 1812–1890. Italian critic, poet, and compiler. *Michelangelo*, 1875; *Manzoni*, 1876.

Venturi Tube. One having its diameter contracted for a short distance in order to increase the flow of water. By

Venturi Water Meter and Recording Gauge and Connections.

measuring the pressures at the normal and at the contracted part, the quantity of water passing through can be determined, as in the venturi meter.

Venue. County in which a legal proceeding is to be conducted.

Venus. Roman goddess of spring, and from ab. 217 B.C. of love, being identified with APHRODITE (q.v.).

Venus. Second planet in order of distance from the sun, 67,200,000 m.; diameter, 7,700 m.; density, 4.85 that of water; mass, 0.78 that of the earth; period of revolution about the sun, 224.7 days; time of axial rotation, 23h. 21m. 23s. perhaps. Schiaparrelli concludes from recent observations that the time of axial rotation is the same as the period about the sun, 224.7 days. At greatest elongation its angular distance from the sun may be as great as 47° 45′. Next to the sun and moon, it is the most brilliant object in the heavens, and may frequently be seen in full daylight. Viewed through a telescope it presents phases like the moon and Mercury: there is an extensive atmosphere, but the markings seen on the surface are the faintest and vaguest possible; probably they are only clouds in the planet's atmosphere. Observers have at different times believed that they saw a satellite, but it is certain that none, corresponding to any of the descriptions, exists.

Venusberg. See TANNHAUSER.

Venus' Flower-basket. See HYALOSPONGIA.

Venus' Fly-trap. *Dionæa muscipula.* Insectivorous herb of the natural family *Droseraceæ*, native of e. N. Carolina. Its leaves are irritable, closing quickly and firmly when an insect or other object alights on them. See INSECTIVOROUS PLANTS.

Venus' Girdle. See CESTIDÆ.

Venus' Hair Stone. Dark quartz containing fine acicular or capillary crystals of rutile.

Venus' Looking-glass. Blue-flowered herbs of the genus *Legonzia*, natural family *Campanulaceæ*, natives of N. America.

Vera, AUGUSTO, 1813–1885. Teacher of philosophy in France 1838–51: in England 1851–60; prof. Naples from 1862; tr. Hegel; prolific writer. *Experimental Science*, 1856; *Speculative Logic*, 1875.

Veracity. Disposition and habit of telling the truth under all circumstances.

Vera Cruz. Chief seaport of Mexico on the Gulf of Mexico; founded 1580, in place of one built by Cortes 1520; opposite the fortified islet of San Juan d'Ulloa; taken by the French 1838, and by Gen. Scott 1847. It is extremely unhealthy, and has a poor harbor, but a large trade in coffee, ore, tobacco and leather. Pop., 1895, ab. 30,000.—The State of V. C. has an area

Vera Cruz and Fort of St. John d'Ulloa.

of 27,454 sq. m., and is agricultural, raising tobacco, coffee, vanilla, cotton and hard woods. It has manufactures of cotton and cigars. Pop., 1893, ab. 642,000.

Vera Cruz, ALONSO DE LA, 1504–1584. Augustinian provincial 1550; founder Univ. Mexico 1551; founder of Tarascan missions 1573.

Veragua. Province of n.w. Colombia, discovered by Columbus 1503, and granted him with the title of duke. He named the river which he ascended Verdes-Aguas, which was shortened to Veragua.

Verandrye, PIERRE GAUTIER DE VARENNES DE LA, 1685–1749. Canadian explorer, discoverer of the Rocky Mountains ab.1735.

Veratria. See VERATRINE.

Veratrine. $C_{32}H_{49}NO_9$. Alkaloid obtained from the white hellebore, and other species of *Veratrum;* greenish-white crystalline powder, inodorous, acrid and poisonous, and irritating to the tongue and nostrils. It is used externally in neuralgia.

Verazzano, or **Verrazano,** GIOVANNI DA, ab.1480–ab. 1527. Italian seaman and French privateer, who took a treasure-ship of Cortes 1523; sailed from Madeira Jan. 1524, explored the coast of N. America from Cape Fear to Nova Scotia, and returned to Dieppe in July, claiming to have discovered 700 leagues of coast; executed as a pirate in Spain.

Verb. See PARTS OF SPEECH.

Verbal Orders. Orders given by word of mouth in times of emergency by an officer and transmitted through the recognized military channels have the authority of written orders. It is, however, fully recognized that orders are to be communicated in writing should they be asked for and time permit.

Verbeck, GUIDO FRIDOLIN, D.D., b.1830. Dutch-American missionary and teacher in Japan since 1859; long in government employ; N. T. reviser. He tr. the *Code Napoleon* and other works into Japanese.

Verbeck, REINIER DIRK, b. 1841. Dutch engineer, long in E. Indies.

Verbena, or VERVAIN. Genus of herbs of the natural family *Verbenaceæ*, of wide geographical distribution. Many of the species bear showy flowers, and are cultivated for ornament.

Verbenaceæ. Natural family of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Gamopetalæ*, comprising ab.65 genera and 740 species, widely distributed throughout the warm regions of both hemispheres; called the Vervain family.

Verboeckhoven, EUGENE JOSEPH, 1799–1881. Flemish painter, especially of sheep.

Verbena (*Verbena officinalis*).

Vercelli (anc. VERCELLÆ). Town of n. Italy, 40 m. s.w. of Milan; Piedmont: scene of a Roman defeat by Hannibal 218 B.C., and of Marius' victory over the Cimbri 101 B.C.; taken by Spaniards 1630, by French 1704, and by French and Allies 1706. Its cathedral library includes an early Latin MS. of the Gospels, and one of Anglo-Saxon homilies and poems, discov-

ered 1823 and pub. 1836. It has the beautiful basilica of St. Andrew in Romanesque-Lombard style (13th and 14th centuries). Much rice is produced in the vicinity. Pop. ab. 25,000.

Vercingetorix. Commander of the Gauls 52 B.C.; defeated at Alesia 52, led in triumph by Cæsar 45, and slain in prison.

Gold Coin of Vercingetorix.

Verd-Antique. Clouded marble, pale green or mixture of green and white, the green parts generally being serpentine and the white either calcite or dolomite.

Verde, CAPE. See CAPE VERDE.

Verdet's Constant. Amount of rotation of the plane of polarization of a beam of polarized radiation, expressed in circular measure, which takes place between two points in a magnetic field one centimeter apart, within the medium, when the magnetic potential difference between these points is unity. The value of this constant in absolute measure has been determined by Gordon 1877, and by Rayleigh 1885.

Verdet's Law. As a result of his investigations on magneto-electric rotation, Verdet found that "for a given medium and a given wave-length the rotation of the plane of polarization between two points taken in the path of the beam is proportional to the difference of magnetic potential at those points." This is known as Verdet's law. For different media the angular rotation σ is numerically equal to the increase of magnetic potential in the medium $V_A—V_B$, multiplied by a coefficient ω, which is generally positive in diamagnetic media (see VERDET'S CONSTANT). Thus $\omega=\sigma/V_A—V_B$. Rayleigh, using sodium light with CS_2 at 18°, obtained 1.22231×10^{-6} radian for ω.

Verdi, GIUSEPPE, b.1813. Italian opera composer, one of the foremost musical geniuses of the century. He brought out his first opera, *Oberto, conte di S. Bonifacio*, 1839, and his latest, *Falstaff*, 1893. Between these are no less than 24 operas, of which the following still hold their places on the stage: *Ernani*, 1844, *Rigoletto*, 1851, *Il Trovatore*, 1853, *La Traviata*, 1853, *Aida*, 1871, and *Otello*, 1887. He also composed a *Requiem* mass to the memory of Manzoni, 1874, a string quartet, 1873, a hymn for the Universal Exhibition of London, 1862, a *Pater Noster* for five-part chorus, and some songs.

Verdict. Finding of a jury on an issue of fact. If it is a decision of the whole for or against either party, it is general; if a decision of particular questions involved, special.

Verdigris. $Cu:C_2H_3O_2,OH,2\frac{1}{2}H_2O$. Basic acetate of copper, of somewhat varying composition; produced by immersing copper in a dilute acetic acid. See ACETATE OF COPPER.

Verditer. Name for a variety of blue and green pigments; hydrated percarbonates of copper, prepared by adding chalk or lime to a solution of nitrate of copper. Green verditers are made by boiling the blue pigment. Bremen Blue, Bremen Green, Brunswick Green, etc., are some of the names by which the different green and blue verditers are known.

Verdon, SIR GEORGE FREDERIC, F.R.S., b.1834. Anglo-Australian official.

Verdugo, VICENTE, ab.1690–1775. Peruvian historian.

Verdun. Town of n.e. France, 35 m. w. of Metz; annexed to the empire ab.939; surrendered to France 1552; taken and

Verdun.

held by Prussians 43 days, Sept.-Oct. 1792; surrendered to the Germans Nov. 8, 1870, with 4,000 men; held by them till Sept. 16, 1873. Pop., 1891, 18,195.

Verdun, TREATY OF, 843. Three sons of Louis the Pious divided among themselves the Carlovingian empire.

Vere, AUBREY THOMAS DE, b.1814. Irish R. C. poet, noted for grace and delicacy. *Waldenses*, 1842; *May Carols*, 1857; *Essays*, 1887–89.—His father, SIR AUBREY, 1788–1846, pub. *A Song of Faith*, 1842, and other poems.

Vere, EDWARD, 17th EARL OF OXFORD, ab.1540–1604. Courtier and poet; Lord High Chamberlain ab.1585.—His cousin, SIR FRANCIS, ab.1560–1609, served with distinction in the Netherlands, was knighted 1588, and wrote an account of his campaigns, pub. 1657.—His brother, HORATIO, 1565–1635, held command in Holland and Germany, was knighted 1596, and became Baron Vere 1625.

Vere, MAXIMILIAN SCHELE DE, b.1820 in Sweden. Prof. Univ. Va. 1844–61 and since 1866; prolific writer, chiefly on language.

Verestchagin, VASILI, b.1842. Russian painter, chiefly of battle scenes; notable for the size and force of his pictures, the subjects often being painful and horrible.

Verga, GIOVANNI, b.1840. Sicilian novelist, in his later works a strong realist, depicting peasant life. *La Vita dei Campi*, 1880; *House by the Medlar Tree*, tr. 1890.

Verge-Board. See BARGE-BOARD.

Vergennes, CHARLES GRAVIER, COMTE DE, 1717–1787. French Ambassador to Turkey 1754–68, and to Sweden 1771–74; Foreign Minister 1774; promoter of the alliance with the U. S. 1778; negotiator of several treaties.

Vergil. See VIRGIL.

Vergil, POLYDORE, ab.1470–1555. Italian priest, in England 1501–50; prebendary of St. Paul's from 1513; friend of Erasmus and foe of Wolsey. *Proverbiorum Libellus*, 1498. His *De Rerum Inventoribus*, 1499, was much read in four languages: his *Historiæ Anglicæ Libri XXVI.*, 1534, is still valued.

Vergniaud, PIERRE VICTURNIEN, 1753–1793. French deputy 1791; Girondist leader; brilliant orator; executed by the Jacobins.

Verhas, JAN, b.1834. Belgian painter.

Verification. Confirmation by oath of a statement, particularly of a pleading.

Verjuice. Expressed juice of unripe grapes or of wild crab-apples, used in cooking and as an astringent.

Verkolie, JAN. 1650–1693. Dutch painter, chiefly of portraits.—His son, NICHOLAS, 1673–1746, was a historical painter and engraver.

Verlaine, PAUL, 1844–1896. French poet, of unquestioned genius and unregulated life, whose 13 vols. of verse and 6 of prose strangely alternate between debauchery and devotion. *Poèmes saturniens*, 1865; *Sagesse*, 1881; *Romances sans Paroles*, 1887; *Amour*, 1888; *Confessions*, 1895.

Vermejo. Branch of the Paraguay, rising in s. Bolivia and flowing s.e. ab.820 m.

Vermes. Bilateral, elongated animals, without segmented appendages; the body is often made up of a succession of nearly similar rings, segments, joints, articulations, or metameres. A dermal muscular system and paired nephridia are present. The Earthworm is a typical example. It has a digestive tract, with a mouth and anus and a circulatory system. The group includes the classes *Platyhelminths*, *Nemathelminths*, *Annelida*, *Rotatoria*, and *Nemertea*: some authors include the *Prosopygii*.

Vermicelli. Same as MACARONI (q.v.), except that it is made smaller and solid instead of hollow.

Vermiculites. Group of minerals, belonging to the family of hydrous silicates, much resembling the micas in external appearance, but mainly products of the alteration of other minerals, and not always of definite chemical composition. When heated, they often curl up in a way that suggests the wriggling of worms.

Vermiformia. See POLYZOA.

Vermifuges, or VERMICIDES. Remedies to free the intestines and stomach from tapeworms and threadworms. Turpentine and extract of male-fern are given for the former, and santonin, cathartics and injections of salt, tea or quassia, for the latter.

Vermigli, PIETRO MARTIRE (called PETER MARTYR), 1500–1562. Italian reformer; prof. Strasburg 1543, Zurich 1556; in England 1547–53. *Loci Communes*, 1575.

Vermilinguia. Suborder of Lizards, with vermiform tongue, which can be protruded with great rapidity, to a con-

siderable distance. The body is flattened laterally, and covered with a shagreen-like skin. The parietal and occipital bones are firmly united. The group includes the Chameleons, whose feet have five toes arranged in two bundles, opposable for

Chameleon.

grasping. The tail also is prehensile. There are two layers of pigment cells (chromatophores) in the skin, the upper being yellowish, the deeper, brownish-black. By changes in the shape of these cells, stimulated by the light reflected from surrounding objects, the animal changes color rapidly.

Vermilinguia (ENTOMOPHAGA, EDENTULA; ANT-EATERS). Family of *Edentata*, having a long pointed snout and a thin worm-shaped tongue that can be protruded a great distance. Except in the AARDVARK (q.v.), there are no teeth, whence they are also termed *Edentula*. See PANGOLIN.

Vermilion. See MERCURIC SULPHIDE.

Vermont. One of the n.e. States; area 10,200 sq. m. Its surface is broken, the principal relief being produced by the Green Mts., which run in quite a continuous range from the s. to the n. boundary, rising in places to heights of 4,000 ft. Except the Connecticut River on the e. and Lake Champlain on the w., the State has no navigable waters. The Green Mts. and their slopes are made up of Archæan rocks, on the flanks of which are exposed those of the Cambrian period, while the lower country is covered with rocks of the Silurian age. The industries of the State largely consist of agriculture and sheep-raising. The principal city is Burlington, on Lake Champlain. Capital, Montpelier. V. was first settled by emigrants from Mass., who built Fort Dummer, near the site of Brattleboro, 1724. For years both N. Y. and N. H. laid claim to V., both colonies having given grants which covered the same territory in it. The majority of the settlers resisted the claims of N. Y. In 1776 the colony appealed to the Provincial Congress for admission into the confederacy, but were kept out by the influence of N. Y., and again 1777. Meantime the British generals were attempting to induce the people to aid the British cause, but they remained loyal to the colonies. In 1789 N. Y. waived its objections to the admission of V., and in 1791 she was admitted as the 14th State in the Union. The Vermonters were

Gathering Maple Sap.

loyal throughout the Revolution, "the Green Mountain Boys" under Ethan Allen capturing Ticonderoga and Crown Point. During the Civil War the State sent to the Union army 32,549 men out of 315,000. Pop., 1890, 332,422.

Vermont, UNIVERSITY OF. At Burlington, chartered 1791, opened 1800. The medical coll. was organized 1823, suspended 1834, and reorganized 1854; it has (1897) 21 professors and 221 students. The Vt. Agricultural Coll. was incorporated with the Univ. 1865. The academic department has 22 professors, 10 instructors, and 271 students. Women have been admitted since 1872. The library contains 51,000 vols. The courses offered lead to the usual degrees in arts, civil, electrical, and mechanical engineering, chemistry, and agriculture. The buildings are mainly new or newly reconstructed.

Vermouth. Various quantities of wormwood (*Artemisia absinthum*), hyssop, aniseed, sage, calisaya, cloves, coriander, orange peel, and other fragrant herbs, are put into a linen bag and hung in a white wine, at a temperature of 150° F., for four or five days; it is then squeezed and replaced for a month, the bag being squeezed at intervals of five days. It is then filtered and bottled, yielding an agreeable, bitter wine, varying in strength of alcohol up to 17 per cent, depending entirely upon the strength of the wine used. The Italian vermouth is sweeter than the French.

Vermuyden, SIR CORNELIUS, ab.1590–ab.1660. Dutch engineer employed in building dikes in Holland and in drainage operations in England. *Drayning of the great Fennes*, 1842.

Vernation, or PRÆFOLIATION. Arrangement of foliage leaves in the bud, in relation to their folding or imbrication among themselves.

Verne, JULES, b.1828. French semi-scientific romancer, whose works have been widely translated and highly popular. *Around the World in 80 Days; 20,000 Leagues under the Sea; From Earth to Moon; Mysterious Island; Dr. Ox.*

Verner, KARL ADOLPH, b.1846. Prof. Copenhagen 1883.

Verner's Law. In Philology; discovery by Karl Verner, 1875, which removed some apparent exceptions to Grimm's law, and proved that the Germanic languages had once, like the Greek, a movable accent.

Vernet, (EMILE JEAN) HORACE, 1789–1863. French military and historic painter, much favored by Bonaparte. Many of his works are at Versailles.—His father, "CARLE" (ANTOINE CHARLES HORACE), 1758–1836, painted landscapes, animals, and military scenes.—His father, (CLAUDE) JOSEPH, 1714–1789, was eminent as a marine painter.

Verneuil, PHILIPPE-EDOUARD POULLETIER DE, 1805–1873. French engineer, who shared in the survey of Russia under Sir Roderick Murchison.

Vernier. Apparatus invented by Pierre Vernier, 1580–1637, a Portuguese mathematician, to enable very close read-

Verniers.

ings to be made with measuring instruments of relatively coarse graduation. If, *e.g.*, the main scale be divided into 25 equal parts, and there be a second scale at the side of the first whose zero mark is the gauge point, and which is graduated so that its 25 subdivisions are as long as 24 subdivisions of the main scale (starting from coincidence of zero marks) the mark of the second or vernier scale which coincides with a mark of the main scale shows how far the measurement has really come beyond the division of the main scale to which the zero of the vernier is nearest. If the main graduation be in N subdivisions, and the vernier has n subdivisions agreeing with N—1 subdivisions of the main scale, the reading will be to $\frac{1}{N \times n}$ of the primary unit. It is used on arcs of surveying and astronomical instruments, scales, calipers, and other exact apparatus.

Vernon, EDWARD, R.N., 1684–1757. Rear-admiral 1708; M.P. from 1727. He won much fame by taking Portobello, on the Isthmus of Panama, Nov. 1739: the event was celebrated by many medals. He failed in the attack on Cartagena 1741, as described by Smollett in *Roderick Random*, and at Panama 1742. He left the navy 1746. *Hist. Jamaica*, 1740.—His father, JAMES, was Sec. of State 1697–1700.

Vernon, GEORGE JOHN WARREN, BARON, 1803–1866. M.P. 1830, Peer 1835; writer on Dante.

Vernon, JANE MARCHANT (FISHER), 1796–1869. Anglo-American actress.

Vernon, ROBERT, 1774–1849. Founder of an art gallery in S. Kensington Museum, London, 1847.

Vernon-Harcourt, LEVESON FRANCIS, b.1839. Prof. Univ. Coll., London; hydraulic engineer. *Rivers and Canals*, 1882; *Harbors and Docks*, 1885; *Achievements in Engineering*, 1891.

Veron, LOUIS DESIRÉ, 1798–1867. Parisian journalist, speculator and author; Deputy 1852. *Mémoires*, 1854; *Théâtres de Paris*, 1860.

Verona. Ancient city of n. Italy, on the Adige, 72 m. w. of Venice; capital of Theodoric 489, and of the Lombards; ruled by the Scaligers 1260–1387, then by Milan, and by Venice from 1405; taken by the French 1796; held by Austria 1814–66; one of the four fortresses of the Quadrilateral. Here a Congress was held 1822 in the interest of the Spanish King, Ferdinand VII.; and near the city Charles Albert of Sardinia defeated an Austrian army May 6, 1848. There are manufactures of silk, wool and cotton, furniture and musical instruments. Pop., 1893, 69,900.

Veronese, PAOLO (CAGLIARI), 1528–1588. Last of the great Venetian painters. His characteristic works are enormous canvases, illustrating the actual Venetian life of his time under the disguise of Scripture subjects. Such are the *Feast in the House of Levi*, in the Venice Academy; *Marriage at Cana*, in the Dresden Gallery, and *Feast in the House of the Pharisee*, at the Louvre. As a colorist and brush painter he is of the first rank. In intellectual or decorative quality he is subordinate. The *Vision of St. Helena* in the National Gallery is his finest work from the standpoint of color.

Veronica, ST. In Catholic Legend, woman who, offering her handkerchief to the exhausted Saviour on the Via Dolorosa, received back His portrait imprinted upon it. It was given to St. Clement of Rome, and is kept at St. Peter's.

Verplanck, GULIAN CROMMELIN, 1786–1870. M.C. from N.Y. 1825–33; ed. Shakespeare, 1844–47. *Bucktail Bards*, 1819; *Doctrine of Contracts*, 1825.

Verrazano, G. See VERAZZANO.

Verres, CAIUS, ab.112–43 B.C. Proprætor in Sicily 73–71 B.C.; prosecuted by Cicero for his extortions. He fled to Marseilles, and was proscribed by Antony.

Verri, ALESSANDRO, COUNT, 1741–1816. Italian author. *Notti Romane*, 1780.—Of his brothers, PIETRO, 1728–1797, wrote on Political Economy, and CARLO, 1743–1826, on Agriculture.

Verriculate. Covered with thickset tufts of parallel hairs.

Verrius Flaccus. See FLACCUS, MARCUS V.

Verrocchio, ANDREA DEL, 1435–1488. Florentine painter and sculptor, greatest in the latter field. His equestrian

Statue of Colleoni, by Verrocchio.

statue of Colleoni at Venice ranks beside the Gattemelata of Donatello at Padua, these two being the greatest modern equestrian statues. His *Baptism of Christ* in the Venice Academy contains one head by his pupil, Leonardo da Vinci. As a painter his design is hard and formal, but severely accurate.

Versailles. City of France, 11 m. s.w. of Paris; seat of Assembly and government 1871–79. The palace, begun by Louis XIII., enlarged and occupied by his successors, was made a museum 1837. Here the treaty of peace between Britain and the U.S. was signed 1783, and here William was proclaimed Emperor of Germany Jan. 18, 1871. Pop., 1891, 51,679.

Versatile. In Botany, mode of attachment of the anther to the filament of a stamen in which the tip of the filament is fastened to the anther at one point only, as in grasses and lilies.

Verschoor, JULIUS WILHELM VAN, ab.1575–1640. Dutch admiral, active against Peru 1624.

Verse. Poetical line; in popular usage, stanza, or poetry in general.

Versed Sine. Trigonometric function, equal to unity minus the cosine.

Versor. In Quaternions, element which in the division and multiplication of vectors operates to turn the vector on which it acts into coincidence with the other. Its symbol is U.

Verst. Russian measure of length, containing 3,500 English feet.

Verstegan, RICHARD, d. ab.1635. English-Dutch printer and author. His *Theatrum Crudelitatum Hæreticorum*, 1587, is a R. C. pendant to Foxe's *Book of Martyrs*.

Verstovski, ALEXEJ NIKOLOJEVICE, 1799–1862. One of the founders of the national school of opera in Russia. His important operas are: *Pan Tverdewsky; Twelve Sleeping Virgins*, 1832; *Asskold's Grave*, 1835; *Longing for the Family*, 1839; *The Obvious Dream; Gromoboy*, 1858; *The Magician of Moscow*.

Vertebral Ossicles. Ambulacral plates of the starfish.

Vertebral Theory of Skull. Idea that the skull consists of modified and coalesced vertebræ; first promulgated by Oken; later independently by Goethe; developed by Owen. See CEPHALIC SEGMENTS.

Vertebrata. Bilaterally symmetrical animals, with an internal skeleton, consisting primarily of an axial notochord, usually modified to form a segmented, vertebral column. On its dorsal side lies the central nervous system (spinal cord), generally inclosed by arches formed by processes of the vertebræ. On the ventral side is a hæmal cavity, inclosing various viscera, its walls supported by ventral processes (ribs) from the vertebræ. The anterior end of the central nervous system is enlarged to form a brain, inclosed by a cartilaginous or bony cranium. Respiration is effected either by air-sacs (lungs), which are extensions of the wall of the anterior or pharyngeal portion of the digestive tract, or else by gills, borne by the pharynx, supported by cartilaginous arches, and separated by clefts that perforate the body wall in the region of the neck, for the exit of the water taken in at the mouth. The gill arches also contain vessels (aortic arches) that convey blood sent forward from the ventrally-placed heart into the dorsal aorta, which lies between the alimentary tract and the vertebral axis, and conveys the blood posteriorly. At most, there are two pairs of limbs. The sexes are nearly always in separate individuals. The group comprises the classes *Pisces*, *Amphibia*, *Reptilia*, *Aves*, and *Mammalia*. They may also be classed as *Ichthyopsida*, *Sauropsida*, and *Mammalia*.

Vertebrates, FOSSIL. See PALÆOZOÖLOGY and PALEONTOLOGY.

Vertical Gradient. Rate of change with altitude above the earth's surface; especially used in meteorology in reference to diminution of temperature and moisture, and increase of wind velocity.

Vertical Line. Path of a freely falling body, near the earth's surface; usually determined by a plumb-line. Vertical lines drawn at different points of the earth's surface converge nearly to the center of the earth.

Vertical Succession of Air-Currents. See LEY'S LAW.

Verticil. See WHORL.

Verticillaster. Inflorescence consisting of pairs of opposite sessile cymes or glomerules, as in many plants of the Mint family.

Verticillate, or WHORLED. Arrangement of leaves on

the stem, where several are borne at each node, as in the Lily and many other plants.

Vertigo. Dizziness or giddiness; disorder of the sense of equilibrium, characterized by an apparent whirling about either of the individual or of the objects around him. The former is subjective vertigo, the latter objective. The most common causes are disordered circulation in the brain and abnormal condition of the semicircular canals of the internal ear.

Vertot d'Aubœuf, RENÉ AUBERT DE, 1655–1735. French priest, historian of revolutions in Portugal, 1689, Sweden, 1696, and Rome, 1719, as also of the Knights of St. John, 4 vols., 1726.

Vertue, GEORGE, 1684–1756. English engraver and antiquarian.

Vertumnus. Roman god of the changing year, of exchange and trade, but specially of the transformations of the vegetable world; lover of POMONA (q.v.).

Verulam. See BACON, FRANCIS.

Verus, LUCIUS, 130–169. Son of Ælius; son-in-law of Marcus Aurelius, and his colleague in the empire from 161.

Vervain. See VERBENA.

Verviers. Town of Liege, e. Belgium, on the Vesdre, among the Ardennes. It has chalybeate springs and manufactures of cloth. Pop., 1891, 50,223.

Very, JONES, 1813–1880. American sacred poet.

Very Reverend. Title of a dean, and in R.C. Ch. of a vicar-general; also, in Scottish Presbyterianism, of the principal of a university.

Vesalius, ANDREAS, 1514–1564. Father of Anatomy; b. at Brussels; prof. Padua, Pisa, Bologna and Basel; surgeon to Charles V. 1544; condemned as a sorcerer, and sent for penance to Palestine 1563. His *De Corporis Humani Fabrica*, 1543, is of historical importance. *Works*, 1725.

Vesey, DENMARK, ab.1767–1822. Freedman of Charleston, S. C., planner of a negro insurrection; hanged with others.

Vesey, WILLIAM, 1674–1746. First rector of Trinity Ch., New York, from 1696; commissary of Bp. of London from 1712.

Vesicants. Substance which when applied to the skin will produce a blister; a preparation of cantharides, obtained from the Spanish fly, whence fly-blister, is most commonly used. See BLISTERS.

Vesica Piscis. Pointed oval figure formed by two equal circles, cutting each other in their centers; the form of the aureole, by which the Persons of the Holy Trinity and the Blessed Virgin are surrounded in mediæval paintings. It is found on panels and seals.

Vesicle. Small hollow body, like a bladder.

Vesicular. Composed of vesicles, or bearing them.

Vesiculata. See CAMPANULARIÆ.

Vespasian, TITUS FLAVIUS SABINUS, 9–79. 9th Roman emperor 70–79; of humble origin; military legate in Germany and Britain; consul 51; proconsul in Africa; commander against the Jews 67–69; proclaimed emperor at Alexandria 69; came to Rome 70 and applied himself to restore order; simple in mode of life, and exemplary in public and private character.

Laurelwreath-crowned Head of Vespasian on a bronze medal with the inscription: *Imp(erator) Caes(ar) Vesp(asianus) Aug(ustus) P(ontifex) M(aximus) T(ribunicia) P(otestate) P(ater) P(atriae) Con(sul) III Cens(or).*

Vespers. Evening prayer; in R.C. Ch., between nones and compline.

Vespertilia. Group of *Microcheiroptera*, including the following families of BATS (q.v.): *Vespertilionidæ*, *Nycteridæ*, and *Rhinolophidæ*.

Vespertilionidæ. See BATS.

Vespidæ (WASPS). Family of *Aculeata*, including forms having a slender smooth body: the anterior wings are narrow and can be folded together longitudinally. They are social or solitary: the former approach bees in the organization of their colony. The nest is made of paper from chewed wood; the cells are in successive tiers or floors; the door is below. The larvæ are fed on insects that have first been well chewed, while the adult feeds on nectar and sweet juices. Most of the eggs hatch into workers or imperfect females. In the fall males and true females appear, copulation takes place in the air, the colony breaks up, and the fertilized female survives

Nest of Wood-wasp (*Vespa media*).

Nest of Common Wasp (*Vespa vulgaris*) seen from below.

in some protected place until the following spring, when she starts a new nest and soon has a worker progeny to help her build the nest larger. Some of the offspring may be females that produce males parthenogenetically. The solitary wasps construct mud cells in which usually caterpillars or spiders are stored for the developing young, thus resembling the FOSSORIA (q.v.).

Vespucci, AMERIGO (AMERICUS VESPUCIUS), 1451–1512. Florentine seaman, who visited uncertain parts of the New World under Spanish colors 1497 and 1499, and others, probably Brazil, in Portuguese ships 1501 and 1503. His *Letters*, pub. in various translations 1504 and later, gave the first account of these regions, and procured for him the undeserved honor (probably without willful falsehood on his part) of fixing his name, instead of that of Columbus, on the Western Continent.

Vessel. In Botany, long cell or series of longitudinally communicating cells whose walls are variously marked by thickenings of the cellulose composing them.

Vest, GEORGE GRAHAM, b.1830. Confederate Senator from Mo. 1863–65; U. S. Senator from 1879.

Vesta. Roman goddess of the hearth; identified with Hestia of the Greeks. Her eternal fire was supposed to have been brought from Troy by Æneas with the Penates. Her temple was the public hearth of the great Roman family.

Vestals. Six virgin priestesses of Vesta at Rome, who lived for thirty years in the cloister appointed for them at the end of the Forum, and were charged with the care of the eternal fire, and with certain sacrifices, which were considered necessary for the well-being of the state. Wills were often intrusted to their keeping, and they had special places assigned at the games, and enjoyed exalted rank and great privileges. If a Vestal broke her vow of chastity she was buried alive and her paramour scourged to death.

Half-figure of a Vestal.

Vestibule. Hall or antechamber, next the entrance of a house, whence the doors open to the various rooms; originally the entrance-chamber to the baths, where the clothes were laid aside.

Vestige, Vestigial. In Botany and Zoölogy, abortive representative of an ancestral or rudimentary organ.

Vestments. For R.C. priests celebrating mass, amice, alb, girdle, maniple, stole, and chasuble; for bishops, also dalmatic and tunic, with their emblems of office, ring, miter, staff or crosier, and pectoral cross. For Anglican clergy, surplice and stole, now worn over a cassock. The gown and bands, formerly much worn in the pulpit, are now generally disused. Various hoods indicate the doctorate.

Vestris, GAETANO APOLLINO BALDASSARE, 1729–1808. Dancer at the Paris opera 1819.—His son, MARIE AUGUSTE, 1760–1842, was prof. at the Conservatory.

Vestris, LUCIA ELIZABETH (BARTOLOZZI), 1797–1856. Actress of Italian descent, prominent in England 1820–54.

Vestry, or SACRISTY. 1. Room attached to the choir of a church, where the sacred vessels and vestments are kept and where the priest puts on his robes; on one side of the choir or behind the altar, at the east end. 2. In England, meeting of ratepayers to elect parish officers. 3. In P.E. Ch., lay officers of a parish.

Vesunna. See PERIGUEUX.

Vesuvianite. Essentially a calcium aluminium silicate, with other chemical elements in varying proportions. It was first found as a mineral on Mt. Vesuvius; but it is a common accessory ingredient in limestone and dolomite, frequently showing a resemblance to garnet, though it is tetragonal in crystallization, while garnet is isometric. See IDOCRASE.

Vesuvin. See BISMARCK BROWN.

Vesuvius. Volcano on w. coast of Italy, near Naples. Altitude 4,253 ft. An eruption 79 ruined Herculaneum and Pompeii. Since then it has erupted at intervals of a few years.

Vetancour, AGUSTIN DE, 1620–1700. Mexican priest and author. *Teatro Mexicano*, 1697–98.

Vetch, or TARE. Climbing herbs of the genus *Vicia*, natural family *Leguminosæ*, of wide geographical distribution. *Vicia sativa* is a leguminous forage plant, much esteemed in England, but not thriving well in the hotter and drier climate of the U. S. The tubers of some sorts are used for food.

Common Vetch (*Vicia sativa*): *a*, seed-pod.

Vetch, JAMES, 1789–1869. Scottish engineer, in Mexico 1824–35.

Vetch, SAMUEL, 1668–1732. Gov. of Nova Scotia 1710–13.

Vetchling. See PEA, EVERLASTING.

Veteran. Officer or soldier who has had experience in battle and campaign. In the U. S. service, enlisted men who have served meritoriously twelve years or more are classed as veteran soldiers.

Veterinary. Veterinary surgeons are appointed by the U. S. Sec. of War; they have the rank of sergeant-major and are entitled to the same allowances. One is allowed to each of the cavalry regiments with pay of $75 per month, and an additional one with pay of $100 per month to the 7th, 8th, 9th and 10th cavalry regiments.

Veterinary Medicine. That branch of medicine which treats of the ailments of domestic animals.

Vethake, HENRY, LL.D., 1792–1866. Prof. Rutgers 1813, Princeton 1817, Dickinson 1821–29, and Univ. Pa. 1836–59; provost 1854. *Political Economy*, 1838.

Vetillart, MARIE MICHEL HENRI, b.1848. French engineer, on the port of Calais 1875–92.

Veto. Denial of validity to legislation, or check upon administration. In the U. S. it is regulated by constitutional provisions.

Vettori. See VICTORIUS, PETRUS.

Veuillot, LOUIS, 1813–1883. Parisian journalist and novelist, vehemently ultramontane and polemic; ed. *L'Univers* 1843–60. *Melanges*, 18 vols., 1857–76.—His brother, EUGENE, b.1818, wrote *Guerres de la Vendée*, 1847.

Vexillar. Peculiar æstivation of the *Papilionaceæ*.

Vexilla Regis Prodeunt. One of the most famous Latin hymns; by Venantius Fortunatus, 569; for reception of a relic of the Cross; in the Breviaries, for Passion Week; much used in translations.

Vexillum. 1. Large posterior petal of the papilionaceous flower of the Pea family; called also the Standard. 2. Vane of the feather. See BARBS.

Veytia, MARIANO, 1718–1779. Historian of ancient Mexico. His work, pub. 1836, extends only to 1450.

Vezin, HERMANN, b.1829. American-English actor, in the U. S. only 1857–58.

Via Dolorosa. Way of Jesus to Calvary. A street in Jerusalem, so named, is supposed to mark part of it.

Viaduct. High trestle-work supporting a roadway or bridge over a valley having many high piers. The Kinzua viaduct on Lake Erie & Western R.R., in n. Pa., built 1882, is 2,050 ft. long and 302 ft. above the water surface. The Loa viaduct in

Garabit Viaduct.

Bolivia is 800 ft. long and 336 ft. above the water. The largest in the world, the Pecos viaduct, over the Rio Grande in Texas, built 1893, is 2,180 ft. long and 321 ft. above the water. See GARABIT.

Via Mala. Remarkable gorge in canton of Grisons, Switzerland, through which pass the Hinter-Rhine and the carriage road over the Splugen.

Viana, MIGUEL PEREIRA, 1779–1838. Brazilian official, Viscount 1823; historical writer.

Viardot, LOUIS, 1800–1883. French author, journalist, and translator. *Italian Art*, 1868, tr. 1870.—His wife, MICHELLE PAULINE (GARCIA), b.1821, m.1840, was well known 1839–62 as a mezzo-soprano in operas. She is also a composer.

Viareggio. Italian watering-place, on the Mediterranean, 14 m. n.w. of Pisa; created by draining adjacent marshes. Pop. ab. 10,000.

Viaticum. Mass, or Holy Communion, given (whether once or repeatedly) to a person near death.

Viaud, LOUIS MARIE JULIEN ("PIERRE LOTI"), b.1850. French impressionist novelist and naval officer; Academician 1891. *Aziyadè*, 1879; *Le Mariage de Loti*, 1880; *Mon frère Yves*, 1883; *Pêcheur d'Islande*, 1886; *Mme. Chrysanthème*, 1887; *Roman d'un Enfant*, 1890; *Fantome d'Orient*, 1892.

Viazemsky, PETER, PRINCE, 1792–1878. Russian poet, critic, and satirist. *Works*, 10 vols., 1889.

Vibert, JEHAN GEORGES, b.1840. Vivacious and talented French painter, without serious power.

Vibracula. Tentacle-like appendages that represent zoöids, situated on the Polyzoan colony.

Vibrio. Genus of flexible filamentous bacteria with sinuous motion.

Vibrissæ. 1. Stiff hairs, such as a cat's whiskers. 2. Stiff filoplumes at the angles of the mouth of birds.

Vibroscope. Apparatus devised by Duhamel, by which the number and character of the vibrations of a tuning-fork

Vibroscope.

or vibrating rod can be determined by a graphical mechanical method. It consists of a drum, covered with smoked paper, on the axle of which is a screw thread, fitting a nut in one of

its bearings. Thus, if the cylinder be revolved, it has a uniform lateral motion. In front of this cylinder a tuning-fork is made to vibrate. To one prong of the fork is attached a light stylus, brought just in contact with the blackened surface: in this way a curve characteristic of the note of the fork is traced on the paper.

Vicar. Ecclesiastical substitute; in Ch. of England, priest in charge of a parish whose temporalities are held by others.

Vicar Apostolic. Priest, or usually bishop, who governs an unorganized diocese as the simple representative of the Apostolic See.

Vicar-Forane. Bishop's deputy in part of a diocese; not known in the U. S.

Vicar-General. Bishop's deputy in a diocese or part of it.

Vicarious Sacrifice. See ATONEMENT.

Vicars, JOHN, 1582–1652. English theological and polemic writer.

Vice. Immoral habit, resulting from a defect or fault of character.

Vice-Admiral. Rank, in British navy, between admiral and rear-admiral; thrice bestowed in the U. S. navy; held by Farragut, Porter, and Rowan. It was abolished in 1890, upon the death of Rowan.

Vice-Consul. Consul's deputy, in British service appointed by Foreign Sec. on consul's nomination.

Vicente, GIL, 1470–ab.1538. Father of the Portuguese drama, and its chief writer; 42 of his plays remain, most of them in Spanish.

Vicente y Bennazar, ANDRES. Spanish cartographer, whose chart, pub. 1476, roughly anticipated the discovery of N. and S. America.

Vicenza. Ancient town of n. Italy, 42 m. w. of Venice; it was sacked by Alaric the Goth 401; sacked by Attila 452;

Villa Rotunda at Vicenza, by Palladio.

the Austrians took it in 1848. Notable for its buildings, especially those erected ab.1550–80 by Palladio. Its manufactures consist mainly of silk, cotton, wool and hemp. Pop. ab. 28,000.

Vice-President. Presiding officer of the U. S. Senate; elected quadrennially with the Pres., and his successor if he dies during his term.

Viceroy. Deputy of the sovereign in a province or colony, as in Mexico and Peru while held by Spain.

Vichy. Town of central France, on the Allier. Its mineral springs were known to the Romans, and are largely resorted to. The waters are both hot and cold, are alkaline, containing mostly sodium carbonate, and are charged with carbonic acid. They are valued for diseases of digestion, and more than 2¼ million bottles are exported annually. Pop., 1891, 10,525.

Vick, JAMES, 1818–1882. Anglo-American horticulturist.

Vicksburg. Capital of Warren co., Miss., on the Mississippi; founded 1826; largest city of the State, and one of the leading ports on the river. It has a large trade in cotton. Pop., 1890, 13,373, more than half colored.

Vicksburg, SIEGE OF. Farragut's attempt to capture the city, May 18–July 27, 1862, was unsuccessful. Grant moved from Grand Junction Nov. 26, intending to attack it from the rear, but failed in his plans for getting his troops to the point desired. Finally he took them down the right bank of the river; crossed by help of Porter's fleet to the left bank below the city; June 14, 1863, captured Jackson, won several battles, made an unsuccessful assault June 22, and then began a regular siege which resulted in the surrender of the town July 4, with 31,000 men and 172 guns: 10,000 men and 90 guns having been previously lost. The total Union losses in this campaign were ab. 10,000. Port Hudson fell July 9, and the Mississippi was open.

Vico, GIOVANNI BATTISTA, 1668–1744. Prof. Naples 1697; royal historiographer 1735; noted for the first application of philosophy to history. He called it *Una Scienza Nuova*, 1725–30. His works were collected 1818, 1835–37, and 1858–69.

Victor, AURELIUS. See VICTOR, SEXTUS AURELIUS.

Victor, CLAUDE PERRIN, DUC DE BELLUNO, 1764–1841. General 1793, Marshal 1807; prominent in Napoleon's wars; Minister of War 1821–23. *Mémoires*, 1846.

Victor, CLAUDIUS MARIUS, 5th cent. Latin poet of Gaul. His *Aletheia* is based on Gen. i.-xix.

Victor, SEXTUS AURELIUS, 4th cent. Latin historical writer.

Victor I. Bp. of Rome 185–197; native of Africa. He threatened to enforce the Roman observance of Easter by excommunicating dissidents, but was dissuaded by Irenæus.—II. GEBHARD, Bp. of Eichstädt; pope 1055–57.—III. DESIDERIUS, Abbot of Monte Casino; pope 1087.—IV. Two antipopes, 1138 and 1159–64.

Victor Amadeus I., 1587–1637. Duke of Savoy 1630.—II. His grandson, 1666–1732; duke 1675–1730; at war with France. He became king 1713, held Sicily 1713–20, and then gave it for Sardinia.—III. His grandson, 1727–1796; king 1773; at war with France 1794, which took Savoy and Nice from him 1796.

Victor Emmanuel I., 1759–1824. Son of Victor Amadeus III.; King of Sardinia 1802–21. His dominions, except the island, were held by Napoleon till 1814: a revolution forced him to abdicate.

Victor Emmanuel II., 1820–1878. King of Sardinia 1849, of Italy 1861; son of Charles Albert. He fought against Austria 1848, joined in the Crimean war 1854, secured the alliance of France against Austria and gained Lombardy 1859, acquired Sicily and Naples through Garibaldi 1860, formed an alliance with Prussia 1866, acquired Venice, and entered Rome, July 2, 1871. He deserved and won great popularity as a brave soldier and a constitutional king, who made no attempts at absolutism.

Victoria. British colony of s.e. Australia; organized 1850 from New S. Wales; area 87,884 sq. m. Its surface is somewhat broken, and in parts mountainous. The capital is Melbourne. The settlement was promoted by the discovery of rich gold mines 1851. Pop., 1891, 1,140,405.

Victoria. Capital of British Columbia since 1871; near s.e. end of Vancouver's Island; founded as a trading-post 1843. Pop., 1891, 16,841.

Victoria. See SWINE.

Victoria, ALEXANDRINA, b.1819. Queen of Great Britain and Ireland; daughter of Edward, Duke of Kent, and granddaughter of George III.; Queen 1837; m.1840 to her cousin, Prince Albert of Saxe-Coburg-Gotha, who d.1861; mother of

Queen Victoria in 1839.

nine children; proclaimed Empress of India 1876. Her reign has been one of unexampled peace and prosperity. Her Jubilee, or 60th anniversary of her accession, was celebrated with much pomp June 20–30, 1897.

Victoria, GUADALUPE (MANUEL FELIX FERANDEZ), 1789–1843. Mexican general and patriot, in revolt against Spain

1811–17, in hiding 1817–21; imprisoned by Iturbide 1822; first Pres. 1824–29. Under him slavery was abolished 1825.

Victoria Blue. $C_{33}H_{31}N_3Cl$. Hydrochloride of the product of the action of phenyl-α-naphthylamine on tetramethyldiamidobenzophenon chloride; bronze crystals which dye silk and wool blue in an acid bath, and cotton upon a mordant.

Victoria Cross. Bronze decoration, bestowed since 1856, with an annual pension of £10, on British soldiers, sailors, or volunteers, for conspicuous valor or devotion.

Victoria Falls. On the ZAMBESI (q.v.), lat. 17° 55′ S.; height 400 ft.

Victoria Green. See BENZALDEHYDE GREEN.

Victoria Land. 1. Island of N. America, in Arctic Ocean. 2. Antarctic region, with mountains 10,000 to 13,000 ft. high; discovered by Ross 1842.

Victoria Nyanza (UKEREWE SEA). Largest lake in e. Africa, on the head waters of the White Nile. Altitude 3,880 ft.; area ab. 27,000 sq. m. It was discovered by Speke 1858, explored by Stanley, 1875, and others, and is held by Britain and Germany. (See Map, page 1609.)

Victoria Orange. See VICTORIA YELLOW.

Victoria Regia. Species of plants of the genus *Victoria*, natural family *Nymphæaceæ*, found in the rivers of n.e. S. America. It is a large water-lily, with circular leaves, 6 ft. diameter, margins turned up, floating upon the water. The flowers are a foot in diameter, white, internally pink. The fruit is a globose capsule, 3 in. diameter, fleshy, with farinaceous seeds.

Victoria University. At Manchester; chartered 1880; established 1851 as OWENS COLLEGE (q.v.); unsectarian. It is federated with Univ. Coll. at Liverpool and Yorkshire Coll. at Leeds.

Victoria University. At Toronto; established as Victoria Coll., at Cobourg, Ontario, 1841; removed 1884; controlled by Methodists, but affiliated with Toronto Univ.

Victoria Yellow. Mixture of salts of dinitrocresols; prepared by the action of nitric acid on a mixture of cresol-sulphonic acids. It dyes wool yellow.

Victorius, PETRUS (VETTORI), 1499–1584. Florentine humanist, editor of Cicero, Aristotle, and other classics. *Variæ Lectiones*, 1582.

Victor Vitensis, 5th cent. Historian of Vandal persecutions in Africa.

Vicuña. Rare mammal of the group TYLOPA (q.v.), living on the heights of the Andes (above 13,000 ft.) in Bolivia and Peru, valuable for its exceedingly soft and silken wool. The Alpaca of the same regions is supposed to be a larger domesticated form of the same species. The Vicuña is found in flocks of young males or of females, with an old male for sentinel. They are secured by corraling. They are reddish-brown, with an apron of long white hair in front, and extending along the sides as far as the hind legs. With the Llama, Guanaco, and Alpaca, they constitute the genus *Auchenia*.

Vicuna (*Auchenia vicugna*).

Vicuña-Mackenna, BENJAMIN, 1831–1886. Chilian historical writer: in exile 1852–56 and 1859–62; Senator 1871–76. —His father, PEDRO FELIX, 1806–1874, was an author, journalist, and Senator.

Vida, MARCO GIROLAMO, ab.1485–1566. Bp. of Alba, n. Italy, 1532; Latin poet, noted for easy and graceful style. *De Arte Poetica*, 1527; *Christias*, 1535; *Bombyx* (on silkworms), 1537; *Scacchiæ Ludus* (chess), 1527. His works were collected 1732.

Vidal, PEIRE, ab.1175–ab.1215. Troubadour of Provence.

Vidaurre, MANUEL LORENZO DE, 1773–1841. Peruvian jurist and diplomatist.

Vidaurri, SANTIAGO, 1803–1867. Mexican officer and politician; Gov. of Nuevo Leon 1852; Minister under Maximilian 1864; executed.

Vidocq, EUGÈNE FRANÇOIS, 1775–1857. French adventurer and convict, chief of a bureau of spies and detectives 1812–25. His *Mémoires*, 1828, are of doubtful authorship and little value.

Vieira, ANTONIO, 1608–1697. Brazilian Jesuit, long in Europe; chief of Portuguese preachers, and eminent as an author.

Vieira, JOAO FERNANDES, ab.1600–1660. Brazilian revolutionist, active against the Dutch in Pernambuco.

Viele, EGBERT LUDOVICKUS, b.1825. Brig.-gen. U. S. Vols. 1861–63; engineer; M.C. from N. Y. 1885–87. *Atlas of New York City*, 1865.

Vien, JOSEPH MARIE, 1716–1809. French painter and art teacher.

Vienna. Capital and largest city of Austria, on the Wien near the Danube. It is the first manufacturing city of the empire, and has an extensive trade. Its libraries, art collections, and museums are important. Its univ., founded 1364, includes a notable school of medicine; it had in 1895 ab. 400 instructors and 6,714 students. In 14 the Romans established here a fortified camp. The spot was afterward occupied by Attila, and then by Avars, who were expelled by Charlemagne. The city received a charter 1237; increased rapidly during the crusades; was besieged unsuccessfully by Hungarians 1477, taken by M. Corvinus 1485, gallantly defended against the Turks 1529 and 1683, and occupied by the French 1805 and 1809. In 1866 the Prussians marched to within sight of its towers. The International Exhibition of 1873 was held here. Pop., 1891, with suburbs, 1,364,548.

Vienna in 1873—Looking Northeast.

Vienna, CONCORDAT OF. 1448, between Frederick III. and Pope Nicholas V. It retracted the resolutions of the Council of Basel as to restriction of papal abuses.

Vienna, CONGRESS OF. Composed of representatives of all European governments, who met, Sept. 30, 1814, to settle the affairs of Europe, after the 1st Peace of Paris. All the great powers obtained important accessions of territory. A new confederation of German states was formed, which continued till 1866. A formal treaty, the 5th of Vienna, was drawn up and signed, June 9, 1815. The Congress declared its determination to suppress the slave trade Feb. 8, 1815.

Vienna, PEACE OF. Between Italy and Austria; signed Oct. 3, 1866. Austria restored the iron crown of Lombardy; Italy abandoned the Trentino, and received Venetia.

Vienna, TREATIES OF. 1. Signed 1725–27 for Spain, Russia, and Prussia, guaranteeing the Pragmatic Sanction. 2. Concluded March 16, 1731. Great Britain and the Dutch states guaranteed the Pragmatic Sanction; Charles VI. agreed to the treaty of Seville, as respected the Italian duchies. 3. Nov. 18, 1738; Augustus III. was recognized as King of Poland; Stanislaus was to receive compensations for his abdication, in Bar and Lorraine. 4. Oct. 14, 1809. Austria ceded territory.

MAP OF AFRICA, FROM PTOLEMÆI COSMOGRAPHIA,

PUBLISHED AT ROME, 1490.

This Map Shows Lakes Victoria Nyanza and Albert Nyanza and the Mountains of the Moon as the Sources of the Nile.

5. See CONGRESS OF V. 6. Signed March 25, 1815, on Napoleon's return from Elba, renewing the alliance of Chaumont.

Vienna Caustic, or **Paste.** Mixture of quicklime and caustic potash used in medicine as a caustic.

Vienna Green. Name given to Paris green or SCHWEINFURTH GREEN (q.v.).

Vienne. Town of e. France, near the Rhone, 19 m. s. of Lyons; capital of the Allobroges; important in Roman times and later; notable for its remains of antiquity. A council met here 1312. Pop., 1891, 22,814.

Vieta, FRANCOIS, 1540-1603. French mathematician and councilor. His *Isagoge in Artem Analyticam*, 1591, is the earliest work on symbolic algebra. *Works*, 1646.

Vieussens, RAYMOND, 1641-1720. French anatomist. *Neurographia*, 1685.

Vieuxtemps, HENRI, 1820-1881. Belgian violinist and composer; pupil of De Beriot; solo performer to the Czar at St. Petersburg for five years; in America 1844, 1857, and 1870;

Henri Vieuxtemps.

prof. at the Conservatory of Brussels 1871. In 1873 a stroke of paralysis deprived him of the use of his right arm, and he spent his time in composing.

Vigfusson, GUDBRAND, 1827-1889. Icelandic writer, in England from 1864. *Icelandic Dictionary* (with R. Cleasby), 1873; *Sturlunga Saga*, 1878; *Corpus Poeticum Boreale* (with F. Y. Powell), 1883.

Vigil. Eve of a festival or fast; observed in R. C. Ch., and mentioned in English Prayer-book; origin of watch-night services.

Vigilance Committees. Formed at San Francisco 1851 and 1856, and in other Western settlements in their early and rude stages, to do justice upon criminals and preserve order when legal appliances and officers were lacking, inefficient, or corrupt; often parodied and abused, as by Ku-klux and Whitecaps. In 1877-78, during the labor riots, a committee of safety was formed in San Francisco, headed by W. T. Coleman (1821-1893), as were the committees of 1851 and 1856.

Vigilantius. Presbyter of Gaul, who traveled in the East ab.400, and anticipated Protestantism in opposing monachism and saint worship; known only by Jerome's book against him.

Vigilius. Pope 537-555; appointed and maintained by Justinian.

Vignaud, JEAN HENRI, b.1830 in New Orleans. Diplomatic official, long in Paris. *L'Anthropologie*, 1861.

Vignes, PIERRE DES, ab. 1190-1249. Italian poet, said to have invented the sonnet.

Vignette. Picture on the title-page of a book.

Vignette. Running ornament of leaves and tendrils in the hollow moldings in Gothic architecture.

Vignola. Town near Modena, Italy; birthplace of Jacopo Barozzo, or Barocchio, 1507-1573, who is often known by this name. He succeeded Michelangelo as architect of St. Peter's.

Vigny, ALFRED VICTOR, COMTE DE, 1799-1863. French poet, dramatist, and romancer. *Cinq-Mars*, 1826; *Chatterton*, 1835; *Destinées*, 1864. *Works*, 6 vols., 1863-66.

Vigo. Seaport of n.w. Spain, taken by the British 1585, 1589, and 1719. In its bay a British and Dutch fleet won a victory 1702. Pop. ab.15,000.

Vikings. Pirate chiefs among the Northmen, who plundered the coasts of Europe ab.700-1000.

Vilas, WILLIAM FREEMAN, b.1840. Postmaster-gen. 1885-87; Sec. of Interior 1887-89; U. S. Senator from Wis. 1891.

Vilayet. Turkish province, formerly eyalet.

Vilers, CHARLES MARIE LE MYRE DE, b.1833. French gov. of Cochin-China 1879-82; envoy to Siam 1893, and to Madagascar 1888 and 1894; instigator of its subjection to France.

Villafranca. Town of Lombardy, 12 m. n. of Mantua. Here France and Austria arranged the preliminaries of peace July 11, 1859, after Solferino, afterward ratified in the treaty

Villafranca.

of Zurich. Lombardy was taken from the Austrians, who were allowed to retain Venetia. It has a fine castle of the 14th century. Pop. 3,986.

Village Community, IN ECONOMIC HISTORY. Unit of organization among many ancient and some modern tribes; group of peasants occupying a village and adjoining tract of land, and pursuing most of the affairs of life in common.

Villagra, GASPAR DE, ab.1550-ab.1620. Participant in the conquest of New Mexico 1600, and its historian 1610.

Villagran, FRANCISCO DE, 1507-1563. Gov. of Chili 1554-57 and from 1561; at war with the Araucanians.

Villalobos, FRANCISCO LOPEZ DE, 1473-ab.1545. Portuguese physician and author. *Problemas*, 1515.

Villani, GIOVANNI, ab.1276-1348. Florentine historian. His work is valued both for style and substance: it was carried further by his brother and nephew.

Villanovanus Arnaldus. Eminent Italian physician, who lived from ab.1235-1312. He wrote much on alchemy, medicine and religion.

Villanueva, JOAQUIN LORENZO, 1757-1837. Spanish liberal priest. Deputy 1808-14 and 1820-23; imprisoned 1814-20; in exile from 1823; historical and political writer. *Phœnician Ireland*, tr. 1832.

Villard, HENRY, b.1835 in Bavaria. Pres. Northern Pacific R.R. 1881-84.

Villaret de Joyeuse, LOUIS THOMAS, 1750-1812. French admiral 1793; distinguished in action with a British fleet May 1794; Gov.-gen. of Martinique 1802-9.

Villari, PASQUALE, b.1827. Prof. Pisa 1859, Florence 1866; author of historical, critical, and political works; Senator 1884; Minister of Instruction 1891. His important lives of Savonarola, 1859-61, and Machiavelli, 1877-82, and *Two first Centuries of Florentine History*, 1893-94, were tr. by his wife, Linda (White), who has pub. sundry novels.

Villari's Critical Value. "Magnetism, induced or residual, in an iron or steel wire, is diminished on stretching, provided that the magnetization correspond to an inducing force above this value, which, according to Lord Kelvin, is ab. 24 times the terrestrial intensity. Below this critical value,

tension increases the magnetization. In nickel the magnetization is always diminished. The effects of transverse expansive stress are opposed to those of longitudinal stretching."

Villars, CHARLES, ab.1760–1814. French physician, introducer of vaccination in Spanish America.

Villars, CLAUDE LOUIS HECTOR, DUC DE, 1653–1734. French general; Ambassador to Austria 1699–1701; commander in Germany 1702–3; Marshal 1702; victorious at Höchstädt Sept. 1703; defeated at Malplaquet Sept. 1709. He defeated the British and Dutch at Denain July 1712.

Villars, DOMINIQUE, 1745–1814. French botanist. Prof. Paris 1794, Strasburg 1805. *Histoire des plantes du Dauphiné*, 1786–89; *Catalogue des substances végétales*.

Villasenor y Sanchez, JOSÉ ANTONIO, ab.1700–ab.1760. Mexican geographer.

Villaverde, CIRILO, b.1812. Cuban novelist, in exile from 1849. *Cecilia Valdés*, 1881.

Villefranche, CHARLES PIERRE DE, 1756–1809. Cuban historical writer, b. at Mobile.

Villegaignon, NICOLAS DURAND, CHEVALIER DE, 1510–1571. French soldier and writer, founder of an unsuccessful colony in Brazil, 1555–67.

Villegas, ESTEBAN MANUEL DE, 1595–1669. Spanish lyric poet. *Amatorias*, 1618.

Villehardouin, GEOFFROI DE, ab.1160–ab.1213. French historian of the Latin conquest of Constantinople, in which he took part. His book (if it be his) extends 1198–1207, was pub. 1585, and is highly valued.

Villeins, or VILLAINS. Class of non-free inhabitants in early English law, who were tied to the land, but held it so long as they rendered due service to their lords.

Villèle, JEAN BAPTISTE SÉRAPHIN JOSEPH, COMTE DE, 1773–1854. French royalist; Deputy 1815; ennobled 1820; Finance Minister 1821–28.

Villemain, ABEL FRANÇOIS, 1790–1870. Prof. Paris 1810; Academician 1821; Peer 1831; perpetual sec. of the Academy 1832; Minister of Instruction 1839–44; historian and critic. *Cromwell*, 1819; *Lascaris*, 1825; *Melanges*, 1823–27; *Cours de Littérature Française*, 1828–30; *Chateaubriand*, 1857; *Grégoire VII.*, 1873.

Villemarque. See LA VILLEMARQUE.

Villemarque, HOUSART DE LA, VICOMTE, 1815–1895. Collector of Breton folklore.

Villena, ENRIQUE DE, 1384–1434. Spanish poet, tr. Virgil and Dante.

Villeneuve, ALEXANDRE LOUIS DUCREST DE, 1777–1852. French Post-captain 1814, Rear-admiral 1829; author of W. Indian charts.

Villeneuve, JULES EDMOND FRANÇOIS DE, 1804–1863. French writer on Brazil.

Villeneuve, PIERRE CHARLES JEAN BAPTISTE SYLVESTRE DE, 1763–1806. French Rear-admiral 1797; commander of the rear division at the battle of the Nile Aug. 1, 1798, from which he escaped with 5 ships; Vice-admiral 1804; defeated by Nelson at Trafalgar Oct. 21, 1805.

Villeraye, CHARLES STANISLAS, VISCOUNT DE, ab.1820–1854. French filibuster in n.w. Mexico.

Villeré, JACQUES, 1761–1831. Gov. of La. 1818–22.

Villermet, JULES GUILLAUME FERDINAND DE, 1802–1859. French explorer in Mexico and Central America 1854–59. *Voyage*, 1860.

Villeroi, FRANÇOIS DE NEUVILLE, DUC DE, 1644–1730. Marshal of France 1693; defeated at Ramillies by Marlborough; guardian to Louis XV.

Villers, CHARLES FRANÇOIS DOMINIQUE DE, 1765–1815. French writer, in Germany from 1793. *Spirit of the Reformation*, tr. 1805.

Villiers, BARBARA, 1640–1709. Wife of Roger Palmer. Mistress of Charles II. of England ab.1659, Countess of Castlemaine 1661, Duchess of Cleveland 1670, m. Robert (Beau) Fielding 1705; mother of Dukes of Cleveland (1662–1730), Grafton (1663–1690), and Northumberland (1665–1716).

Villiers, CHARLES PELHAM, 1802–1898. M.P. from 1835; reformer.

Villiers, FREDERIC, b.1852. English war correspondent.

Villiers, GEORGE. See BUCKINGHAM.

Villiers, G. W. See CLARENDON.

Villmorgen, BATTLE OF. In Switzerland 1712. It gave Zurich and Berne ascendency in the Confederation.

Villoison, JEAN BAPTISTE GASPARD D'ANSE, 1753–1805. Prof. Coll. de France 1800; writer on Greek classics.

Villon, FRANÇOIS (MONTCORBIER), 1431–ab.1489. French poet, of fine talent and scandalous life; sentenced to banishment for homicide 1455, and to death for burglary 1456; again in prison 1461. *Petit Testament*, 1456; *Jargon; Grand Testament*, 1461. His works were collected 1489, often reprinted, and tr. 1878.

Vilmar, AUGUST FRIEDRICH CHRISTIAN, 1800–1868. Prof. Marburg 1855. *Hist. German Literature*, 1845; *Theology of Fact*, 1854.

Vilna, or WILNA. Town of w. central Russia, on a branch of the Niemen; capital of Lithuania from 1323; site of a univ.

Vilna—View taken from the Snipiski Suburb.

1576–1830. It has several institutions of learning, and a large trade in timber and grain. Pop., 1891, 109.363, mostly Poles.

Vimiera, or VIMEIRO. Town of Portugal, 30 m. n. of Lisbon; scene of Wellesley's victory over Junot, Aug. 21, 1808. This was followed by the Convention of Cintra, Aug. 30, and the evacuation of Portugal by the French.

Vimineous. Producing long flexible branches, as in willows.

Vincennes. E. suburb of Paris; noted for its park and old castle, now a fort. Here Duc d'Enghien was executed by Napoleon's order 1804. Pop., 1891, 24,626.

Vincennes. Oldest town in Indiana; capital of Knox co.; on the Wabash; site of a French fort ab. 1722; held by the British 1763–79, and by Va. till 1783; capital of Northwest Territory 1800–13. Pop., 1890, 8,853.

Vincennes, JEAN BAPTISTE BISSOT, SIEUR DE, 1688–1736. Canadian explorer, b. in Quebec. He preserved Detroit from an Indian invasion 1712, built an earth fort at Vincennes, Ind., ab.1722, and was taken and burned by Chickasaws.

Vincent, ST., d.304. Spanish martyr, celebrated Jan. 22.

Vincent, CHARLES EDWARD HOWARD, b.1849. Journalist; M.P. 1884; writer on military and police topics.

Vincent, FRANCIS, 1822–1884. Journalist at Wilmington, Del. *Hist. Delaware*, 1870.

Vincent, FRANK, b.1848. American traveler. *Land of the White Elephant*, 1874; *Burmah*, 1877; *Cambodia*, 1878; *S. America*, 1888; *Central America*, 1889; *Actual Africa*, 1895.

Vincent, JOHN HEYL, D.D., LL.D., b.1832. Chancellor of Chautauqua Assembly 1884; M.E. Bp. 1888; writer on Sunday-schools.

Vincent, MARVIN RICHARDSON, D.D., b.1834. Prof. Union Theol. Sem., New York, 1888. *Word Studies in N. T.*, 1887–90.

Vincent, MARY ANNE (FARLEY), 1818–1887. Anglo-American actress.

Vincent de Paul, ST., 1577–1660. French priest, slave in Tunis 1605–7; active philanthropist; founder of the Sisters

of Charity, and of the Lazarists or Priests of the Missions; canonized 1737. His day is July 19.

Vincentians. Secular R.C. priests, not under a monastic rule, but under obligations to hear confession and preach among the poor.

Vincent of Beauvais, d. ab.1264. French Dominican. *Speculum majus*, pub. 1473.

Vincent of Lerins, 5th cent. Author of *Commonitorium*, a semi-Pelagian work of repute.

Vinci, LEONARDO DA, 1452–1519. Florentine painter. His *Last Supper* at Milan, finished ab.1498, was an epoch-making work, having no even remotely equal predecessor and no following superior. In all things he was the forerunner, founder, and spiritual father of the greatest Italian art. His works are rare: several ascribed to him are known to be by scholars. His most accessible authentic oil paintings are the *Mona Lisa* portrait and *The Virgin and St. Anne* of the Louvre. His car-

Leonardo da Vinci.

toon of *The Battle of the Standard*, designed for a fresco in Florence which was never executed, survives in an old engraving of one of its groups. He was a talented sculptor, but no works of his survive. He was also musician, poet, military and civil engineer, expert in gunnery and irrigation, author, and scientist of wide attainments. He was prominent at Milan till 1498, then served for some years as engineer to Cesare Borgia. He left Italy for France 1516. See LORD'S SUPPER.

Vincis, PETRUS. See PETER DE VINCIS.

Vinculum. Straight line placed above an expression to show that it is taken as one quantity and subject to one or more operations. Its most common use is in connection with the radical sign.

Vine. Grapes have been cultivated and wine has been made from them from the earliest times. The vines of Europe came from Asia by the Mediterranean. They were carried to England by the Romans early in the Christian era; in Gaul 270. Madeira received its vines from Cyprus 1420; to America they were indigenous. The best wines are obtained from grapes grown on clayey, sandy, and slaty soil, of indifferent value for the growth of cereals. The volcanic soil of Madeira produces rich wines, but would hardly support other vegetation. The soil affects the quality of the wine. The higher the average temperature the larger the quantity of wine and the higher the percentage of alcohol. The quality, however, will not be proportionate to the quantity. The vines are generally kept to a height of 3 ft., so that the grapes are exposed to the sun and the reflection from the ground. In the Burgundy wine district, the ground is laid out in ditches 5 ft. apart and 1½ ft. deep, partly filled with manure. Vine-cuttings 1½ ft. long are placed in these, ½ foot apart, bending toward the ridge; they are covered with earth, with two buds above it. The first and second years they are hoed two or three times. In the latter year they are pruned to two buds and manured. The third year they are pruned to two branches, each with two buds, and furnished with a stake of 4 ft. length. In the 4th or 5th year ditches are made from the vine to the middle of the rows and the vine is drawn into this ditch, one branch remaining with the root and the other being bent to the middle of the row. Thus the rows of vines are about 2½ ft. apart. Each vine has one stem and begins to bear in the fifth or sixth year. When the vine has grown too high, it is laid down in a ditch and the yearling branch is bent upward and pruned to three buds. About $\frac{1}{10}$ are so laid yearly, so that the vineyard is renewed every ten years. A variety of grapes are grown here, the Pineau and the Gamay being the chief ones. The Pineau bear up to 1½ lbs. of grapes, the Gamay three times as much. Small proprietors sell their grapes to wine-dealers, or make an inferior wine. The larger growers make their wines. In the U. S. the vines are often trained to a wire trellis, 5 to 6 ft. high, with 2 or 3 wires. The vines are planted 6 to 8 ft. apart. The U. S. has 500 varieties of indigenous grapes; of these 25 are valuable. In 1890 there were 51,000 acres of vineyards in N. Y. region; 42,633 in Ohio-Illinois region; 17,306 in Kansas-Missouri region; 17,092 in Virginia-Georgia region; 213,230 in Pacific region; elsewhere in the U. S. 60,000: total, 401,261 acres. The diseases of the vine are the European mildew, *Oidium*, which is cured by dusting with sulphur; downy mildew, *Peronospora viticola*, which is treated with ammonio-carbonate of copper solution. These two affect the leaves. The black rot, *Læstadia bidwellii*, causes shriveling and decay of the grapes, and is treated as the last. Of insects are the thrip or leaf-hopper, which is sprayed with petroleum emulsion; and the PHYLLOXERA (q.v.), which attacks the roots; for this, coal-tar and sulpho-carbonate of lime have been used. This last pest was carried from the U. S. to Europe. Many American vines resist this disease, and a large acreage of land in France has been planted with these vines as stocks on which to graft the French vines.

Vine. Properly, the grape; in America, any climbing plant.

Vine, SIR JOHN RICHARD SOMERS, b.1847. London official, knighted 1886. *Municipal Institutions*, 1878.

Vinegar. The best vinegar is made from cider in which the fermentation has proceeded till acetic acid is formed. Of late acetic acid is so easily and cheaply made from the destructive distillation of wood that the manufacture of vinegar from apples is seldom profitable. It is also made by the acetic fermentation of wine, solution of malt, and dilute alcohol, by action of the vinegar plant. It contains 2.5 to 4.6 per cent of acetic acid.

Vinegar, AROMATIC. Dilute solution of acetic acid flavored with oils of lavender, rosemary, juniper, peppermint, cinnamon, lemon, and cloves; or flavored with rose-geranium and oil of cloves.

Vinegar Eel. See ANGUILLIDÆ.

Vinegar Plant. *Saccharomyce mycoderma.* Minute plant of the subkingdom *Protophyta*, causing the acetous fermentation of alcoholic solutions.

Vinegar Hill. In s.e. Ireland; scene of defeat of rebels by British troops June 21, 1798.

Vine Mildew. See OIDIUM.

Viner, CHARLES, 1680–1756. Benefactor of Oxford. *General Abridgment of Law and Equity*, 24 vols., 1741–51.

Vines, RICHARD, ab.1585–1651. Agent of Sir F. Gorges in Me. 1616–17; founder of Saco, Me.

Vines, SYDNEY HOWARD, F.R.S., b.1849. Prof. of Botany at Oxford 1888. *Physiology of Plants*, 1886.

Vinet, ALEXANDRE RUDOLPHE, D.D., 1797–1847. Swiss Reformed theologian, prof. Lausanne 1837–45; eminent as a literary critic. *Pastoral Theology*, tr. 1852; *Homiletics*, tr. 1853; *Hist. French Literature in 18th Century*, tr. 1854; *Studies in Pascal*, tr. 1859; *Outlines of Philosophy*, tr. 1865.

Vingt-Un. Game of cards, played by any number of persons, with pack of 52 cards; aces counting 1 or 11, others according to the spots, face cards 10. After the stakes are made, one card is dealt face down to each player, beginning at the left and this repeated; sometimes the first card is examined before the stake is made and the dealer may require the players to double their stakes, after seeing his first card. The players then examine their hands; if one has a natural Vingt-un, an ace and a face card or 10, he declares it and receives double his stake. The dealer deals to the players successively as many cards as requested, face up. If the hand amounts to more than 21, the player bursts and pays his stake to the dealer. When all have played, the dealer turns his cards and stands, or draws cards. If he bursts he pays those remaining in; if he does not burst, he pays those nearer 21 and stands off ties; he receives from those lower, and if he has a natural he receives double.

Vining, JOHN, 1758–1802. Delegate to Congress 1784–86; M.C. from Del. 1789–93; U. S. Senator 1793–98.

Vinland. Part of N. American continent discovered by Norsemen ab.1000; probably in Mass. or R. I. A stone tower has been erected at Waltham, Mass., by Prof. Hosford, to mark the site of an old Norse settlement, which he claims to have identified with this locality.

Vinometer. Form of HYDROMETER (q.v.), used for testing the alcoholic strength of wine.

Vinton, ALEXANDER HAMILTON, D.D., 1807–1881. Rector in Boston 1842–58 and 1869–77, Phila. 1858–61, and New York 1861–69; eminent as a preacher.—Of his brothers, FRANCIS, D.D., S.T.D., D.C.L., 1809–1872, rector in Providence 1840–42, Newport 1842–44, Brooklyn 1844–46, and Trinity, New York, 1855–72; pub. *Evidences*, 1855, and *Canon Law*, 1870: DAVID HAMMOND, U.S.A., 1803–1873, was chief quartermaster in Mexico, 1846–48, and elsewhere: JOHN ROGERS, U.S.A., 1801–1847, was killed at Vera Cruz.—His son, FRANCIS LAURENS, 1835–1879, was Brig.-gen. U. S. Vols. 1862–63, and prof. Columbia 1864–77.

Vinton, FREDERIC PORTER, b.1846. Boston painter, chiefly of portraits.

Vinton, JOHN ADAMS, 1801–1877. American genealogist.

Vinton, SAMUEL FINLEY, 1792–1862. M.C. from Ohio 1823–37 and 1843–51.

Vinyl. Chemical group CH_2:CH.

Vio, THOMAS. See CAJETAN.

Viola. Alto violin, called tenor in England, larger than the violin and having its four strings tuned a fifth lower. Its tone is not brilliant, but has great richness and is productive of fine effects in the orchestra. It was formerly called viola da braccio, or arm viol, to distinguish it from the viola da gamba, or knee viol.

Viola da Gamba. See VIOLONCELLO.

Violaniline. See INDULINE.

Violaceæ. Natural family of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Polypetalæ*, comprising 24 genera and ab. 270 species, distributed throughout all parts of the earth; called the Violet family.

Violet. Plants of the genus *Viola;* low herbs of the natural family *Violaceæ*, of numerous species and wide distribution. The cultivated Sweet Violet is native of Europe, and highly esteemed as an ornamental and fragrant flower. See PANSY.

Violet, DOG'S-TOOTH. See ADDER'S TONGUE.

Violet, GREEN. *Cubelium concolor*. Large herb of the Violet family, native of the e. U. S.

Violet, WATER. See FEATHERFOIL.

Violet Stones. Stones found upon the Riesengebirge and the Brocken, which emit a smell due to the Violet Moss with which they are covered.

Violin. Small viol; stringed instrument, played upon with a bow of resined horsehair; most useful member of the orchestra, and after the human voice the most expressive of all musical instruments. Its origin, which was doubtless Oriental, cannot be traced with exactness. It was developed out of the

Violin.

larger viols ab.1480–1530, and reached its perfection in the masterpieces of the Cremona school ab.1710. It has a range of over three octaves, G below the treble staff upward, with all the semitones between, and is capable of many effects due to various devices in manipulation.

Violle, JULES, b.1841. Prof. Paris 1890; writer on light and heat. *Cours de Physique*, 1881.

Viollet-le-Duc, EUGÈNE, 1814–1879. French architect and authority on Mediæval architecture. His great *Dictionary*, 10 vols., 1854–69, and *Discourses on Architecture*, 1858–68, are his best-known works—the latter has been translated by Van Brunt.

Violoncello. Bass instrument of the viol tribe, midway in size between the viola and the double bass. It has four strings, tuned like those of the viola, but an octave lower, and is held between the knees when played, wherefore in its earlier form it was called viola da gamba, or knee viol.

Vioménil, ANTOINE CHARLES DU HOUX, BARON DE, 1728–1792. French general, active in Corsica, Poland, and the U. S.; Gov. of La Rochelle 1783–89; mortally wounded in defending Louis XVI.—His brother, CHARLES JOSEPH HYACINTHE, became Major-gen. 1780, fought with Condé 1792–97, served in Russia, commanded the Portuguese army 1801–8, and was made Marshal 1816 and Marquis 1817.

Vionville, BATTLE OF. Aug. 16, 1870. See MARS-LA-TOUR.

Viotti, GIOVANNI BATTISTA, 1753–1824. Italian violinist, composer of 29 concertos and many smaller pieces.

Vipers. Old World snakes of moderate size and viviparous reproduction, having no pits, as in *Bothrophera*. The Horned

Horned Viper (*Vipera cerastes*).

Viper, *Vipera cerastes*, was Cleopatra's snake. In India is a Tree Viper; and in Africa a Puff Adder, whose poison the Bushmen use for their arrows. This attains a size of four or five feet, and is very poisonous. England has but one poisonous snake, the Adder (*Pelias verus*). It has a zigzag chain of dark dorsal spots on an olive-brown ground. The common viper of Europe is *V. aspis*. See SOLENOGLYPHA.

Young Viper's Position in the Egg.

Virchow, RUDOLF, b.1821. Prof. of Pathology at Würzburg 1849, and Berlin since 1856; father of the cellular theory; member Prussian Diet 1862; political liberal and sanitary reformer. *Cellular Pathology*, 1850, tr. 1860; *Famine Fever*, tr. 1868; *Freedom of Science*, tr. 1878.

Viret, PIERRE, 1511–1571. Swiss reformer and theological writer.

Virgil, or PUBLIUS VERGILIUS MARO, 70–19 B.C. Greatest of Latin poets; born near Mantua, educated at Rome. When the empire was established, he became a friend of Mæcenas and Augustus, and enjoyed the companionship of the literary men of the Golden Age. Besides several poems that have been attributed to him with some doubtfulness, we possess the ten *Eclogues* or *Bucolics*, pastoral poems in imitation of Theocritus; the *Georgics*, in four books, a didactic poem upon agriculture, considered his most finished work; and the *Æneid*, an epic in twelve books, which recounts the adventures of Æneas, the mythical ancestor of the Julian family, from the taking of Troy until the defeat and death of Turnus in Latium. The perfection of its hexameter verse, beauty of its descriptions, and general interest of the action, have given the *Æneid* a high place in the world's literature.

Virginal. Musical instrument with keyboard, one of the precursors of the pianoforte.

Virginia. One of the e. States. Its area is 42,450 sq. m. The e. part is low and level, and contains much alluvial and marshy land. Further back the country rises, gradually becoming more broken until the Blue Ridge is reached, which within the State has an elevation of from 1,300 to over 5,000 ft. Beyond the Blue Ridge succeeds the great Appalachian valley, which is here considerably broken by parallel ridges. The line separating V. from W. Va. follows approximately the ridges which limit this valley on the w. It has numerous rivers, flowing from the Blue Ridge s.e. to the Atlantic. The larger

of these, as the Potomac, Rappahannock, and James, are tidal and navigable to the Fall Line; *i.e.*, the line between the Archæan and the Cretaceous formations, where the rivers of the Atlantic slope generally have falls or rapids. A geological section across the State, running n.w. and s.e., characterizes the distribution of formations. The Appalachian valley shows an alternation of Silurian and Devonian rocks. With the Blue Ridge the Archæan rocks come to the surface and continue e. to the Fall Line, where they are succeeded by Cretaceous, Eocene, and finally Neocene beds, which extend to the coast. The industries of V. are mainly agricultural; the greatest attention is paid to tobacco. The value of farms in 1890 was $254,490,600; of agricultural products, 1889, $42,244,458. Manufactures are by no means as important; they consist of flour, tobacco, lumber, iron and steel. The mileage of railroads in 1896 was 3,605. The capital is Richmond, at the head of navigation and tidewater on the James. V. was one of the 13 original States. It was reduced in area in 1863 by the formation of W. Va. The first permanent English settlement in America was made at Jamestown, May 1607; its shores had been visited 1498 by Sebastian Cabot, and afterward by Sir W. Raleigh, who named it in honor of Queen Elizabeth. The company of English gentlemen which settled at Jamestown was re-enforced or superseded two years later by the London company sent out by the king with a charter granting them 400 miles of seacoast and all the country back "throughout from sea to sea." The colony flourished: in 1619 was organized the first legislative body in N. America. In 1624 James I. deprived the London company of its charter, and V. became a royal province. It took a leading part in the war for independence, and after the formation of the Union furnished four of the first five Presidents. The State capital, Richmond, was the center of the Confederacy during the Civil War. Pop., 1890, 1,655,980, or 39 per sq. m., 640,807 were colored.

Virginia. In Roman Legend, daughter of the Roman centurion Virginius; slain by her father to save her from the lust of the decemvir Appius Claudius; avenged by a revolution; celebrated by Macaulay.

Virginia, UNIVERSITY OF. At Charlottesville; chartered 1819, opened 1825. Jefferson had much to do with its organization, and was its first rector. It consists of 22 separate schools, each under a professor; the students elect their schools or courses. It has received from the State, since 1884, $40,000 annually. It has (1897) 27 instructors in the academic staff, and 29 in the medical, with 504 students in all, of whom 248 are in the department of arts, 119 in law, and 151 in medicine. Summer courses are offered in mathematics, chemistry, and law.

Virginia, WEST. See WEST VIRGINIA.

Virginia City. Capital of Storey co., Nevada; on the side of Mt. Davidson, over the COMSTOCK LODE (q.v.), with which its fortunes are closely connected; founded 1859. Pop., 1890, 8,511.

Virginia Creeper. *Parthenocissus quinquefolia.* High

Virginia Creeper (*Porthenocissus quinquefolia*).

climbing vine of the Grape family, native of the e. U. S., much planted for ornament; called American Ivy. The tendrils terminate in a kind of sucker, it is a rapid grower, and its leaves have a brilliant autumnal coloring.

Virginian Deer (CARIACUS VIRGINIANUS). Species of deer found in all parts of N. America, from Mexico to ab. 45° N. lat. and from the Atlantic to the Pacific Ocean. It grows to be 3 ft. high at the shoulder; the color varies, being light reddish-brown in summer and dull brown in winter, the belly and the inner parts of the limbs being white.

Virginian Snake-root. See SNAKE-ROOT, VIRGINIAN.

Virginia Polytechnic Institute. At Blacksburg, Va. It was opened in 1872; enlarged 1896. It offers seven four-year courses leading to the B S. degree. It has 15 professors, 12 assistants, 24 graduate and 223 undergraduate students; the total enrollment is 335.

Virgin Islands. W. Indian group of ab. 50, mostly very small, e. of Porto Rico. The two largest, St. Thomas and Santa Cruz, with St. John, are Danish; a few are Spanish, the rest British. Total area ab. 245 sq. m.; pop. ab. 45,000.

Virgin's Bower. Vines of the genus *Clematis*, natural family *Ranunculaceæ*, of wide geographical distribution.

Virgo. See ZODIAC.

Virgula. Solid chitinous axis which runs along the dorsal side of the polypary of a Graptolite.

Viriathus, d.140 B.C. Peasant of Lusitania (Portugal and w. Spain), who raised war against the Romans ab.150 B.C., defeated a consular army 141, and secured independence for his region, but was soon treacherously slain.

Viridine. $C_{31}H_{23}N_2SO_3Na$. Dark green powder, produced from the substance obtained by the action of sulphuric acid on an oxidized product of the action of benzyl chloride on diphenylamine.

Viridite. Greenish products of alteration often seen in rock sections when studied under the microscope; and probably of a chloritic or serpentinous character; so named by Vogelsang.

Virtual Image. See FOCUS.

Virtual Moment. See VIRTUAL VELOCITY.

Virtual Temperature. Absolute temperature that would have to be given to a unit volume of dry air in order to bring it to the same density that a unit volume of given ordinary moist air has, both being under a common pressure; so named 1876 by Guldberg and Mohn.

Virtual Velocity, or VIRTUAL WORK. Component of the displacement in the direction in which the force acts, if the point of its application be displaced through a small distance Δs. This is positive or negative according as it is in the same or in the opposite direction to that of the force. The product of the force into the virtual velocity of its point of application is called by Duhamel its virtual moment. The principle of virtual velocities is applied to the solution of many problems in statics, and may be thus enunciated: If any material system be in equilibrium, and if we conceive a displacement of all its parts, which is consistent with the conditions to which they are subject, the sum of the virtual moments of all the forces is zero, whatever be the displacement; and conversely, if this relation hold for all the virtual displacements, the system is in equilibrium.

Virtue. Habit of mind by which duties are performed, accompanied by a disposition toward their performance, and moved by a love of right.

Virus. Originally the specific contagious material obtained in cowpox and used for vaccination, and then the specific contagium of any infectious disease. It has now a wider signification, being applied to any poison causing a morbid process, including pathogenic microbes.

Viscellinus, SPURIUS CASSIUS, d.485 B.C. In Roman Legend, thrice consul; author of an alliance with the Hernici of Campania, dangerous foes of Rome, and of the first agrarian law. Patrician jealousy of this law caused his death by execution.

Visceral Arches AND **Clefts.** See BRANCHIAL ARCHES and BRANCHIAL APERTURES or CLEFTS.

Visceral Hump. Great dorsal development of Gastropod mollusks, which contains the generative organs, liver, etc., and occupies the upper turns of the shell, usually spirally wound.

Vischer, FRIEDRICH THEODOR, 1807–1887. Prof. Tübingen 1837, Zurich 1855, and Stuttgart 1866; essayist and critic of

high rank. *Æsthetik*, 4 vols., 1846–57; *Kritische Gänge*, 7 vols., 1846–66. He pub. also poems, and a novel, *Auch Einer*, 1879.

Vischer, PETER, 1455–1529. German artist in bronze, famous for St. Sebald's tomb in Nuremberg, a relief in the cathedral at Ratisbon, and others in or near Bavaria, and

St. Sebald's Tomb at Nuremberg, by Vischer.

in virtue of these he was reckoned by contemporaries as next to Albert Durer. Little is known of his life. His sons were also distinguished as sculptors and workers in bronze.

Viscidity. Property of a viscous fluid in virtue of which it can, like melted glass, be drawn out into fine threads; *e.g.*, fluid from which a spider spins his web.

Visconti. Lombard house, long supreme in Milan. OTTONE, or OTHO, 1208–1295, became Abp. 1263: his nephew, MATTEO, 1250–1322, was Viscount 1311–22.—GALEAZZO I., 1277–1328, formed an imperial alliance and defeated a papal army.—GALEAZZO II., 1320–1378, founded the Univ. of Pavia and patronized Petrarch.—His son, GIAN, 1347–1402, ruled 1378–1402, became Duke, and enlarged his dominions. The male line ended 1447: the Sforzas succeeded.

Visconti, GIAUBATTISTA, 1722–1784. Prefect of antiquities at Rome from 1768; curator of the museum founded by Clement XIV.—His son, ENNIO QUIRINO, 1751–1818, prof. Paris from 1799, pub. *Iconographie Grecque*, 1808, and *Iconographie Romaine*, 1818–20. *Opere tutte*, 21 vols., 1824.—His son, LOUIS TULLIUS JOACHIM, 1791–1853, was an architect in Paris.

Visconti Venosta, EMILIO, b.1829. Italian Foreign Minister 1863–64, 1866–67, and 1869–76; Senator 1886.

Viscosity. When a fluid is subjected to a deforming force, the strain produced is proportional to the time the force acts. The resistance to this continuous change of form, depending on the velocity of the change, is called viscosity. It varies in amount from that of tar or sealing-wax to that of ether or hydrogen. This term is sometimes applied to an elastic solid, capable of vibrating, to explain the fact that in time the motion ceases, the energy of vibration being converted into heat. This viscosity or imperfect elasticity makes it impracticable to employ lead or zinc in the construction of tuning-forks. Superficial viscosity is the property of the surface films of liquids on account of which frothing may result from agitation, providing the surface tension be not too great. A fluid with infinite viscosity would not differ from a rigid solid (see COEFFICIENT OF VISCOSITY). The discovery of the viscosity of fluids in general is due to Prof. Stokes.

Viscount. In Britain, rank between earl and baron; first bestowed 1440, on John Beaumont.

Vise. Spiral staircase, in the Norman style, with the steps resting upon a continuous spiral vault; subsequently, each step was a single stone, the outer end inserted in the wall, the other end resting upon and forming part of the newel.

Vishnu. Preserver; middle deity of the Hindu Triad. The worship rendered to him in his many avatars or incarnations is the principal form of Hinduism, and is often licentious,

Vishnu as Narayana.

but less gloomy and cruel than that of Siva, the Destroyer. V. is generally represented as a dark-blue man with four arms. His most ardent worshipers are of the middle classes.

Visible Speech. System of symbols designed to represent every possible articulate utterance of the organs of speech. It was devised by Alex. M. Bell and first printed in 1867. The symbols are to a certain extent pictorial of the action of the organs which produce the sound. Consonants are represented by curves which have the outline of the organs they symbolize, and a straight line is the basis of all vowel symbols. With these, the curve and straight line, and their combinations, symbols for all the sounds are made.

Visigoths. See GOTHS.

Vision. Process that permits one to take cognizance of an object through the organ of sight; it involves the transmission of light from the object to the eye, its refraction by the dioptric apparatus of the eye, the exciting of nervous energy by the resulting image, which is conveyed to the brain and is there transformed into a sensation. See SIGHT, SENSATIONS OF.

Vision, DEFECTS OF. Anything that interferes with any factor in the complex process of vision will cause a defect. The media of the eye may not be transparent, there may be disease of the coats of the eye, of the optic nerve, or of the visual centers in the brain, and vision would be deficient for some organic cause; again the dioptric curves may be abnormal, or the muscular apparatus governing either the accommodation or convergence of the eyes may be deficient, and a defect of vision would result from a functional cause.

Vision. In Scripture, presentation, commonly in symbolic form, to the mind of a prophet or seer, of some spiritual truth; usually affecting the sight and hearing, but sometimes only the inner sense.

Visitation, FEAST OF. In R.C. Ch., July 2, commemorating the visit of the Virgin Mary to Elizabeth.

Visitation, NUNS OF THE. Order founded 1610 by St. Francis de Sales and Mme. de Chantal. It became monastic 1618, and spread rapidly, as later in America.

Visitation and Search. See SEARCH.

Visiting Cards. The origin of these can be traced directly in China, where the custom of exchanging cards is universal at New Year. Chinese cards are oblong strips of red paper, inscribed with the name of an individual or shop company. They are carefully preserved and pasted in a conspicuous place in the shop or dwelling through the year, forming a kind of pledge from friend or clansman. It may be inferred from their name that they were originally made of bamboo, and from their resemblance to the message arrow of China that they originated with the latter in the arrow marked with the name or symbol of its owner.

Visp. Village of Vaud, where Swiss peasants defeated the Earl of Savoy 1388.

Vistula. River of Europe, which heads in the Carpathian Mts. of Austro-Hungary, and flows mainly n. across parts of Poland and Prussia to the Gulf of Dantzig, in the Baltic Sea. Length 696 m., drainage area 69,309 sq. m.

Visual Angle. See OPTIC AXIS.

Visualization. Act of calling up a mental picture with such distinctness as to simulate more or less completely an

actual visual percept. Individuals differ greatly in visualizing power, some being able to form such distinct images that they are in effect looking upon the actual object or scene; a few are unable to form any visual image. Nearly every one has the faculty to some extent. See NUMBER FORMS.

Vis Viva. See LIVING FORCE.

Vit, VICENZO DE, 1811–1892. Italian priest, editor of Forcellini's Latin *Lexicon*, 6 vols., 1858–79, and compiler of *Onomasticon*, a list of proper names prior to 400.

Vitaceæ. See AMPELIDACEÆ.

Vitalianus. Pope 657–672. He and Maurus, Abp. of Ravenna, excommunicated each other.

Vitalis, ORDERICUS. 1075–ab.1143. English monk of St. Evroul, Normandy. His *Hist. Ecclesiastica*, extending to 1142, was tr. 1853–56; parts are of value.

Vital Statistics. Statistical information relating to the life history of a collection of individuals, whether an institution, a community, or a nation. It involves the gathering of the facts, their tabulation and certain deductions that may fairly be drawn from the premises furnished. Facts as to birth, marriage, sickness and death are the chief ones sought for. Carefully gathered and properly tabulated, vital statistics are of inestimable value in studying the economic and social condition of a country.

Vitebsk. City of w. Russia, at the junction of the Dwina and Viteba. Pop., 1890, 58,179.

Vitellarium. Special portion of the ovaries of turbellarian worms, insects, etc., which furnishes cells that are wholly transformed into yolk as food for the egg cells.

Vitelline Duct. That leading from the yolk-sac to the embryo in forms that have much food-yolk in the egg, as Reptiles and Birds.

Vitellius, AULUS, 15–69. Eighth Roman emperor; notorious for gluttony; proclaimed Jan. 69 at Cologne by his troops,

Vitellius, from Bust in the Capitoline Museum.

who defeated Otho's but were beaten by those of Vespasian; slain Dec. 21.

Viterbo. Italian town, 42 m. n.w. of Rome, noted for its springs, bishop's palace, and ch. relics. Pop. ab.16,500.

Vitet, LOUIS, 1802–1873. French poet and essayist. *Etudes*, 1864–74.

Vitiligo. Disease of the skin characterized by a deficiency of pigment, causing a well-defined white patch, of which there may be one or many. If on the hairy parts of the body, the hair also becomes white or drops out.

Vitreous. See ELECTRIFICATION.

Vitreous Copper. Chalcocite, Cu_2S.

Vitreous Silver. Argentite, Ag_2S.

Vitrification. Conversion of a material into another having a glassy or vitreous structure. It is assisted by alkalies and heat.

Vitrified Forts. Prehistoric fortifications found in Scotland, built of siliceous stones, which have the inside and in some cases the entire fort vitrified by means of fire and wood ashes.

Vitringa, CAMPEGIUS, 1659–1722. Dutch theologian and voluminous Latin writer; prof. Franeker from 1683. His commentary on Isaiah, 1714–20, is still valued.

Vitriols. Hydrous metallic sulphates. Some of the vitriols are found in nature in small quantity as products of the alteration of metalliferous minerals, as copper vitriol, chalcanthite, $CuSO_4+5H_2O$; iron vitriol, melanterite, $FeSO_4+7H_2O$; zinc vitriol, goslarite, $ZnSO_4+7H_2O$.

Vitruvian Scroll. Scroll work of convolved undulations, used in Classical Architecture.

Vitruvius, POLLIO, 1st cent. B.C. Latin writer on architecture. His work was tr. 1771–91 and 1826.

Vittæ. Oil-tubes of the fruit of the *Umbelliferæ*.

Vittoria. Town of e. Sicily; site of a defeat of Arabs by Roger I. 1092.

Vittoria. Town of n. Spain; site of Wellington's victory over the French commanded by Joseph Bonaparte and Mar-

Vittoria.

shal Jourdan, June 21, 1813. Ab.75,000 were on each side. Jourdan lost all his artillery.

Vittoria, ALESSANDRO, 1525–1608. Italian architect.

Vittoria, TOMASO LUDOVICO DA. ab.1540–1608. Spanish ch. composer; colleague and friend of Palestrina.

Vitus, ST. Sicilian martyr ab.300; patron of dancers and actors; invoked by German peasants to cure the nervous disease named from him, and to insure health in general. His day is June 15.

Vivaldi, ANTONIO, d.1743. Italian violinist. His most important compositions are those for violin, but he also wrote 29 operas, chiefly for Venice, where he was director of the Conservatorio della Pietà. J. S. Bach transcribed some of his violin concertos for clavier and organ.

Vivanco, MANUEL IGNACIO DE, 1806–1873. Peruvian revolutionist, in power 1843.

Vivandiere. Woman sutler, chiefly in French marching regiments; celebrated in Ouida's and other novels.

Vivarini, ANTONIO, d.1470, and BARTOLOMMEO, d. ab.1500. Venetian painters.

Viverridæ. Family of *Æluroidea*, having sharp muzzles, long tails, spotted or banded marks in the fur, and a semiplantigrade mode of progression. There are four premolars

Zebra Mongoos (*Herpestes fasciatus*).

and two tuberculated molars in each series. Here belong the Civet cats, noted for the musky secretion of their anal glands, used as a pomade. The Genet is a variety domesticated in Europe, having rudimentary scent-glands. Allied is the Ich-

neumon (*Herpestes*), domesticated in Egypt, which lives on snakes, lizards, crocodile eggs, etc., and the Mongoos of India, celebrated for killing poisonous snakes. The *Cryptoprocta* of Madagascar belongs to a special subfamily, as does *Proteles*, the Aard-wolf of S. Africa, about as large as a fox, with feet as in dogs, a body like the hyena, and dentition truly viverrine.

Vives, JUAN LUIS, 1492–1540. Spanish humanist, tutor to Princess Mary of England 1523–28; teacher at Bruges from 1529; Latin writer on Aristotle, Virgil, and St. Augustine. *Linguæ Latinæ Exercitatio*, 1539. *Works*, 8 vols., 1782.

Viviani, DOMENICO, 1772–1840. Prof. of Botany in Genoa. *Annali di Botanica*, 1802; *Floræ Corsicæ*, 1824–30.

Vivianite. $Fe_3P_2O_8+8H_2O$. Hydrous mineral, sometimes called blue iron earth, containing iron and phosphorus; product of mineral alteration, and, when associated with iron ores, an objectionable impurity on account of the phosphorus.

Vivien de St. Martin, LOUIS, 1802–1897. French writer on geography and history.

Vivier, JACQUES DU, 1720–1793. French botanist, long in Peru. *Nova genera et species plantarum*, 1788–90; *Sertum Peruvinum*, 1792.

Viviparous. 1. Giving birth to developed young; as opposed to OVIPAROUS (q.v.). All animals reproduce by means of eggs which, in viviparous forms, hatch within the mother. 2. Plants whose seeds or bulblets begin to grow before separation from the parent plant.

Vivisection. In Physiology, the employment of living animals to assist in solving problems relating to the performance of the normal functions of an organ, the nature and effects of diseased conditions, or the effects of remedies. Animal experimentation has aided in making many valuable discoveries for the benefit of mankind.

Vizcaino, SEBASTIAN, ab.1550–1615. Spanish seaman, who explored the coast of California and Oregon 1602–3, and went to the Philippines and Japan 1610.

Vizier. Mohammedan dignitary; usually, since 752, chief minister of a sovereign. The Grand Vizier was head of the Sultan's councilors 1327–1878.

Vladikavkaz. Russian town, n. of the Caucasus, commanding the pass s. to Tiflis. Pop., 1892, 46,345.

Vladimir. Old town of Russia, 120 m. n.e. of Moscow. Its Kremlin and Golden Gate date from ab.1150–60. Pop. 18,305.

Vladivostok. Town of s.e. Siberia, on the Japan Sea; founded 1861. It has a fine harbor, and is of naval importance. Pop. ab. 15,000.

Vocal Music. Generally, all music written to be sung by the human voice; strictly, it does not include mixed forms, as songs, cantatas, oratorios, masses, and operas, in which the voices are accompanied by instruments. Its most perfect type is the so-called a capella music of the church, which reached its culmination in Palestrina.

Voclupiaceæ. Natural order of flowering plants, of the class *Angiospermæ*, subclass *Dicotyledons*, and series *Polypetalæ*, comprising 7 genera and ab. 130 species, distributed through the tropical regions of America as far as Panama.

Voetius, GYSBERTUS, 1588–1676. Prof. Utrecht 1634; severe theologian, who wrote much against the Arminians or Remonstrants.

Vogdes, ISRAEL, U.S.A., 1816–1889. Brig.-gen. U. S. Vols. 1862–66, serving in Fla., S. C., and Va.

Vogel, ALFRED, 1829–1890. Prof. Dorpat 1866, and Munich 1886; writer on pathology. *Kinderkrankheiten*, 1860.

Vogel, EDUARD, 1829–1856. German explorer in n. central Africa from 1853; murdered in Wadai.

Vogel, JULIUS, b.1835. English official in Australia 1852–69, and New Zealand 1869–88.

Vogelweide. See WALTHER UM WOGELWEIDE.

Voghera. Ancient town of n.w. Italy, 16 m. s.w. of Pavia. Pop. ab.13,000.

Vogler, GEORG JOSEPH, 1749–1814. German musician and teacher, celebrated in one of Browning's noblest poems, *Abt Vogler*, 1864. He elaborated a new system of fingering, contrived to learn the violin and other instruments without a teacher, and founded schools of music at Mannheim, Stockholm and Darmstadt. Weber and Myerbeer were among his pupils. He excelled in the department of harmony.

Georg Joseph Vogler.

Vogt, CARL, 1817–1895. Prof. of Geology at Geneva from 1852. *Lectures on Man*, tr. 1864.

Vogüé, CHARLES JEAN MELCHIOR, MARQUIS DE, b.1829. French Orientalist; Academician 1868; envoy to Turkey 1871, and to Austria 1873.—His relative, EUGENE MARIE MELCHIOR, VICOMTE, b.1848, is prominent as a critic and in the Neo-Christian movement. *Le Roman Russe*, 1886; *Russian Portraits*, tr. 1896.

Vogué, JEAN PIERRE DE, 1570–1630. Flemish soldier, treasure-hunter in the wilds of Brazil.

Voice. Appreciable sound produced by the air, when driven from the lungs, throwing the inferior ligaments of the glottis into vibration. See SINGING, SOUND, and TIMBRE.

Voice, LOSS OF. See APHONIA.

Voight, FRIEDRICH SIEGMUND, 1781–1850. Prof. Jena. *Botanischen Kunstsprache*, 1803; *Praktischen Botanik*, 1850.

Voir Dire. Preliminary examination of a proposed witness to determine his competency.

Voisin, FRANÇOIS PHILIPPE, b.1821. French engineer, director Suez Canal 1861–70; prof. Paris 1873–81. *Ports de Mer*, 1883; *Travaux à l'Embouchure du Danube*, 1893.

Voisin, PIERRE JOSEPH, 1759–1821. French writer on Guiana.

Voiture, NICOLAS AUGUSTE, ab.1764–1821. Chilian-French writer on Patagonia 1812–14; literary historian of S. America 1818.

Voiture, VINCENT, 1598–1648. French author of lyrics and epistles. *Works*, 1650; *Lettres*, 1880.

Vokes, ROSINA (MRS. C. CLAY), 1854–1894. English actress, often in the U. S.

Volapük. Universal language, invented 1879 by J. M. Schleyer, a German priest of Baden. It has 37 letters, each having always the same sound. It is simple and uniform in structure and arrangement, and easily learned. A grammar and dictionary were pub. 1880. It has been used in many books. Though received with some enthusiasm at first, interest in it seems to have declined.

Volatile Oils. Vegetable oils which boil without decomposition, as oil of turpentine. They may be hydrocarbons or compounds of more complicated nature.

Volcano. To the modern geologist, opening extending down into the earth and providing a way for the escape of molten and gaseous matter from below. The outbreak is in all probability caused by the access to heated rock of water, which, being suddenly converted into steam, develops enormous explosive force and produces an eruption. The lava forced up from below soon opens a way through the porous side of the crater and flows down, while vast quantities of the same material are violently blown from the crater, and, being

thereby reduced to powder, produce the volcanic dust, the heavier part of which falls again on and near the crater, while the lighter portion rises and floats away in the higher regions of the atmosphere, where much of it probably remains for months or even years. The volcano consequently builds up for itself a cone of the material thrown out of the crater, and forms a mountain of eruption. The study of volcanic lavas has thrown great light on the history of the primitive rocks of the globe, and the results of furnace experiments have in turn elucidated the formation of lavas by showing most of the volcanic products in their slags. The smoke often said to attend a volcanic eruption, is mostly the dust. The flame is chiefly the glare of the lava in the crater, reflected from the clouds, and the rain is in part at least due to the condensation of erupted steam. Some of the most remarkable outbreaks on record are the following: those of Ætna from time immemorial, and of Vesuvius since 79; that at Tomboro in Sumbawa 1815, when nearly the whole population of the island was destroyed and the explosions were heard 1,000 m. away; the great eruption of the Skapta Jokul, in Iceland, 1783, when 10,000 persons and immense numbers of cattle perished and a thick haze overhung w. Europe for some months; that of Jorullo in Mexico, 1759, when a volcano was suddenly elevated to a height of 16,000 ft. in the midst of a vast plain previously covered with fertile fields of sugar-cane and indigo; that of Galung-Gung, in Java, 1822, when, in the midst of a dense forest in a fruitful and thickly peopled region, immense torrents of boiling water and mud were poured forth until in five hours not a trace of the villages and plantations remained. More recent still is the tremendous eruption of Krakatoa, in the same region, 1883, the details of which are yet fresh in the memory. The report of the committee sent out by the Royal Society of London forms a valuable and permanent record of this outbreak, the concussion of which was traced by the barometer three times round the globe before it died out, and the sunset glows produced by the dust were brilliant for months. The destruction of the pink and white terraces of Rotarua, New Zealand, 1886, and the eruption of the Mud Volcano of Bandaisan in Japan 1895, are among the most recent illustrations of volcanic action. Whymper estimated that in the eruption of Cotopaxi in 1880 2,000,000 tons of dust were discharged into the atmosphere. It was of an ashen color and consisted of fragments of lava and feldspar; the smallest particles were $\frac{1}{25000}$ of an inch in diameter.

Voles. Rodents of the subfamily *Arvicolinæ*, of section MYOMORPHA (q.v.). In America they are called Field and Meadow Mice. Many species are included. They range from the Arctic regions to Texas, living in burrows in low, moist

Water Vole (*Arvicola amphibius*).

lands; some species are aquatic. They are small, not exceeding 5 in. in length, but very prolific, and destructive to grain and crops. They differ from mice in having short blunt muzzle, short limbs and tail, and low, nearly hidden ears.

Volga. Longest river in Europe. It heads in the Ural Mts. and the plains of central Russia, and flows into the Caspian Sea through an extensive delta. Length 2,330 m., drainage area 517,272 sq. m. It is of vast commercial importance, being navigable, except in winter, through nearly its entire course, as are many of its tributaries.

Volition. Active aspect of consciousness. It is commensurate with COGNITION and FEELING (q.v.) and interdependent with them. Every state of consciousness involves a volitional or conative element. Volition is based on impulse, and is itself impulse regulated and directed toward a recognized end, this end being felt as desirable. It follows then that volition or will involves knowledge and feeling: there must be knowledge of the end and the end must involve an emotional element with consequent interest. In a concrete volitional act, then, we have a state of desire followed by determination and choice between competing desires, and these become the motive of the action. If the action be unimpeded the will may be said to be free. See WILL.

Volk, LEONARD WELLS, 1828–1895. Sculptor of Chicago. His works are chiefly portrait-busts. — His son, STEPHEN ARNOLD DOUGLAS, b.1856, is a sculptor in Minneapolis.

Volkelt, JOHANNES, b.1848. Prof. Basel 1883, Würzburg 1889, and Leipzig 1894; writer on philosophy and pedagogy.

Volkmann, FRIEDRICH ROBERT, 1815–1883. Prof. of Harmony and Counterpoint at Pesth 1858; composer of two symphonies, D minor and B-flat major, three serenades for string orchestra, of which one in D minor with violoncello obbligato is much liked in the U. S., six string quartets, two overtures, and many miscellaneous pieces.

Volkslieder. German popular songs, 1300–1600.

Vollenhove. Town of Overyssel, on the Zuyder Zee, 12 m. n.w. of Zwolle. Here the Frisians defeated Rheinhold of Guelders 1323. Pop. 1,543.

Vollon, ANTOINE, b.1833. French painter, eminent especially as a colorist.

Volney, CONSTANTIN FRANÇOIS CHASSEBŒUF (BOISGIRAIS), COMTE DE, 1757–1820. Last of the French philosophes; Deputy 1789. His famous *Ruins*, 1791, brilliant, cynical, and anti-religious, was extracted from *Voyage in Egypte et en Syrie*, 1787. Though a republican, he narrowly escaped the guillotine. In 1794 he befriended Bonaparte, and while in the U. S., 1795–99, predicted the successive steps of his Italian campaign. He became Senator 1799, Academician 1803, Count 1808, and Peer 1814. *Tableau du Climat et du Sol*, 1803. *Works*, 8 vols., 1820–26.

Volsci. Italian tribe s.e. of Rome, long its enemies; conquered and made citizens ab.338 B.C.

Volscian Language. That of the Volscians, related to the Umbrian.

Volsinii. Ancient name for Bolsena, a town of Italy ab. 20 m. n.w. of Viterbo. It was the capital of the Volsci, and taken by the Romans 280 B.C. Pop. ab. 3,000.

Volsk. Town of e. Russia, on the Volga, 70 m. n.e. of Saratoff. Pop., 1890, 39,995.

Volsungs. Legendary race sprung from a grandson of Odin; celebrated in sagas.

Volt. Practical unit of difference of electrical potential or electromotive force; named for Volta. It is equal to 10^8 C.G.S. electromagnetic units. A megavolt is 1,000,000 volts; microvolt is one millionth of a volt. The electromotive force of a Daniell's cell is about one volt.

Volta, ALESSANDRO, 1745–1827. Prof. of Natural Philosophy at Pavia 1774–1804; pioneer electrician; inventor of the Voltaic pile; made count and senator by Bonaparte. *Works*, 5 vols., 1816.

Volta, LAW OF. Whenever two substances at the same temperature are brought in contact, a finite difference of potential is established between them, independent of their dimensions, form, extent of the surfaces in contact, and absolute value of the potential upon either of them, and dependent only upon the chemical or physical characters of the substances and the medium in which they are immersed.

Voltaic Arc. See ELECTRIC ARC.

Voltaic Pile. Apparatus contrived 1800 for producing electrification by metallic contact. Volta maintained that the effects observed by Galvani were due to the contact of two metals; his pile consists of an alternating series of disks of copper, zinc and wet cloth, many times repeated. If the lower copper and the upper zinc of a considerable series be connected by a wire, a small spark may be observed at the terminals. This experiment excited great interest. Volta described soon afterward the "crown of cups" or series of cups in a circle, containing salt water; in each of

Voltaic Pile.

these was immersed a plate of copper and one of zinc, the copper of each cup being joined with the zinc of the next,

except at the ends. The difference of potential developed at the terminals in both these cases is proportional to the number of pairs. See RITTER'S PILE.

Voltaire, FRANÇOIS MARIE AROUET, 1694–1778. French philosopher, poet, dramatist, critic, essayist, letter-writer, and novelist. His most noted work of fiction is *Candide*, 1759; of history, *Charles XII.*, 1731. Among his tragedies *Zaïre*, 1732, and *Mérope*, 1743, were most highly regarded. His mock-heroic poem, *La Pucelle*, 1730–39, is a travesty of everything sacred: the *Henriade*, 1728, is in another vein. His correspondence is most voluminous, and universal in its topics. He was the acknowledged head of European literature in his later years, and wielded enormous influence, which he used nobly in defense of freedom, as in the cases of Calas and Sirven. His character was a strange mixture of virtues and vices: his hatred of priests, of supernaturalism, and apparently of all forms of visible religion, freely displayed in his *Dict. philosophique*, 1764, and elsewhere, and formulated in the watchword, *Écrasez l'infame*, earned much posthumous no less than contemporary obloquy. He was imprisoned 1716–17 and 1726, in England 1726–29, at Cirey in Champagne 1734–49, in Russia 1750–53, and at Ferney near Geneva from 1758, till shortly before his death, when he received an almost idolatrous ovation in Paris.

Bust of Voltaire, by Houdon.

Voltameter. Instrument for measuring the strength of an electric current by means of certain electrolytic effects which it produces. If the current be passed through acidulated water between two platinum electrodes so arranged that the gases resulting from the decomposition of the water are collected and measured, the current strength is proportional

Voltameter.

Classen's Voltameter.

to the quantity of the gases set free. Copper and silver voltameters indicate the strength of the current by the amount of copper or silver deposited in a given time from a solution of copper sulphate or silver nitrate. According to Rayleigh, a current of one ampere sets free 0.000010352 gram of hydrogen, and 0.001118 gram of silver per second.

Volt-Ampere. See WATT.

Volt-Coulomb. See JOULE.

Volterra. Italian town, 35 m. s.w. of Pisa; notable for its Etruscan antiquities. Pop. ab. 7,000.

Volterra, DANIELE DA, 1509–1566. Italian painter, employed to drape the nude figures in Michelangelo's *Last Judgment*. His fine fresco of the *Descent from the Cross* is in Trinità de' Monti, Rome.

Voltmeter. Instrument for determining the electromotive difference of potential between two points of an electric circuit. The indications are given directly in volts by an in-

Thomson's Voltmeter.

dex which moves over an empirically graduated scale. Voltmeters have been devised by Thomson, Ayrton and Perry, Deprez, and Carpentier.

Volume. Limited space in three dimensions, as subject to measurement, or result of such measure. The primary unit of volume is a cube whose edge is a linear unit.

Volumenometer, VOLUMOMETER, or STEREOMETER. Instrument for measuring volumes; *e.g.*, that of an irregular solid. It consists of two glass tubes placed vertically against two scales. The tubes are joined at the bottom by a pipe with a tap in it. One of them is open at the top; the top of the other is bent at right angles, and to it is attached a small spherical flask; at the bottom of this tube is a second tap. The tubes are partly filled with mercury, the height of which may be regulated by the taps at the bottom. The volume of the flask and that of the tube down to a certain mark must first be found, then, by introducing the solid into the flask and repeating the experiment, the volume of the solid is known. This method is applicable for finding the true volume of the material of a porous substance, as a piece of wood; thus the real density of wood may be found. This instrument may be used also for experimentally verifying the law of Boyle.

Volumenometer.

Volumetric Analysis. Branch of quantitative chemical analysis, in which the quantity of a constituent present in a compound is found by running in a known amount of some substance, in form of a standardized solution, which will convert the constituent into some other form. The end of the reaction is usually shown by a change in color or the deposition of a precipitate.

Voluntary Conveyance. Transfer of property without a valuable consideration. It may be set aside as fraudulent against creditors of the grantor.

Voluntaryism. Separation of Ch. and State, and support of clergy and services by free-will offerings of their adherents; system prevalent in the U. S., and urged or desired by British Nonconformists.

Volunteers. Term applied to a portion of the military forces of the U. S. employed during the Civil War; so called

because they engage in military service by voluntary consent, as shown by their contracts of enlistment. Volunteers differ from the militia, in that they can be called into service for a longer period than nine months, to which the service of the militia is limited by law; they differ from the regular army in that they are employed for a definite period, and do not form a part of the permanent military establishment. It has been the practice of the U. S. to permit the Governors of States to appoint the commissioned officers of volunteers, instead of having the President exercise this duty, as in the case of regular officers; in this respect volunteers are assimilated to the militia force, from which they are drawn. The aggregate volunteer force called for in the Civil War, counting in it the various militia forces, amounted to 2,763,760 men; the number furnished by the loyal States and Territories was 2,772,408; in addition, there were 86,724 who paid commutation and were exempted. The aggregate employed, reduced to a three years' service standard, was 2,320,272 men.

Volunteers of America. Organization, similar to the Salvation Army, inaugurated under Commander and Mrs. Ballington Booth, March 9, 1896. It had, Dec. 1, 1896, 170 officered posts, 600 commanding officers, 8 regiments of 16 battalions, and 150 staff officers. Its weekly paper had a circulation of 20,000 and its monthly paper of 10,000 copies.

Volusenus. See WILSON, FLORENCE.

Volute. Spiral scroll, characteristic of the Ionic capital; also used in the Corinthian and Composite orders, and frequently retained in the Norman capitals. In the 13th century it takes the form of foliage and is lost.

Volutidæ. See RHACHIGLOSSA.

Volva. Membrane which incloses young toadstools in certain species of *Agaricini*.

Volvocineæ. Order of *Algæ*, including the common *Volvox globator*, and some other species.

Vomer. Bone of the face placed vertically in the nose, forming the bony partition between the nostrils.

Vomiting. Violent expulsion of the contents of the stomach, sometimes also of the upper portion of the intestines, through the mouth. It is usually preceded by nausea, and the process is a complex one, involving the dilation of the opening of the stomach into the gullet, a pressure upon the stomach by the abdominal walls, and an expiratory effort of the lungs. These failing to act in harmony the effort at vomiting results only in retching.

Vomito Negro. Blackish substance, chiefly disorganized blood, vomited in cases of yellow fever; also an acute attack of yellow fever.

Vondel, JOOST VAN DEN, 1587–1679. Dutch lyric and dramatic poet of high rank. Several of his 33 plays are based on Greek models. His *Lucifer*, 1654, may have given Milton hints for *Paradise Lost*.

Voodoo Worship. Secret African orgies, with hideous magical rites, of malignant influence among negroes of Haiti, La., and elsewhere.

Voorhees, DANIEL WOLSEY, 1827–1897. M.C. from Ind. 1861–66 and 1869–73; U. S. Senator from 1877; advocate of greenbacks and free silver.

Vopiscus, FLAVIUS, ab.300. Biographer of the emperors from Aurelian to Carinus, 270–285, in the *Augustan History*.

Voragine, JACOBUS DE. See GOLDEN LEGEND.

Voronej. Town of s. central Russia, on the Voronej, near the Don. It has a good trade. Pop., 1892, 56,403.

Vorosmarty, MIHALY, 1800–1855. Hungarian dramatist and poet. *Solomon*, 1821; *Kant*, 1825; *Eger*, 1827.

Vorstius, CONRAD, 1569–1622. German Arminian divine, prof. Leyden 1610–12; condemned at Dort 1619.

Vortex Ring. See MATTER.

Vorticella. Bell-shaped Infusorian of the group *Peritricha*. It is usually fastened to a retractile stalk, and in the related genus *Zoothamnium* forms extensive colonies. It is very common, is known as the bell animalcule, and is easily studied with moderate magnification.

Vortigern. British prince who is said to have invited the Saxons into Britain to help him against the Picts. They, however, soon became more dangerous than the Picts

Vos, CORNELIS DE, 1585–1651. Flemish painter of distinction, especially in portraits and religious pieces. A fine example is

Abraham Grapheus, by C. Vos.

in the Metropolitan Museum of New York.—His brother, PAUL, 1590–1678, was a painter of animals, and hunting scenes.

Vos, GEERHARDUS, D.D., b.1862 in Holland. Prof. Princeton 1894; theological writer.

Vos, MARTIN DE, 1530–1603. Flemish painter.

Vose, GEORGE LEONARD, b.1831. Prof. Bowdoin 1872, and Mass. Institute of Technology 1881–86; writer on engineering.

Vosges Mts. Range in e. France and Alsace: greatest elevation 4,700 ft.

Vosmaer, CAREL, 1826–1888. Dutch poet and writer on art. *Rembrandt*, 1868–77; *Franz Hals*, 1874; tr. Homer, 1878–88; *Amazone*, 1880, tr. 1884.

Voss, JOHANN HEINRICH, 1751–1826. Prof. Heidelberg 1805; translator of Shakespeare, 1818–29, and of sundry Greek and Latin poets, and most memorably of Homer, 1793; engaged in sundry controversies, as in *Antisymbolik*, 1824–26. His best poem is *Luise*, 1795.

Vossius, GERARD JAN, 1577–1649. Prof. Leyden 1615, Amsterdam 1632; famous for learning. *Hist. Pelagiana*, 1618; *Ars Rhetorica*, 1623; *Aristarchus*, 1635; *Etymologicum Linguæ Latinæ*, 1662.—His son, ISAAC, 1618–1689, was in Sweden 1648–58, and in England from 1670. He wrote on classical subjects, and ed. *Catullus* and several epistles of Ignatius.

Vote. Will of a member of a body, formally manifested toward the decision of a question by the body as a whole, is his vote; and the aggregate expressions of the will of the members is the vote of the body. See BALLOT.

Voting-Machine. Device which mechanically records votes and also counts them automatically. Its chief advantages are: secrecy, as the ballot cannot be identified; simplicity of voting and of counting votes; impossibility of repeating; rapidity; cheapness; and impossibility of fraud in counting. Their use was legalized in N. Y. in 1892, Mass. and Mich. in 1893, and Conn. in 1895. Advocates of the Australian secret ballot have indorsed this method of voting.

Voucher. 1. Obsolete legal proceeding in an action to recover land. 2. Writing showing the payment of money.

Vouet, SIMON, 1590–1649. French painter of portraits and religious subjects.

Voussoir. Wedge-shaped stones of which an arch is constructed. The crown of the arch is the keystone; the lowest, immediately above the impost, is the springer or springing-stone.

Vowels. See PHONETICS.

Vows. Promises to devote one's life or belongings, or any part thereof, to God; familiar from remote antiquity, under motives of gratitude, fear, or hope; admitted and largely employed by R.C. Ch., especially with religious orders.

Voysey, CHARLES, b.1828. English vicar, tried for heresy 1869, deprived of his living 1871.

Vries, ADRIAAN DE, 1601–1643. Dutch portrait painter.

Vriese, WILLEM HENDRICK DE, 1807–1862. Prof. of Botany in Leyden. *Plantenkunde voor Apothekers en Artsen*, 1835–38; *Hortus Spaarn-Bergensis*, 1839; *Agave Americana*, 1847; *De Kinaboom mit Zuid-America*, 1855; *Tuinbouw-Flora van Nederland*, 1855–56.

Vroom, PETER DUMONT, LL.D., 1791–1873. Gov. of N. J. 1829–31 and 1833–36; M.C. 1839–41; U. S. Minister to Prussia 1853–57. His *Reports of N. J. Supreme Court*, 1866–73, were continued by his son, GARRET DORSET WALL, b.1843.

Vug. Small cavity in a mineral vein, lined with crystals; resembling a GEODE (q.v.) in general appearance, though formed under different conditions.

Vuillefoy, DOMINIQUE FELIX DE, b.1841. French painter.

Vulcan. Roman god of fire, identified by poets with the Greek Hephæstus.

Vulcan. Hypothetical planet, believed by Leverrier to revolve about the sun within the orbit of Mercury.

Vulcanite. See CAOUTCHOUC and EBONITE.

Vulcanology. Science which considers volcanoes. This, like Seismology, has been closely studied in Italy and Japan. Its field of work is the volcano, both static and dynamic.

Vulgate. Latin version of the Bible, used in R. C. Ch. The O. T., except the Psalms, was tr. from the Hebrew by St. Jerome 390–405, and in time displaced an earlier rendering: the N. T. he revised from one of unknown origin.

Vulpes. See CYNOIDEA.

Vulpinite. Variety of the mineral ANHYDRATE (q.v.), found at Vulpino in n. Italy. It takes a good polish and is sometimes used for decorative purposes.

Vulpius, CHRISTIAN AUGUST, 1762–1827. German romancer and playwright. *Rinaldo Rinaldini*, 1797.—His sister, JOHANNA CHRISTIANE SOPHIE, 1765–1816, was Goethe's wife from 1806.

Vultures. Large carrion-eating birds of prey. Those of the Old World differ from those in the New in several particulars; thus, the hind toe of the former is on the level with the other toes; the partition between the nostrils is not perforated as in American Vultures; the tarsi are shorter; and they carry food to their young in their claws and not in their beaks. They constitute a subfamily (*Vulturinæ*) of the *Falconidæ*, while the American Vulture forms the family *Cathartidæ*. Examples of the latter are the CONDOR, TURKEY BUZZARD (q.v.), Carrion-crow or Black Vulture, and the King Vulture, which haunts jungles from Mexico to Paraguay, and is white, with the long tail and wing-feathers black, the head lemon and scarlet with orange caruncles. Examples of the former are the Bearded Vulture or LAMMERGEYER (q.v.), and

Bald-Headed Vultures (*Vultur calvus*).

the Egyptian or White Vulture (see PHARAOH'S CHICKENS). Europe has four species, three of which rival the Condor in size. The crested Black Vulture ranges from China through n. Africa. It builds large nests in trees on mountain-tops, where it rears a single young. The Griffon is black, with white tail and wing feathers. Vultures find their food by sight.

Vulturidæ. See VULTURES.

Vyazemski, V. V., PRINCE, d.1892. Russian scholar, philanthropist and ascetic, who freed his serfs 1850, gave them his lands, and anticipated the principles and practices of Count L. N. Tolstoi.

W

Waagen, GUSTAV FRIEDRICH, 1794–1868. Prof. Berlin 1844; art critic. *Kunstwerke und Künstler*, 5 vols., 1837–45; *Treasures of Art*, tr. 1854–57.

Waahoo. See BURNING-BUSH.

Waal. Arm of the Rhine. in s. Gelderland; called the Merwede after its junction with the Maas.

Wabash. Branch of the Ohio, which rises in w. Ohio, flows w., s.w., and s. through Ind., and forms part of the boundary between Ind. and Ill. Length 550 m., drainage area 31,500 sq. m. It is navigable to its forks.

Wabash College. At Crawfordsville, Ind.; opened 1833, chartered 1834. It offers 3 courses, leading to the degrees of A.B., Ph. B., and B.S. Endowment ab. $500,000. Teaching staff 17, students 192, of whom 115 are collegiate; library 33,000 vols. Non-sectarian, but closely affiliated with the Presb. Ch.

Waccama. River of N. and S. Carolina joining the Great Pedee opposite Georgetown, 10 m. from the Atlantic, after a course of 100 m.

Wace, ab.1112–ab.1184. Author of two Norman-French metrical romances, the *Brut* and *Roman de Rou*.

Wace, HENRY, D.D., b.1836. Prof. King's Coll., London, 1875, principal since 1883; preacher at Lincoln's Inn from 1880; joint ed. *Dict. Christian Biography*, 1877–87, and other works. *Foundations of Faith*, 1879; *Evidences*, 1886.

Wachusett Mountain. In Worcester co., Mass. Elevation 2,018 ft.

Wackernagel, JACOB, b.1853. Prof. Basel; writer on philology.

Wackernagel, KARL EDUARD PHILIPP, D.D., 1800–1877. German hymnologist. His *Deutsche Kirchenlied*, 5 vols., 1864–77, is of historical importance.

Waco. Capital of McLennan co., Tex.; on the Brazos; chartered 1850; seat of Baylor Univ. and of two colleges; noted for its artesian wells and exports of cotton. Pop., 1890, 14,445.

Wad. Indefinite mixture of the oxides of several metals, as iron, copper, cobalt, and manganese, occurring in earthy accumulations, and often in quantity to have value as an ore; then known as bog manganese or earthy cobalt. See MANGANESE ORES.

Wadai. Arab state of the Soudan, n. central Africa, w. of Darfur; powerful in n. central Africa. Area ab.150,000 sq. m., pop. ab.3,000,000. Capital Abeshr.

Waddel, JAMES, D.D., 1739–1805. Presb. minister in Va.; noted for eloquence; celebrated by Wm. Wirt as "the blind preacher."

Waddell, JAMES IREDELL, 1824–1886. Confederate naval officer. As commander of the *Shenandoah*, 1864–65, he sunk or burned 32 vessels, chiefly whalers.

Waddell, MOSES, D.D., 1770–1840. Teacher in S. C. 1804; pres. Univ. Ga. 1819–29.—His son, JOHN NEWTON, D.D., LL.D., b.1812, was prof. and pres. of colleges in Miss. and Tenn. up to 1874.

Wadding, LUKE, 1588–1657. Irish historian of the Franciscans; prof. at Salamanca and Rome; editor of *Duns Scotus* 1639. *Annales Ordinis Minorum*, 8 vols., 1626–40.

Waddington, GEORGE, D D., 1793–1869. Dean of Durham 1840. *Hist. Ch.*, 1833; *Hist. Reformation*, 1841.

Waddington, WILLIAM HENRY, 1826–1894. French Deputy 1871; of English family and education; Senator 1876–85; Foreign Minister 1876–77; Pres. Council 1879; Envoy to England 1883–92; writer on numismatics and archæology.

Wade, BENJAMIN FRANKLIN, 1800–1878. U. S. Senator from Ohio 1851–69; Republican leader; acting Vice-Pres. 1865; Commissioner to San Domingo 1871.

Wade, GEORGE, 1668–1748. British general, commanding in Scotland 1715–30; maker of roads in the Highlands.

Wade, SIR THOMAS FRANCIS, 1818–1895. English envoy to China 1871; knighted 1875.

Waders. Designation often applied to the whole order of birds *Grallatores*, but really only appropriate to some of them, the more aquatic in their habits, as Herons, Snipes, and Rails. They have long legs and beaks, the latter of different forms, varying with the nature of the food.

Characteristic Features of Waders:
1, Head and foot of Common Snipe; 2, Head and foot of Ringed Dotterel; 3, Head and foot of Common Godwit; 4, Head and foot of Curlew.

Wadham, NICHOLAS, ab.1536–1610. Founder of Wadham Coll., Oxford.

Wadsworth, ALEXANDER SCAMMELL, U S.N., 1790–1851. Captain 1825, Commodore 1834.—His father, PELEG, 1748–1829, was a Revolutionary officer, and M.C. from Me. 1793–1807.

Wadsworth, JAMES SAMUEL, 1807–1864. Brig.-gen. U. S. Vols. 1861; Republican candidate for Gov. of N. Y. 1864; distinguished at Fredericksburg and Gettysburg; killed in the Wilderness, Va.

Wadsworth, MARSHMAN EDWARD, b.1847. Teacher of Mineralogy at Harvard 1874–85; Director Mich. Mining School 1887; State Geologist of Mich. 1888; writer on Western geology.

Wafer, LIONEL, ab.1640–ab.1705. English surgeon, and traveler; on the Isthmus of Darien 1680–84. *New Voyage*, 1699.

Wafers. Thin disks of bread, used in R. C. and Anglican churches for Holy Communion.

Wage-fund Theory. Doctrine, now generally discredited, that there is in any country, at any time, an amount of wealth set apart by economic forces for the payment of wages, and that this sum is divided among all the laborers at work in that country, making the average rate of wages equal to the result of this division, unaffected by the action of government, employers, or workmen themselves.

Wager. Agreement that property shall belong to one or other of different parties on the occurrence of an uncertain event; valid in common law, but generally declared illegal by modern decisions or statutes.

Wager Policy. One in which the party assured has no

interest in the thing assured, and could not sustain any loss by the event insured against if he had not made such wager.

Wages. That share of the general product of industry which goes to laborers as remuneration for their services.

Wages, LAW OF. Statement of the economic reason for the prevailing rate of wages. None is generally accepted now, but numerous such generalizations have been proposed and received with favor; as the wage-fund theory, the "iron law" of wages of Ricardo, and the residual theory.

Wagner, ADOLF, b.1835. Political economist, prof. Dorpat 1864, Freiburg 1868, and Berlin 1870; at first a free-trader, later a leading State socialist. *Die Geld und Kredit Theorie der Peelschen Bankakte*, 1862; *System der deutschen Zettelbankgesetzgebung*, 1870; *Lehrbuch der Politischen Oekonomie*, 1871.

Wagner, JOHN, M.D., 1791–1841. Surgeon of Charleston. Eminent as an operator; prof. S. C. Medical Coll. from 1829.

Wagner, MORITZ FRIEDRICH, 1813–1887. Bavarian traveler and author, prof. Munich 1860. *Persia*, tr. 1854.—His brother,

RUDOLF, 1805–1864, prof. Erlangen 1833, and Göttingen 1840. *Anatomie*, 1834, tr. 1845; *Physiologie*, 4 vols., 1842–53.

Wagner, WEBSTER, 1817–1882. American inventor of sleeping cars 1857–58, and drawing-room or palace cars 1867.

Wagner, WILHELM RICHARD, 1813–1883. German dramatist, philosopher and musician, reformer of the opera, or regenerator of the lyric drama; one of the most striking figures in modern artistic history. He had no thorough academic training. He began his career 1832 with an incomplete opera, *Die Hochzeit*. While chorus-master at Würzburg, 1833, he wrote *Die Feen*, which was revived at Munich 1888. In Magdeburg he composed and brought forward *Das Liebesverbot* 1834, an opera based on Shakespeare's *Measure for Measure*.

Wilhelm Richard Wagner.

He now married, went to Königsberg as conductor, and to Riga 1837. In Paris, where he lived 1839–42, he finished *Rienzi* and *The Flying Dutchman*, the production of which in Dresden 1842–43 established his fame and won the conductorship of the opera. This he retained until forced to become a political refugee by his participation in the uprising of May 1849. He lived in Paris and Zurich till 1864, when Ludwig II. of Bavaria secured his amnesty and provided the means to carry out his stupendous plans, which culminated in the erection of a theater for the production of his *Ring of the Nibelung* at Bayreuth 1876, the Bayreuth festivals. Besides the operas mentioned and the tetralogy composing *The Ring of the Nibelung* (*Das Rheingold*, *Die Walküre*, *Siegfried*, and *Die Götterdämmerung*), W. wrote words and music of *Tannhäuser*, *Lohengrin*, *Tristan und Isolde*, *Die Meistersinger*, and *Parsifal*. His principal literary works, written to make propaganda for his artistic system, were gathered in 9 vols. 1871–83, again, 10 vols., 1888, and partly tr. by W. A. Ellis 1892–96.

Wagner, WILLIAM, 1796–1885. Founder and pres. W. Free Institute of Science in Phila. 1855.

Wagner, FORT. In Charleston Harbor, S. C.; assaulted unsuccessfully by the Union troops July 17–18, 1863.

Wagon Boiler. Generator of steam, introduced by Boulton and Watt, but now no longer made; named from the shape, which, from the end, resembled a canvas-topped wagon of Conestoga type. It had a flat or concave bottom, straight or inclined sides, and cylindrical top. Gases passed back under the bottom, and forward on one side to the front, and backward on the other side to the chimney. This was the wheel-draft. These boilers had automatic damper regulator and automatic feed devices, but were for low pressures only.

Wagon Vault. See VAULT.

Wagram. Village 12 m. n.e. of Vienna; site of Napoleon's victory over Archduke Charles July 5–6, 1809. The French took 20,000 Austrians prisoners: each side lost ab. 25,000 men. The battle resulted in the treaty of Schönbrunn Oct. 14.

Wagtail. See DENTIROSTRES.

Wah. See PANDA.

Wahabees. Austere sect of Mohammedan Puritans, founded in Arabia ab.1760. They made conquests, were overthrown 1812–18, but are still powerful in Nejd, and have offshoots in India.

Wahlenberg, GÖRAN GEORGE, 1780–1851. Prof. Upsala. *Flora Lapponica*, 1812; *De vegetatione et climate in Helvetia*, 1813; *Flora Carpatorum principalium*, 1814; *Flora suecica*, 1824–26.

Wahsatch Mts. See WASATCH MTS.

Waihu Island. See EASTER ISLAND.

Wainwright, JONATHAN MAYHEW, D.D., D.C.L., 1792–1854. P.E. Bp. of N. Y. 1852; musical and liturgical compiler. *Land of Bondage*, 1852.

Wait, WILLIAM, 1821–1880. Lawyer of Fulton co., N. Y. *Law and Practice in Justices' Courts*, 1865; *Actions at Law and in Equity*, 7 vols., 1877–79.

Waite, MORRISON REMICK, LL.D., 1816–1888. Ohio lawyer; counsel in Geneva Arbitration 1871–72; Chief-justice U. S. Supreme Court from 1874.—His father, HENRY MATSON, LL.D., 1787–1869, was long Judge of Conn. courts, and Chief-justice 1854.

Waits. English singers of carols at Christmas; originally watchmen with horns to mark the hours of night.

Waitz, GEORG, 1813–1886. Prof. Kiel 1842, and Göttingen 1849–75; ed. *Monumenta Germaniæ Historica*, 1875. *Deutsche Verfassungsgeschichte*, 8 vols., 1843–78; *Grundzüge dei Politik*, 1862.

Waitz, THEODOR, 1821–1864. Prof. Marburg 1848. *Psychologie*, 1846–49; *Anthropologie der Naturvölker*, 6 vols., 1859–71.

Waiver. Voluntary giving up of a legal right. In certain cases one may waive his right to sue another for a tort, and proceed as though the defendant's obligation were imposed by contract. See QUASI CONTRACT.

Wake. Watch over a corpse till burial; once practiced in Scotland, and still common among the Irish; not seldom attended with drunkenness and disorder. Candles were usually placed at the head and foot of the coffin, and spirits and food provided for the watchers. It is probably a survival from heathen times, and in its original sense a vigil. In early days in England a vigil used to be observed on the eve of the anniversary of the consecration of a church, or of the birthday of the saint to whom it was dedicated, the morrow being a holiday. These holidays came at last to be fairs and scenes of merry-making; so wake came to signify any festive gathering.

Wake, WILLIAM, D.D., 1657–1737. Bp. of Lincoln 1705, Abp. of Canterbury 1716. His tr. *Epistles of Apostolic Fathers*, 1693, is still valued.

Wakefield. Town of Yorkshire, on the Calder, 9 m. s.s.e. of Leeds. Here the Duke of York was defeated and slain with 3,000 men by Queen Margaret's army, Dec. 31, 1640. Manufactures still important, although the cloth trade has declined. Pop., 1891, 37,269.

Wakefield, EDWARD GIBBON, 1796–1862. English student of colonial questions, prominent in the organization of New Zealand.

Wakefield, GILBERT, 1756–1801. English controversialist, attacking with equal zeal Bp. Horsley, Paine, and Wilberforce; ed. Horace, Virgil, and Lucretius; imprisoned 1798–1801. *Tr. N. T.*, 1791; *Silva Critica*, 1789–95; *Memoirs*, 1792.

Wake-Robin. Several showy-flowered herbs of the genus *Trillium*, natural family *Liliaceæ*, natives of N. America.

Wakley, THOMAS, 1795–1862. English medical reformer;

M.P. 1835–52; coroner of Middlesex from 1839; founder (1823) and editor of *The Lancet*, which was continued by his son, JAMES GOODCHILD, 1821–1886.

Walafridus Strabus. See STRABO, WALAHFRID.

Walch, JOHANN GEORG, 1693–1775. Prof. Jena 1724; historian of Lutheran and other controversies, in 10 vols., 1730–39.—His son, CHRISTIAN WILHELM FRANZ, 1726–1784, became prof. at Jena 1750, and at Göttingen 1753. *Hist. der Kétzereien*, 11 vols., 1762–85; *Neueste Religionsgeschichte*, 9 vols., 1771–83.

Walcheren. Dutch island, at the Scheldt's mouth; part of Zeeland; occupied by a British force 1809, in a vain expedition against Antwerp. This expedition was planned in 1807

The Stadhuis, Middleburg.

and was one of the most disastrous failures in the history of modern warfare. The people are mostly employed in agriculture. Area 81 sq. m., pop. ab. 45,000.

Walckenaer, CHARLES ATHENASE, BARON, 1771–1852. French naturalist and historical writer.

Walcot, CHARLES MELTON, 1815–1868. Anglo-American comedian and playwright.

Walcott, CHARLES DOOLITTLE, b.1850. Assistant on the U. S. Geological Survey 1879, chiefly in Utah and Nevada; paleontologist 1883, and director 1894; investigator of the Cambrian rocks and their fossils.

Waldeck, JEAN FRÉDÉRIC DE, 1766–1875. French explorer in Central America. *Yucatan*, 1837. When nearly a centenarian, he engraved the plates of *Monuments anciens de Mexique*, 1866.

Waldeck-Pyrmont. Province in n.w. Germany; formerly a constitutional hereditary monarchy; since 1868 administered by Prussia. Chief products are grain, beet-root for sugar and forage crops. Cattle-raising is of some importance. Area 438 sq. m.; pop., 1890, 57,283.

Walden (NETTER), THOMAS, ab.1374–1430. English Carmelite, active in persecuting the Lollards; prior 1414; propagandist in Lithuania 1419; founder of Carmelite nuns; writer against Wiclif's tenets; confessor to Henry V. and VI.

Waldenses. Followers of Peter Waldo (d.1197), merchant of Lyons, who gave his goods to the poor, adopted the mendicant life, and became an itinerant preacher: hence called Poor Men of Lyons. They opposed the corruptions of the Ch., basing their doctrines immediately upon Scripture; were forbidden to preach 1179, and excommunicated for disobedience 1184. Many perished in the Albigensian crusade; others were driven into the valleys of the Alps. Their bitter persecutions from 1655 called forth Cromwell's protest and Milton's famous sonnet. Many emigrated; their troubles lasted till 1848. They now number ab. 25,000 in Piedmont, and have churches and schools in various parts of Italy, Sicily, and Sardinia, and colonies in America.

Waldersee, ALFRED, GRAF VON, b.1832. Prussian general; Chief of Staff 1888, succeeding Von Moltke.—His wife, MARY (LEE), b.1837 in New York, m.1874, had in 1864 married Prince Frederick of Schleswig-Holstein, who d. 1865.

Waldeyer, HEINRICH WILHELM GOTTFRIED, b.1836. Prof. Breslau 1867, Strasburg 1872, and Berlin 1883; writer on anatomy.

Waldo, PETER. See WALDENSES.

Waldseemüller, MARTIN, ab.1470–ab.1525. German geographer. His *Cosmographiæ Introductio*, 1507, first proposed to call the New World America.

Waldstein. See WALLENSTEIN.

Waldstein, CHARLES, L.H.D., b.1856 in New York. Director American School at Athens 1888; writer on archæology.

Wales. Timbers around a ship a little above the water line.

Wales. W. central portion of the island of Great Britain. Area 7,467 sq. m. Its surface is very broken and mountainous. It has great mineral wealth; iron, copper, coal, lead, and silver are mined. Anciently Cambria, the land of the Cymry, a Celtic race; it was invaded repeatedly by the Romans, but never really conquered. Many Britons retired ab. 450 from before the Saxons to the mountains of W., where

Huntsman's Leap—Effects of Erosion on South Coast.

they maintained their independence, though paying tribute to the English king. This they refused to William the Norman, who invaded and conquered them, but allowed them to retain their own princes. Rebellions followed: Henry II. subdued S. W. 1157; Edward I. finished the work 1282, and bestowed the title of Prince of W. on the heir of the English throne 1284. Complete incorporation into the kingdom was deferred until 1536.

Wales, JAMES ALBERT, 1852–1886. Cartoonist of New York *Puck* and *Judge*.

Wales, PHILIP SKINNER, M.D., b.1837. Surgeon-gen. U. S. Navy 1880–84; medical writer.

Wales, PRINCE OF. See ALBERT EDWARD.

Wales, PRINCESS OF. See ALEXANDRA, CAROLINE.

Walewski, ALEXANDER FLORIAN JOSEPH COLONNA, COUNT, 1810–1868. Polish patriot, in France from 1832; envoy to Naples and England; Foreign Minister 1855–60; Duke 1866.

Walhalla. Imitation of the Parthenon, erected 1830–41 near Ratisbon, Bavaria. It contains many statues, busts, and tablets, illustrative of German history. See VALHALLA.

Walk. See GAITS and WALKING.

Walke, HENRY, U.S.N., 1808–1896. Commander 1855, Captain 1862; distinguished on the Mississippi; Commodore 1866, Rear-admiral 1870. *Naval Scenes*, 1877.

Walker, ABRAHAM JOSEPH, 1818–1872. Chief-justice of Ala. 1859–68.

Walker, ALEXANDER, b.1819. Journalist of New Orleans; biographical and historical writer.

Walker, AMASA, LL.D., 1799–1875. Lecturer on Political Economy at Oberlin 1842–48, and Amherst 1859–69; M.C. from Mass. 1862–63. *Money*, 1857; *Science of Wealth*, 1866.—His son, FRANCIS AMASA, LL.D., 1840–1897, was Adjutant-gen. in Va. 1862–65, Supt. of U. S. Census 1870 and 1880, prof. Yale 1873–81, chief of Bureau of Awards at U. S. Centennial Exhibition 1876, and pres. Mass. Institute of Technology from 1881. *Wages*, 1876; *Money*, 1878–79; *Land and its Rent*, 1883; *Political Economy*, 1883; *Hist. 2d Army Corps*, 1886; *Life of Gen. Hancock*, 1894; *Making of the Nation*, 1895; *Double Taxation in U. S.*, 1896.

Walker, CLEMENT, d.1651. M.P. 1640; imprisoned from 1649. *Hist. Independency*, 1646–60.

Walker, FREDERICK, A.R.A., 1840–1875. English painter.

Walker, GEORGE, D.D., d.1690. Defender of Londonderry 1689; made its bishop; killed at the Boyne.

Walker, GILBERT CARLTON, 1832–1885. Gov. of Va. 1870–74; M.C. 1875–79.

Walker, SIR HOVENDEN, R.N., ab.1660–1726. Rear-admiral 1709; knighted 1711. He failed in an attack on Canada 1711, lost his ship by explosion 1715, and was dismissed.

Walker, JAMES, D.D., LL.D., 1794–1874. Ed. *Christian Examiner* 1831–39; prof. Harvard 1839–53, pres. 1853–60; ed. Reid and Dugald Stewart. *Memoir of Josiah Quincy*, 1867.

Walker, JAMES BARR, D.D., 1805–1887. American journalist and lecturer, whose *Philosophy of the Plan of Salvation*, 1855, was widely read and translated. *Doctrine of the Spirit*, 1870.

Walker, JOHN, d. ab.1730. Rector at Exeter, Eng. His noted book, *Sufferings of the Clergy sequestered in the Rebellion*, 1714, called forth answers from Calamy and others.

Walker, JOHN, 1732–1807. English elocutionist and lexicographer. His *Rhyming Dictionary*, 1775, is still printed; his *Pronouncing Dictionary*, 1791, was in use 1850 or later.

Walker, JOHN, 1770–1831. English antiquarian and compiler. *Oxoniana*, 4 vols.

Walker, JOHN GRIMES, U.S.N., b.1835. Lieutenant 1858; active on the Mississippi 1862–63, and on the Atlantic coast 1864–65; Commander 1866, Captain 1877, Commodore 1889, Rear-admiral 1895.

Walker, JOSEPH REDDEFORD, 1798–1876. Frontiersman; guide of several parties to Cal. from 1833; discoverer of the Yosemite.

Walker, LEROY POPE, 1817–1884. Judge in Ala. 1850–53; Sec. of War, C.S.A., 1861–62.—His father, JOHN WILLIAMS, 1789–1823, was U. S. Senator from Ala. 1819–20.

Walker, ROBERT JAMES, 1801–1869, b. in Pa. U. S. Senator from Miss. 1836–45; Sec. Treasury 1845–49; author of the tariff of 1846; Gov. of Kan. 1857–58; Unionist; U. S. financial agent in Europe 1863–64.

Walker, SEARS COOK, 1805–1853. Builder of the Observatory at Phila. High School 1837; prof. Washington Observatory 1845–47; connected with the U. S. Coast Survey from 1847. *Neptune*, 1850–52.—His brother, TIMOTHY, LL.D., 1806–1856, was prof. Cincinnati Law School 1833–44, and founder *Western Law Journal*, 1843. *Introduction to American Law*, 1837.

Walker, THOMAS, 1784–1835. English lawyer. *Pauperism*, 1826; *The Original*, 1835.

Walker, WILLIAM, 1824–1860. American filibuster. He attacked Sonora, n.w. Mexico, 1854; descended on Nicaragua 1855, assumed the presidency, and was expelled 1857; was frustrated in two more attempts 1857–58; landed in Honduras June 1860, and was arrested and executed. *War in Nicaragua*, 1860.

Walker, WILLIAM H. T., 1816–1864. Officer U.S.A. 1840–60; distinguished in Mexico; Major-gen. C.S.A. 1862; killed at Decatur, Ga.

Walker, WILLIAM MCCREARY, U.S.N., 1813–1866. Captain 1862; active in blockading. *Screw Propulsion*, 1861.

Walker, WILLIAM SIDNEY, 1795–1846. English poet and Shakespearian critic.

Walker, LAKE. In w. Nevada; sink of W. River; dscovered 1833 by Joseph R. Walker. Area 110 sq. m.

Walker-Martinez, CARLOS, b.1842. Chilian poet.

Walking. Means of locomotion in which the knees are alternately straightened and the heel of one foot is on the ground before the toe of the other leaves it; sometimes called "fair heel and toe." Track contests are usually under this rule, but long-distance and six-day walking are more generally "go-as-you-please" matches, wherein the contestants may walk, run, hop, or make their progress in any way they desire, but without any adventitious aids. See RUNNING.

The records are as follows: Greatest distance walked in one hour, by an amateur 8 m. 1,487⅜ yd., by a professional 8 m. 302 yd.; 2 h., A., 13 m. 900 yd, P., 15 m. 824 yd.; 3 h., A.,19 m. 1,685 yd., P., 22 m. 456½ yd.; 4 h., A., 25 m. 1,070 yds., P., 27 m. 440 yd.; 24 h., A., 120 m., P., 127 m. 1,201 yd. Distance walking: ⅛ m., A., 3 min. 2⅗ sec.; 1 m., P., 6 min. 23 sec., A., 6 min. 29⅗ sec.; 2 m., P., 13 min. 14 sec., A., 13 min. 33 sec.; 3 m., P., 20 min. 21½ sec., A., 21 min. 9⅕ sec.; 10 m., P., 1 h. 14 min. 45 sec., A., 1 h. 17 min. 40¾ sec.; 20 m., P., 2 h. 29 min. 57 sec., A., 2 h. 47 min. 52 sec.; 50 m., P., 7 h. 54 min. 16 sec., A., 8 h. 25 min. ½ sec.; 100 m., P., 18 h. 8 min. 15 sec., A., 19 h. 41 min. 50 sec. The following by professionals: 200 m., 40 h. 46 min. 30 sec.; 300 m., 66 h. 30 min.; 400 m., 96 h. 51 min. 3 sec.; 500 m., 130 h. 34 min.; 531 m., 138 h. 49 min. 8 sec.

Walking-Beam. See BEAM, WALKING, and BEAM ENGINE.

Walking-Leaf. *Camptosorus rhizophyllus.* Fern which has the habit of rooting at the tips of its leaves, thus producing new plants; native of e. N. America.

Walking-Leaf. Orthopterous insect of the e. Indian region, having its wings and the expanded joints of its legs developed to imitate leaves in appearance.

Walking-Stick (STICK INSECT). Orthopterous insect with elongated slender body and rudimentary wings. It resembles a leafless twig. *Diapheromera* is the common American genus, of family *Phasmidæ*.

Walkyries. See VALKYRIES.

Wall. See ANTONINE, WALL OF, BUTTRESS, FORTIFICATION, OFFA, and WALL, HADRIAN'S.

Wall, HADRIAN'S, or ROMAN WALL. Stone wall and other works erected in 1st century in the n. of England by the Romans, between the Solway and the Tyne. On the English side of the border we find a stone wall with a ditch on its n. side. Attached to it are stationary camps, mile-castles, and turrets for the accommodation of the soldiery who manned it. To the s. of the stone wall are a series of ramparts. Considerable traces of the wall yet remain in Northumberland.

Plan of Hadrian's Wall.

Wall, WILLIAM, D.D., 1646–1728. Vicar of Shoreham, Kent, from 1676. His large *History of Infant Baptism*, 1705, was tr. into Latin, and reprinted 1862.

Wallace, ALFRED RUSSEL, LL.D., b.1822. English naturalist, pensioned 1881. *The Amazon*, 1853; *Malay Archipelago*, 1869; *Natural Selection*, 1870; *Miracles and Modern Spiritualism*, 1875; *Distribution of Animals*, 1876; *Island Life*, 1880; *Land Naturalization*, 1882; *Bad Times*, 1885; *Darwinism*, 1889; *Australia*, 1893.

Wallace, SIR JAMES, R.N., ab.1730–1803. Post-captain 1771; in America 1774–83; Rear-admiral 1794. He burned Kingston, N. Y., and did much damage on the Hudson Oct. 1777.

Wallace, JOHN WILLIAM, 1815–1884. Reporter of U. S. Supreme Court 1863–76. *Cases*, 23 vols., 1864–76.—His brother, HORACE BINNEY, 1817–1852, pub. *Stanley*, 1838, and, with J. I. C. Hare, edited *American Leading Cases*, 1847. *Papers*, 1855–56.

Wallace, LEWIS, b. 1827. Brig.-gen. U. S. Vols. 1861; Major-gen. 1862–65; prominent at Fort Donelson, Shiloh, and the Monocacy; Gov. Utah 1878–81; U. S. Minister to Turkey

1881–85. His novel, *Ben Hur*, 1880, was immensely popular. *The Fair God*, 1873; *Prince of India*, 1893.—His wife, SUSAN ARNOLD (ELSTON), b.1830, m.1852, has written much in prose and verse.—His father, DAVID, 1799–1859, was Gov. of Ind. 1837–40, and M.C. 1841–43.

Wallace, WILLIAM, 1270–1305. Scottish insurgent. After the repulse near Lochnaber he retired to the Highlands; defeated Earl Surrey at Cambuskenneth, Sept. 10, 1297, and ravaged n. England; was elected guardian of the realm; was defeated at Falkirk, July 22, 1298, but maintained a guerrilla warfare; was declared an outlaw 1304, betrayed to the English 1305; tried for treason, and executed Aug. 24.

Wallace, WILLIAM, 1768–1843. Prof. of Mathematics at Edinburgh 1819–38. *Conic Sections*, 1808; *Geometrical Theorems*, 1838.

Wallace, WILLIAM A., 1827–1896. U. S. Senator from Pa. 1875–81; State Senator 1862–75.

Wallace, WILLIAM HARVEY LAMB, 1821–1862. Brig.-gen. U. S. Vols. 1862; mortally wounded at Shiloh.

Wallace, WILLIAM ROSS, 1819–1881. American poet.

Wallace, WILLIAM VINCENT, 1814–1865. Irish opera-composer and traveler; one of the founders of the New York Philharmonic Society; long in Germany. *Maritana*, 1845; *Matilda of Hungary*, 1847; *Lurline*, 1860; *Amber Witch*, 1861; *Love's Triumph*, 1862; *Desert Flower*, 1863.

Wallachian. See ROUMANIAN.

Wallack, JAMES WILLIAM, 1794–1864. Anglo-American actor and manager, long popular in comedy and melodrama.—His son, JOHN LESTER, 1820–1888, succeeded him at Wallack's Theater, wrote two comedies, and was highly successful in young men's parts. *Memoirs*, 1889.

Walla-Walla. Capital of county of same name, Wash. It has water-power, flour-mills and machine-shops. Pop., 1895, 7,770.

Walla-Walla. Idaho Indians of the Nez Percés group; now ab. 200 on a reservation near Ft. Simcoe.

Wallenstein, or **Waldstein,** ALBRECHT WENZEL EUSEBIUS VON, 1583–1634. Bohemian officer, famous in the Thirty Years' War; of brilliant ability, vast wealth, and boundless ambition; celebrated in Schiller's trilogy; made Count 1617, Duke of Friedland 1624, of Sagan 1627, and of Mecklenburg 1629. He suppressed a rising 1618, created and led an army 1625, defeated Mansfeld at Dessau April 25, 1626, and with

Wallenstein.

Tilly repressed the Protestant princes, but won enmity by his arrogance, and was dismissed by the Emperor Ferdinand 1630. In 1631 he was reinstated, given absolute authority, and took the field against Gustavus Adolphus and the Swedes, who defeated him at Lützen Nov. 16, 1632. After many intrigues with the enemy he was proclaimed a traitor Jan. 1634, and murdered by his Scotch and Irish officers Feb. 25. *Letters*, 1828–29.

Waller, EDMUND, 1606–1687. English poet, highly valued in his own age; imprisoned 1643 for a royalist plot; in exile 1644–53; reviver of the heroic couplet. His verse is graceful but slight.

Waller, THOMAS MCDONALD, b. ab.1840. Gov. of Conn. 1883–85; Consul-gen. in London 1885–89.

Waller, SIR WILLIAM, 1597–1668. General of Parliamentary troops 1642–45; thrice defeated and once victorious; twice expelled from Parliament and imprisoned. *Vindication*, pub. 1793.

Wallerton, CHARLES LOUIS AUGUSTE, 1721–1788. French botanist, in Mexico and W. Indies 1760–65. *Plantes médicinales*, 1767–70; *Flore de Mechoacan*, 1775–79.

Wall Flower. *Cheiranthus cheiri*. Perennial herb of the natural family *Cruciferæ*, native of s. Europe, much planted for ornament.

Wallich, NATHANIEL, 1786–1854. Danish-English botanist, long in India. *Plantæ Asiaticæ rariores*, 1830–32.

Wallin, JOHAN OLOF, 1779–1839. Swedish poet and hymnist; Abp. of Upsala 1837.

Walling, GEORGE WASHINGTON, 1823–1891. Supt. of New York Police 1874–85.

Walling, HENRY FRANCIS, 1825–1888. Assistant U. S. Coast Survey and Geological Survey; cartographer.

Wallis. See VALAIS.

Wallis, JOHN, D.D., F.R.S., 1616–1703. Prof. Oxford 1648; writer on mathematics, grammar, logic, and theology; ed. Ptolemy. *Arithmatica Infinitorum*, 1655; *Opera*, 1695–99, repub. 1791.

Wallis, SEVERN TEACKLE, 1816–1894. Lawyer and reformer of Baltimore. *Spain*, 1853.

Wallon, HENRI ALEXANDRE, b.1812. Prof. Paris 1840; Deputy 1849 and 1871; Minister of Instruction 1875, Senator 1876; writer on French history. *De l'Esclavage*, 1847–48.

Walloons. Inhabitants of s. Belgium; of mixed Gallic and Teutonic descent; distinguished from the Flemings. Under Charles V. and Philip II. many emigrated to England; later, some came to America.

Wall Paper. Paper prepared for hanging upon walls to render them more sightly; or for the purpose of coloring them, as in photographic studios. Paper hangings were first attached instead of tapestry ab.1555. The Japanese used powdered mica to give it a shiny appearance. Before the paper-making machine was invented it was obtained in limited sizes. See PAPER HANGINGS.

Wall Plate. Plate of iron or timber, placed under the supports of a bridge, usually extending across the space between the two trusses.

Wallroth, KARL FRIEDRICH WILHELM, 1792–1857. Physician and botanist in Nordhausen. *Naturgeschichte der Flechten*, 1825–27; *Flora cryptogamica Germanica*, 1833; *Beiträge zur Botanik*, 1842–44.

Walnut. Large trees of the genus *Juglans*, natural family *Juglandaceæ*, natives of the n. temperate zone and of the Andes. The e. American Black Walnut, *J. nigra*, furnishes

English Walnut (*Juglans regia*).

valuable timber, used for joinery, furniture and gun-stocks. The English Walnut, *J. regia*, yields a fixed drying oil, used by artists and varnish makers. The Butternut, *J. cinerea*, produces a valuable timber, and a decoction of the bark of the

root is a useful cathartic. The Japanese Walnut, *J. sieboldiana*, bears fruit in long clusters. All are esteemed for their nuts.

Walpers, WILHELM GERHARD, 1816–1853. German botanist. *Repertorium botanices systematicæ*, 1842–48; *Annales botanices systematicæ*, 1848–68.

Walpole, HORACE, 1717–1797. M.P. 1741–68; 4th Earl of Oxford 1791. His house, Strawberry Hill, near Twickenham, contained notable collections and a private press. *Castle of Otranto*, 1764; *Letters*, 9 vols., 1857–59.—His father, SIR ROBERT, 1676–1745, M.P. from 1701, Whig leader, was expelled and imprisoned 1712, made Privy Councilor 1714, Premier 1715–17 and 1721–42; Lord Oxford 1742. Ruling by bribes, he was long the most powerful man in England.

Walpole, SPENCER, LL.D., b.1839. Biographer of Lord John Russell, 1889. *Hist. of England from 1815*, 5 vols., 1878–86.

Walpurga, ST., d.779. English abbess of Heidenheim, Wurtemberg; sister of St. Willibald. Her day, May 1, follows Walpurgis Night, when witches were supposed to hold high revel.

Walpurgis Night. Eve of May-day. A special time of revelry for witches at certain places; the Brocken in Germany is the favorite.

Walrus (TRICHECHUS or ROSMARUS). Marine seal-like carnivore of Arctic regions, formerly more widely distributed. *T. rosmarus*, the Atlantic Walrus, is found about Davis Straits and northward, and about Spitzbergen. *T. obesa*, of the Pacific, is restricted to the coasts of Kamchatka, Alaska, and Walrus Island, among the Pribylof Isles. Walruses have a rudimentary tail: the hind feet turn forward. Their adult dentition is $I\frac{1}{0}$ $C\frac{1}{1}$ $M\frac{3}{3}$, but the other teeth have been lost during growth. The upper canines are developed as long tusks,

Atlantic Walrus (*Trichechus rosmarus*).

projecting downward, and used for digging up clams, which form their chief food. They live in herds, are timid, and keep a sentinel on watch. Their chief enemy, besides Man, is the Polar Bear. They courageously unite to defend a wounded comrade. The female bears one or two young in May, covered with short brownish-yellow hair, which nearly all disappears with age. The males, larger than the females, may attain a length of 12 ft., and weight of more than 2,000 lbs. They are valued for their oil, hides, flesh, and ivory, and are in danger of extinction.

Walsall. Borough of Staffordshire, 8 m. n.n.w. of Birmingham. It has extensive iron works. Pop., 1891, 71,791.

Walsh, BENJAMIN DANN, 1808–1869. Entomologist of Ill.

Walsh, ROBERT, 1784–1859. Founder and editor *American Review*, 1811–13 and 1827–37, and Phila. *Gazette*, 1819–36; in Paris from 1837. *French Government*, 1810; *Russia*, 1813; *Didactics*, 1836.—His grandson, WILLIAM SHEPARD, b.1854, edited *Lippincott's Mag.* 1886–90. *Faust*, 1887; *Paradoxes*, 1888.

Walsh, WILLIAM, 1663–1707. English poet, once called "the Propertius of the Restoration."

Walsh, WILLIAM PAKENHAM, D.D., b.1820. Dean of Cashel 1873; Bp. of Ossory 1878; writer on missions.

Walsingham, SIR FRANCIS, ab.1536–1590. English envoy to France 1570–73 and 1581; knight and Sec. of State 1573; introducer of an elaborate system of espionage; enemy and judge of Mary Stuart.

Walsingham, THOMAS, ab.1400. Monk of St. Albans; chronicler.

Walter, JOHN, 1739–1812. Founder of the London *Times*, 1788, and its owner, as were his son and grandson till 1894.

Walter, THOMAS, ab.1745–ab.1800. Anglo-American botanist. *Flora Caroliniana*, 1788.

Walter, THOMAS USTICK, LL.D., 1804–1887. Architect of Girard Coll., Phila., finished 1847, of the enlarged U. S. Capitol 1851–65, and other buildings at Washington.

Walters, LUCY, 1630–1683. Mistress of Charles II. and mother of James, Duke of Monmouth.

Walthall, EDWARD CARY, b.1831. Brig.-gen. C.S.A. 1862, Major-gen. 1864, serving in the West; U. S. Senator from Miss. 1885–95.

Waltham. City of Middlesex co., Mass., on the Charles, 10 m. w. of Boston; chartered 1737 and 1884; noted for its machine-made watches. It has also extensive cotton manufactories. Pop., 1890, 18,707.

Waltham. Town of Essex, Eng., 13 m. n.e. of London; called also W. Abbey and W. Holy Cross. Here the Lee is diverted into several channels forming a network of islands, on which are four gunpowder mills belonging to the govern-

Waltham Abbey Church.

ment: nearby there are small-arms and cordite factories. It retains the nave and lady chapel of the famous old abbey, of which the church was founded in the time of Canute. Pop. 6,100.

Waltham Forest. See EPPING FOREST.

Walther, CARL FERDINAND WILHELM, D.D., 1811–1887. Leader of Saxon immigrants to Mo. 1839; founder of Lutheran Synod of Mo. 1846, and of its publications; pres. of its theol. sem. from 1849. *Pastoral Theologie*, 1872.

Walther, VON DER VOGELWEIDE, ab.1165–ab.1230. German poet, the greatest of his time. His works are amatory, satiric, political, religious, and didactic, and have repeatedly been collected.

Waltner, CLAUDE ALBERS, b.1846 in Paris. Etcher, especially fine in nude figures. No other is so successful in handling flesh, the most difficult thing to represent adequately with the needle on copper: his touch gives the feeling of color in his modeling. His *Angelus*, after Millet, and *Dans la Rosée*, after Duran, are highly prized.

Walton, BRIAN, D.D., 1600–1661. Prebendary of St. Paul's 1639; deprived of his living 1642; Bp. of Chester 1660; editor of an important polyglot Bible in 6 vols. folio, 1654–57.

Walton, GEORGE, 1740–1804. Delegate to Congress 1776–81; signer Declaration of Independence; Gov. of Ga. 1779 and 1789; Chief-justice 1783; U. S. Senator 1795–96.

Walton, ISAAK, 1593–1683. English biographer of Herbert, Hooker, Donne, and others, frequently reprinted. Still more famous is his *Compleat Angler*, 1653.

Waltz. Round dance in $\frac{3}{4}$ time, the most popular of the century. Its unquestioned history does not extend back of 1775, and it did not become fashionable until after 1800. When introduced in England it was called the German Waltz, and was probably developed out of a popular dance in Bohemia, Bavaria, or Austria. Originally its music consisted of two sections of eight measures each in triple time; but it has

been extensively and freely developed, and even given a place in the highest form of artistic music, the symphony. The most successful composers of waltzes as dances have been the STRAUSSES (q.v.).

Waltzeemuller. See WALDSEEMULLER.

Waltzing Giants. 1. Funnel-shaped cloud of smoke attending forest and prairie fires. 2. Dust-whirls as seen from a distance careering along dry plains and valleys. See WHIRLWINDS.

Walworth, JEANNETTE RITCHIE (HADERMANN), b. 1837. American novelist. *Southern Silhouettes*, 1887.

Walworth, REUBEN HYDE, LL.D., 1788–1867. M.C. 1821–23; Chancellor of N. Y. 1828–48. *Rules of Chancery*, 1829; *Hyde Genealogy*, 1864.—His son, CLARENCE ALPHONSUS, b.1820, R. C. priest, has pub. *The Gentle Skeptic*, 1860, and poems.—His brother, MANSFIELD TRACY, 1830–1873, pub. *Warwick*, 1868, and other romances.

Wampum. Small shells and beads, strung together and used by N. American Indians as money and for decoration.

Strings of Wampum.

The favorite material was round clam shells, white, black, or violet-purple in color, which were drilled through lengthwise and strung upon a thread.

Wanamaker, JOHN, b.1838. Phila. merchant; founder Bethany S.-S. 1858; pres. Phila. Y.M.C.A. 1870–83; U. S. Postmaster-gen. 1889–93.

Wandering Jew. Cartaphilus, or Ahasuerus; legendary character, known as Cartaphilus from ab.1250, and Ahasuerus from ab.1500, condemned, for inhumanity to the suffering Christ, to roam till the Second Advent; celebrated by Sue and many romancers.

Wanderley, JOAO MAURICIO, 1815–1889. Brazilian Minister of State, made Baron of Cotegipe 1868; Premier 1885–88.

Wanderoo. See MACAQUES.

Wangenheim, FRIEDRICH ADAM JULIUS, FREIHERR VON, 1747–1800. German officer, in U. S. 1777–83; writer on arboriculture.

Wanklyn, JAMES ALFRED, b.1834. English chemist; writer on analysis of water, milk, bread, and air. *Tea*, 1874.

Wanton, JOSEPH, 1705–1780. Gov. of R. I. 1769–75.

Wapenshaw. Mediæval Scottish assemblage in preparation for war.

Wapiti. See ELK.

Wappæus, JOHANN EDUARD, 1812–1879. Prof. Göttingen from 1845; writer on geography.

Wappers, GUSTAVE, 1803–1874. Belgian historical painter, ennobled 1847; in Paris from 1855.

War. See the different titles pertaining to military engineering.

War, ARTICLES OF. See RULES AND ARTICLES OF WAR.

War, CIVIL. War between different parties of the same nation. Such as the War of the Roses in England 1455, when the crown was fought for by contending princes. The war of 1861–65 in the U. S. is called by some a civil war, but it has been officially designated by the U. S. Government as the War of the Rebellion. See VOLUNTEERS.

War, COUNCIL OF. SEE COUNCIL OF WAR.

Warbeck, PERKIN, ab.1472–1499. English pretender, who resembled Edward IV., and was acknowledged as his son in France, Burgundy, and Scotland. He invaded the kingdom from Scotland 1496–98, surrendered, escaped, was recaptured and executed.

Warblers. Many species of small, oscine birds, belonging mainly to two families. Most are insectivorous and migratory; with few exceptions they are poor singers; but the nearly related Thrush family (*Turdidæ*) makes up for this lack. The Old World Warblers form the family *Silviidæ*, characteristic of the Mediterranean region. They are dull colored, with slender bill, notched near the end; 10 primaries are present. Examples are Sedge Warblers; the Grasshopper Warbler, which dwells in thickets and imitates the chirp of a cricket; the Black-cap Warbler, noted for the range of modulation of its voice; and the Tailor-bird of India, which sews the leaves together on the end of a twig, making a pocket in which it builds its nest. American Warblers belong to the family *Mniotiltidæ*. Only 9 primaries are present: the plumage is rather brightly colored. Examples are the Golden and Wood

1, Sedge Warbler (*Salicaria phragmitis*); 2, Willow Warbler (*Sylvia trochilus*).

Warblers (*Dendroica*), Fly-catching Warblers (*Setophaga*), Creeping Warblers (*Parula*), Ground or Water Warblers (*Seiurus*), and Worm-eating Warblers (*Helminthophila*).

Warburton, ELIOT, 1810–1852. Irish author. *Crescent and Cross*, 1844; *Prince Rupert*, 1849; *Darien*, 1851.—His brother, GEORGE, 1812–1857, pub. *Hochelaga*, 1846, and *Conquest of Canada*, 1849.

Warburton, WILLIAM, D.D., 1698–1779. Dean of Bristol 1757, Bp. of Gloucester 1760. His *Divine Legation of Moses*, 1738–41, won great repute. *Works*, 7 vols., 1788; *Letters*, 1808.

Warburton River. In Australia, flowing s. to Lake Eyre.

Ward. 1. A guard or watch. 2. Municipal subdivision. 3. Minor as related to his guardian.

Ward, AARON, 1790–1867. M.C. 1825–29 and 1831–37; Major-gen. N. Y. militia 1835–53. *Around the Pyramids*, 1863.—His nephew, ELIJAH, 1816–1882, was M.C. from N. Y. 1857–59 and 1861–65. *Speeches*, 1877.

Ward, ADOLPHUS WILLIAM, LL.D., b.1837. Prof. Owens Coll., Manchester, 1866, principal 1888; biographer of Chaucer, 1880, and Dickens, 1882; tr. Curtius' *Hist. Greece*, 1868–73. *Hist. Dramatic Literature*, 1875.

Ward, ANDREW HENSHAW, 1784–1864. Mass. genealogist. *Ward Family*, 1851; *Rice Family*, 1858.

Ward, ANN. See RADCLIFFE, MRS.

Ward, ARTEMAS, 1727–1800. Brig.-gen. Mass. troops 1774; commanding nominally at Bunker Hill; first major-gen., commissioned by Congress June 1775; in command near Boston, then second to Washington till May 1776; M.C. 1791–95.

Ward, ARTEMUS. See BROWNE, CHARLES F.

Ward, EDWARD MATTHEW, 1816–1879. English historical painter, R.A. 1855.

Ward, ELIZABETH S. See under PHELPS, AUSTIN.

Ward, FREDERICK TOWNSEND, 1831–1862. American adventurer, who served with the French in the Crimea, and under Walker in Nicaragua. He entered the service of China 1860, organized "the ever-victorious army," repeatedly defeated the Taiping rebels, became a Mandarin and Admiral-gen., was killed near Ningpo, and was succeeded by Gen. C. G. Gordon.

Ward, GENEVIEVE (LUCIA LEE), b.1833. American singer and actress, well known in Europe 1873–88; in the U. S. 1881–82. She became Countess Guerbel 1851.

Ward, HENRY AUGUSTUS, b.1834. Prof. Rochester Univ. 1860–75, where he formed large cabinets of mineralogy and geology.—His uncle, FERDINAND, b.1812, was missionary at Madras 1836–47, and pub. *India*, 1850.

Ward, JAMES HARMAN, U.S.N., 1806–1861. Commander 1853; killed on the Potomac. His *Naval Ordnance*, 1851, and *Tactics*, 1859, were long used at Annapolis.

Ward, JOHN ELLIOTT, b.1814. U. S. Minister to China 1859–61.

Ward, JOHN HENRY HOBART, b.1823. Brig.-gen. U. S. Vols. 1862–65, serving in Va.

Ward, JOHN QUINCY ADAMS, b.1830. American sculptor. His *Freedman*, 1861, and *Indian Hunter*, 1864, are well known. His statues of Gen. Reynolds, Gen. Thomas, Pres. Garfield, H.

W. Beecher, and many others, are of later date.—His brother, EDGAR MELVILLE, b.1839, is a painter. N.A. 1883.

Ward, JULIUS HAMMOND, 1837–1897. Biographer of J. G. Percival, 1866, and Bp. White, 1891.

Ward, LESTER FRANK, b.1841. Assistant on U. S. Geological Survey 1881; Curator of Fossil Botany in the National Museum since 1888. His investigations have added largely to our knowledge of American fossil floras. *Dynamic Sociology*, 1883; *Psychic Factors of Civilization*, 1893.

Ward, MARCUS LAWRENCE, 1812–1884. Gov. of N. J. 1865–68; M.C. 1873–75.

Ward, MARY AUGUSTA (MRS. HUMPHRY), b.1851 in Tasmania. English novelist; granddaughter of Dr. Thomas Arnold; m.1872. Her chief works, *Robert Elsmere*, 1888, *David Grieve*, 1891, *Marcella*, 1894, and *Sir George Tressady*, 1896, are full of thought and knowledge. In genius, in earnestness, and in mental freedom, she may be called the successor of George Eliot.

Ward, MRS. HUMPHRY. See WARD, MARY A.

Ward, NATHANIEL, ab.1579–1652. Pastor at Ipswich, Mass., 1634–37; author of the first code of New England laws, 1641. *Simple Cobbler of Agawam*, 1647.

Ward, RICHARD, 1689–1763. Gov. of R. I. 1740–43.—His son, SAMUEL, 1725–1776, was Chief-justice of R. I. 1761, Gov. 1763 and 1765–66, and delegate to Congress 1774–76.—His great-grandson, SAMUEL, 1814–1884, noted for accomplishments and world-wide acquaintance, pub. *Lyrical Recreations*, 1865.—One of his sisters is Mrs. Julia Ward Howe; another became the wife of Crawford the sculptor, and mother of F. Marion Crawford, the novelist.

Ward, RICHARD HALSTED, M.D., b.1837. American inventor of improvements in microscopy.

Ward, ROBERT PLUMER, 1765–1846. English official, juristic writer and novelist; M.P. 1802–20; pensioned 1831. *Law of Nations*, 1795; *Belligerents and Neutral Powers*, 1801; *Tremaine*, 1825; *De Vere*, 1827; *Revolution of 1688*, 1838.—His son, SIR HENRY GEORGE, ab.1796–1860, was M.P. 1832–49, and Gov. of Ceylon 1856. *Mexico*, 1828–29.

Ward, WILLIAM, 1769–1823. English Baptist, missionary at Serampore, India, from 1799. *Writings, Religion, and Manners of the Hindus*, 4 vols., 1811.

Ward, WILLIAM HAYES, D.D., LL.D., b.1835. Ed. New York *Independent* since 1870; Assyriologist; explorer in Babylonia 1884.

Ward, WILLIAM THOMAS, 1808–1878. M.C. from Ky. 1851–53; Brig.-gen. U. S. Vols. 1861–65, serving chiefly in Tenn. and Ga.

Warden. Name given to various officers; as the warden of a prison, church warden, and others. A keeper; a guardian.

Warden, DAVID BAILLIE, 1778–1845. U. S. Consul in Paris from 1805. His *Account of U. S.*, 1819, was tr. into French and German. *Bibliotheca Americana*, 1820–31.

War Department of U. S. This has charge of all duties connected with the army, fortifications, the distribution and movement of troops, purchase, issue, and care of warlike stores, munitions of war, supplies, transportation, payments to troops, etc.: the head of this department is the Secretary of War, who is appointed by the President and confirmed by the Senate. He is a member of the President's Cabinet.

Wardian Cases. Nearly air-tight glass cases for growing plants, which thus live in an atmosphere saturated with moisture; invented by Nathaniel B. Ward (1791–1868).

Wardian Case.

Wardlaw, LADY ELIZABETH (HALKETT), 1677–1727; m. 1696. Scottish author of *Hardyknute*, 1719; doubtfully credited with other ballads, probably much older.

Wardlaw, RALPH, D.D., 1779–1853. Scottish Congregationalist; pastor in Glasgow from 1803, prof. from 1811; prolific theological writer.

Ware, HENRY, D.D., 1764–1845. Divinity prof. at Harvard 1805–40. *Letters to Trinitarians*, 1820.—His son, HENRY, D.D., 1794–1843, prof. Cambridge Divinity School 1830–42, wrote much in prose and verse.—His brother, WILLIAM, 1797–1852, ed. *Christian Examiner* 1839–44, pub. three brilliant classical romances, *Zenobia*, 1837, *Aurelian*, 1838, and *Julian*, 1841.

Ware, MARY GREENE (CHANDLER), b.1818. American writer. *Elements of Character*, 1818; *Thoughts in my Garden*, 1862; *Death and Life*, 1864.

Ware, WILLIAM ROBERT, b.1832. Prof. Architecture Mass. Inst. Tech. 1865, Columbia Univ. 1881.

Warehouseman. Bailee of goods which he stores for a compensation. Statutes regulating his charges have been held constitutional, when his business has been considered to be concerned with a public interest. He may give receipts, the indorsement and delivery of which will operate as a transfer of the goods therein described; but such documents are only quasi negotiable.

Warehouse Receipts. See WAREHOUSEMAN.

Warehouse System. Statutory provisions allowing owners of goods, subject to tariff or internal revenue duties, to deposit them in government warehouses for a time, without paying the duties until the goods are withdrawn.

Warfield, BENJAMIN BRECKENRIDGE, D.D., LL.D., b.1851 in Ky. Prof. Allegany, Pa., 1879–87, and Princeton Theol. Sem. since 1887; theological writer.—His brother, ETHELBERT DUDLEY, LL.D., b.1861, pres. Miami Univ., Ohio, 1888, and Lafayette Coll. since 1891, has pub. *Ky. Resolutions of 1798*, 1887.

Warfield, CATHARINE ANN, 1816–1877. Daughter of Nathaniel A. Ware (1780–1854); scholar, traveler, and author; m.1833 in Ky.; novelist and poet, as was her sister, ELEANOR PERCY (MRS. LEE), 1820–1849.

Warfield, WILLIAM, b.1827. American breeder. *Shorthorn Cattle*, 1884; *Hist. Cattle Breeding*, 1889.

Warham, WILLIAM, ab.1450–1532. Bp. of London 1503; Lord Chancellor 1503–15; Abp. of Canterbury from 1503.

Waring, ANNA LÆTITIA, b.1820. English author of a few hymns of great beauty.—Her uncle, SAMUEL MILLER, 1792–1827, pub. *Sacred Melodies*, 1826.

Waring, GEORGE E., b.1833. Col. U. S. Vols. 1861–65; sanitary engineer and author; Street Commissioner of New York 1895–97. *Whip and Spur*, 1875; *Tyrol*, 1879; *Sewerage*, 1888.

Warm-Blooded Animals. Those having a complete circulation of the blood, and its aëration through the medium of lungs at each revolution. Birds and mammals are the only warm-blooded animals.

Warming. Provisions for heating buildings in cold weather. This can be done by open fires or stoves in each room, by hot-air furnaces, by steam direct or indirect, and by hot water, heated by fire or by friction. Open fires heat objects by radiation only, but do not heat the air of a room, except as it is warmed by contact with the warmed objects. Hence rooms to accommodate large numbers cannot be made comfortable in this way, though they ventilate admirably. Stoves do not ventilate, but are very efficient to heat air in rooms by contact. Hot-air furnaces supply fresh air, are easily attended to in a basement area, and are cleanly. Hot water and steam act in the same way, circulating in radiators, and conveying heat to the points at which it is to be radiated (see STEAM HEATING). Water has been heated, where mechanical power which costs nothing is wasted, by means of friction of surfaces in the water which is thus heated and circulated. See VENTILATION.

Warneck, GUSTAV, b.1834. German writer on missions.

Warner, CHARLES DUDLEY, b.1829. American descriptive writer, humorist and novelist, connected with *Harper's Magazine* since 1884. *Backlog Studies*, 1872; *Baddeck*, 1874; *Being a Boy*, 1877; *Irving*, 1881; *Their Pilgrimage*, 1886; *A Little Journey in the World*, 1892; *The Golden House*, 1894. With "Mark Twain" he wrote *The Gilded Age*, 1873.

Warner, HIRAM, 1802–1881. Judge Ga. Supreme Court 1845–53; M.C. 1855–57; Chief-justice 1872.

Warner, OLIN LEVI, 1844–1896. American sculptor.

Warner, SETH, 1743–1784. Officer of Vt. troops 1775–82, distinguished at Crown Point, Ticonderoga, and Bennington.

Warner, SUSAN ("ELIZABETH WETHERELL"), 1819–1885. American novelist. *The Wide, Wide World*, 1850, had an immense popular success. *Queechy*, 1852; *Hills of the Shatemuc*, 1856; *Daisy*, 1868.—Her sister, ANNA BARTLETT, b.1820, wrote *Say and Seal*, 1859, and other novels, alone or jointly with Susan, and pub. *Hymns of the Ch. Militant*, 1858, and *Wayfaring Hymns*, 1869.

Warner, WILLIAM, ab.1558–1609. English poet. *Albion's England*, 1586.

War of 1812. Between the U. S. and Gt. Britain, growing out of a series of wrongs inflicted by Britain, chiefly the search of American vessels for supposed British deserters and their impressment into British service, and the prohibition of American commerce with France, with whom England was at war. The war lasted two years on land and sea, and was concluded with the treaty of Ghent in 1814.

Warped Surface. One which, if rigid, cannot be unwrapped upon a plane.

Warrant. Writing from a competent authority in pursuance of law, directing the doing of an act: addressed to an officer or person competent to do the act, and affording him protection therefor.

Warranty. Agreement, collateral to a contract of sale, that the subject of such sale possesses certain qualities; the breach of it gives the purchaser a right to damages. In some jurisdictions it is synonymous with condition.

Warren. Place for breeding rabbits or game.

Warren, FITZ HENRY, 1816–1878. Brig.-gen. U. S. Vols. 1862–65; Minister to Guatemala 1867–68.

Warren, FRANCIS E., b.1844. Gov. of Wyoming 1882–85 and 1889–90; U. S. Senator 1890–93 and 1895.

Warren, GEORGE WILLIAM, b.1828. Organist in New York and Brooklyn; composer.

Warren, GOUVERNEUR KEMBLE, U.S.A., 1830–1882. Brig.-gen. U. S. Vols. 1862; Major-gen. 1863–65; distinguished at Gettysburg and in many Va. battles, especially at and after the Wilderness, where he commanded the 5th corps; unjustly relieved, in the moment of victory, by Sheridan, April 1, 1865. As officer of engineers he conducted the survey of the Miss. River, showed that great changes of level had taken place in N. America, and proved that at one time Lake Winnipeg had discharged its waters through the Red River Valley. *Explorations in Dakota*, 1855–58.

Warren, HENRY WHITE, D.D., b.1831. M. E. Bp. 1881; writer on astronomy and the Bible.

Warren, JAMES, 1726–1808. Patriot of Plymouth, Mass., active in committees of correspondence; pres. Mass. Congress from 1775.—His wife, MERCY (OTIS), 1728–1814, pub. poems, two tragedies, and a *Hist. Revolution*, 1805.

Warren, JOSEPH, 1741–1775. Physician and patriot of Boston, eminent for courage, eloquence, energy, and devotion; chairman Committee of Public Safety 1774; pres. Mass. Congress and Major-gen. 1775; killed at Bunker Hill, where he fought as a volunteer, and where his statue was raised 1857. The beauty of his character and the brilliancy of his services to liberty made him the most picturesque hero of the opening conflict: his death, though a national loss, did much to stimulate the spirit of revolt throughout the colonies.—His brother,

Major-general Joseph Warren.

JOHN, 1753–1815, was hospital surgeon 1775–82. Prof. of Anatomy in Harvard from 1783, and pres. Mass. Medical Society from 1804.—His son, JOHN COLLINS, M.D., 1778–1856, studied in Europe, became his father's assistant and successor (1815–47), founded the *Medical and Surgical Journal* 1828, and was eminent as a scholar and operator. He introduced ether 1846.—His son, JONATHAN MASON, M.D., 1811–1867, was a prominent surgeon.—His son, JOHN COLLINS, M.D., b.1842, became prof. Harvard 1887.

Warren, MINTON, b.1850. Prof. Johns Hopkins since 1883; writer on Latin philology.

Warren, SIR PETER, R.N., 1703–1752. Rear-admiral 1745, M.P. 1747. He co-operated with Pepperell and the Mass. troops in the taking of Louisburg, June 1745.

Warren, ROBERT RICHARD, 1817–1897. Irish judge and author.

Warren, SAMUEL, 1807–1877. M.P. 1856–59; novelist. His *Diary of a late Physician*, 1831, and *Ten Thousand a Year*, 1840, were very popular. *Manual of Parliamentary Elections*, 1857.

Warren, SAMUEL EDWARD, b.1831. Prof. Rensselaer Inst. 1854–72, and Mass. Inst. of Technology 1872–75; author of textbooks on drawing and geometry.

Warren, SAMUEL PROWSE, b.1841. Organist in New York from 1864; composer.

Warren, WILLIAM, 1812–1888. American actor, long active and prominent in comedy, and held in high regard.

Warren, WILLIAM FAIRFIELD, D.D., LL.D., b.1833. Pres. Boston Univ. from 1873. *Prehistoric World*, 1885; *Quest of the Perfect Religion*, 1887; *Gottlieb*, 1891.

Warren Truss. Bridge truss in which the webbing is formed of members placed in an inclined position between the chords; sometimes called triangular truss. The truss is gener-

Warren Girder.

ally built of equilateral triangles, and the inclination of the bracing to the horizon should never be less than 45°. The figure shows a Warren girder of 6 equal bays in which the inclination of bracing is 60°.

Warrington. Manufacturing borough of Lancashire, Eng., on the Mersey, 16 m. w. of Manchester. Pop., 1891, 55,349.

Warrington, LEWIS, U.S.N., 1782–1851. Captain 1814; distinguished in the War of 1812; chief of ordnance from 1847.

Wars of the United States.

Statement of the Number of United States Troops Engaged.

WARS.	From—	To—	Regulars.	Militia and Volunteers.	Total.*
War of the Revolution	April 19, 1775	April 11, 1783	130,711	164,080	309,781

* Including all branches of the service.
† Naval forces engaged.
‡ The number of troops on the Confederate side was about 600,000.

See FRENCH AND INDIAN WAR, MEXICAN WAR, UNITED STATES, VOLUNTEERS, WAR, CIVIL, and WAR OF 1812.

Warsaw. Capital of Poland from 1609; on the Vistula; twice taken by Charles IX. of Sweden 1655–56; held by Russia 1793–95 and since 1815; in revolt 1830 and 1863. Depressed for a time, it has much increased of late, and has varied manu-

factures and an extensive trade, with many fine buildings. Its university, founded 1817, suppressed 1832, and reopened 1864, had in 1896 1,335 students and ab. 80 teachers. Pop., 1890, 490,417; 523,133 including military.

Warships. See SHIPS OF WAR.

Warta, or WARTHE. River rising in s.w. Poland, flowing 445 m. n. and w. into and through Prussia, and entering the Oder at Custrin; partly navigable.

Wartburg. Saxon castle near Eisenach, built 1069–72; scene of a poetic contest ab.1207, and of a students' assemblage

Wartburg (restored).

1817; restored ab.1860. Here dwelt for a time St. Elizabeth of Hungary (d.1231), and here Luther was protected May 1521 to March 1522.

Wart-Cress. Low herbs of the genus *Coronopus*, natural family *Cruciferæ*, natives of the Old World, introduced as weeds into America.

Wartenburg, YORK VON. See YORK VON WARTENBURG.

Wart-Hog (PHACOCHÆRUS). African swine, with a broad flat face bearing a pair of warty excrescences on each side, and having the canines of both jaws developed as tusks and curved upward. *P. æthiopicus* of s.e. Africa is 30 in. high, has a reddish-brown skin, scantily hairy, but with a dorsal mane. Its feet have 4 toes each. The teeth become reduced with age, until only one pair of greatly developed molars are left in each jaw. *P. africanus* is widely distributed through s. Africa, but its teeth are not so much reduced in number as in the former.

Wartmann, ELIE FRANCOIS, b.1817. Physicist who wrote much on electricity and magnetism. Prof. Lausanne 1838–46; prof. Geneva 1848.—His father, LOUIS FRANCOIS, b. 1793, wrote on astronomy and meteorology.

Warton, THOMAS, 1728–1790. Prof. Oxford 1757–61, poet laureate 1785. His *History of English Poetry*, 1774–81, is important. *Observations on the Faerie Queene*, 1754; *Poems*, 1802. —His brother, JOSEPH, 1722–1800, headmaster of Winchester School 1766–93, edited Pope and Dryden, and wrote verse.

Warts. Small tumors most commonly situated on the hands, but sometimes found on the feet, face, and ears. They consist of enlarged papillæ of the skin, covered with a thick, hard layer of epidermis. Some are easily removed by almost any of the many remedies suggested, while others seem to resist the action of almost every application. Painting the wart with lactic or glacial acetic acid (repeating if necessary), or the frequent application of a moistened crystal of copper sulphate are among the most promising remedies.

Warville, BRISSOT DE. See BRISSOT DE WARVILLE.

Warwick. Township of R. I., s. of Providence, including sundry manufacturing villages; settled 1642. Pop., 1890, 17,761.

Warwick, GUY OF. Mythical hero of Norman-English metrical romances ab.1150–1350.

Warwick, RICHARD DE BEAUCHAMP, EARL OF, 1381–1439. English courtier, soldier, and diplomatist; regent of France 1425–28 and from 1437; guardian or tutor of Henry VI.—His son, HENRY, 1424–1445, was made Duke of Warwick and "King of the Isle of Wight" 1445.

Warwick, RICHARD NEVILLE, EARL OF, 1428–1471. "King-Maker"; son of Richard, Earl of Salisbury. He married Anne Neville, heiress of Richard, Earl of Warwick, and received the title 1449; secured the crown to his cousin Edward IV. (York); captured Henry VI. (Lancaster) 1465; became disaffected; restored Henry VI. Sept. 13, 1470, and was killed at Barnet.

Wasatch Mts. Range of central Utah, separating the Great Basin from the Col. drainage area. Elevation 9,000 to 10,000 ft., with a few peaks rising to greater altitudes.

Wash. Arm of the sea on e. coast of England, receiving the Ouse and other rivers. Length 22 m., width ab. 15.

Washboards. Boards around the sides of a room at the floor line.

Washburn, EDWARD ABIEL, D.D., 1819–1881. Rector of Calvary Ch., New York, from 1865. *Social Laws of God*, 1874; *Epochs of Ch. History*, 1883; *Poems*, 1883.

Washburn, EMORY, LL.D., 1800–1877. Gov. of Mass. 1853–55; prof. Harvard 1856–76. *Judicial Hist. Mass.*, 1840; *Real Property*, 1860–62; *Study and Practice of Law*, 1871.

Washburn, ISRAEL, LL.D., 1813–1883. M.C. 1851–61; Gov. of Me. 1861–63; collector of Portland, Me., 1863–77.—Of his brothers, CADWALLADER COLDEN, 1818–1882, was M.C. from Wis. 1855–61 and 1867–71, Major-gen. U. S. Vols. 1862–65, serving in the southwest, and Gov. of Wis. 1872–73; CHARLES AMES, 1822–1889, journalist in San Francisco 1853–61, and Minister to Paraguay 1863–68, pub. novels and a *Hist. Paraguay*, 1870; WILLIAM DREW, b.1831, was M.C. from Minn. 1879–85, and U. S. Senator 1889–95; and ELIHU BENJAMIN, 1816–1887, who spelled the name WASHBURNE, was M.C. from Ill. 1853–69, a Republican leader, and U. S. Minister at Paris 1869–77, where he remained during the siege and under the Commune, and rendered eminent services to humanity. *Recollections*, 1887.

Washburn, PETER THACHER, 1814–1870. Reporter Vt. Supreme Court 1844–52; Gov. 1869. *Reports*, 1845–52; *Digest of Cases*, 1845–52.

Washburn, WILLIAM BARRETT, LL.D., 1820–1887. M.C. from Mass. 1863–72; Gov. 1872–74; U. S. Senator 1874–75.

Washburn College. At Topeka, Kan.; coeducational; founded 1865. It has 5 professors, 10 other instructors, 119 collegiate students, and a total enrollment of 247.

Washing Machine. For cleaning clothes with soap and water. The oldest methods are the rubbing between the hands, the dashing of the clothes on the water, and the pounding of the clothes on stones. Of the modern machines many varieties are on the market, those rubbing the clothes between corrugated rollers being very common.

Washing of Feet. Practiced from early Christianity to the present day, in supposed accordance with John xiii. 5–14, both in Europe and America. It is practiced by the Pope on Maundy Thursday each year, after a solemn mass, on 12 pilgrims. As a court ceremony it is practiced by the emperor at Vienna, and at Moscow in the Kremlin.

Washington. Capital of the U. S.; coextensive with the District of Columbia, and under immediate jurisdiction of the U. S. government. It is on the left bank of the Potomac, just above the mouth of the Anacostia, and is built mainly in the alluvial bottom land formed by the junction of these two streams. The Potomac is tidal and navigable to this point. The city is planned very regularly, being divided into four quarters, in each of which the n. and s. streets are numbered and the e. and w. streets designated by letters of the alphabet; these streets are crossed obliquely by avenues bearing the names of States. The streets are very wide, are parked on the sides or in the middle, and paved mainly with asphalt. Water is supplied by gravity, being taken from the Potomac at the head of Great Falls and brought to the city in an aqueduct; the supply is excellent and abundant. The public buildings are numerous, scattered widely over the city, and mostly fine architectural works. The Capitol, on an eminence at the nominal center of the city, is admirably adapted to its uses in all respects. Others are the Interior, Agricultural, Treasury, Post-Office, State, War, and Navy Departments, National Museum, Pension Office, Smithsonian Institution, Bureau of Engraving and Printing, Government Printing Office (the largest in the world), Observatory, Navy Yard, Arsenal, and Congressional Library. The W. Monument is a plain shaft of marble 555 ft. in height. W. is a city of parks. It contains numerous public squares and circles scattered widely over the city, most of them embellished by statuary, flower-beds, and fountains. The Soldiers' Home Park lies outside the city on the north, has an area of 500 acres, and contains the National Soldiers' Home. The city has little commerce or manufactures beyond what is required for the support of its inhabitants. In a legal sense, there is no city of W., its charter having been

The Capitol at Washington.

abolished 1874 and the government centered in that of the District, which is governed by 3 commissioners appointed by the President. The inhabitants have no voice in the management of affairs. Its growth was very slow, and the present beautiful city has been mainly built since the Civil War. It was accepted as the site of the national capital 1790: the boundaries of the city, with the location of the public squares, were determined 1791, by Washington; he called it The Federal City, but after his death it was named in his honor; the capital was moved there in 1800. It was laid out after the plans of a French engineer, and is modeled somewhat after the form of Versailles. The White House, the Presidential residence, stands in the w. part. on Pa. Avenue. W. is the most cosmopolitan of American cities, every civilized nation being represented in it. Pop., 1890, 230,392, of which about one-third were colored. Area 64 sq. m. (See Map, p. 1633.)

Washington. Most northwestern of the States. Its area is 69,994 sq. m. Along the w. coast are ranges or groups of mountains of no great height; e. of them is a depression or valley descending from Puget Sound through to the Columbia, in continuation of the Willamette valley of Oregon. Still further e. rises the Cascade Range, broad and plateau-like, surmounted by volcanic cones. The e. part is mainly occupied by the Great Plains of the Columbia, grass-covered but treeless. The industries are mainly agricultural. The State has become prominent as a source of wheat supply. The capital is Olympia. In 1592 the Strait of Juan de Fuca was discovered by a Greek pilot of that name. In 1789 an exploration of the inland waters was made by Capt. Kendrick, and in 1792 the Columbia was explored by Capt. Gray. The expedition of Lewis and Clark was fitted out 1803 by the U. S. to obtain a further knowledge of the interior. The history of the Territory was for a long time hardly more than that of the fur-trading company of J. J. Astor, the Northwest Fur Co., and the Hudson's Bay Co. The present State was originally a part of one territory including also Oregon and Idaho. W. was set off as a separate Territory 1853 and admitted as a State 1889. Pop., 1890, 349,300. (See Map, p. 1635.)

Washington, BOOKER TALIAFERRO, b.1856 in Va. as a slave; educated at Hampton. Founder (1881) and pres. of Tuskegee Institute, Ala., which under his guidance has grown to great proportions, and done an immense work in the industrial, mental, and moral education of the colored people.

Washington, BUSHROD, LL.D., 1762–1829. Nephew and heir of George; Associate Justice U. S. Supreme Court from 1798. *Reports of Va. Court of Appeals*, 1798–99; *U. S. Circuit Court Reports*, 4 vols., 1826–29.

Washington, GEORGE, 1732–1799. First President of the U. S.; born in Westmoreland co., Va. At 16 he was employed to survey the wilderness in the district of the Allegany Mts. During the war with the French and Indians he held important commands. He was attached to Gen. Braddock's staff

George Washington.

during his disastrous campaign of 1755, and was the only aid not killed or wounded: the Indians believed he had a charmed life. At the close of this war, 1759, he retired to private life, married Mrs. Martha Custis (1732–1802), and lived on his estates at Mt. Vernon, Va., until the beginning of the Revolution. At the news of the battle of Lexington he was appointed commander-in-chief of the Continental army. Thenceforth his history is that of the country. The management of the war was mainly in his hands, and its final success was chiefly due to his wisdom, valor, and public spirit. As President, 1789–97, he guided the new State through its first dangers, holding the balance between Federalists and Republicans, and avoiding foreign strife. His last years were spent at Mt. Vernon. His greatness lay in the even poise of many qualities: in dignity, purity, and disinterestedness he is the model of a public man. As the liberator of his country from a foreign yoke he ranks with Judas Maccabæus; as its "father," William the Silent alone has equal eminence.

Washington, JOHN MARSHALL, U.S.A., 1797–1853. Major 1847; distinguished at Buena Vista.

Washington, WILLIAM, 1752–1810. Cousin of George; Revolutionary officer, in active service 1776–82; distinguished especially at Cowpen's and Hobkirk's Hill; Brig.-gen. 1798.

Washington, MT. Highest peak of the White Mts., in N. H. Altitude 6,293 ft.

Washington, TREATIES OF. 1. June 12, 1846, defining the n.w. boundary of the U. S. and British America. 2. 1854, regulating trade with Canada; known as the "Reciprocity" treaty. 3. May 8, 1871, respecting the Alabama claims, San Juan boundary, and fishery disputes, and prescribing the duties of neutral States.

Washington, UNIVERSITY OF. At Seattle, Wash.; opened 1862. Congress assigned two townships 1854, and the State appropriated 100,000 acres 1893. It has 18 teachers and nearly 500 students.

Washington and Jefferson College. At Washington, Pa.; formed 1865 by the union of Washington Coll., chartered 1806, and Jefferson Coll., at Cannonsburg, Pa., chartered 1802. It is non-sectarian; has 13 teachers and ab.300 students.

Washington and Lee University. Outgrowth of Augusta Academy, founded 1749, known as Liberty Hall 1776–97; at Lexington, Va., since 1780; chartered 1782; called Washington Coll. 1797. It received various gifts, was revived 1865 with Gen. R. E. Lee as pres., and took its present name 1870. It has schools of arts, engineering, and law, 14 professors, 5 instructors, ab.200 students, and a library of 30,000 vols.

Washington Bridge. Highway bridge over the Harlem River at 181st Street, New York, completed 1890; remarkable for its long spans and its architectural beauty. The two main arches are each 510 ft. in span and 92 ft. in rise; the approaches to these consist of stone arches. Its cost was $2,850,000. The chief engineer was Wm. R. Hutton. See BRIDGES.

Washington Monument. Hollow stone tower in Washington, D. C., completed 1885. It is 55 ft. square; the walls are 15 ft. thick. At the top is a pyramid, capped with an aluminium tip. It is 555 ft. high, and the tallest structure ever made by man, except the Eiffel tower. The weight is 90,854 net tons.

The Washington Monument.

Washington University. At St. Louis, Mo.; chartered 1853, opened 1859. The law school was opened 1867, the polytechnic 1870, that of fine arts 1879. The medical coll. (founded 1842) became a part of it 1891, the dental coll. 1892. It has over 100 instructors, with 151 collegiate students, 274 in fine arts, 165 in law, 85 in medicine, and 90 in dentistry. Including secondary and training schools, it has (1897) a total of 175 teachers, and 1,823 pupils.

Washita, or **Ouachita,** RIVER. Left hand branch of the Arkansas, in Ark. and La. Drainage area 20,764 sq. m., length ab.600 m. It is navigable to Arkadelphia.

Wasielewski, JOSEPH VON, 1822–1896. German violinist and historical writer, of Polish descent.

Wasp. See FOSSORIA and VESPIDÆ.

Wassail. Drinking bowl used in the celebration at New

Year. A survival exists in the loving cup, which is passed from hand to hand around the guests at dinners.

Wasson, DAVID ATWOOD, 1823–1887. Successor of Theodore Parker in Boston 1865–66; poet.

Waste. Damage to land by a tenant, injurious to the owner. If caused by the tenant's act it is voluntary; if by his negligence, permissive. Liability for waste has been modified by modern statutes.

Waste Weir. Overflow from a reservoir, built to let off the water that rises above a certain level. Its length should be sufficient to discharge all surplus water in times of flood. See JOHNSTOWN FLOOD.

Wasting Palsy. Progressive muscular atrophy.

Watch. On shipboard, that set of men which have charge of the ship while others rest. Day and night are divided into watches of 4 hours each, except from 4 to 8 P.M., in which they are 2 hours each. See DOG-WATCH. The object of the dog-watch is to change the hours of the men, so that the same set is not on duty at the same hours every day.

Watch. Time-keeper actuated by a spring, and capable of being carried on the person. They are said to have been first invented at Nuremberg 1477, although it is claimed that Robert, King of Scotland, had a watch ab. 1310. Watches are now made by machinery. See HOROLOGY.

Watch Night. Last night of the old year. Some churches have religious services until midnight when the church bell is sounded, announcing the advent of the New Year.

Water. H_2O. Found as such on the earth's surface, and in all plants and animals; as water of CRYSTALLIZATION (q.v.); as vapor in the atmosphere, and in the earth's crust. It is formed whenever hydrogen or compounds containing hydrogen, as wood and coal, are burned. Rain water collects many impurities from the air as it falls; it usually contains particles of dust, plant and animal organisms, dissolved gases, small quantities of nitric and nitrous acid, and ammonia. Spring waters always contain foreign substances; the dissolved substances vary in quality and quantity according to the locality. Lake and river waters are often contaminated by the sewage of towns upon their banks, and are never free from bacteria, many of which are wholly unobjectionable. The Mich. standard of purity of water for domestic use is as follows, in parts per million: total residue not over 500; earthy bases 200; sodium chloride 10; sulphates 100; organic matter not reduce more than 8 pts. potassium permanganate; free ammonia .05; albuminoid ammonia .15; nitric acid .5; nitrous acid not enough to be estimated; toxicogenic germs none. Sea water contains a large number of salts. See SALT WATER; also FILTERS and SPRING. The following analysis is by Von Bibra:

	Atlantic Ocean.	Dead Sea.

Water, WEIGHT OF. The weight of a cubic foot of fresh water is generally taken at 1,000 oz. or 62½ lbs., but this is slightly in excess of the true value. For distilled water the following are the weights per cubic foot at different temperatures:

At 39° Fahrenheit	62.42	lbs.
" 50° "	62.41	"
" 60° "	62.37	"
" 100° "	62.00	"
" 212° "	59.84	"

Water Battery. Permanent fortification, located near the level of the water and armed with high powered guns for the defense of a channel or harbor.

Water Bed. Contrivance similar to the air bed, and used to prevent bed-sores.

Water-Beetle. See DYTISCIDÆ.

Water-Bok (KOBUS). S. African antelope, thick-set, with stout legs, coarse brownish gray hair, a height of 5 ft., and

Water-Bok (*Kobus ellipsiprymnus*).

having horns 30 in. long. These animals frequent the neighborhood of water. They go in herds of ab. 20, consisting either of young males or of females led by one old male.

Water Brash. Symptom in some dyspepsias, where there is a regurgitation, which may be insipid, salty or even acid, when the stomach is presumably empty of food. Numberless remedies have been suggested; the attempt at cure must include the discovery and removal of the cause.

Waterbury. City of New Haven co., Conn., on Naugatuck River. It has extensive manufactures, especially of brass work, clocks and watches. It was settled 1677 and chartered 1853. Pop., 1890, 28,646.

Waterbury, DAVID, 1722–1801. Brig.-gen. of Conn. troops 1776.

Water Chinquepin. See NELUMBO.

Water Clock. See CLEPSYDRA.

Water Colors. Pigments ground with water and gum, or size, which preserve their consistency in a solid cake when dried and which can be mixed with water by rubbing them on a moistened palette.

Water Courses. Natural flow of water in streams, considered as a subject of a legal interest or right vested in owners of land affected. The term does not apply to a line of discharge, natural or artificial, which is not the usual channel of flow.

Water Cress. See CRESS, WATER.

Water-Culture. Process of growing plants in water which carries known amounts of mineral salts in solution.

Water Cure. See HYDROPATHY.

Water Equivalent. Amount of water which has the same heat capacity as the calorimeter, stirrer, and thermometer; added to the total amount of water in the calorimeter in experiments in specific and latent heat.

Waterfalls. Falls of water from a height, most frequently occurring in mountainous country, where the streams from the mountain sides enter the valley. They change their ap-

pearance yearly owing to the wearing away of the rocks. Among the principal waterfalls are the following:

Yosemite (3 plunges)	2,660	feet.
Roraima Fall, Guiana (2 plunges)	2,000	"
Grand Falls, Labrador	2,000	"
Sutherland Falls, New Zealand (3 plunges)	1,904	"
Kukenam Fall, Guiana (sheer plunge)	1,500	"
Gavarnie Fall, Pyrenees	1,308	"
Staubbach, Switzerland	866	"
Kaieteur Falls, Guiana	740	"
Victoria Falls, Zambesi	400	"
Shoshone, U. S.	210	"
Foyers, highest in Britain (2 plunges)	205	"
Hay River, Alaska	200	"
Niagara	169	"

Water-Feather. Water violet. See FEATHERFOIL.

Water Flea. See DAPHNIA.

Waterford. Town of s. Ireland, on the Suir, 97 m. s.s.w. of Dublin; taken and fortified by Strongbow 1171. It has a good export trade. Pop., 1891, 21,693.

Waterford, LOUISA, MARCHIONESS OF, 1818–1891. Painter and illustrator.

Water-Gas. This is a much used kind of illuminating gas, which has largely replaced coal-gas. Steam is passed through a bed of red-hot anthracite or coke, thus producing a mixture of hydrogen and carbonic oxide gases, which is fuel-gas, and not luminous. This gas then passes through a superheater, where it mixes with the vapor of naphtha or petroleum, which is decomposed by the high temperature into permanent hydrocarbon gases, and the mixture becomes luminous. The resulting gas is passed through condensers, to remove the vapors, and through purifiers containing iron oxides to remove the sulphur. There are many modifications of the apparatus. 40 lbs. of anthracite and 5 gals. of naphtha are required per 1,000 cu. ft. of gas, and much less labor than for coal-gas. The fuel-gas, approximately, consists by volume of hydrogen 50, carbonic oxide 40, marsh-gas 2, carbon dioxide 3, nitrogen 5. The finished gas contains hydrogen 29, carbonic oxide 31, marsh-gas 23, illuminants 14.5, nitrogen 2, oxygen 0.5. The luminosity is about 26 candle-power. There is no tar or ammonia of value produced in this process. Although patents for water-gas processes date as far back as 1823, the manufacture was not successful until 1874; in 1889, of the total number of gas-works, 26 per cent made water-gas. Fuel-gas has been used for heating somewhat. Coal-gas was first used for lighting in Cornwall 1792, and the Gas-light Company of London was chartered 1809. In 1822 the Boston Co. was chartered, and in 1823 the New York Co., which went into operation in 1827. See COAL-GAS and ILLUMINATING GAS.

Water-Glass. See SODIUM SILICATE.

Water Hammer. Shock caused when a column of water in motion is suddenly brought to rest. The living force of the incompressible fluid has to be absorbed at the point to which the mass of water was moving, and the impact is like a blow. When steam or air is mixed with the moving column, the snapping or cracking is very pronounced, as the less dense fluids move quicker than the dense water, and if the pipes are cool enough with a steam water mixture to condense the steam so that a mass of the water is impelled into a vacuum by the expansive force of steam behind it, the blow is so severe as to endanger metal pipes and fittings and cause disasters. See AIR CHAMBER, CONCUSSIVE EBULLITION, and HYDRAULIC RAM.

Waterhen. See MOOR HEN.

Water Hog. See CAPYBARA.

Waterhouse, ALFRED, b.1830. English architect, R.A. 1885.

Waterhouse, BENJAMIN, M.D., 1754–1846. Prof. Harvard 1783–1812; pioneer of vaccination 1799; writer on medicine, botany, and politics.

Water Jet. Jet forced through a pipe for the purpose of sinking a pile by loosening the sand around its foot. See PILE DRIVER.

Waterland, DANIEL, D.D., 1683–1740. Archdeacon of Middlesex 1730; active in controversy. *Hist. Athanasian Creed*, 1724; *Eucharist*, 1737.

Waterleaf. Herbs of the genus *Hydrophyllum*, natural family *Hydrophyllaceæ*, natives of N. America.

Water-Legs. Those parts of a fire-box boiler which surround the fire, and on which the weight of that end of the boiler is borne. They are double, with a space of 4 or 5 in. between, filled with the water to be evaporated. When of large diameter or flat, the water-leg sheets are stay-bolted. The closure at the bottom is made by a mud-ring of heavy rectangular iron, or the inner plate is riveted to the outer by a Z-flange. Hand-holes should be made in water-legs.

Water-Lily. Aquatic herbs of the genus *Castalia* (*Nymphæa*), of the natural family *Nymphæaceæ*, bearing showy flowers; natives of the n. temperate and tropical zones; known

White Water-lily (*Castalia alba*).

also as Water-nymph. The root-stocks of the white water-lily contain gallic acid and have been used for dyeing. See LOTUS and VICTORIA REGIA.

Water-Lily, YELLOW. Yellow-flowered, aquatic herbs of the genus *Nymphæa* (*Nuphar*), of the natural family *Nymphæaceæ*, natives of the n. temperate zone; known as Pond Lily.

Waterloo. Belgian village, 11 m. s. of Brussels; site of the decisive battle, June 18, 1815, between the French under Napoleon, 72,000 men and 246 guns, and the Allies under Wellington, 68,000 men and 156 guns, re-enforced toward evening by the Prussians under Blücher, 50,000 men and 104 guns. The French lost 37,000 killed, wounded and prisoners, the Allies 23,000. Napoleon fled to Paris, and abdicated the second time June 22.

Waterman, ROBERT WHITNEY, b.1826. Gov. of Cal. 1887.

Waterman, THOMAS GLASBY, 1788–1862. Lawyer of Binghamton, N. Y. *Justice's Manual*, 1828.—His son, THOMAS WHITNEY, b.1821, edited many law books.

Water Mark. Impression, wrought in paper during the process of manufacture, by means of wire or brass plates on the hand mold or the dandy-rollers of the paper-machine.

Watermelon. *Cucumis citrullus.* Trailing vine of the natural family *Cucurbitaceæ*, extensively cultivated in warm and temperate countries for its large fruit.

Water Meter. Apparatus for measuring and registering the amount of water that flows through a pipe. There are four kinds: the piston meter, which registers the displacement of a piston head by clockwork; the screw meter, which

Water Meter.

has screw blades attached to a shaft and is surrounded by a cylinder; the wabbling-disk meter, in which the clockwork is moved by a pin attached to a disk; and the Venturi meter, in which the pipe is contracted so as to produce differences of

pressure. All meters must be rated so as to determine their discharge by actual test.

Water-Mole. 1. Desman; two species of aquatic moles of the genus *Myogale*, inhabiting s.e. Russia and the Pyrenees respectively. The former is 16 in. long, has a strong scaly tail, webbed feet, and the upper jaw is extended as a proboscis. 2. ORNITHORHYNCHUS (q.v.). See SORICIDÆ.

Water Motor. Small water wheel, designed to furnish a light power. See OVERSHOT WHEEL, TURBINE, and UNDERSHOT WHEEL.

Water-Net. Small reticulated fresh-water *Algæ*, the *Hydrodictyon utriculatum*.

Water Oats. See RICE, WATER.

Water of Crystallization. Many substances in crystallizing from aqueous solutions combine with a portion of water; *e.g.*, copper sulphate ($CuSO_4.5H_2O$) and sodium carbonate ($Na_2CO_3.10H_2O$). Upon heating these substances, the water is readily given off and the crystals lose their original form.

Water Opossum (YAPOK, *Chironectes*). Aquatic marsupial of Guiana and Brazil. Its pouch is well developed, and its habit of life is similar to that of a muskrat. It lives on fish, and brings forth half a dozen young in a litter in a burrow, which opens below the surface of the water of a stream, etc.

Water Ouzel. See OUZEL.

Water-Pepper. See SMARTWEED.

Water Pick-up. Arrangement to enable the water tanks upon locomotive tenders to be filled while the train is in motion; due to Ramsbottom. A trough of boiler-plate iron, 4 in. deep, 18 in. wide, and a quarter mile long, lies between the rails. This is filled with water from a source of supply, and is kept from freezing in winter by steam pipes in the corners of the trough. The tender has an inclined rectangular pipe, curved

Feed Water Trough.

toward its mouth to come down and enter the water like a scoop at its lower end. As the scoop end enters the water and is moved forward through it by the motion of the train, the inertia of the water compels it to follow the incline of the back of the pipe, and forces it upward until it falls over the top of the pipe into the tank. Best speed is ab. 20 m. per hour. Considerable water wastes sidewise over the trough.

Water Pipes. House service pipes are made of lead and wrought-iron, and sometimes of brass. Mains for carrying water through the streets of towns are cast-iron, and range in diameter from 3 to 60 inches; they are cast in lengths of 12 ft. and united by a bell and spigot joint. Pipes for conveying water from reservoirs to towns are generally of cast-iron, but steel pipes made of plates riveted together have come into use since 1890; the largest steel pipe is one of 60 in. diameter at Allegany, Pa. Wooden pipes made of red-wood staves bound with steel bands are frequently used on the Pacific slope. Cast-iron and steel pipes are coated internally with coal tar or asphalt to prevent corrosion. See PIPE LINES.

Water-Pore. Degenerate stoma at the extremity of a vascular bundle in the leaves of many plants, allowing the escape of water.

Water Power. Power derived from a wheel driven by water. One horse-power can be theoretically obtained by the fall of 33,000 lbs. of water per minute through a vertical distance of one foot. It is estimated that the rivers of the U. S. can furnish ab. 200,000,000 horse-power, of which less than one-hundredth part is actually utilized. The cost of water power per annum ranges from $10 to $20 per horse-power.

Water Proofing. Process of rendering textile fabrics and other substances impervious to water. This is accomplished by treating the substance with india-rubber, by means of double decomposition of alum and soap, or of tannic acid and gelatin. Chinese waterproof paper is made by treating it successively with solutions of glue and potassium dichromate, the gelatin being thus rendered insoluble.

Water Ram. Sudden shock produced in a pipe when a valve is quickly closed, the pressure thus produced being often much greater than the static pressure. To avoid it valves should be arranged so that they cannot be suddenly closed.

Water-Rat. 1. *Arvicola amphibius*, the European Water-Vole (see VOLES). 2. American Muskrat (see MUSKRAT).

Water Rice. See RICE, WATER.

Watershed. Area drained by a stream.

Water-Snakes (see also SEA-SERPENTS). The families represented here are the *Natricidæ* and *Homalopsidæ*. Members of the former family swallow their prey alive, and can be made to disgorge them before they are dead. *Tropidonotus* is a common genus, including the Water Moccasin (not the poisonous *Ancistrodon*), which may attain a length of 3 ft.; it is harmless, though a fierce fighter when cornered. *Macrophthalmus* of India mimics the venomous Cobra almost perfectly in form, color, and habit of flattening the neck. *Eutenia*, the Garter Snakes, are also included; they are not confined to the water. Some species of *Tropidonotus* can remain under water for hours.

Water Spaniel. One of the several breeds of SPANIELS (q.v.).

Water Spout. Appearance as if water were flowing from a cloud to the earth, or inversely, in a nearly vertical column; really due to the existence of a very rapidly revolving slender

Waterspouts.

cylinder of air, having a core of very low barometric pressure, up which spray is drawn from the center, and within which cloud or mist is formed by expansion and cooling of the air that is drawn into it.

Water Supply. Ab. 100 gallons per person per day are required for the supply of a town. A gravity system collects water in a storage reservoir, from which it is distributed to the town through pipes. Pumping systems are employed when the supply is obtained from a lake or river whose elevation does not permit distribution by gravity. Pumping to a stand-pipe or to a reservoir is the most common method, while direct pumping into pipes is used in some towns. For fire service an effective pressure of 60 to 80 lbs. per square in. is desirable in the pipes.

Water-Table. 1. Course of stone with an inclined front, around the base of a building. 2. Partition thrown across the fire-box of a locomotive boiler, so as to form a combustion chamber above and behind it (see COMBUSTION CHAMBER, FIRE-BOX, LOCOMOTIVE, and SMOKE-ARCH). It is double, like the water-legs, and of same depth, and is in direct communication with the water in these legs and at the front. The gases pass through a hole, made in it as the fire-door opening is made, and so become mixed with air.

Water-Tight Compartment. See BULKHEAD.

Water-Tissue. Modification of parenchyma, found in succulent plants, whose cells are filled with sap.

Waterton, CHARLES, 1782–1865. English naturalist and traveler. *Wanderings in S. America,* 1825; *Essays on Natural History,* 1838–44.

Water Tower. Vertical pipe into which water is pumped in order to produce a pressure head in the street mains;

Water Tower.

often called Stand Pipe. This prevents pulsation of the water in the distributing pipes, and, for small towns, acts as a reservoir.

Watertown. Capital of Jefferson co., N. Y., on Black River, near Lake Ontario; settled 1800, chartered 1869. It has varied manufactures. Pop., 1890, 14,725.

Water-tube Boilers. The water is inside of tubes, and the fire outside. They are less likely to become clogged with ashes and flue-dust, and favor rapid circulation; the heating surface is efficient. In foul or scaling waters the deposits give trouble; in many forms, to repair a tube at the middle of a group involves emptying and cooling the boiler, and an awkward process of renewal. Forced circulation increases the efficiency of such boilers. See BOILERS, COIL BOILERS, GALLOWAY BOILERS, and SECTIONAL BOILERS.

Waterville College. See COLBY UNIVERSITY.

Watervliet Arsenal. Established by the U. S. Government at W. Troy, N. Y., 1807, on a reservation of 109 acres. Here are manufactured field and siege ordnance, shot and shell, gun-carriages, ammunition and equipments for the U. S. army.

Waterweed. *Philotria canadensis.* Small, submerged, aquatic herb of the natural family *Hydrocharideæ,* native of N. America; naturalized in Europe.

Water-Wheel. See BREAST-WHEEL, CENTER-FLOW WHEEL, OVERSHOT WATER-WHEEL, TURBINES, and UNDERSHOT WHEEL.

Water-Willow. *Dianthera americana.* Narrow-leaved, aquatic herb of the natural family *Acanthaceæ,* native of e. N. America.

Water Works. The first public water supply in the U. S. was a gravity reservoir constructed at Boston, Mass., 1652; the second one was a pumping system built at Bethlehem, Pa., 1754. In 1800 there were five water works in the U. S.; in 1850 there were 68, and in 1880 there were 629. In 1890 the number was 2,037, of which 588 were gravity systems and 1,449 pumping systems. In 1897 the number had increased to 3,196, of which 1,690 were owned by towns and cities and 1,506 by private parties; these works furnished both domestic supply and fire protection to 3,480 towns. See AQUEDUCT, DAMS, PIPE LINES, PUMPING ENGINE, RESERVOIR, WATER PIPES, WATER SUPPLY, and WATER TOWER.

Waterwort. Insignificant aquatic herbs of the genus *Podostemon,* natural family *Podostemaceæ,* of wide geographical distribution.

Watkin, SIR EDWARD WILLIAM, b.1819. M.P. from 1864; knighted 1868; promoter of railways, parks, and the Channel tunnel.

Watkins Glen. Summer resort in Schuyler co., N. Y., near Seneca Lake. It has precipitous sides and many cataracts.

Watling's Island. One of the Bahamas, supposed to be Guanahani or San Salvador, first touched by Columbus.

Watling Street. Roman road from Dover to London, Chester, and York, thence branching n.w. and n.

Watson, ELKANAH, 1758–1842. American traveler and promoter of public works. *Tour in Holland,* 1790; *Hist. Canals in N. Y.,* 1820; *Agricultural Societies,* 1820.—His son, WINSLOW COSSOUL, b.1803, ed. his *Memoirs,* 1855, and pub. *Hist. Essex Co., N. Y.,* 1870.

Watson, GEORGE LENOX, b.1851 in Glasgow. Designer of yachts.

Watson, HENRY CLAY, 1831–1869. American journalist. *Camp-fires of the Revolution,* 1851.

Watson, HENRY COOD, 1816–1875. Anglo-American journalist; founder *Art Journal* 1862; musical critic.

Watson, HEWETT COTTRELL, 1804–1881. English botanist. *Distribution of British Plants,* 1832; *Cybele Britannica,* 4 vols., 1847–59.

Watson, JAMES CRAIG, LL.D., 1838–1880. Prof. Univ. Mich. 1859; Director Observatory there 1863, and of Washburn Observatory, Univ. Wis., 1879; discoverer of 22 asteroids. He left with the Academy of Sciences a fund for computing and publishing tables of their motions. He had charge of an expedition to Peking 1874 to observe the transit of Venus. *Comets,* 1860; *Theoretical Astronomy,* 1868.

Watson, JOHN ("IAN MACLAREN"), b.1840. Presb. minister at Liverpool. His novel, *Beside the Bonnie Brier Bush,* 1894, was highly successful. *Days of Auld Lang Syne,* 1895; *Mind of the Master,* 1896.

Watson, JOHN, LL.D., b.1847 in Glasgow. Prof. Queen's Univ., Kingston, Canada, 1872. *Kant,* 1881–88; *Schelling,* 1882; *Comte, Mill, and Spencer,* 1895.

Watson, JOHN WHITTAKER, 1824–1890. American poet. *Beautiful Snow,* 1869.

Watson, MUSGRAVE LEWTHWAITE, 1804–1847. English sculptor.

Watson, PAUL BARRON, b.1861. Boston lawyer. *Life of Marcus Aurelius,* 1884.

Watson, RICHARD, D.D., 1737–1816. Bp. of Llandaff 1782. His *Apology for Christianity,* 1776, and *for the Bible,* 1796, answering Gibbon and Paine, and *Theological Tracts,* 6 vols., 1785, were much valued.

Watson, RICHARD, 1781–1833. English Wesleyan. His *Theological Institutes,* 1823–24, "has been the standard of Methodism." His *Life of John Wesley,* 1831, *Biblical and Theological Dictionary,* 1832, *Sermons,* 1834, and other works, have been much used.

Watson, SERENO, M.D., 1826–1892. Curator Gray Herbarium at Harvard 1888. *Botany of U. S. Geological Exploration of 40th Parallel,* 1871.

Watson, THOMAS, ab.1557–1592. English poet, one of the "Amorettists."

Watson, WILLIAM, b.1834. Prof. Mass. Inst. of Technology 1865–73. *Descriptive Geometry,* 1873; *Shades and Shadows,* 1885.

Watson, WILLIAM, b.1855. English poet. *Lachrymæ Musarum,* 1892; *Excursions in Criticism,* 1893; *Father of the Forest,* 1896.

Watt, or VOLT-AMPÈRE. Energy of an electric current of one ampère strength under an electromotive force of one volt; equal to 10^7 ergs per second. 746 watts are equal to one horse-power nearly. A watt-hour is the total amount of energy expended in one hour where the rate of working has been one watt. It is equal to 36×10^9 ergs.

Watt, JAMES, 1736–1819. Scottish civil and mechanical engineer. He designed bridges, greatly improved the steam engine, made the first rotary steam motor, and invented the engine governor. He was an instrument maker of

Glasgow 1754; began the study of steam 1758; built model engines 1761–68, and with Matthew Boulton operated the

James Watt.

Soho works near Birmingham 1773–1800. See ENGINE and HISTORY OF STEAM.

Watt, ROBERT, 1774–1819. Physician at Paisley and Glasgow; medical writer. *Bibliotheca Britannica*, 4 vols., 1824.

Watteau, ANTOINE, 1684–1721. French painter of court life and amusements; leading artist of his time in France; good colorist and sagacious observer.

Watteau, BOUDOIN LOUIS, 1570–1627. French traveler. *Voyage*, 1627.

Watterson, HENRY, b.1840. Ed. Louisville *Courier-Journal* since 1868; M.C. from Ky. 1876–77; Democratic leader.

Watt-Hour. See WATT.

Wattignies. In n. France; scene of a defeat of Austrians by French under Jourdan, Oct. 16, 1793.

Wattles. Several species of Australian *Acacias*, trees of the natural family *Leguminosæ*, prized for their hard wood and for the bark, which is used in tanning.

Wattmeter. Instrument for measuring the power expended in electric circuits.

Watts, ALARIC ALEXANDER, 1797–1864. English poet, pensioned 1854; ed. *Literary Souvenir* 1824–37, and *United Service Gazette* 1833–43.

Watts, FREDERICK, 1719–1795. Revolutionary officer; Brig.-gen. Pa. troops 1782.—His grandson, FREDERICK, 1801–1890, was presiding judge 9th Pa. district 1849–52, and Commissioner of Agriculture 1871–77. *Reports Pa. Supreme Court*, 19 vols., 1833–46.—His brother, HENRY MILLER, b.1805, was U. S. Minister to Austria 1868–69.

Watts, GEORGE FREDERICK, D.C.L., b.1817. Most thoughtful and imaginative of recent English painters; chiefly of portraits and allegories, the latter of profound meaning and literary purpose. His execution is wholly a means to the expression of thought. An exhibition of his works was held at the New York Metropolitan Museum 1884. *Love and Death* and *Love and Life* were seen at the World's Columbian Exposition.

Watts, HENRY, F.R.S., 1815–1884. English chemist. *Dict. Chemistry*, 5 vols., 1863–68; supp. 1872, 1875, 1881; new ed. by Morley and Muir, 4 vols., 1889–94.

Watts, ISAAC, D.D., 1674–1748. Father of English hymnody. His *Hymns and Spiritual Songs*, 1707, and *Psalms of David*, 1719, had a mighty influence: a large proportion of them was in general use for over a century. *Divine and Moral Songs for Children*, 1720, were long popular. *Horæ Lyricæ*, 1706, is of less importance. His *Logic*, 1725, and other treatises, were formerly valued.

Watts, ROBERT, D D., b.1820 in Ireland. Presb. pastor in Phila. 1852–63, and Dublin 1863; prof. Belfast since 1866; prolific writer on theology and philosophy.

Watts, THOMAS HILL, 1819–1892. Confederate Atty.-gen. 1862; Gov. of Ala. 1863–65.

Watts, WALTER THEODORE, b.1836. English poet and critic.

Wat Tyler. See TYLER, WAT.

Waugh, EDWIN, 1817–1890. Lancashire poet and descriptive writer, mostly in dialect; pensioned 1882. *Works*, 11 vols., 1881–83.

Waurin, JEHAN DE, 15th cent. French-English chronicler. His work, extending to 1471, was pub. in 5 vols. 1864–91, and partly tr. 1864–87.

Wausau. Capital of Marathon co., Wis., on Wisconsin River; settled 1842. It has some manufactures and a large trade in lumber. Pop., 1895, 11,013.

Wauters, ÉMILE, b.1846. Belgian historical painter.

Wave-Force. Dynamic pressure produced by a wave of the Atlantic Ocean impinging upon a surface has been observed to be as great as 6,100 lbs. per sq. ft.

Wave-Length. In any wave motion, distance from a vibratory particle to the next one in the same phase.

Wavellite. $3Al_2O_3,2P_2O_5,12H_2O$. Natural hydrous aluminium phosphate, occurring in small radiated or globular masses. Magnet Cave, Ark., is one of its localities.

Wave-Motion. Act of propagating through an elastic medium an undulation or wave. A wave may be defined as the continued transmission of a relative state of particles by the successive reciprocating vibrations of the individual particles. Waves of the Atlantic attain a length of 600 ft. and a height of 48 ft. Such a wave was 11 sec. in passing a given point.

Wave of Cold. Sudden change in temperature, now known as Cold Wave.

Waverley Novels. See SCOTT, WALTER.

Waves. See RADIATION, REFLECTION, REFRACTION, SOUND, WAVE LENGTH, and WAVE MOTION.

Wax. Substance both of animal and vegetable origin. See BEESWAX, MINERAL WAX, OZOKERITE, and SPERMACETI.

Wax-Bill. Small seed-eating bird of many species, inhabiting the Oriental region, and having short thick bills resembling sealing-wax in colors and gloss. Some are pleasant singers and are kept as cage-birds; *e.g.*, the Java Sparrow.

Wax-Myrtle. See BAYBERRY.

Wax-Palm. *Copernicia cerifera*. Palm, native of Brazil, its young stems and leaves secreting a large amount of wax, which is collected and exported. *Ceroxylon andicola* of Columbia, also a palm, yields a similar secretion.

Wax-Wing. Bird with soft plumage, and erectile crest; the tips of the secondary wing feathers (and in some species the tail also) bear appendages resembling red or yellow sealing wax. *Ampelis cedrorum* is the common cedar bird of the U. S.

Wax-Wing (*Ampelis garrulus*).

A. garrulus is the Bohemian or Northern Wax-wing of Europe, Asia, and America. It goes in flocks, visiting different countries in successive years: its appearance was once believed to herald disaster.

Waxwork, IN BOTANY. See BITTERSWEET.

Wax Works. The ancient Egyptians used wax figures of their deities in funeral rites, and deposited them in their graves; many of these are now preserved in museums. The Greeks made wax dolls. In the beginning of the 18th century wax anatomical specimens were first shown. The most famous modern wax-work exhibition is in London, owned by Madame Tussaud, and consists of models of noted persons. This collection originated in Paris during the Revolution. Beeswax is the most convenient medium, as it is fluid at a low heat, can be easily cut and shaped, takes surface tints well, and easily mixes with any coloring matter.

Waxy Degeneration. Degenerative change of a tissue, occurring during the progress of some disease, which causes the affected part to have a waxy appearance upon section. It is due to the infiltration of lardacein, which is stained a deep, mahogany brown upon the application of iodine. The spleen, liver and kidneys are most frequently attacked, and the concurrent disease is such as to cause a drain on the system; chronic bone disease, pulmonary tuberculosis, etc. A removal of the cause may arrest the progress of the degeneration. It is also known as albuminoid disease.

Way. Right of private passage by a defined course over another's land, arising either by grant, by prescription, or from necessity.

Way, ANDREW JOHN HENRY. 1826–1888. American painter.

Way, COVERED. See COVERED WAY.

Wayfaring Tree, AMERICAN. See HOBBLE-BUSH.

Wayland, THE SMITH. Mythical hero of old German, Norse, and Anglo-Saxon poems.

Wayland, FRANCIS, D.D., LL.D., 1796–1865. Pres. Brown Univ. 1827–55; eminent as a preacher. His *Moral Science*, 1835, *Political Economy*, 1837, and *Intellectual Philosophy*, 1854, were long used as text-books.—His son and biographer (with his brother FRANCIS, LL.D., b.1826), HEMAN LINCOLN, D.D., b.1830, ed. *National Baptist* 1872–94.

Wayne, ANTHONY, 1745–1796. Col. 4th Pa. 1776; Brig.-gen. Feb. 1777; prominent at Brandywine, Germantown, Monmouth, and in the capture of Stony Point, as later in Va. and Ga. As Gen.-in-chief of the U. S. Army 1792 he defeated the Indians on the Maumee, Aug. 20, 1794, and negotiated with them an important treaty 1795.

Wayne, JAMES MOORE, LL.D., 1790–1867. Judge of Ga. Superior Court 1824–29; M.C. 1829–35; Justice U. S. Supreme Court from 1835.

Waynesborough. Village of Augusta co., Va.; scene of Early's defeat by Sheridan March 2, 1865.

Waynfleet, WILLIAM OF, ab.1405–1486. Bp. of Winchester 1447; Chancellor 1456–60; founder of Magdalen Coll., Oxford, 1448–56.

Wazan. Town of Morocco, 90 m. s.e. of Tangier; home of the Grand Shereef and resort of pilgrims; founded ab.880. Pop. 20,000.

Weak-Fish, or SQUETEAGUE (CYNOSCION). Fish living near estuaries on the U. S. coast s. from N. J. It attains a weight of 1 to 10 lbs., and larger in the South. It is migratory, spending the summer North, and is most abundant when its enemy the Bluefish is least prevalent. It snaps at bait readily, and must be carefully hauled in because of its weak mouth. It has irregular dark spots, those on the back being round in a related Southern species known as Sea-trout. See ACANTHOPTERI.

Weald. Fresh-water formation in s.e. England, at the base of the Cretaceous series, with which it has been generally connected. Recent evidence derived from its vertebrate fossils has led many geologists to believe that it is more closely allied to the underlying Jurassic system.

Wealth. So much of one's possessions as can be transferred or exchanged.

Weaning. Process of substituting substantial food from external sources for the milk used in early infancy. It is a period for special care-taking both for mother and child. The precise time of weaning must be determined by the circumstances of each case. As there is a period of rest in teething after the appearance of the 8 incisor teeth, 10 months is ordinarily named as the proper time.

Weare, MESHECH, 1713–1786. Pres. of N. H. 1776–85; Chief-justice 1777.

Weasel. Member of the genus *Putorius*, family *Mustelidæ*, including small carnivores with very slender body. *P. vulgaris* is the common Weasel. It lives in the colder parts of the n. hemisphere, attains a length of 8 in., with the tail 2¼ in. It is reddish-brown above and white below, the end of the tail never becoming black. In extremely cold seasons the fur becomes all white except the end of the tail. It lives on small birds

Weasel (*Putorius vulgaris*).

and rodents; the latter it readily follows in their retreats, owing to its slenderness, small head, long neck, and short limbs. Two or three litters per year of ab. five young each are brought forth in burrows, and are courageously defended by the mother.

Weatherboards. Outer boards of a wooden house.

Weather Bureau. Established in 1891 as a branch of the U. S. Department of Agriculture, to continue the meteorological work of Signal Service, instituted 1870. See AGRICULTURE, DEPARTMENT OF, and WEATHER SERVICE.

Weathercock. Use of a cock as a vane is said to date from the 9th century, when a certain pope ordered it placed on all church steeples as an emblem of St. Peter, who denied the Lord before the cock crew twice. See VANE.

Weather Cycle. Periodic recurrence of any feature of the weather. Such cycles have been sought for in vain for many ages. The ancients were guided in their search by the planetary configurations, and the modern astrologists have followed their lead. Since the days of Galileo the accumulation of meteorological records has led to the discovery of many local cycles of empyrical lengths, and since the publication of Wolf's sunset numbers there have been extensive studies in sunset cycles and a cycle of 26 days, coinciding with the rotation of the sun on its axis. The law of hydronamics shows that atmospheric motions are compounded of many minor cycles.

Weather-Gage. Position of a fleet or ship when to windward of another.

Weather-Gaw. Any sign of approaching change in the weather.

Weather Glass. Apparatus that indicates the condition of the present or future weather; especially in four forms. 1. Crude Galileo air thermometer ab.1630. 2. Since ab.1660, any form of barometer. 3. Camphor barometer. 4. Most frequently, hygroscopic apparatus showing the effects of moist and dry weather.

Weather House. Hygroscope, so constructed of two figures connected by a piece of hygroscopic substance, as wood, that one or other retires into a little house as the moisture of the air increases or decreases.

Weather Plant. In Corsica and Tunis, species of plant the condition of whose leaves is said to indicate the approaching weather 48 hours in advance.

Weather Quarter. On windward side of a ship.

Weather Rules. Any system for foretelling the weather; *e.g.*, Halley's rules, 1700, for barometer; Harris rules, 1730, for barometer and hygrometer; Herschel's rules, so called, but really not his.

Weather Service. Any official government organization for observing and utilizing meteoric data: weather bureau, as at Washington; meteorologic office, as at London; meteorologic institute, as those of Germany, Austria, and Russia.

Weather Side. That on which the wind blows.

Weather Signal. Any signal displayed to announce approaching weather; those ordered daily by telegrams from the Signal Office at Washington to be displayed in early morning

at towns or on railroad trains throughout the country, to announce the weather for 24 hours from the time of display, and, by reading from the top signal downward, to predict fair or rain, warmer or colder. White square flag indicates fair weather; blue square flag indicates rain or snow; black triangular flag, when placed above the two previously mentioned, indicates warmer weather, when placed below them, colder weather; white square flag with black square in center indicates fall in temperature or cold wave. The square flags are 6 ft. square, the triangular flag is 6 ft. long by 4 ft. wide.

Weather Types. Conditions of the weather or weather chart that are typical of succeeding well-recognized changes. Four such types were specifically described by Abercromby 1887 as defined by systems of isobars.

Weaver-Birds. Members of the family *Ploceidæ*, including over 250 species, chiefly African. They resemble Sparrows, but the male is brightly colored, and some undergo great change of plumage during the breeding season. The bills are grosbeak-like, but there are 10 primaries. They all build closely woven nests of remarkable shapes. The Philippine bird makes a rope suspended from the end of a limb over water; near its lower end is an enlargement, the nest, entered by means of the tubular extension below. The Social Weavers construct mushroom-like domes of grass upon the stems of trees, and 20 to 40 nests are made under each roof; as many as 300 have been found united into one aggregation of united roofs, resembling the huts of the natives. Members of the genus *Estrelda* are kept as cage-birds, and are pleasant songsters.

Baya Weaver-bird and Nest (*Ploceus baya*).

Weaving. Process of converting fibers into fabrics, performed upon a frame called a LOOM (q.v.). It is not known who were the first to practice it, or what fabric was first produced. The Chinese claim to have practiced silk weaving 2500 B.C. The Egyptians ascribed the art to Isis; the Greeks to Minerva; and the Peruvians to the wife of Manco Capac. The holy coat of Treves was woven in one whole piece. The essential operations in weaving are the successive raising of certain threads of the warp, and the depression of others, so as to form a passage for the weft yarn, which is then beaten up by means of a batten.

Ordinary Navajo blanket loom.

Web. Plate that joins the upper and lower flanges of a beam; or members joining the upper and lower chords of a truss.

Webb, CHARLES HENRY ("JOHN PAUL"), b.1834. American author and inventor. *Parodies*, 1876; *Vagrom Verse*, 1889. Several of his books are burlesques of well-known novels or plays.

Webb, GEORGE JAMES, 1803–1887. Anglo-American organist, teacher, and compiler of tune-books.

Webb, CAPT. M., d.1895. English champion swimmer. See SWIMMING.

Webb, SAMUEL BLATCHLEY, 1753–1807. Officer of Conn. troops 1775; aid to Washington 1776; prisoner 1777–80.—His son, JAMES WATSON, 1802–1884, was editor New York *Courier and Enquirer* 1829–61, and Minister to Brazil 1861–69. *Altowan*, 1846; *Slavery*, 1856.—His son, ALEXANDER STEWART, U.S.A., LL.D., b.1835, Brig.-gen. U. S. Vols. 1863–66, was distinguished at Gettysburg and in Va., and became pres. Coll. New York 1869. *The Peninsula*, 1882.

Webb, SIDNEY, b.1859. English economist. *Socialism*, 1889.

Webb, THOMAS, 1724–1796. English officer, pioneer of Methodism in America 1767–72.

Webb, THOMAS SMITH, 1771–1819. American founder of Masonic chapters and encampments. *Freemason's Monitor*, 1797.

Webbe, WILLIAM. English playwright and critic. *Discourse of Poetrie*, 1586.

Webber, CHARLES WILKINS, 1819–1856. American novelist, traveler, and adventurer, killed in Nicaragua under Walker. *Old Hicks the Guide*, 1848; *Hunter-Naturalist*, 1851.

Webber, SAMUEL, D.D., 1759–1810. Prof. Harvard 1789, pres. 1804. His *Mathematics*, 1801, was long in use.

Weber. Unit magnetic pole, being one that will repel an equal pole at a centimeter distance with a force of one dyne; name proposed by Clausius and Siemens.

Weber, ERNST HEINRICH, 1795–1878. Prof. Leipzig from 1818; writer on anatomy and physiology.—His brother WILHELM EDUARD, 1804–1891, Prof. of Physics at Göttingen 1831–37 and 1849, and Leipzig 1843–49, wrote on magnetism and electricity.

Weber, FRIEDRICH, 1781–1823. Prof. of Botany at Kiel. *Beiträge zur Naturkunde*, with D. M. Mohr, 1805–10, *Botanisches Taschenbuch*, 1807; *Historiæ muscorum hepaticorum prodromus*, 1815.

Weber, FRIEDRICH ALBRECHT, b.1825. Prof. Berlin from 1856; Sanskrit scholar. *Indische Studien*, 17 vols., 1849–89.

Weber, GEORG, 1808–1888. Teacher at Heidelberg. His *Outlines of Universal History*, tr. 1852, was widely used. *Weltgeschichte*, 15 vols., 1857–80.

Weber, KARL MARIA VON, 1786–1826. German opera composer of the romantic school, and one of the most influential musicians of the century. He opened a new world to German opera with his *Freischütz* 1821, and as composer and conductor at Dresden from 1816 exerted a powerful influence on Wagner. He produced *Oberon*, written to English words, in London 1826. Other operas are *Abu Hassan*, 1811, *Silvana*, 1812, *Euryanthe*, 1823. He composed voluminously in other forms, especially for pianoforte.

Weber, MAX, b.1824 in Baden. Brig.-gen. U. S. Vols. 1862–65, serving in Va.; Collector of internal revenue in New York 1872–83.

Weber, PAUL, b. ab.1823. German landscape painter, in Phila. 1848–58.

Weber River. In n. Utah, flowing ab. 170 m. w. and n.w. to Salt Lake.

Weber's Law. See PSYCHOPHYSICS and FECHNER'S LAW.

Webster, AUGUSTA (DAVIES), 1840–1894, m.1863. English poet, novelist, and dramatist.

Webster, DANIEL, 1782–1852. Greatest of American orators, and eminent as statesman and constitutional lawyer; M.C. from N. H. 1813–17, and from Mass. 1823–27; moved to Boston in 1816; U. S. Senator 1827–41 and 1845–50; Sec. of State 1841–43 and 1850–52. Probably the most famous of his many memorable speeches were that on the Dartmouth College case, 1818, and his defense of the Union in reply to Hayne of S. C., 1830. He won great favor in the North by his advocacy of tariffs, and lost much of it in later life by defending the slave system. In 1842 he negotiated the Ashburton treaty with Britain. For 20 years he shared with Clay the leader-

ship of the Whigs, and was the most conspicuous of public men; but his ambition was never gratified by a Presiden-

Daniel Webster.

tial nomination. *Speeches*, etc., 6 vols., 1851. *Correspondence*, 1857.

Webster, JOHN. English dramatist of remarkable power. His greatest tragedies are *The White Devil*, 1612, and *The Duchess of Malfi*, 1623.

Webster, JOHN ADAMS, U.S.N., 1785–1876. Defender of Baltimore 1812.

Webster, JOHN WHITE, M.D., 1793–1850. Prof. Harvard 1827–50; hanged for the murder of Dr. G. Parkman.

Webster, JOSEPH DANA, 1811–1876. Brig.-gen. U. S. Vols. 1862–65; chief of staff to Grant and Sherman; collector at Chicago 1872.

Webster, JOSEPH PHILBRICK, 1820–1875. American composer, chiefly of songs.

Webster, NOAH, 1758–1843. American teacher, whose spelling-book, included in *A Grammatical Institute*, 1783–85, was enormously successful. He labored hard for copyright, and pub. sundry treatises and a *Grammar*, 1807. His celebrated *American Dictionary*, the foundation of that now in use under his name, appeared 1828.

Webster, PELATIAH, 1725–1795. Phila. patriot and publicist. *Political Essays*, 1791.

Webster, SIR RICHARD EVERARD, b.1842. Queen's counsel 1878; M.P. 1885; Atty.-gen. 1885–92 and 1895.

Webster, WARREN, M.D., b.1835. Surgeon U.S.A. since 1860. *Army Medical Staff*, 1865.

Wecker, LOUIS DE, b.1832 in Germany. French writer on diseases of the eye.

Wedderburn, ALEXANDER, 1733–1805. M.P. 1762; Solicitor-gen. 1771; supporter of tyranny in America; Atty.-gen. 1778; Baron Loughborough and Chief-justice 1780; Lord Chancellor 1793–1801; Earl of Rosslyn 1801.

Wedderburn, JAMES, ab.1500–ab.1564. Scottish playwright and satirist.—His brothers, JOHN, d.1556, and ROBERT, wrote most of *The Gude and Godlie Ballates*, used by early Scottish reformers.

Wedding Customs. Many different rites of marriage are practiced, which no doubt arose by degrees and in many different ways, and which at a later day survived as a ceremony. The Malay custom of the man and woman eating out of the same dish is one of the oldest. The Romans offered a cake of spelt to Jupiter in the presence of witnesses. Wives were often bought or captured; in the latter case the bridegroom had a helper, who at the present day is known as best-man. The wedding day was also of importance, the Bedouins preferring Friday, and the Chinese the last month in the year. See HANDFASTING, MARRIAGE, and PENNY WEDDINGS.

Wedge. Simple machine, usually consisting of an isosceles prism of wood or metal having one very acute dihedral angle called the edge. The face opposite the edge is called the back. It is used frequently for splitting blocks of stone or wood.

Wedge. Solid bounded by five plane figures, a parallelogram (the back), two trapezoids (the faces), and two triangles (the ends). See UNGULA, SPHERICAL.

Wedgwood, JOSIAH, F.R.S., 1730–1793. English improver of pottery, founder of British ceramic art; grandfather of Darwin. Much of his ware was from designs by Flaxman. He is

Wedgwood Cup and Saucer (blue and white).

chiefly celebrated for his decorations, vases, etc., in imitation of the antique, which are still highly valued. He accumulated a large fortune, which he dispensed with princely benevolence and great public spirit.

Wednesbury. Town of Staffordshire, 8 m. n.w. of Birmingham; noted for its iron manufactures. Pop., 1891, 25,342; Parliamentary borough, 69,083.

Wednesday. Fourth day of the week; so called from Odin or Woden, the Scandinavian god of war.

***Weed.** Plant out of place, intruder in gardens and fields, or inhabiting waste places and retreating before cultivation.

Weed, STEPHEN HINSDALE, U.S.A., 1834–1863. Captain of Artillery 1861; Brig.-gen. U.S.Vols. 1863; killed at Gettysburg.

Weed, THURLOW, 1797–1882. Founder Albany *Evening Journal*, 1830, which he controlled till 1863; Whig and Republican leader, long powerful in N. Y. politics. *Letters*, 1866; *Autobiography*, 1882.

Weeden, WILLIAM BABCOCK, b.1834. American writer on labor. *Economic Hist. New England*, 1890.

Weedon, GEORGE, ab.1730–ab.1795. Va. officer, Brig.-gen. 1777 and 1780.

Week. Period of seven days; supposed to be first used among the Jews, who observed the Sabbath every seventh day. They had three sorts of weeks; the common one of 7 days, the second of 7 years, and the third of 7 times 7 years, at the end of which was the jubilee.

Weekes, HENRY, 1807–1877. English sculptor, R. A. 1863.

Weeks, EDWIN LORD, b.1849 in Boston. Painter, chiefly of Oriental scenes; resident in Paris.

Weeks, FEAST OF. Name originally given to PENTECOST (q.v.).

Weems, MASON LOCKE, ab.1760–1825. Erratic Va. minister, book-agent, and pamphleteer; biographer of Washington, 1800, and others; author of the cherry-tree and hatchet legend.

Weenix, JAN BAPTISTA, 1621–1660. Dutch landscape, genre and animal painter.—His son, JAN, 1640–1719, followed the same profession with great success.

Weep Hole. Hole through a retaining wall to let out water that accumulates behind it.

Weeping. In Botany, having slender, flexible branches which hang downward.

Weeping. When the lachrymal glands are stimulated to such a degree that the secretion cannot be carried off through the usual channels, the excess of secretion is known as tears, and the process weeping. It may be produced by an irritation of the eye or, reflexly, by a distant irritation, as of the mucous membrane of the nose; or by a strong emotion, more especially grief. See TEARS.

Weever, JOHN, 1576–1632. English antiquarian. *Funeral Monuments*, 1631.

Weevils. Family *Curculionidæ*, including over 10,000 species of beetles. They all have a long straight rostrum in front of the head; from its sides, apparently, spring the antennæ, which really are inserted further back. The rostrum is used

Large Black-Nut Beetle (*Otiorhynchus niger*), with Larvæ and Cocoon.

for boring into nuts, seeds and bark while the shoots are young, so that the eggs may be lodged within and the young on hatching will find food. The result is gradual death of the part affected and premature dropping of the fruit. See TETRAMERA.

Wegscheider, JULIUS AUGUST LUDWIG, 1771–1849. Prof. Halle 1810. His *Institutiones theol. dogmaticæ*, 1815, were in the rationalist interest and had considerable influence.

Wehrlite. Mineral found in Hungary, consisting essentially of bismuth and tellurium and sometimes containing silver. It is closely allied to TETRADYMITE (q.v.).

Weidner, REVERE FRANKLIN, D.D., b.1851. Prof. Augustana Sem. 1882–91; theological writer.

Weigel, VALENTIN, 1533–1588. German mystic, of posthumous fame as a pantheist. A sect was founded on his doctrines.

Weighing-Machine. See BALANCE, HYDROMETRY, HYDROSTATIC BALANCE, JOLLY BALANCE, SCALES, and TORSION BALANCE.

Weight. Force exerted by the earth upon all bodies, tending to draw them to itself; hence that of any body is measured by the mutual attraction between it and the earth. Weight is proportional to mass, and inversely proportional to the square of the distance of the body from the center of the earth, if the former be above the surface, but directly proportional to that distance if it be below the surface. The common units of weight are the pound and grain. See UNITS.

Weight. In Determinants, sum of the suffixes in the several terms.

Weight, DIFFERENCE OF, BETWEEN EQUATOR AND POLE. At either pole of the earth a body weighs $\frac{1}{190}$ of the whole amount more than at the equator. This difference is due to the oblate form of the earth and to the centrifugal force of its rotation.

Weights, ATOMIC. See ATOMIC WEIGHTS.

Weights and Measures. Weights are used to determine the gravity of bodies and measures to determine the magnitude of bodies or the space which they occupy. These are attributed to Pheidon, tyrant of Argos, 895 B.C. Weights were originally taken from grains of wheat, the lowest being still called a grain. See METRIC SYSTEM, UNITS; and WEIGHTS AND MEASURES in Addenda.

Weihaiwei. On coast of China; taken by Japanese Jan. 30, 1895; ceded to Gt. Britain by China 1898.

Weil, GUSTAV, 1808–1889. Prof. Heidelberg 1861; historian of the Caliphs and the Moslem nations. *Life of Mohammed*, 1843.

Weil, HENRI, b.1818. Prof. Paris 1876; editor of Æschylus and other Greek classics.

Weilen, JOSEPH VON, 1828–1889. Austrian poet and dramatist.

Weimar. Capital of Saxe-Weimar; on the Ilm; residence of Goethe and Schiller; noted for literary associations. Pop., 1890, 24,546.

Weimar, DUKE OF. See BERNHARD.

Weir. Crest of a dam over which water flows; vertical notch in the side of a reservoir, so arranged that the head of water above its lower edge can be measured, and thus the discharge be computed. This is one of the most precise methods of measuring the flow of a small stream. See SUBMERGED WEIR.

Weir with a Level Crest.

Weir, HARRISON WILLIAM, b.1824. English painter and engraver, especially of animals.

Weir, ROBERT WALTER, 1803–1889. N.A. 1829; Prof. of Drawing at West Point 1832–74; historical painter.—His sons are also artists: JOHN FERGUSON, b.1841, N.A. 1866, became director of Yale School of Fine Arts 1869; JULIAN ALDEN, b. 1852, N.A. 1886, is a painter of serious purpose and marked talent in New York.

Weise, CHRISTIAN, 1642–1708. German novelist and dramatist.

Weishaupt, ADAM, 1747–1830. Prof. of Canon Law at Ingolstadt, Bavaria; founder of the ILLUMINATI (q.v.) 1776; degraded and banished 1785.

Weismann, AUGUST, b.1834. Prof. Freiburg 1873; very eminent biologist. *Theory of Descent*, tr. 1882; *Heredity*, tr. 1889–92; *Germ-plasm*, tr. 1893.

Weismann's Theory of Heredity. Most important features of this are: (*a*) Doctrine of the continuity of germ plasm; *i.e.*, that the eggs and sperm cells of any organism are direct descendants of the germ cells of the parent, without any intervening generations of somatic cells. The latter are in a sense distant cousins of the reproductive cells, both kinds having a common ancestor in the egg-cell from which the organism was developed. (*b*) Denial of the transmissibility of acquired characters; *i.e.*, that new characteristics appearing solely in the organs or tissues of the body, as a result of the action of the environment or otherwise, cannot be transmitted to the offspring. W. does not believe, as does Darwin (see PANGENESIS), that the tissue cells give off gemmules, bearing their respective characteristics, to be stored up in the germ-cells for the purpose of rendering the latter capable of developing into a new and complete body; he rejects BROOKS' THEORY OF HEREDITY (q.v.), and is radically opposed to the NEO-LAMARCKIANS (q.v.). (*c*) The different organs, etc., of the body are represented in the egg-plasm (by gemmules or otherwise) correspondingly differentiated; and development consists in the successive analysis or separation of the different sorts by means of egg-cleavage or cell-division, while the various kinds of plasma appropriate to different parts of the body maintain their local relations throughout development. *E.g.*, to suggest the general method, let us assume that the first cleavage of the egg results in the ancestral cells of the reproductive tissues and of the soma respectively. The cleavage of the soma-cell results in the cells from which ectoderm and mesentoderm respectively develop. Division of the latter defines the mesoderm and entoderm, and in turn the mesoderm separates into muscle cells and connective tissue cells. Finally, when the analysis has been completed, the cell multiplication results in increase of similar plasma for each tissue, until the body acquires its proper size. (*d*) An explanation of the signifi-

cance of the polar globules; viz., the first polar cell represents extruded histogenic plasma, *i.e.*, plasma which has the office simply of developing the eggs as members of a tissue and furnishing them with yolk. When this plasma has been extruded, the egg is an independent being capable of development, and in a proper environment it does so develop. If the second polar cell is extruded, the egg has lost its power to develop, unless, by fertilization or conjugation with a sperm, the power is restored. W. has shown that parthenogenetic ova produce but one polar cell during maturation. In all cases of development following fertilization, the polar-cell cleavage of the egg nucleus is repeated twice, so that the sperm conjugates with one-fourth of the original nucleus. (*e*) Explanation of the phenomena of conjugation among the *Protozoa*. In some *Ciliata* there is mutual copulation, the nucleus of each cell individual dividing twice: one of the products then becomes a conjugation nucleus, which is transferred to the other cell (mutually) and there unites with one of the nuclei (the other two disappearing) to form the segmentation nucleus. W. believes this procedure to be essentially universal in the conjugation of the one-celled animals: so we see that the *Metazoa* differ from the *Protozoa* only in two particulars; (1) the products of segmentation remain united to form a body in the former group, while they live separate lives in the latter group; (2) the union of the cells has favored tissue-differentiation, so important among the *Metazoa*. (*f*) Explanation of the fact that sexually produced organisms are much more variable than those asexually produced. Among unicellular organisms, acquired characters are transmitted to the offspring, because the latter are a part of the parent. When plasmas with slightly different characters, though belonging to the same species, are united by conjugation, a new combination or resultant cross breed is obtained, and this will necessarily be different for every case of conjugation. The application is readily made to the sexual reproduction of the *Metazoa*. The variations that the plasm of the germ cells have undergone are transmitted both to the somatic cell descendants and to the reproductive cells of the next generation. Acquired characteristics of this sort are conserved, and thus Natural Selection has material to work on in evolving new species. There still remains a question to be answered; viz., Are the variations of the germ plasm fortuitous, or are they governed by definite laws? If the latter, what are the laws? Here biology seeks light.

Weiss, BERNHARD, b.1827. Prof. Kiel 1863, and Berlin 1877. *Biblical Theology of N. T.*, 1868, tr. 1882–83; *Life of Jesus*, 1882, tr. 1883–84; *Introduction to N. T.*, 1886, tr. 1889.

Weiss, CHRISTIAN SAMUEL, 1780–1856. Prof. Berlin; mineralogist, especially eminent as a crystallographer.

Weiss, JOHN, 1818–1879. Biographer of Theodore Parker, 1864. *American Religion*, 1871.

Weisse, CHRISTIAN FELIX, 1726–1804. German dramatist.

Weisse, CHRISTIAN HERMANN, 1801–1866. Prof. Leipzig 1828–37; independent Hegelian. *Philosophie des Christenthums; Philos. Dogmatik*, 1855–62.

Weisse, JOHN ADAM, M.D., 1810–1888. French-American philologist. *English Language and Literature*, 1873; *Obelisk and Freemasonry*, 1881.

Weitbrecht, GOTTLOB FRIEDRICH, b.1840. Pastor at Stuttgart 1885. *Leben Jesu* (2d ed. 1883); *Unser Glaube*, 1888.

Weitzel, GODFREY, U.S.A., 1835–1884. Brig.-gen. U. S. Vols. 1862, Major-gen. 1863–66, serving chiefly in La. till 1864, and then in Va.; Major of Engineers 1866, Lieut.-col. 1882.

Weizsäcker, KARL HEINRICH, b.1822. Prof. Tubingen from 1861, succeeding Baur. *The Apostolic Age*, 1886, tr. 1894.—His brother, JULIUS, 1828–1889, prof. Tübingen 1867, Göttingen 1876, and Berlin 1881, ed. the *Deutsche Reichstagsakten*, vols. i. to vi., 1867–87.

Welbeck Abbey. Seat of the Duke of Portland, 3 m. s. of Worksop, Eng. It is in a park 10 m. in circumference and is mainly of the 17th century. It has a semi-underground picture gallery.

Welby, AMELIA B. (COPPUCK), 1819–1852, m. 1838. Ky. poet.

Welch, ADONIJAH STRONG, LL.D., 1821–1889 U. S. Senator from Fla. 1868–69; pres. Iowa Agricultural Coll. 1869–83. *Psychology*, 1888.

Welch, ASHBEL, 1809–1882. Engineer Delaware and Chesapeake Canal, and Camden and Amboy R.R.; introducer of the block system of signals.

Welch, PHILIP HENRY, 1849–1889. American humorist.

Welch, WILLIAM HENRY, M.D., b.1850. Prof. New York 1878 and Baltimore 1884; writer on pathology.

Welcker, FRIEDRICH GOTTLOB, 1784–1868. Prof. at Giessen 1803, Göttingen 1816, and Bonn 1819; editor of several Greek authors. He did much to develop classical archæology. *Kleine Schriften*, 5 vols., 1844–67.—His brother, KARL THEODOR, 1790–1869, prof. Bonn and Freiburg, wrote on economic and political topics.

Weld. *Reseda luteola.* Herb of the Mignonette family, native of Europe, formerly much cultivated as a dye-plant. It has been sparingly introduced into N. America. It contains luteoline, a yellow coloring matter, which is very durable and ranks next in vegetable dyes to the Persian berry. In later years it has been supplanted by quercitron to a great extent.

Weld (*Reseda luteola*).

Weld, HORATIO HASTINGS, D.D., 1811–1888. Rector in N. J.; author and compiler.

Weld, ISAAC, 1774–1856. Irish traveler in the U. S. and Canada 1795–97 His *Travels*, 1799, was widely read, and tr. into French and German.

Weld, THEODORE DWIGHT, 1803–1895. American writer against slavery. For his wife, ANGELINA EMILY, see GRIMKÉ.

Welde, THOMAS, ab.1590–1662. Minister at Roxbury, Mass., 1632; part author of Bay Psalm Book 1640; in England from 1646. *Antinomians*, 1644.

Welding. See FORGING OF METALS.

Weldon Railroad. In Va.; seized by the National troops Aug. 18, 1863, who lost 2,500 prisoners the next day. In another battle, Aug. 21, the Confederates lost 1,200.

Weldon's Process. In the preparation of chlorine, manganese dioxide is converted into manganese chloride, for which there is no market; by this process it is treated with calcium hydroxide, which converts it into manganese hydroxide. This is then mixed with more lime, and steam and air passed through the mixture, by which it is converted to calcium manganite. When this compound is treated with hydrochloric acid, chlorine is liberated and manganese chloride again formed. This is again treated with lime as before.

Welhaven, JOHAN SEBASTIAN, 1807–1873. Norwegian critical essayist and poet, prof. Christiania from 1846. *Norway's Twilight*, 1834.

Welland Canal. In Canada, between Lakes Erie and Ontario; begun 1833, enlarged 1871; length by the new and enlarged route, completed 1888, 26¾ m.; number of locks, 26;

Welland Canal.

total rise, 326¾ ft.; depth, 14 ft.; size of lock, 270 by 45 ft.; width of canal, 100 ft.; amount of tolls annually collected, ab. $250,000.

Well Drilling. See ARTESIAN WELL, DRILLING, OIL-WELL, and PETROLEUM.

Welle. River of central Africa, tributary to the Congo.

Weller, JOHN B., 1812–1875. M.C. from Ohio 1839–45; U. S.

Senator from Cal. 1852–57; Gov. of Cal. 1858–60; Minister to Mexico 1860–61.

Welles, GIDEON, 1802–1878. Comptroller of Conn. 1835 and 1842–43; Sec. U. S. Navy 1861–69.—His ancestor, THOMAS, 1598–1660, was Gov. of Conn. 1655–58.

Wellesley, ARTHUR. See WELLINGTON.

Wellesley, RICHARD COWLEY, MARQUIS, D.C.L., 1760–1842. Brother of Wellington; Earl of Mornington (Irish peer) 1781; M.P. 1785–86 and 1789; Lord of the Treasury 1786. Privy Councilor 1793; Baron Wellesley 1797; Gov.-gen. of India 1798–1805, where his rule is memorable for the conquest of Mysore 1799, and of the Mahrattas 1805, as also for increase of the Company's income and several reforms; Marquis 1799; Envoy to Madrid 1808–9; Sec. of State 1809–12; Lord-lieut. of Ireland 1821–28. *Dispatches*, etc., 5 vols., 1836–37; *Memoirs*, 1846.

Wellesley College. At Wellesley, Mass., 15 m. w. of Boston; founded for women by Henry F. Durant 1875. It had, in 1897, 33 professors, 41 instructors, 721 students, a library of over 46,000 vols., 13 buildings, and an income of $223,000.

Well Foundations. Method of sinking foundations used in India, a well being sunk with a stone casing and afterward filled with concrete.

Wellhausen, JULIUS, b.1844. Prof. Greifswald 1872, Halle 1882, Marburg 1885, and Göttingen 1892; rationalist, eminent in O. T. criticism. *History of Israel*, 1878, tr. 1885.

Welling, JAMES CLARKE, LL.D., 1825–1894. Ed. Washington *Intelligencer* 1856–65; pres. Columbian Coll., Washington, D. C. (Univ. 1873), from 1871.

Wellington. Capital of New Zealand since 1865; on s. end of North Island; settled 1840. Pop., 1891, 31,021.

Wellington, ARTHUR MELLEN, 1847–1895. American engineer. *Location of Railways*, 1878–87.

Wellington, ARTHUR WELLESLEY, DUKE OF, 1769–1852. Son of an Irish Earl; Ensign 1787, Lieut.-col. 1793, Col. 1796; in India 1797–1804 under his brother (see WELLESLEY), where he won sundry battles, and was made Gov. of Mysore 1799, Major-gen. 1802, and knight 1804; M.P. 1806; Lieut.-gen. 1808; made Baron and Viscount 1809 for victories in Portugal; Commander-in-chief in Spain 1809–14, where he defeated the French

Duke of Wellington.

at Badajos, Salamanca, and elsewhere, and was made Earl 1812, Field-marshal 1813, Marquis and Duke 1814. Now covered with titles, honors, and rewards, he reached the pinnacle of glory by crushing Napoleon at Waterloo, June 18, 1815. As Prime Minister, 1828–30, he lost much of his popularity by opposing inevitable reforms. Personally he was upright, generous, and unostentatious. His *Dispatches*, pub. 1852–80, fill 33 vols.

Wellington College. Public school in Berkshire, Eng., founded 1853 in memory of Wellington, with funds raised by subscription. Its scholarships are for the sons of deceased army officers.

Wellingtonia. Genus of trees to which the name *Sequoia* was formerly given. See RED-WOOD.

Wells. Pits sunk to arrive at springs, for obtaining water. Formerly, wells were simply pits sunk into the ground, until water was reached. These pits were lined or not, according to the hardness of the earth or rock passed through. These open wells have been greatly superseded by artesian wells. See ARTESIAN WELL and DRIVEN WELL.

Wells, CHARLES JEREMIAH, 1800–1879. English poet. His *Stories after Nature*, 1822, and *Joseph and his Brethren*, 1824, were highly praised by Swinburne.

Wells, CLARK HENRY, U.S.N., 1822–1888. Active in the taking of Mobile 1864; Captain 1871, Commodore 1880, Rear-admiral 1884.

Wells, DARIUS, 1800–1875. Printer in N. Y. and N. J.; inventor of improvements in types.

Wells, DAVID AMES, LL.D., D.C.L., b.1828 in Mass. Economist and reformer; U. S. Commissioner of Revenue 1866–70; active writer on finance and the tariff. *Crusoe's Money*, 1876; *Merchant Marine*, 1882; *Catechism*, 1888.

Wells, HENRY, 1805–1878. Pres. American Express Co. 1860–68.

Wells, HORACE, 1815–1848. Dentist at Hartford, Conn. In 1844 he proved the efficacy of nitrous oxide in producing anæsthesia; his claim antedates those of Drs. Morton and Jackson. Failing to gain the due credit and profits of his discovery, he died insane.

Wells, SAMUEL ROBERTS, 1820–1875. American writer and lecturer on phrenology.

Wells, SIR THOMAS SPENCER, M.D., d.1897. Reviver of ovariotomy 1855; Baronet 1883.

Wells, WILLIAM CHARLES, M.D., F.R.S., 1757–1817. B. in S. C.; practitioner in London from 1785; forerunner (1813) of Darwin as to natural selection. *Single Vision*, 1792; *Essay on Dew*, 1814.

Wells College. At Aurora, N. Y.; for women; incorporated 1868. In 1896 it had 20 teachers and 80 students.

Wellwood, H. See MONCREIFF.

Welsbach, CARL AUER VON, b. ab.1860. Austrian chemist who investigated the rare earths, separated didymium into two elements, praseodymium and neodymium, and in 1886 invented the incandescent gas light which bears his name. This consists of a cylindrical mantle 0.9 in. diameter, 4 in. long, which is coarsely woven of thread and is then dipped in a water solution of thorium nitrate, containing cerium nitrate and other salts to vary the light or strengthen the mantle. This is subsequently dried and ignited, which leaves a skeleton of the oxides. When this is heated over a Bunsen burner it produces an intense incandescent light, reaching 27 candle-power per cu. ft. of gas, and a life of 600 hours.

Welsby, WILLIAM NEWLAND, 1803–1864. English editor of law books. *Judges of 17th and 18th Centuries*, 1846.

Welsh. Language of Wales; branch of the Celtic family, with literature from the 12th century. The word was applied by different peoples to any strange nations; so Italians are "Welsh" to the Germans. See WALLACHIAN.

Welsh, ALFRED HIX, b.1850. Prof. Ohio Univ. 1885; author of text-books.

Welsh, JOHN, LL.D., 1805–1886. Phila. merchant; pres. Centennial board of finance 1873–76; U. S. Minister to England 1878–80.—His son, HERBERT, b.1851, founded the Indian Rights Association 1883.

Welsh, THOMAS, 1824–1863. Pa. Colonel 1861; Brig.-gen. U. S. Vols. 1863, serving in Va. and Miss.

Welsh Music. Admittedly the most beautiful, as it surely is the most ancient, British folk music, traditionally including relics of the art of the old Britons. The Welsh are the most industrious cultivators of music in Great Britain, and have carried their fondness for choral singing, as well as their contests in composition and performance, wherever they have gone. Their harp is the most perfect of the ancient instruments of the Islands. Tradition ascribes an age of 1,100 years to the tune, "Plain of Rhuddlan." The favorite Welsh dance is the jig.

Welsh Pony. See HORSE.

Welshpool. Town of Montgomeryshire, North Wales, 20 m. s.w. of Shrewsbury, on the Severn. Formerly it was the center of the flannel trade, but this has now been transferred to Newtown. Near is Powis Castle (12th century) with beautiful grounds. Pop. 6,500.

Welwitsch, FRIEDRICH, 1806–1872. Austrian botanist, long in Africa; discoverer of a long-lived plant, named from him.

Wemyss, FRANCIS CHARTERIS DOUGLAS, EARL OF (LORD ELCHO), b.1818. M.P. 1841; Lord of the Treasury 1852–55; leader in the Volunteer movement; Earl 1883.

Wemyss, FRANCIS COURTNEY, 1797–1859. Anglo-American actor, manager, and writer on the stage.

Wen. Tumor situated in the skin or subcutaneous tissue, found most frequently on the scalp and varying in size from less than a pea to an orange. It consists of a wall and contents. Originally a sebaceous gland whose contents have been confined through the closing of its duct. The accumulating secretion causes the tumor, and the cell walls hypertrophy, as the pressure increases from within. They are easily removed by incision.

Wenceslas, or WENZEL, 1361–1419. Son of Charles IV.; King of Bohemia 1364; German emperor 1378; deposed 1400. Sigismond, his own brother, headed a conspiracy against him

Seal of King Wenceslas.

for the partiality he showed toward the Germans. He soon lost all control in Germany and sold Lombardy to one of the Visconti.

Wend. Slavonic dialect still spoken in Lusatia in Germany, but rapidly losing ground to German, amid which it forms what is called a Speech-island.

Wendell, BARRETT, b.1855. Prof. Harvard 1888. *Emilia*, 1885; *English Composition*, 1891; *Cotton Mather*, 1891.

Wendell, JOHN LANSING, 1785–1861. Reporter N. Y. Supreme Court. *Reports*, 26 vols., 1829–42; *Digest of Cases*, 1836.

Wenderoth, GEORG WILHELM FRANZ, 1774–1861. Prof. Botany at Marburg. *Lehrbuch der Botanik*, 1821; *Flora Hassiaca*, 1846.

Wends. Slavic tribes which occupied n. Germany ab.500. Ab. 170,000 remain, chiefly in Prussia and Saxony.

Wendt, HANS HINRICH, b.1853. Prof. Heidelburg 1885, Jena 1893. *Teaching of Jesus*, 1886–90, tr. 1892.

Wener, LAKE. In s. Sweden; area 2,150 sq. m.

Wenlock Shale. Division of the English Upper Silurian, corresponding to the Niagara in America. See COLUMN and SILURIAN.

Wensleydale, JAMES PARKE, BARON, 1782–1868. Judge of Exchequer 1831; life Peer 1855; Baron 1856.

Wentworth, BENNING, 1696–1770. Gov. of N. H. 1741–67. His liberal grants of land in s. Vt. led to troubles with N. Y., which long claimed that region. His second wife, m.1760, was celebrated by Longfellow.—His nephew, SIR JOHN, LL.D., 1737–1820, an accomplished man of pure, gentle, and noble character, was Gov. of N. H. 1768–75, and benefactor of Dartmouth Coll. Divided between loyalty and patriotism, he went to England 1775, was Lieut.-gov. of Nova Scotia 1792–1808, and was made Baronet 1795.—His cousin, JOHN, 1745–1787, was an active patriot.—Another JOHN, 1768–1816, pub. *System of Pleading*, 10 vols., 1797.

Wentworth, JOHN, 1815–1888. Ed. Chicago *Democrat* 1840–61; M.C. 1843–51, 1853–55 and 1865–67; Mayor of Chicago 1857–63. *Wentworth Family*, 1878.

Wentworth, THOMAS. See STRAFFORD.

Wentworth, WILLIAM, 1615–1697. Founder of Exeter, Mass., 1639, and of the American family.

Wenzel. See WENCESLAS.

Werden, REED, U.S.N., 1818–1886. Active on the Atlantic Coast 1861–64, and in the Gulf 1864–65; Captain 1866, Commodore 1871, Rear-admiral 1875.

Werder, AUGUST, GRAF VON, 1808–1887. Prussian general, prominent in the wars with Austria, 1866, and France, 1870–71; ennobled 1879.

Weregild, or WERGILD. Mediæval fine for homicide, proportioned to the victim's rank.

Werewolf. In Mediæval superstition, one who by compact with Satan could at will assume a wolf's body. The notion still exists in parts of Europe.

Werff, ADRIAAN VAN DER, 1659–1722. Most frivolous of Dutch artists. His ivory-like finish and soulless art are well

The Holy Family, by Werff.

represented in Dresden. The *Magdalen* there, long attributed to Correggio, is his work, but its execution, which imitates Italian methods, differs from his usual style.

Wergeland, HENRIK ARNOLD THAULOW, 1808–1845. Norwegian lyric, epic, and dramatic poet. *Works*, 9 vols., 1852–57.

Werner, ABRAHAM GOTTLOB, 1750–1817. Prof. of Mineralogy in Freiberg 1815; leader of the school of neptunists as opposed to the plutonists; investigator of the highest rank in the field of economic geology. His *Neue Theorie über die Entstehung der Gänge*, 1791, is one of the most important contributions ever made to the world's knowledge of the modes of occurrence of ore-deposits. His lectures attracted students from every part of Europe and raised a small School of Mines to high rank. He was the first to extend the study of mineralogy to the phenomena observed in the structure of the globe and to point out their application to the practical purposes of mining. But while the study of geology was in many ways promoted by his labors, it was also retarded by his bold and sweeping generalizations and the implicit faith with which his doctrines were generally received. See NEPTUNISM and PLUTONISM.

Werner, E. See BÜRSTENBINDER, ELIZABETH.

Werner, FRIEDRICH LUDWIG ZACHARIAS, 1768–1823. German dramatist, noted for his exaltation of Fate; R. C. priest from 1814. *Luther*, 1806.

Wernerite. Most common representative of the scapolites, a group of minerals consisting essentially of silicates of

aluminium, calcium, and sodium, in varying proportions, and tetragonal in crystallization.

Wernwag, LOUIS, 1769–1841. German-American engineer, builder of bridges at Fairmount (Phila.), Harper's Ferry (Va.), and elsewhere; invented a stove for anthracite coal 1819; designer of Fairmount waterworks.

Werther. Hero of Goethe's sentimental romance, 1774.

Wertmuller, ADOLPH ULRIC, 1751–1811. Swedish painter, in the U. S. from 1797; eminent as a colorist. He produced several portraits of Washington.

Wesel, JOHANN VON, 1419–1481. German humanist, teacher at Erfurt ab.1445–60; condemned 1479 for attacking indulgences. He died in prison.

Weser. River of w. Germany, formed by the Werra and the Fulda. It flows n. ab.250 m. to the North Sea.

Wesley, CHARLES, 1708–1788. Brother and associate of John; eminent for eloquence, piety, and lyrical power; in Ga. 1735–36; itinerant till after his marriage, 1749; most brilliant of English hymnists, and probably the most voluminous of lyric poets in any language; chief author of some 60 books and tracts, 1739–85, containing ab.6,000 pieces of sacred verse, reprinted in 13 vols. 1868–72. His hymns have far more grace, delicacy, and fervor, than those of Dr. Watts: their chief faults are extreme subjectiveness and a tendency to unrestrained emotion. Their use was long confined chiefly to the two branches of Methodism, but many of them are now found everywhere.—His sons, CHARLES, 1757–1834, and SAMUEL, 1766–1837, and grandson, SAMUEL SEBASTIAN, 1810–1876, were eminent as organists and composers.

Wesley, JOHN, 1703–1791. Founder of Methodism; in Ga. 1735–38; deeply influenced by Moravians; thenceforth in the British isles, itinerating and organizing; much in controversy and long under great obloquy. He was a strong preacher, a devoted worker, and an admirable executive. His first societies were formed in London and Bristol 1738–39: here his success was immense. Class-meetings were begun 1742, and conferences 1744. He had few clerical helpers, the bishops

John Wesley.

and clergy generally disapproving and sometimes denouncing the movement; but he formed a body of active lay-preachers, who exhibited much heroism, and often, like himself, endured persecution. His converts were drawn alike from the Ch. and from dissent: he attended and observed the Ch. services, disclaimed any idea of setting up a rival body, and was carried to the grave by Ch. clergymen. By that time there was ab. 80,000 Methodists. He wrote some 40 hymns, mostly tr. from the German, some of them of very high quality.

Wesley, SAMUEL, 1662–1735. Rector of Epworth, Lincolnshire, 1697; poet; father of John and Charles. *Life of Christ*, 1693; *Hist. O. and N. T.*, 1701.—His wife, SUSANNA (ANNESLEY), 1669–1742, was of memorable gifts and labors.—Their eldest son, SAMUEL, 1690–1739, usher at Westminster School 1715 and headmaster at Tiverton 1732, had no sympathy with his brothers. Some of his *Poems*, 1736, are of very marked ability.

Wesleyan Methodist Connection of America. Minor Methodist body, seceding as abolitionists 1839; non-episcopal and anti-masonic. It admits lay representation, and has ab. 300 ministers and 20,000 members.

Wesleyans. See METHODISM.

Wesleyan University. At Middletown, Conn.; opened 1829 by M. E. Ch. It offers three courses of study, and has admitted women since 1872. It has an observatory, with laboratories for physics, chemistry, and mechanics. Its funds, buildings, and collections have received large additions in recent years. It had, in 1897, 25 instructors, 307 students, and a library of 46,000 vols.

Wessel, JOHAN HERMAN, 1742–1785. Norwegian-Danish dramatic and satirical poet.

Wessel, JOHANN, or GANSFORT, ab.1419–1489. Dutch-German humanist; one of the advance-guards of the Reformation. Some of his writings were burned; others Luther pub. 1522.

Wesseling, PETER, 1692–1764. Prof. Franeker 1723, and Utrecht 1735; ed. Diodorus and Herodotus.

Wessels, HENRY WALTON, U.S.A., 1809–1889. Brig.-gen. U. S. Vols. 1862–65, serving in Va. and N. C.; captured with his troops at Plymouth, N. C., April 21, 1864.

Wessex. Saxon kingdom in s. England from 519. It subjugated Sussex ab.685, Mercia, Kent and Essex 825, and Northumbria 841.

West, BENJAMIN, 1738–1820. American painter, in London from 1763; pres. Royal Academy 1792–1815; of inferior talent, but great temporary repute, especially for his historical pictures.

West, JOSEPH RODMAN, b.1822. Brig.-gen. U. S. Vols. 1862–65; Senator from La. 1871–77.

West, LIONEL SACKVILLE, b.1827. British Minister to Madrid 1878–81, and to Washington 1881–88; Baron Sackville 1888.

West, STEPHEN, D.D., 1735–1819. Pastor at Stockbridge, Mass., 1759–1818; theological writer. *Life of S. Hopkins, D.D.*, 1806.

West Bromwich. Borough of Staffordshire, 5 m. n.w. of Birmingham. It has manufactures of hardware. Pop., 1891, 59,489.

Westbury, RICHARD BETHELL, LORD, 1800–1873. M.P. 1832; Knight and Solicitor.-gen. 1852; Atty.-gen. 1856–58 and 1859–61; Baron 1861; Lord Chancellor 1861–65; law reformer.

Westcott, BROOKE FOSS, D.D., D.C.L., b.1825. Prof. Cambridge 1870; Canon of Westminster 1884; Bp. of Durham 1890; commentator on St. John; ed. (with Hort) Greek N. T., 1881. *Canon of N. T.*, 1855; *Study of Gospels*, 1860; *Bible in Ch.*, 1864; *Gospel of the Resurrection*, 1866.

Westcott, JAMES DIAMENT, 1802–1880. Sec. of the territory of Fla. 1830–34; U. S. Senator 1845–49.

Westcott, THOMPSON, 1820–1888. Phila. journalist and historical writer.

Westerman, HANS, 1660–1721. French traveler in S. America, Mexico, and W. Indies. *Voyage*, 1715.

Westermann, ANTON, 1806–1869. Prof. Leipzig 1834–65; writer on Greek classics.

Western, PAULINE LUCILE (MRS. J. H. MEAD), 1843–1877. American actress.

Western Australia. British colony in Australia, w. of 129th meridian; organized 1890; area 978,000 sq. m. The country is mainly an arid plain, covered with bush, occasionally with trees, and varied by a few ranges of hills. Capital, Perth; pop., 1891, 53,285, excluding natives.

Western College. Founded 1856 by United Brethren at Western, Ia.; removed to Toledo, Ia., 1881; co-educational. It has (1897) 12 instructors and 235 students.

Western Dwina, or DUNA. River of w. Russia, rising on the Valdai Plateau, flowing s.w. and entering the Gulf of Riga 7 m. n.w. of Riga. Length 625 m.

Western Empire. Name sometimes given to the w. provinces of the Roman Empire between 395 and 476.

Western Islands. See HEBRIDES.

Western Reserve University. Founded at Cleveland, Ohio, 1884. It embraces Adelbert Coll., founded at Hudson 1826 as Western Reserve Coll., and removed to Cleveland 1882; a medical shool organized 1844; a coll. for women opened 1888; a graduate department, a law school, and a dental school opened 1892. The two colleges have 37 instructors; the three schools have 51. There are 270 students in the colleges; in all departments, excluding an academy, 602. The library contains 30,000 vols.

Westfield. Manufacturing town of Hampden co., Mass., 9 m. w. of Springfield. Pop., 1890, 9,805.

Westfield River. River rising in the Green Mts., Mass., emptying into the Connecticut at Springfield. It affords good water power, and in its lower course is sometimes called the Agawam.

West Highland. See CATTLE.

West India Company, DUTCH. See DUTCH WEST INDIA COMPANY.

West Indies. Cuba, Haiti, Porto Rico, Jamaica, and many smaller islands, separating the Caribbean Sea and the Gulf of Mexico from the Atlantic; named by Columbus, their discoverer, who supposed that through them he had found a new route to India. The British and Dutch early established themselves here; a French settlement was established 1625. The British long used them for penal settlements. Total area of the archipelago 94,822 sq. m., pop. 4,194,700.

Westinghouse Brake. See BRAKE, WESTINGHOUSE.

Westmacott, SIR RICHARD, D.C.L., 1775–1856. English sculptor, R.A. 1816; prof. R.A. 1827; knighted 1837.—His son, RICHARD, F.R.S., 1799–1872, became R.A. 1849, and Prof. of Sculpture 1857.

Westminster. Former suburb, now part of London. Pop., 1891, 55,760.

Westminster, HUGH LUPUS GROSVENOR, DUKE OF, b.1825. M.P. 1847; Marquis 1869, Duke 1874; owner of great estates in London.

Westminster Abbey. Collegiate (formerly monastic) Ch. of St. Peter, where for over 800 years the kings of England have been crowned and her great men buried or commemorated. The Dean, within the Abbey, outranks even the Abp. of York.

Westminster Abbey.

Westminster Assembly. Held in Westminster Abbey 1643–52; called by the Long Parliament; composed of 121 divines, mostly Puritans, and 30 laymen. Its Confession, 1646, and Larger and Shorter Catechisms, 1647, have become the foundation of Anglo-Saxon Calvinism.

Westminster Confession of Faith AND **Catechism.** See WESTMINSTER ASSEMBLY.

Westminster Hall. Remains of the ancient palace of Westminster, built during the reign of Richard II.; it serves as a vestibule to Westminster Palace.

Westminster Palace. Building in the s.w. part of London, fronting on the Thames, in which are the meeting-rooms of the Houses of Parliament. It has a facade of 900 ft. on the e. side, and three towers of 300, 320, and 340 ft. in height.

Westminster School. One of the seven great public schools of England, founded by Queen Elizabeth 1560. It adjoins the Abbey. At Christmas one of Terence's plays is performed. This is an old custom.

Westminster Standards. Church books drawn up by the WESTMINSTER ASSEMBLY (q.v.).

Westphal, JOACHIM, 1510–1574. Pastor at Hamburg from 1541; extreme Lutheran controversialist. Calvin wrote against him.

Westphal, KARL FRIEDRICH OTTO, 1833–1890. Prof. Berlin 1869; writer on nervous diseases.

Westphal, RUDOLPH, 1826–1892. German writer on Greek music and meters; prof. Moscow 1873.

Westphalia. Province of w. Prussia; duchy, under Abp. of Cologne, from 1179; mostly given to Hesse 1802; enlarged as a kingdom under Jerome Bonaparte 1807–13; reduced, and held by Prussia since 1813. Area 7,892 sq. m.; pop., 1890, 2,428,661.

Westphalia, PEACE OF. See MUNSTER, TREATY OF.

West Point. Site of U. S. MILITARY ACADEMY (q.v.); on w. bank of the Hudson, 50 m. n. of New York; noted also for noble scenery, and as Washington's headquarters 1779. It was the site of one of the most important fortresses during the Revolutionary war; ruins of Ft. Putnam still exist. Altitude 188 ft. Pop. ab. 1,500.

View from West Point.

West Point Cadet. See CADET.

Westropp, HODDER MICHAEL, 1847–1884. British writer on archæology. *Phallic Idea*, 1873.

West Troy. Village of Albany co., N. Y., on the Hudson, opposite Troy; chartered 1836; site of Watervliet Arsenal, founded by the U. S. 1807. Pop.,1890, 12,967.

West Virginia. One of the eastern States; part of Va. till 1863. Its area, 24,780 sq. m., is occupied by the Cumberland or Allegany plateau. The e. boundary follows generally the line of its escarpment: from the summit of this the general slope of the land is toward n.w., but it has been eroded by its water courses into an irregular mass of ridges and gorges. These become less pronounced and the country more open toward the w. The principal navigable rivers are the Ohio and Big Sandy, which form the w. boundary; the Kanawha, which, rising in N. C., cuts a gorge entirely through the Cumberland plateau from its escarpment to its foot; and the Monongahela, one of the head branches of the Ohio, which has been improved so as to permit of slackwater navigation. The geological structure of the State is simple. The surface rock is over almost the entire State of the Carboniferous formation, containing almost everywhere coal measures. Coal mining is rapidly becoming a large industry and bids fair in the near future to become the leading industry. In 1896, 12,541,382 tons were mined. The coal is of all varieties except anthracite. Agriculture is a very prominent industry. The value of farms in 1890 was $154,996,772, and of agricultural products in 1889 $20,439,000. Manufactures are still somewhat limited, and are almost confined to Wheeling, the principal city. Capital, Charleston. Geographical and political circumstances led to the separation from Va. The natural dividing line between the e. and w. portions was the Allegany Mts. This had of itself created two States as to commercial and political interests: as a consequence the two portions of the State were in frequent controversy. When Va. seceded, 1861, the people of the n.w. part called a convention and adopted provisions for the organization of a new State. A Constitution was adopted 1862, and the State was admitted June 1863. Pop., 1890, 762,791. (See Map, page 1650.)

West Virginia, UNIVERSITY OF. Established at Morgantown 1867; one of the land-grant colleges. It has (1897) 7 courses, 27 instructors, 164 students in collegiate courses, 89 in law, and 146 in preparatory studies.

Westwood, JOHN OBADIAH, 1805–1893. English entomologist.

Wetherell, ELIZABETH. See WARNER, SUSAN.

Wetherell, EMMA (ABBOTT), 1849–1891, m.1874. American singer.

Wetherill, SAMUEL, 1736–1816. Phila. patriot; founder of a society of Free or "Fighting Quakers" 1781.—His great-grandson, SAMUEL, 1821–1890, invented processes for zinc white, and founded zinc works at S. Bethlehem, Pa., 1853.—His cousin, CHARLES MAYER, 1825–1871, was Prof. Chemistry at Lehigh Univ. from 1866. *Vinegar*, 1860.

Wetmore, PROSPER MONTGOMERY, 1798–1876. American poet.

Wet Rot. Rot occurring in timber under conditions of alternate dampness and dryness. See PRESERVATION OF TIMBER.

Wetstein, JOHANN JACOB, 1693–1754. Swiss Arminian, prof. Amsterdam from 1733. His ed. N. T., 1751–52, is still valued. *Prolegomena ad N. T.*, 1730.

Wette, W. See DE WETTE.

Wetted Perimeter. Part of the outline of the cross-section of a channel or river which is in contact with the water, or below the water level. It increases directly as the frictional resistance to flow.

Wetter. Lake of s. Sweden; area 733 sq. m.

Wetterhorn, or HASLE. Mountain in the Bernese Oberland, Switzerland, e. of the Grindelwald, ab. 12 m. e.s.e. of Interlaken. Altitude 12,150 ft.

Wetzer, HEINRICH JOSEPH, 1801–1853. Prof. Tübingen 1830; R. C. theologian.

Weyden, ROGIER VAN DER, 1399–1464. Leading Flemish artist between the time of the Van Eycks and of Memling. Good examples are in the Berlin Museum and elsewhere. He

Rogier van der Weyden.

never signed or dated any of his pictures, and so their authorship and chronological order is generally a matter of internal evidence.

Weyler, VALERIANO, b. ab.1836. Spanish general, noted for severity during the Carlist insurrection and as commander in Cuba Feb. 1896–Oct. 1897.

Weyman, STANLEY JOHN, b.1855. English novelist, dealing chiefly with the France of Henry IV. and succeeding reigns. *House of the Wolf*, 1889; *Francis Cludde*, 1891; *A Gentleman of France*, 1893; *Under the Red Robe*, 1894; *My Lady Rotha*, 1894; *Red Cockade*, 1895; *Shrewsbury*, 1897.

Weymouth. Town of Norfolk co., Mass., 12 m. s.e. of Boston; settled 1623. Pop., 1890, 10,866.

Weyprecht, KARL, 1838–1881. Commander, with Lieut. Payes, of an Austrian Arctic expedition 1872–74; discoverer of Franz-Josef Land.

Whahoo. *Ulmus alata.* Tall tree of the Elm family, bearing corky ridges on the branches; native of the s.e. U.S.; known as Winged Elm.

Whaleback Steamer. Designed by Alexander McDougall, of Minnesota, who built the first propeller in 1890. Its form of construction is meant to resemble the back of the whale. They are chiefly used in carrying coal, iron-ore,

Whaleback Steamer.

grain and petroleum in bulk. They are built entirely of steel and are moderate in their demand for power. One 3,000-ton vessel is 362 ft. long, 24 deep, 42 ft. beam, and makes ab.19 m. an hour, being driven by 2,600 H.-P. triple-expansion engines.

Whalebone. See BALEEN PLATES.

Whalebone Whales. See BALEEN WHALES.

Whale Oil. Blubber of the Bowhead Whale and various allied species. It is of a yellow or brown color and has a disagreeable fishy odor, removable by bleaching powder. It deposits stearin when cooled and sometimes contains valerin. Some varieties dry rapidly. It is used in soap-making, illumination and saw-hardening.

Whales. Whales fall into two divisions, those with teeth, DENTICETE (q.v.), and those with whalebone or baleen plates in the mouth (see BALEEN WHALE). The former group includes the Narwhal, Blackfish, Grampus, Porpoises, Dolphins and Sperm whales; the latter includes Rorquals, Right Whales, the Greenland Bowheads, and Biscay whales. See CETACEA and MYSTACOCETI.

Whalley, EDWARD, ab.1616–1678. Parliamentary officer, distinguished at Naseby 1645; one of Charles I.'s judges; Major-gen.; in Mass. from 1660.

Wharfage. Fees imposed for the use of a wharf; if public, the charge must be reasonable. Its regulation belongs generally to the States.

Wharncliffe, JAMES ARCHIBALD STUART WORTLEY MACKENZIE, LORD, 1776–1845. M.P. 1797; Baron 1826; introducer of an order of the Lords under which meetings, named from him, are held.

Wharton, CHARLES HENRY, 1748–1833. Rector at Burlington, N. J., from 1798; theological and controversial writer.

Wharton, FRANCIS, LL.D., D.D., 1820–1889. Phila. lawyer 1841–56; prof. Kenyon Coll., O., 1856–63; rector at Brookline, Mass., 1866; prof. P. E. theol. sem., Cambridge, 1871, and Boston Law School; solicitor U. S. Dept. of State 1885. *Criminal Law*, 1846; *State Trials*, 1849; *Conflict of Laws*, 1872; *Agency*, 1876; *Digest of International Law*, 1886.—His father, THOMAS ISAAC, 1791–1856, pub. sundry *Reports*.

Wharton, GRACE. See THOMSON, ANTHONY T.

Wharton, THOMAS, MARQUIS OF, 1640–1715. M.P. ab.1662; Whig leader, imprisoned 1677; Privy Councilor 1689; Baron 1696; negotiator of the Anglo-Scottish union 1706; Viscount and Earl 1706; Lord-lieut. of Ireland 1708–10; Privy Seal 1714; Marquis 1715.—His son and successor, PHILIP, 1698–1731, became Duke 1718, edited *The True Briton* 1723–24, went over to the Pretender ab.1716, was attainted, and died abroad. Pope called him "the scorn and wonder of our days."

Wharton, THOMAS, 1735–1778. Phila. merchant and patriot; Pres. of Pa. 1777–78.

Wharton, THOMAS, 1859–1897. Phila. journalist. *Bobbo*, etc., 1897.

Wharton Switch. Railroad switch so arranged that the rails of the main track are unbroken, the passage of a car to a turnout being effected by carrying the wheels on one side over the main track rail.

Whately, RICHARD, D.D., 1787–1863. Prof. Oxford 1830; Abp. of Dublin 1831; an independent liberal, neither partisan,

Richard Whately.

courtier, nor politician, but wise and efficient as an executive, and eminent as an author; founder, with Coleridge and Arnold,

of the "Broad Ch." movement. In thought he followed Paley and the "common sense" divines, with some improvements, as shown by his *Christian Evidences*, 1837. His *Historic Doubts relative to Napoleon*, 1819, is famous. His *Logic*, 1826, and *Rhetoric*, 1828, were long used as text-books. The long list of his works includes editions of Bacon and Paley.

Wheal, or HUEL. Cornish name for mine.

Wheat. *Triticum vulgare.* Annual grass, cultivated from prehistoric times as a food plant; of unknown origin. It is grown both as a winter and spring crop. The spring wheat is almost entirely grown w. of the Mississippi. It is harder and contains more gluten and less water than winter wheat. Wheat thrives on almost all soils, but does especially well on a rich, well-drained and cultivated clay or clay loam. It should have a very mellow seed-bed, but the subsoil should be more compact; therefore the best preparation is by plowing once and following repeatedly with the harrow and cultivator. There are numerous varieties, all divided into winter and spring; *e.g.*, amber or white, according to the color of the kernel, and smooth or bearded, according as the chaff is awned or not. The wheat crop of the world for 1897 is estimated at 2,071,489,000 bushels; of which there was produced in millions of bushels, by the U. S. 492, Russia 387, Asia Minor 316, France 269, British India 180, Germany 107, Italy 102, Spain 100, Hungary 98, Gt. Britain 52, Canada 51, Roumania 44, Argentina 37, Austria 32, Bulgaria 30, Turkey 28, Australasia 24, Belgium 21, Chili 15, Algeria 13, Egypt 11. In 1896 the U. S. produced 427,684,000 bushels, of which 27 per cent was exported.

Wheat-Ears (SAXICOLA). Thrush-like birds, mainly of the Old World, strongly marked with black and white. One species, *S. œnanthe*, inhabits the bleak northern regions of America. Its wings, tail, and a broad stripe through the eye backward are black; the upper back is ashen, and the remainder of the plumage white.

Wheatleigh, CHARLES, 1823–1895. Anglo-American actor.

Wheatley, CHARLES MOORE, 1822–1882. Pa. mineralogist, first to reduce Pa. copper ores with success.

Wheatley, HENRY BENJAMIN, b.1838. English writer, chiefly on books; editor of old texts. *Pepys*, 1880.

Wheatley, PHILLIS, ab.1753–1784. Poet of African birth, servant in Boston. She became Mrs. Peters 1778. *Poems*, 1773. *Letters*, 1864.

Wheatley, WILLIAM, 1816–1876. American actor and manager; son of SARAH (ROSS), 1790–1854, actress.

Wheaton, FRANK, U.S.A., b.1833. Brig.-gen. U. S. Vols. 1862–66, serving chiefly in Va.; Col. 1874, Brig.-gen. 1892.

Wheaton, HENRY, LL.D., 1785–1848. Ed. New York *National Advocate* 1812–15; Judge of Marine Court 1815–19; reporter U. S. Supreme Court 1816–27; Chargé at Copenhagen 1827–35; Minister at Berlin 1835–46. His *Elements of International Law*, 1836, is of high importance. *Hist. Northmen*, 1831; *Hist. Law of Nations*, 1841 (French), tr. 1845.

Wheat Saw-fly (*Cephus pygmæus*).

Wheat Saw-fly (CEPHUS PYGMÆUS). The adult insect is ½ in. long, black, variegated with yellow. The larva is a yellowish-white grub, hatching in May from eggs deposited in the hollow stalk of the wheat. As the season advances, the grub bores toward the roots, causing the stalk to fall or bend. The next spring the grubs, having wintered in the stubble, become transformed into flies. As remedies, the stubble is burned, or rotation of crops practiced. Saw-flies belong to the *Tenthredinidæ*, a family of *Hymenoptera*, and are not true flies; *i.e.*, *Diptera*.

Wheatstone, SIR CHARLES, LL.D., F.R.S., 1802–1875. Prof. King's Coll., London, 1834; inventor of the stethoscope 1838, and other instruments; knighted 1868. *Scientific Papers*, 1879.

Wheatstone's Bridge. Arrangement of electric conductors for measuring small resistances. Its utility has been widely increased, and it is now one of the most necessary instruments in general electrical testing. In the diagram, B represents a battery, G a galvanometer, and the arrows indicate the directions of the current in the various conductors. The law of the bridge is derived from Kirchhoff's laws and may be stated thus: If the resistances r are so adjusted that the galvanometer G indicates no current in the branch c d, c and d must be at the same potential; it follows that $r_1 : r_2 = r_4 : r_3$. In practice three of the resistances are coils of wire of known value, and the fourth the unknown resistance. Suppose it to be r_1, then clearly $r_1 = \frac{r_2 r_4}{r_3}$. The battery and galvanometer are mutually interchangeable; hence the parts a b and c d are termed conjugate. Thomson has suggested a method of measuring the resistance of a galvanometer by the bridge, and Mance one for determining the resistance of a battery.

Whedon, DANIEL DENISON, D.D., LL.D., 1808–1885. Prof. Wesleyan Univ. 1832–43, and Univ. Mich. 1845–53; ed. *Methodist Quarterly Review* 1856–84. *Commentary on N. T.*, 5 vols., 1860–75; *on O. T.*, 1880–86; *Freedom of the Will*, 1864; *Essays*, 1887.

Wheel. Implement on which a criminal or victim was "broken," usually by blows of an iron bar; used in Scotland till 1604, in France till ab.1789, and in Germany till 1827.

Wheel and Axle. Simple machine, consisting of a cylinder of revolution upon which is fixed a wheel of considerably larger diameter. The power is applied tangentially to the wheel, and the weight tangentially to the axle, usually by ropes. The principle is that of the lever, the axis of the axle being the fulcrum. The mechanical advantage is given by the formula,

$$\frac{\text{Power}}{\text{Weight}} = \frac{\text{radius of axle}}{\text{radius of wheel.}}$$

Wheel and Axle.

Wheel-Animalcule. See ROTATORIA.

Wheel Base. Distance between the centers of the rear and front wheels of a car or locomotive. That of a locomotive and tender is ab. 50 ft.

Wheeler, ANDREW CARPENTER ("NYM CRINKLE"), b.1835. New York journalist and critic.

Wheeler, BENJAMIN IDE, b.1854. Prof. Cornell 1886; writer on language.

Wheeler, CHARLES STEARNS, 1816–1843. Tutor at Harvard 1838–42; editor of Herodotus 1843.

Wheeler, DAVID HILTON, D.D., LL.D., b.1829. Prof. Northwestern Univ. 1867–75; ed. N. Y. *Methodist* 1875–82; pres. Allegany Coll., Pa., 1883–87. *Brigandage in s. Italy*, 1864; *Byways of Literature*, 1883.

Wheeler, JOHN HILL, 1806–1882. Historian of N. C. 1851; U. S. Minister to Nicaragua 1854–57.—His brother, JUNIUS BRUTUS, U.S.A., 1830–1886, prof. at West Point 1866–85, pub. several text-books. *Military Engineering*, 1884–85.

Wheeler, JOSEPH, b.1836. Brig.-gen. C.S.A. 1862, Major-gen. 1863–65; able cavalry commander in Tenn. and Ga.; M.C. from Ala. 1881–83 and since 1885.

Wheeler, NATHANIEL, b.1820 in Conn. Founder (1852–53) and pres. Wheeler & Wilson Sewing Machine Co.

Wheeler, SAMUEL, 1742–1820. Revolutionary soldier of Pa., inventor of a light gun, adopted in France, and of several mechanical devices.

Wheeler, WILLIAM ADOLPHUS, 1833–1874. Contributor to Worcester's and Webster's dictionaries. *Noted Names of Fiction*, 1865; *Who wrote It?* 1881.

Wheeler, WILLIAM ALMON, 1819–1887. M.C. from N. Y. 1861–63 and 1869–77; pres. N. Y. Constitutional Convention 1867–68; author of the Wheeler Compromise for La. 1876; Vice-Pres. of the U. S. 1877–81.

Wheeling. Chief city of W. Va., and its capital 1865–70 and 1875–85, as now of Ohio co.; on the Ohio, 63 m. s.w. of Pittsburg; site of Fort Henry, attacked by Indians and British 1777 and 1781–82; settled 1793, chartered 1806 and 1836. It has considerable manufactures, especially of iron and steel. Pop., 1890, 35,013.

Wheelock, ELEAZAR, D.D., 1711–1779. Pastor at Lebanon, Conn., 1735–70; teacher there of S. OCCOM (q.v.), and other Indians; first pres. of Dartmouth Coll. from 1770. *Narrative*, 1762–75.—His son, JOHN, LL.D., 1754–1817, was its pres. 1779–1815. *Hist. Dartmouth Coll.*, 1816.

Wheelwork. See GEAR WHEELS.

Wheelwright, JOHN, ab.1592–1679. Pastor in Mass. 1636; partisan of Anne Hutchinson; condemned for a fast-day sermon, and banished 1637; founder of Exeter, N. H., 1638. *Mercurius Americanus*, 1645. *Writings*, 1876.—His descendant, WILLIAM, 1798–1873, established steamship lines and built railroads in S. America, and founded the Pacific Steam Navigation Co.

Wheildon, WILLIAM WILLDER, 1805–1892. Mass. journalist and historical writer.

Whelan, RICHARD VINCENT, D.D., 1809–1874. R. C. Bp. of Richmond, Va., 1841, and of Wheeling from 1851; active in missionary and educational work.

Whelk. See RHACHIGLOSSA.

Whetstones. Slaty stone used to sharpen edge tools after grinding. See NOVACULITE and OIL STONE.

Whewell, WILLIAM, D.D., F.R.S., 1794–1866. Prof. Cambridge 1828; Master of Trinity from 1841; Vice-chancellor from 1855; prolific writer, of wide and varied learning; in philosophy a rationalist, as opposed to empiricism. *Astronomy and Physics*, 1833; *Inductive Sciences*, 1837–40; *Hist. Moral Philosophy*, 1852; *Plurality of Worlds*, 1853; *Platonic Dialogues*, 1859–61. His *Elements of Morality*, 1845, was much used in colleges.

Whewellite. $CaC_2O_4.H_2O$. Natural calcium oxalate, sometimes found in connection with coal beds.

Whewell's Anemometer. Set of small plane metallic plates, arranged as windmill fans, revolving around a horizontal axis, which was kept pointed toward the wind by the wind vane.

Whey. In the process of cheese making, residue left after the casein has been separated with rennet. It contains a large part of the water, nearly all the sugar, all the albumen, a varying and small portion of the fat, and about two-thirds of the ash of the milk. It is of considerable value for feeding purposes, particularly before the sugar has turned to lactic acid. See MILK and LACTOSE.

Whichcote, BENJAMIN, D.D., 1610–1683. Cambridge Platonist of highest ability and influence; provost of King's Coll. 1644–61; called by Shaftesbury "preacher of good nature." He and his school, often called latitudinarians, cared little for forms of government and theological symbols, but were busy with abstractions: they were far ahead of their age, and developed lines of religious thought now familiar. His works were posthumous: *Aphorisms*, 1703, and *Discourses*, 4 vols., 1701–7, contain many pregnant and memorable sayings.

Whigs. 1. British Liberals ab.1650–1830, opposed to the Tories. 2. American patriots during the Revolution. 3. Party opposed to the Democrats 1828–52. The Federalists had lost control of national affairs and become disorganized. During the "Era of Good Feeling" in Monroe's administration party feeling was at an ebb; but when Jackson became Pres. the Conservative elements took alarm at his arbitrary measures and rapidly crystallized into a political organization under the leadership of Clay and Webster. The Whigs elected Harrison 1840 and Taylor 1848, but later divided into Democrats and Republicans.

Whim, or GIN. In Mining, piece of machinery resembling a windlass with a vertical axle, worked by horse power and used for hoisting from shallow depths. In some forms the

Whim.

drum is elevated on a vertical shaft, provided with a cross bar to which a pair of traces is connected. To obtain the best effect the horse should walk at the rate of 2½ m. per hour and in a track not less than 24 ft. in diameter.

Whin, or WHINSILL. Hard intrusive basaltic rock, associated with lead ores in n. England.

Whin. See DYER'S GREENWEED.

Whip, or WHIP AND DERRY. In Mining, simple contrivance for hoisting from small depths, the bucket being raised directly by a horse drawing on a rope that passes over a fixed pulley.

Whipping. See FLOGGING and KNOUT.

Whipping-Post. Stake to which criminals are tied while punished; generally abolished in English-speaking countries; still used in Delaware.

Whipple, ABRAHAM, 1733–1819. R. I. Commodore 1775; noted for his captures with two vessels named *Providence;* prisoner 1780–83.

Whipple, AMIEL WEEKS, 1818–1863. Engineer; Brig.-gen. 1862; mortally wounded at Chancellorsville, Va.

Whipple, EDWIN PERCY, 1819–1886. American lecturer and critical essayist. *Literature and Life*, 1849; *Character and Characteristic Men*, 1867; *Literature of the Age of Elizabeth*, 1869; *Success*, 1871; *Works*, 6 vols., 1871; *Outlooks*, 1888.

Whipple, HENRY BENJAMIN, D.D., LL.D., b.1822. Bp. of Minn. 1859; authority on Indian questions.

Whipple, JOHN ADAMS, b.1822 in Mass. Inventor of improvements in photography.

Whipple, SQUIRE, 1804–1888. Civil engineer; designer and builder of the first iron bridges in the U. S.; inventor of the

Whipple Truss.

Whipple truss 1847. It was extensively used for long spans until 1880. It has a double system of inclined tension members with vertical posts. *Essay on Bridge-Building*, 1847.

Whipple, WILLIAM, 1730–1785. Delegate to Congress 1776 and 1778–79; signer of the Declaration of Independence; N. H. Brig.-gen. 1777–82; Judge N. H. Supreme Court from 1782.

Whipple, WILLIAM DENISON, U.S.A., b.1826. Brig.-gen. U. S. Vols. 1863–65; chief of staff to Gen. Thomas 1863; Col. 1887.

Whipple Truss. See WHIPPLE, S.

Whip-Poor-Will. See GOATSUCKERS.

Whip-Poor-Will Shoe. *Cypripedium acaule.* Purple-flowered herb of the Orchid family, native of e. N. America; known also as Stemless Ladyslipper.

Whip Snake. See COLUBRIDÆ.

Whirled Thermometer. One attached to a swivel or to a more complex whirling apparatus, by which it is rapidly whirled round in a small circle and made to attain the temperature of the air more nearly than it would do if standing still; first used by Saussure 1788; sometimes entitled Thermometre à fronde.

Whirl Pillars. Waterspout or its imperfect development, as a small whirlwind of spray and cloud.

Whirlpool. Rapidly-whirling current, produced by the meeting of two rapid opposing currents. Among the best known are the Maelström, off the coast of Norway; Euripius, off the island of Negropont; Charybdis, in the Strait of Messina; Corrievrekin, between the islands of Scarba and Jura, in Scotland; and that below the Niagara Falls.

Whirlwinds. All storms or commotions in which the air

Whirlwinds of Dust.

describes a path around a central region. The circular theory of storms assumes this path to be nearly a circle; the more cor-

rect modern view is that each particle in describing the first portion of its path approaches the central region and also ascends; it then recedes from the center, and eventually descends. This term and description apply equally to the smallest dust-whirls, the tornadoes, and the largest cyclone.

Whisky. Alcoholic liquor obtained from the fermentation and distillation of materials containing starch or sugar. In Scotland malt is used; in Ireland one-third malt with barley, oats and corn; in England raw cereals with malt; in Scotland and Ireland a few large manufacturers also follow the last method: on the Continent they use beet-root and the potato. In the U. S., rye, corn, wheat and malt are used. In making whisky in the U. S., the husk is removed from the grain by a machine, and the kernels are ground between millstones or crushed between rollers. The meal is then placed in a mash-tub of iron or wood, with water at 150° F., 40 gals. to a bushel of grain, and free steam blown through it for 50 minutes. This is to break open the starch cells of the grain. The malt is now added, to convert the starch into sugar, and it is allowed to stand one hour. It is then cooled down to 75° F., and transferred to the fermenting tub, which is closed. The yeast is added to convert the sugar into alcohol, which requires from 48 to 72 hours. It is then called beer or wort, and is run to the beer wells. It is then distilled by steam in the copper beer still, and the low wines condensed in the worm; these contain 30 per cent alcohol. The low wines are redistilled in another still, called the doubler, and the high wines or whisky passes over. The whisky is then barreled. It contains ab. 50 per cent of alcohol by weight. For sour mash whisky the grain in the first operation is scalded with the slop from a previous distillation and no yeast is used. Bourbon whisky is made from 8 parts corn, 1 part rye, and 1 part malt. The yield has reached 4 gals. of proof spirit (50 per cent) to the bushel of grain. Sour mash whisky requires 8 years to ripen; the sweet mash whisky is in good condition in 5 years. The color of whisky is from the charcoal of the barrel or from caramel introduced. Whisky is chiefly alcohol (ethylic) and water; it also contains small quantities of acetic, butyric, valerianic and œnanthic ethers, and propyl, butyl and amyl alcohols. Fusel oil consists of these last named alcohols. By rejecting the first and last portions in the distillation much of this last is avoided. By age whisky improves in flavor by the evaporation and breaking up of the disagreeable flavors into others more agreeable. The production of rye whisky in the U. S. year ending June 30, 1897, was 4,269,220 gals., and of Bourbon whisky 6,113,126 gals.; withdrawn for export, Bourbon 534,085 gals., rye 13,967 gals.; remaining in distillery warehouses 72,148,220 gals. It can remain in bond 8 years, and pays a tax of $1.10 per proof gal. when taken out of bond. Proof gal. of spirits has sp. gr. .9198 at 15.6° C., and contains by weight 49.24 per cent of alcohol sp. gr. .7938; by volume it contains 57.06 per cent.

Whisky Insurrection. In w. Pa. 1794; caused chiefly by dissatisfaction with a law of Congress imposing a duty on spirits. 6,000 insurgents were in arms, but were soon suppressed.

Whist. Game of cards thought to have been developed in England from the game of Trump, which was played in the time of Henry VIII., or from Rough and honors. Whisk, a similar game, is mentioned 1621 by Taylor, the Water-Poet. Whist occurs in *Hudibras*, pub. 1663. Charles Cotton describes the game in the *Compleat Gamester*, 1674. The game was played by four persons, with 48 cards, the four deuces being discarded, the last card being turned for trump. The game was 9, honors were counted, and the players could call at eight. In the first quarter of the 18th century the full pack was used and the game made 10, called Long-whist. About 1785 the game was made five, and Short-whist resulted. The game is played by four persons, two being partners against the other two, and each endeavors to inform his partner what cards he holds by the order in which he plays them. The game is 5 and the rubber is the best of 3 games. Ace, King, Queen, Jack of trumps are honors; if held by one side they count 4; if 3 are held they count 2; if 2 are held they do not count. Each trick over 6 counts 1.

Whistler, George Washington, 1800–1849. Civil engineer of several U. S. railroads; employed by the Russian government 1842 to superintend the construction of the railroad from Moscow to St. Petersburg.—His son, James Abbott McNeil, b.1834 in Mass., in London 1863–92, and since mainly in Paris, is the most widely gifted in purely technical qualities of all American painters, and in the front rank of modern etchers. No one has ever approached him in depicting the docks and old barges of London. The banks of the Thames from the Tower to Old Chelsea, and in its upper reaches, he has made his own, and no other etcher is comparable to him in his treatment of the varied phases of that section of the river. His drawing is faultless, and no picturesque point escapes his artistic eye. His works are little more than sketches, but they show power given only to the highest artistic natures. *Art of Making Enemies*, 1890–92.

Whistle Signals. An attempt has been made to have locomotive whistle signals uniform on all roads of the country. The proposed code is in use on many roads: 2 long (— —) to start; 2 short (– –) answer to cord or other signal; 4 long (— — — —) calls in rear flagman; 2 long and 2 short (— — – –) warning to highway crossing; succession of short blasts, warning to cattle or other trespassers; 3 short, train is to back; 1 short blast, for brakes.

Whiston, William, 1667–1752. Prof. Cambridge 1703–10; expelled as an Arian; prolific writer, much in controversy; biographer of Samuel Clarke, 1730; translator of Josephus, 1737. *Primitive Christianity Revived*, 5 vols., 1711–12; *Primitive N. T.*, 1745; *Memoirs*, 1749–50.

Whitaker, Nathaniel, 1732–1795. Pastor in Conn. and Mass.; with S. Occom in England and Scotland 1761–63, where he raised £11,000 to endow Dartmouth Coll.

Whitaker, Ozi William, D.D., b.1830. Bp. of Nevada 1869–87, and of Pa. since 1887.

Whitaker, Walter C., 1823–1887. Col. 6th Ky. 1861; Brig.-gen. U. S. Vols. 1863–65, serving chiefly in Tenn. and Ga.

Whitby. Seaport and watering-place of Yorkshire, Eng., on both sides of the Esk, 50 m. n.e. of York. The ruins of St. Hilda's Abbey, founded 566, but rebuilt in the 11th century, marks the place where the poet Cædmon d. ab.880. The jet

Entrance to Whitby Harbor.

found here is famed over the world, and the manufacture of ornaments from it forms a special industry. Shipbuilding, herring fishing and sail cloth manufacture are also carried on. Pop. ab.14,000.

Whitby, Daniel, D.D., 1638–1726. Anglican liberal, whose *Protestant Reconciler*, 1683, was burned at Oxford, and he forced to recant. His *Commentary on N. T.*, 1703, was bound with those of Patrick and Lourth.

Whitby, Council of. Called 664 by Oswy of Northumbria to settle differences as to Easter, etc. The Roman party won.

Whitcher, Frances Miriam (Berry), 1811–1852; m.1847. Humorist of central N. Y. *Widow Bedott Papers*, 1855.

Whitcomb, James, 1795–1852. Gov. of Ind. 1843–49; U. S. Senator from 1849.

Whitcomb, John, 1713–1785. Col. of Mass. troops 1755 and later; Major-gen. 1775.

White, Albert Smith, 1803–1864. M. C. for Ind. 1837–39 and 1861–63; U. S. Senator 1839–45.

White, Andrew, ab.1579–1656. English Jesuit, missionary to Md. Indians 1633–44. His writings were pub. 1874.

White, Andrew Dickson, LL.D., b.1832. Prof. Univ. Mich. 1857–62; pres. Cornell 1867–85, and its benefactor; U. S. Minister to Germany 1879–81, and to Russia 1892–94; member of Venezuelan Commission 1896; writer on education, history and politics. *Warfare of Science with Theology*, 1896.—His cousin, Edwin, 1817–1887, was a historical painter.

White, Anthony Walton, 1750–1803. Aid to Washington 1775; Lieut.-col. 1776, Col. 1780; Gen. of cavalry 1794.

White, Canvass, 1790–1834. Engineer of the Erie, the Delaware and Raritan, and Lehigh Canals.

White, Charles Abiathar, b.1826. State geologist of Ia. 1866–70; Prof. of Natural History in Ia. State Univ. 1867–73, and at Bowdoin Coll. 1873–75; geologist and paleontologist on

the U. S. Surveys 1875–79, and since 1883, with charge of the paleontological collections in the National Museum.

White, CHARLES A., 1830–1892. Mass. writer and publisher of songs.

White, EDWARD DOUGLAS, 1795–1847. M.C. from La. 1829–34 and 1839–43; Gov. 1834–38.—His son and namesake, b.1845, was Judge of La. Supreme Court 1878–80, and U. S. Senator 1889–95.

White, EMERSON ELBRIDGE, b.1829. Pres. Purdue Univ., Ind., 1876–83; Supt. of Cincinnati schools 1883. *Pedagogy.*

White, GILBERT, 1720–1793. English naturalist, famous for the *Natural History of Selborne*, 1789.

White, HENRY CLAY, b.1850. Prof. Univ. Ga. 1872; State chemist 1880. *Chemistry of the Cotton-plant*, 1873.

White, HENRY KIRKE, 1785–1806. English poet, celebrated by Byron, and remembered chiefly for his few hymns.

White, HORACE, b.1834. Ed. Chicago *Tribune* 1864–74, and (with E. L. Godkin) New York *Evening Post* since 1883. *Money and Banking*, 1895.

White, HUGH LAWSON, 1773–1840. Justice of Tenn. Supreme Court 1801–7 and 1809–15; U. S. Senator 1825–39; opponent of Jackson; Presidential candidate 1836.—His father, JAMES, 1737–1815, founded Knoxville, 1787–91, and was Brig.-gen. of Tenn. Vols. 1813.

White, ISRAEL CHARLES, b. 1848. Assistant geologist of Pa. 1875–84; Prof. Univ. of W. Va. 1877–91. His chief work has been the adjustment of the strata on the Pa. and Ohio line, and the development and publication of the anticlinal theory of Natural Gas.

White, JOHN, 1575–1648. English Puritan, vicarious founder of Dorchester, Mass., 1630; one of the Westminster divines 1643. *Planter's Plea*, 1630.

White, JOHN BLAKE. 1781–1859. Historical painter of S. C. —Of his sons, EDWARD BRICKELL, 1806–1882, was an architect, and OCTAVIUS AUGUSTUS, M.D., b.1826, a medical writer and inventor of surgical instruments.

White, JOHN WILLIAMS, b.1849. Prof. Harvard since 1877; author and editor of classical text-books.

White, JOSEPH BLANCO, 1775–1841. B. in Spain; of Irish descent; priest till 1810, thenceforth in England; pensioned 1814; author of books against the R. C. Church and of a famous sonnet, "Night and Death," 1828. *Autobiography*, 1845.

White, JULIUS, 1816–1890. Brig.-gen. U. S. Vols. 1862–64; prisoner at Harper's Ferry, Va., 1862.

White, PEREGRINE, 1620–1704. First white child born in New England, on the *Mayflower*, near Cape Cod.

White, RICHARD GRANT, 1821–1885. American Shakespearian critic and editor, noted also as a philologist and essayist. *Shakespeare's Scholar*, 1854; *New Gospel of Peace*, 1863–66; *Words and their Uses*, 1870; *England*, 1881.

White, WILLIAM, D.D., 1748–1836. Minister in Phila. 1773, rector 1779; chaplain of Congress 1777–85 and 1789–1801; Bp.-elect of Pa. 1786; consecrated at Lambeth, Eng., Feb. 1787; chief mover of the Convention of 1789, which organized the P.E. Ch. He exercised wide influence, and won general affection and respect. *Memoirs of P.E. Ch.*, 1820–36.

White, WILLIAM HENRY, LL.D., F.R.S., b.1845. English naval architect, engineer, and writer.

White Ants. See TERMITES.

Whiteaves, JOSEPH FREDERICK, b.1835. Anglo-Canadian paleontologist, author of numerous reports.

White Boys. Association similar to that of the RIBBONMEN (q.v.), though of an earlier date.

White Caps. See VIGILANCE COMMITTEES.

White Colors. See WHITE PIGMENTS.

White Copper. One of the names given to German silver.

White Cross Societies. Organized 1883 in Ch. of England, in the interest of purity among men. The movement spread rapidly throughout the British empire and in America.

White Damp. Accumulation of carbon monoxide gas, CO, in mines.

Whitefield, GEORGE, 1714–1770. English evangelist, associated with the Wesleys at Oxford, but later separated from them on the Divine Decrees; in America seven times; from 1748 backed by Lady Huntingdon; leader of Calvinistic Method-

George Whitefield.

ism. His personal influence was immense, but he was no organizer like Wesley: though accounted the greatest preacher of his time, his sermons are unreadable.

Whitefish. See COREGONUS, ISOSPONDYLI, and SALMONIDÆ.

White Flux. Oxidizing flux consisting of a mixture of carbonate, nitrate and nitrite of potassium. It is prepared by introducing in small portions and equal parts argol and niter into a hot crucible. It is used in assaying ores.

Whitefriars, or ALSATIA. Old precinct in London, named from a Carmelite monastery established 1241.

Whitehead, CHARLES, 1804–1862. English poet and novelist. *The Solitary*, 1831; *Jack Ketch*, 1834; *Richard Savage*, 1842.

Whitehead, PAUL, 1710–1774. English satirist.

Whitehead, WILLIAM, 1715–1785. English poet laureate 1757.

Whitehead, WILLIAM ADEE, 1810–1884. N. J. historical writer.

Whitehead Torpedo. See TORPEDO.

White Horse. In many mythologies regarded as sacred to the gods, and often kept in temples and sacred groves, for purposes of augury, as among the ancient Germans, or as the steed of the gods, ready for their service, as in Japan to-day; usually considered as a harbinger of death, or ridden by the personification of death; *e.g.*, the Pale Horse in the Apocalypse. Popular European notions about the white horse appear to survive from the mount of Odin in Teutonic myth.

White House. Executive Mansion in Washington, built 1818–29; of freestone painted white, 86 by 170 ft. Its grounds include ab.20 acres.

Whitehouse, HENRY JOHN, D.D., LL.D., 1803–1874. Bp. of Ill. from 1851.

White Lady. Traditional ghost of many castles and great houses in Germany, Bohemia, Scotland, and elsewhere; celebrated in Scott's *Monastery*.

White Lead. See LEAD CARBONATE.

White Leg. White, painful swelling of the leg, occurring, in most cases, in women who have recently given birth to children. In olden times, as the lacteal secretion ceases with the onset of the disease, it was thought to be caused by milk in the leg, and was called Milk Leg. It is now thought to be a septic infection causing a thrombosis.

White Lily Society. See TRIAD SOCIETY.

Whitelocke, BULSTRODE, 1605–1675. M.P. 1640; commissioner on various occasions; Envoy to Sweden 1653; Speaker

1656; so moderate a liberal as to be almost a trimmer. *Memorials*, 1682.

Whitelocke, JOHN, ab.1757–ab.1810. British general, defeated at Buenos Ayres July 1807; disgraced.

White Mts. Part of the Appalachians, ab. 30 m. long, covering some 800 sq. m. in n. N. H. Mt. Washington is 6,286 ft. high; at least six other peaks are over 5,000 ft. These moun-

View from Mt. Washington.

tains have many noteworthy waterfalls, among which are Artist's Silver Cascade and Ripley's. They are remarkable for wild scenery and are a favorite summer resort. The principal peaks are Mts. Washington, Jefferson and Adams.

White Nile. See NILE.

White Pigments. See BARITE, LEAD CARBONATE, and ZINC OXIDE. They are commonly adulterated with gypsum, chalk and clay.

White Plains. Capital of Westchester co., N. Y., 22 m. n.e. of New York; scene of a minor defeat of Americans Oct. 28, 1776. Pop., 1890, 4,042.

White Precipitate. $HgNH_2Cl$. White, insoluble compound, made by treating mercuric chloride (corrosive sublimate) with ammonia; called infusible in distinction from a fusible white precipitate, $Hg(NH_3Cl)_2$, made by adding a solution of mercuric chloride to a boiling solution of ammonium chloride.

White River. Left hand branch of the Arkansas, in Ark. and Mo. Drainage area 29,556 sq. m., length 380 m.; mean flow at ordinary high water 50,000 cu. ft. per sec.

Whites. See LEUCORRHEA.

White Sea. Deep indentation into the Russian coast from the Arctic Ocean.

White Ship. That in which Prince William, eldest son of Henry I. of England, set sail from Barfleur Nov. 25, 1120, struck a rock and went down with all on board save one. The Prince lost his life in an effort to save his sister.

White Sulphur Springs. Watering-place in Greenbrier co., W. Va., 227 m. w. of Richmond; formerly of great social importance, and still much resorted to in summer. Within 40 m. are several other sulphur springs. See RED SULPHUR SPRINGS.

White Swelling. Dropsy of the synovial sac lining a joint, usually due to an inflammation, synovitis. The name is usually applied to the disease as found in the knee-joint, characterized by a marked swelling unaccompanied by one of the usual signs of inflammation, redness.

White Vitriol. See ZINC SULPHATE.

Whitewash. Slaked lime, with water and glue, used on walls, fences, etc., and as a disinfectant.

Whitewater River. Tributary of the St. Francis, flowing ab. 250 m. s. through s.e. Mo. and n.e. Ark.

White-Weed. See DAISY, OX-EYE.

Whitewood. Wood of the tulip-tree.

Whitfield, HENRY, 1597–1658. Pastor at Guilford, Conn., 1637–50, and its founder; previously and later in England; writer on the Indians.

Whitfield, JAMES, D.D., 1770–1834. R. C. Abp. of Baltimore 1828.

Whitfield, ROBERT PARR, b.1828. Prof. Rensselaer Inst. 1875–78; curator of geology in Central Park Museum, New York, since 1877; writer on Paleontology.

Whitgift, JOHN, D.D., 1530–1604. Prof. Cambridge 1563; Dean of Lincoln 1571; Bp. of Worcester 1577; Abp. of Canterbury 1583; Privy Councilor 1586; severe with Puritans. *Works*, 1851–53.

Whiting. Purified chalk, used to clean glass and silverware. It is adulterated by adding white-lead.

Whiting. See GADIDÆ.

Whiting, ARTHUR, b.1861 in Mass. Composer.

Whiting, GEORGE ELBRIDGE, b.1842 in Mass. Organist and composer of masses and cantatas.

Whiting, WILLIAM, LL.D., 1813–1873. Boston lawyer; solicitor U. S. War Dept. 1862–65. His *War Powers*, 1862–63, was widely read, and exerted much influence.

Whiting, WILLIAM B., U.S.N., 1813–1883. Officer of the Coast Survey and Naval Observatory; Captain 1867, Commodore 1871.

Whiting, WILLIAM HENRY CHASE, 1825–1865. Brig.-gen. C.S.A., 1861, Major-gen. 1863; builder and commander of Fort Fisher, N. C.; prisoner Jan. 1865.

Whitlow. Inflammation involving the fingers or toes and usually the last phalanx. It may be of varying degrees of severity, from a superficial inflammation involving the nail (which will be thrown off in the progress of the disease) to an inflammation involving the periosteum. When at all deep-seated, a free incision should be made into the inflamed part, with such additional treatment as may be necessary to combat the inflammation. A felon.

Whitlow-Grass. Low herbs of the genus *Draba*, natural family *Cruciferæ*, mainly natives of the n. hemisphere.

Whitman, CHARLES OTIS, b.1842. Prof. of Zoölogy at Tokio, Japan, 1878–80; Clark Univ., Mass., 1889, and Univ. Chicago 1892; founder *Journal of Morphology*, 1887. *Embryology*, 1885.

Whitman, EZEKIEL, 1776–1866. M.C. 1809–11 and 1817–23; Judge of Me. courts 1822–41; Chief-justice 1841–48.

Whitman, MARCUS, M.D., 1802–1847. Missionary in Oregon 1836; opener of a road thither, and pioneer American settler; killed by Indians. He saved Oregon to the U. S. by journeying to Washington 1842–43 and enlightening the government as to its value, which secured its retention in the Ashburton treaty.

Whitman, SARAH HELEN (POWER), 1803–1878, m. 1828. R. I. poet; friend of Edgar A. Poe, and defender of his memory 1860.

Whitman, WALT, 1819–1892. American poet, who disdained the ordinary restraints of rhyme and meter, but whose unconventional freshness and force won many warm admirers, especially in Europe. His *Leaves of Grass*, 1855, caused no little sensation, and became the basis of controversies which are not yet ended.

Whitman College. At Walla Walla, Wash.; founded 1859, opened 1866, and rechartered 1883. It has 12 teachers and 168 students, of whom 82 are in college courses.

Whitmarsh, CAROLINE SNOWDEN, b. 1827. Mass. writer for children; compiler of *Hymns of the Ages*, 3 vols., 1859–64. She became Mrs. James Guild 1870.

Whitmer, DAVID, 1805–1888. Partaker in the alleged revelation made to Joseph Smith near Palmyra, N. Y., 1829; believer in original Mormonism, but not in its additions, which caused his secession 1838. *Address*, 1887.

Whitmore, WILLIAM HENRY, b.1836. Mass. genealogist; ed. Praed's poems, 1860, Sewall's *Diary*, 1875–82, and other works.

Whitney, ADELINE DUTTON (TRAIN), b.1824 in Mass.; m. 1843. Author of many excellent stories for girls, and of several books of verse. *Mother Goose for Grown Folks*, 1860; *Leslie Goldthwaite*, 1866.

Whitney, ANNE, b.1821. Mass. sculptor.

Whitney, ASA, 1791–1874. Manufacturer in Phila. from 1842; improver of car wheels.

Whitney, ELI, 1765–1825. Machinist of Mass.; in Ga. 1792–93, where he produced the first cotton-gin. The vast importance of this invention, which practically created the chief Southern industry, led to innumerable invasions of his rights, and for years his life was one of litigation and discouragement. In 1798 he began to manufacture firearms near New Haven; in this he made many improvements, filled many contracts, and

secured the wealth which he had previously earned but not received. Indomitable energy and patience backed his great

Eli Whitney watching the first Cotton-gin.

abilities, and made his history a memorable chapter in the beneficent but checkered annals of invention.

Whitney, JAMES AMAZIAH, LL.D., b.1839 in N. Y. Patent-lawyer. *Chinese Question*, 1880–88; *Poems*, 1886.

Whitney, JOSIAH DWIGHT, LL.D., 1819–1896. State geologist of Cal. 1860–74; prof. Harvard from 1865; engaged in early life on surveys in N. H., Ia., Wis., and the iron and the copper districts about Lake Superior. Author of many reports. *Metallic Wealth of the U. S.*, 1854; *Yosemite Guide-Book*, 1869.

Whitney, MYRON W., b.1836 in Mass. Bass singer.

Whitney, SAMUEL BRENTON, b.1842 in Vt. Composer.

Whitney, WILLIAM COLLINS, LL.D., b.1841. Corporation Counsel of New York 1875–76 and 1880–82; Sec. U. S. Navy 1885–89.

Whitney, WILLIAM DWIGHT, LL.D., 1827–1894. Brother of Josiah D.; Prof. of Sanskrit at Yale 1854, and of Comparative Philology 1870; author of Sanskrit, German, French, and English grammars, of *Study of Language*, 1867, *Life and Growth of Language*, 1876, and many treatises and articles in philological journals and transactions; ed. *Century Dictionary* 1889–91. As a teacher he has inspired some of our best scholars.

Whitney, MT. Highest summit of the Sierra Nevada, and of the U. S., excluding Alaska; in e. Cal. Altitude 14,898 ft.

Whitneyite. Cu_3As. Mineral compound of copper and arsenic, found in limited quantity in the copper region of Lake Superior.

Whitsunday. See PENTECOST.

Whittaker, FREDERICK, b.1838. Biographer of Gen. Custer 1876; novelist.—His father, HENRY, 1808–1881, pub. *Practice and Pleading*, 1852–67.

Whittaker, JAMES THOMAS, M.D., b.1843. Prof. Ohio Medical Coll. 1870–94. *Physiology*, 1879; *Tuberculosis*, 1887.

Whittemore, DON JUAN, b.1830 in Vt. Civil engineer, chiefly on Western railways.

Whittemore, THOMAS, D.D., 1800–1861. Ed. Boston *Trumpet* 1828–58. *Hist. Universalism*, 1830–60; *Life of Hosea Ballou*, 4 vols., 1854–55; *Autobiography*, 1859.

Whitthorne, WASHINGTON CURRAN, 1825–1891. Adjutant-gen. of Tenn. 1862–65; M.C. 1871–86 and 1887–91; U. S. Senator 1886–87.

Whittier, JOHN GREENLEAF, 1807–1892. New England Quaker poet, active in youth as a journalist and against slavery. His later life was peacefully spent in Mass., chiefly at Amesbury. His poems throb with indignation against wrong and cruelty, glow with love of Nature, and in some cases, as *My Psalm* and *The Eternal Goodness*, rise to the highest regions of devout feeling. His purity, earnestness, and sweetness, have made him widely beloved. His most popular book is *Snow Bound*, 1866.

Whittingham, WILLIAM ROLLINSON, D.D., 1805–1879. Prof. General Theol. Sem., New York, 1835–40; Bp. of Md. 1840; eminent for learning and character; editor of sundry books and periodicals.

Whittington, SIR RICHARD, ab.1355–1423. Mayor of London 1397, 1406, and 1419; M.P. 1416; merchant-prince, famous in legend; knighted ab.1419; benefactor of churches, schools, and hospitals.

Whittlesey, CHARLES, 1808–1886. Pioneer geologist of n. Ohio; Col. 20th Ohio Vols. 1861–62; writer on the antiquities and geology of the Western Reserve and on the Lake Superior mining region.—His uncle, ELISHA, 1783–1863, was M.C. from Ohio 1823–38, and Comptroller U. S. Treasury 1849–57 and from 1861.

Whittredge, WORTHINGTON, b.1820. American landscape painter. N.A. 1861; pres. of the Academy 1874.

Whitworth, SIR JOSEPH, LL.D., D.C.L., F.R.S., 1803–1887. English mechanical engineer, improver of rifles and cannon; Baronet 1869. *Papers*, 1858; *Guns and Steel*, 1873; *Essays*, 1882.

Whitworth Gun. Rifled cannon whose bore is hexagonal in section and has a very rapid twist. The projectiles are very much elongated and adapted to closely fit the bore. It was invented by Sir Joseph Whitworth.

Whoop. Variety of Hide and Seek; so called from the hider's call when ready to be sought.

Whooping Cough. Communicable disease marked by paroxysms of spasmodic coughing, during which the inspiration of air into the lungs is accompanied by a shrill sound, known as the whoop. It is a disease largely of childhood, usually lasting for 6 or 7 weeks and is but seldom fatal. It is claimed that the specific bacillus of the disease has been isolated.

Whorl, VERTICIL. Group of two or more leaves, borne at a single node of a stem. When only two the leaves are said to be opposite; when three or more, whorled or verticillate.

Whortleberry. Shrubs of the genus *Vaccinium*, natural family *Vacciniaceæ*, bearing edible berries; natives of the n. temperate zone and the Andes. Huckleberry and blueberry are species.

Whortleberry (*Vaccinium myrtillus*).

Whymper, EDWARD, b.1840. English mountaineer, author, and engraver; first to scale the Matterhorn 1865. *Swiss Pictures*, 1866; *Scrambles among the Alps*, 1871; *Andes of the Equator*, 1891–92.—His brother, FREDERICK, pub. *Alaska*, 1868, and *Heroes of the Arctic*, 1875.

Whyte, WILLIAM PINKNEY, LL.D., b.1824. U. S. Senator 1868–69 and 1875–81; Gov. of Md. 1871–74; Atty.-gen. 1887.

Whyte-Melville, GEORGE JOHN, 1821–1878. Scottish author of sporting and historical novels.

Wicelius, or **Witzel,** GEORG, 1501–1573. German controversialist, alternately Romanist and Lutheran. *Typus ecclesiasticus*, 5 vols., 1540–48.

Wicheren. See RAUHE HAUS.

Wichern, JOHANN HEINRICH, 1808–1881. Founder, near Hamburg, 1833, of the Rauhe Haus for ignorant and depraved children. Many others were modeled upon it. *Die innere Mission*, 1849.

Wichita. City of Sedgwick co., Kan., on the Arkansas; settled 1870; important railroad center. It has two colleges, a large trade, and some manufactures. Pop., 1890, 23,853.

Wichitas. See PAWNEES and REES.

Wick. Bundle of fibers, usually cotton threads, to lead oil to the flame, where the oil is evolved as gas to maintain combustion. It acts by capillary attraction. The best wick is braided, one thread being under tension, to bend the flame end into the outer zone of combustion, to avoid smoking.

Wickedness. Disposition toward the violation of moral laws.

Wicket. Small door in a larger one, to avoid opening the whole.

Wickham, WILLIAMS CARTER, 1820–1888. Brig.-gen. C.S.A., commanding cavalry in Va. His statue was raised at Richmond 1891.

Wickram, JÖRG, 16th cent. Earliest German novelist.

Wicksteed, PHILIP HENRY, b.1844. London pastor, author, and translator. *Ibsen*, 1892.

Wickström, JOHANN EMANUEL, 1789–1856. Prof. of Botany in Stockholm. *Conspectus litteraturæ botanicæ in Sueciæ*, 1831; *Stockholm's Floræ*, 1840.

Wiclif, or **Wycliffe,** JOHN, ab.1320–1384. English "Reformer before the Reformation"; lecturer at Oxford ab.1363; rector of Lutterworth 1374; accused of heresy 1377 and 1382; first English translator of the entire Bible. His remains were

Exhumation of Wiclif.

disinterred and burned 1415. His followers, the Lollards, were persecuted, and his doctrine practically stamped out in England; but it spread to Bohemia, and produced Huss and the Hussites.

Wicopy. See LEATHERWOOD.

Widdin. Town of n.w. Bulgaria, on the Danube; scene of a Russian defeat 1828; fortified Turkish post till 1878. Pop. ab.14,500.

Wide Gauge. See BROAD GAUGE.

Widor, CHARLES MARIE, b.1845. French organist and composer.

Widukind. See WITTEKIND.

Wieck, CLARA. See SCHUMANN, R.

Wiedersheim, ROBERT ERNST EDUARD, b.1848. Prof. Freiburg 1876; writer on anatomy.

Wieland, CHRISTOPH MARTIN, 1733–1813. German epic poet and novelist, popular rather than profound; Prof. Erfurt 1767; at Weimar from 1772. Tr. Shakespeare 1762–66; *Agathon*, 1767; *Oberon*, 1780. *Works*, 42 vols., 1794–1802.

Wieliczka. Town of w. Galicia, 6 m. s.e. of Cracow; site of important salt mines, worked since ab. 1350. Pop. ab. 6,300.

Wieniawski, HENRI, 1835–1880. Polish violinist and composer; in America 1872–74; Prof. Brussels Observatory 1873.—His brother, JOSEPH, b.1837, pianist and composer, was conductor at Warsaw 1871–77.

Wier, JOHANN, 1516–1588. Physician and scholar of Cleves, pupil of Cornelius Agrippa; writer against belief in witchcraft 1563. His *Pseudomonarchia Dæmonum* (perhaps satirically) enumerates the population of hell as 72 princes and 7,405,926 minor devils. These writings caused much commotion, and were stigmatized by the eminent Jean Bodin (1530–1596) "as horrible blasphemies." The Duke of Cleves protected W. from persecution.

Wiertz, ANTOINE JOSEPH, 1806–1865. Flemish painter, founder of the Musée Wiertz at Brussels; distinguished for audacity, literary suggestiveness, and technical facility. To show that criticism was not wholly just to his art, he sent a Rubens to the Paris Salon after erasing the signature and substituting his own name, thus causing its rejection.

Wiesbaden. Old town of Prussia, on the Salzbach; former capital of Nassau; contains mineral springs, and is a noted resort of health seekers, as till 1872 of gamblers. There are 20 springs, 104°–156° F., curative of dyspepsia, gout and nervous diseases. Pop., 1890, 64,692.

Wife. See HUSBAND AND WIFE and MARRIAGE.

Wiffen, JEREMIAH HOLME, 1792–1836. English poet, tr. of G. de la Vega, 1823, and Tasso, 1824–25.—His brother, BENJAMIN BARRON, 1794–1867, edited the *Works of Spanish Reformers*, 29 vols., 1848–69.

Wig. False head of hair; the hair being fastened into a fabric or false scalp. The Egyptians wore false beards on the chin. Well constructed wigs are found in the tombs of Egypt. Wigs for judges and barristers in England are made of horse hair; actors' wigs often of jute.

Wigan. Manufacturing borough of Lancashire, Eng., on the river Douglas, 18 m. n.e. of Liverpool. Large deposits of cannel coal occur near by. Pop., 1891, 55,013.

Wigand, ALBERT, 1821–1886. Prof. of Botany in Marburg 1860. *Grundlegung der Pflanzen-Teratologie*, 1850; *Intercellularsubstanz und Cuticula*, 1850; *Der Baum*, 1854; *Mikroscopische Untersuchungen*, 1872.

Wigfall, LOUIS TREZEVANT, 1816–1874. U. S. Senator from Texas 1860–61; Brig.-gen. C.S.A. 1861–62; Confederate Senator 1862–65.

Wigger, WINAND MICHAEL, D.D., b.1841. R. C. Bp. of Newark, N. J., 1881.

Wiggin, KATE DOUGLAS (SMITH). American author, writing much for children and on kindergartens. She became Mrs. Figgs 1896. *A Summer in a Cañon*, 1889; *Marm Lisa*, 1896.

Wiggins, CARLETON, b.1848. Landscape painter of Brooklyn, N. Y.

Wigglesworth, MICHAEL, 1631–1705. Pastor at Malden, Mass., from 1657. His poem, *The Day of Doom*, 1662, reflecting the severe views of his age, had great popularity, and was reprinted 1867.—His son, EDWARD, D.D., 1693–1765, was Prof. of Theology at Harvard from 1722, as was his son, EDWARD, D.D., 1732–1794, from 1765.—His grandson, EDWARD, 1804–1876, was assistant ed. *Encyc-Americana*, 1828–32.—A cousin, EDWARD, 1742–1826, was Col. of Mass. troops 1776–79.

Wight, ORLANDO WILLIAMS, M.D., 1824–1888. American writer, compiler, and translator. *Philosophy of Sir W. Hamilton*, 1853; *Abelard and Héloise*, 1853–61.

Wight, PETER BONNETT, b.1838 in New York. Architect in Chicago since 1871; improver of fire-proof buildings.

Wight, ROBERT, 1796–1872. Anglo-Indian botanist. *Botany of India*, 1834; *Prodromus Floræ Peninsulæ Indiæ orientalis*, 1840–56.

Wight, ISLE OF. In English Channel, off Hampshire. Here is Osborne House, the seaside residence of Queen Victoria. Area 145 sq. m.; pop., 1891, 78,718.

Wigram, SIR JAMES, 1793–1866. English lawyer, 2d Vice-chancellor 1841–50; knighted and pensioned 1850; writer on wills.

Wikoff, HENRY ("CHEVALIER"), 1813–1884. American traveler, in Europe from 1834. His erratic deeds and adventures are described in *My Courtship*, 1855, *Roving Diplomatist*, 1856, and other books.

Wilamowitz-Möllendorf, ULRICH VON, b.1848. Prof. Greifswald 1876, and Göttingen 1883; editor of, and writer on, Greek classics.

Wilberforce, WILLIAM, 1759–1833. M.P. 1780–1825; active in many philanthropic movements, especially that against the slave trade, which, after 20 years' devoted labor on his part and

William Wilberforce.

Clarkson's, was abolished 1807. With equal zeal he fought slavery in the British colonies, and just lived to see it destroyed. His *Practical View*, 1797, was widely circulated and translated. *Correspondence*, 1840.—His son, SAMUEL, D.D.,

1805–1873, Bp. of Oxford 1845 and of Winchester 1869, was eminent for social brilliancy, administrative activity and power, eloquence, and wit. *Hist. P.E. Ch. in America*, 1844. His father's *Life*, 5 vols., 1838, was by him and his brother, ROBERT ISAAC, 1802–1857, who became prebendary of York 1841, and entered the R. C. Ch. 1854. *Baptism*, 1849; *Eucharist*, 1853.

Wilbour, CHARLES EDWIN, 1833–1896. American Egyptologist and translator.

Wilbrandt, ADOLF, b.1837. German dramatist and novelist.

Wilbrord. See WILLIBROD.

Wilbur, HERVEY BACKUS, M.D., 1820–1883. Director State asylum for idiots at Syracuse, N. Y., from 1854.—His brother, CHARLES TOPPAN, M.D., b.1835, has done similar work in Ill. since 1865.

Wilbur, JOHN, 1774–1856. Quaker preacher in R. I.; disowned 1843 for opposing J. J. Gurney; founder of a society named from him. *Journal*, 1859.

Wilbye, JOHN, ab.1564–ab.1612. English composer, chiefly of madrigals, between 1598 and 1614.

Wilcox, CADMUS MARCELLUS, 1826–1890. Brig.-gen. C.S.A. 1861, Major-gen. 1863–65, serving chiefly in Va. *Rifle Practice*, 1859.

Wilcox, CARLOS, 1794–1827. Conn. poet.

Wilcox, ELLA (WHEELER), b. ab.1845 in Wis.; m.1884. Poet, in New York since 1887. *Poems of Passion*, 1883.

Wilcox, PHINEAS BACON, 1798–1863. Author of Ohio *Reports*, and other law-books.

Wild. Uncultivated plants, especially those that are native.

Wild, EDWARD AUGUSTUS, 1825–1891. Brig.-gen. U. S. Vols. 1863–66, serving in N. C. and Va.

Wild, HEINRICH, b.1833. Prof. Berne 1858; director Physical Observatory at St. Petersburg since 1868; electrician and meteorologist.

Wild, JONATHAN, ab.1682–1725. English criminal and thief-taker; executed; celebrated by Fielding, 1743.

Wild Animals. See FERÆ NATURÆ.

Wild-Cat. See LYNX.

Wild-Cat. Notes of Mich. State banks adorned with the figure of a panther; thence any swindling banking or insurance business.

Wild Cherry. *Prunus serotina.* Tree growing in all parts of the U. S., attaining a height of 100 ft. in the Western States, but much smaller in the Eastern States. Its fruit is a small, blackish-purple berry. Preparations of the bark are employed to flavor medicinal preparations, as a stomachic tonic and in bronchial affections.

Wilde, OSCAR, b.1856. Irish æsthete, dramatist, novelist, and poet, of the decadent school; in America 1882; imprisoned in England 1895–97. — His mother, LADY JANE FRANCESCA (ELGER), 1819–1898, pub. *Poems by Speranza*, 1864.

Wilde, RICHARD HENRY, 1789–1847. M.C. from Ga. 1815–17 and 1827–35; in Europe 1835–40; discoverer of Giotto's portrait of Dante; law prof. Univ. La. 1845; poet. *Tasso*, 1842; *Hesperia*, 1867.

Wilde, SAMUEL SUMNER, LL.D., 1771–1855. Judge Mass. Supreme Court 1815–50.

Wilde, THOMAS. See TRURO, BARON.

Wildebeest. See GNU.

Wildenbruch, ERNST VON, b.1845. German dramatist, novelist, and poet. *Harold*, tr. 1891; *Heinrich*, 1896.

Wilder, ALEXANDER, M.D., b.1823. Prof. in New York 1873; writer on symbolism.

Wilder, BURT GREEN, M.D., b.1841. Prof. Cornell since 1867; investigator in anatomy; author of many papers.

Wilder, MARSHALL PINCKNEY, 1798–1886. Boston merchant; authority on arboriculture.

Wilderness. Region in Va., s. of the Rapidan; scene of indecisive battles, May 5–7, 1864. Union loss 5,580 killed, 28,360 wounded; Confederate loss ab.30,000.

Wild Goose. Bird of the genus *Anser* in a broad sense, which is wild or feral. In Great Britain this name is given to the graylag, and in N. America to the Canada goose, *Bernicla canadensis.* See ANSERINÆ.

Wild Huntsman. Legendary specter of the forest, of common occurrence in European folk-lore; variously explained in local tales; in the Black Forest, identified as the personification of the storm; in that of Fontainebleau, as St. Hubert; in England known as Herne the Hunter, and again as the Wandering Jew.

Wild Ipecac. Name given to Feverwort. See IPECAC, WILD.

Wild's (or TABLET) **Anemometer.** Instrument used 1666 in England, slightly modified by H. Wild 1860. It consists of a rectangular plate of thin metal hanging broadside to the wind; the strength of the wind is measured by the extent to which it causes the plate to deviate from the vertical.

Wiley, CALVIN HENDERSON, 1819–1887. N. C. author. *Alamance*, 1847; *Utopia*, 1852; *Roanoke*, 1886.

Wiley, HARVEY WASHINGTON, b.1844. Prof. in Indiana 1874; chemist U. S. Dept. of Agriculture since 1883.

Wiley, ISAAC WILLIAM, D.D., LL.D., 1825–1884. M. E. Bp. 1872.

Wilfrid, ST., 634–709. Abbot at Ripon ab.660; partisan of Rome and opponent of the Celts at the Council of Whitby 664; titular Bp. of York 664, but in possession of his see only ab. 669–670. He twice appealed to Rome, making that custom familiar in England.

Wilhead. See WILLEHAD.

Wilhelm, KARL, 1815–1873. German composer of *Die Wacht am Rhein*, 1854; pensioned 1871.

Wilhelmina, HELENE PAULINE MARIE, b.1880. Daughter of William III. of Netherlands: Queen 1890.

Wilhelmite. See WILLEMITE.

Wilhelmj, AUGUST, b.1845. German violinist, in America 1878; since in London.

Wilhelmshaven. Prussian seaport, on Jahde Bay, 45 m. n.w. of Bremen; founded 1856; strongly fortified. Pop., 1891, 15,471.

Wilhelmshöhe. Castle 3 m. from Cassel, Prussia, where Napoleon III. was held a prisoner from the capitulation of Sedan till the end of the Franco-German war. The gardens

Bird's-eye View of Wilhelmshohe.

contain splendid fountains and cascades, and the colossal statue of Hercules, within the hollow of whose club 8 persons can stand at one time.

Wilhorst, CORA (WITHERS) DE, b.1835 in New York. Singer, known in the U. S. 1856–60, and in Europe 1870–74.

Wilken, GEORG ALEXANDRE, 1847–1891. Prof. Leyden 1885; writer on the Dutch E. Indies, their ethnology and folk-lore.

Wilkes, CHARLES, U.S.N., 1798–1877. Lieut. 1826; commander of an exploring expedition in the Pacific and Antarctic Oceans 1838–42, the Reports of which filled 19 vols.; Captain 1855. While on the *San Jacinte*, he stopped the British steamer *Trent* at sea Nov. 8, 1861, and arrested J. Slidell and J. M. Mason, Confederate Commissioners to Europe. This act, extremely popular at home, endangered war with England, and the prisoners were soon released. He was made Commodore 1862 and Rear-admiral 1866. *Narrative*, 1845–51; *Western America*, 1849; *Theory of the Winds*, 1856.

Wilkes, GEORGE, 1820–1885. Ed., with W. T. Porter, New York *Spirit of the Times* from 1850. *Hist. California*, 1845.

Wilkes, JOHN, 1727–1797. M.P. 1757–64 and 1774–90; ed. *North Briton* 1762–63; long embroiled with government, and a popular hero; outlawed 1764, and in exile 1764–68; imprisoned

1768–70; Sheriff of London 1771, Lord Mayor 1774, Chamberlain from 1779. *Correspondence*, 1805.

Wilkesbarre. Capital of Luzerne co., Pa., on n. branch of the Susquehanna; in the WYOMING VALLEY (q.v.); settled 1769, chartered 1806 and 1871; surrounded by anthracite mines, and center of an important trade. Pop., 1890, 37,718.

Wilkie, SIR DAVID, 1785–1841. Scottish genre painter, who had acute perception for character and the humorous side of life, and achieved a national reputation; R.A. 1811; knighted 1836; the Dickens of British painters. His *Village Festival*, *Blind Fiddler*, and other works, are in the National Gallery.

Wilkie, WILLIAM, 1721–1772. Prof. St. Andrew's 1759; epic poet. *Epigoniad*, 1747; *Fables*, 1768.

Wilkins, JOHN, D.D., F.R.S., 1614–1672. Prebendary of York 1660, Bp. of Chester 1668; eminent for scientific attainments and writings. *Discovery of a New World*, 1638; *Mercury*, 1641; *Mathematical Magic*, 1648. *Works*, 1708.

Wilkins, MARY ELEANOR, b. ab.1860 in Mass. Novelist, eminently successful in short stories of rural New England life, as *An Humble Romance*, 1887; *Jane Field*, 1893; *Pembroke*, 1894; *Madelon*, 1896; *Jerome*, 1897.

Wilkins, PETER. Strange romance of flying islanders, 1750, by PALTOCK, ROBERT (q.v.).

Wilkins, WILLIAM, 1779–1865. Lawyer of Pittsburg; U. S. Judge for w. Pa. 1824–31; U. S. Senator 1831–34; Minister to Russia 1834; M.C. 1843–44; Sec. of War 1844.

Wilkinson, JAMES, U.S.A., 1757–1825. Capt. 1775, Major 1776, serving under Arnold and Gates; Col. 1777; Brig.-gen. under Wayne 1792; General-in-chief 1796–1798 and 1800–1812; Gov. of La. 1805–6; tried 1811 for complicity in Burr's schemes, and receiving Spanish pay; Major-gen. 1813–15; in Mexico from 1815. He held posts far above his merits, and escaped the due punishment of his traitorous intrigues. *Memoirs*, 1816.

Wilkinson, JEMIMA, 1753–1819. Fanatic or impostor, founder of a semi-Shaker sect in Yates co., N. Y., 1789. It died with her.

Wilkinson, JOHN, b.1821. Lieut. U.S.N. 1850, C.S.N. 1861; blockade-runner. *Narrative*, 1877.

Wilkinson, SIR JOHN GARDNER, D.C.L., F.R.S., 1797–1875. English traveler in Egypt 1821–33; knighted 1839. His *Ancient Egyptians*, 6 vols., 1837–41, was repub. 1879. *Modern Egypt*, 1843; *Dalmatia and Montenegro*, 1848.

Wilkinson, MORTON SMITH, b.1819. U. S. Senator from Minn. 1859–65; M.C. 1869–71.

Wilkinson, WILLIAM CLEAVER, D.D., b.1833. Prof. Rochester Theol. Sem. 1872–81; author of Chautauqua text-books. *Baptist Principle*, 1881.

Willkomm, HEINRICH MORITZ, 1821–1895. Prof. of Botany at Dorpat 1868. *Deutschlands Laubhölzer im Winter*, 1859; *Deutschen Pflanzen*, 1863.

Will. See VOLITION.

Will. Legal instrument by which one disposes of property at his death. The capacity to make it, the form in which it shall be made, the persons in whose favor it may be made, and the way in which it may be revoked, are matters largely of statutory law.

Willaert, ADRIAN, ab.1490–1562. Dutch composer, called the head of the Venetian school.

Willamette River. In Ore., branch of the Columbia,

Willamette Falls.

flowing ab.270 m. n.w. and n. between the Cascade and Coast ranges; partly navigable. It joins the Columbia a few miles below Portland; 25 m. from the mouth are W. Falls, at Oregon City, 40 ft. high, around which a canal has been constructed. Drainage area 11,700 sq. m.

Willamette University. M. E. co-educational institution at Salem, Ore., chartered 1852, and formerly known as Oregon Institute, which was founded 1844. It has colleges of liberal arts, medicine, law, theology, music, art, and oratory.

Willard, ABIJAH, 1722–1789. Mass. loyalist; Col. 1776; settler in New Brunswick.

Willard, EMMA (HART), 1787–1870. Founder of a famous girls' school at Troy, N. Y., and its head 1821–38; author of several histories and other books. *Poems*, 1830.

Willard, FRANCES ELIZABETH, 1839–1898. Prof. Northwestern Univ., Ill., 1871–74; pres. W. C. T. U. 1879; founder World's W. C. T. U. 1883, and its pres. 1888; active writer and reformer.

Willard, JOHN, LL.D., 1792–1862. Judge N. Y. Supreme Court from 1846. *Equity Jurisprudence*, 1855; *Executors*, 1859; *Real Estate*, 1861.

Willard, SAMUEL, 1640–1707. Pastor Old South Ch., Boston, from 1678; acting pres. of Harvard from 1701. *Body of Divinity*, 1726.—His great-grandson, JOSEPH, 1738–1804, was pres. of Harvard from 1781.—His son, SIDNEY, 1780–1856, was prof. there 1807–31.

Willaumetz, JEAN BAPTISTE PHILIBERT, COMTE DE, 1763–1845. French admiral 1805, Peer 1832. *Dict. de Marine*, 1820.

Willcox, ORLANDO BOLIVAR, U.S.A., b.1823. Brig.-gen. U. S. Vols. 1861–66, serving chiefly in Va.; Col. 1866, Brig.-gen. 1886. *Faca*, 1857.

Willdenow, KARL LUDWIG, 1765–1812. Prof. of Botany in Berlin. *Historia Amaranthorum*, 1790; *Grundriss der Kräuterkunde*, 1792; *Einleitung zum Seltststudium der Botanik*, 1804.

Willehad, ST., d.789. English missionary to Frisia; Bp. of Bremen 787. His day is Nov. 8.

Willekens, JACOBUS, 1571–1633. Dutch admiral, engaged against Brazil 1623–24 and 1626, and later at Manila. *Journal*, 1629.

Willemite. Zn_2SiO_4. Natural zinc silicate, found especially in Belgium and n.w. N. J.

Willems, JAN FRANZ, 1793–1846. Keeper of archives at Antwerp and Ghent; writer on Dutch language; ed. of old texts.

Willes, SIR JAMES SHAW, 1814–1872. English law reformer; Judge of Common Pleas and knight 1855.

Willets Point. U. S. military reservation at the w. end of Long Island Sound, 20 m. n.e. of New York City. It was bought by the Government in 1857 and 1863, with the intention of building a fort on it to defend the e. entrance to New York; which is not yet completed. It comprises 136 acres. It is now the site of a hospital and has a school of practice authorized 1885, and a torpedo experiment station. It also has engineers' stores and supplies.

Willett, MARINUS, 1740–1830. Lieut.-col. 1776; defender of Ft. Stanwix 1777; Commander on the Mohawk 1780–83; Sheriff of New York 1784–92; Mayor 1807. *Narrative*, 1831.

Willey, BENJAMIN GLAZIER, 1796–1867. Pastor in N. H. *Hist. White Mountains*, 1856–70.

Willey, HENRY, b.1824. Mass. writer on Lichens.

Willey, WAITMAN THOMAS, LL.D., b.1811. U. S. Senator from Va. 1861–63, and W. Va. 1863–71.

William I., "THE CONQUEROR," 1027–1087. Duke of Normandy 1035; King of England from 1066. He claimed the throne as heir of his great-uncle, Edward the Confessor, and on Harold's election invaded England and defeated the Anglo-Saxons at Hastings Sept. 29, 1066, where Harold was killed. He reduced England to complete subjection, conquered Scotland, ruled energetically, and consolidated his dynasty.—His son, WILLIAM II. (RUFUS), 1056–1100, reigned from 1087, warred with his brother Robert of Normandy, with Wales, and with Scotland, and acquired Normandy 1096.

William III., 1650–1702. King of Gt. Britain and Ireland from 1689; stadtholder of the Netherlands 1672; son of William II. of Orange and Mary, daughter of Charles I. of England. He resisted the encroachments of France, married (1677) Mary, eldest daughter of the Duke of York, afterward James II., and came to England by invitation of leading men Nov. 4, 1688, with a force of 15,000. James fled to France, and W. and Mary

were proclaimed Feb. 13, 1689. James, supported by Louis XIV., endeavored to regain his kingdom. England united with Austria, Spain and the Netherlands against France; in the war which followed, 1689–97, their armies, commanded by

King William III.

W., successfully withstood the French. He had no charm of manner, and was disliked by the English as a foreigner; but his reign is memorable in their history. Though overpraised by Macaulay, as soldier, statesman, and friend of freedom, he was the worthy scion of a great house.

William IV., 1765–1837. King of Gt. Britain and Ireland. Third son of George III.; naval Captain 1786, Duke of Clarence 1789, Admiral 1801, king from 1830. He opposed the Reform Act of 1832.

William I., 1797–1888. German Emperor; son of Frederick William III. of Prussia. Regent 1858, king 1861. The liberal party increased in power, and the chamber refused to consent to the king's measures till its constitutional powers were acknowledged. Sept. 22, 1862, Bismarck was made Prime Minister, and the chamber, having rejected the budget, was dissolved Oct. 14. The strife continued till 1863, when Bismarck made use of the Schleswig-Holstein question and the rivalry of Austria to divert attention to matters of "German" interest. The war of 1866 between Prussia and Austria ended in Prussia's triumph, and W. became head of the German Confederation 1867. The Franco-German war broke out 1870; the king commanded at Gravelotte and Sedan, and was proclaimed Emperor of Germany at Versailles, Jan. 18, 1871. His later years were full of honors.—His grandson, WILLIAM II., b.1859, succeeded his father, Frederick "the Good," June 1888, forced the resignation of Bismarck 1890, developed the Triple Alliance, and is noted for extreme activity, and assertiveness, and lofty views of prerogative and divine right. He is the friend of militarism, the JUNKERS (q.v.), and Turkish absolutism.

William I., 1772–1843. King of the Netherlands 1815–40, including Belgium till 1830; son of William V. of Orange, stadtholder. On his abdication, his son, WILLIAM II., 1792–1849, succeeded.—His son, WILLIAM III., 1817–1890, reigned from 1849.

William and Mary College. At Williamsburg, Va.; chartered 1693; oldest in the U. S., except Harvard; non-sectarian. Its work was interrupted by the Revolutionary War, by the Civil War, and by lack of funds 1882. It resumed again 1888, and in 1893 received from the U. S. $64,000 as indemnity for losses in the Civil War. Three Presidents, Jefferson, Monroe and Tyler, and many eminent men were among its graduates. It has (1897) 12 teachers and ab.150 students.

William of Malmesbury, ab.1095–1142. Author of *Historia regum Anglorum*, pub. 1596, tr. 1815.

William of Nassau, 1533–1584. Prince of Orange (in Provence); greatest of the Dutch nobles under Charles V. and Philip II. When in France as a hostage 1559, the king casually informed him of the intended extirpation of Protestants; this disclosure determined his course, and the way he received it earned his title, "the Silent." He was Gov. of Holland 1564, and on Alva's arrival escaped by flight the fate of Egmont and Horn. He and his brothers devoted their fortunes and lives to the task of liberation, against apparently hopeless odds, and with little success till 1572, when the Sea Beggars gained a foothold at Briel. From 1572 he was stadtholder of Holland and Zealand, and later of other provinces. His wisdom directed the war against the Spanish armies, led

William of Nassau.

successively by Alexi, Requesens, Don John of Austria, and Alexander Farnese, and secured independence through the Union of Utrecht 1579. From 1580 a price was on his head; his life was repeatedly attempted, and at last taken by an assassin. He was a far-seeing statesman, tolerant beyond his age, unselfish, pure, noble, the Father of his Country in the fullest sense. His services to humanity were almost unparalleled: the only names that stand beside his in the roll of liberators are Washington, Judas Maccabæus, and in less degree Timoleon.

William of Newbury, 1135–1200. English chronicler. His *Work*, pub. 1856, extends 1066–1198.

William of Orange. See WILLIAM OF NASSAU.

William of Poitiers, 11th cent. Historian of William the Conqueror.

William of Tyre. Abp. of Tyre 1175; historian of the Crusades 1127–83. His book, pub. 1549, has merit and value.

William of Wykeham, 1324–1404. Bp. of Winchester 1367; Lord Chancellor 1367–71 and 1389–91; founder of New College, Oxford, and of Winchester College 1373; eminent also as an architect and the rebuilder of Winchester Cathedral.

Williams, ALPHEUS STARKEY, 1810–1878. Brig.-gen. U. S. Vols. 1861–66; division and corps commander in Va., Tenn., and Ga.; Minister to San Salvador 1866–69; M.C. from Mich. from 1875.

Williams, BARNEY (BERNARD FLAHERTY), 1823–1876. Irish-American comedian and manager.

Williams, BENJAMIN, 1754–1814. Revolutionary officer; M.C. 1793–95; Gov. of N. C. 1799–1802 and 1807–8.

Williams, DAVID, 1754–1831. Captor, with J. Paulding and I. Van Wert, of André 1780.

Williams, DAVID ROGERSON, 1776–1830. M.C. 1805–9 and 1811–13; Brig.-gen. U. S. A. 1813–14; Gov. of S. C. 1814–16.

Williams, EDWARD, 1745–1826. Welsh poet and literary antiquarian; ed. *Myvyrian Archæology*, 1801–7.

Williams, EDWARD P., U.S.N., 1833–1870. Commander 1866; drowned off Yokohama with 22 officers and 115 men, when the *Oneida* was sunk by a British vessel.

Williams, ELEAZER, ab.1787–1858. Missionary to Indians in N. Y. and Wis.; of mixed blood; supposed by some (as in J. H. Hanson's *Lost Prince*, 1854) to be Louis XVI.'s son.

Williams, ELISHA, 1694–1755. Pres. of Yale 1726–39.

Williams, ELKANAH, M.D., 1822–1888. Prof. in Ohio; ophthalmologist.

Williams, EPHRAIM, 1715–1755. Col. of Mass. troops 1755; slain near Lake George, N. Y.; founder, by will, of a school which became Williams College.

Williams, GEORGE HENRY, b. 1823. Iowa judge 1847–52; Chief-justice of Oregon 1853–57; U. S. Senator 1865–71; Attorney-gen. 1872–75.

Williams, GEORGE HUNTINGTON, 1856–1894. Prof. Johns Hopkins from 1885; eminent as a student of petrology and inorganic geology; author of papers on the geology of Maryland. *Crystallography*, 1890.

Williams, HENRY SHALER, b.1847. Prof. of Paleontology at Cornell 1879, and at Yale since 1892; paleontologist to U. S. Geological Survey; largely occupied with Devonian geology.

Williams, HENRY WILLARD, M.D., 1821–1895. Prof. of Ophthalmology at Harvard from 1871. *Diseases of the Eye*, 1862–86.

Williams, ISAAC, 1802–1865. Contributor to *Tracts for the Times* (80, 86, 87) and to *Lyra Apostolica;* author or translator of many hymns and sacred poems. *Harmony and Commentary on the Gospel Narrative*, 8 vols., 1842–45; *The Psalms interpreted of Christ*, 3 vols., 1864–65; *Autobiography*, 1892.

Williams, JAMES, 1740–1780. S. C. officer, killed at King's Mountain.

Williams, JAMES DOUGLAS ("BLUE JEANS"), 1808–1880. M.C. 1875–76; Gov. of Indiana from 1877.

Williams, JAMES WILLIAM, D.D., 1825–1892. Anglican Bp. of Quebec 1863.

Williams, JARED WARNER, 1796–1864. M.C. from N. H. 1837–41; Gov. of N. H. 1847–49; U. S. Senator 1853–55.

Williams, JESSE LYNCH, 1807–1886. Chief engineer of Indiana 1837–53; connected with various railways and canals; director Union Pacific R. R. 1864–69.

Williams, JOHN, D.D., 1582–1650. Bp. of Lincoln 1621; keeper of the Great Seal 1621–26; fined £18,000 for opposing Laud, and imprisoned 1636–40, as again 1642–43 with other prelates; Abp. of York 1641; moderate royalist, hating and protesting against tyranny, though earnestly loyal to Charles I.

Williams, JOHN, 1664–1729. Pastor at Deerfield, Mass., from 1688; sufferer by the Indian massacre there Feb. 28, 1704, nearly all his family being killed or captured; prisoner in Canada till 1706. *Redeemed Captive*, 1707.—A daughter remained with the Indians, and became a supposed ancestress of Eleazer, the "dauphin".—A son, STEPHEN, D.D., 1693–1782, ransomed 1705, was pastor at Longmeadow, Mass., from 1716, chaplain to expeditions 1745 and 1755–56, and a founder of the Indian mission at Stockbridge.

Williams, JOHN, 1726–1798. Welsh writer on prehistoric America. *Concordance*, 1767.

Williams, JOHN ("ANTHONY PASQUIN"), ab.1765–1818. Anglo-American playwright and journalist, fined in Ireland 1797.

Williams, JOHN, 1778–1837. Col. U.S.A. 1812–15; U. S. Senator from Tenn. 1815–23.—Of his brothers, ROBERT, 1773–ab.1820, was M.C. from N. C. 1797–1803; LEWIS, 1786–1842, was M.C. 1815–42 and "father of the House"; THOMAS LANIER, 1786–1856, was Chancellor of Tenn. 1836–52.

Williams, JOHN, 1792–1858. British divine. *Alexander*, 1829; *Gomer*, 1854.

Williams, JOHN, 1796–1839. English Congregationalist, missionary in Polynesia 1816; murdered by natives of New Hebrides. His *Narrative*, 1837, was widely read.

Williams, JOHN, D.D., LL.D., b.1817. Pres. Trinity Coll. 1848–53; assistant Bp. of Conn. 1851, Bp. 1865; founder and dean of Berkeley Divinity School, Middletown, Conn., 1854. *English Reformation*, 1881.

Williams, JOHN FOSTER, 1743–1814. Mass. sea captain, active against the British 1779–80; prisoner 1780–83.

Williams, JOHN H., 1836–1896. Humorist of Norristown, Pa., *Herald* from 1871. His paragraphs were widely copied.

Williams, JOHN JOSEPH, D.D., b.1822. R. C. Bp. of Boston 1866, Abp. 1875.

Williams, JOHN STUART, b.1820. Brig.-gen. C.S.A. 1862–65; U. S. Senator from Ky. 1879–85.

Williams, JONATHAN, U.S.A., 1750–1815. Lieut.-col. and Supt. of West Point 1802–3 and 1805–12; Col. and chief engineer 1808; constructor of forts about New York.

Williams, SIR MONIER, b.1819. Prof. of Sanskrit at Haileybury 1844–58, and Oxford 1860; knighted 1887: writer on Indian topics; ed. *Sákuntalá* 1853; author of Sanskrit lexicons and grammars.

Williams, OTHO HOLLAND, 1749–1794. Col. 6th Md. 1776, Brig.-gen. 1782, serving chiefly in S. C.; collector of Baltimore from 1783.

Williams, REUEL, LL.D., 1783–1862. U. S. Senator from Me. 1837–43.—His nephew, SETH, U.S.A., 1822–1866, was Brig.-gen. U. S. Vols. 1861–65, and chiefly on staff duty in Va.

Williams, ROBERT. Settler at Roxbury, Mass., ab.1638; ancestor of most of the name in New England, and many elsewhere.

Williams, ROGER, 1607–1683. British separatist, minister at Plymouth, Mass., 1631, and Salem 1633. In constant conflict with the authorities, who found him a sore spot in the body politic; he escaped being sent across sea by flight Jan. 1636, and in June settled at Providence, R. I., founding a colony on a democratic and tolerant basis. In 1639 he adopted Baptist

Roger Williams sheltered by the Narragansetts.

principles and practices. He procured a charter in England 1643, was there again 1651–54, and was Pres. of R. I. 1654–58. He was in advance of his age in relegating theologic strife from deeds to mere words: his *Bloudy Tenent of Persecution*, 1644, *Hireling Ministry*, 1652, and *George Fox digged out of his Burrowes*, 1676, were in the spirit of his time, and provoked acrid replies. *Letters*, 1863. *Works*, 6 vols., 1866–75.

Williams, ROWLAND, D.D., 1817–1870. Prof. Lampeter, Wales, 1850; contributor to *Essays and Reviews* 1860; tried for heresy 1862. *Rational Godliness*, 1855.

Williams, SAMUEL, LL.D., 1743–1817. Grandson of John of Deerfield; prof. Harvard 1780–88; astronomer and surveyor. *Hist. Vt.*, 1794.—His son, CHARLES KILBOURNE, LL.D., 1782–1853, was judge of Vt. Supreme Court 1829–42, Chief-justice and Chancellor 1842–46, and Gov. 1850–52. — His cousin, STEPHEN WEST, M.D., 1790–1855, wrote on botany and genealogy.

Williams, SAMUEL WELLS, LL.D., 1812–1884. B. in N. Y.; long in China; prof. Yale 1877; eminent as a sinologist. His *Middle Kingdom*, 1848–83, is highly valued. *Chinese Commercial Guide*, 1844–63; *Syllabic Dictionary of Chinese*, 1874.

Williams, THOMAS, U.S.A., 1815–1862. Brig.-gen. U. S. Vols. 1861; killed at Baton Rouge, La.

Williams, THOMAS HILL, 1780–1840. U. S. Senator from Miss. 1817–29.

Williams, THOMAS SCOTT, 1777–1861. M.C. 1817–19; judge Conn. Supreme Court 1829, Chief-justice 1834–47.

Williams, WILLIAM, 1717–1791. Welsh evangelist and hymnist. His English hymns, 1759–72, were reprinted 1859. Our text of "Guide me, O thou great Jehovah," is believed to be partly his.

Williams, WILLIAM, 1731–1811. Nephew of Elisha; town-clerk of Lebanon, Conn., 1756–1801; in Conn. Assembly over 50 years; in Congress 1776–77; signer of the Declaration of Independence; son-in-law of Gov. Trumbull; Councilor 1780–1804.

Williams, SIR WILLIAM FENWICK, D.C.L., 1800–1883. British general, b. in Nova Scotia; commissioner with Turkish army in the East 1854; defender of Kars 1855; Major-gen. and Baronet; M.P. 1856–59; commander in Canada 1859–65; Gov. of Gibraltar 1870–76.

Williamsburg. Capital of James City co., and of Va. till 1779; 50 m. s.e. of Richmond; founded 1632; seat of William and Mary Coll., and of a lunatic asylum opened 1773; site of an indecisive battle May 5, 1862; occupied by Union forces May 6.

Williams College. At Williamstown, Mass.; outgrowth of a free school, chartered 1793; endowed with 4 townships in Me. It has (1897) 21 professors, 7 assistants, 385 students, and a library of 40,000 vols.; its productive funds amount to $850,000. The first foreign missionary society in the U. S. was formed here 1806. It is nonsectarian. See WILLIAMS, EPHRAIM.

Williamson, ALEXANDER WILLIAM, LL.D., F.R.S., b.1824. Prof. of Chemistry at Univ. Coll., London, 1849–87. His work has been chiefly in organic chemistry.

Williamson, HUGH, M.D., 1735–1819. Prof. Phila. Coll. 1760–63; in Congress from N. C. 1784–86; M.C. 1789–93; in New York from 1793; writer on canals, comets, and climate. *Hist. N. C.*, 1812.

Williamson, ISAAC HALSTED, 1769–1844. Gov. and Chancellor of N. J. 1817–30.—His son, BENJAMIN, 1811–1892, eminent as a constitutional and corporation lawyer, was Chancellor 1852–60.

Williamson, ISAIAH VANSANT, 1803–1889. American philanthropist, who in 1888 gave $2,500,000 for a free school of mechanical trades at Media, Pa. At his death he willed $5,000,000 to the Protestant charitable institutions of Philadelphia.

Williamson, JAMES ALEXANDER, b.1829. Brigade commander in Miss. and Ga. 1863–65; Brig.-gen. U. S. Vols. 1865.

Williamson, ROBERT STOCKTON, U.S.A., 1824–1882. Engineer officer in Va. and Cal. *Use of the Barometer*, 1868.

Williamson, WILLIAM CRAWFURD, 1816–1895. English palæobotanist, who demonstrated the existence of exogenous structure in some of the palæozoic cryptogams, as *Calamites* and *Lepidodendron*.

Williamson, WILLIAM DURKEE, 1779–1846. Historian of Me. 1832–39.

Williamson's Blue. $Fe_7(CN)_{18}$. Obtained, mixed with soluble Prussian blue, by adding a solution of a ferric salt to one of potassium ferrocyanide, or by oxidizing Turnbull's blue with nitric acid or chlorine water.

Williamsport. Capital of Lycoming co., Pa., on the w. branch of the Susquehanna. Its chief industry is in lumber; its boom holds 300,000,000 ft. Pop., 1890, 27,132.

William the Lyon, 1143–1214. King of Scotland 1165–1214. He was the grandson of David I., whose policy he followed, but with less success.

William the Silent. See WILLIAM OF NASSAU.

Willibrod, or **Wilbrord,** ST., ab.658–739. Northumbrian missionary to Friesland ab.690; Bp. of Utrecht 696; active and successful evangelist. His day is Nov. 6.

Willich, AUGUST, 1810–1878. Prussian captain 1841; Brig.-gen. U. S. Vols. 1862–66, serving in Tenn. and under Sherman.

Willing, THOMAS, 1731–1821. Judge Pa. Supreme Court 1767–74; in Congress 1775–76; opponent of the Declaration; Pres. Bank of N. America 1781–91, and of U. S. Bank 1791.

Willis, NATHANIEL PARKER, 1806–1867. American poet and descriptive writer, highly popular in his day; ed. *Home Journal* from 1846. *Prose Works*, 13 vols., 1849–50; *Poems*, 1868.

Willis, THOMAS, F.R.S., 1621–1675. Prof. Oxford; royal physician 1666; writer on the nerves and the plague. *Works* (Latin), 1676, tr. 1679.

Willis, WILLIAM, LL.D., 1794–1870. Historian of Portland, Me., 1831–65, and of Me. law 1863.

Williways. Short descending gusts of wind on land, similar to cat's-paws at sea. Those observed by the French expedition to Cape Horn 1882 were more severe than any hitherto recorded in the n. hemisphere.

Willmore, JAMES TIBBITS, 1800–1863. English engraver.

Will of God. In Ethics, religious sanction to the moral law, and source of our moral obligations.

Will-o'-the-Wisp. See IGNIS FATUUS.

Willoughby, SIR HUGH, d. 1554. English explorer, who perished with his companions in Lapland. R. Chancellor, with another vessel, reached the White Sea and opened Russia to British commerce.

Willow. Trees and shrubs of the genus *Salix*, natural family *Salicaceæ*, bearing flowers in catkins, and a bitter bark; of wide geographical distribution. Several species contain in their bark a crystallizable substance salicin, used in medicine as a febrifuge.

White Willow (*Salix alba*):
a, branchlet of male tree with flowers; *b*, branchlet of female tree.

Willow-Herb. See FIREWEED.

Willow Saw-Fly (CIMBEX AMERICANA). The adult, when in flight, resembles a bee; it girdles twigs of willow and other trees to feed on the sap, and deposits its eggs on the leaves, which serve as food for the larvæ, thus defoliating the tree. The larva, when full grown, is 2 in. long, of a yellowish white color, with a dark stripe along its back. It spends the winter in the ground. As a remedy the affected trees are sprayed with arsenites.

Wills, WILLIAM GORMAN, 1830–1891. Irish playwright and novelist. *Notice to Quit*, 1861; *Nell Gwynne*, 1878; *Black-Eyed Susan*, 1880; *Royal Divorce*, 1891.

Wills, WILLIAM JOHN, 1834–1861. English explorer in Australia, which he traversed from s. to n. with O. Burke. Both perished on the way back. *Exploration*, 1863.

Willson, FORCEYTHE, 1837–1867. American poet.

Willughby, FRANCIS, 1635–1672. English ornithologist and ichthyologist, pupil and co-worker with John Ray; precursor of Linnæus. *Ornithologia*, 1678; *Historia Piscium*, 1686.

Wilmarth, SETH, 1810–1886. Supt. Charlestown, Mass., Navy Yard 1855–75; inventor of improvements in monitors.

Wilmer, RICHARD HOOKER, D.D., LL.D., b.1816. Bp. of Ala. 1864; suspended by Gen. Thomas, 1865.—His cousin, JOSEPH PERE BELL, D.D., 1812–1878, became Bp. of La. 1866.

Wilmington. Capital of Newcastle co., and largest city in Del.; founded 1731, on the site of a Swedish fort built 1638; chartered 1832. It has excellent railroad communications and some navigation. Its manufactures are varied. The old Swedes' Ch. dates from 1698. Pop., 1890, 61,431.

Wilmington. Capital of New Hanover co., N. C., on Cape Fear River, here navigable 30 m. from the ocean; settled 1730, chartered 1739 and 1866. Pop., 1890, 20,056.

Wilmot, DAVID, 1814–1868. M.C. 1845–51; author of the WILMOT PROVISO (q.v.); Pa. Judge 1853–61; U. S. Senator 1861–63; U. S. Judge from 1863.

Wilmot, JOHN. See ROCHESTER.

Wilmot, LEMUEL ALLAN, D.C.L., 1809–1878. Premier of New Brunswick 1848; Judge Supreme Court 1851–68; Gov. 1868–73.—His cousin, ROBERT DUNCAN, b.1809, was Canadian Senator 1865–80, Speaker and Privy Councilor 1878–80.

Wilmot Proviso. Amendment, Aug. 8, 1846, to a bill for the purchase of Mexican territory, providing that "neither slavery nor involuntary servitude shall exist in any part of said territory." It passed the House, but not the Senate. In 1848 its Democratic adherents, with the Liberty party and the anti-slavery Whigs, united to form the Free Soil party.

Wilna. See VILNA.

Wilson, ALEXANDER, 1766–1813. Scottish-American weaver, peddler, and poet, who under heavy difficulties brought out his fine and valuable *American Ornithology*, 7 vols., 1808–13. Two more were pub. by G. Ord, and a supplement of four by C. L. Bonaparte, 1828–33.

Wilson, ALLEN BENJAMIN, 1824–1888. Cabinet-maker of Mass.; inventor of a sewing-machine, patented 1850–52; partner of N. WHEELER (q.v.) from 1851.

Wilson, SIR ARCHDALE, 1803–1874. English officer, distinguished in the capture of Delhi and Lucknow 1857–58; Baronet and Major-gen. 1857.

Wilson, AUGUSTA E. See EVANS, AUGUSTA.

Wilson, SIR CHARLES RIVERS, b.1831. Anglo-Indian financier; pres. Canadian Grand Trunk Railway 1895.

Wilson, SIR DANIEL, LL.D., 1816–1892. Prof. Univ. Toronto from 1853, pres. 1881; scientist and poet; knighted 1888. *Old Edinburgh*, 1847–78; *Archæology of Scotland*, 1851–63; *Prehistoric Man*, 1862; *Anthropology*, 1885.—His brother, GEORGE, M.D., 1818–1859, prof. Edinburgh 1855, pub. *Chemistry*, 1850, and *Five Gateways of Knowledge*, 1856.

Wilson, EPHRAIM KING, 1821–1896. M.C. from Md. 1873–75; Judge 1878–84; U. S. Senator 1885–95.

Wilson, SIR ERASMUS, LL.D., F.R.S., 1809–1884. Scottish surgeon and philanthropist, knighted 1881; writer on anatomy and on Egypt.

Wilson, FLORENCE, ab.1500–1547. Scottish humanist, known only by his Latinized name, Florentius Volusenus. His chief work, *De Animi Tranquillitate*, 1543, is written in the purest classical Latin.

Wilson, GEORGE FRANCIS, 1818–1883. Manufacturer of chemicals at Providence, R. I., with Eben N. Hosford, from 1855; inventor of several mechanical devices.

Wilson, HENRY (orig. J. J. COLBAITH), 1812–1875. Shoemaker of Natick, Mass.; anti-slavery leader; pres. Mass. Senate 1850; U. S. Senator 1855–73; chairman committee on military affairs 1861–65; Vice-pres. 1873. *Rise and Fall of the Slave Power*, 1872–75.

Wilson, HENRY BRISTOW, 1803–1888. Prof. Oxford; contributor to *Essays and Reviews*, 1860, and to *Oxford Essays*; tried for heresy 1862. *Communion of Saints*, 1851.

Wilson, HORACE HAYMAN, F R.S., 1786–1860. Anglo-Indian official 1808–32; prof. Oxford from 1833, and librarian at E. India House from 1836; translator of many Sanskrit works; author of a Sanskrit dictionary, 1819, and grammar, 1841. *Hist. British India, 1805–35*, 1844–48.

Wilson, JAMES, LL.D., 1742–1798. B. in Scotland; in Pa. from 1766; in Congress 1775–77, 1783, and 1785–88; signer of the Declaration of Independence; framer and defender of the Constitution; Justice U. S. Supreme Court from 1789; law prof. Phila. Coll. 1790. *Works*, 1803–4.—His son, BIRD, D.D., LL.D., 1777–1859, was prof. P.E. Theol. Sem. New York 1821–50. *Life of Bp. White*, 1839.

Wilson, JAMES, 1805–1860. M.P. 1847; founder *Economist* 1843; writer on currency and the corn-laws.

Wilson, JAMES F., 1828–1895. M.C. from Iowa 1861–69; U.S. Senator 1883–95.

Wilson, JAMES GRANT, LL.D., b. 1832. Col. U. S. Vols. 1863–65; aid to Gen. Banks in La.; since in New York; biographer of Gen. Grant 1868, F. G. Halleck 1869, and others; ed. *Cyc. American Biography*, 1886–89.—His father, WILLIAM, 1801–1860, Scottish poet, was a bookseller at Poughkeepsie, N. Y., from 1834.

Wilson, JAMES HARRISON, b. 1837 in Ill. Brig.-gen. U. S. Vols. 1863, serving chiefly in Tenn.; Major-gen. 1865–66; Lieut.-col. U. S. A. 1865–70; since engaged in railroad work. *China*, 1887.

Wilson, JOHN, 1588–1667. Pastor at Boston, Mass., from 1630.

Wilson, JOHN ("CHRISTOPHER NORTH"), 1785–1854. Prof. Edinburgh 1820; essayist and poet. *Sights and Shadows of Scottish Life*, 1822; *Noctes Ambrosianæ*, 1822–35.

Wilson, JOHN, 1802–1868. Scottish printer and polemic, in Boston and Cambridge, Mass., from 1846. *Punctuation*, 1826–50; *Unitarianism*, 1833–47.

Wilson, JOHN, D.D., F.R.S., 1804–1875. Scottish missionary at Bombay from 1828. *Parsi Religion*, 1843; *Lands of the Bible*, 1847.

Wilson, JOHN ALLSTON, b.1837 in Pa. Civil engineer, engaged chiefly on railways.—His brother, JOSEPH MILLER, b. 1838, has planned many bridges and buildings.

Wilson, JOHN LEIGHTON, D.D., 1809–1886. American missionary in Africa 1834–52; ed. *Foreign Record*, 1853–61, and *Missionary*, 1861–85; *Western Africa*, 1857.

Wilson, JOHN LYDE, 1784–1849. Gov. of S. C. 1822–24; Nullifier and duelist.

Wilson, JOHN MACKAY, 1804–1835. Scottish writer. *Tales of the Borders*, 1834–40.

Wilson, PETER, 1746–1825. Prof. Columbia 1789–92 and 1797–1820; ed. Sallust and Longinus. *Prosody*, 1810–17.

Wilson, RICHARD, 1714–1782. British landscape painter. At first he painted portraits, but Zuccarelli and Vernet strongly recommended him to paint landscapes after seeing some of his works. In color, composition and aerial truth, none have excelled and few equaled him. It is only in lack of material he falls below the level of Claude.

The Morning, by Richard Wilson.

Wilson, SIR ROBERT THOMAS, 1777–1849. English general and military writer; M.P. 1818–31. *Diary*, 1861.

Wilson, THEODORE DELAVAN, 1840–1896. U. S. naval constructor 1873. *Shipbuilding*, 1873.

Wilson, THOMAS, 1524–1581. English divine, in exile 1553–58; sec. to Queen Elizabeth 1558; Sec. of State 1577; Dean of Durham 1579. *Logique*, 1551; *Rhetorique*, 1553; *Usurie*, 1572.

Wilson, THOMAS, D.D., LL.D., 1663–1755. Bp. of Sodor and Man 1698; eminent for saintly character and administrative reforms. His *Sacra Privata* and other devotional books have been very popular. *Works*, 1781.

Wilson, WILLIAM DEXTER, D.D., LL.D., b.1816. Prof. Geneva (Hobart) Coll. 1850, Cornell 1868–86. *Logic*, 1856–72; *Psychology*, 1871; *Metaphysics*, 1872–77.

Wilson, WILLIAM LYNE, LL D., b.1843. Prof. Columbian Coll., D. C., 1865–71; pres. Univ. W. Va. 1882–83; M.C. 1883–95; chief framer of the tariff of 1894; U. S. Postmaster.-gen. 1895–97; pres. Washington and Lee Univ. 1897.

Wilson, WOODROW, LL.D., b.1856 in Va. Prof. Bryn Mawr, Pa., 1886, Wesleyan Univ. 1888, and Princeton since 1890. *Congressional Government*, 1885; *The State*, 1889; *Division and Reunion*, 1893; *Essays*, 1894; *Washington*, 1897.

Wilson's Creek. In Mo.; scene of a Confederate victory Aug. 10, 1861. Gen. Lyon, Union commander, was killed.

Wilson's Petrel. See PETRELS.

Wilson's Specific Gravity Bulbs. Small hollow glass balls with a short stem. To determine the specific gravity of a liquid by their means, it is only necessary to note which one of a series of these balls will just float when immersed in the liquid. In the preliminary graduation they may be assorted by trial in liquids of known specific gravity; any small adjustment is accomplished by grinding the stem. They are very delicate and are said to show a difference in the third place of decimals in the specific gravity of a liquid.

Wilson's Thrush, or VEERY (TURDUS FUSCESCENS). Song thrush common in the e. U. S. It is very shy, frequents thick woods and swamps; tawny brown above, below whitish, with a few small spots on its throat.

Wilstach, JOHN AUGUSTINE, b.1824 in Washington. Tr. of Virgil 1884, and Dante 1888.

Wilton, JOSEPH, 1722–1803. English sculptor.

Wilton Carpet. Brussel carpets with the yarn cut, which gives the face an elastic velvety pile.

Wimble. Auger used by miners in boring in soft rocks.

Wimbledon. S.w. suburb of London; scene of rifle meetings 1860–89. Pop., 1891, 25,758.

Wimmer, BONIFACE, 1809–1887. Bavarian priest, in Pa. from 1846; founder of St. Vincent's Abbey, Beatty, West-

moreland co., Pa., 1848–52, and of several branches; abbot and pres. 1866.

Wimmer, FRIEDRICH, 1803–1868. German botanist. *Flora Silesiæ* (with H. Grabowsky), 1827–29; *Flora von Schlesien*, 1832–57; *Das Pflanzenreich*, 1853–63.

Wimpffen, EMMANUEL FÉLIX DE, 1811–1884. French general 1855; Gov. of Algeria; prominent in 1871. *Sédan*, 1871; *La Nation Armée*, 1876.

Wimpffen-Berneburg, ALEXANDER STANISLAUS, 1748–1819. French traveler in W. Indies. *St. Domingo*, tr. 1797.

Winans, ROSS, 1796–1877. Founder of machine-shops in Baltimore; improver of car wheels and locomotives.

Winchell, ALEXANDER, LL.D., 1824–1891. Prof. Univ. Mich. 1854–73, and from 1879; director geological survey of Mich. 1859–61 and 1869–71; Chancellor Syracuse Univ. 1872–74. His chief works are *Sketches of Creation*, 1870; *Evolution*, 1874; *Preadamites*, 1880; *Sparks from a Geologist's Hammer*, 1881; *World Life*, 1883; *Geological Studies*, 1886.—His brother, NEWTON HORACE, b.1839, prof. Univ. Minn., has been engaged in geological surveys of Mich., Ohio, and since 1872 of Minn. His work is chiefly among the older palæozoic rocks.

Winchelsea, ANNE FINCH, COUNTESS OF, d.1720. English poet.

Winchester. Ancient city of Hampshire, on the Itchen, 60 m. w.s.w. of London; once capital of England; seat of a

Winchester Cathedral.

bishop, and of a college founded 1369–93. Its cathedral was built 1079–93. Pop., 1891, 19,073.

Winchester. Capital of Frederick co., Va.; in the Shenandoah valley, 87 m. w.n.w. of Washington; scene of Confederate successes under Gen. Ewell May 25, 1862, and June 14, 1863, and of a Union victory under Sheridan Sept. 19, 1864. Pop., 1890, 5,196.

Winchester, ELHANAN, 1751–1797. Founder of a Universalist society in Phila. 1781; active propagandist in New England from 1787; voluminous writer in prose and verse.

Winchester, JAMES, 1752–1826. Brig.-gen. U.S.A. 1812. His troops were surrendered and mostly massacred on Raisin River, Mich., Jan. 22, 1813.

Winchester, OLIVER FISHER, 1810–1880. Manufacturer of repeating rifles at New Haven, Conn., from 1860.

Winchester, WILLIAM PAULET, MARQUIS OF, ab.1477–1572. Courtier under the Tudors; Baron 1537, Earl 1550, Marquis 1551; Treasurer from 1549; richest subject of his time.

Winchester Rifle. Repeating arm, of which the best known form is the model of 1873. It has a tubular magazine under the barrel, which contains from 15 to 25 cartridges, depending on the length and caliber of the gun. The cartridges in the magazine are pressed to the rear by a spiral spring. To load the gun, press forward the lever which forms the trigger guard; this motion throws the empty shell out of the chamber, raises a cartridge from the magazine to the front of the chamber and cocks the hammer; when the lever is returned to its first position it forces the cartridge into the chamber and closes the breech, leaving the mechanism in the firing position. The model of 1895 has a box magazine with five cartridges. The forward motion of the lever withdraws the trigger from contact with the sear, draws down a locking bolt, and withdraws the breech bolt, at the same time cocking the gun and ejecting the empty cartridge from the chamber. The breech bolt, in passing to the rear, locks the firing pin, and the hammer, resting against the bolt, holds the latter open. When the lever is restored to its first position, the breech bolt is moved forward, pushing the cartridge into the chamber, and, when the breech bolt reaches its closed position, the locking bolt comes into place, locking the breech bolt and unlocking the firing pin. The final movement of the lever brings the trigger into bearing against the sear, and the gun is in the firing position.

Winckelmann, JOHANN JOACHIM, 1717–1768. German art critic of high rank, librarian at Dresden and Rome. His *History of Ancient Art*, 1764, is of historical importance. *Works*, 8 vols., 1808–20.

Winckler, JOHN JOSEPH, 1670–1722. German hymnist.

Wind. See WINDS.

Winder, WILLIAM HENRY, 1775–1824. Col. U.S.A. 1812, Brig.-gen. 1813–15; defeated at Bladensburg, Md., 1814.—His son, JOHN HENRY, 1800–1865, Brig.-gen. C.S.A., had command of Libby prison, Richmond, and Andersonville, Ga.

Windermere. Lake between Lancashire and Westmoreland, noted for beauty; celebrated by Wordsworth. Length 11 m., greatest width 1 m.

Wind-Flower. Showy-flowered herbs of the genus *Anemone*, natural family *Ranunculaceæ*, of wide geographical distribution. Some are cultivated for ornament.

Windgall. Puffy swelling around the fetlock-joints of animals, especially horses. It is due to an increased secretion of synovia arising from work on hard roads. They do not produce pain or lameness. Old horses are worked, young horses are blistered and not worked.

Windham, WILLIAM, 1750–1810. M.P. 1784; Sec. of War 1794–1801 and 1806–7; eminent orator; called "Weathercock." *Speeches*, 1806; *Diary*, 1866.

Windisch, ERNST, b.1844. Prof. Sanskrit at Heidelberg 1872, Strasburg 1875, and Leipzig since 1877; writer on comparative philology.

Windischgrätz, ALFRED, PRINCE VON, 1787–1862. Austrian general, Gov. of Prague 1826–49, Field-marshal 1833. He suppressed insurrections at Prague and Vienna, but was inefficient in Hungary.

Windlass. Modified form of the wheel and axle used to raise great weights. It differs from the CAPSTAN (q.v.) principally in the horizontality of its axis.

Windmills. Motors for utilizing the pressure of wind in motion. The historic types had four radial arms, borne upon a horizontal axis which was supported in a revolving cap at the top of a tower. The sails were of canvas, and could be

Windmill at Chesterton, Warwickshire, by Inigo Jones.

unfurled upon a light framework. The modern mill uses wooden slats, filling the entire annular area of their circle, and mounted upon a frame to the plane of which each slat is inclined at the angle of best efficiency, which varies from

48° to 82°, as the linear velocity of the elements of the sails increases relatively to that of the wind. The revolving frame is secured to a horizontal bed-casting, which is automatically brought so that the frame will be perpendicular to the direction of the wind by a large rudder, which projects horizontally at right angles to the plane of the frame. The slats or sails are also made automatically to furl, when the pressure exceeds a certain limit upon the resisting area, in two ways. They are held in their normal position by a spring, adjusted to a certain wind-pressure, or by a governor set to a certain velocity of rotation. When either is exceeded by high velocity of wind, the slats either turn edgewise individually, or the rudder is tripped so as to come into the plane of the wheel, when the latter turns bodily edgewise, or the slats are swung around short axes at right angles to their length, so that they form elements of an acute angled cone. Windmills of these types are much used for pumping, or for any other purposes where power can be stored up to supply intermittent demands upon it. Near the seacoast windmills can be worked from $\frac{1}{2}$ to $\frac{3}{4}$ of the time; inland, they work more than this in winter, and less in summer.

Windom, WILLIAM, 1827–1891. M.C. from Minn. 1859–69: U. S. Senator 1870–81 and 1881–83; Sec. of the Treas. 1881 and from 1889.

Window. Aperture in a wall for the admission of air and light. They were almost unknown in the religious structures of the Egyptians, Greeks, and Romans, but are a distinctive feature of the Gothic. In Classical architecture they are rectangular openings, ornamented exteriorly like doorways, sometimes arched; circular and semicircular forms are sometimes used. In Saxon architecture they are small and are splayed externally and internally. In church towers there are two or more lights, separated by pillars and having semicircular or triangular arches. In the Norman style the windows are small, but later of considerable size, arched, with a small shaft on each side and a molding over the arch; they are also divided by shafts into two or more lights. Circular windows are also found. In Early English they are long and narrow, singly or in groups, under a large arch. On the inside are small shafts, and much ornamentation with moldings. Circular and triangular windows are also found. In Decorated style windows are larger and divided by mullions into separate lights, and with tracery in the heads. They have two-centered pointed arches, also segmental and square heads. The ball-flower molding is much used. In the Perpendicular style transoms are used, and heads, formed of four-centered arches. Circles and quartrefoils and small battlements are often used. Later the heads became flatter, until the arch ceased to be used, and the opening was divided into rectangular lights. The low-side or lepers' window or Lychnoscope, in churches prior to the Early English, is thought to have been used to administer the Sacrament to lepers, or that the altar light might be seen from outside. The Rose window of the Middle Ages was circular with radiating mullions; also called Catherine or wheel windows. Roman windows were first closed with shutters, later mica was used, and ab. 150 horn. Colored glass windows for churches are mentioned by Gregory of Tours ab. 350. Glass was used in windows of private houses in England in 1180. See DECORATED STYLE. DORMER WINDOW, LANCET WINDOW, LANTERN, ROSE WINDOW, TRACERY, etc.

Windpipe. See TRACHEA.

Wind Pressure. As usually taken in computing stresses on roofs, this is 40 lbs. per sq. ft. of vertical surface. This pressure obtains when the wind has a velocity of ab. 28 m. per hour. See PRESSURE OF THE WIND.

Wind River Mts. High rugged range of the Rocky Mt. system, in w. Wyoming. Many peaks exceed 13,000 ft. in height. It contains several small glaciers.

Wind-Rose. Classification of any meteorological phenomenon according to the prevailing wind-directions, especially the simple enumeration of the wind directions. See BARIC WIND-ROSE and THERMIC WIND-ROSE.

Winds. Sensible currents of the atmosphere, and distinct from that motion which is the consequence of the diurnal and annual movements of the earth, which is not perceptible. See ANTICYCLONE, CHINOOK WIND, CYCLONE FERREL'S LAW, FOHN WIND, HURRICANES, LAW OF STORMS, LAW OF WINDS, MISTRAL, SIROCCO, SQUALL, STORM CIRCLE, STORM TRACK, TRADE WIND, WHIRLWIND, WILLIWAYS, etc.

Winds, WILLIAM, 1727–1789. Col. N. J. troops 1776; Brig.-gen. 1777.

Wind-Sale. Laplanders and witches or old women in the Orkneys were reputed to sell favorable winds to mariners.

Wind's Eye. Point from which the wind blows.

Windship, GEORGE BARKER, M.D., 1834–1876. Mass. athlete; lecturer on physical culture, and deviser of health-lifting.

Windsor. Town of Berkshire, on the Thames, 21 m. w. of London. Its royal castle is in part old, but mainly built

Windsor Castle.

1821–28. Charles II. employed Wren to build the state apartments, and Wyatville transformed the castle under George IV. The park covers 13,000 acres. Pop., 1891, 12,327.

Windsor. Town of Ontario, on Detroit River. Pop., 1891, 10,322.

Windthorst, LUDWIG, 1812–1891. Hanoverian Minister of Justice 1862–65; prominent member of the Reichstag from 1867; leader of R. C. Center party, and strong opponent of Bismarck.

Windward, TO. Toward that quarter whence the wind blows.

Windward Islands. S.w. group of W. Indies; St. Lucia, Barbadoes, St. Vincent, and Granada; held by Great Britain.

Windy Cap. King Erick of Sweden, who was believed to order the winds by setting his cap in the direction he wished the winds to blow.

Wine, SPIRITS OF. See ALCOHOL.

Winebrennarians. German Baptist sect, founded 1830 in Pa. by John Winebrenner (1797–1860) as "Church of God," and practicing feet-washing as obligatory. It has ab. 50,000 members.

Wineland. See VINLAND.

Wine Plant. Name given to RHUBARB (q.v.).

Winer, GEORG BENEDIKT, 1789–1858. Prof. Erlangen 1823, Leipzig 1832. *Grammar of N. T. Greek*, 1822, tr. 1825; *Chaldee Grammar*, 1824, tr. 1845; *Confessions of Christendom*, 1824, tr. 1873.

Wines. Fermented juice of the grape. With the best practice in France the maturity of the grapes is determined by testing the amount of sugar in the juice by the saccharimeter. The bunches are cut from the vines by pruning-knives or small shears by women and children and carried in pails by men to large wooden tubs or to carts, in which they are transported to the cellar. Some of the best wines are made from one variety of grapes, others from mixtures of several varieties. The grapes are sorted in the field or in the cellar, poor or unripe fruit being rejected. In making red wine the grapes on the stems are crushed by a machine with two grooved cylinders and placed in the fermentation vats, or, as in the Bordeaux district, the bunches of grapes are crushed in the vats by men's feet or by pounders. The vats are of oak or chestnut, truncated cone-shaped, of 400 to 1,000 gals. capacity, and open or closed, the practice varying. The grapes are sometimes separated from the stems by a sieve, before crushing.

The wine yeast or ferment consists of several species of saccharomycetes, unicellular plants $\frac{1}{500}$ to $\frac{1}{150}$ mm. diameter, always found upon the surface of the grape. They reproduce by fissure or by budding; one cell with a favorable menstruum and temperature will produce 35,000 cells in 48 hours. The fermentation, due to oxidation of the albuminous contents of the cells, transforms the sugar of the grape juice or must into alcohol, with evolution of carbon dioxide. The temperature for fermentation is 15° C. to 25° C.; it reaches its highest point in 3 to 4 days, and is completed in the Bordeaux district in 7 to 10 days, in warmer places in 4 to 5 days. A must of 13.9° B. gravity contains 236 grains of sugar per liter and should yield 13 9 per cent alcohol in the wine. The wine is drawn from a spigot near the bottom of the vat and constitutes three-fourths of the product. The skins and lees are pressed and yield the balance, which is sometimes added to the former. Of Bordeaux or claret wines 70 to 80 per cent by weight is obtained from the grapes. The wine is now placed in casks of ab. 50 gals. capacity, kept full, and loosely stopped, for the slight after-fermentation, lasting 4 to 6 weeks. The casks are then filled and tightly closed. They are now transferred to the vaults, which should have a temperature of 10° C. to 15° C. The wine gradually becomes clearer, the impurities settling out, and in December the common qualities are racked or siphoned into other casks, leaving the sediment in the bottom.

This consists of albuminous and coloring matters, tannic acid and potassium, calcium and magnesium tartrates. With finer wines this takes place in March and again in August, and so on until it is bottled. If the wine does not clear after three rackings, it is filtered or is fined with egg-white, isinglass, or gelatin. The common wine is bottled at the end of a year, the finer wine remains in the casks 4 years or more.

White wine is made from the juice of white or colored grapes, pressed immediately after gathering and fermented without the skins or stems. The more famous white wines are made from white grapes. For the dry white wines the wine is left on the lees till May or June, when the sugar has been all converted into alcohol; in these the bouquet is at a maximum. For the sweet white wines, the fermentation is checked by burning sulphur in the casks or otherwise. The alcoholic white wines are made from grapes rich in sugar or by the addition of alcohol. Sometimes, to the skins and lees from wine, water sugar, tartaric and tannic acid are added, and another fermentation is effected, as in the first case, and second wine results.

Grape juice contains water, grape and fruit sugar, gelatin or pectin, gum, fat, wax, vegetable albumen, vegetable gluten, other extractive matters, tartaric acid, potassium bitartrate, calcium tartrate, racemic acid and malic acid, free and combined with calcium, oxides of iron and manganese, potassium sulphate, calcium phosphate, sodium chloride, magnesia, silica, and the substances which produce the vinous smell and aroma. The sugar amounts to 13 to 30 per cent in ripe grapes and yields from 7 to 15 per cent alcohol by weight.

Wine contains water, alcohol, sugar, gum, extractive and albuminous matters; free tartaric, racemic, malic, and acetic acids; potassium, calcium, and magnesium tartrates; potassium sulphate, calcium phosphate, sodium chloride; œnanthic ether and œnanthine, which impart the bouquet or aroma. The red wines contain the coloring matter and tannic acid; the white wines do not contain these last two. The properties of wine depend upon the sugar, alcohol, tartaric acid, and water, not considering taste and odor. The tannic acid is derived from the skins, stems, and stones, and the coloring matter from the skins. The percentage of alcohol in wines is, by volume, as follows: Port, 20.7 to 23.2; Madeira, 19 to 19.7; sherry, 15.4 to 24.7; champagne, 14.1 to 14.8; Burgundy, 10.1 to 13.2; Rhine wine, 9.5 to 13; claret, 9.1 to 11.1; Moselle, 8.7 to 9.4. The amount of sugar in grains per oz. is as follows: Sherry, 4 to 18; Madeira, 6 to 20; champagne, 6 to 28; Port, 16 to 34; Malmsey Madeira, 56 to 66; Tokay, 74; Cyprus, 102. The acid, calculated as tartaric acid in grains per oz., is: Sherry, 1.95 to 2.85; Port, 2.10 to 2.55; champagne, 2.40 to 3.15; claret, 2.55 to 3.45; Madeira, 2.70 to 3.60; Burgundy, 2.55 to 4.05; Rhine wine, 3.05 to 3.60; Moselle, 2.85 to 4.50. Wines become musty from mold penetrating the corks. Turning of wine is due to decomposition of the potassium bitartrate, which results finally in turning alcohol into acetic acid. Ropiness is due to formation of vegetable mucus from the sugar, influenced by tartaric acid. Bitterness, as in Burgundy wines, is due to citric ether formed by a second fermentation caused by the sediment; drawing off the wine or adding new wine may remedy it. Pasteuring or heating wine to 140° F., out of contact with the air, prevents spontaneous decomposition due to microbes and improves the aroma and flavor.

The production of wine varies from year to year and a large production does not always indicate good quality. The production in 1891 in gallons was: France, 875,685,252; Spain, 899,654,422; Jerez, 7,639,236; Italy, 923,210,640; German Empire, 13,427,184; Austria, 47,691,600; Hungary, 50,624,000; Croatia-Slavonia, 15,645,201; Portugal, 115,300,000; Douro, 7,500,000; Madeira, 887,634; United States, 23,724,890. Average annual production of Russia is 75,000,000; Greece, 39,600,000; Roumania, 53,000,000; Switzerland, 28,420,000; Turkey, with Cyprus, 65,000,000; Servia, 72,800,000; Bulgaria, 70,000,000; Argentina, 39,600,000; Chili, 39,520,000; Cape Colony, 2,642,000; Australia, 3,000,000; Tunis, 2,500,000; Persia, 739,000; Canaries, 3,950,000. The average annual production of champagne in France from 1881 to 1891 was 41,269,750 qt. bottles, of which 21,699,111 were exported. The estimated production of wine in the United States in 1897 was 35,370,000 gals.; California produced 25,000,000 gals. dry wine, 4,000,000 sweet wines; Ohio, 1,800,000 gals. wine; New York, 1,500,000; Missouri, 2,500,000; Southern States, 300,000; and other States, 270,000. There were exported 14,669 bottles, value $60,726, and 1,199,921 gals., value $517,795. There were imported still wines 2,645,932 gals, value $1,823,969, and 295,308 doz. bottles, value $1,426,620; and champagne 216,106 doz. bottles, value $3,170,024. In 1894 there were exported from U. S. in bottles 13,813 doz., value $63,800, and 802,192 gals., value $380,588, chiefly to Mexico, Germany, Hawaiian Islands, Great Britain, Central America, and West Indies; 12,312 gals. were exported to France.

See ALCOHOL, BURGUNDY WINES, CHAMPAGNE, FERMENT, FERMENTATION, MADEIRA WINES, MOSELLE WINE, MUSCATEL, PHYLLOXERA, PORT WINE, RHENISH WINE, SHERRY, TOKAY, VINE, and YEAST.

Wines, ENOCH COBB, D.D., LL.D., 1806–1879. American penologist; founder of the National Prison Association 1870; promoter of International Penitentiary Congresses at London 1872 and Stockholm 1877. *Laws of the Ancient Hebrews*, 1852; *Prisons and Child-Saving Institutions*, 1880.—His son, FREDERICK HOWARD, b.1838, has carried on his work.

Wing. 1. In Botany, thin appendage of many seeds and fruits, aiding in their distribution by the wind. 2. Narrow decurrent portion of a leaf upon the petiole or the stem of a plant. 3. One of the lateral petals of a pea-flower.

Wing, AUGUSTUS, 1809–1876. Geologist of Vt. who found Silurian fossils in its limestones.

Wing, HENRY HIRAM, b.1859. Asst. director N. Y. Agricultural Experiment Station 1882–84, instructor in agriculture Univ. Neb. 1884–88, deputy director Agricultural Experiment Station Cornell Univ. 1888–94, asst. prof. animal industry and dairy husbandry Cornell Univ. since 1891. *Milk and its Products*, 1897.

Wingate, GEORGE WOOD, b.1840. Brig.-gen. N. Y. militia 1874–79; "father of rifle-practice in America." *Manual*, 1872.—His brother, CHARLES FREDERICK, b.1847, is an eminent sanitary engineer.

Wingate, PAINE, 1739–1838. U. S. Senator 1789–93; M.C. 1793–95; Judge N. H. Superior Court 1798–1809.

Wing Dam. Dam built partly across a stream to deepen the channel on the other side by the scour of the water.

Wings of Insects. Membranous expansions of the respiratory or tracheal system; hence modified branchiæ. There are usually two pairs, borne on the meso- and meta-thorax. They are strengthened by ramifications of the tracheæ, known as

Wings of Insects.

nervures, ribs or veins. The spaces inclosed between the branches of these are cellules. The ribs, beginning at anterior or external edge, are the costal, subcostal, radial, premedian, median, postmedian, cubital, and anal. The cellules take their names from the ribs behind which they lie. One or more of these ribs are absent in the wings of most insects. Authors differ in the terms used. Those here given are according to Prof. Comstock, who is developing the subject.

Wing Wall. Inclined side wall retaining the earth at the mouth of a culvert; often built with a warped surface.

Winifred, ST. Legendary British confessor, who survived decapitation; commemorated at Holywell, Flintshire.

Winkelried, ARNOLD VON. Burgher of Unterwalden, Switzerland, to whom was due the victory at Sempach July 9, 1386. He made a path with his body over the Austrian lances. His heroism is celebrated in a poem by James Montgomery.

Winkworth, CATHERINE, 1829–1878. English translator of German hymns. Her *Lyra Germanica*, 1855–58, and *Chorale Book*, 1863, are of high value; their contents are "faithful, terse, and delicate," and have been drawn upon for public use more largely than the versions of any one else. *Christian Singers of Germany*, 1869.

Winlock, JOSEPH, 1826–1875. Supt. *Nautical Almanac* 1856–59 and 1861–66; Prof. of Astronomy at Harvard from 1866; observer of solar eclipses in Ky. 1869 and Spain 1870.

Winnebagoes. Indians of Sioux descent, but not belonging to the Sioux confederacy. They joined with the Sacs, Foxes, and Pottawatomies against the Dakotas and Iroquois. They were agricultural and lived near Green Bay, Wis., but in 1848 were removed to Minn.; in 1863 most were placed on a reservation near Omaha.

Winnebago Lake. In e. Wis.; area 212 sq. m.

Winnemucca Lake. In w. Nev.; drained by Truckee River. Area 85 sq. m.

Winnipeg. Capital of the province of Manitoba, Canada; on the Red and Assiniboine Rivers; chartered 1873; previously

Winnipeg.

Ft. Garry. It has an important trade, chiefly in grain. Pop., 1891, 25,642.

Winnipeg, LAKE. In Manitoba, Can. It receives the waters of the Assiniboine and Saskatchewan Rivers, and empties into Hudson's Bay by Nelson River. Area ab. 8,700 sq. m.

Winnipeg River. In Manitoba, flowing n.w. from Lake of the Woods to Lake Winnipeg.

Winnepesaukee, or **Winnipiseogee,** LAKE. In N. H., e. of the Merrimac; noted for the beauty of its islands and irregular shores. Elevation 472 ft.; area 175 sq. m.

Winona. Capital of W. co., Minn., on the Mississippi, 103 m. s.e. of St. Paul. It has a large grain trade. Pop., 1890, 18,208.

Winooski River. In Vt.; flowing w. past Montpelier into Lake Champlain 4 m. n.w. of Burlington. It has channels through solid rocks from 30 to 100 ft. deep, and in many places natural bridges and caverns. Length 70 m.

Winslow, EDWARD, 1595–1655. One of the *Mayflower* pilgrims; Gov. of Plymouth 1633, 1636, and 1644; thrice in England, and in prison 1635. *Good Newes from New England*, 1624; *Progress of the Gospel*, 1649.—His son, JOSIAH, 1629–1680, was Gov. of Plymouth from 1673, and general of the colonies 1675.—His grandson, JOHN, 1702–1774, became Major-gen. of militia, and expelled the Acadians 1755.—His nephew, EDWARD, 1746–1815, became Gov. of New Brunswick.

Winslow, FORBES BENIGNUS, M.D., D.C.L., 1810–1874. English writer on mental disease.

Winslow, JACQUES BÉNIGNE, 1669–1760. French anatomist. *Structure du Corps humain*, 1732.

Winslow, JENS OLAUS, 1739–1794. Danish naval officer, writer on the West Indies.

Winslow, JOHN ANCRUM, U.S.N., 1811–1873. Commander of the *Kearsarge*, which sunk the *Alabama* off Cherbourg, June 19, 1864; Commodore 1864; Rear-admiral 1870.

Winslow, MIRON, D.D., LL.D., 1789–1864. American missionary in Ceylon and India from 1820. *Pamil and English Dictionary*, 1862.—His brother, HUBBARD, D.D., 1799–1864, was a pastor and teacher in Boston, and a prolific writer. *Intellectual* and *Moral Philosophy*, 1852–56.—His son, WILLIAM COPLEY, D.D., LL.D., D.C.L., b.1840, has been an active official of the Egyptian Exploration Fund, and writer on archæology.

Winsor, JUSTIN, LL.D., 1831–1897. Supt. Boston Public Library 1867–77; librarian of Harvard from 1877; ed. *Hist. Boston*, 4 vols., 1880–82, and *Narrative and Critical History of America*, 8 vols., 1884–89. *Columbus*, 1891; *The Mississippi Basin*, 1896.

Winston, JOHN ANTHONY, 1812–1871. Gov. of Ala. 1853–57.

Winston, JOSEPH, 1746–1815. Officer of N. C. troops 1776–82; M.C. 1793–95 and 1803–7.

Wint, PETER DE, 1784–1849. English water color painter.

Winter. Astronomically, from Dec. 21, the shortest day, to March 21, the vernal equinox. Generally speaking, the months of Dec., Jan. and Feb. in the U. S., and Nov., Dec. and Jan. in England; the three coldest months of the year. In the s. hemisphere June, July and August. The rainy season of the tropical zone corresponds to our winter.

Winter, JOHN STRANGE. See STANNARD, H. E.

Winter, WILLIAM, b.1836 in Mass. Poet, journalist, and writer on the stage; biographer of Edwin Booth 1871, and Henry Irving 1885. *The Jeffersons*, 1881; *Shakespeare's England*, 1886.

Winter Annual. Plant whose seedling lives through the winter, the plant dying after producing its seed the following summer.

Winterberry. *Ilex verticillata.* Red-berried shrub of the Holly family, native of swamps in e. N. America; known as Black Alder.

Winter Eggs. See SUMMER EGGS.

Wintergreen. 1. *Gaultheria procumbeus.* Diminutive shrub of the natural family *Ericaceæ*, yielding an aromatic essential oil. The plant is locally known also as Teaberry, Checkerberry, Partridgeberry, and Boxberry. 2. Plants of the genus *Pyrola*, of the same natural family. See SHIN-LEAF.

Wintergreen, FLOWERING. *Polygala paucifolia.* Low wood plant of the Milkwort family, native of e. N. America; known as Gay-wings.

Wintergreen, OIL OF. See METHYL SALICYLATE.

Wintergreen, SPOTTED. *Chimaphila maculata.* Low herbaceous perennial plant with evergreen mottled leaves, native of N. America.

Winterhalter, FRANZ XAVER, 1805–1873. German-French painter, chiefly of portraits.

Winter's Bark. *Drimys winteri.* Small tree of the natural family *Magnoliaceæ*, native of s. S. America; the bark is used in medicine.

Winter's Bark.

Winther, RASMUS VILLADS, 1796–1876. Danish poet.

Winthrop, JOHN, 1588–1649. Leader of the emigrants who founded Boston 1630; Gov. of Mass. 1630–34, 1637–40, 1642–44, and from 1646; eminent for purity and beauty of character. His *Journal* was pub. as *Hist. New England*, 1825–26.—His son, JOHN, F.R.S., 1606–1676, founder of Saybrook, Conn., 1635, and New London 1646, Gov. of Conn. 1635 and from 1657, was an accomplished man of high character. He procured 1662 the charter uniting Conn. and New Haven.—His son, JOHN, or FITZ-JOHN, 1639–1707, was agent of Conn. in London 1693–98, and Gov. from 1698.—His brother, WAIT STILL, 1643–1717, was Councilor, Major-gen., Judge, and Chief-justice in Mass.

Winthrop, JOHN, LL.D., F.R.S., 1714–1779. Great-grandson of the first John; prof. Harvard from 1738; eminent as an astronomer. *Earthquakes*, 1755; *Comets*, 1766.—His son, JAMES, 1752–1821, was a judge and writer on prophecy.

Winthrop, ROBERT CHARLES, LL.D., 1809–1894. M. C. 1841–50; Speaker 1847–49; U. S. Senator 1850–51; pres. Mass. Historical Society 1855–85; biographer of his ancestor, Gov. John, 1864–67. *Speeches*, 4 vols., 1852–86.

Winthrop, THEODORE, 1828–1861. Major U. S. Vols. 1861; killed at Big Bethel, Va. His novels, *Cecil Dreeme*, 1861, *John Brent*, 1862, and *Edwin Brothertoft*, 1863, reflect his chivalrous spirit. His minor works appeared in 2 vols. 1862–63.—His brother, WILLIAM WOOLSEY, U.S.A., b.1831, pub. *Military Law*, 1886.

Winyaw Bay. Estuary formed by the confluence of the Black, Pedee, and Waccamaw rivers in Georgetown co., S. C. It is 14 m. long and 2 m. broad.

Winze. Small auxiliary shaft or opening connecting two levels in the interior of a mine, but not opening to the surface; constructed as an aid to ventilation or means of communication.

Winzet, NINIAN, 1518–1592. Scottish R.C. writer; teacher at Paris and Douay; abbot of Ratisbon 1577.

Wire and Wire Drawing. Wire is a small metallic rod varying in thickness. The ancients made their wire by hammering metal into thin sheets, cutting these sheets into strips, and hammering the strips into wire. The threads of gold in Aaron's dress were no doubt made in this manner. Pliny speaks of the interweaving of gold threads in dress-stuffs. In the modern method, metal is passed in a hot state through rolls forming rods, which in turn are drawn in a cold state through holes in a plate of harder metal, called a draw-plate. These draw-plates are made of hard steel pierced with holes varying in diameter by almost insensible degrees. The rods are drawn through a great number of holes in succession, so as to reduce their thickness gradually. By this continual compression the wire becomes very brittle and requires frequent annealing, and the oxide formed on the wire is removed by pickling in dilute sulphuric acid. Most wire is round, but other forms are made for special purposes. Some of the delicate wires are drawn through a plate made of ruby. See DUCTILITY, IRON WIRE, and WIRE GAUGE.

Wire Gauge. For measuring sizes of wire; the two in general use being the Birmingham and the U. S. standard

U. S. Standard Wire Gauge.

gauge. In both cases arbitrary numbers are used instead of actual diameters. See GAUGE, BIRMINGHAM.

Wire Rope. Rope of iron or steel wire, laid up, when flexibility is desired, of six strands of seven wires each around a hemp center, or of 12 or 19 wires in each of the six strands. The latter is most flexible. For standing-rigging, guys, etc., a wire center is used instead of hemp. The strength of iron wire rope in pounds = 4,480 times the weight per fathom in pounds; for steel wire use 7,098 as multiplier. Mild Bessemer steel and crucible cast-steel wire are used, as also iron wire. A wrought-iron wire rope one inch in diameter has an ultimate strength of ab. 18 tons.

Wire-Worms. Larvæ of Snapping-beetles. They resemble Millipeds ("Thousand legs") in being rounded, elongated, and brownish in color, but have only 3 pairs of legs, placed at

Wire-Worms (*Agriotes segetis*).

the front end. They spend two years or more in the ground, feeding on seeds and the roots of crops. Among the remedies recommended are fall plowing with thorough pulverization of the soil, trapping the adults, scattering seeds soaked in molasses and Paris green.

Wirt, WILLIAM, 1772–1834. Va. lawyer, U. S. Atty-gen. 1817–29. *Letters of a British Spy*, 1805; *Old Bachelor*, 1812; *Life of Patrick Henry*, 1817.

Wirtgen, PHILIPP, 1806–1870. German botanist. *Prodromus der Flora der Preussischen Rheinland*, 1842.

Wisby. Swedish town, on w. coast of Gothland Isl., in the Baltic, 130 m. s. of Stockholm; of great commercial importance from ab. 1000 till sacked 1361 by Danes. Pop., 1891, 7,102. See SEA LAWS.

Wisconsin. One of the n. central States; area 56,040 sq. m. Its surface presents little decided relief. The n. part is a broad elevation, constituting the divide between Lake Superior and the rivers flowing to the Mississippi. The remainder is undulating or covered with hills of glacial deposits. In the s. portion is considerable prairie land, while the n. part is covered with forests. The principal stream is the Mississippi, which forms part of the w. boundary and is navigable; it also contains the Rock, Wisconsin, and St. Croix Rivers. The geological structure is simple. In the n. part is a large area of Archæan rocks, extending in from the upper peninsula of Mich. Surrounding this on all sides is Cambrian of considerable breadth on the n., w. and s.; surrounding this and extending beyond the limits of the State on the e., s. and w. are Silurian beds. The industries are mainly agricultural, the cereals being the principal crop. The value of farms was, in 1890, $496,691,517, and of farm products, in 1889, $70,990,645. Manufactures of secondary interest. Beer, iron, lumber and leather are produced. The mineral resources only partially developed. Iron ore of great purity and in large quantity is found in the n., but the mines have scarcely reached the producing stage. Railroad mileage was 6,212 in 1896. The capital is Madison, the chief city Milwaukee. The beginnings of W., like those of Minn., were in the fur trade, 1656, and the French mission, 1669, on the shore of Green Bay. The rule of England was

Wisconsin Scenery—Pillar Rock.

felt in this region for some years after the Revolution, and it was not until after the war of 1812 and the formation of Astor's fur trading company that American influence became supreme. W. was originally a part of the Northwest Territory. In 1800 it was included in Ind., whence it passed to Ill., and in 1818 to Mich. In 1836 it was organized as a separate territory, and in 1848 was admitted as a State. It contains several distinct colonies of foreign settlers, Germans, Scandinavians, Swiss, and Belgians. Pop., 1890, 1,686,880. (See Map, page 1670.)

Wisconsin, UNIVERSITY OF. At Madison; organized 1849, opened 1851. Its College of Law was formed 1868, that of Engineering 1870, that of Political Science and History 1887. Two townships were appropriated for its support by Congress 1838; another grant was made in 1854. In 1866 it received 240,000 acres under the Morrill Act. The State has also made numerous and liberal subventions. It has 13 buildings, a domain of 240 acres; libraries of 44,000 vols., 78 professors, 36 instructors, 21 lecturers, and 1,598 students, of whom 818 are in letters and science, 207 in mechanics and engineering, 223 in law, and 190 in agriculture. All departments are open to women.

Wisconsin River. Branch of the Mississippi, rising in n. Wis. on the Mich. line, and flowing ab. 600 m. s. and w. Drainage area 11,520 sq. m., mean flow 11,399 cu. ft. per sec.

Wisdom. That intellectual virtue by which one selects true and right ends of action, and proper means for attaining these ends.

Wisdom, BOOK OF. Apocryphal book of the O. T., written in Greek during the latter half of the second century B.C.

Wisdom of Solomon. Apocryphal book of uncertain origin, received as canonical by the Roman and Greek churches; rejected by Protestants, though acknowledged to be of considerable intrinsic value.

Wise, DANIEL, D.D., b.1813 in England. Editor of M. E. publications; voluminous writer.

Wise, HENRY ALEXANDER, 1806–1876. M.C. 1833–39; Minister to Brazil 1844–47; Gov. of Va. 1856–60; Brig.-gen. C.S.A. 1861–65.—His cousin, HENRY AUGUSTUS, U.S.N., 1819–1869, Captain 1866, pub. *Los Gringos*, 1849, *Captain Brand*, 1860, and other tales and books of travel.

Wise, ISAAC MAYER, b.1819 in Bohemia. Rabbi in Cincinnati 1854; writer on Judaism.

Wise, JOHN, 1652–1725. Pastor at Ipswich, Mass., from 1683; persecuted by Andros and Dudley 1688; vigorous defender of civil and religious liberty. His *Churches' Quarrel Espoused*, 1710, and *Vindication*, 1717, repub. 1772 and 1860, exerted much influence.

Wise, JOHN, 1808–1879. American aëronaut, lost, after many ascensions, in Lake Michigan.

Wiseheart, G. See WISHART.

Wiseman, NICHOLAS PATRICK STEPHEN, D.D., 1802–1865.

R. C. Abp. of Westminster and Cardinal 1850; active prelate and prolific writer. *Eucharist*, 1836–39; *Essays*, 3 vols., 1853. His *Fabiola*, 1854, is a touching story of the early Church.

Wiseman, RICHARD, d.1679. English surgeon.

Wishart, GEORGE, ab.1513–1546. Scottish reformer, burned at St. Andrews. He foretold Cardinal Beaton's death.

Wishart, GEORGE, D.D., 1609–1671. Scottish royalist, imprisoned 1639 and 1644; chaplain to Montrose 1645–46, and to Elizabeth of Bohemia 1650–60; Bp. of Edinburgh 1662. *Wars of Montrose*, 1647.

Wishbone. Furcula or united pair of clavicles of a fowl, frequently employed in sportive divination. Two persons grasp the forks of the bone with their little finger, at the same time making a wish. The one retaining the unbroken fork, upon their pulling the bone apart, is thought to have his wish.

Wish-Stone. Natural pebble, pierced with a hole, commonly regarded as lucky by English children. It is thrown into a stream with a wish.

Wislicenus, JOHANNES, b.1835. Prof of Chemistry at Würzburg 1872–85, and Leipzig since 1885. Most of his papers are pub. in *Annalen der Chemie.*

Wismar. Old Hanse town, on the Baltic, in Mecklenburg; chartered 1229; held by Sweden 1649–75, later by Denmark and Prussia. Its small coinage is extensive. Pop., 1890, 16,787.

Wissembourg. Town of Alsace, fortified 1706; scene of a brilliant but bloody victory of the Crown Prince of Prussia over the French, Aug. 4, 1870; held by France 1697–1871. Pop. ab. 6,000.

Wistar, CASPAR, M.D., 1761–1818. Prof. Univ. Pa. from 1792; founder of Wistar parties for the discussion of subjects of interest; pres. Philosophical Society 1815. *Anatomy*, 1814.—His grandson, ISAAC JONES, b.1827, was Brig.-gen. U. S. Vols. 1862–65.

Wistaria. Showy-flowered, woody vines of the genus *Kraunhia*, natural family *Leguminosæ*, natives of e. N. America and e. Asia; much planted for ornament; named from Dr. C. Wistar.

Wistaria (*Kraunhia chinensis*).

Wister, ANNIS LEE (FURNESS), b.1830, m. 1854. American tr. of German novels.

Wister, OWEN, b. ab.1860. Phila. author, grandson of Fanny Kemble. *Red Men and White*. 1896; *Lin McLean*, 1897.

Witchcraft. Imagined power, by certain mystic rites, of working harm to human beings or their possessions, especially by the infliction of disease, death, or invisible torments; superstition held in all ages, among all races, but most of all in Africa, where millions fall victims to it; in Christendom, held to imply a compact with the devil. The 12 Tables and the Code of Justinian provided for the punishment of witches. The Church followed Roman law,

Three Witches of Belvoir (Anne Baker, Joane Willimott, and Ellen Greene).

condemning soothsayers at the Council of Ancyra 315 to 5 years' penance. Papal bulls were issued against witchcraft 1484 and later, and caused untold misery. In the see of Bamberg, Germany, 600 were hanged or burned in 4 years, in that of Würzburg 900. In Geneva 400 were burned in 4 months in 1516, and 1,000 in the district of Como in 1524. During the Long Parliament 3,000 are said to have been put to death in Great Britain for sorcery. The Salem (Mass.) delusion broke out 1692 and cost 19 lives. English laws against witches were repealed 1736. The belief gradually yielded to the advance of Christian humanity, of scientific inquiry, and of a more rigorous science of evidence. The last execution of a witch in Europe was in Posen, Prussia, 1793, but they were burned judicially in Mexico in 1873. See SALEM WITCHCRAFT.

Witch-Hazel. *Hamamelis virginica.* Shrub of the natural family *Hamamelideæ*, bearing large leaves and yellow flowers which open in late autumn, native of e. N. America. A forked twig has been used as a divining rod. Alcoholic extract of the twigs is used in medicine.

Witch of Agnesi. Curve generated by a point so moving that its ordinate is to the ordinate of the corresponding point on a fixed circle having its diameter on the axis of x as the diameter of the circle to the abscissa of the moving point. Its rectangular equation is $y^2 = \frac{a^3}{x} - a^2$, where a is the diameter of the circle.

Witch of Endor. See ENDOR.

Witenagemot. English court or council 827–1066; composed of ealdormen, bishops, and chief thanes or nobles. Its claims were large, and sometimes its power.

Wither, GEORGE, 1588–1667. English lyric poet, officer under Parliament and Cromwell; imprisoned 1660–63. *Shepherd's Hunting*, 1614; *Hymns*, 1623; *Hallelujah*, 1641.

Withering, WILLIAM, 1741–1799. Physician in Birmingham. *Vegetables growing in Great Britain*, 1776–1830.

Witherite. $BaCO_3$. Natural barium carbonate, found in considerable quantity in England, and utilized as a raw material in the manufacture of barium salts for use in the arts.

Withe-Rod. *Viburnum nudum.* Tall shrub of the Honeysuckle family, native of swamps in e. N. America.

Withers, FREDERICK CLARKE, b.1828. American architect.

Withers, JONES MITCHELL, b.1814. Brig.-gen. C.S.A. 1861, Major-gen. 1862.

Withers, ROBERT ENOCH, b. 1821. Va. journalist; U. S. Senator 1875–81; Consul at Hong Kong 1885.

Witherspoon, JOHN, D.D., LL.D., 1722–1794. Pastor at Paisley 1757–68; pres. Coll. of N. J. from 1768; signer of the Declaration of Independence; active in Congress 1776–79 and 1780–83. *Works*, 1800–1.

Withrow, WILLIAM HENRY, D.D., b.1839. Ed. Toronto *Methodist Mag.* since 1874. *Catacombs*, 1874; *Hist. Canada*, 1878; *China*, 1893.

Witness. One who testifies in court.

Witsius, HERMANN, 1636–1708. Prof. Franeker 1675, Utrecht 1680, and Leyden 1698. *Œconomy of the Covenants*, 1677, tr. 1763; *Creed*, tr. 1823; *Baptism*, tr. 1852.

Witte, EMANUEL DE, 1607–1692. Dutch painter.

Witte, NICOLAS, ab.1505–1565. Flemish missionary in Mexico.

Wittekind, d. 807. Saxon leader against Charlemagne 778 and 782–83.

Wittenberg. Town of Prussian Saxony, on the Elbe, 55 m. s.w. of Berlin; taken by Austrians 1760, and by Prussians

Schloss-Kirche (restored).

1814; fortified till 1873. Here Luther lived, nailed his 95 theses to the Schloss-Kirche door, burned the pope's bull, and was

buried. The university, founded 1502, was absorbed by Halle 1817. Pop., 1890, 14,458.

Wittrock, VEIT BRECHER, b. 1839. Swedish botanist.

Wittstock. In Brandenburg; scene of a Swedish victory over Saxons Oct. 4, 1636.

Witzel, GEORG. See WICELIUS.

Wladislas (or LADISLAUS) **I.,** ab. 1041–1095. Son of Bela I.; King of Hungary 1080; canonized 1192.

Wladislas I., d. 1333. King of Poland 1319.—II., d. 1434. King 1386.—III., d. 1444. King 1440; killed by Turks at Varna. —IV., d. 1648. King of Poland and Sweden 1632.

Woad. *Isatis tinctoria.* Herbaceous biennial plant used formerly for dyeing blue, and previous to the introduction of indigo was largely cultivated in various parts of Europe. See DYER'S WEED.

Woburn. City of Middlesex co., Mass., 10 m. n.w. of Boston; settled 1642, chartered 1888. Its manufactures are chiefly of leather. Pop., 1890, 13,499.

Wocheinite. $Al_2O_3,2H_2O$. Clay-like variety of the mineral bauxite, named from Lake Wochein, in Carniola, Austria.

Woden, or ODIN. God of the storm-cloud, and in some aspects of the sun, therefore represented as one-eyed; worshiped by all Teutons, though only by the Danes and Goths as supreme. See ODIN.

Wodrow, ROBERT, 1679–1734. Scottish historical writer. *Sufferings of Ch. of Scotland*, 1721–22; *Lives of Reformers*, 1834–35; *Analecta*, 4 vols., 1842–43. His *Correspondence*, 3 vols., 1842–43, was pub. by the Wodrow Society, formed 1841.

Woffington, MARGARET, 1720–1760. Irish actress, highly popular in London 1740–57; celebrated in Charles Reade's novel.

Wofford College. Founded 1851 by M. E. Ch. South at Spartanburg, S. C.; opened 1854. It has 8 teachers and ab. 150 students.

Wöhler, FRIEDRICH, 1800–1882. Prof. of Chemistry at Göttingen from 1836. He was an industrious worker in organic, inorganic, analytical and applied chemistry, ed. of *Handwörterbuch der Chemie*, and with Liebig ed. of *Annalen der Chemie und Pharmacie*. In 1828 he prepared urea artificially, the first organic compound so made. In 1827 he isolated aluminium. *Grundriss der anorganischen Chemie*, 1831.

Frederick Wohler

Wöhler's Law. In cases of repeated stress, the ultimate unit-stress is lower in degree as the range between the minimum and maximum stress is greater. Thus a bar may be broken by repetitions of stress none of which exceeds one-half of the ultimate strength.

Wohlgemüth, MICHAEL, 1434–1519. Painter of Nuremberg. Albert Dürer was his pupil.

Woivode, or VOIWODE. Governor of a Slavonic province; title of princes of Moldavia and Wallachia till 1716.

Wolcot, JOHN, M.D. ("PETER PINDAR"), 1738–1819. English satirist. *Lyric Odes*, 1782; *Lousiad*, 1785–95. *Works*, 5 vols., 1816.

Wolcott, EDWARD OLIVER, b. 1848. U. S. Senator from Colorado since 1889; active bimetallist.—His father, SAMUEL, D.D., 1813–1886, wrote many hymns.

Wolcott, J. See WOLCOT.

Wolcott, ROGER, 1679–1769. Conn. councilor 1714; Judge of Supreme Court 1732; Major-gen. 1745, next in command to Sir W. Pepperell at Louisburg; Gov. of Conn. 1750–54.—His son, ERASTUS, 1722–1793, was Col. 1776, Brig.-gen. 1777, and later Judge Conn. Supreme Court.—His brother, OLIVER, 1726–1797, was in Congress 1776, 1778, and 1780–84; signer of the Declaration of Independence; Gen. of Conn. troops 1776, and commander of a brigade at Burgoyne's surrender; Councilor of Conn. 1774–86, Lieut.-gov. 1786–96, and Gov. 1796.—His son, OLIVER, 1760–1833, was auditor U. S. Treasury 1789–91, Comptroller 1791–95, and Sec. 1795–1800; Judge U. S. Circuit Court 1801–2; merchant and banker in New York 1802–14; Gov. of Conn. 1817–27.

Wolf (CANIS LUPUS). Carnivore of section CYNOIDEA (q.v.), widely distributed, of many species and varieties, but absent from S. America, Africa, Ceylon, Australia, and since 1766 extinct in Great Britain. The most common color is gray, but there are black wolves in Florida and the Pyrenees, red ones in Texas, and those of n. Russia and Scandinavia turn white in winter. The resemblance of wolves of various regions

Wolf (*Canis lupus*).

to the dogs of the same have led naturalists to suppose that the dogs are domesticated wolves. Wolves have been tamed and have shown attachment to their masters; but they do not bark, though barking is not a fixed characteristic of all dogs. Wolves hunt in packs and run down their prey. The female brings forth 4 or 5 young after a period of gestation of 63 days, as in the dog. The small wolf of the Western prairies is the coyote or American jackal.

Wolf, or I SPY. Game similar to Whoop and Hide and Seek.

Wolf, CHRISTIAN. See WOLF, JOHANN C.

Wolf, EDMUND JACOB, D.D., b. 1840. Prof. Gettysburg 1874. *Lutherans in America*, 1890.

Wolf, FERDINAND, 1796–1866. Austrian writer on mediæval literature, especially Spanish and that of the Romance languages.

Wolf, FRIEDRICH AUGUST, 1759–1824. Prof. Halle 1783–1807, and later in Berlin; editor of sundry classics; eminent as scholar, critic and teacher. Philology he called "Knowledge of human nature as exhibited in antiquity." His *Prolegomena ad Homerum*, 1795, which disputed the authorship and unity of the Homeric poems, began a discussion which is still unsettled. He may be called the originator of the encyclopedic method of classical study which prevails to-day.

Wolf, GEORGE, 1777–1840. M.C. 1823–29; Gov. of Pa. 1829–35: "father of the public school system"; Comptroller U. S. Treasury 1836–38.

Wolf, HIERONYMUS, 1516–1580. Teacher at Augsburg from 1557; editor of Demosthenes and other Greek authors.

Wolf, or **Wolff,** JOHANN CHRISTIAN VON, 1679–1754. Prof. Halle 1706–23 and 1740; prof. Marburg 1723–40; Chancellor of Halle 1743. His system of philosophy, based on Leibnitz and largely mathematical, was long in high repute. *Theologia Naturalis. Works*, 22 vols.

Wolf, JOHANN CHRISTOPH, 1683–1739. Teacher at Hamburg from 1712. *Bibliotheca Hebræa*, 4 vols., 1715–33.

Wolf Children. Stories of abandoned children nurtured by wolves (as Romulus and Remus) are common among primitive peoples, and of frequent occurrence among American tribes. Cases are recent in India.

Wolf Dog. Dog bred to protect sheep from the attack of wolves. He is of no particular breed, and is found principally in Spain; also a cross between a wolf and dog; such hybrids are found among the dogs of the N. American Indians.

Wolfe, CHARLES, 1791–1823. Irish poet, known by his lyric, *Burial of Sir John Moore*, 1817. *Remains*, 1825.

Wolfe, GEN. JAMES, 1727–1759. English Major-gen. 1759, in command of the expedition against Canada. Killed at

Monument to Wolfe and Montcalm—Quebec.

Quebec, in the victory over Montcalm which determined the ascendency of the Anglo-Saxon race in the New World.

Wolfe, JOHN DAVID, 1792–1872. Philanthropist of New York.—His daughter, CATHARINE LORILLARD, 1828–1887, was also noted for her benefactions.

Wolfenbüttel. Town of Brunswick, on the Oker; founded 1046; besieged and taken 1193 and 1542; scene of a battle 1641; noted for its large library. Pop., 1890, 14,480.

Wolfenbüttel Fragments. Written by Reimarus; ed. by Lessing, 1773–81; regarded as deistical, and productive of much commotion in Germany.

Wolff, ALBERT, 1814–1892. German sculptor, prof. Berlin 1866.

Wolff, ALBERT, 1835–1891. Journalist, critic, and novelist, b. in Germany; in Paris from 1857.

Wolff, CASPAR FRIEDRICH, 1733–1794. German anatomist, from whom the Wolffian Body and Duct were named.

Wolff, JOSEPH, D.D., LL.D., 1795–1862. German Hebrew, R.C. student 1812–18; Anglican missionary to Jews 1821. His *Mission to Bokhara*, 1845, records a dangerous expedition. *Journal*, 1824–39; *Researches and Missionary Labors*, 1835; *Travels and Adventures*, 1860.

Wolffian Body. See MESONEPHROS.

Wolffian Bottles. Employed for dissolving or purifying gases; named from Peter Woulfe, 1727–1806, chemist in London.

Wolffian Duct. That of the primitive embryonic kidney, split off dorsally from the archinephric duct in the region of the meso- and meta-nephros. In the male it becomes specialized into a vas deferens and a ureter. It aborts more or less in the female, represented by HYDATIDS, PAROVARIUM, EPOÖPHORON, PAROÖPHORON, and Gaertner's DUCT (q.v.).

Wolffian Tubules. See MESONEPHROS.

Wolf-Fish (ANARRHICHAS LUPUS). Acanthopterygian fish of Blennoid affinities, inhabiting the N. Atlantic; also called

Wolf-Fish (*Anarrhichas lupus*).

the Sea Cat. It has powerful carnivorous teeth, which are used to break shell-fish. It is very pugnacious, and at Eastport, Me., has been known to attack persons while wading.

Wölfflin, EDUARD, b. 1831. Prof. Zurich 1869, Erlangen 1875, and Munich 1880; writer on Latin grammar and etymology; editor of several classics; founder *Archiv fur Lat. Lexicographie.*

Wolfram. See TUNGSTEN.

Wolframite. $(Fe,Mn)WO_4$. Natural iron and manganese tungstate, most important source of tungsten and the tungsten compounds used in the arts. In small quantity it is rather widely distributed in nature, especially in connection with tin ore, but its commercial production is practically limited to the Cornwall mining district in England and the vicinity of Zinnwald in Saxony and Bohemia.

Wolfram von Eschenbach. See ESCHENBACH.

Wolfsbane. See ACONITE.

Wolgemut. See WOHLGEMUTH.

Wollaston, WILLIAM, 1659–1724. English rational theologian. His *Religion of Nature*, 1722, was based on S. Clarke's views, and was much valued by Bp. Butler.—His great-grandson, WILLIAM HYDE, M.D., F.R.S., 1766–1828, chemist and physicist of high rank, discovered the dark lines in the solar spectrum, the metals palladium and rhodium, and the mode of rendering platinum malleable. He was sec. of the Royal Society 1806–20, and its pres. 1820.

Wollastonite. $CaSiO_3$. Natural calcium silicate, sometimes called Tabular Spar, and resembling several of the zeolites and the light-colored varieties of amphibole.

Wollaston, LAKE. In Canada, on the Arctic Circle, between Mackenzie and Churchill Rivers.

Wollaston's Doublet. Combination of two plano-convex lenses to replace a single double convex lens. Each lens is less convex than the simple lens which they replace, yet their joint magnifying power is as great and with less spherical aberration.

Wolle, FRANCIS, 1817–1893. Botanist of Pa.; inventor 1852 of a machine since widely used for making paper bags. *Desmids of U. S.*, 1884; *Fresh-Water Algæ*, 1887.—His father, PETER, 1792–1871, was a Moravian bishop.

Wollstonecraft, MARY. See GODWIN, WILLIAM.

Wolowski, LOUIS FRANÇOIS, 1810–1876. B. in Poland; prof. Paris 1839, Deputy 1849; writer on Finance.

Wolseley, GARNET JOSEPH, D.C.L., LL.D., VISCOUNT, b. 1833. Irish officer, distinguished in the Crimean war 1854–55, and in the Indian mutiny 1857–59; in Canada 1862–70, where he suppressed the first Riel rebellion; knighted 1871; victor over the Ashantees 1873; Major-gen. 1875; Gov. of S. Africa 1879; Commander-in-chief in Egypt 1882 and 1884–85, where he defeated Arabi at Tel-el Kebir Sept. 13, 1882; General and Baron 1882, Viscount 1885; Field-marshal 1894; biographer of Marlborough.

Wolsey, THOMAS, 1471–1530. Dean of Lincoln 1509; Privy Councilor 1511; Abp. of York 1514, Cardinal and Lord Chancellor 1515; papal legate with plenary power 1519, envoy to Charles V. 1521, and to Francis I. 1527; eminent as statesman and patron of learning, but hated for wealth, power, pomp, and pride rivaling the king's; disgraced Oct. 1529; charged with treason and arrested 1530; celebrated by Shakespeare.

Wolstan. See WULFSTAN.

Woltmann's Anemometer. Form first described ab. 1790, consisting of small plates at the extremities of radial arms. The plates are so inclined that the wind causes the arms to revolve. This is the parent of the modern Wind-Meter, Patent Tide-Meter, etc.

Wolverene (GLUTTON). This Carnivore attains a length of 3 ft. besides the tail, 8 in. It is blackish, with a broad arched back, semiplantigrade feet, and short legs. It is as voracious

Wolverene (*Gulo luscus*).

and cunning as its congener the Weasel. It inhabits northern forests, and is most abundant in the Mackenzie River basin, where it seriously annoys trappers, stealing their bait and the animals captured. What it cannot eat it buries or befouls by

means of a fetid secretion from anal glands. Its fur is valuable, but it can be trapped only by secret or hidden traps. The female brings forth 4 or 5 young in late June in burrows. See MUSTELIDÆ.

Wolverhampton. Borough of Staffordshire, 13 m. n.w. of Birmingham. It has a large local trade, and important manufactures of hardware, tin, japanned and plated ware. Its locks have long been famous. Pop. 82,620; of parliamentary borough, 174,325.

Wolzogen, CAROLINE VON (LENGEFELD), 1763–1847. German novelist, biographer of Schiller 1830. *Cordelia*, 1840.

Woman's Christian Temperance Union. Founded 1874 in Ohio; since widely extended throughout the U. S. The World's W. C. T. U. was organized 1883, and has branches in many countries. Frances E. Willard was pres. of both.

Womb. See UTERUS.

Wombats. Nocturnal Marsupials of S. Australia and Tasmania. There are 3 living species; the largest attain a wt. of 100 lbs. or more and a length of 3 ft. They resemble Badgers,

Wombats (*Phascolomys wombat*); in upper left-hand corner, *P. latifrons*.

the tail is rudimentary, legs short and thick, resembling those of a bear. The feet are adapted for burrowing. They feed on roots, and have a skull and teeth resembling those of the Beaver. Their color is black to yellowish brown. See RHIZOPHAGA.

Women's Rights. Those rights which have been denied women on account of their sex. The first organized effort was made in the U. S. by Elizabeth C. Stanton and Lucretia Mott, who called conventions in Rochester and Seneca Falls, N. Y., in 1848. In 1850 a national committee was formed, and since 1869 the national association has held annual meetings in Washington, D.C. In 1866, some of the members registered and voted, claiming that women, as well as slaves, were enfranchised by the 13th, 14th, and 15th amendments. This was denied by Congress and the Supreme Court, and created a demand for a 16th amendment forbidding the disfranchisement of women, and in 1894 a petition containing 625,000 names was presented to Congress asking for an amendment to the Constitution, striking out the word "male" from section 1, article 2. Partial suffrage has been obtained in some States and countries. In many countries of Europe, in Australia, New Zealand, Canada, and in some parts of India, women vote for municipal or school officers. In Finland, Denmark, and Sweden women vote for all officers except members of Parliament. In Croatia and Dalmatia they vote in person, and in Austria-Hungary by proxy, and in Italy widows vote by proxy. In Asiatic Russia, women householders vote, and in European Russia women who are heads of families have a vote. In Norway, women have school suffrage, while in France the women teachers elect women on the boards of education. Woman suffrage exists in a limited way, mainly in the selection of school officers, in Ariz. Ter., Del., Idaho, Ill., Ind., Ia., Kan., Ky., Mass., Mich., Minn., Mont., Neb., N. H., N. J., N. Dak., O., Okla. Ter., Ore., S. Dak., Tex., Vt., Wash., and Wis. In Col., Utah, and Wyo. women have full suffrage, voting for all officers, including Presidential, electors. Full suffrage has been denied in Me., Cal., Conn., Del., Mass., Mont., Neb., Nev., and Okla. Ter.

Wonders, SEVEN. See SEVEN WONDERS OF THE WORLD.

Wood. Hard portions of the stems of plants, consisting mostly of fibers and vessels, prosenchymatous tissue.

Wood, STRENGTH OF. As average values the ultimate strength may be taken as 10,000 lbs. per sq. inch in tension and 8,000 in compression.

Wood, ALPHONSO, 1810–1881. American botanist. *Class-Book of Botany*, 1845; *American Botanist and Florist*, 1870.

Wood, ANTHONY À, 1632–1695. English antiquarian, whose *Athenæ Oxonienses*, 1691–92, is of high biographical value. *Hist. and Antiquities Univ. Oxford*, 1674, repub. in 5 vols. 1786–96; *City of Oxford*, 1773.

Wood, CHARLOTTE MATILDA (VINING), b. 1836. Anglo-American actress and manager.

Wood, DE VOLSON, b.1832. Prof. Univ. Mich. 1857–72, and Stevens Institute, Hoboken, N. J., since 1872; writer on mathematics and engineering. *Mechanics*, 1876–84.

Wood, ELEAZER DERBY, U.S.A., 1783–1814. Lieut. 1806; distinguished at Niagara; killed at Fort Erie.

Wood, ELLEN (PRICE), (MRS. HENRY), 1814–1887. English novelist; ed. *Argosy* 1867. *East Lynne*, 1861; *Shadow of Ashlydyat*, 1863.

Wood, SIR EVELYN, b.1838. Brig.-gen. 1879; prominent in the Zulu war; knighted 1879; Commander in Egypt 1882; Quartermaster-gen. 1893.

Wood, FERNANDO, 1812–1881. M.C. 1841–43, 1863–65, and 1867–77; Mayor of New York 1854–58 and 1860–61. He favored secession, as did his brother, BENJAMIN, b.1820, M.C. 1861–65.

Wood, GEORGE, 1799–1870. American author. *Modern Pilgrim*, 1855; *Gates Wide Open*, 1858–69.

Wood, GEORGE BACON, M.D., LL.D., 1797–1879. Prof. Univ. Pa. 1835–60. *Practice of Medicine*, 1847; *Therapeutics and Pharmacology*, 1856; *Lectures*, 1859. His *U. S. Dispensatory* (with Dr. F. Bache), 1833, has been widely used.—His nephew, HORATIO C., M.D., LL.D., b.1841, prof. Univ. Pa. since 1866, ed. the later editions of this work, and pub. *Therapeutics*, 1875, and *Nervous Diseases*, 1886.

Wood, JAMES, 1750–1813. Va. Col. 1776; Gov. 1796–99.

Wood, JAMES FREDERIC, D.D., 1813–1883. R. C. coadjutor Bp. of Phila. 1857, Bp. 1860, Abp. 1875.

Wood, JAMES RUSHMORE, M.D., 1816–1882. Prof. of Surgery at Bellevue Med. School from 1861.

Wood, JOHN, 1798–1860. Founder of Quincy, Ill., 1822; Gov. 1859–60.

Wood, JOHN GEORGE, 1827–1889. English author. *Natural History*, 1859–63; *Man*, 1868–70; *Homes Without Hands*, 1869; *Man and Beast*, 1874; *Dominion of Man*, 1890.

Wood, JOSEPH, d.1789. Pa. Col. 1776; in Congress from Ga. 1777–79.

Wood, REUBEN, 1792–1864. Judge Ohio Supreme Court 1833–45; Gov. 1849–51.

Wood, SEARLES VALENTINE, 1830–1884. English geologist, attentive chiefly to the Tertiary and Post-tertiary formations. —His father, SEARLES V., wrote on the Pliocene *Mollusca*.

Wood, THOMAS JEFFERSON, U.S.A., b.1823. Brig.-gen. U. S. Vols. 1861, serving mostly in Tenn. and Ga.; distinguished at Chickamauga and Nashville; Major-gen. 1865–66.

Wood, THOMAS WATERMAN, b.1823. American painter. N.A. 1871; pres. N.A. since 1891.

Wood, WALTER ABBOTT, b.1815. Inventor and manufacturer of mowers, reapers, etc.; M.C. from N. Y. 1879–83.

Wood, WILLIAM, ab.1580–1639. Immigrant to Mass. 1629. *New England's Prospect*, 1634.

Wood, WILLIAM BURKE, 1779–1861. American actor and manager. *Recollections*, 1855.

Wood, WILLIAM MAXWELL, M.D., 1809–1880. Surgeon-gen. U. S. Navy 1869. *Wandering Sketches*, 1849; *Fankwei*, 1859.

Woodberry, GEORGE EDWARD, b.1855. Prof. Univ. Nebraska 1880–82, and Columbia 1892; poet; biographer of Poe, 1885.

Woodbine. See HONEYSUCKLE.

Woodbridge, WILLIAM, 1780–1861. Judge Mich. Supreme Court 1828–32; Gov. 1839–41; U. S. Senator 1841–47.

Woodbury, DANIEL PHINEAS, U.S.A., 1812–1864. Major of Engineers 1861; Brig.-gen. U. S. Vols. 1862, serving in Va. till 1863; distinguished at Fredericksburg; commanding at Key West, Fla., 1863. *Sustaining Walls*, 1845; *Theory of the Arch*, 1858.

Woodbury, LEVI, 1789–1851. Judge N. H. Supreme Court 1817; Gov. 1823–24; U. S. Senator 1825–31 and 1841–45; Sec. Navy 1831–34, and Treasury 1834–41; Justice U. S. Supreme Court from 1845. *Writings*, 1852.

Woodburytype. See PHOTO-MECHANICAL PRINTING.

Wood-Carving. See CARVING.

Wood-Cells. See PROSENCHYMA and TRACHEIDS.

Woodchuck, or GROUND-HOG. See ARCTOMYS.

Woodcock (*Philohela minor*, American, and *Scolopax rusticula*, European species; other species are in Java). Crepuscular snipe that prefers the drier woodlands to marshes. It has a long bill, short legs, large eyes, and a beautiful mottled plumage, and is noted as a game-bird. It is migratory, and has been supposed to have crossed the Atlantic from Europe to America. The American species is smaller than the European, and its 3 outer primaries are attenuated. The food is earthworms, etc. They pair in Feb., and lay four eggs in a nest on the ground near water in March. Two broods are raised. They moult in Aug. It is said that the parents carry the newly hatched young to better feeding grounds.

Woodcock (*Scolopax rusticula*).

Wood-Duck (AIX SPONSA). N. American duck, nesting in trees. The male has a large crest, head green, purple and violet, back velvety black with metallic tints, breast chestnut, spotted with white, belly white. The female has gray head, greenish crown, and white throat. The upper parts are grayish brown, chest brown and spotted. Length 18 in. In the West, this name is applied to the Hooded Merganser.

Wood-Duck (*Aix sponsa*).

Wooden Bridge. One having all members of wood, or all except the tensile members of the web. Wood was used for bridges exclusively till ab.1800, when a few iron structures were built. Combination bridges, of wood and wrought-iron, came into use ab.1840. See HOWE TRUSS, LONG TRUSS, and TOWN TRUSS.

Wood Engraving. This is said to have been practiced in China and Japan from very remote times; supposed by some to have been brought thence to Europe, where it first appeared, in s. Germany, ab.1400. The earliest known wood engraving, dated 1423, is a colored print of St. Christopher, 8 in. by 11½, one of a series of pictures of saints (*helgen*) issued by the monks as religious tracts. It has been a question whether European wood-engraving originated for this purpose or was first used in the nearly contemporary manufacture of playing-cards. The pious intent has the greater likelihood. The first books with wood-cuts were known as block-books, pictures with explanatory texts, both engraved on the same planks. On the invention of movable type these were followed by what we now call illustrated books, the designs subservient to the text. One of the most important is the *Nurnberg Chronicle*, 1493, with some 2,000 cuts. Durer's great works, the *Apocalypse*, a larger and a smaller *Passion of Christ*, and the *Life of the Virgin*, pictorial subjects with effect, the *Triumphal Arch of Maximilian* (92 blocks forming a whole 9 ft. by 10½), and a *Procession* of 135 designs by Durer and Burgkmair (170 ft. long and 16 in. high), marked the period 1490–1510. In the 16th century the art was extensively practiced, most notably in Holbein's *Dance of Death*, pub. at Lyons 1538. Little is known of the engravers: Jerome Andreæ of Nurnberg stands forth as the best of those employed by Durer, and the names of Dienecker and others appear on the backs of the Pro-

St. Christopher and the Christ-child (1423).

cession blocks; Hanns Lutzelburger of Basel engraved the *Dance of Death*. All these works were done with knives, the engraver leaving the lines drawn for him in relief, on the surface of the plank, so that the print might be taken from the surface in the same manner as type. Similar relief work was also cut in metal, copper or pewter, but with gravers instead of knives. After 1600 wood-engraving was mainly superseded by copper. Before 1800 it had been found that on cross-sections of boxwood gravers could be used as on metal; so that, no longer dependent on black lines drawn on the face of the wood, the engraver could invent his own lines with the graver, such lines, of course, white, as the print was still from the surface. This more artistic method marked specially the work of Thomas Bewick in his *Fables*, *Quadrupeds*, and *Birds*, produced 1784–1818. His most noted pupils and helpers were Clennell (also a painter), Nesbit, and Harvey. Robert Branston worked in the same way, but with more imitation of copper. His pupil, John Thompson, greatly indebted to the designs of Thurston, ranks as ablest of wood-engravers: Clennell and Bewick are superior as artists. William Harvey, after promise of excellence, gave up engraving for design. The more artistic white line manner distinguishing the Bewick school, partly departed from by Thompson, was afterward neglected, and has been replaced by a feeble imitation of the refinement of copper. At the present time the design is drawn upon boxwood or transferred by photography and cut by gravers.

Woodfall, HENRY SAMPSON, 1739–1805. Ed. London *Advertiser* 1760–93; tried 1770 for publishing Junius' *Letters*, which he collected 1772.

Wood Fern. See SHIELD-FERN.

Woodford, STEWART LYNDON, b.1835. Lieut.-gov. of N.Y. 1866–68; M.C. 1873; U. S. Attorney for s. N. Y. 1877–83. Minister to Spain 1897–98.

Wood-Grass. See GRASS, INDIAN.

Woodhouse, JAMES. M.D., 1770–1809. Prof. Univ. Pa. from 1795; promoter of the use of anthracite coal; chemical writer.

Woodhouselee. See TYTLER, WILLIAM.

Wood-Ibis (*Tantalus loculator* of s. U. S.). White Stork with a bill curved down near its end, which is blunt; the toes are long. Its head is bald and blue, its wings and tail are black. *Pseudotantalus rhodinopterus* of Ethiopia has a yellow bill, red feet, white plumage, and roseate wing coverts.

Wood-Louse. See ISOPODA.

Wood-Naphtha. See METHYL ALCOHOL.

Wood Oil. Aromatic drying oil, obtained from Burmah and the Straits, being the product of various species of *Dipterocarpus*. It is used in making varnish, lithographic ink, and as a substitute for copaiba, which it resembles closely.

Wood Opal. Wood converted into opal by silicification.

Woodpeckers. Ab. 350 species, distributed over the world

(except Australia, Madagascar, and Egypt), are known. A common European genus is *Dendrocopus*, Great Spotted Woodpecker; the most common in U. S. is *Melanerpes*. *M. Carolinus* is the Red-bellied, *M. erythrocephala* the Red-headed, Woodpecker. *Colaptes auratus* is the Golden-winged Woodpecker or "Flicker." The Pileated Woodpecker is black with scarlet crest, and is 18 in. long, of which the tail measures 7 in. (see SAPSUCKER). The Woodpecker is a shy, usually solitary, brightly colored bird, frequenting heavy woods, running up trees, tapping them with its strong, sharp beak; by means of a long, extensible tongue having barked filaments at the tip, it extracts insects from their holes. The hyoid bone has greatly lengthened thyrohyal cornua that arch over the skull. *M. formicivorus* of Cal. has the curious habit of making the bark of pines full of holes, into which it hammers acorns and sometimes pebbles. See PICIDÆ.

Wood Preserving. See PRESERVATION OF TIMBER.

Wood-Rats. See RATS.

Woodrow, JAMES, D.D., b.1828. Prof. Columbia, S. C., Theol. Sem. 1861–84. and S. C. Univ. 1880–91; pres. S. C. Coll. from 1891; ed. *Southern Presbyterian* from 1865.

Woodruff, HIRAM, 1817–1867. American horse-trainer. *Trotting-Horse*, 1869.

Woodruff, WILFORD, b.1807. Mormon apostle 1839, pres. 1887.

Woods, KATHERINE PEARSON, b.1853. American novelist. *Metzerott, Shoemaker*, 1890.

Woods, LEONARD, D.D., 1774–1854. Prof. Andover 1808–46; controversialist. *Letters to Unitarians*, 1820; *Works*, 5 vols., 1849–50.—His son, LEONARD, D.D., LL.D., 1807–1878, was pres. Bowdoin 1839–66.—His nephew, ALVA, D.D., 1794–1887, was prof. Brown Univ. 1824–28, pres. Transylvania, Ky., 1828–31, and Univ. Ala. 1831–37.

Woods, MRS. MARGARET. English novelist. *A Village Tragedy*, 1894; *Vagabonds*, 1895; *Weeping Ferry*, 1897.

Woods, VIRUA, b.1864. Novelist of Cal. *A Modern Magdalen*, 1894; *Jason Hildreth's Identity*, 1896.

Woods, WILLIAM BURNHAM, 1824–1887. Col. Ohio Vols. 1861–65, serving in the West; Brig.-gen. 1865–66; Chancellor of Ala. 1868; U. S. Judge 1869; Justice U. S. Supreme Court 1880. —His brother, CHARLES ROBERT, U.S.A., 1827–1885, was Brig.-gen. U. S. Vols. 1863–66.

Woods and Forests. Source of British revenue, administered since 1810 by commissioners.

Wood's Halfpence. Copper pieces minted 1722–23 for Ireland by Wm. Wood; made unpopular by Swift's *Drapier's Letters*, and the privilege withdrawn.

Wood's Holl. Hamlet on Buzzard's Bay, Mass., site of an important station of U. S. Fish Commission.

Wood's Metal. Fusible alloy, consisting of bismuth 4 parts, lead 2 parts, tin 1 part, cadmium 1 part. It melts at 60.5° C.

Wood-Sorrel. Showy-flowered herbs of the genus *Oxalis*, natural family *Oxalidaceæ*, of wide geographical distribution.

Common Wood-Sorrel (*Oxalis acetosella*).

Some species are cultivated for ornament. The common variety is found in damp, deep shade. It is also known as stubwort and cuckoo-bread, and is held by some to be the original Irish shamrock. The fresh plant contains 0.75 per cent of potassium binoxalate.

Wood-Spirit. See METHYL ALCOHOL.

Woody Nightshade. See BITTERSWEET.

Wood-Thrush (TURDUS MUSTELINUS). Exquisite songster of e. U. S., living in thick woods on hillsides near watercourses. Length 8 in., tail 3 in.; color cinnamon brown, shading to olive on rump. Large dusky spots on breast. It feeds on insects, and nests in May, raising two broods.

Wood Tin. See TIN.

Woodville, RICHARD CATON, 1825–1855. American genre painter.

Woodville, ELIZABETH. Queen of Edward IV. 1464. This marriage offended the Earl of Warwick, who forced Edward to flee from England 1469.

Woodward, BERNARD BOLINGBROKE, 1816–1869. English author and translator. *Hist. Wales*, 1850–52; *Hist. U. S.*, 1855; *Chronology*, 1872.

Woodward, GEORGE WASHINGTON, 1809–1875. Judge Pa. Superior Court 1852–67; M.C. 1867–73.

Woodward, JOSEPH JANVIER, M.D., 1833–1884. Surgeon U.S.A.; microscopist. *Medical Hist. Rebellion*, 1870–79.

Woodward, ROBERT SIMPSON, b.1849. Prof. Columbia 1893; writer on mathematics and astronomy.

Woodworth, SAMUEL, 1785–1842. American editor, poet, and playwright, author of "The Old Oaken Bucket."

Wool. Hair-like, wavy covering of certain animals, used for the manufacture of fabrics. The wool of the sheep is mostly employed, while that of the alpaca, llama, camel, Cashmere and Angora goat is also used. Under the microscope, wool is seen to consist of wavy threads or fibers, each of which is covered with scales attached only by their bases; and to the interlocking of these scales is due the readiness with which the wool can be

Fibers of Wool (Magnified, showing Scales).

compacted into fabrics. The greater part of the wool of commerce is fleece wool, clipped from the living sheep; pulled wool is obtained from the skins of dead sheep. In 1896 the U. S. produced 272,474,708 lbs. of wool, imported 230,911,473 lbs., exported of domestic wool 6,945,981 lbs., exported of foreign wool 6,028,236 lbs., retained for home consumption 490,939,256 lbs. The estimated product of the world in 1896 was, in lbs., Great Britain 135,000,000, European Continent 611,978,500, North America 289,474,708, Australasia 643,000,000, Cape of Good Hope 93,000,000, River Platte 329,000,000, other countries 345,649,792. See SUINT.

Wool, JOHN ELLIS, U.S.A., 1784–1869. Captain 1812, Col. 1816, Brig.-gen. 1841; prominent under Taylor at Buena Vista 1847; Major-gen. 1862. He saved Fort Monroe, Va., 1861.

Woolen Manufactures. Weaving of woolen fabrics was one of the earliest industries. Before the Reformation it was mostly domestic, employing the large spinning-wheel, reel and hand loom. The teasel for combing the nap is of an-

cient date. From 1300 to 1700 the manufacture was extensive in England, but the goods were coarse; the Spanish and Flemish goods were finer. The carding machine was used in England 1753, the spinning-jenny 1764, the power loom 1785, and Jacquard loom 1811. The first factory in U. S. was established 1794; before this the industry was domestic. The wool is first sorted as to fineness, length and texture, and then scoured with hot water and soap to remove dirt and fatty suint. It is now dyed if necessary. It is cleansed from seeds and burrs by a burring machine, picked to separate the matted portions, and oiled with oleic acid. It is now carded, spun and woven, the woolen yarns being less twisted than worsted yarns. The goods are scoured to remove oil, dyed if necessary, fulled in soap and water, washed, dried, the nap raised with teasels, sheared and pressed. The last three processes are not applied to flannels. Delaines have a cotton weft and woolen warp, and are printed like calicoes. Carpets are made from coarse wools. The value of the woolen manufactures in U. S. in 1890 amounted to $337,768,524, including woolen, worsted and felted goods, carpets, hosiery and knit goods, chiefly in Mass., Pa., N. Y., Conn. and R. I. The value of imported goods the same year was $56,582,432. See LOOM, SPINNING, SPINNING-JENNY, WEAVING, and YARN.

Woolf, BENJAMIN E., b.1836 in London. American critic, dramatist, and composer of comic operas. *The Mighty Dollar.*

Wool Fat. See SUINT.

Wool-Grass. See COTTON-GRASS.

Woollett, WILLIAM, 1735–1785. English engraver.

Woolman, JOHN, 1720–1772. American Quaker preacher. *Journal*, 1775, repub. 1871.

Woolner, THOMAS, 1826–1892. English sculptor and poet, R.A. 1874; one of the Pre-Raphaelites. *Pygmalion*, 1881; *Silenus*, 1884; *Tiresias*, 1886.

Woolpack Clouds. Small cirro-cumuli regularly arranged; so called from their resemblance to small fetches, bags or packs of white wool. Among the Sanskrit-speaking Aryans, the cumuli were personified as lambs or sheep.

Woolrych, HUMPHREY WILLIAM, 1795–1871. English writer on law; biographer of Coke, the Lord Chancellors, and Lord Jeffreys, 1826–27. *Serjeants at Law*, 1869.

Woolsack. Large square bag of wool without back or arms and covered with red cloth, which forms the seat of the Lord Chancellor of England, in the House of Lords.

Woolsey, MELANCHTON TAYLOR, U.S.N., 1782–1838. Captain 1816, Commodore 1832; active in the War of 1812.—His son, MELANCHTON BROOKS, U.S.N., 1817–1874, Captain 1866, Commodore 1871, served on the Atlantic Coast and in the Gulf 1861–65.

Woolsey, THEODORE DWIGHT, D.D., LL.D., 1801–1889. Prof. Yale 1831, pres. 1846–71; N. T. reviser 1871–81. *International Law*, 1860; *Divorce*, 1869; *Political Science*, 1877.—His son, THEODORE SALISBURY, b.1852, became Prof. of International Law at Yale 1878.—His cousin, SARAH CHAUNCEY ("SUSAN COOLIDGE"), b.ab.1845, has written much for children. *Verses*, 1880.

Woolson, ABBA LOUISA (GOOLD), b.1838. American writer. *Dress*, 1874.

Woolson, CONSTANCE FENIMORE, 1848–1894. American novelist of much ability, sympathy, and penetration; in Europe from 1879. *Anne*, 1882; *For the Major*, 1883; *East Angels*, 1886; *Jupiter Lights*, 1889; *Horace Chase*, 1894; *Dorothy*, 1895; *Mentone, Cairo, and Corfu*, 1896.

Woolsorter's Disease. ANTHRAX (q.v.).

Woolston, THOMAS, 1669–1732. English deist, imprisoned from 1729 for a work on N. T. miracles.

Woolwich. E. suburb of London, on the Thames; noted for its arsenal, begun 1585, and military academy, founded 1741. Pop., 1891, 40,848; of parliamentary borough, 98,976.

Woonsocket. City of Providence co., R. I., on Blackstone River; chartered 1867 and 1888. It has extensive cotton and woolen manufactures, and an excellent water power. Pop., 1890, 20,830.

Woorali. See CURARA.

Wooster, DAVID, 1710–1777. Col. 3d Conn. 1755; Brig.-gen. 1758 and 1775; active in the French war and at Ticonderoga; killed at Danbury, Conn.—His grandson, CHARLES WHITING, 1785–1848, was a captain in the Chilian navy, and Rear-admiral 1829.

Wooster, UNIVERSITY OF. At Wooster, O.; opened 1870 under Presbyterian patronage; co-educational. It has 14 professors, 7 assistants, 378 collegiate and 145 preparatory students.

Wootten Fire-Box. Form of locomotive fire-box, introduced by J. E. Wootten for burning pea-coal, culm, or buckwheat coal. It has an area of 64 sq. ft., to secure low rates of combustion, and extends sidewise over the engine frame, so that the cab has to be put in front of it to avoid excessive overhang, and the two fire-doors are close to the coal supply in the tender. Such engines give large weights on the drivers for traction and work with economy of fuel. See COMBUSTION, FIRE-BOX, and LOCOMOTIVE.

Worcester. County town of Worcestershire, on the Severn; seat of a bishop since 679. It has varied manufac-

Worcester, from the Severn.

tures, and a cathedral, rebuilt from 1084, restored 1857 and later. Here Cromwell defeated Charles II. Sept. 3, 1651. Pop., 1891, 42,905.

Worcester. City of W. co., Mass.; important railroad center, with extensive manufactures, principally of boots and shoes and iron and steel; irregularly planned, owing in part to the hilly character of its site; incorporated 1722, chartered 1848; seat of Clark Univ. Pop., 1890, 84,655.

Worcester, EDWARD SOMERSET, MARQUIS OF, ab.1601–1667. Royalist, imprisoned 1645 and 1652–54; Marquis 1646; in exile 1648–52; student and inventor, apparently much in advance of his age. *A Century of Inventions*, 1663, includes the steam-engine, said to have been then applied for raising water at Vauxhall.

Worcester, JOSEPH EMERSON, LL.D, 1784–1865. American author of a *Gazetteer*, 1817, and other works, eminently the well-known *Dictionary of the English Language*, 1860.

Worcester, NOAH, D.D., 1758–1837. Unitarian controversialist; founder Mass. Peace Society 1815; ed. *Christian Disciple* 1813–18, and *Friend of Peace* 1819–29.—His brother, SAMUEL, 1770–1821, pub. *Letters to W. E. Channing*, 1815, and a much-used edition of Watts' hymns with Appendix, 1818.

Worcester Polytechnic Institute. At Worcester, Mass.; chartered 1865, opened 1868. It offers 4-year courses in mechanical, civil, and electrical engineering, chemistry, and general science. It has, 1897, 30 instructors and 221 students.

Word. 1. Logos; title given to Christ by St. John. 2. In popular (not biblical) language. Scripture, as a divine means of communication to men. See PHILOLOGY.

Worde, WYNKIN DE, d. after 1535. Caxton's helper and successor 1491; printer of 408 books; improver of the art, as in type-cutting and introduction of title-papes.

Worden, JOHN LORIMER, U.S.N., 1818–1897. Commander of the *Monitor* in her conflict with the *Merrimac*, March 9, 1862; Captain 1863, Commodore 1868; superintendent U. S. Naval Academy 1870–74; Rear-admiral 1872; retired 1886.

Wordsworth, CHRISTOPHER, 1774–1846. Brother of the poet; Master of Trinity Coll., Cambridge, 1820–41; compiler of *Christian Institutes*, 4 vols., 1837; *Ecclesiastical Biography*, 6 vols., 1810.—His son, CHARLES, D.D., D.C.L., 1806–1892, became Bp. of St. Andrews 1852. *Unity*, 1886; *Annals of my Life*, 1891–93.—His brother, CHRISTOPHER, D.D., 1807–1885, Archdeacon of Westminster 1865, Bp. of Lincoln 1868, edited the Greek N. T. 1856–60, and English *Bible with Notes*, 1864–70, and was a prolific author. *Theophilus Anglicanus*, 1843; *Inspiration of the Bible*, 1861. His *Holy Year*, 1862, contains some valuable and widely-used hymns.—His son, JOHN, D.D., b.1843, became Bp. of Salisbury 1885.

Wordsworth, WILLIAM, D.C.L., 1770–1850. English poet, resident in the Cumberland lake region—at Grasmere 1799–1813, and thenceforth at Rydal Mount; Poet Laureate 1843. His *Lyrical Ballads*, 1796, by their unpretentious simplicity, called forth much ridicule: a preface to the 2d edition, 1800, set forth his peculiar views. *The Prelude*, written 1799–1805, pub. 1850, is an autobiographic fragment in blank verse. *The Excursion*, 1814, is philosophic and descriptive. His later poems take a wider range of topics and style: some of them are among the

William Wordsworth.

noblest in the language. They are marked by deep love of nature and humanity, and by the "energetic and profound treatment of moral ideas." He had no sense of humor, no capability of lightness: no poet is more unequal. Popular recognition came to him slowly; but his influence on literature has been great, and chiefly in the way of liberation and uplifting.—His gifted sister, DOROTHY, 1771–1855, was an important element in his life, and a model of sympathy and devotion. *Journal in Scotland*, 1874.

Work. Result of producing some effect upon a body which is the subject of an applied force. As no effect is produced unless the point of application of the force moves, the work done is proportional not only to the magnitude of the force but to the distance through which it moves, or W=Fs. When work is done upon a body, it imparts to it an amount of energy which is exactly equal to the work done. The units of work are then the same as those of energy; viz., the foot-pound, foot-poundal, gram-centimeter, and erg.

Work, HENRY CLAY, 1832–1884. Conn. writer of war songs and other popular lyrics.

Working Stress. Stress that can be safely put on a member of a structure; equal to the ultimate strength divided by the assumed factor of safety. Thus, for timber in tension the ultimate strength is 10,000 lbs. per sq. in., but the working stress should be only ab. $\frac{1}{10}$ of this.

Work in Machines. Product of a force acting through a space. If the force acts through no path, as when a weight is supported, no work is done. The work is the same, if the product of path and force is constant, whether the force is large and path small, or the force small and path large. In any machine, the work of power and resistances are always equal to each other, over extended intervals.

Works, ADVANCED. See ADVANCED WORKS.

Works, DETACHED. See ADVANCED WORKS.

Works, FIELD. See FIELD WORKS.

Workshop Acts. See FACTORY LAWS.

World. See EARTH, SEA, and UNIVERSE.

World, POPULATION OF THE. Ernest Behm estimated this at 1,350,000,000 in 1866; 1,456,000,000 in 1880; 1,434,000,000 in 1882. This apparent loss of 22,000,000 in two years was due to greater accuracy in statistics. In connection with Herman Wagner, Behm edited *Population of the Earth*, 1872, and seven successive editions. In 1891 the eighth edition was prepared by Wagner and A. Supan, which estimates the population at 1,479,729,000, showing an increase of 45,729,000 since 1882, for which reasonably exact figures were obtained for 57 per cent. In 1880 actual census returns were obtained for only 44 per cent. Owing to the difficulties of obtaining accurate statistics, the estimate may be 75,000,000 at variance with the truth.

	Area, sq. m.	Population.	Pop. sq.m.
Europe (without Nova Zembla, Iceland and Atlantic Islands) . .	3,756,860	357,379,000	94
Asia (without the Polar islands) .	17,530,686	826,954,000	47
Africa (without Madagascar and other islands).	11,277,364	163,953,000	14
America (without the Polar regions)	14,801,402	121,713,000	8
Australia (with Tasmania) . . .	2,991,442	3,230,000	1
Oceanic Islands	733,120	7,420,000	10
Polar Regions.	1,730,810	80,000	—
	52,821,684	1,479,729,000	

World's Fairs. The chief international exhibitions have been those of London 1851 and 1862, Paris 1855, 1867, and 1878, Vienna 1873, Philadelphia 1876, Paris 1889, and Chicago 1893. See EXPOSITIONS, INTERNATIONAL.

Wormeley, KATHARINE PRESCOTT, b. 1832 in England. American translator of Balsac, 1886–97, and of Molière, 1895.

Wormley, THEODORE GEORGE. M.D., LL.D., 1826–1897. Prof. Columbus, O., 1852–77; Univ. Pa. 1877; writer on chemistry and toxicology.

Worms. Ancient town of Hesse-Darmstadt, on the Rhine; destroyed by Attila ab. 450; taken and burned by the French 1689, its cathedral, rebuilt ab. 1100, escaping. Many diets met here, especially that which heard Luther 1521; and here a treaty was signed Sept. 23, 1743, between England, Austria, and Sardinia.

Worms Cathedral.

Worms. See VERMES.

Wormseed. *Chenopodium anthelminticum.* Strong-smelling herb of the natural family *Chenopodiaceæ*, native of tropical America, widely distributed as a weed in temperate regions.

Wormseed Mustard. See MUSTARD, TREACLE.

Worm-Wheel. See SCREW-GEARING.

Wormwood. *Artemisia absinthium.* Bitter and aromatic perennial herb of the Composite family, native of Europe, cultivated and naturalized in waste grounds in America. The liqueur ABSINTHE (q.v.) is derived from it.

Wormwood (*Artemisia absinthium*).

Wormwood, ROMAN. See HOGWEED.

Wornum, RALPH NICHOLSON, 1812–1877. English art critic, Keeper and Sec. National Gallery from 1853. *Hist. Painting*, 1846; *Ornament*, 1856; *Epoch of Painting*, 1864; *Holbein*, 1867.

Worsaae, JENS JACOB ASMUSSEN, 1821–1885. Prof. Copenhagen 1854; Minister of Education 1874–75. *Antiquities of Denmark*, 1843, tr. 1849; *Danes in England*, 1851, tr. 1852; *Primitive History of the North*, 1881, tr. 1886.

Worship. Honor paid to a divine being; with Jews and heathens, largely in the form of sacrifices; among Christians, prayer and praise, spoken or sung, accompanied by Scripture-readings and sermons, and culminating in the Eucharist.

Worsley, PHILIP STANHOPE, 1832–1866. English poet; tr. Homer 1861–65.

Worsted. Thread spun of wool, which has been combed, and which, in spinning, has been twisted harder than ordinary. It is used for knitting and weaving.

Wörth. Village of Alsace; scene of defeat of the French under MacMahon by the Germans under the Crown Prince after a desperate and bloody battle lasting seven hours, Aug.

6, 1870. The French charged and broke the German lines eleven times, but lost 5,000 killed and wounded, and 55,000 prisoners. The German loss was ab. 8,000. Pop., 1890, 1,064.

Worth, CHARLES FREDERICK, 1825–1895. Ladies' tailor, b. in England, in Paris from 1846. His costumes long outranked all others.

Worth, JONATHAN, 1802–1869. N. C. legislator, opponent of nullification and secession; Gov. 1865–68.

Worth, WILLIAM JENKINS, U.S.A., 1794–1849. Captain 1814, Col. 1838, Brig.-gen. 1847; distinguished in the War of 1812, against the Seminoles in Fla. 1841–42, and especially at Monterey and in the later Mexican battles.

Worthen, AMOS HENRY, 1813–1888. Assistant on the Geological Survey of Ill. 1851, and of Ia. 1855; State Geologist of Ill. 1858–77; collector of Ill. fossils, and author of many reports and papers.

Worthen, WILLIAM EZRA, 1819–1897. Civil and hydraulic engineer; pres. Society of Civil Engineers 1887. *Drawing*, 1857–63; *Mechanics*, 1862.

Worthing. Fashionable watering-place in Sussex, Eng., 10 m. w. of Brighton. From its sheltered position, being encircled by the Downs on the n. and n. e., it has become a winter resort and a place for growing early fruits.

Worthington, HENRY ROSSITER, 1817–1880. American engineer and inventor, especially of pumps and pumping engines.

Worthington, THOMAS, 1773–1827. U. S. Senator 1803–7 and 1811–14; Gov. of Ohio 1814–18.

Wotton, SIR HENRY, 1568–1639. English poet, knighted 1604; Ambassador at Venice and elsewhere 1604–24; provost of Eton from 1625. His lyric, *Happy Life*, is famous. *Reliquiæ*, 1651.

Wotton, WILLIAM, D.D., 1666–1726. Precocious English scholar, prebendary of Sarum 1705–14. *Ancient and Modern Learning*, 1694.

Wounds. Breaks in the continuity of the soft parts caused by violence. Wounds may be classified as to their character as incised, where there is a cut from a sharp instrument; contused, when a blunt instrument bruises and breaks; punctured, when it is a stab from a pointed instrument; lacerated, where the tissues are torn. The treatment of wounds includes the stopping of hemorrhage, the cleansing, or rendering the wound aseptic, and the careful adjustment of the parts. In wounds of any severity, these requirements may be difficult to meet, and should be intrusted to trained hands.

Wouverman, PHILIP, 1619–1668. Dutch painter of cavalry combats, hunting scenes, and landscapes with equestrian figures; artist of great distinction.—His brothers, PIETER, 1623–1682, and JAN, 1629–1666, were less gifted.

Philip Wouverman.

Wouverman, SIMON VAN, 1690–1743. Flemish writer on the La. and W. India Companies. His works were pub. 1752.

Wrack. See SCUD.

Wrangel, FERDINAND, BARON VON, 1796–1870. Russian Arctic explorer 1820–24; Gov. of Alaska 1829–34; Rear-admiral 1837. *Journal*, tr. 1837; *Expedition*, tr. 1840.

Wrangel, FRIEDRICH HEINRICH ERNST, GRAF VON, 1784–1877. Prussian general 1823, Field-marshal 1856; commander against the Danes 1864.

Wrangel, KARL GUSTAF, COUNT, 1613–1676. Swedish general, commanding in sundry campaigns against Danes, Germans, and Poles.

Wrangel, KARL MAGNUS, D.D., 1730–1786. Overseer of Swedish congregations in and near Phila., Pa. 1759–68.

Wrangel Island. Island in the Arctic Ocean, n. of e. Siberia; sought by F. Wrangel, discovered by Long 1855, explored 1881.

Wrangler. One who takes honors in mathematical examinations at Univ. Cambridge. The highest on the list is Senior Wrangler.

Wrasse. See ACANTHOPTERI and LABRIDÆ.

Wratislaw, ALBERT HENRY, b.ab.1822. English translator of Bohemian poems and prose.

Wraxall, SIR NATHANIEL WILLIAM, 1751–1831. M.P. 1780, Baronet 1813; historical writer. His *Memoirs*, 5 vols., 1815–36, were repub. 1884.

Wray, J. See RAY, J.

Wreck. Property cast by the sea on to land. At common law it belonged to the crown, unless claimed by the owner within a year and a day; in the U. S., it is matter of State regulation. A vessel which becomes unnavigable at sea, requiring repairs more than half its value, is termed a wreck. See FLOTSAM, JETSAM, and LIGAN.

Wrede, KARL PHILIPP, 1767–1838. Bavarian general, who fought for the French 1805–12, and against them 1799–1800 and 1813–15; Count of the Empire 1809; defeated at Hanau 1813; Prince and Field-marshal 1815.

Wren, SIR CHRISTOPHER, LL.D., D.C.L., 1632–1723. Prof. of Astronomy at Oxford 1661; architect of St. Paul's, London, 1675–1710, and of many other notable buildings; knighted 1672; Pres. Royal Society 1680; M.P. 1689; Surveyor-gen. of repairs at Westminster Abbey 1698.

Wrens (*Troglodytes* and allied genera). Small dentirostral birds with short rounded wings, and short tail carried erect. The Wren family, *Troglodytidæ*, includes 60 species in the New World alone. *T. parvulus* is the common European wren. *T. hiemalis*, the White Wren of America, remains throughout the year, but *T. aëdon*, the House Wren, migrates in Oct. The latter is very variable in coloration.

Wrestling. Sport of marked antiquity, consisting of a contest between two individuals, each striving to throw the other to the ground. There are, however, forms of Japanese and Chinese wrestling in which the object is to force the opponent out of a set space. The principal varieties of modern wrestling are known as the Græco-Roman, where the hold is confined to the waist and above; the Collar and Elbow, which is sometimes wrestled in harness and in which the holds are as indicated in the name; and the Catch-as-catch-can, where any grip is permitted.

Japanese Wrestlers.

Wright, AMBROSE RANSOM, 1826–1872. Col. 3d Ga. 1861, Brig.-gen. C.S.A. 1862, Major-gen. 1864.

Wright, ARTHUR WILLIAMS, b.1836. Prof. of Physics at Yale 1872; author of many papers.

Wright, BENJAMIN, 1770–1842. Engineer of Erie and other canals.

Wright, BENJAMIN HALL, 1801–1881. American engineer, long in Cuba; introducer of steam on canal boats.

Wright, CARROLL DAVIDSON, b.1840. U. S. Commissioner of Labor 1885; prof. R. C. Univ., Washington, 1895. *Reports Mass. Bureau of Statistics of Labor*, 15 vols., 1873–88; *Census of Mass.* 1887–88; *Strikes*, 1887; *Industrial Evolution*, 1895.

Wright, CHARLES HENRY HAMILTON, D.D., b.1836. Dublin pastor; prolific writer. *Zachariah*, 1879; *Ecclesiastes*, 1883; *Introduction to O. T.*, 1891.

Wright, CHAUNCEY, 1830–1875. Mathematician of Cambridge, Mass., eminent in metaphysics. *Philosophical Discussions*. 1877.

Wright, ELIZUR, 1804–1885. American journalist, reformer, and writer on insurance. Tr. La Fontaine's *Fables* 1841.

Wright, FANNY, 1795–1852. Scottish-American lecturer and philanthropist; founder of a negro colony at Memphis, Tenn., 1827. She became Mme. d'Arusmont 1838. *Society in America*, 1821; *Free Inquiry*, 1829.

Wright, GEORGE, U.S.A., 1803–1865. Active in the Seminole and Mexican wars; Captain 1848, Col. 1855; Brig.-gen. U. S. Vols. 1861, commanding on the Pacific.

Wright, GEORGE FREDERICK, D.D., LL.D., b.1838. Prof. Oberlin since 1881; assistant 1881 on Pa. Geological Survey, where he traced the terminal moraine, as later through Ohio. His later work has been chiefly on Glacial Geology.

Wright, HENDRICK BRADLEY, 1808–1881. M.C. from Pa. 1853–55, 1861–63, and 1877–81. *Labor*, 1871.—His nephew, HARRISON, 1850–1885, was of note as an antiquarian.

Wright, HENRY CLARKE, 1797–1870. American lecturer and writer against war and slavery.

Wright, HORATIO GOVERNEUR, U.S.A., b.1820. Brig.-gen. U. S. Vols. 1861, Major-gen. 1862–66, serving chiefly in Va.; Brig.-gen. and Chief of Engineers 1879–84.

Wright, SIR JAMES, ab.1714–1785. Chief-justice of S.C. 1760; Gov. of Ga. 1764–75 and 1779–83; Baronet 1772.

Wright, JOSEPH ("OF DERBY"), 1734–1797. English painter, mostly of portraits; noted for his use of artificial lights.

Wright, JOSEPH ALBERT, 1810–1867. M.C. 1843–45; Gov. of Ind. 1849–57; U. S. Minister to Prussia 1857–61 and from 1865; Senator 1862–63.

Wright, JOSEPH JEFFERSON BURR, M.D., 1800–1878. Surgeon U.S.A. 1833–76; active in the Mexican war, and in organizing hospitals 1861–62.

Wright, MARCUS JOSEPH, b.1831 in Tenn. Brig.-gen. C.S.A. 1862–65.

Wright, ROBERT, ab.1765–1826. U. S. Senator 1801–6; Gov. of Md. 1806–9; M.C. 1810–17 and 1821–23.

Wright, ROBERT EMMET, 1810–1886. Writer and editor of law-books. *Pa. Reports*, 14 vols., 1861–66.

Wright, SILAS, 1795–1847. M.C. 1827–29; Comptroller of N. Y. 1829–33; U. S. Senator 1833–44; Democratic leader. As Gov. of N. Y., 1844–46, he suppressed the anti-rent disturbances.

Wright, THOMAS, 1809–1884. Scottish paleontologist, active near Cheltenham, Eng.; describer of the Jurassic and Cretaceous *Echinodermata*.

Wright, THOMAS, 1810–1877. English antiquarian; editor of old texts, and prolific historical writer. *Biographia Literaria*, 1842–46; *Hist. Ireland*, 1848–52; *Uriconium*, 1872.

Wright, WILLIAM, 1794–1866. M. C. from N. J. 1843–47; U. S. Senator 1853–59 and from 1863.

Wright, WILLIAM, LL.D., 1830–1889. Prof. Dublin 1856, Cambridge 1870; editor of Arabic works.

Wright, WILLIAM ALDIS, b. ab.1836. English editor of Shakespeare, Bacon, and other texts.

Wrist. See CARPUS.

Wristdrop. Paralysis of the muscles of the forearm induced by lead poisoning.

Writ. Written mandate from a court to an officer.

Writer's Cramp. See NEUROSIS.

Writers to the Signet. Corporation of Scottish lawyers, who alone can draw up crown writs. Their privileges were formerly more extensive.

Writing. Art of recording ideas by the means of letters and characters formed on paper, parchment, stone, or other material. Pictures are considered to be the first essay toward writing. The most ancient remains of writing are upon hard substances, such as stones and metals, used by the ancients for edicts and matters of public notoriety. Hermes is said to have written a history of the Egyptians, and to have been the author of the hieroglyphics 2112 B.C. It is said to have been taught to the Latins by Europa 1494 B.C. Cadmus brought the Phœnician letters into Greece 1493 B.C. The commandments were written upon two tablets of stone 1491 B.C., according to Usher. The Greeks and Romans used wax table-books long before papyrus was known. See ALPHABET, CUNEIFORM WRITING, DIPLOMATICS, HIEROGLYPHICS, INSCRIPTIONS, PAPYRUS and RUNES.

Writing Machines. See TELEGRAPH and TYPEWRITER.

Wrongs. Violations or infractions of another's rights.

Wronskian. Determinant, based upon n functions of a single variable, whose elements are these functions and their successive differentials. Each column comprises one function and its successive differential coefficients: each row comprises the differential coefficients of the n functions of the same order.

Wrought-iron Pipe. One foot in length, having its interior diameter d inches and its exterior diameter D inches, will weigh 0 2614 (D—d)(D+d) lbs. For steel pipe add two per cent.

Wrought-Iron, STRENGTH OF. In both tension and compression, the average ultimate strength is ab. 50,000 lbs. per sq. inch. See STRENGTH OF MATERIALS.

Wry-Neck (JYNX). Bird of the Woodpecker family, but having soft tail feathers and nostrils partly hid by membrane. *J. torquilla* is widely distributed in the Old World; it is a little

Wry-Neck (*Jynx torquilla*).

larger than a sparrow, resembles a woodcock in coloration, feeds on ants, lays 6 to 10 eggs in holes in trees, and if these are taken will lay more up to 40. It is named from its habit of twisting its head and neck snake-like when alarmed.

Wuhu. Chinese treaty port since 1876, 55 m. s. e. of Nanking on an affluent of the Yang-tse-kiang, ab. 4 m. from the main stream. It is noted throughout China for its red cord; also for cutlery and other articles in steel. Pop. 100,000.

Wulfenite. $PbMoO_4$ Natural lead molybdate, tetragonal in crystallization, usually yellow, and found in association with other ores of lead.

Wulfram, ST., 650–720. Missionary to Frisia ab.684–689; Bp. of Sens 682.

Wulfstan, ab.1007–1095. Bp. of Worcester 1062; only prelate not displaced by William the Conqueror. Supposed author of part (from 1034) of the *Anglo-Saxon Chronicle*.

Wundt, WILHELM MAX, b.1832. Prof. Leipzig 1874; writer on physiology and psychology.

Wupper. River of Prussia, flowing past Barmen and Elberfeld and entering the Rhine below Cologne; not navigable; length 40 m.

Wurmser, DAGOBERT SIGMUND, GRAF VON, 1724–1797. Austrian general, defeated by Bonaparte in Italy 1796.

Wurtemburg. Kingdom of s.w. Germany, between Bavaria and Baden; area 7,529 sq. m.; held by Rome ab. 85–210; governed by counts 760–1495, then by dukes; much injured in the Thirty Years' War, and by French invasion 1688–92; made a kingdom by Napoleon 1806. It received a constitution 1819, sided with Austria 1866, bore part against France 1870, and became a portion of the German Empire. Capital, Stuttgart; pop., 1890, 2,036,522, mostly Protestants.

Wurtz, CHARLES ADOLPHE, 1817–1884. Prof. Paris 1854; Senator 1881. *Chemical Philosophy*, tr. 1867; *Dict. de Chimie*, 5 vols., 1868–78; *Atomic Theory*, tr. 1880.

Wurtz, HENRY, b.1828. American chemist, author of many papers.

Wurtzite. ZnS. Mineral of the same chemical composition as sphalerite, but crystallizing in the hexagonal system.

Wurzburg. City of Bavaria, on the Main; ruled by its bishops till 1803; their palace dates from 1720–44; their small

Wurzburg.

coitage is abundant. The university, founded 1582, has ab. 75 teachers and 1,500 students, largely in medicine. Pop., 1890, 60,844.

Wuttke, HEINRICH, 1818–1876. Prof. Leipzig 1848; historian of Silesia 1842–47. *Entstehung der Schrift*, vol. i., 1872.

Wuttke, KARL FRIEDRICH ADOLF, 1819–1870. Prof. Berlin 1854, and Halle 1861. *Geschichte des Heidenthums*, 1852–53; *Christian Ethics*, 1860–62, tr. 1873.

Wyandots. Tribe connected with the Iroquois. A few remain in I. T. and Kan.

Wyant, ALEXANDER H., 1836–1892. American landscape painter. N. A. 1869.

Wyatt, SIR FRANCIS, ab.1575–1644. Gov. of Va. 1621–26 and 1639–42.

Wyatt, JAMES, 1746–1813. English architect, builder of Beckford's Fonthill Abbey, Wiltshire, Eng.

Wyatt, SIR MATTHEW DIGBY, 1820–1877. English architect, knighted 1869. *Industrial Arts*, 1851; *Metal-work*, 1852; *Fine Art*, 1870; *Note-book in Spain*, 1872.

Wyatt, RICHARD, 1795–1850. English sculptor.

Wyatt, SIR THOMAS, 1503–1542. English lyric poet, knighted 1536. His works, collected 1557, are largely sonnets and satires. —His son, SIR THOMAS, ab.1521–1554, rose against Queen Mary, and was beheaded.

Wycherley, WILLIAM, 1640–1715. English author of a few prose comedies, notable for wit and grossness, written ab.1659–71, produced 1672–77, pub. 1712. *The Plain Dealer*, 1665–77, is the best, and procured his release from prison and a pension 1686.

Wycliffe. See WICLIF.

Wycliffe College. At Toronto, Can.; theological school, founded 1779; affiliated with Toronto Univ.

Wye. Branch of the Severn, rising in Wales, and flowing 150 m. e. and s.; noted for beauty.

Wyeth, JOHN ALLAN, M.D., b.1845 in Ala. Prof. in New York 1881. *Surgery*, 1879–87.

Wyeth, NATHANIEL J., 1802–1856. Pioneer, in Oregon from 1835.

Wykeham. See WILLIAM OF WYKEHAM.

Wylie, JAMES AITKEN, LL.D., 1808–1890. Prof. Edinburgh Prot. Inst. from 1860; voluminous writer. *Hist. Protestanism*, 1874–77; *Hist. Scottish Nation*, 1886.

Wylie, ROBERT, 1839–1877. Anglo-American painter, in Brittany from 1864.

Wylie, SAMUEL BROWN, D.D., 1773–1852. Reformed Presb. pastor in Phila. from 1802, and prof. 1809–51. *Greek Grammar*, 1838; *Life of A. McLeod*, 1855.

Wyllys, GEORGE, ab.1570–1645. Gov. of Conn. 1642.—His grandson, GEORGE, 1710–1796, was Sec. of Conn. 1734–94.—His son, SAMUEL, 1739–1823, was Col. 1776–82, and Sec. of Conn. 1796–1809.

Wyman, JEFFRIES, M.D., 1814–1874. Prof. Harvard from 1847; pres. Boston Society of Natural History 1856–70; active investigator, and of high authority as a comparative anatomist; author of many papers.

Wyman, ROBERT HARRIS, U.S.N., 1822–1882. Commander 1862; active on the Atlantic coast; Captain 1866; chief hydrographer 1869–77; Commodore 1872, Rear-admiral 1878.

Wynants, JAN, ab.1615–ab.1680. Dutch landscape-painter.

Wynkin de Worde. See WORDE.

Wynkoop, HENRY, 1737–1816. In Congress from Pa. 1779–82; M.C. 1789–91.

Wynn, RICHARD, ab.1750–1813. S. C. officer 1775–82; M.C. 1793–95 and 1809–13.

Wynne, EDWARD, 1734–1784. English lawyer. *Eunomus*, 1767.

Wyntoun, ANDREW OF, ab.1350–ab.1425. Scottish versifier. His *Orygynale Cronykil* extends to 1406, and was pub. 1795 and 1872–79.

Wyoming. State between Montana and Colorado, nearly rectangular; area 97,890 sq. m. The e. part consists of undulating plains. The central and s.w. portion is level and plateau-like; in the s. and n.w. are ranges of mountains, reaching altitudes of 14,000 ft. The average elevation is 6,400 ft. The climate is arid and subject to extremes of cold. The principal industries are cattle and sheep-raising and coal-mining, the latter mainly in the s.w. part. The capital is Cheyenne. W. was organized as a Territory 1868, and became a State 1890. Pop., 1890, 60,705. (See Map, page 1681.)

Wyoming Massacre. In Luzerne co., Pa., on the Susquehanna, near Wilkesbarre, July 3–5, 1778, by British, In-

Descent into Wyoming Valley.

dians, and Tories, who slew over 200; celebrated by Campbell in *Gertrude of Wyoming*. The region was settled ab.1762, and was claimed by Conn. till 1788.

Wyoming, UNIVERSITY OF. At Laramie; opened 1887. It comprises colleges of arts and of agriculture, a normal school, schools of mechanics and mines, and the State Experiment Station. It has 11 professors, 3 tutors, and 118 students.

Wyre Forest. In the n. e. of Worcestershire, Eng., forming the s. part of the Severn coalfield.

Wyss, JOHANN RUDOLF, 1781–1830. Prof. Berne 1806; ed. *Alpenrose*, 20 vols., 1811–30. His *Swiss Family Robinson*, 1812–13, is famous.

Wythe, GEORGE, LL.D., 1726–1806. Delegate to Congress 1775–76; signer of the Declaration of Independence; Va. judge 1777; law prof. at William and Mary Coll. 1779–89; Chancellor of Va. from 1786; member U. S. Constitutional Convention 1787.

Wyttenbach, DANIEL, 1746–1820. Prof. Amsterdam 1771, and Leyden 1799–1816; ed. of Plutarch's *Moralia* 1795–1830; biographer of Ruhnken 1800.—His wife, JOHANNA (GALLIEN), m.1818, d.1830, pub. *Théagène*, 1815, and *Alexis*, 1823.

Wyttenbach, THOMAS, D.D., 1472–1526. Swiss reformer, teacher of Zwingli; prof. Basel 1505, canon at Berne 1515, m.1524.

Wyvern. Fictitious monster, occurring in heraldry. It resembles a dragon, but has only two legs and feet, which are like those of the eagle.

X

X, Axis of. Axis of abscissas in bilinear co-ordinates; so called because measurements on or parallel to it are indicated by X's. It is usually, though not necessarily, the first to be fixed, and is commonly drawn horizontally and made the initial line of the axial angle.

Xanthic Acid. $S{:}C{:}OC_2H_5.SH$. Oil with a bad odor; prepared by treating potassium xanthate with a mineral acid. Potassium xanthate is a beautiful colorless crystalline salt, very soluble in water. It is prepared by the action of alcoholic potash upon carbon disulphide, and used in cotton printing and as a vermicide.

Xanthine. $C_5H_4N_4O_2$. Xanthic oxide. Yellow coloring matter of several flowers; crystalline powder, formed by the action of nitrous acid upon guanine; it occurs in urinary calculi, pumpkin seeds, tea, and yeast.

Xanthochroi. Fair-skinned group of the Iranian or Caucasian race. The Greek, Slavonic, Romanic, Teutonic, Celtic and Scandinavian peoples are examples. More or less of a dark or melanochroic element has been introduced into the groups named, especially the Celtic and Romanic. See Man.

Xanthophyll. Yellow substance occurring in the cells of leaves, etc., to which is principally due the autumnal coloration of foliage; also known as Phylloxanthin.

Xanthoproteic Acid. Formed by the action of nitric acid upon albuminoid substances. The yellow substance which stains the fingers when nitric acid comes in contact with them. The stain turns an orange-red upon applying an alkali.

Xanthorhamnin. $C_{48}H_{66}O_{29}$(?). Yellow coloring matter obtained from Persian berries. It dyes fabrics, mordanted with iron-salts, black.

Xanthosiderite. $Fe_2O_3,2H_2O$. Variety of yellow ocher or bog ore, consisting of ferric oxide combined with ab. 18 per cent of water.

Xanthus. Ancient city of Lycia, s.w. Asia Minor; near the Mediterranean; taken by Persians 546 B.C.

Marble Monument in Xanthus.

Xantippe. Wife of Socrates; represented in tradition as of shrewish temper, but perhaps maligned.

Xavier, Francis, St., 1506–1552. Spanish Jesuit, most illustrious of Loyola's first associates 1534; missionary in India, Japan, and China from 1541; supposed author of the noble hymn, *O Deus, ego amo te;* canonized 1623; patron saint of India 1747.

Xebec. Small felucca-looking vessel, common to the Mediterranean Sea, carrying three masts with lateen, and sometimes square, sails.

Xenocrates, 396-314 B.C. Greek philosopher, successor of Speusippus 339 as head of the Academy at Athens. His writings are lost.

Xenogamy. Fertilization of flowers by pollen from others, borne on different plants.

Xenophanes, 6th cent. B.C. Greek philosopher and poet, founder of the Eleatic school and of philosophic monotheism; strong opponent of anthropomorphism. Fragments remain.

Xenophon, ab.444–ab.359 B.C. General in the service of Cyrus the Younger, who, after Cyrus' death at Cunaxa and the capture of the other commanders, led the 10,000 back to Greece. He left a number of works upon history, philosophy, and agriculture. The most celebrated are: the *Anabasis*, which recounts his own campaign in Persia, 401–399 B.C.; the *Hellenica*, which continues Thucydides' Greek history to the battle of Mantinea, 362 B.C.; the *Cyropædia*, and the *Memorabilia*, or memoirs of his master, Socrates. An adherent of Sparta, he was banished from Athens, and lived in Elis 387–371, and then at Corinth.

Xenotime. Y_2O_3,P_2O_5. Rare mineral, consisting essentially of yttrium phosphate, crystallizing in hexagonal forms and somewhat resembling zircon.

Xeres. See Jerez.

Xerez, Francisco de, 16th cent. Companion of Pizarro, and historian of the conquest of Peru.

Xerophilous. Plants especially adapted to growth in dry regions. Among the most characteristic are *Cacteæ*.

Xerxes, ab.519–465 B.C. King of Persia from 485 B.C. He started from Sardis to subjugate Greece 480; crossed the Hellespont by a bridge of boats, with an army said to number over

Ruins of Xerxes' Palace at Persepolis.

2,640,000, with as many attendants; was delayed at Thermopylæ by Leonidas and his Spartans; burned Athens; witnessed the defeat of his fleet at Salamis; and retreated. He was murdered by Artabanus.

Ximenes de Cisneros, Francisco, 1436–1517. Spanish Franciscan 1482; Isabella's confessor 1492; Abp. of Toledo 1495; Chancellor of Castile and Grand Inquisitor 1505; Regent 1506 and 1516; Cardinal 1507; leader of an expedition against Barbary pirates 1508; persecutor of Moors and heretics; patron of learning; sincere ascetic and able statesman, wielding immense power with vigor and fanaticism.

Ximenes de Quesada. See Quesada, Gonzalo Ximenez de.

Xingu, or Chingu. River of Brazil, joining the Amazon near long. 52° W., rising in the Matto Grosso plateau, and flowing ab. 900 m. in a southern direction. It is full of rapids and falls except near its mouth.

Xiphias (Swordfish). Its upper jaw is produced into a sword-shaped organ, with which it is enabled to cut up many fish as they swim in schools, especially mackerel. Swordfish

are caught with harpoons. A single fish may attain a weight of eight hundred lbs. One or two million lbs. of this fish are

Swordfish (*Xiphias velifer*).

prepared for the market by the New England States annually. See ACANTHOPTERI.

Xiphisternum. Posterior end of the breast bone.

Xiphoid Whale. See ODONTOCETI.

Xiphosura. See PŒCILOPODA.

X-Rays. See ROENTGEN RAYS.

Xylem. Woody portion of a fibro-vascular bundle.

Xylem-Plate. Portion of xylem included between two medullary rays.

Xylenes. $C_6H_4(CH_3)_2$. Dimethylbenzenes; liquid hydrocarbons, known in three forms, all present in coal-tar, from which commercial xylene is prepared. Orthoxylene boils at 142° C., metaxylene at 137° C., and paraxylene at 137° C. They are used as solvents for rubber, and for making the xylidines.

Xylenols. $C_6H_3{:}{,}OH{,}(CH_3)_2$. Phenols derived from the xylenes; made by fusing the xylene sulphonic acids with caustic potash.

Xylidine Red. $C_{18}H_{14}N_2O_7S_2Na_2$. Sodium salt of the compound formed by the action of diazoxylidine upon β-naphtholdisulphonic acid; brown powder, soluble in water. It dyes wool red.

Xylidines. $C_6H_3 : NH_2.(CH_3)_2$. Bases prepared by the action of reducing agents upon the nitroxylenes. Six forms are known; five are liquids, one is a solid. They are used in the manufacture of coal-tar colors.

Xyloidin. $C_6H_8(NO)_2O_6$. Explosive product obtained by the action of nitric acid on starch; discovered by Braconnot 1832.—Also, some varieties of collodion prepared by the action of nitric acid on wood-cellulose.

Xylonite. See CELLULOID.

Xylophone. Musical instrument formed by suspending a series of strips of wood so that they are free to vibrate transversely when struck with a little wooden mallet. Each piece

Xylophone.

is of such dimensions as to sound with a known pitch. They are then arranged in a row, with the lowest notes at one end and the highest at the other. By striking the pieces in the proper order, melodies and other musical effects may be produced.

Xyridaceæ. Natural family of flowering plants, of the class *Angiospermæ* and sub-class *Monocotyledons*, comprising 2 genera and 50 species, widely distributed throughout the warmer parts of the earth; called the Yellow-Eyed-Grass family.

Xysythrus, or XISUTHRUS. Name given by Berosus to the hero of the Deluge, in the Babylonian version of the story.

X. Y. Z. Correspondence. Name given to the dispatches of Marshall, Pinckney and Gerry, who were sent to France as commissioners 1797, which contained the insulting demands of Talleyrand and the other Directors. In the congressional copies X. Y. and Z. were substituted by President Adams for the names of Talleyrand's emissaries.

Y

Y, Axis of. Axis of ordinates in the bilinear systems; so called because measurements on or parallel to it are indicated by y's.

Yablonoi Mountains. Range of e. Siberia, offshoot from the great elevated region of central Asia, separating the basin of the Amoor from that of the Lena. Some peaks are 7,000 ft. high.

Yacht. Pleasure vessel, with more or less deck, with sail, steam, naphtha, electricity or other motive power, in size from the small sailboat up to the large steam-yacht 250 ft. in length. Of sailing boats the American Catboat is the simplest. It is a broad, shallow boat, with a centerboard, a single mast in the bow, with a large sail on a boom and gaff. The centerboard is made of wood or metal, pivoted at one end, and projects through the bottom of the boat on the center line, affording stiffness and retarding drift to the leeward; it was patented as a lee-board by Jacox Swain of N. J. 1811. The Sloop is of Dutch origin and usually has a centerboard. The Fin-keel has a fixed metallic fin attached to the keel. The Cutter is a keel boat, the name, however, applying to the rig; much used since 1885. These are all single-masted. Of two-masted vessels, the Yawl has sloop rig on the foremast and a triangular or sometimes a lug-sail on a smaller mast abaft the rudder-head. The Ketch has a higher mizzenmast than the yawl, set forward of the rudder-head, with a larger sail. The Topsail Ketch has a square sail on the mainmast. The Lugger has the sail on a yard, slung at the middle to the mast. The Sharpie has a flat bottom, a centerboard, triangular or leg-o'-mutton sails, extended by a sprit across the masts. The Cat-Yawl has a double-cat rig. The schooner rig is used on larger yachts, 60 ft. and upward in length.

Previous to the present century no time allowances were made in races of yachts of different sizes and area of sails. Subsequently, a modification of the Builders' Old Measurement tonnage was adopted, as the Thames rule, in Great Britain. This takes into consideration the length and breadth of the hull, the depth being considered to bear a fixed relation to the breadth. This led to the building of narrow, deep yachts with large keels of lead for stiffness and large sails, which competed equally with broader and shallower vessels and smaller sail areas, to the disadvantage of the latter. In 1880 it was proposed by Dixon Kamp to combine length of water-line with sail area in square feet in rating, and in 1887 the present rule was adopted as follows: $\frac{L \times SA}{6{,}000} = R$. This gave greater latitude in the modeling of yachts.

In U. S. the tonnage rule was not adopted, but various rules, involving displacement, sail area, deck length, etc., were in use from 1850. The yachts built were broad and shallow, with square ends. In 1882 the Seawanhaka-Corinthian Yacht Club of New York formulated a rule for rating yachts, based on water-line length and sail area, which was somewhat altered in 1883 and which has been adopted by American clubs. This is length of water-line plus square-root of sail area, divided by 2, $\frac{L + \sqrt{SA}}{2} = R$.

The change of rating rules has modified the form of yachts; moderate beam has been supplemented by great depth, not of hull proper, but of a portion of the hull, which may be regarded as a fixed centerboard or a fin-keel. The application of the wave-line theory has modified the water-lines of the boats, and the plans are now first worked out on paper by professional designers.

Yachts are built of wood, iron, or steel; also composite, wood and iron. Those of wood are sometimes sheathed with sheet copper. The "Vigilant" had a steel frame with Tobin-bronze plates. Previous to 1846 stone ballast was used; lead was then introduced. In 1870 lead keels were used; that of the "Galatea" weighed 78 tons.

The dimensions of a few yachts are appended:

1820.—80 tons, 55 ft. water-line, 18 ft. beam, 10 ft. draught.

1847.—American centerboard sloop "Maria," 92 ft. water-line, 26½ ft. beam, 5½ ft. draught, 7,890 sq. ft. sail area, besides a topsail.

1851.—American keel schooner "America," 170 tons, 83 ft. water-line, 22½ ft. beam, 11½ ft. draught.

1873.—English yawl "Florinda," 125 tons, 85¾ ft. water-line, 19½ ft. beam, 11¾ ft. draught, 54 tons ballast, 8 tons on keel.

1885.—English cutter "Galatea," 90 tons, 87 ft. water-line, 15 ft. beam, 13 ft. draught, 78 tons ballast on trough keel.

1891.—American cutter "Gloriana," 45 ft. water-line, 13 ft. beam, 10 ft. draught, 4,000 sq. ft. sail area.

1893.—American centerboard, fin-keel type yacht "Vigilant," 87 ft. water-line, 127 ft. over all, 26 ft. beam, 14 ft. draught, steel frame, Tobin-bronze plates, 11,312 sq. ft. sail area.

1893.—English cutter "Valkyrie II.," 86.8 ft. water-line, 23 ft. beam, 17½ ft. draught, composite build.

1895.—American cutter, fin-keel type, "Defender," 90 ft. water-line, 23 ft. beam, 19 ft. draught.

1895.—English cutter, fin-keel type, "Valkyrie III.," 90 ft. water-line, 26 ft. beam, 20 ft. draught.

See Cutter, Half-Rater, Ice-Boating, Schooner, and Sloop.

Yachting. Pleasure boats were used in early times. True yachting originated in the seventeenth century and became an established sport in the nineteenth century. Charles II. of England gave much attention to the sport, and the first recorded race was between this king and his brother, Duke of York, 1662. The first sailing club was the Cork Harbor Water Club founded 1720; the Yacht Club at Cowes, Isle of Wight, founded 1812, became the Royal Yacht Club 1817 and the Royal Yacht Squadron 1833. The first yacht club in U.S. was the New York Yacht Club, founded by John C. and Edwin Stevens 1844. In 1850 there were not more than five steam yachts afloat. In Lloyd's Yacht Register, 1891, there were recorded 6,179 vessels of all nations; Great Britain 2,428 sailing yachts, 59,795 tons, and 788 steam yachts, 78,000 tons; British colonies 253, mostly sailing, 7,193 tons; France 296 sailers, 6,358 tons, and 180 steamers, 10,020 tons; Germany and Austria 303 sailers, 3,070 tons, and 24 steamers, 2,825 tons; America 1,164 vessels In 1851 George Steers built the schooner yacht "America" for John C. Stevens, and five other members of the N.Y.Yacht Club. This yacht was a great advance both as to form and proportions of hull and flat set of sails. Aug. 22, 1851, this yacht won a race around the Isle of Wight, in a fleet of nine cutters and eight schooners, and won the Queen's Cup, offered by the Royal Yacht Squadron. In 1857 this cup was intrusted to the N. Y. Yacht Club for international competition. There have since been nine international contests for the America's Cup, the last in 1895 between the American boat "Defender" and the English boat "Valkyrie III.," both being keel cutters. The first race was won by the American boat, in the second the English boat was disqualified, and the third her owner refused to sail. The eight preceding contests were won by American yachts.

Yak (Bos, or Pœphagus grunniens). Species of *Bovidæ* of the highlands of central Asia, size of a small ox, and having long horns that curve outward, then forward, and at the tips turn backward. It has a heavy fringe or mane of hair that nearly reaches the ground, growing on the shoulders and sides and including the bushy tail. The wild Yaks keep within the snow line and range to 20,000 ft. elevation. Curiously, they are black, but the domesticated varieties are of various colors,

even white, or black with the mane white. They are useful for their milk and hair, and are trained for plowing and riding.

Yak (*Bos grunniens*).

Yakuts. Turkish tribes of the Lena valley of Siberia, numbering ab. 200,000. They have strong Mongolian features, and great powers of endurance, practice stock-raising, but are mainly nomadic hunters. They are nominally Christians, but polygamy prevails extensively.

Yakutsk. Capital of the province of Y. in e. Siberia, 1,800 m. n.e. of Irkutsk, on a left bank branch of the Lena, Khatystakh. It has a great fair from June 22 to Aug. 13 (new style) with returns amounting to ab. 2¼ million dollars. It was founded as a Cossack station 1632, and is now the center of the fish, tallow and fur trade of n. Siberia.

Yale, ELIHU, 1649–1721. Anglo-Indian merchant, b. in Mass.; benefactor 1715–21 of the college which took his name.

Yale, LINUS, 1821–1868. American inventor of combination locks.

Yale University. Chartered 1701 as the collegiate school of Conn.; in 1716 removed from Saybrook to New Haven; named Yale College 1718, taking the name of a liberal benefactor; rechartered 1745; title changed 1887. It is organized in four departments: Philosophy and Arts (including the scientific school), Theology, Medicine, and Law. The theological school was founded 1822; degrees in theology were first conferred 1867. The medical school, organized 1812, came under the complete control of the corporation 1884. The scientific school, begun 1847 as a school of chemistry, was endowed by J. E. Sheffield 1860, and received the income of Conn. "land-grant" college 1863–92. There are, 1897, 122 professors, 115 assistants, and 2,495 students, of whom 227 are graduates, 1,237 in the college proper, 553 in the scientific departments, 104 in divinity, 138 in medicine, and 213 in law: the library contains 200,000 vols., with special collections aggregating 45,000 more. Women are admitted to the courses for the Ph.D. degree, and to the school of fine arts, founded 1864.

Yam (*Dioscorea sativa*): *a*, a flower; *b*, root.

Yam. Vines of the genus *Dioscorea*, natural family *Dioscoreaceæ*, natives of India, bearing large, starchy roots; much cultivated in tropical countries as food-plants. The N. American *D. villosa* has also a large root.

Yama. Hindu god of the dead, and king of the infernal regions.

Yamagata, ARITOMO, MARQUIS, b. 1838. Japanese general and reformer; Premier 1889–91, Minister of Justice 1891–93; Count 1894, Marquis 1895; prominent in the war of 1894–95.

Yamaji, MOTOHARU, b. ab. 1840. Japanese general, active in the Satsuma rebellion 1877; in command at Port Arthur 1894; Viscount 1895.

Yamaska River. River of the province of Quebec, Canada, rising in Brome Lake and emptying into Lake St. Peter, an expansion of the St. Lawrence. Length 100 m.

Yana. River of Siberia, e. of the Lena, flowing ab. 1,000 m., mostly n., to the Arctic Ocean.

Yancey, WILLIAM LOWNDES, 1814–1863. M. C. from Ala. 1844–47; zealous promoter of secession; Commissioner to Europe 1861, Confederate Senator 1862.

Yangtse-Kiang. Largest river of China. It heads in the Niu Shan Mountains in n. Tibet, and after a very circuitous course of 3,200 m. flows into the Pacific. Drainage area ab. 690,000 sq. m.

Yankee. Inhabitant of New England; term now applied by Europeans to a resident of the U. S.

Yankee Doodle. English tune of uncertain origin, probably ab. 1750, popular in the U. S. since ab 1776; first printed in Samuel Arnold's Opera, *Two to One*, London, 1784. The words of the American song were written 1755 by Dr. Schuckburgh, a surgeon in the army of Gen. Amherst, in the French and Indian war. The etymology and history of the word *Yankee* are doubtful. See NATIONAL HYMNS.

Yantic River. Stream of Conn., affording large water-power and uniting with the Shetucket at Norwich and forming the Thames.

Yapura. See JAPURA.

Yard. British standard of length or Imperial yard was fixed by act of Parliament 1855. It was enacted "that the straight line, or distance between the centers of the transverse lines, in the two gold plugs in the bronze bar deposited in the office of the Exchequer shall be the genuine standard yard at 62° F., and if lost it shall be replaced by means of its copies." This length is equal, as nearly as possible, to that of the best standards formerly used in England. Authorized copies have been deposited at the Royal Mint, under the care of the Royal Society, at the Observatory at Greenwich, and at the New Palace at Westminster. Should all these copies ever become unavailable, the standard yard can be reproduced from the length of a seconds pendulum which has been accurately determined at a station near London to be 99.413 cm., equal to 39.139 in. The yard is subdivided into three feet, and the foot into twelve inches. The American standard yard is a copy of the British, and is preserved in the Coast Survey Office, Washington, D.C.

Yard-Grass. See CRAB-GRASS.

Yards. Spars on which a vessel's sails are spread.

Yard's Off. Variety of Hide-and-Seek, in which the chaser stands at a certain spot where a stick is placed upon some support, and counts a certain number while the other players run off and conceal themselves. He then seeks them, and when he spies one calls out and runs to his yard. If he reaches it first, the player who has been discovered becomes a prisoner there; if the discovered one reaches it first, he throws it as far as he can and runs off again. The chaser must replace the stick or yard before he can resume his search for the others. At any time while he is searching, one of the hiders may rush in, and, reaching the yard, throw it, thus liberating all the prisoners who may have been caught. When all are discovered and made prisoners, the first one taken becomes the searcher.

Yarmouth. Town of Norfolk, Eng., on the Yare, near the North Sea; important from its herring fisheries. The estuary of the Yare, bordered on both sides by quays with a total length

The Quay, Yarmouth.

of 4 m., forms the harbor. It is one of the most frequented watering-places in Eng., having an excellent sandy beach and a handsome parade along the shore. Pop., 1891, 49,318.

Yarmuk. River of Syria; chief tributary of the Jordan, formed by the union of three head streams, one from the n. and two from the e. It enters the Jordan 4 m. below the Lake of Tiberias, and is the Hieromax of the ancient Greeks. Length 115 m.

Yarn. Spun thread, used in the weaving of cloth of different kinds. It varies in the material and the fineness to which it is spun. In order that uniformity may be insured, a pound of the material is taken as the standard, and this is divided into hanks or cuts. A hank of wool or cotton consists of 840 yards. A hank of linen yarn consists of 300 yards; and if it takes 25 of these hanks to make 1 pound: the yarn is called 25s. Grège yarn is spun of wool and silk, and combines the greatest strength with the utmost fineness.

Yaroslav, or JAROSLAV. Old town of Russia, on the Volga, 173 m. n.e. of Moscow. It has manufactures of linen, cotton, and silk. Pop., 1891, 80,336.

Yarrell, WILLIAM, 1784–1856. English zoölogist. *Hist. British Fishes*, 1835–36; *Birds*, 1839–43.

Yarriba. See YORUBA.

Yarrow. *Achillæa millefolium.* White-flowered herb of the Composite family, with finely dissected leaves; native of the n. hemisphere; frequently met as a wayside weed; known also as Milfoil.

Yarrow. Branch of the Ettrick, in s. Scotland; 25 m. long; celebrated by Scott, Wordsworth, and other poets.

Yassy. See JASSY.

Yates, EDMUND HODGSON, 1831–1894. Novelist; ed. London *World* from 1874. *Black Sheep*, 1866; *Recollections*, 1884.

Yates, JOSEPH CHRISTOPHER, 1768–1837. Judge N. Y. Supreme Court 1808–22; Gov. 1823–25.

Yates, RICHARD, 1818–1873. M.C. 1851–55: Gov. of Ill. 1860–64; U. S. Senator 1865–71. From him came U. S. Grant's commission as Colonel.

Yates, ROBERT, 1738–1801. Judge N. Y. Supreme Court 1776; Chief-justice 1790–98; member U. S. Constitutional Convention 1787.—His son, JOHN VAN NESS, 1779–1839, was N. Y. Sec. of State 1818–26, and pub. *Cases Adjudged*, 1811, and *Pleadings and Precedents*, 1837.

Yates, WILLIAM, D.D., 1792–1845. English Baptist, Missionary in India from 1815. *Sanskrit Grammar*, 1820, and *Dictionary*, 1846; *Hindustani Dictionary*, 1830.

Yavari. See JAVARY.

Yawl. Ship of war's boat, nearly of the same form as the pinnace, but smaller, and used to land men, etc. It is generally rowed with six oars.

Yawning. Modified respiratory movement which frequently accompanies a sensation of drowsiness. It consists of a deep inspiration drawn through a widely opened mouth, followed by a pronounced, often markedly audible, respiration.

Yaws. Contagious disease of the skin peculiar to the tropics. It is chronic in its nature, and characterized by dirty or bright red raspberry-like tubercles.

Yazoo Fraud. In 1795 Ga. sold some 35,000,000 acres to four companies for $200,000. The sale was soon nullified, and the lands ceded to the U. S. 1802; but purchasers brought suit, the U. S. Supreme Court decided in their favor 1810, and Congress voted $5,000,000 in 1814 to discharge these claims.

Yazoo River. In Miss., branch of the Mississippi, draining an extent of low, marshy, fertile land known as the Yazoo bottoms. Length 500 m., drainage area 13,936 sq. m., average flow 35,166 cu. ft. per sec.

Yeaman, GEORGE HELM, b.1829. M.C. from Ky. 1862–65; U. S. Minister to Denmark 1865–70. *Government*, 1870.

Yeamans, SIR JOHN, ab.1605–ab.1676. Leader of emigrants from Barbadoes to Carolina; Gov. 1665–67 and 1672–74.

Year and a Day. Period fixed by common law for various purposes; *e.g.*, one assaulted must die within such period, or the killing was not murder; the owner of a wreck or an estray must claim it within such period; execution on a judgment must issue within such time.

Year Books. Oldest English law reports, pub. annually. The first includes 1292–1307, in the reign of Edward I.

Yeardley, SIR GEORGE, ab.1580–1627. Gov. of Va. 1619–21 and 1626–27.

Year of Confusion. That preceding the adoption of the Julian Calendar, 45 B.C., when the beginning of the year was changed from March to January 1, making the year preceding 445 days in length.

Year of Release. In Israel, every seventh year, in which tillage was to be suspended and debts remitted. Only two are known to have been actually observed, 164–163 and 136–135 B.C.

Yeast. Minute unicellular plants of the class *Saccharomycetes*, which cause the vinous fermentation of saccharine fluids, breaking up the sugar into alcohol and carbon dioxide. Yeast cells are oval corpuscles of protoplasm inclosed in a cellulose

Bakers' and Brewers' Yeast (*S. cerevisiæ*) A, Single cell, one with two vacuoles; B, Chain of cells budding; C, Cell containing spores.

sac averaging $\frac{1}{2500}$ in. in diameter. They reproduce by buds, and under special conditions by endospores. There are 25 species. See BREAD, BEER, FERMENT, FERMENTATION, and WINE.

Yeast Powders. Mixtures of sodium bicarbonate with acid calcium phosphate, or with potassium bitartrate, or with burnt alum, in the form of powders, used as a substitute for yeast in leavening bread. They set free carbon dioxide.

Yeates, JASPER, 1745–1817. Judge Pa. Supreme Court from 1791. *Reports*, 1817–19.

Yeats, WILLIAM BUTLER, b.1865. Irish poet and novelist. *Secret Rose*, 1897.

Yedo. See TOKIO.

Yekaterinburg. See EKATERINBURG.

Yelk. See YOLK.

Yell, ARCHIBALD, 1797–1847. M.C. from Ark. 1835–39 and 1845–46; Gov. 1840–44; Col. 1846; killed at Buena Vista.

Yellata Falls. The last falls on the Congo, 25 m. above Viva and ab. 100 m. from its mouth.

Yellow-Cells, OF RADIOLARIA. Alga-like cells that apparently live parasitically or symbiotically (see SYMBIOSIS) in the outer layers of the protoplasm of Radiolarians.

Yellow Fever. Highly communicable fever of the subtropical regions, which formerly was occasionally epidemic further north in the late summer or early autumn. The poison of the disease is killed by frost. It is highly contagious, severe in its attack, and has a high mortality rate. It is dreaded in the Southern States, where it is frequently imported from the W. Indies or Central America. Sanitation can do much to prevent its spread, as has been demonstrated in several Southern cities where the introduction of a satisfactory sewage system and the employment of care in the prompt removal of garbage has prevented its spread in an epidemic form even when cases have been imported.

Yellow Fever Microbe. Prof. Giuseppe Sanarelli, an alumnus of the University of Siena, Italy, and Director of the Institute of Experimental Hygiene, Montevideo, Uruguay, in 1896 discovered the microbe of yellow fever, which he named *Bacillus Icteroides*. It has the form of a rod, with round ends, is .002—.004 mm. long and $\frac{1}{2}$ to $\frac{1}{3}$ this in diameter, and occurs in groups in the tissues and in pairs in cultures. It is an energetic poison and produces disease in most domestic animals excepting birds. It enters by every channel, even by respiration, and is found in the circulation and the tissues, effecting degeneration of the liver and uræmia. By repeated inoculation with the icteroid toxin, he has obtained serum, giving immunization, against experimental yellow fever, to animals. Injected into the thigh or forearm of man during the first period of yellow fever, it is fatal to the *Bacillus Icteroides*, but impotent against toxins produced by that microbe. Thus far it has been successful only in the early stages of the disease. The treatment is yet in the experimental stage.

Yellow Hammer (EMBERIZA CITRINELLA). Bunting found in Europe and w. Asia. It is fattened and eaten in Italy. The name is given to the flicker in the U. S.

Yellow Metal. See MUNTZ METAL.

Yellow Pigments. Yellow lakes, prepared from Persian

berries and quercitron bark are fugitive colors. Gamboge, and Indian yellow, prepared in India from camels' urine, are used in water-color painting, but have a tendency to fade. Ochers, cadmium yellow (cadmium sulphide), lemon yellow (barium chromate), and Naples yellow (basic lead antimoniate), are all permanent. All can be used as water-colors except the last named.

Yellow Prussiate of Potash. See POTASSIUM FERRO-CYANIDE.

Yellow-Rattle. Yellow-flowered herbs of the genus *Rhinanthus*, natural family *Scrophulariaceæ*, natives of cooler parts of n. temperate zone.

Yellow River. See HOANG-HO.

Yellow-Root, SHRUBBY. *Xanthorhiza apiifolia.* Low shrub of the natural family *Ranunculaceæ*, with pinnate leaves and a deep yellow root, native of e. and s.e. U. S.

Yellows. Disease of peach trees, communicable from tree to tree, by what means is not known. The foliage is yellowish green, the fruit is spotted red, the new shoots are stiff-leaved, and bunched growths appear on the larger branches. The tree dies in 3 to 6 years. The cause is not known and there is no cure. Some States require the diseased trees to be destroyed.

Yellow Sea. Arm of the Pacific, between China and Corea.

Yellowstone Lake. In the National Park; on the Yellowstone, near its head. Elevation 7,741 ft., area 130 sq. m.

Yellowstone National Park. Reservation in n.w. Wyo., which has been set apart from settlement by the U. S. government. Its area is 3,312 sq. m. It is a volcanic region, the fires of which have not yet been entirely extinguished. It contains the most extensive collection of hot springs (ab. 3,000) and geysers (71) in the known world. Its surface consists mainly of an elevated plateau ab. 8,000 ft. above sea level. Along its e. border extends a rugged range of mountains, whose highest peaks exceed 11,000 ft. In the n.w. another range enters the Park, and within its area are two groups of mountains 9,000 to 10,000 ft. in height. Nine-tenths of its area is covered with forests. Within it heads the Snake, which flows to the Columbia, and the Madison, Gallatin, and Yellowstone, which flow to the Missouri. Many of its streams have cut gorges in the volcanic plateau, the greatest of which is that of the Yellowstone, which has a depth of from 600 to 1,200 ft. and a length of 24 m. As hunting is prohibited in this area, it is rapidly becoming stocked with buffalo, elk, antelope, deer, and other wild game. It was first thoroughly explored 1870, and set apart by Congress as a public pleasure-ground 1872. It has several hotels connected by good roads.

The "Giant" Geyser.

Yellowstone River. Right-hand branch of the Missouri. It heads in n.w. Wyo., flows n. into Mont., then e. and n.e. to the border of N. D. Length ab. 1,300 m., drainage area 71,747 sq. m. It is navigable for small vessels at highwater to Livingston, Mont.

Yellow-Wood. *Cladrastis lutea.* Large white-flowered tree of the natural family *Leguminosæ*, with pinnate leaves and yellow wood, native of the s.e. U. S.

Yemen. S.w. province of Arabia, on the Red Sea. Area ab. 75,000 sq. m.

Yenesei. River of Siberia. It heads in the mountains bordering n. Mongolia, and flows n. ab. 3,200 m. to the Arctic Ocean. Drainage area 1,041,000 sq. m.

Yenesei, GULF OF. Inlet from the Arctic Ocean, in n.w. Siberia.

Yenikale, STRAITS OF. Body of water connecting the Sea of AZOV (q.v.) with the Black Sea. The s. part is called Strait of Kertch. Length 19 m., width 3 m.

Yeo, SIR JAMES LUCAS, R.N., 1782–1819. Captain 1809; active on Lake Ontario 1813–15.

Yeoman. Small farmer in England during the Mediæval and early modern period, holding land from the lord of the manor in fee simple, on lease at a money rent, or by copyhold, *i.e.*, at a customary rent with security of tenure.

Yeomanry. British volunteer force, formed 1797 as infantry, but cavalry since 1815; liable for home duty. They number ab. 12,000.

Yeomen of the Guard. Company of British veterans, formed 1485 as a bodyguard for the king or queen.

Yerkes Observatory. At Lake Geneva, Wis.: dedicated 1897 by C. T. Yerkes for Univ. Chicago. It possesses the largest refracting telescope in the world; object-glass 40 in. aperture, tube 62½ ft. long, focal distance 61 ft., cost of lens $100,000, cost of the whole $500,000.

Yesdigerd III., 617–651. Persian king 632. He was the last of the Sassanidæ. He warred with the Mussulmans, and was defeated at Cadesiah 636, and at Nehavend 641.

Yesso. See YEZO.

Yew. *Taxus baccata.* Evergreen shrub or tree of the Pine family, bearing red berry-like cones; native of the n. hemisphere. The east American yew is a low straggling bush, commonly called Ground Hemlock.

Yezd. Town of Persia 165 m. e.s.e. of Ispahan, situated in an oasis of mulberries in a sandy plain between two ranges of heights. The snow water from these hills is collected in underground reservoirs and used for irrigation. It is the center of the Persian silk industry, and contains nearly all of the 9,000 or so adherents of Zoroastrianism. Pop., 1870, 1,000,000.

Yezidis. Kurdish tribe near the Tigris, numbering some 200,000; worshipers of Satan, whom they regard as once chief in the creation, and to be hereafter restored.

Yezo, or YESSO. Second in size of the islands of Japan, lying n. of Nippon. Its surface is mountainous, and in the interior imperfectly known. Area ab. 30,000 sq. m.; pop., 1894, 339,445, including the remnant of the Ainos.

Yggdrasil. Ash-tree under which the Norse gods meet in council. Its three roots reach to Asgard, Niflheim, and the realm of Hela; beneath them springs up Mimir's Well, the well of wisdom.

Y Level, or WYE-LEVEL. Leveling instrument in which the telescope with its attached bubble rests in Y bearings, out of which it can be lifted and reversed. The telescope can be rotated at pleasure. It has been superseded to a certain extent by the DUMPY-LEVEL (q.v.).

Y Level.

Yoga Philosophy. See YOGI.

Yogi. Hindu ascetic who practices the Yoga philosophy, one of the six orthodox systems of India. Such persons are believed to acquire supernatural powers and knowledge which leads to salvation. They live a mendicant life, professing absolute indifference to the world of sense, and devoted to contemplation.

Yokohama. Seaport of Japan, on the e. coast of Nippon; of recent development; headquarters of foreign commerce. Pop. ab. 165,000.

Yolk, or YELK. Food material stored up in the form of granules in egg cells, to feed the cells of the developing embryo. Hence the size of the egg is in relation to the amount of yolk, and this is in proportion to the complexity and size of the embryo at the time of hatching. The yolk itself is transformed chromatin granules, derived either from the egg nucleus or the nuclei of follicle cells. It is simply formed or plastic

substance, and is not itself true protoplasm: hence it is called deuteroplasm. The so-called "yolk" of a hen's egg represents the entire original egg cell or ovum, greatly distended with yolk granules; the white is accessory albuminous food material, wrapped around the ovum after it leaves the ovary, and after it has been impregnated.

Yolk-Glands. See VITELLARIUM.

Yolk-Nucleus. Accessory nucleus present in eggs during their growth, and supposed to have the function of making yolk. It is not constantly present, and in many eggs the proper nucleus of the egg manufactures the yolk spheres. In other cases the investing cells of the ovum elaborate the yolk, which is absorbed by the ovum directly; sometimes entire cells or their nuclei may wander into the ovum, where they undergo degeneration and conversion into yolk. See PARANUCLEUS.

Yolk-Sac. Egg, or yolk of the egg, after it has been inclosed by epibole and the embryo developed as a definite structure upon it, so that a sharp demarcation exists between the yolk and the embryo.

Yon, EDMOND CHARLES, 1841–1897. French etcher.

Yonge, CHARLOTTE MARY, b.1823. English novelist and historical writer, in the Ch. interest; author of some 120 vols.; ed. *Monthly Packet*. *Heir of Redclyffe*, 1853; *Landmarks of History*, 1852–57; *Daisy Chain*, 1856; *Golden Deeds*, 1864; *Book of Worthies*, 1869; *Life of Bp. Patteson*, 1873.

Yonkers. City of Westchester co., N. Y., on the e. bank of the Hudson, 18 m. n. of the Battery; suburb of New York; chartered 1855 and 1872. Pop., 1890, 32,033.

Yoritomo, MINAMOTO, 1146–1199. Shogun of Japan 1192; founder of its mediæval system.

York. Ancient city of Yorkshire, on the river Ouse; capital of Northumbria and Deira; destroyed by William I. 1068. Its noble minster dates mostly 1154–1400. The cathedral is in many respects the most remarkable of all English churches.

York Minster.

It measures 524½ ft. by 250 ft., with central tower 216 ft. high, and the western towers each 202 ft. It was completed as it now stands in 1472. Hadrian resided here in 120, and Severus died here 211. The castle, dating from Edward I., is an interesting object near the river, with Clifford's Tower. Pop., 1891, 66,984.

York. Capital of York co., Pa.; 28 m. s. of Harrisburg; founded 1741; chartered 1787 as a borough, 1887 as a city. It has some manufactures. Congress met here 1777–78. Pop., 1890, 20,793.

York, ARCHBISHOPRIC OF. Second to that of Canterbury, giving its incumbent third rank after the royal family; founded 634. It had Scottish jurisdiction till ab.1470.

York, CARDINAL. See STUART, HENRY B.

York, HOUSE OF. Richard, Duke of York, was descended on the female side from Lionel, Duke of Clarence, 3d son of Edward III., as also by his father from the 5th son of the same Edward; the house of Lancaster held the throne by descent from the 4th son of Edward III. The law of primogeniture favored York. To this line belong Edward IV. and V. and Richard III. The civil wars were ended, and the claims of the two rival houses to the throne merged, by the marriage of Elizabeth, eldest daughter of Edward IV., to Henry VII., his dangerous rivals being removed by execution. The badge of York was a white rose.

Yorke. See HARDWICKE, EARL OF.

Yorkshire. See SWINE.

Yorkshire College. See LEEDS.

Yorktown. Capital of York co., Va., on York River. Here Cornwallis, after a siege of ten days, surrendered to Washington Oct. 19, 1781. Magruder and Johnson, C.S.A., were besieged by McClellan April 5–May 4, 1862, and abandoned the town. Pop., 1890, 221.

York von Wartenburg, HANS DAVID LUDWIG, GRAF VON, 1759–1830. Prussian general 1807; leader in the revolt against Napoleon and alliance with Russia 1812–13; distinguished 1813–14; ennobled 1814; Field-marshal 1821.

Yoruba, or YARRIBA. Farming country of w. Africa, n.e. of Dahomey. Area ab.19,000 sq. m., pop. ab. 3,000,000.

Yosemite Valley. In the Sierra Nevada, Cal., ab. 6 m. long, a mile or less in width, and near a mile below neighboring level; surrounded by precipitous granite walls, 3,000 to 4,000 ft. high; supposed to be the work of a glacier; first known to whites 1851; controlled by State commissioners; greatly resorted to for its scenery. Its falls and rocks are especially famed.

You, DOMINIQUE, 1775–1830. Leader of La. pirates, pardoned for his services in the battle of New Orleans 1815, and thenceforth prominent in public affairs.

Youatt, WILLIAM, 1777–1847. English veterinarian and writer. *The Horse*, 1831; *Sheep*, 1832; *Cattle*, 1834; *The Dog*, 1842.

Youmans, EDWARD LIVINGSTON, M.D., 1821–1887. American writer on chemistry; founder International Scientific Series 1871, and *Popular Science Monthly* 1872. *Household Science*, 1857.—His sister and helper, ELIZA ANN, b.1826, has pub. several books on Botany.—His brother, WILLIAM JAY, M.D., b.1838, has continued his editorial work, and pub. *Pioneers of Science*, 1895.

Young, SIR ALLEN WILLIAM, R.N., b.1830. Arctic explorer, knighted 1877. *Two Voyages of the Pandora*, 1879.

Young, ANDREW WHITE, 1802–1877. American writer on government. *Political Hist. U. S.*, 1855–88.

Young, ARTHUR, 1741–1820. English farmer and author; Sec. to Board of Agriculture from 1793; ed. *Annals of Agriculture*, 1784–1801. His *Tour in Ireland*, 1780, and *Travels in France*, 1792–94, were repub. 1890–92; the latter is often quoted. His *Farmers' Kalendar*, 1771, was very widely circulated. A French tr. of his works, 1800–1, filled 20 vols.

Young, BRIGHAM, 1801–1877. Mormon elder 1832, apostle 1835, and pres. 1844; leader of the emigration from Nauvoo, Ill., to Utah; founder of Salt Lake City 1847, and of the State

Brigham Young.

of Deseret 1849; Gov. of Utah 1851–58; introducer of polygamy 1852; in conflict with U. S. authorities; husband of many wives, and gatherer of much wealth.

Young, CHARLES AUGUSTUS, LL.D., b.1834. Prof. Dartmouth 1866, and Princeton since 1877; inventor of an automatic spectroscope; measurer of the sun's rotation. *The Sun*, 1882; *Astronomy*, 1888.

Young, CHARLES MAYNE, 1777–1856. English actor, prominent in Shakespearian parts.—His son, JULIAN CHARLES, 1806–1873, wrote his *Memoir*, 1871, and *Last Leaves*, 1875.

Young, EDWARD, LL.D., 1684–1765. English didactic and satirical poet. *Love of Fame*, 1728. His *Night Thoughts*, 1742–46, were once very popular.

Young, JAMES, LL.D., F.R.S., 1811–1883. Scottish chemist, developer of paraffin oil from Scotch Boghead coal.

Young, JOHN, 1802–1852. M.C. 1836–37 and 1841–43; Gov. of N. Y. 1847.

Young, SIR JOHN, 1807–1876. M.P. 1831–55; Baronet 1848; Gov. of New S. Wales 1860–67; Gov.-gen. of Canada 1868–72; Baron Lisgar 1870.

Young, JOHN RUSSELL, b.1841 in Pa. Journalist; U. S. Minister to China 1882–85; librarian of Congress 1897. He accompanied Gen. Grant around the world 1877. *Around the World with Gen. Grant*, 2 vols., 1879.

Young, JONATHAN, U.S.N., 1825–1885. Captain 1873, Commodore 1882.

Young, PIERCE MANNING BUTLER, 1839–1896. Major-gen. C.S.A. 1864; M.C. from Ga. 1868–75.

Young, RICHARD MONTGOMERY, 1796–ab.1852. U. S. Senator 1837–39; Judge Ill. Supreme Court 1843–47.

Young, ROBERT, 1822–1888. Scottish printer and missionary. *Concordance*, 1880.

Young, THOMAS, F.R.S., 1773–1829. Prof. Royal Institution, London, 1801; physicist and Egyptologist. *Lectures*, 1807.

Young, THOMAS LOWRY, 1832–1888. Gov. of Ohio 1877; M.C. 1879–83.

Young, SIR WILLIAM, 1799–1887. Premier of Nova Scotia 1854 and 1860; Chief-justice 1860; knighted 1863.

Young, WILLIAM, 1809–1888. Anglo-American journalist; tr. Beranger 1850.

Young England. Name given to a band of young Tory politicians during the Corn-law struggle, 1842–45, who wished to revive the old kindly relations between the rich and poor. Among the foremost were Disraeli, C. Baillie, G. Smythe, and J. Manners. Disraeli, in his *Coningsby* and *Sybil* exposes their principles.

Young Ireland. Name given to the Revolutionary party in Ireland 1848, headed by G. Duffy and W. S. O'Brien.

Young Men's Christian Associations. Societies of Trinitarian Protestants, indifferent otherwise as to denomination, busy with various good works, and now of vast extension; organized first in London by G. Williams 1844; next at Montreal and at Boston 1851. They now number 1,430 in the U. S. and Canada, and 6,240 throughout the world. The American membership is 248,734.

Young People's Society of Christian Endeavor. See CHRISTIAN ENDEAVOR.

Young's Modulus. Force required to stretch a bar one inch sq. to double its original length, provided that it could be done without impairing the elasticity. It was introduced by Thos. Young 1805, and is now generally called the coefficient or modulus of elasticity.

Youngstown. Capital of Mahoning co., Ohio, on the Mahoning, 66 m. n.w. of Pittsburg; founded 1799. It has important iron manufactures. Pop., 1890, 33,220.

Young Women's Christian Associations. Organized in London 1855 and New York 1858, on plans similar to those of young men. They now number ab. 350 in the U. S., chiefly in colleges, with ab. 35,000 members.

Ypres (Flemish YPEREN). Fortified town of Belgium, 15 m. n.w. of Tourcoing, France. It contains many relics of the Middle Ages; in the 14th century it was noted for its manufacture of woolen goods and is supposed to have had a population of 200,000. Seat of a bishop from 1509–1801. Pop. 16,500.

Ypsilanti, ALEXANDER, 1725–1805. Hospodar of Wallachia and Moldavia; executed.—His son, CONSTANTINE, 1760–1816, held the same posts, rebelled against the Sultan, and ended his life in Russia.—His sons, ALEXANDER, 1792–1828, and DEMETRIUS, 1793–1832, fought against Napoleon and the Turks: the latter was Greek commander-in-chief 1828–31.

Yrarrazaval, MANUEL JOSÉ, 1836–1896. Chilian Senator and Premier.

Yriarte, CHARLES ÉMILE, b.1832. French author and journalist, of Spanish descent. *Venice*, 1879, tr. 1879; *Florence*, 1880, tr. 1882; *César Borgia*, 1889.

Yriarte, JUAN DE, 1702–1771. Librarian at Madrid 1732; poet. *Codices Gráeci MSS.*, 1769. *Obras*, 4 vols., 1774.—His nephew, TOMAS, 1750–1791, was a poet, dramatist, and translator. *La Musica*, 1780; *Fabulas*, 1782. *Obras*, 1787–1805.

Ysaye, EUGÈNE, b.1858. Belgian violinist, in America 1894 and 1898.

Yssel. Branch of the Rhine, separating from it near Arnhem in the Netherlands and emptying into Zuyder Zee. Length 80 m.

Ytterbium. Yb. At. wt. 173, sp. gr. 9.17, sp. ht. .0646, valence III.; discovered by Marignac 1878; rare metal, occurring in euxenite and gadolinite; white, infusible powder; salts are colorless.

Ytterbium Nitrate. $Yb(NO_3)_3$+aq. Large, clear, colorless crystals, obtained on treating the oxide with nitric acid, and crystallizing from water.

Yttrialite. Silicate containing large percentages of yttrium, thorium, and other rare chemical elements, found in Texas in association with other minerals of allied composition.

Yttrium. Y. At. wt. 89.1, valence III, IV; discovered by Gadolin 1798; rare metal, occurring in cerite, euxenite and gadolinite; it has not been prepared in the pure condition.

Yttrium Carbonate. $Y_2(CO_3)_3+3H_2O$. Gelatinous precipitate obtained on adding a solution of sodium carbonate to yttrium salts.

Yttrium Chloride. YCl_3+6H_2O. Colorless, hygroscopic, soluble prisms; made by dissolving the trioxide in hydrochloric acid and sal ammoniac, and then evaporating and crystallizing.

Yttrium Nitrate. $Y(NO_3)_3+6H_2O$. Large, transparent, easily soluble crystals; made by dissolving the oxide in nitric acid.

Yttrium Oxide. Y_2O_3. Yttria. Yellowish-white powder, obtained by heating the oxalate or hydroxide. When heated it emits a bright white light. Soluble in the common acids.

Yttrium Sulphate. $Y_2(SO_4)_3+8H_2O$. Sp. gr. 2.54; colorless, transparent, small, monoclinic crystals; made by treating the oxide with sulphuric acid and crystallizing from water.

Yttrocerite. Rare mineral, containing yttrium and cerium in connection with calcium fluoride; found in Sweden.

Yttrotantalite. Rare mineral, consisting essentially of yttrium tantalate or niobate with small admixtures of iron and other chemical elements; found in Sweden. A variety of the mineral fergusonite has been called by the same name.

Yuba River. In California, flowing through deep gorges in the Sierra Nevada, and emptying into Feather River below Y. City.

Yucatan. Peninsula projecting from Mexico and separating the Gulf of Mexico from the Caribbean Sea; first visited

The Governor's Palace—Ruins of Uxmal.

by Europeans 1517; part of Mexico, except for brief periods. The natives are Mayas. Ruins of Uxmal and other cities of unknown date have attracted much attention. See MAYA-QUICHE.

Yucatecs. Name often given to the inhabitants of Yucatan. See MAYA-QUICHE.

Yucca. See BEAR-GRASS.

Yukon. River which rises in the mountains of Northwest Territory, flows n.w. into Alaska, then w. and s.w. to its delta mouth in Bering Sea. Length ab. 2,050 m., drainage area ab. 205,600 sq. m. Its importance has been greatly increased by the development of gold-mining in the Klondike region 1897.

Yule. German festival in pagan times. Some of its appurtenances have passed over to Christmas. See YULE LOG.

Yule, SIR HENRY, LL.D., 1820–1889. Scottish engineer, in India 1840–62. *Cathay*, 1866; *Book of Marco Polo*, 1871; *Anglo-Indian Glossary*, 1886.

Yulee, DAVID LEVY, 1811–1886. M.C. from Fla. 1841–45; U. S. Senator 1845–51 and 1855–61.

Yule Log. Still burned in parts of England and the Continent at Christmastide. The usage is a survival from the old festival of the revival of the sun after the winter solstice. Magical properties are attributed to the Yule Log, which is believed to bring good luck. It is a widespread custom to keep part of the old log to light the new one the following year. In n. Italy the charred log is regarded as a protection against lightning.

Yuncas. Native tribes of the coast of Peru, who have now become merged in the general population. In the vicinity of Lima there are many ruins attributable to this people, the most extensive being at Caxamarquilla, ab. 15 m. from Lima and near Truxillo.

Yun-ho, or YUN-LIANG-HO. Chinese name of the Grand and Imperial Canal. It runs from Hangchou to Tientsin, ab. 700 m.; constructed in the first part of the 7th century primarily for the conveyance of the tribute of rice from the s. provinces. It is still an important means of communication between the n. and s. in the e. plain, though the section n. from the Hwang-ho to the Yu-ho has been dry since ab.1852.

Yupanqui, ab.1380–ab.1440. Ninth Inca sovereign of Peru. He assumed the government ab.1400, conquered the Chancas, and annexed their territory. At his death the Inca Empire embraced nearly all the territory of what is now Peru.

Yuruari. River of Venezuela, rising to the e. of the valley of the Caroni, flowing e. till it joins the Cuyuni in ab. 61½° W. long. Its valley contains valuable gold mines.

Yuste. Village of Spain 28 m. e. of Plasencia, on the slopes of the Sierra de Vera. It has ruins of a famous Hieronymite monastery, where Charles V. spent the last 18 months of his life and died Sept. 21, 1558.

Yusuf-ben Taxfyn, d.1106. Emir of Morocco; victor over Alfonso VI. of Castile 1086; usurper in Cordova, Grenada, and other kingdoms of s. Spain.

Yver de Chazelles, JEAN PIERRE, 1709–1786. French naval officer and Arctic explorer. *Voyage*, 1752–53; *Mexico*, 1778.

Yves d'Evreux, PIERRE, ab.1575–ab.1625. French Capuchin, missionary to Brazil 1611–14. His *Voyage*, 1615, was repub. 1864.

Yvetot. Town of n. France, 24 m. n.w. of Rouen. Till 1681 its lords were entitled king, as in a familiar song of Beranger.

Yvon, ADOLPHE, 1817–1893. French painter.

Y'ylang-Y'ylang. See IHLANG-IHLANG.

Z

Zabism, or SABISM. System of pagan philosophy, containing Gnostic and Neoplatonic elements, chiefly in Syria ab. 800–1200.

Zabriskie, ABRAHAM OOTHOUT, 1807–1873. Chancellor of N. J. 1866–72.

Zacatecas. Capital of the state of Z. in central Mexico, in a silver mining region; founded ab.1540. Elevation 8,000 ft., pop. ab. 60,000. The state has an area of 25,229 sq. m.; pop., 1893, ab. 486,000.

Zach, FRANZ, FREIHERR VON, 1754–1832. Hungarian-German astronomer.

Zacchæus. Jewish taxgatherer at Jericho, whose curiosity to see Jesus passing through Jericho led to his conversion. Luke xix. 1–10.

Zachariæ, JUST FRIEDRICH WILHELM, 1726–1777. German mock-heroic poet.

Zacharias, d.752. Pope from 741; able and influential.

Zacynthus (modern ZANTE). Largest of the Ionian Islands; w. of Morea. It is entirely mountainous or hilly in the w., with a stretch of fertile plains running n.e. to the s. coast; the w. coast is accessible only in summer; noted for its vines and

Zante.

currants, which were introduced in the middle of the 15th and 16th centuries respectively. This island is one of the parts of Greece most subject to earthquakes. Zante, on the e. coast, is the seaport town. Area 166 sq. m.; pop., 1889, ab. 44,000.

Zadkiel (RICHARD JAMES MORRISON), ab.1794–1874. Author of an astrological almanac, issued from 1830. The name had been assumed by Wm. Lilly, 1602–1681.

Zadok. High priest under David with Abiathar, who was deposed by Solomon.

Zaffarines. Three islets off the n. coast of Morocco, in the Mediterranean, 7 m. n.w. of the mouth of the Muluya; known from ancient times as a protection to ships. Spain, who owns them, has fortified them as outworks for Melilla.

Zaffre. Residue obtained in roasting cobalt ores. Ground up with various substances, it is used for painting porcelain blue.

Zagros Mountains. Between ancient Media and Assyria; general name for the mountain systems of w. Persia.

Zahn, THOEDOR. D.D., b.1838. Prof. Göttingen 1871, Erlangen 1878 and 1891, Leipzig 1888–91. *Cyprian*, 1882; *Hist. N. T. Canon*, 1888–91.

Zaldivar, RAFAEL, b. ab.1830. Pres. Salvador 1876–85.

Zaleucus, 7th cent. B.C. Greek lawgiver of Locri.

Zalinski, EDMUND LOUIS GRAY, b.1849 in Poland. Lieut. U.S.A. 1866, Captain 1887; developer of the pneumatic dynamite torpedo-gun and other military devices; writer on ordnance.

Zaluski, JOSEF ANDREI, 1702–1774. Bp. of Kieff; banished 1767–73; Polish bibliographer and collector. *Leges Poloniæ*, 1732; *Specimen hist. Polonicæ criticæ*, 1733.

Zama. Fortified city in Numidia, where Scipio defeated Hannibal and ended the 2d Punic war 202 B. C.

Zamacois, EDUARDO, 1842–1871. Spanish genre painter. Fine colorist and brilliant designer. *Education of a Prince*, 1870.

Zambeccari, FRANCESCO, COUNT, 1756–1812. Italian aëronaut.

Zambesi. River of s. Africa. Rises in lat. 12° S., flows s.e., n.e., e., and finally s.e. to the Indian Ocean. Owing to the

The Gonye Falls, on the Zambesi.

great number of cataracts and rapids in its upper and middle course (cataracts of Gonye, Katima, Mololo, Victoria Falls,

Kebrabasa Rapids) the greater part of the Z. is unfit for navigation. Length ab. 1,550 m., area of basin ab. 550,000 sq. m.

Zambesians. See ZAMBESI TRIBES.

Zambesi Tribes. The principal are the SUAHILI (q.v.) and the Mashona. The latter are agriculturists, and work iron ornaments. They are enervated and great beggars.

Zamboni's Pile. See DRY PILES.

Zambrana, RAMON, 1817–1866. Cuban medical writer.

Zamoiski, JAN, 1541–1605. Polish statesman, soldier, author, and king-maker. *De Senatu Romano*, 1563.—His descendant, ANDREI, 1716–1792, was Chancellor 1764, and framer of a code adopted 1791.

Zampieri. See DOMENICHINO.

Zamzummim. Aboriginal race, exterminated or reduced by the Hebrew and Arab tribes.

Zanchi, HIERONYMUS, 1516–1590. Italian reformer and polemic, prof. Strasburg 1553 and Heidelberg 1568. *Spiritual Marriage*, tr. 1592; *Christian Religion*, tr. 1659. *Works*, 8 vols., 1613.

Zane, EBENEZER, 1747–1811. Founder of Wheeling, W. Va., 1793; builder of Fort Henry there 1774, and its defender when besieged by Indians 1777, 1781 and 1782. In one of these sieges his sister, ELIZABETH, ab.1759–1847, rendered heroic service.

Zanella, GIACOMO, 1820–1888. Italian lyric poet and critic, his prof. Padua 1866–72. *Della letteratura Italiana*, 1885.

Zanesville. Capital of Muskingum co., and of Ohio 1810–12; on the Muskingum; founded 1799 by Col. E. Zane; chartered 1814 and 1869; in a coal region. It has varied manufactures. Pop., 1890, 21,009.

Zanguebar. See ZANZIBAR.

Zangwill, ISRAEL, b.1865. English novelist and critic. *Children of the Ghetto*, 1892; *King of Schnorrers*, 1894; *The Master*, 1895; *Big Bow Mystery*, 1895.—His brother, LOUIS, b.1867, pub. *A Drama in Dutch*, 1896.

Zannichelli, GIAN GIROLAMO, 1662–1729. Apothecary in Venice. *Istoria della piante che nascono nè lidi intorno a Venezia*, 1735.

Zante. See ZACYNTHUS.

Zanzibar. Region of e. Africa, on the coast, from ab. 2° N. lat. to 10° 40′ S.; long dependent on Muscat; now chiefly a British protectorate, the s. part being German. Area ab. 12,000

Zanzibar.

sq. m. on the mainland, and 1,200 in several islands, held by Britain. The chief of these, Z., includes 625 sq. m.; pop. ab. 150,000, mostly at the capital.

Zapata, JUAN ORTIZ DE, ab.1620–1690. Jesuit missionary in Mexico; historical writer.

Zapiola, JOSÉ, 1802–1885. Chilian musical conductor and composer.

Zapolya, STEPHEN, d.1499. Hungarian general, voivode of Transylvania.—His son, JOHANN I., 1487–1540, contested the throne from 1527 with Ferdinand of Austria.—His son and successor, JOHANN II., 1540–1571, established Protestantism 1555.

Zapotecs. Aboriginal Mexicans of the Isthmus of Tehuantepec and southward. They built temples and pyramids, whose ruins may still be found. The temple at Mitla had its four walls built leaning outward, so that it resembles an inverted truncated pyramid. The modern Indians of this region are handsome, industrious agriculturists, and well clothed. Their women have much influence.

Zappi, GIANBATTISTA FELICE, 1667–1719. Italian lyric poet.

Zaragoza, IGNACIO, 1829–1862. Mexican general; Sec. of War 1861; defender of Puebla against the French 1862.

Zarate, AGOSTIN DE, ab.1493–ab.1560. Historian of the conquest of Peru 1555.

Zarate, GIL, 1796–1861. Spanish dramatist. *Rosamunda.*

Zaratite. See EMERALD NICKEL.

Zarco, FRANCISCO, 1829–1869. Mexican journalist.

Zarephath, or SAREPTA. Phœnician town, n. of Tyre; refuge of Elijah. I. Kings xvii.

Zaritzin. See TSARITZIN.

Zarlino, GIOSEFFO, 1517–1590. Italian musical theoretician and composer. *Istituzioni harmoniche*, 1558; *Dimostrazioni harmoniche*, 1571; *Sopplimenti musicali*, 1588.

Zarncke, FRIEDRICH, 1825–1891. Prof. Leipzig 1853; ed. *Litterarisches Centralblatt* from 1851; ed. Brant's *Narrenschiff*, 1854, and other old texts; historian of Leipzig and the older universities.

Zavala, JOAQUIN, b. ab.1839. Pres. of Nicaragua 1879–83.

Zavala, LORENZO DE, 1788–1836. Mexican Senator and Minister. *Revoluciones, 1808–30*, 1831.

Zea, FRANCISCO ANTONIO, 1770–1822. Colombian patriot and botanist, in exile 1795–1815; then with Bolivar; Vice-pres. 1819.

Zea, KEA, or TSIA. One of the Cyclades; 12 m. e. from Cape Sunium. It is very fertile, producing cotton, figs, and wine. The town of Z. is on the middle of the island. Area 40 sq. m., pop. ab. 4,000.

Zeal. Earnest enthusiasm on behalf of any cause.

Zealand, or ZEELAND. Dutch province, composed of Walcheren and five other islands. It produced most of the Sea Beggars, and, with Holland, led in the war of liberation. Area 690 sq. m.; pop., 1893, 204,561.

Zealand. See SEELAND.

Zealots. Jewish party in 1st century, distinguished by immoderate patriotic zeal. Simon Zelotes was perhaps one of them.

Zeballos, or **Ceballos,** PEDRO DE, 1715–1778. Spanish general, Gov. of Buenos Ayres 1760–66; Viceroy there 1776–78.

Zebedee. Galilean master fisherman, father of the Apostles James and John.

Zeboim. 1. One of the five cities of the plain or circle of Jordan, Gen. x. 19. 2. Ravine, apparently e. of Michmash, mentioned in I. Samuel xiii. 18.

Zebras. Two species of *Equus*, having whitish-yellow skin beautifully marked with almost black stripes, confined to Africa: *E. zebra* (*montanus*) and *E. burchellii*. The true zebra lives only in the mountains of Cape Colony, where it has nearly been exterminated, and s. of Abyssinia; the latter some consider a separate species, *E. grevyi*. *E. zebra* has long ears, small upright mane, asinine tail, and is barred everywhere, except belly, even on the tail and the legs down to the hoofs.

Zebra (*Equus burchellii*).

It stands 4 ft. at the withers, is 8 ft. long, and has but 2 mammæ. Burchell's zebra lives in now decreasing herds on the plains of S. Africa, like the rarer Quagga, with which it is sometimes confounded. The Quagga has legs and entire hindquarters unstriped, while in the *E. burchellii* these regions are partially and faintly striped. Compared with the zebra, the ears and tail of *E. burchellii* are more equine, its mane is higher, and it has 4 mammæ. The flesh of these animals is highly esteemed as food by the natives.

Zebra Wood. Striped wood found in Guiana and the W. Indies, and used for veneering.

Zebu (BOS INDICUS). Domesticated species of the BOVIDÆ (q.v.), distributed throughout s. Asia, and characterized by the presence of a hump on the withers, long pendulous ears, very short upright horns, varied color, reddish-yellow to white. They are somewhat smaller than the cattle of Europe, and

Zebu (*Bos indicus*).

in India have been bred for specific purposes, resulting in several races, useful for milk, draught, riding, etc. White bulls when branded with the image of Siva are held especially sacred by the Hindus: they are free from labor and restraint, and are not molested even when they commit depredations.

Zebulun. Tenth son of the patriarch Jacob, and ancestor of one of the twelve tribes of Israel.

Zechariah. Jewish prophet, author of 38th O. T. book, ab. 520 B.C., written to encourage the despondent Jews after the return from Babylon. Chapters ix.–xiv. are perhaps much older.

Zedekiah. Last king of Judah 598–588 B.C.; son of Josiah. Rebelling against Nebuchadnezzar of Babylon, his suzerain, he saw Jerusalem taken, the temple burned, his sons slain, and was then blinded and carried to Babylon, there to die in prison. Jer. xxxiv. 2–5.

Zedlitz, JOSEPH CHRISTIAN VON, 1790–1862. Austrian poet and dramatist.

Zedoary. Name given to the roots of several species of *Zingiber* and *Curcuma*, native of China and Bengal, resembling ginger in its qualities, but now entirely replaced by the latter.

Zeeland. See ZEALAND.

Zeisberger, DAVID, 1721–1808. Moravian missionary among the Indians of Pa. and Ohio; abundant in labors and sufferings. *Delaware Dictionary*, 1887; *Onondaga Grammar*, 1888; *Diary*, 1888.

Zelaya, JOSÉ SANTOS, b. ab.1845. Pres. of Nicaragua 1893.

Zell, BERNHARD, 1715–1779. German traveler in Mexico and Cal. His *Reisen*, 1771–72, indicated the existence of gold in Cal.

Zell, MATTHAUS, 1477–1548. Reformer at Strasburg.

Zeller, EDUARD, b.1814. Prof. of Theology at Berne 1847 and Marburg 1849, of Philosophy at Heidelberg 1862 and Berlin 1872–94. *Philosophy of the Greeks*, 1844–52 and later, tr. in 6 vols. 1868–83; *Hist. Apostles*, 1854, tr. 1875–76; *Strauss*, 1874.

Zeller, JULES SYLVAIN, b.1820. Prof. Paris 1858; historical writer: especially on Italy and Germany.

Zelter, KARL FRIEDRICH, 1758–1832. German musician, teacher of Mendelssohn; conductor Singakademie in Berlin; founder Royal Institute for church music 1809.

Zenana. Harem or women's apartments in India.

Zend. Old Persian dialect, sometimes called Old Bactrian, in which was written the sacred book of Zoroaster, the AVESTA (q.v.). It comprised three books of verse, hymns, prayers, and laws.

Zendejas, MIGUEL GERONIMO, 1724–1816. Mexican painter, self-taught.

Zenea. JUAN CLEMENTE, 1834–1871. Cuban lyric poet and patriot; executed.

Zenith. Point where the plumb-line produced upward pierces the celestial sphere.

Zenith Distance. That of a star from the zenith, measured on a great circle.

Zenith Telescope. Instrument much used for determination of latitude. It consists of a telescope having an altitude and azimuth mounting, provided with a delicate level and micrometer, by means of which the difference of zenith distance

Combination Transit and Zenith Telescope.

of two stars may be measured. These stars are so selected that one culminates n. of the zenith, the other s. at approximately equal zenith distances. The measurements so made with the declinations of the stars furnish data for determining the latitude.

Zenker, JONATHAN KARL, 1799–1837. Prof. Jena 1828. *Die Pflanzen und ihr wissenschaftliches Studium überhaupt*, 1830; *Merkantilische Waarenkunde*, 1831–35.

Zeno, 5th cent. B.C. Philosopher of Elea, s. Italy; pupil of Parmenides; famous for his denial of the existence of motion and for the paradoxical illustrations of Achilles and the Tortoise, and of the flying arrow, to prove his position.

Zeno, ab.350–260 B.C. Philosopher of Cyprus, founder of the Stoic school or "Porch" at Athens ab. 312 B.C.

Zeno, d.491. Byzantine Emperor 474; Isaurian; son-in-law of Leo I.

Zeno, APOSTOLO, 1668–1750. Italian dramatist, poet, and critic. Plays, 10 vols., 1744; *Epistole*, 6 vols., 1785.

Zeno, NICOLO, ab.1340–ab.1391. Venetian seaman, said to have visited Greenland, Newfoundland, and coasted as far s. as Virginia.

Zenobia. Wife of Odenathus, King of Palmyra, Queen of the East 266; defeated and made prisoner by Aurelian 272; led in his triumph 274.

Zenon de Rouvroy, CHARLES ALBERT, 1698–1759. French writer on the American colonies.

Zenteno, CARLOS DE TAPIA, 1698–ab.1770. Prof. Mexico; writer on Aztec language.

Zenteno, JOSÉ IGNACIO, 1785–1847. Chilian general and minister of war, active against Spain.

Zeolite. Group of minerals, including a number of species,

essentially hydrous silicates with aluminium and an alkali or alkaline element as basic components, agreeing closely with each other in type of chemical composition, but varying widely in color, hardness, and crystalline form. They are minerals of secondary origin, in some respects analogous to the feldspars. When heated before the blowpipe, they easily part with their water, often with intumescence and an appearance of boiling. The word signifies boiling-stone.

Zephaniah. Hebrew prophet, author of 36th O. T. book, ab.625 B.C., directed against the corruptions of Judah.

Zepharovich, VICTOR VON, 1830–1890. Prof. Cracow and Prague; writer on crystallography; connected with Austrian surveys.

Zephyrinus. Bp. of Rome 199–218.

Zephyrus. West wind, personified in Greek mythology.

Zequeira, MANUEL DE, ab.1760–1846. Cuban poet.

Zerafshan. River of Bokhara, useful for irrigation, but lost in the sand near Samarkand.

Zermatt. Village in the canton of Valais, Switzerland, near the upper end of the Visp valley, 25 m. s.s.w. of Visp. It is a great tourist resort and center of Alpinists; starting-point for the ascent of the Matterhorn. The railway from Visp to

Zermatt and the Matterhorn.

Z., opened 1891, combines adhesive (max. gradient 45:1,000) and rack and pinion (125:1,000) systems. The graves of many of the victims of mountaineering are here. Altitude 5,315 ft., pop. ab. 2,000.

Zero. (A) Absence of magnitude; absolute nothing. (B) Less than any assignable quantity; beginning of magnitude; treated algebraically as a positive even integer; used as a limit in higher analysis. Zero co-ordinates of position indicate coincidence with fixed elements of reference. The zero angle denotes sameness of direction. Zero as a term does not affect the result: as a factor, it gives a zero-product: as a dividend with a finite divisor, it gives a zero-quotient, or, by the theory of limits, as the dividend approaches the zero, the ratio approaches zero as a limit. As a divisor with a finite dividend, zero is said to give an infinite quotient, or, by the theory of limits, as the divisor approaches zero, the ratio increases without limit. The ratio, zero divided by zero, $\frac{0}{0}$, is indeterminate. See ABSOLUTE ZERO.

Zero-Axial. Determinant whose principal diagonal has only zero terms.

Zerotin, KARL VON, 1564–1636. Gov. of Moravia 1608–15; protector of the Unitas Fratrum or Bohemian Brethren; exiled 1627.

Zerrahn, CARL, b.1826 in Germany. Director Boston Handel and Hadyn Society since 1854; conductor at many concerts and festivals.

Zerubbabel. Leader of the Jews who returned from Babylon 536 B.C. to rebuild Jerusalem and the Temple.

Zeruiah. Elder half-sister of King David, and mother of his generals, Joab, Abishai, and Asahel.

Zesen, PHILIPP VON, 1619–1689. German poet and novelist *Torments of Love.*

Zetland. See SHETLAND.

Zetterstedt, JOHAN WILHELM, 1785–1874. Swedish botanist and zoölogist; prof. Lund 1839–53. *Diptera Scandinaviæ,* 14 vols., 1842–60.

Zeugita. See ALLOPOLA.

Zeuglodon. Huge fossil cetacean found in the Eocene beds of several Gulf States. Its vertebræ are so abundant in places that they are piled up in the fields to clear the land.

Zeuglodontia. See ARCHÆOCETI.

Zeugobranchiata. Suborder of *Gastropoda,* including forms having paired bipennate gills, and paired kidneys, of which the left one is rudimentary. The heart has two auricles; the rectum perforates the ventricle. The lip of aperture of shell is cleft, as is the anterior border of the mantle. The radula has in each transverse row of teeth a great number of lateral hooked plates, arranged in a fanlike manner. There is no proboscis or siphon. The animals are herbivorous; the shell resembles that of the *Patellidæ. Fissurella* and *Haliotis* are examples. Some place the group as a subdivision of RHIPIDOGLOSSA (q.v.).

Zeuner, CHARLES, 1795–1857. German-American organist, composer, and compiler in Boston and Philadelphia.

Zeus. Chief of Greek deities; son of Cronos and Rhea; father of many mythological personages; later identified with,

Bust of Zeus, by Otricoli.

or replaced by, the Roman Jupiter. In Homeric mythology, Z. is king of gods and men, the supreme ruler, the sovereign source of law and order, the fountain of justice, and the final arbiter of disputes.

Zeuxippus. Successor of Ænesidemus in the leadership of the revival of Pyrrhonian skepticism.

Zeuxis, 5th cent. B.C. Greek painter of great fame, rivaled only by Parrhasius; at Athens ab.420 B.C. Helen, Hercules and Zeus were among his most noted subjects.

Zhitomir. See JITOMIR.

Zhukofsky, VASILII, 1783–1852. Russian lyric poet and translator.

Zidon. See SIDON and TYRE.

Ziegenbalg, BARTHOLOMEW, 1683–1719. German missionary at Tranquebar, s. India, from 1706; tr. N. T. into Tamil 1711.

Ziegler, ERNST, b.1849. Prof. Zurich 1881, Tübingen 1882; writer on pathology.

Ziegler, HEINRICH, b.1841. German theologian. *Irenæus,* 1868–71; *Christus,* 1891.

Ziem, FELIX, b.1821. French painter, distinguished for views of Venice: at his best, which is infrequent, a magnificent colorist.

Ziemer, HERMANN, b.1845. German writer on syntax.

Zierikzee. Town of Schouwen, Zealand; memorably though vainly defended against Spaniards 1576. Pop., 1890, 7,060.

Zieten, or **Ziethen,** HANS JOACHIM VON, 1699–1786. Prussian general of cavalry 1760, distinguished in the wars of Frederick II. against Austria.

Zietrisikite. Natural hydrocarbon compound, occurring as a mineral in wax-like masses; in many of its properties allied to ozokerite.

Ziggerat. Artificial hill intended for sacred uses in old Babylonia; usually constructed with seven platforms, but sometimes with two. There is no evidence that the different stories were painted in different colors, as has been asserted, or that the use was necessarily astronomical. It may be regarded simply as an attempt to reproduce a mountain. The Tower of Babel was unquestionably a ziggerat.

Zig-Zag. Molding peculiar to Norman style of architecture, of considerable variety.

Zigzag Riveting. Riveted joints where the rivets in parallel rows are placed alternating with each other, thus making a tight joint. See CHAIN RIVETING.

Zigzags. Approaches constructed from the parallels in siege operations to reach the covered way of the besieged position. Their general direction is along the capitals of the bastion or polygonal work to be attacked. Each branch is directed obliquely to the front, so as to pass to the front of any position which the enemy can occupy to enfilade them. They are constructed by the flying, full, or double-sap, under the direction of the engineer officers charged with the conduct of the siege. See SIEGE.

Ziller, TUISKON, 1817–1882. Prof. Leipzig 1864; writer on pedagogy and ethics.

Zillerthal. Tyrolese valley, n. of that of the Inn; 400 Protestants were expelled from it 1837.

Zilpah. Handmaid of Leah and inferior wife of Jacob; ancestress of the tribes of Issachar and Zebulun.

Zimb. Venomous dipterous insect found in Abyssinia, resembling and related to the TSETSE (q.v.).

Zimbabye, or ZIMBABWE. Remarkable ruins in British S. Africa, to the s.e. of Fort Victoria, in 20° 16′ 30″ S., and 31° 7′ 30″ E., at an altitude of 3,340 ft. The ruins evidently formed a garrison for the gold-producing race in remote antiquity, of whose work many traces have been found.

Zimisces, JOHN, 925–976. Byzantine Emperor 969–976. His abundant coins show the head or figure and titles of Christ, instead of his own.

Zimmerman, JOHANN GEORG VON, 1728–1795. Swiss physician and author of vast repute in his day. His *Solitude*, 1755, was widely read.

Zin. N.e. part of the wilderness in which the Israelites wandered in coming out of Egypt.

Zinc. Zn. Element. At.wt. 65.3, valence II.; mentioned first by Basil Valentine, and Paracelsus, 15th century. White metal with a bluish-gray tint, malleable between 100° and 150° C., but crystalline and somewhat brittle below 100°, and brittle as glass above 200° C. Sp.gr., cast 6.9, rolled or hammered 7.2 to 7.3; mpt. 424° C.; bpt. ab.1,000° C.; sp.ht. 0.0956 (0 to 100° C.). Heated to bright redness, it takes fire in the air and burns with a greenish-blue light to white flakes of oxide (Philosopher's wool). When exposed to moist air it becomes coated with a basic carbonate. It is soluble in the common acids and in sodium and potassium hydroxides.

Zinc, METALLURGY OF. The principal zinc ores are as follows: Zincblende or sphalerite, a zinc sulphide, ZnS, containing 67 per cent of zinc when pure, but carrying up to 18 per cent of iron and to 3 of cadmium. It is found in many countries, and very abundantly in Mo. Zincspar or smithsonite is a carbonate, $ZnCO_3$, carrying 52 per cent of zinc. Calamine is a hydrous silicate, $2ZnO.SiO_2H_2O$, occurring in white, knuckle-like bunches of crystals. Similar-looking smithsonite is often erroneously called calamine. Willemite is anhydrous silicate, $2ZnO.SiO_2$. Zincite is red oxide, ZnO, its color being due to iron and manganese. Franklinite is a black mineral like magnetic iron ore, and consists of oxides of zinc, iron and manganese. The latter three minerals are found abundantly only in n. N. J. These minerals all have value as ores of zinc; they occur in many forms and under many diverse geological conditions. There are also other minerals, less common, in which zinc is an essential constituent.

The principle on which the smelting of zinc ores is based is the reduction of the oxide ore by carbon in a closed retort, and condensing the zinc vapors driven off. If the ore is a sulphide ore, it must first be roasted to oxide as a preliminary to reduction. This volatilization of the zinc is practically inevitable, because, under atmospheric pressure, zinc boils at a temperature less than is required for the reduction of its oxide. The temperature of reduction is a bright reddish yellow, ab.1,150° C., while zinc boils at ab.1,000° C.

When a mixture of oxidized zinc ore with granulated carbon is heated, it is probably not the carbon which directly abstracts oxygen from the ore, since such action could take place only at the few points of contact of carbon and ore; but the small amount of air always present forms with the carbon carbonic oxide, which reduces the ore over all its surface, forming carbonic acid gas. The latter is reduced back by carbon to carbonic oxide, and thus the cycle continues.

The roasting of sulphide ore (black-jack ore) to oxide requires considerable care. The finely-divided ore is heated slowly to bright redness in a roasting furnace, with excess of air admitted, being continually turned over. At a low heat, the sulphide forms largely sulphate, $ZnSO_4$, which at a higher heat splits up into ZnO and SO_3, the former being then suitable for reduction.

The original form of apparatus for reducing zinc ores is no longer in use. It was called the English process, and consisted of crucibles in which the charge was heated, with tightly fitting covers, and a pipe passing through a hole in the bottom and reaching above the charge and below the crucible into a clear space below the fire; the lower part of the tube serving as a condenser for the zinc vapors driven off the charge, whose only outlet was through the pipe. The melted metal condensed in the tube trickled down into pots set beneath. The capacity of the crucibles was so small, and the consumption of fuel so great, that the process could not compete with the muffle and retort furnaces.

In Belgium, cylindrical or oval retorts are used, placed ab. 100 in a furnace, as shown in Fig. 1, where *a* is the charge in

Fig 1—Retorts, R ceivers, and Prolongs.

the retort; *b* the condenser, in the hollow of which the liquid zinc accumulates; *c* the prolong in which zinc vapor is still further caught as a blue powder. Only ab. 20 to 30 lbs. of ore is treated at once in a muffle, the operation requiring 10 to 12 hours. Usually only three-quarters to four-fifths of the metal in the ore is extracted, the cost of working being ab. two and a half cents per lb. of zinc. The price paid for the ore averages one cent per lb. of zinc contained. With the older furnaces, fired by coal, the fuel consumed was a considerable item of expense; the modern furnaces are longer and fired by gas, thus effecting considerable economy in fuel, as well as causing a less rapid destruction of the muffles.

In Silesia the muffles are several times as large, and are called retorts. In Fig. 2 is shown the retort A, the condenser *a*, and

Fig 2—Silesian Zinc-Furnace; transverse section.

their situation in the furnace. Each furnace contains ab. 24 of these retorts, each taking 60 lbs. of calcined ore, with carbon, skimmings of metal, etc. The operation takes ab. 24 hours; gas firing is used in all the recently-constructed furnaces.

The zinc made in these furnaces is usually pure enough to go at once to the market. If a greater degree of purity is needed, the metal may be re-distilled, but a cheaper method is to melt it in a large pot and allow it to cool quietly and slowly. Lead sinks to the bottom and accumulates, while iron combined with some zinc falls to the bottom as a sandy residue; the purer zinc is ladled from the surface.

In Europe, Silesia and Belgium have long been large producers of zinc, and zinc ores are abundant in Italy and in Spain.

The U. S. now ranks third in the list of zinc-producing countries, extensive deposits of ores being found in n. N. J., e. Pa., Va., s.w. Wis., Mo., and other States. In 1897 the product of zinc in the U. S. was, in short tons, East and South, 9.673; Ill. and Ind., 38,616; Kan. and Mo., 51,814; total, 100,103; ab. one-fourth the product of the world.

Commercial zinc (sometimes called spelter), usually contains lead, cadmium and iron, while tin, copper, arsenic, sulphur and carbon may be present in traces; it averages 98 to 99.5 per cent of zinc. Its market price is 4 cts. per lb.; re-distilled zinc commands 6 cts.

Zinc has been known as a commercial metal only since 1805; but it has many and important uses. Sheet zinc has many applications, while the metal is cast into art-castings and battery plates. The process of coating iron or steel with zinc by first cleaning and then dipping into the melted metal, the process erroneously called galvanizing, consumes a large proportion of the zinc made.

In alloys, the most important is brass, which is red brass when containing 3 of copper to 1 of zinc, and yellow brass with 2 of copper to 1 of zinc. Before zinc itself was known, brass was made by reducing together a mixture of zinc and copper ores; but now it is made entirely by melting the zinc into the copper. See BRASS and COPPER, METALLURGY OF.

Zinc, STRENGTH OF. Spelter zinc has a compressive ultimate strength of ab. 40,000 lbs. per sq. inch.

Zincates. $Zn_3(OH)_2(ONa)_4.17H_2O$; $(2Zn(OH)(ONa).7H_2O$. Zinc hydroxide is soluble in alkaline hydroxides; from these solutions crystallized salts have been obtained, which have been called zincates.

Zincblende. See SPHALERITE.

Zinc Bloom. Hydrous zinc carbonate formed by chemical change of zinc ores; found in considerable quantity in some Spanish mines.

Zinc Bromide. $ZnBr_2$. White soluble needles, melting to a bright yellow liquid; made by treating heated zinc with bromine.

Zinc Carbonate. Its composition varies according to condition. When zinc sulphate is precipitated with sodium carbonate, the basic salt $Zn(OH)_2.ZnCO_3.ZnO$. is formed. It occurs in nature as SMITHSONITE (q.v.).

Zinc Chlorate. $Zn(ClO_3)_2+6H_2O$. Hygroscopic soluble crystalline substance with an herb-like odor; mpt. 60° C.; made by treating the carbonate with chloric acid and evaporating.

Zinc Chloride. $ZnCl_2$. White, deliquescent substance, volatile at 680° C.; made by dissolving zinc in hydrochloric acid. It forms double salts with the alkaline chlorides.

Zinc Cyanide. $Zn(CN)_2$. Lustrous orthorhombic prisms, or amorphous powder, soluble in alkalies; made by treating the acetate with hydrocyanic acid.

Zinc Dust. Mixture of the metal and the oxide, obtained in the reduction of zinc ores, or by pulverizing the metal at a temperature just below its melting point. It is used as a reducing agent in chemistry.

Zinc Ethyl. $Zn:(C_2H_5)_2$. Zinc ethide; combination of the ethyl radical with zinc; prepared by the action of ethyl iodide upon zinc; liquid, bpt. 118° C., which takes fire with explosive violence if brought in contact with the air.

Zinc Fluoride. ZuF_2. Soluble needles, sp.gr. 4.84; made by treating the metal or oxide with hydrofluoric acid.

Zinc Hydroxide. $Zn(OH)_2$. White, amorphous, insoluble powder, made by adding a soluble hydroxide to a soluble zinc salt; soluble in excess of the precipitant.

Zincing of Metals. See GALVANIZING.

Zinc Iodide. ZnI_2. Octahedra, or cubes modified by octahedra. They decompose on heating, and are made by heating zinc with iodine.

Zincite. ZnO. Natural zinc oxide, occurring in n. N. J. as a red mineral, whose powder is orange-yellow in color; red zinc ore.

Zinc Methyl. $Zn:(CH_3)_2$. Zinc methide. See ZINC ETHYL, to which it corresponds in every respect.

Zinc Nitrate. $Zn(NO_3)_2+6H_2O$. Clear, four-sided columns; mpt. 36.4° C., bpt. 131° C.; made by dissolving zinc in nitric acid.

Zinc Nitrite. $Zn(NO_2)_2+3H_2O$. Hygroscopic crystals, decomposing at 100° C.; made by treating zinc sulphate with barium nitrite in solution.

Zinc Oxide. ZnO. Flores zinci, Zinc White, Philosopher's Wool. White powder, turning yellow when heated; made by burning zinc or igniting the carbonate; used extensively as a constituent of white paint, and for complexion powders. It is made on a large scale by mixing pulverized blende, freed from sulphur by roasting, or other zinc ores, with fine anthracite or coke, and burning the mixture in a furnace. The zinc is reduced to the metallic state and free access of air converts it into the oxide. The light zinc oxide with the gases are drawn through a series of chambers, where the heavier impurities are deposited and the gases with the oxide are forced into cotton bags, the gases passing through the tissue, the oxide being retained. This is ground with linseed oil for a white pigment. It does not cover as well as white lead and, not forming so strong a combination with the oil, does not withstand the weather as long. It is not blackened by sulphur vapors from burning coal or illuminating gas. In 1897, 26,275 short tons were produced in the U.S.

Zinc Phosphate. $Zn_3(PO_4)_2$. Prisms, sp.gr. 3.99, melting at a red heat; made by boiling the oxide or carbonate in phosphoric acid.

Zinc Sulphate, ZINC VITRIOL, or WHITE VITRIOL. $ZnSO_4+7H_2O$. Transparent, rhombic prisms, made by roasting zinc blende and extracting with water; used in the preparation of cotton-prints and in medicine; found in nature as the mineral GOSLARITE (q.v.).

Zinc Sulphide. ZnS. Found in nature as SPHALERITE and BLENDE (q.v.). Artificially it is made by adding a soluble sulphide to a soluble zinc salt. It is a white, amorphous substance.

Zinc White. See ZINC OXIDE.

Zingarelli, NICOLA ANTONIO, 1752–1837. Italian composer of 31 operas, 4 oratorios, over 150 masses, and many motets, hymns, etc.

Zingerle, IGNAZ VINCENZ, b.1825. Tyrolese poet and historical writer, prof. Innsbruck 1859.

Zinkenite, or ZINCKENITE. $PbSb_2S_4$. Rare mineral compound of lead, sulphur, and antimony, first found at an antimony mine in the Harz Mountains.

Zintgraff, EUGEN, 1858–1897. German traveler in Africa.

Zinzendorf, NICHOLAS LUDWIG, GRAF VON, 1700–1760. Protector of Moravian exiles at Herrnhut 1722; reviver of the

Nicholas Ludwig Zinzendorf.

Unitas Fratrum; Bp. 1737; exiled from Saxony 1736–47; active in travel and missionary labors; in Pa. 1741–42; voluminous writer, especially of hymns. Several of these, tr. by J. Wesley, are in familiar use.

Zion. S.w. hill of JERUSALEM (q.v.); ht. 2,540 feet.

Zipporah. Daughter of Jethro or Raguel, and wife of Moses.

Zircon. $ZrSiO_4$. Zirconium silicate, found as a rare mineral in several widely separated parts of the world, as Ceylon, Australia, N. C., and Norway, usually as an accessory ingredient in crystalline rocks. When transparent, colored and brilliant in luster, it has value as a gem-stone under the name of hyacinth. The duller opaque varieties are utilized in the preparation of the highly refractory earth, zirconia.

Zirconia. See ZIRCONIUM OXIDE.

Zirconium. Zr. At.wt. 90.6, sp.gr. 4.15, sp.ht. .066, valence IV. Discovered by Berzelius 1824; rare metal, obtained

by heating potassium fluozirconate with aluminium, as an amorphous black powder or in crystalline metallic leaflets. It occurs in nature chiefly as zircon, $ZrSiO_4$.

Zirconium Bromide. $ZrBr_4$. White, crystalline powder, decomposed by water; made like the chloride.

Zirconium Chloride. $ZrCl_4$. White substance, fuming in the air; decomposed by water; made by treating a heated mixture of the oxide and carbon with chlorine.

Zirconium Fluoride. $ZrFl_4$. Colorless, translucent crystals, made by heating a mixture of fluorspar and zircon in hydrochloric acid gas.

Zirconium Hydroxide. $Zr(OH)_4$. White, amorphous powder, precipitated from acid solutions of zirconium by ammonium hydroxide; decomposed by heat, yielding zirconium oxide.

Zirconium Oxide. ZrO_2. Zirconia. Amorphous powder, or quadratic prisms, obtained by igniting the metal or heating the hydroxide.

Zirconium Silicate. See ZIRCON.

Zirconium Sulphate. $Zr(SO_4)_2$. White mass, soluble in water, decomposing on heating; made by treating the hydroxide with sulphuric acid.

Zirknitz, LAKE OF. In Carniola, Austria. In August, the water sometimes disappears long enough to raise a crop of hay on the bottom, being connected underground with the river Laibach, and the caves of Adelsberg. Length 6 m., breadth 3 m., depth 15–50 ft., alt. 1805 ft.

Z Iron. Bar whose cross-section resembles the letter Z, really like this ⊤⊥; rolled of wrought-iron and steel, and used for making posts and compression members in bridges.

Ziska, JOHN, 1360–1424. Bohemian officer, distinguished at Tannenberg 1410, and Agincourt 1415; leader of the Hussites from 1419; one-eyed, and blind from 1421; victor in 13 battles and 100 skirmishes; only once defeated. At Deutsch-brod, Jan. 18, 1422, he routed the Emperor Sigismund, who had violated his safe-conduct and given Huss to the flames.

Zither. Musical instrument, extremely popular in the Tyrol and other mountainous sections of Germany and Austria. It consists of a flat sound-box strung with from 36 to 42 strings, all but five of which are of gut or silk. The five are of metal, and

Zither.

are extended over a finger-board fretted chromatically. Upon this board the tones are formed by the fingers of the left hand; the melody is plucked by means of a ring or plectrum fastened to the thumb of the right hand, while the harmony is supplied by the fingers, as in the case of a harp.

Zittau. Town in s.e. Saxony, on a lignite deposit of 20 sq. m. It has manufactures of linen and cotton goods, dye and bleaching works, iron-smelting and glass works; also mineral springs. It was burned in the Austrian bombardment 1757. Pop., 1890, 25,400.

Zittel, CARL ALFRED VON, b.1839. Prof. Munich 1866; author of an extensive handbook of Paleontology.

Znaim. Town of Moravia: scene of a French victory July 11, 1809. An armistice was concluded the next day. Pop., 1890, 14,515.

Zoan, or TANIS. Former capital of Egypt under the Hyksos kings and in 19th dynasty; in the Delta; often mentioned in O. T.; destroyed 174. Its remains were explored by Petrie 1883–84.

Zoantharia (HEXACTINIA). Division of *Anthozoa*, including coral polyps or polyp-stocks with tentacles in concentric circles and with the mesenteric septa in multiples of six. This group includes the most common corals. The anatomy of the soft parts is similar to that in the Sea-Anemone (*Actinia*). There are three groups: *Sclerobasica* (*Antipatharia*), *Malacodermata* (*Actinaria*), and *Scleroderma*ta (*Madreporaria*).

Zoanthidæ. Family of *Zoantharia*, *Malacodermata*, or Polyps, closely related to those that secrete coral, but free, having no hard, rock-like support; further characterized by including compound individuals, each consisting of many polyps united by a common cœnosarc. The walls of these polyps are often strengthened by a crust containing grains of sand or spicules.

Zoar, or BELA. One of the Cities of the Plain, s.e. of Dead Sea; spared at Lot's prayer. Gen. xix. 20–23.

Zobah. Ancient kingdom of Syria, at war with Israel.

Zöckler, OTTO, D.D., b.1833. Prof. Greifswald 1866; commentator. *Cross of Christ*, 1875, tr. 1877.

Zodiac. Zone of the celestial sphere, 16° in breadth, 8° each side of the ecliptic. It is divided into twelve signs of 30° each, beginning with the vernal equinox, as follows:

Aries ♈	Libra ♎
Taurus ♉	Scorpio ♏
Gemini ♊	Sagittarius ♐
Cancer ♋	Capricornus ♑
Leo ♌	Aquarius ♒
Virgo ♍	Pisces ♓

Originally these signs corresponded to the constellations having the same names, but by the action of precession the sign Aries now corresponds to the constellation Pisces nearly, and similarly with the others. Similarly designated signs are found among the ancient Egyptians, Arabs, Hindus, and Chinese, as also among the Aztecs and other primitive American tribes. See TROPICS.

Zodiacal Light. Faint beam of light extending along the ecliptic on both sides of the sun; best seen in the evening

Winter Solstice. Vernal Equinox. Summer Solstice.

The Zodiacal Light.

during Feb., March and April; supposed to be caused by the reflection of the sun's rays by meteoric matter in the vicinity of the sun.

Zoëa. Earliest larval stage of the Lobster and Crab. (The nauplius and other early stages represented by free larvæ in lower *Crustacea* are in Lobsters and Crabs passed through within the egg-shell.) It has a cephalothorax provided with three long spines, and a six-jointed abdomen without appendages. The only locomotor appendages present are those that represent the first two pairs of maxilipedes of the adult.

Zoecium. 1. Chamber or cell in which the polypide of a Polyzoön is contained. 2. Equivalent of zoöid.

Zoega, JOHANN GEORG, 1755–1809. Danish numismatist, antiquarian, and Orientalist, resident at Rome; cataloguer of Coptic MSS.

Zoepffel, RICHARD OTTO, D.D., 1843–1891. Prof. Strasburg 1872; ed., with H. J. Holtzmann, *Lexikon fur Theologie*, 1882–91.

Zoetrope. Optical toy in which a succession of figures in different attitudes are made to appear like a single one in motion. Two forms exist. In one the figures are arranged

in a circle on a pasteboard disk which is made to revolve on an axle with another disk, through slits in which the pictures are observed. In the other the pictures are placed on strips of

Zoetrope.

paper within a round box open at the top, which is made to revolve on an upright stand, the observer looking through slits in the box. See AFTER-IMAGES and STROBOSCOPIC DISK.

Zoffany, JOHANN, R.A., 1735–1810. German-English painter.

Zogbaum, RUFUS FAIRCHILD, b.1849. American illustrator, handling military and naval subjects. *Horse, Foot and Dragoons*, 1887; *All Hands*, 1897.

Zoilus, 3d cent. B.C. Greek vilifier of Homer.

Zoisite. Light-colored mineral of the epidote group, relatively poor in iron. It includes a part of the so-called saussurite.

Zola, ÉMILE, b.1840. French novelist, chief of the realistic school. *Thérèse Raquin*, 1867; *L'Assommoir*, 1878; *Nana*, 1880; *Germinal*, 1885; *La Terre*, 1888; *La Débâcle*, 1892; *Lourdes*, 1894; *Rome*, 1896. Some of these books have been severely criticised on the score of taste and morals, as by M. Brunétiere.

Zollicoffer, FELIX KIRK, 1812–1862. M. C. from Tenn. 1853–59; Brig.-gen. C.S.A. 1861; killed at Mill Springs, Ky.

Zollikofer, GEORG JOACHIM, 1730–1788. Pastor at Leipzig from 1758; moderate rationalist, noted for eloquence. Sermons, tr. in 10 vols. 1803–12; *Exercises of Piety*, tr. 1796.

Zöllner, JOHANN CARL FRIEDRICH, 1834–1882. Prof. of Astronomy at Leipzig 1872: author of papers on stellar photometry.

Zöllner, KARL FRIEDRICH, 1800–1860. German musician, best known by his part-songs for men's voices.—His son, HEINRICH, b.1854, since 1890 conductor Deutscher Liederkranz in New York, has composed many vocal and orchestral works and four operas, *Frithjof*, 1884, *Faust*, 1887, *Der Ueberfall*, 1895, and *Bei Sedan*, 1895.

Zollverein. Union among states, by which a common system of tariffs and a common custom house frontier are established; especially that of German states 1821–71.

Zona Radiata, or ZONA PELLUCIDA. Thick, clear membrane pierced with minute pores, surrounding the eggs of many fishes and mammals.

Zonaras, JOANNES, 1030–1118. Byzantine writer. His *Chronicon*, pub. 1557, extends to his own time.

Zonaria. See DECIDUATA.

Zonda Wind. Warm wind descending the mountain valleys on the e. side of the Andes; evidently a Föhn wind.

Zone. Portion, limited by parallel planes, of the surface formed by the revolution of a curve. A spherical zone has its area equal to the product of its altitude by the circumference of a great circle. Zones on the same sphere are proportional to their altitudes; formed by the same planes on different spheres, they are as the spherical radii.

Zonoplacentalia, or ZONARIA. See PLACENTA and PLACENTALIA.

Zoöcytology. See ZOÖLOGY.

Zoödynamics. See ZOÖLOGY.

Zoögenesis. See ZOÖLOGY.

Zoöglœa. Slimy, jelly-like coating formed on liquids that contain active bacteria. The slime is produced from the outer coats of the bacteria, which lie imbedded in it, and at the air surface of the liquid. The bacteria are producing spores. See SPORES OF BACTERIA.

Zoöid. Individuals or units making up a colony of animals, whether free or attached. They are in all cases individuals that have risen by budding or fission of the original product of an egg or its equivalent.

Zoölogical Geography. See DISTRIBUTION and ZOÖLOGICAL PROVINCES.

Zoölogical Provinces. Regions of the earth's surface distinguished by special peculiarities as regards their Fauna; viz., Palæarctic, Ethiopian, Oriental, Australian, Nearctic, and Neotropical. The Oceanic Islands have special peculiarities, as fewness of species existing on any one island, and the endemic character of those that do occur; *i.e.*, a species present on one island will be found on no other.

Zoölogy. Biology of Animals, as Botany is that of Plants; usually divided into Morphology, the study of structure, and Physiology, of function; but it is not advisable here to separate the two. Special departments are: 1. Systematic or taxonomic zoölogy, the description and classification of species: this may be called Zoötaxy, and is subdivided, according to the special group of animals studied, into Helminthology, Conchology, Entomology, Ichthyology, Herpetology, Ornithology, etc. 2. Gross anatomy of animals, special and comparative: this may be termed Zoötomy; its subdivisions are Osteology, Myology, Neurology, Angeiology, Splanchnology, etc. 3. Development of animals, including Embryology or Ontogeny, and the study of Affinities or Phylogeny, Zoögenesis. 4. Study of the minute structure of cells and tissues, or Histology and Cytology, Zoöcytology. 5. Study of fossil animal remains, or Paleontology, Palæozoölogy. 6. Geographical distribution, or Chorology, Zoögeography. 7. Darwinismus, Hexacology, Ætiology, Œcology, Teleology, and Thremmatology; study of the interaction of organization and environment, heredity, struggle for life, survival, sexual and natural selection, Zoönomics. 8. Study of the functions of the living body, Physiology or Phoronomy, Zoödynamics, with its subdivisions, zoömechanics, co-ordination, nutrition and generation. 9. Application of zoological principles in agriculture and the arts, animal industry and husbandry, Economic Zoölogy, Zoötechny. 10. Instincts, habits, Psychology and Sociology of Animals, Zoöpsychology. Philosophical Zoölogy is mainly Zoönomics; "Natural History" is the union of 1 and 10.

Aristotle (d. 322 B.C.), "Father of Zoölogy," is rather the last representative of a gradual development. After him for 2,000 years there was no advance, but rather degeneration. The revival of zoölogy occurred after 1500, stimulated by the descriptions of new animals brought by travelers and explorers. Gesner compiled a Natural History, Vesalius studied Anatomy by actual dissection, and Belon described Fishes. The 17th century saw the founding of the Royal Society of London 1662. Harvey (1616) discovered the circulation of the blood. Leeuwenhoek (1675) by his lenses discovered the Infusoria and many other animalculæ, and was the first to oppose the then prevalent belief that small animals could be spontaneously generated from mud. Other noted names of this time are Malpighi, Ray, Redi, and Swammerdam. During the 18th century Linnæus introduced the present method of naming animals, and was able more accurately to classify them. Buffon popularized natural history. Haller, the experimental physiologist, was opposed by Wolff, who believed in epigenesis. In 1796 Erasmus Darwin wrote the *Zoönomia*. The 19th century opened with Lamarck, who propounded a theory of Evolution, and the Nature Philosophers, Oken, Goethe, etc., who discovered Serial Homology. Embryology and Histology, thanks to the development of the microscope, had now been pursued so far that Von Baer could announce (1827) that Omne vivum ex ovo. Dujardin (1835) discovered Protoplasm or Sarcode, and Schwann (1841) propounded the generalization that organisms are built up of protoplasmic units, the cells. He also discovered that fermentations are due to microbic organisms. Johann Muller (1801–1858) trained up a school of eminent German zoölogists. During the first third of this century Cuvier laid the foundations of Comparative Anatomy, and opposed the idea that animals could be arranged in a series with the most complex at the top. He saw that there were types related in a branching manner. His pupil, Louis Agassiz, taught that not only species, but genera, orders, classes, etc., were fixed ideas in the Creator's plan, and needed but the discerning eye to reveal them. Owen, another of Cuvier's pupils, was imbued with the idea of homologous parts. The year 1858 marked the beginning of the modern era in Zoölogy. Darwin's *Origin of Species* showed that the animal kingdom is a continuum of individuals. The limitations of our knowledge and the loss of connecting links

enables us to see apparently isolated groups of animals. To make a natural classification, we need to know the entire history of as many animal forms as possible. This idea has been a new organon, and has stimulated and enlarged research in many directions. Marine laboratories have been established, so that the vast life of the ocean can be studied properly. Since Darwin's epoch-making work appeared, great advances in microscopical technique have enabled zoölogists to study the minute structure of protoplasm, so that a new set of facts on which to base a theory of life and heredity has been gleaned.

Zoönomics. See ZOÖLOGY.

Zoöphytes. Plant-like forms of animals, as the coral Polyps and other Cœlenterates.

Zoösperms. 1. Egg-like encysted forms of *Coccidia*. 2. *Spermatozoa*.

Zoöspores. Active flagellated young, produced by spore-formation in *Protozoa* and other low forms of life. They usually conjugate, and so produce the usual adult forms.—In Botany, minute bodies by means of which many of the lower plants are propagated. They originate by the division of the protoplasmic contents of a cell into an immense number of individual spores. They are commonly motile by means of vibratory cilia; also called Sporids, or *Sporidia*.

Zoötaxy. See ZOÖLOGY.

Zoötechny. See ZOÖLOGY.

Zoötomy. Art and science of animal dissection; divided into gross dissection and microtomy. See ZOÖLOGY.

Zorgite. Double selenide of lead and copper, found in the Harz Mts., Thuringia and Clausthal. It is the principal source of commercial selenium.

Zorndorf. Village of Brandenburg where Frederick II. defeated a Russian army Aug. 25, 1758.

Zoroaster, probably 6th cent. B.C. Founder of the religion of ancient Persia. His system was marked by moral earnestness, but fettered by dualism: Ahriman, the evil principle, being equally eternal with Ahuramazda, or Ormuzd, principle of good, though ultimately subdued by him.

Zoroastrianism. See ZOROASTER.

Zorrilla y Moral, JOSÉ, 1817–1893. Spanish poet and dramatist. *Cantos del trovador*, 1841; *El Zapatero*, 1844; *Don Juan Tenorio*, 1845; *Granada*, 1853–54.

Zosimus. Pope 417–418. After some hesitation, he condemned Pelagius.

Zosimus, 5th cent. Greek (heathen) historian of the Roman Empire to 410.

Zouaves. Regiments formed in Algeria 1830, at first consisting largely of Kabyles (Turcos), later of Frenchmen, retaining a peculiar uniform; distinguished in Africa and the Crimea; imitated by the Papal Zouaves 1860–71, and in the U. S. 1861–65.

Zrinyi, MIKLOS, 1508–1566. Slovak noble, in the Austrian service; Gov. of Croatia and Slavonia 1542; active against the Turks; killed in defending Sziget, after a month's siege; celebrated in plays and poems, as by his great-grandson, MIKLOS, 1616–1664, also Ban of Croatia, in the earliest Hungarian epic.

Zschskke, JOHANN HEINRICH DANIEL, 1771–1848. German-Swiss author, chiefly of tales and histories; notable for moral earnestness and public spirit. *Hours of Meditation*, 1809–16, tr. 1843; *Hist. Switzerland*, 1822, tr. 1855; *Goldmaker's Village*, tr. 1845; *Autobiography*, 1842, tr. 1847. *Works*, 35 vols., 1851–54.

Zubly, JOHN JOACHIM, D.D., 1725–1781. Pastor at Savannah, Ga.; active patriot, in Congress 1775; then royalist; accused of treason to U. S. and banished 1777.

Zuccaro, FEDERIGO, 1543–1609. Italian artist, of more versatility than talent; much employed as a decorator, especially in Florence, Rome and Madrid.—His brother, TADDEO, 1529–1566, did similar work.

Zug. Central Swiss canton. Area 92 sq. m.; pop., 1894, 23,167.

Zuider Zee. Arm of North Sea, separating n. Holland from Frisia and other provinces; ab. 70 m. long; formed by inundations 860 and later. The s. part, called the Y, is shallow; a plan of drainage has been proposed, which would reclaim some 500,000 acres at a cost of $50,000,000.

Zuinglius. See ZWINGLI.

Zuloaga, FELIX, 1814–1876. Pres. of Mexico 1858–59; outlawed 1860; in exile 1862–64.

Zulu. S. African agglutinative dialect, with considerable variety of linguistic forms.

Zulus. Most important tribe of the Kaffre division of the Bantu or S. African negroes. They are now restricted to the coast district s. of Delagoa Bay, but not long ago overran all s.e. Africa, conquering other tribes and imposing their own highly developed language. They are intelligent, courageous, and fierce warriors, powerfully developed, and well organized for war. They practice stock-raising and agriculture, but field-work is done by the women, except milking. Little meat is eaten during peace. Possessions consist in cattle, wives and children. Wives are secured by a system of barter, the worth of the bride being measured by cattle. The first wife is mistress over those subsequently acquired, but each wife has her own hut and land. The oldest son has absolute rule over the other children, but the youngest succeeds his father as chief. The

The King's Kraal.

huts are hemispherical, and used for storage of utensils and for sleeping. A tribal village is a kraal surrounded by a double thorn hedge with one gate through which the cattle are driven to spend the night within the inclosure. Each kraal has its chief: the most powerful and sagacious chief exercises a sort of kingship over the nation. Some are Christianized, but their religious ideas are crude and simple. The magician is the doctor, priest and judge, but must lead in battle. The well-to-do are buried; other corpses are exposed.

Zumala-Carreguy, TOMAS, 1789–1835. Spanish officer 1808–14 and 1822–32; Carlist general-in-chief 1833; killed at Bilbao after several victories.

Zumarragua, JUAN DE, 1468–1548. Superior of Franciscans in Mexico 1528–31; Bp. of New Spain 1534; protector of Indians, but fanatical and wholesale destroyer of Aztec documents.

Zumaya, MANUEL, ab.1670–ab.1740. Mexican priest, musician, and dramatist.

Zumpt, KARL GOTTLOB, 1792–1849. Prof. Berlin 1827; ed. Cicero and other classics; writer on Roman history and law. His Latin Grammar, 1818, was widely used.—His nephew, AUGUST WILHELM, 1815–1877, did similar work.

Zundel, JOHN, 1815–1882. German musician; organist of Plymouth Ch., Brooklyn, 1850–65 and 1867–78; composer.

Zuni. Pueblo Indian tribe on the Zuni branch of the Colorado in w. New Mexico. This pueblo contains ab. 1,500 persons; originally it accommodated 5,000. Frank Cushing, sent by the Smithsonian Institution to study these Indians, was initiated as a member. They are sun-worshipers, have many mystic

Zuni Woman Weaving a Belt.

orders and degrees pertaining to war, medicine, religion, etc., and practice peculiar rites and ceremonies of great interest to the ethnologist. Their language is grammatically well developed. They are undersized, religiously disposed, and peace-loving, but courageous in defense of their rights. Tradition says that they came from the northwest.

Zuniga. See ERCILLA Y ZUNIGA.

Zuniga, ALVARO, MARQUIS DE VILLA-MANRIQUE, ab.1530–ab.1600. Viceroy of Mexico 1585–90.

Zuniga, BALTASAR DE, MARQUIS DE VALERO, ab.1670–ab.1730. Viceroy of Mexico 1716–22.

Zuniga y Acevedo, GASPAR DE, COUNT DE MONTEREY, ab. 1540–1606. Viceroy of Mexico 1595–1603, and of Peru 1604; promoter of explorations in California.

Zuni Mountains. Range of New Mexico, n. of lat. 35° N., extending 45 m. from n.w. to s.e., and rising to 6,500 ft. The range is of special interest to geologists.

Zurbaran, FRANCISCO DE, 1598–1662. Spanish painter. His works are simple and serious, mainly depicting monks.

Zurich. Canton of n. Switzerland. Area 666 sq. m.; pop., 1894, 351,917. Its capital, Z., at the foot of Lake Z., was taken by Massena Sept. 26, 1799. It has varied manufactures, and a university, founded 1832. Pop., 1894, 103,271, chiefly in its suburbs.

Zurich, LAKE OF. In central Switzerland; 25 m. long e. to n.w., with a curve to the s.w.; 1½–2½ m. broad; now divided into two parts by a railway embankment. Area 33.2 sq. m., depth 470 ft.

Zurich, TREATY OF. Between Napoleon III. and Francis Joseph of Austria, Oct. 1859, concerning Italy.

Zurita, ALONSO, ab.1500–ab.1570. Spanish official and writer, in San Domingo, S. America and Mexico 1544–64.

Zurita, GERONIMO, 1512–1580. Chronicler of Aragon 1549. *Anales*, 6 vols., 1562–79.

Zutphen. Dutch town, on the Yssel; memorable for the death of Sir Philip Sidney in a skirmish, Oct. 1586. Pop., 1890, 17,044.

Zuyder Zee. See ZUIDER ZEE.

Zwickau. City of Saxony, on the Mulde, in a coal-mining region. Pop., 1890, 44,198.

Zwingli, HULDREICH, 1484–1531. Swiss reformer, precursor of Calvin. He introduced the Reformation at Zurich 1519–23,

Huldreich Zwingli.

separated from Luther as to the Eucharist 1529, and was killed in battle for freedom. He was fearless and devoted, with a plain, practical mind, and (excepting Socinus) the most liberal of the reformers. *Opera*, 4 vols., 1545. His last confession, sent to Francis I. 1531, is memorable, and caused Luther to despair of his salvation, since it admitted the salvability of good heathens.

Zygadenus, or **Zygabenus,** EUTHYMIUS. Byzantine theologian who wrote *Panoply Against All Heresies*, at the request of A. Comnenus; flourished 1081–1118. Some of his commentaries are in the Vatican in manuscript; those on the Gospels and Psalms are often consulted.

Zygantrum. Deep cavity situated medianly in the neural arch, posterior end, of a serpent's vertebra. It has a pair of articular facets, looking upward and inward, on which the articular facets of the zygosphene fit. More laterally, and facing down and outward, are the post-zygapophyses, slightly above and to the sides of the ball of the centrum.

Zygnemaceæ. Order of minute green fresh-water *Algæ*.

Zygobranchia. See CYCLOBRANCHIATA.

Zygodactylous. Yoke-toed; *i.e.*, with toes in pairs, two turned forward and two backward, as in the Parrot and Woodpecker, in which the first and fourth are turned back. In the Trogons the first and second turn back; these are heterodactylous.

Zygomorphous. Flowers or other organs which can be bisected by but a single plane into bilaterally symmetrical halves.

Zygomycetes. Sub-class of *Fungi*, characterized by the formation of a zygosperm in the process of reproduction.

Zygophyllaceæ. Natural order of flowering plants, of the class *Angiospermæ*, sub-class *Dicotyledons*, and series *Polypetalæ*, comprising 18 genera and ab. 110 species, distributed throughout the tropics and the warmer regions of the n. hemisphere especially.

Zygopleura. See ALLOPOLA.

Zygosis. Sexual union (conjugation) of two unicellular organisms. The process is termed copulation in higher animals. In zygosis, differences of sex are not distinguishable. There is a mutual interchange of fertilizing protoplasm if the conjugation is temporary; otherwise the gametes fuse into a single zygote.

Zygosperm. Result of the union of the protoplasm from two vegetable cells in the reproductive process called CONJUGATION (q.v.).

Zygosphene. Bony wedge projecting forward medianly from the neural arch of a serpent's vertebra. Its articulating surfaces look down and outward, the opposite of the more laterally placed præzygapophyses, with which they are nearly parallel. This wedge fits into a hollow (see ZYGANTRUM) of the vertebra next in front, with which the centrum also articulates by a ball and socket joint.

Zygospore. Spore or reproductive body produced by conjugation.

Zygote. Cell formed by the coalescence of two cells when the nuclei become one. The most common variety of zygote is the oösperm or fertilized egg.

Zygotrocha. Order of Rotifers, characterized by the presence of two simple trochal disks.

Zylonite. Variety of celluloid, used for collars and cuffs; it contains camphor: also called xylonite.

Zymogenic Bacteria. Those which produce fermentations.

Cuba. Largest island of the West Indies, between the Gulf of Mexico and the Caribbean Sea, between lat. 20°–24° N. and long. 74°–85° W.; 780 m. long. 28–143 m. wide; area 43,319 sq.m.; adjacent islands 1,400 sq.m.; coast line 2,000 m. It is separated from Florida on the north by the Straits of Florida, 130 m. wide; from Hayti on the east by the Windward Passage, 48 m. wide; from Jamaica on the south by the Carribbean Sea, 90 m. wide; from Yucatan on the west by the Yucatan Channel, 130 m. wide. It is of volcanic origin, with mountain range from e. to w., the highest at the e., 7,700 ft. Coral formations surround the island. The longest rivers are in the south, navigable for vessels of 50 tons. There are several good ports. The climate is that of the torrid zone, 77–82° F., Aug.-Sept. being the hottest months, Nov.-Feb. the coldest; rainfall 39–46 in. The highlands are healthy, the low, marshy parts unhealthy. Yellow fever is endemic. Earthquakes have occurred in the eastern end. Hurricanes take place in fall months. Pop. 1894 was estimated at ab. 1,640,000, of whom 950,000 were white creoles, 150,000 Spaniards, 500,000 negroes, 40,000 Chinese. A large portion of the land is uncultivated, consisting of virgin forests and fertile plains. In 1894–95 there were produced 1,004,264 tons of sugar; of tobacco 560,000 bales of 110 lbs., of which 338,000 bales were exported, the rest being made into cigars and cigarettes; in 1895, 48,163,846 cigarettes were exported. Other products are coffee, cacao, opium, aniseed, indigo, manihot, two crops Indian corn, cotton, hard woods, tropical fruits. Horses, mules, swine and sheep are largely raised. Iron, copper, zinc, coal, asphaltum, manganese, mercury, gold, silver, petroleum, and mineral waters are found in the eastern end. In 1897, 495,566 tons of iron ore were exported by two American companies. The imports are rice, flour, meat, wines, cottons, woolens, silks, perfumeries, and building materials. The exports in 1892 amounted to $90,000,000; and the imports $57,000,000. The revenue of the government does not exceed $30,000,000; in 1893–94 the expenditures were $26,000,000. The debt amounted in 1896 to $350,000,000 and the annual interest to $17,800,000. The principal towns are Havana, pop. 200,000; Santiago, 70,000; Puerto Principe, 45,000; Holguin, 35,000; Santo Spiritu, 30,000; Cienfuegos, 28,000; Cardenas, 24,000. C. is divided into six provinces; these and the municipalities are administered by corporations of councilors. The whole island is governed by the Captain-general, with an advisory council, which is rarely consulted. There are 16 senators and 30 deputies to the Spanish Cortes. There have been numerous revolts against the government—one, 1868–78, was formidable. The present rebellion began in 1895, under the lead of Jose Marti, Antonio and Jose Maceo, and Gomez. Gen. Martinez Campos, the Gov.-gen., endeavored to quell the rebellion by fair fighting and employing the people. He was not supported by his officers, and in 1896 was replaced by Gen. Weyler, who was energetic and cruel, and concentrated the Cubans within certain lines, near towns, who suffered from want of food and exposure. Gen. Blanco succeeded in Oct. 1897, who endeavored to conciliate the Cubans by appointments to office and the establishment of autonomous government, the Cuban parliament being inaugurated at Havana, May 1, 1898. Roads are few; ab. 1,000 m. of railroads radiate from Havana. There are ab. 2,500 m. of telegraph. The religion is Roman Catholic. Slavery was abolished 1886. C. was discovered by Columbus in 1492, settled by Spaniards 1511–15, taken by England 1762, ceded back to Spain 1763. The inhabitants found there at the discovery were Indians from Yucatan and S. America.

Hawaiian (or SANDWICH) **Islands.** Group of 12 islands in the Pacific Ocean, lat. 19–23° N. and long. 155–162° W., 2,100 m. from U.S.; 8 are inhabited, having an area of 6,740 sq.m. The others are barren rocks. They are volcanic and mountainous, high ground in the center, rich valleys to sandy shores, with coral reefs. Soil is fertile and productive. Hawaii, 4,210 sq.m., and Kauai, 640 sq.m., are supplied with rivers for irrigation, not navigable. Harbors are wanting; that of Honolulu, on Oahu 500 sq.m., has a depth of 22½ ft. Climate temperate, 52-90° F., rainfall 40–54 in. N.E. trade winds bring rain. The uplands have forests. There are no mineral resources. Rats, dogs, mice, bats, hogs are indigenous; there are also wild horses, few reptiles and 71 species of birds. Sugar, rice, coffee, bananas, wool and hides are exported; cotton, tobacco, cacao, arrowroot, yams, and all live stock, are also raised. The imports consist of groceries, provisions, clothing, grain, machinery, hardware and cotton goods. In 1896 the exports amounted to $15,436,000, of which sugar was $14,932,000, rice $195,000 and bananas $125,000. The imports amounted to $7,165,000; 92 per cent of the trade is with U.S. The public revenue in 1896 amounted to $1,997,818; expenditures $1,904,191; customs $656,896; taxes $706,542; internal revenue $168,384; debt $4,136,174; interest 5-12 per cent. Pop., 1892, 109,020; of these 31,019 were Hawaiians, 8,485 half castes, 21,616 Chinese, 24,407 Japanese, 15,191 Portuguese, 3,087 Americans, 225 British, 1,420 Germans, 378 Norwegians, 101 French, 455 Polynesians, 600 others. 7,570 were engaged in agriculture, 2,100 in fishing and navigation, 2,265 in industries, 2,031 in trade and transport, 2,580 in liberal arts, 34,498 laborers, 4,310 various. The natives are allied to Maories of New Zealand in race and language. There are 71 m. of railroad and 250 m. of telegraph in the islands. The capital is Honolulu, on Oahu; pop., 1896, 29,920. It has electric lights and tramways. Postal savings banks in 1890 had deposits of $956,999. U. S. coins constitute the money. Kalakaua was elected king 1874, with opposition of dowager Queen Emma; he died 1891. His sister Liliuokalani succeeded him. In 1893 Committee of Public Safety, of U. S. element, abrogated monarchical government and established a provisional government, applying to U. S. for annexation. July 4, 1894, a Republic was proclaimed, and Sanford B. Dole was elected President. July 7, 1898, President McKinley signed the Senate resolution annexing the Hawaiian Is. to U.S. Aug. 12 the American flag was raised over the palace in Honolulu, and President Dole and his government continued in office.

Ladrones, or MARIANA ISLANDS. Group of fifteen islands in the Pacific Ocean, lat. 13–21° N. and long. 144–146° E., area 417 sq.m. Four of the islands are inhabited, Guahan or Guam, Rota, Tinian and Aquigan; pop. 9,000; capital San Ignacio de Agaña on Guam, which island has an area of 198 sq.m. and a pop. of 7,000. The islands are of volcanic origin, mountainous and fringed with reefs. They are fertile and wooded. Rice, maize, sugar, tobacco, cotton, indigo, breadfruit, bananas, areca and cocoanut palms and castor oil are produced. Water is plentiful and the climate is salubrious, the mean temperature being 81° F. At the time of the Spanish settlement the inhabitants numbered 50,000. The present population consists of the descendants of the original inhabitants, called Chamorros, more or less mixed with Spaniards, and the Tagals from the Philippines. They are poor and indolent. The islands were discovered by Magellan in 1521 and settled by the Spaniards in 1667, since which date they have remained a Spanish colony with little revenue. In 1898, during the Spanish-American war, U. S. took possession of the group, June 21.

Philippine Islands. Extensive group of islands belonging to Spain, lat. 4–20° N., long. 116–127° E., area 114,400 sq.m., of volcanic origin, having mountains 7,800 ft. high, with coral formations on the coast and subject to earthquakes and eruptions. The climate is healthy, tropical, 79° mean temperature, March to May hottest, Nov. to Feb. coldest; N.E. wind Oct. to April, S.W. monsoon April to Oct. The soil is fertile. The flora is Malayan and Australian; ebony, teak, sandal, sappan, camphor, areca and perfume flowers abound. Pepper, tea, cinnamon, cloves, palms, manila hemp, tropical fruits, sugar, tobacco, coffee, rice, cacao, cotton, indigo, wheat, maize, ginger and vanilla are cultivated. The fauna is Asiatic and Australian; monkeys, flying lemurs, boars, buffaloes, antelopes, cockatoos, tortoises, insects, pheasants, ducks, parrots, squirrels, mollusca, fish, tarantulas and mosquitoes. Gold, galena, mercury, iron, copper, pyrites, amber, coal, sulphur and mineral waters are found here. Oxen, horses, goats, sheep and swine are raised. The ancient inhabitants are negritos (negro pigmies), with woolly hair; they are savage and repulsive and roam in bands; a few thousand of pure stock remain. Malays constitute the majority; they are Roman Catholics, live in villages, and are engaged in fishing, agriculture, shipbuilding, leather dressing, and weaving mats and linen. Chinese are numerous, and Mestizoes, a cross of the Chinese with native women; they are engaged in commerce. The Spaniards are few. Pop. 6,500,000. Luzon is the largest, 40,000 sq.m. The capital is Manila, on Luzon, pop. 160,000. Other large towns are Laoag, pop. 31,000; Lipa, 42,000; Banang, 36,000; Batangas, 34,000. The imports in 1896 amounted to $10,750,000 and exports to $37,500,000. The imports were rice, flour, wines, dress goods, petroleum and coal. The exports were sugar, tobacco, cigars, hemp, cotton manufactures and yarn. Value of sugar exported $8,000,000; hemp, $7,500,000; tobacco leaf, $2,500,000; cigars, $750,000; copra, $1,875,000. Average imports 34 per cent from Great Britain; 21 per cent from Hong Kong and Amoy; 13 per cent from Spain; 10 per cent from Singapore. Coins are Mexican dollars, with local fractional coins. Estimated revenue 1894–95, $13,579,900; expenditures, $13,282,630. There are 70 m. of railroad; 720 m. of telegraph. The P. were discovered by Magellan 1521, who

was killed there soon after. Spain took possession in 1569. Manila was captured by U. S. 1898. See SPANISH-AMERICAN WAR.

Puerto Rico, or PORTO RICO. Island of the West Indies, between Hayti and Virgin Islands, 90 m. long, 36 m. wide n. and s., area 3,530 sq.m.; adjacent islands, Mona, Calebra, etc., 184 sq.m. There is a low range of mountains from e. to w., highest peak Mt. Yunque, 3,678 ft. high; along the coast are fertile plains; in the interior are large savannahs, feeding grounds for cattle. There are many rivers, chiefly running north, navigable 5-6 m., with fertile valleys, cultivated. On north coast are navigable lagoons. Coralligenous limestones chiefly predominate. There are three safe harbors, San Juan on the north, Guanica and Hovas on the south; the first named has 30 ft. of water, 24 ft. at entrance. Few severe earthquakes occur; the rainfall is abundant; the climate is salubrious, at San Juan the temperature is Jan.-Feb. 76.5° F., July-Aug. 83.2° F. On mountains are a few tropical forests. No reptiles or serpents. Sugar, coffee, tobacco, maize, rice, cotton and cattle are raised. The pop. in 1887 was 813,937, of which 300,000 were negroes, the balance chiefly Spanish, originally from Andalusia, the Balearic Islands and Spanish colonies, fugitives 1810-25. The dense native population found there by the Spaniards was exterminated. The religion is Roman Catholic with the archbishop at Santiago de Cuba. The government is from Spain, by a Captain-General. Education is backward. The roads are good. Railroads have 137 m., 170 under construction. Telegraph extends 470 m. Revenue, 1894-5, $5,454,958; expenditures, $3,905,667; exports, 1895, $15,799,000; imports, $17,466,000; exports, 1896, coffee 26,655 tons, sugar 54,205 tons, molasses 14,740 tons, tobacco 1,039 tons. P. R. was discovered by Columbus 1493, Ponce de Leon founded town of Caparra 1510. The important towns are San Juan, the capital, pop. 23,414; Ponce, 37,545, San German, 30,146. Oct. 18, 1898, U.S. flag raised at San Juan, the Spanish army having evacuated the island.

Spanish-American War, 1898. IMPORTANT EVENTS.

Sept. 23, 1897.—Gen. Stewart L. Woodford, U. S. Minister to Spain, presented a note to the Duke of Tetuan, Minister of Foreign Affairs, stating that American interests were suffering from the Cuban insurrection. Señor Sagasta of the succeeding cabinet in reply expressed the hope that proposed reforms would pacify the island, especially if the U. S. Government would check filibustering expeditions fitted out by American sympathizers.

Feb. 15, 1898.—U. S. battleship "Maine" blown up in the harbor of Havana; 266 men killed.

April 11.—Message of President McKinley recommending that he be empowered by Congress to intervene in Cuba, without recognizing the Republic.

April 20.—The President signed the joint resolutions to that effect. Ultimatum sent to Spain and Spanish Minister Polo left Washington.

April 21.—The North Atlantic Squadron ordered to blockade Cuba. U. S. Minister Woodford left Madrid.

April 23.—Call for 125,000 volunteers issued.

April 24.—War formally declared by Spain.

April 25.—War formally declared by United States; dating from April 21.

April 27.—The flagship "New York," cruiser "Cincinnati" and monitor "Puritan" bombarded Matanzas.

April 29.—Spanish squadron under Admiral Cervera, consisting of the cruisers "Almirante Oquendo," "Cristobal Colon," "Viscaya" and "Maria Teresa," and torpedo-boat destroyers "Terror," "Furor" and "Pluton," sailed from Cape Verde Islands.

May 1.—Rear-admiral George Dewey, commanding U. S. Asiatic Squadron, destroyed the Spanish fleet, under Admiral Montojo, at Manila, capital of the Philippines. The U.S. fleet consisted of cruisers "Olympia," "Baltimore," "Boston" and "Raleigh," gunboats "Petrel" and "Concord," revenue cutter "McCulloch," and two transports. The Spanish fleet consisted of eleven warships, including the cruisers "Reina Cristina," "Velasco," "Castilla," "Don Juan de Austria," "Isla de Cuba," three gunboats and three other vessels. U.S. loss, none killed, six wounded, and no serious injury to the ships; Spanish loss, two commanders, 700 men killed and wounded, and all their ships.

May 9.—Thanks of Congress given to Acting Rear-admiral George Dewey.

May 11.—U.S. vessels "Wilmington," "Winslow" and "Hudson" were engaged by Spanish gunboats and shore batteries at Cardenas, Cuba. Loss of U.S. five killed, four wounded, and "Winslow" disabled.—Gen. Wesley Merritt selected for Military Governor of the Philippines.

May 12.—First land fight of the war at Port Cabanas, Cuba.—Rear-admiral Sampson, with a portion of his squadron, bombarded batteries at San Juan, Porto Rico, doing much damage. Loss, two killed, seven wounded.

May 19.—Spanish fleet under Admiral Cervera arrived at Santiago de Cuba.

May 25.—75,000 more volunteers called for by the President; 2,500 troops sail for Manila.

May 31.—Fortifications of Santiago bombarded.

June 1.—Rear-admiral Sampson took command of the fleet off Santiago.

June 3.—Assistant Naval Constructor Hobson and seven men sunk the "Merrimac," a collier, in the entrance to Santiago harbor.

June 6.—Spanish batteries and fleet at Santiago bombarded.

June 10.—Skirmishing at Caimanera, Guantanamo Bay, between 600 marines and the Spanish soldiers, continuing several days.

June 13.—Brig.-gen. Shafter with Fifth Army Corps, consisting of 773 officers and 14,564 enlisted men, sailed from Tampa for Santiago.—War Revenue Bill signed.

June 15.—4,200 soldiers embark from San Francisco for Manila.

June 17.—Spanish fleet of ten vessels under Admiral Camara sailed from Cadiz for Manila, passing through the Suez Canal and then returning.

June 20.—Gen. Shafter's first division arrived off Santiago.

June 22.—Gen. Shafter's troops began to land at Baiquiri and Siboney, near Santiago.

June 24.—Engagement at La Guasima, near Sevilla; dismounted cavalry repulsed the Spaniards, with loss of 16 killed and 52 wounded. Roosevelt's Rough Riders lost 18 killed and 34 wounded.

June 27.—Third expedition set sail for Manila.

June 28.—Southern ports of Cuba blockaded.

July 1.—Gen. Lawton took El Caney and Gen. Kent took San Juan Hill overlooking Santiago, with loss of 231 killed and 1,364 wounded, on this day and July 2 when the Spanish endeavored to retake them.

July 3.—Admiral Cervera's squadron endeavored to escape from Santiago harbor, but were destroyed by the U. S. fleet. U. S. loss 1 killed, 2 wounded; Spanish loss probably several hundred. Prisoners ab. 1,300, including Admiral Cervera. Gen. Shafter demanded the surrender of Santiago by Gen. José Toral, who refused.

July 7.—Hawaiian Annexation Bill signed by the President.

July 10.—Attack on Santiago renewed by the ships and artillery, Gen. Toral having finally refused to surrender unconditionally.

July 11.—Gen. Shafter's available force before Santiago was 22,500 fighting men; total killed, wounded and sick 3,000.

July 17.—Gen. Toral surrendered his troops and eastern part of the province of Santiago, the number of troops being 24,000, including 12,000 not in the defenses of the city of Santiago.

July 19.—6,200 troops embark from Tampa for Porto Rico.

July 20.—Gen. Leonard Wood appointed military Governor of Santiago.

July 25.—Gen. Nelson A. Miles, with U. S. troops, lands at Guanica, Porto Rico, which had surrendered to the "Gloucester."

July 26.—French Ambassador, Jules Cambon, on behalf of Spain, asked for terms of peace.

July 28.—Ponce, Porto Rico, surrendered to Gen. Miles.

July 30.—President McKinley's terms for peace were given to the French ambassador. They included independence of Cuba, cession of Porto Rico and one of the Ladrones, and retention of Manila until final disposition of the Philippines by a joint commission.

July 31.—U. S. troops repulse Spaniards at Malate, near Manila.

Aug. 5.—Guyama, Porto Rico, captured.

Aug. 9.—Coamo, Porto Rico, captured. Spain accepted the President's terms of peace.

Aug. 10.—Engagement near Hormigueros, Porto Rico, Spaniards defeated, U. S. loss 1 killed, the first U. S. soldier killed in Porto Rico, 16 wounded.

Aug. 12.—Protocols for preliminaries for a treaty of peace, in accordance with the President's terms, signed by Sec. of State Day and the French Ambassador Cambon. Hostilities suspended and blockades lifted. Peace Commission to meet in Paris by Oct. 1, five from each government. Commissioners to be appointed to arrange the details of evacuation of Cuba and Porto Rico.

Aug. 13.—Manila surrendered, U.S. loss 8 killed, 40 wounded.

Peace Commissioners for U. S. William R. Day, ex-Secretary of State, Senator Cushman K. Davis, Senator William R. Frye, Senator George Gray, Whitelaw Reid.

The total number of deaths due to the war to Sept. 30, is 2,906, of whom 107 were officers; of this number 2,600 died in camp or on furlough, 80 of whom were officers. The cost of the war to Oct. 30 was $40,277,364 for the Navy and $124,654,863 for the Army; total cost, $164,932,227.

FOREIGN WEIGHTS AND MEASURES

The following table embraces only such weights and measures as are given from time to time in U. S. CONSULAR REPORTS and in Commercial Relations:

Foreign weights and measures, with American equivalents.

Denominations	Where used	American equivalents
Almude	Portugal	4.422 gallons
Ardeb	Egypt	7.6907 bushels
Are	Metric	0.02471 acre
Arobe	Paraguay	25 pounds
Arratel or libra	Portugal	1.011 pounds
Arroba (dry)	Argentine Republic	25.3175 pounds
Do	Brazil	32.38 pounds
Do	Cuba	25.3664 pounds
Do	Portugal	32.38 pounds
Do	Spain	25.36 pounds
Do	Venezuela	25.4024 pounds
Arroba (liquid)	Cuba, Spain, Venezuela	4.263 gallons
Arshine	Russia	28 inches
Arshine (square)	do	5.44 square feet
Artel	Morocco	1.12 pounds
Baril	Argentine Rep. & Mex	20.0787 gallons
Barrel	Malta (customs)	11.4 gallons
Do	Spain (raisins)	100 pounds
Berkovets	Russia	361.12 pounds
Bongkal	India	832 grains
Bouw	Sumatra	7.096.5 sq. meters
Bu	Japan	0.1 inch
Butt (wine)	Spain	140 gallons
Caffiso	Malta	5.4 gallons
Candy	India (Bombay)	529 pounds
Do	India (Madras)	500 pounds
Cantar	Morocco	113 pounds
Do	Syria (Damascus)	575 pounds
Do	Turkey	124.7036 pounds
Cantaro (cantar)	Malta	175 pounds
Carga	Mexico and Salvador	300 pounds
Catty	China	1.333⅓ (1⅓) pounds

METRIC WEIGHTS AND MEASURES

Metric weights.

Milligram ($\frac{1}{1000}$ gram) equals 0.0154 grain.
Centigram ($\frac{1}{100}$ gram) equals 0.1543 grain.
Decigram ($\frac{1}{10}$ gram) equals 1.5432 grains.
Gram equals 15.432 grains.
Decagram (10 grams) equals 0.3527 ounce.
Hectogram (100 grams) equals 3.5274 ounces.
Kilogram (1,000 grams) equals 2.2046 pounds.
Myriagram (10,000 grams) equals 22.046 pounds.
Quintal (100,000 grams) equals 220.46 pounds.
Millier or tonnea—ton (1,000,000 grams) equals 2,204.6 pounds.

Metric dry measures.

Milliliter ($\frac{1}{1000}$ liter) equals 1.061 cubic inch.
Centiliter ($\frac{1}{100}$ liter) equals 0.6102 cubic inch.
Deciliter ($\frac{1}{10}$ liter) equals 6.1022 cubic inches.
Liter equals 0.908 quart.
Decaliter (10 liters) equals 9.08 quarts.
Hectoliter (100 liters) equals 2.838 bushels.
Kiloliter (1,000 liters) equals 1.308 cubic yards.

Metric liquid measures.

Milliliter ($\frac{1}{1000}$ liter) equals 0.0388 fluid ounce.
Centiliter ($\frac{1}{100}$ liter) equals 0.338 fluid ounce.
Deciliter ($\frac{1}{10}$ liter) equals 0.845 gill.
Liter equals 1.0567 quarts.
Decaliter (10 liters) equals 2.6418 gallons.
Hectoliter (100 liters) equals 26.418 gallons.
Kiloliter (1,000 liters) equals 264.18 gallons.

Metric measures of length.

Millimeter $\frac{1}{1000}$ meter) equals 0.0394 inch.
Centimeter $\frac{1}{100}$ meter) equals 0.3937 inch.
Decimeter ($\frac{1}{10}$ meter) equals 3.937 inches.
Meter equals 39.37 inches.
Decameter (10 meters) equals 393.7 inches.
Hectometer (100 meters) equals 0.62137 mile (3,280 feet 10 in.)

Metric Surface Measures.

Centare (1 square meter) equals 1,550 square inches.
Are (100 square meters) equals 119.6 square yards.
Hectare (10,000 square meters) equals 2.471 acres.

DEATH, DATES OF.

Abbey, Henry E., 1896.
Adams, W. T., 1887.
Alcock, Sir Rutherford, 1897.
Armitage, Thomas, 1896.
